

# HAZARD ALERT

Two fatalities have occurred since January 1, 2007

## TASK Training

One miner was fatally injured recently when the mine roof fell on him. Another was fatally injured as a result of exposure to hydrogen fluoride when opening a ball valve. Effective TASK Training can prevent these accidents in the future.

### Effective TASK Training Saves Lives

Effective Task Training educates all miners on hazards and discusses procedures to safely complete the tasks. Task Training prevents injuries, illnesses, property damage and interruptions in the mining process.

Remember: ***An untrained miner is a hazard to him/herself, as well as others.***

Keep these principles in mind when task training employees:

**T**each the miner

**A**ll the job steps and

**S**kills to safely perform the task with

**K**nowledge
