

**Resolution of the Florida Keys National Marine Sanctuary Advisory  
Council in support of local, state and national actions to reduce the  
causes of climate change**

May 22, 2007

Whereas, the Florida Keys National Marine Sanctuary was established by President George H. Bush in 1990, and

Whereas, the legislation creating the FKNMS found that adjacent to the Florida Keys land mass are located spectacular, unique, and nationally significant marine environments, including seagrass meadows, mangrove islands, and extensive living coral reefs, and

Whereas, these marine environments support rich biological communities possessing extensive conservation, recreational, commercial, ecological, historic, research, educational, and esthetic values which give this area special national significance, and

Whereas, these environments are the marine equivalent of tropical rain forests in that they support high levels of biological diversity, are fragile and easily susceptible to damage from human activities, and possess high value to human beings if properly conserved, and

Whereas, the south Florida region not only is home to the world's third largest coral barrier reef, but it shelters more than 6 million full-time residents and attracts millions of seasonal visitors annually with nearly 4 million traveling to the Keys alone each year, and

Whereas, Florida's reefs are an important "engine" of the region's economic prosperity generating nearly 40,000 jobs annually in Monroe, Miami-Dade, and Broward Counties, and producing nearly \$3.4 billion in income and sales, and

Whereas, these marine environments are subject to damage and loss of their ecological integrity from a variety of sources of disturbance, and

Whereas, the United Nations Intergovernmental Panel on Climate Change report, "Climate Change 2007: The Physical Science Basis," which represents the state of the art on the subject, states that "eleven of the last twelve years (1995-2006) rank among the 12 warmest years in the instrumental record of global surface temperature" and that "observations since 1961 show that the average temperature of the global ocean has increased to depths of at least 3000m and that the ocean has been absorbing more than 80% of the heat added to the climate system" and that "most of the observed increase in globally averaged temperatures since the mid-20<sup>th</sup> century is very likely (>90% likelihood) due to the observed increase in anthropogenic greenhouse gas concentrations," and

Whereas, the US EPA states that "The Everglades and other south Florida ecosystems already are stressed by the pressures of human development, with global warming adding

additional stresses, such as higher water levels, increased salinity and warmer temperatures, and

Whereas, Governor Crist in the Florida State of the State address of 2007 stated that “Global climate change is one of the most important issues that we will face this century”, and

Whereas, Florida became 3°F warmer over the course of the 20th century with more and stronger tropical storms, sea level rise double that predicted by computer models, increased droughts, and warmer, more acidic oceans in recent years, and

Whereas, elevated sea temperatures caused by a warming world are also contributing to severe coral bleaching events, and rendering corals more susceptible to diseases, in many cases causing significant mortality, and

Whereas, 2005 was the hottest year on record globally, and for the waters of the Caribbean producing extensive coral bleaching from Colombia to the Florida Keys, and

Whereas, since 1930 the sea level has risen 9 inches in Key West, and is increasing at about a foot per century, and

Whereas, on barrier islands such as the Florida Keys, a one-foot rise could put water 200 to 2,000 feet inland, and

Whereas, for the purposes of the FKNMS and Protection Act the term “adverse effect” means any factor, force, or action that would independently or cumulatively damage, diminish, degrade, impair, destroy, or otherwise harm any of those qualities, values, or purposes for which the Sanctuary is designated, and

Whereas, it is consistent with the FKNMS and Protection Act for local, state and federal agencies to cooperate with the FKNMS Advisory Council, charged with providing recommendations to the Secretary of the Department of Commerce on actions necessary to provide for the protection of the marine resources of the Florida Keys, in addressing adverse effects over which those agencies have jurisdiction, and

Therefore, the FKNMS Advisory Council resolves that global climate change represents an adverse effect on the FKNMS. This Council, local, state and federal agencies charged with oversight and management of the Florida Keys and citizens concerned with the well-being of the Florida Keys marine environment and the economy that it supports should become informed of the causes and consequences of climate change. Furthermore any and all actions should be taken to reduce or eliminate the sources of human-caused global climate change that are causing significant harm to the resources of the Florida Keys National Marine Sanctuary.

The FKNMS staff is requested to send certified copies of this Resolution to every state legislator, the Governor and members of the Florida cabinet, every member of Congress,

the director of the Department of Commerce, the Board of County Commissioners, the city governments of Monroe County, the head of Florida Department of Environmental Protection, the head of Florida Fish and Wildlife Commission, the head of Florida Department of Agriculture and Consumer Services, the head of Florida Department of Community Affairs, the parties listed in Section 4 of “A Resolution of the Board of County Commissioners of Monroe County Objecting to the Construction of Coal-Fired Power Plants in the Everglades Basin” (passed by the County Commissioners in April 2007: Florida Senator Larcenia J. Bullard; Florida Representatives Ron Saunders, Stan Mayfield, Baxter Troutman, and Trudi Williams; Dick Kempthorne, Secretary of the Interior, U.S. Department of the Interior; Matthew J. Hogan, Acting Assistant Secretary of Fish, Wildlife & Parks; Fran P. Mainella, Director, National Park Service, all located at 1849 C Street, NW, Washington, DC 20240; Pat Hooks, Regional Director, National Park Service Southeast Region, 100 Alabama St. SW, 1924 Building, Atlanta, GA 30303; Fred Gaske, State Historic Preservation Officer, 505 S. Bronough St., Tallahassee, FL 32399-0250), and the President of the United States of America.

Passed unanimously on this date: May 22, 2007.
