ROCKVILLE, MD—September 28, 2005—TELESIS announced today that it has won a HUBZone set-aside contract with the U.S. Department of the Army at Aberdeen Proving Ground (APG) to assist the Developmental Test Command's (DTC's) Mission Support (MS) and Test and Technology (TT) Directorates for Federal Information Processing (FIP) Support Services. TELESIS estimates the value of the contract to be approximately $30M if all options are exercised. Subsequent task order support includes data input and retrieval, database back-up and database administration, technical and administrative support services, LAN management, software engineering and system development, engineering and technical support, graphical support, program management support, as well as providing overall Army Test and Evaluation Command (ATEC) Decision Support System assistance (ADSS) necessary to administer, sustain, maintain, and enhance the current and future MS and TT missions.

Teaming with TELESIS are two small businesses that include TRI-S Corporation of Aberdeen, MD and T2E Solutions Inc. of Springfield, ME.

About the Directorates

Critical missions of the TT are management of Department of Defense test programs being conducted by DTC test center in support of safety assessments and system evaluations, management of the DTC program for the Virtual Proving Ground (VPG), development and utilization of over 600 Test Operations Procedures (TOPS) and International Test Operations Procedures (ITOPS), and to serve as the ATEC agent for international standardization of development and production test procedures. Another mission of TT is the integration of new test technology into the DTC infrastructure through the execution of a dynamic test methodology program. The MS Directorate is responsible for Information Technology Management for DTC, the day-to-day operation and maintenance of the LAN at Headquarters DTC, software engineering and information technology support for a variety of applications in support of the DTC mission including investments, financials, information management, test support and more.
