

# The Earth

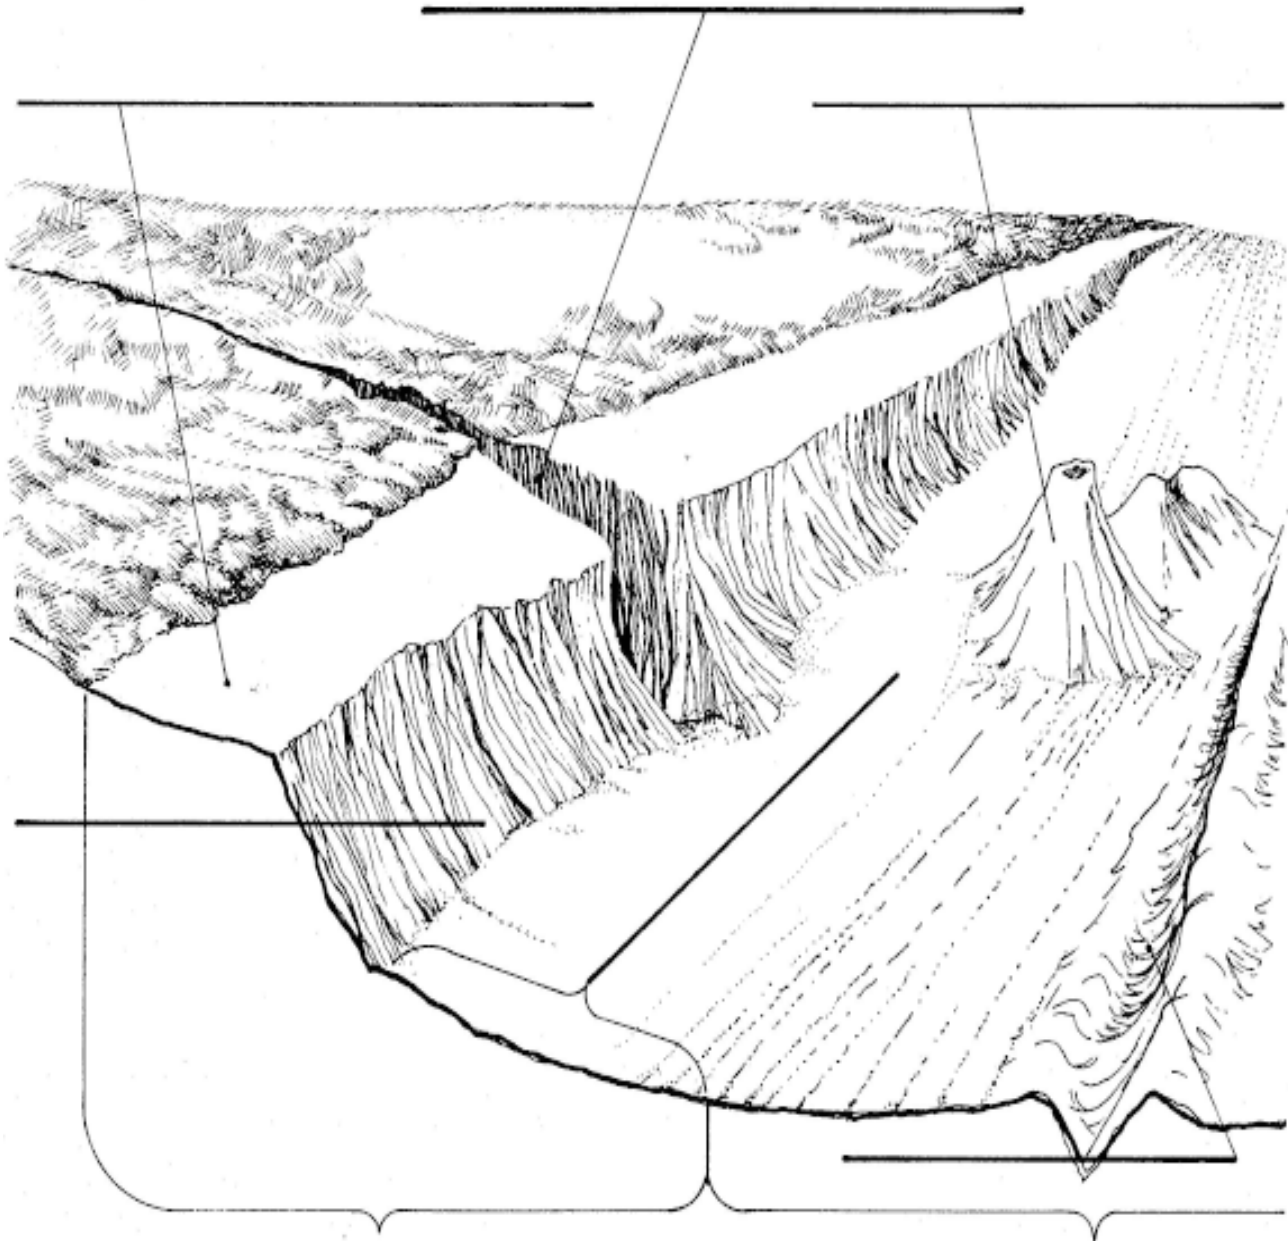

The earth is more than just the ocean and the continents. Under your feet are four layers: the crust, the mantle, the outer core, and the inner core. Color the picture below to show the layers of the earth. Use a different color for each layer and then label them.

- water
- land
- crust
- mantle
- outer core
- inner core

# The Ocean Floor

The ocean floor is divided into eight areas to make it easier to study. Under the ocean are the continental shelf, the continental margin, continental slope, continental rise, submarine canyons, the ocean basin, trenches, and mountains. Name each area on the drawing below. Use a different color to highlight the different areas.

ocean basin

continental margin

trench

continental slope

continental shelf

mountain

continental rise

submarine canyon
