Offshore Publications Program

The MMS established a scientific and technical publications program for Offshore Minerals Management in 1984. The objective of the Offshore Publications Program is to make MMS investigative findings available to the public. The Technical Services Branch (TSB) within the Division of Information Technology operates this program.

Since January 1, 1984, TSB has been assigning series designations and publication numbers to scientific and technical documents that the Offshore Program issues. Documents are numbered consecutively within each calendar year. The series designations for **MMS** scientific and technical publications are explained on this page.

Publication Series

.....

OCS Environmental Impact Statements/ Environmental Assessments (EIS/EA): Draft EIS, final EIS, and regional or areawide EA.

OCS Maps: Geologic, bathymetric, resource, and coastal maps.

OCS Monographs: Various technical and professional papers or reference material.

OCS Reports: Continental (COST) well reports, investigations, risk analysis, resource estimates, environmental impact statements (EIS) support documents, etc.

.....

OCS Statistical Reports: Statistical summaries, bibliographies, geologic and geophysical data printouts, computerized lists, and catalogs of studies, all in nonstandard (unedited) report format.

OCS Studies: Contractually prepared environmental and socioeconomic, resource evaluation, and technological studies.

Publication Number Listing

2000-2002 Publications

The following section lists all 2000-2002 Offshore publications by MMS number. Complete bibliographic information is provided for each publication.

Many of the publications are available on the web and are so indicated in their citation.

Regional Subject Index

Subject Word Index

This index lists publications under the relative MMS region—Alaska, Gulf of Mexico, Pacific, and Headquarters. Atlantic Region publications are now available from NTIS and, in some cases, the Gulf of Mexico Region.

Within each region, publication titles are listed (alphabetically) under key words that reflect the general subjects covered by the publication.

These key words are intended as an aid in the initial search for subject matter. Publications may be listed under several key words. Publications dealing with MMS or the Offshore Program (not necessarily region specific) are listed under Headquarters.

This index lists the key word and publication title and gives a page-number reference to the full bibliographic citation (see publication number listing).

The Department of the Interior Mission

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering sound use of our land and water resources; protecting our fish, wildlife, and biological diversity; preserving the environmental and cultural values of our national parks and historical places; and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to ensure that their development is in the best interests of all our people by encouraging stewardship and citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.

The Minerals Management Service Mission

As a bureau of the Department of the Interior, the Minerals Management Service's (MMS) primary responsibilities are to manage the mineral resources located on the Nation's Outer Continental Shelf (OCS), collect revenue from the Federal OCS and onshore Federal and Indian lands, and distribute those revenues.

Moreover, in working to meet its responsibilities, the **Offshore Minerals Management Program** administers the OCS competitive leasing program and oversees the safe and environmentally sound exploration and production of our Nation's offshore natural gas, oil and other mineral resources. The **MMS Minerals Revenue Management** meets its responsibilities by ensuring the efficient, timely and accurate collection and disbursement of revenue from mineral leasing and production due to Indian tribes and allottees, States and the U.S. Treasury.

The MMS strives to fulfill its responsibilities through the general guiding principles of: (1) being responsive to the public's concerns and interests by maintaining a dialogue with all potentially affected parties and (2) carrying out its programs with an emphasis on working to enhance the quality of life for all Americans by lending MMS assistance and expertise to economic development and environmental protection.
