SOIBULETIN FAIL 1994

A Quarterly Statistics of Income Report

## Volume 14, Number 2

The Statistics of Income (SOI) Bulletin is issued quarterly, in July, October, January and April, by Statistics of Income of the Internal Revenue Service. The report provides the earliest published annual financial statistics obtained from the various types of tax and information returns filed, as well as information from periodic or special analytical studies of particular interest to students of the U.S. tax system, tax policymakers and tax administrators. It also includes personal income and tax data by State and historical data for selected types of taxpayers, in addition to data on tax collections and refunds and on other tax-related items.

Information on the availability of supplemental data on the topics included in this issue, special tabulations undertaken on a reimbursable basis, or other SOI subjects, may be obtained by telephọning the SOI Statistical Information Services office (202-874-0410), or by writing to the Acting Director, Statistics of Income CP:R:S, Internal Revenue Service, P.O. Box 2608, Washington, D.C. 20013-2608.

Robert Wilson and Beth Kilss of Statistics of Income are the technical editors of the Bulletin. Wendy Alvey, Clementine Brittain, Bettye Jamerson, Ruth Schwartz, and Lisa Smith made major contributions in the production of this issue. Views expressed in the articles are those of the authors and do not necessarily represent the views of the Treasury Department or the Internal Revenue Service.

## This Issue at a Glance

## Individual Income Tax Returns, 1993: Early Tax Estimates

By Michael E. Weber
For Tax Year 1993; taxpayers filed 106.8 million individual income tax returns by the end of April 1994, with another 7.7 million expected by year end. Early estimates for 1993 , based on the returns filed through April; reveal that "adjusted gross income".grew by 2:3.percent over the early estimate for 1992 , from $\$ 3,254$ billion to $\$ 3 ; 328$ billion. Taxable income grew 2.2 percent from $\$ 2,103$ billion to $\$ 2,150$ billion, while total income tax increased 4.9 percent, from $\$ 408$ billion to $\$ 428$ billion. Much of the increase in tax reflects the impact of the new marginal tax rates applicable to high-income taxpayers. Of the sources of income reported for 1993, taxable interest income was down by 16.6 percent, reflecting declining interest rates, while unemployment compensation dropped by 14:2 percent, reflecting the decline in the national unemployment rate. The number of taxpayers itemizing deductions and the total amount claimed were each about the same as 1992, although the interest paid deduction decreased 4.1 percent.

## Sole Proprietorship Returns; 1992

By Michael Strudler and Marty Shiley
Nonfarm sole proprietorship profits for 1992 increased from $\$ 141.5$ billion for 1991 to $\$ 154.0$ billion. This 8.8 percent increase reflects the recovery from the recession that began late in 1990. The growth in profits was led by construction and finance, insurance, and real estate. Among the service industries, which accounted for more than 60 percent of all sole proprietorship profits; legal services showed the largest increase. However, profits for medical and health services experienced their lowest increase since 1981, despite the fact that this group led the services division in profits for the year. The 1992 depreciation deduction reported by nonfarm proprietorships increased slightly over 1991, the first such increase since 1988, but, with the gradual decline in the deduction that began after enactment of the Tax Reform Act of 1986, the deduction for 1992 was still less than 1984 levels.

## Partnership Returns, 1992

By Timothy D. Wheeler
For Tax Year 1992, partnerships reported the largest increase in profits in recent history, as net income (less deficit) more than doubled, from $\$ 21.4$ billion for 1991 to
$\$ 42.9$ billion. This increase continued the trend that began after enactment of the Tax Reform Act of 1986, a trend that was reinforced for 1992 by the improving economy after the recession of 1990-1991. Prior to 1986, partnerships were characterized by annual overall losses, due mostly to their use as "tax shelters." With the disappearance of tax incentives that encouraged this usage, partnership investments seemed to increasingly turn to profit-seeking alternatives, as evidenced by the upward shift in profits, the result of both an increase in positive net income and a decrease in negative net income, i.e., net deficit. The latter was especially noticeable among real estate operators and lessors of buildings, the industry that had been the main vehicle for creating the "tax losses" that enabled partners to "shelter" other income from taxation prior to 1986.

## Individual Foreign-Eamed Income and Foreign Tax Credits 1991

## By Lissa Redmiles

For Tax Year 1991, U.S. taxpayers excluded more than $\$ 9.7$ billion of foreign-earned income and employerprovided housing expenses from "adjusted gross income" on 220,000 individual income tax returns, and credited $\$ 1.8$ billion of foreign taxes against U.S. income tax on 873,000 returns. The housing deduction, reported on about 3,000 returns for "excess" housing expenses, reduced adjusted gross income by another $\$ 43.5$ million. U.S: taxpayers living at home or abroad reported about $\$ 15$ billion of foreign-source income, while an additional $\$ 14$ billion of foreign-earned income was reported by taxpayers living abroad. The United Kingdom, Canada, and Japan were the countries with the largest proportions of foreign-earned income and foreign-source income. Taxpayers living in the United Kingdom had the highest average foreign salary.

## Self-Employed Nonfilers, Post-Audft, 1988

By Laura Rosage
For Tax Year 1988, an estimated 1.5 million delinquent farm and nönfarm sole proprietorship returns were secured through enforcement efforts. These returns showed $\$ 22.2$ billion in "total income (less loss)" from all sources, an average of $\$ 15,000$ per return, and 68 percent of them showed an income tax liability. Nonfarm business profits amounted to $\$ 9.9$ billion, while farm profits recorded a net loss of $\$ 0.1$ billion. However, after audit by the Internal Revenue Service, adjustments were made on 87 percent of these returns. Total income increased to $\$ 30.5$ billion, an average of nearly $\$ 21,000$ per return, and

## Bulletin Board

82 percent of the returns showed a tax liability. Nonfarm business profits increased to $\$ 16.0$ billion and farm profits, to $\$ 0.6$ billion.

## Charities and Other Tax-Exempt Organizations, 1990

Data Release

## Some Observations and Insights

We are always looking for new ways to broaden our scope. This year it seems SOI has gone international! While we have always welcomed visitors from other countries - or even our own - it seems that recently we have had more foreign guests than usual. This summer we kicked things off by hosting a delegation of five South Korean tax officials. Since then, we have also met with representatives from a number of Eastern European countries - two statisticians from Poland, 16 tax officials from Bulgaria, and 12 delegates from the State Tax Inspectorate of Belarus. Officials from Russia are expected later this fall. (Delegates from Armenia and Hungary were here last year.)

Most of these visits are part of an orientation program, run by the IRS International staff's Tax Administration Advisory Services office, as part of joint efforts sponsored by Treasury and the State Department's Agency for International Development. None of these countries has statistical programs to support tax research. SOI's role is to provide a brief overview of our statistical programs. This is often supplemented by a demonstration of one of our on-line processing systems. Efforts are made to tailor the presentations to the specific interests of the visitors, often drawing in subject matter specialists to answer questions. Despite language barriers - and the need to sometimes rely on translators - the exchanges invariably prove as interesting to us as we hope they are to our visitors. The guests are usually sent home with an armful of our publications.

Behind the Scenes

As has been our tradition for the past 14 years, SOI once again sent a small but strong delegation of statisticians and economists to the Joint Statistical Meetings. The conference, which marked the 154th annual meeting of the American Statistical Association, was held August

13-18, 1994, in Toronto, Ontario, Canada. It drew about 4,500 people from the U.S., Canada, and many other countries.

As in previous years, SOI was involved in a number of different activities - from presenting methodological papers of work-in-progress and exchanging ideas and information with fellow statisticians, to attending specialinterest committee meetings, business meetings, and a wide spectrum of contributed and invited paper sessions. Topics of interest ranged from applied sampling problems to methodological issues affecting Government statistics and ethical concerns involving privacy and confidentiality of Federal data.

There were 10 technical papers presented by Statistics of Income staff:

- Alternative Imputation Techniques for Proportions of Income Variables for IRS Compliance Modeling, by William Wong, co-authored with Chih-Chin Ho of IRS, Compliance Research;
- Linking Individuals on a Capital Gains Panel for Tax Policy Analysis, by Susan Hostetter;
- Inverse Sample Design Algorithms, presented by Fritz Scheuren, on detail to IRS Criminal Investigations, co-authored with Susan Hinkins;
- Quality Review Consistency Study, by Glenn White;
- Estimating the Internal Revenue Service Telephone Demand, by Robin Lee;
- The 1994 Taxpayer Compliance Measurement Program (TCMP) Sample Design: A Case Study, by Wendy Rotz, co-authored with Jeri Mulrow and Eric Falk;
- The Challenges of Preparing Sensitive Data for Public Release, a poster presentation, done jointly by Louise Woodburn and co-author, Gerhard Fries, of the Federal Reserve Board;
- How Sales of Capital Assets Were Affected by the Tax Reform Act of 1986, by Barbara Longton, coauthored with Pete Sailer and Janette Wilson;

- Self-Employed Nonfilers: The Accuracy of Enforcement-Secured Tax Returns, by Laura Rosage; and
- Statistics of Income Partnership Studies: Evaluation of Preliminary Estimates, by Paul McMahon.
In addition, Mary Batcher gave a discussion of four papers on Data Collection Issues for Government Surveys and Censuses; Ellen Legel led a roundtable discussion onMegatrends'for Women - The Revolution of Women Leaders; and Wendy Alvey and Beth Kilss spoke at the Workshop on Improving Statistical Presentations.

Two other particularly relevant presentations were:

- Income Stratification in Panel Surveys: Issues in
. Design and Estimation, by John Czajka, Mathematica-Policy-Research--Inc-,-which-drew on work he is doing for SOI on the Sales of Capital-Assets Panel study; and
- Creating Desktop Documentation: Individual Income Tax Return Microdata, Statistics of Income, by Martin David, of the University of Wisconsin, who has been working with SOI to develop a "metadata system."

We expect all of these papers to appear in the next issue of our Methodology Reports series Statistics of Income: Turning Administrative Systems Into Information Systems - 1994, to be published later this year. They will also be published in the 1994 American Statistical Association Proceedings, due out early next year.

## 80. Years of Income Tax Statistics

Although we have wound down our anniversary celebration, we promised to continue to publish special feature, articles from time to time, for those programs we missed, as their 80th year of data become available. This issue we are pleased to bring you two such articles:

- Sole Proprietorship Returns, 1992, by Michael Strudler and Marty Shiley; and
- Partnership Returns, 1992, by Tim Wheeler.

We hope you will enjoy these presentations of our data.

## Upcoming Features

The following are some of the articles planned for inclusion in upcoming issues of the SOI Bulletin:

- Environmental Excise Taxes, 1992;
- Foreign Controlled Domestic Corporations, •

中 1991 ;

- High Income Individual Income Tax Returns, 1991;
- Corporate Foreign Tax Credit by Country, 1990; and
- Projections of Returns to be Filed, 1995-2001.

Fūture dāta releases include:

- Corporate Foreign Tax Credit, 1991; and
- Private Foundations and Charitable Trusts, 1991.

## Your Call

## Subscription Problems?

Have you had trouble receiving your subscription copies of the SOI Bulletin? We understand that some of you who have subscribed through the Government Printing Office (GPO) have not been receiving your Bulletins at all or in a timely fashion. If you do experience any problems along these lines, please let us know. - give the Statistical Information Services staff a call at (202) 874-0410. We'll be glad to look into the problem for you.

## Hew Message System

You can now add AUDIX to your list of Government alphabet soup acronyms - SOI has just installed a new AUDIX Voice Messaging System. While everybody hates to talk to answering machines, we figured that this was better than not reaching us at all. We are committed to making every effort to have a "real person" answer each call, but at times that is not possible. So, if you call a specific SOI staff member and he or she is not available, do not be surprised to hear the phone answered by AUDIX. Please leave a message - we'll get back to you as soon as we can.

## Bulletin Board

The advantage of AUDLX over our old answering machine is that, when you call someone who isn't in, you can leave a message for that specific person. The message is sent directly to the employee's personal telephone, where a green light will indicate that there is a message in his or her mailbox. Calls to the general Statistical Information Services number - (202) 874-0410 - will continue to be answered by a regular answering machine, if no one is available to handle your call. We will continue to check frequently for messages and get back to you as soon as possible. We hope that this new system will help us be more responsive to your needs. Let us know how it works!

## E-Mall

It's coming! The SOI Technical Team has been working on a way to give us e-mail access to Internet, so that we can communicate with you electronically. We hope to have good news to report in the Winter Bulletin.

## Data Release Dates

For the fourth year, now, we are publicizing the dates
when data for the major SOI programs will be released to users, ahead of their formal publication. The listing includes some of the critical dates that precede the data releases, to help show some of the constraints under which we must operate in order to make data available on a timely basis. While it isn't always possible to meet all completion dates, we continue to strive to release the timeliest and most accurate data possible.

Since SOI is an annual program, many of its data requirements are unchanged from year to year. Every new year, nevertheless, brings changes and new challenges. A high priority is, therefore, assigned to continually improving our operations, while adapting to the changing and growing research and data requirement needs of our main customers - tax policymakers at Treasury and in Congress and the national income economists in Commerce; the evolving tax law and resulting tax return form changes; and the constantly improving tax administration system, itself.

${ }^{1}$ Corporation statistics for 1992 represent accounting periods ended July 1992-June 1993. Other "years" are similarly defined.
${ }^{2}$ Dates coincide with the corporation Statistics of Income program because these programs are based on schedules attached to the corporation income tax return.
${ }^{3}$ Estate tax return statistics are processed on a filing-year, rather than on a year-of-death basis. At a later stage (not shown here), the underlying data from several filing years are combined by year of death.

## Revision to the Spring 1993 Issue

## Foreign Recipients of U.S. Income, 1990

On pages 124-127:
Tables 1 and 2 are reproduced to reflect corrections to the data.

# Individual Income Tax Returns, 1993: EarlyTax Estimates 

by Michael E. Weber

Early estimates for Tax Year 1993, which are based on individual income tax returns filed through April 1994, show that between 1992 and 1993 "adjusted gross income"(AGI) grew by 2.3 percent, from $\$ 3,254$ billion to $\$ 3,328$ billion; "taxable income" grew by 2.2 percent, from $\$ 2,103$ billion to $\$ 2,150$ billion; and total income tax increased by 4.9 percent, from $\$ 408$ billion to $\$ 428$ billion. Much of the increase in total income tax reflects the impact of the new marginal tax rates of 36 and 39.6 percent applicable to higher incomes. Of the sources of income, salaries and wages increased by 2.8 percent, roughly matching the 3.0 percent annual rate of inflation; taxable interest income fell 16.6 percent, reflecting the decline in interest rates; and dividend income increased by 7.4 percent. Itemized deductions remained essentially unchanged. The amount of "earned income credit" (EIC) claimed increased 17.4 percent, from $\$ 12.4$ billion to $\$ 14.6$ billion, at least partially reflecting a statutory liberalization of the EIC.
Data for this article were derived from the "Early Tax Estimates," or ETE, a subset of returns included in the full sample used for Statistics of Income--Individual Income Tax Returns for 1993. The ETE sample was developed in order to provide reliable estimates expeditiously following the close of the regular tax return filing season. Each return in the ETE sample represents approximately 5,000 returns in the population. In contrast to the estimated 106,000 individual tax returns selected for the full Statistics of Income (SOI) sample, the size of the 1993ETE subsample of returns filed through the end of April 1994 was only 21,196 . Although 1993 represents only the second time this sample has been used for early data, the taxpayers included in the ETE sample have been included in the Statistics of Income samples each year since Tax Year 1979, provided that the taxpayer filed a return for the given year.

To provide some insights into how the ETE subsample of returns filed through April relates to the full-year SOI sample, Figure A compares estimates of key income and other items from both samples for Tax Year 1992. For many items the ETE subsample of returns filed through April provides reliable data. An example is salaries and wages, for which there is only a 9.5 percent difference between the estimates from the two samples. For other items, however, the ETE subsample does not provide reliable data. An example of an unreliable item is net capital gain, for which

[^2]there is a 78.5 percent difference between the estimates for the two samples. Other items for which the ETE subsample provides unreliable data are: partnership, S Corporation and sole proprietorship net income or loss, and alternative minimum tax. These items are often reported in sizable but varying amounts on returns filed after April. Returns filed after April are mainly those for which filing extensions have been taken, and many of these returns are for highincome taxpayers. As a result, early estimates for the items listed above (and also for high-income returns in general) should be used with caution.

A second problem with the estimates from high-income returns is the relatively high sampling variability. Since the ETE subsample is a simple random sample not stratified to favor these taxpayers, there may not be a sufficient number of returns to present an accurate picture of this part of the individual income tax return population. The discussion that follows focuses only on those tax return items and those taxpayer characteristics for which the ETE subsample offers reliable estimates.

## Selected Sources of Income and Statutory Adjustments

"Adjusted gross income" (AGI) grew by 2.3 percent from $\$ 3,254$ billion for 1992 to $\$ 3,328$ billion for 1993 even though the number of returns filed increased by only 0.5 percent (Figure B). Salaries and wages, the principal income source, increased by 2.8 percent from $\$ 2,562$ billion for 1992 to $\$ 2,635$ billion. Both the rate of AGI growth and salary growth were less than the 3.0 percent annual rate of inflation for 1993 [1].

The principal components of AGI and "statutory adjustments" to AGI are shown in Tables 2 and 3, respectively. In addition to the increase in salaries and wages, there were significant changes in several other components from 1992 to

## Total income tax

 increased by 4.9 percent, reflecting the effect of the two new marginal tax rates. 1993(Figure B). Falling interest rates were a principal cause of a 16.6 percent decline in reported taxable interest income. Unemployment compensation income also decreased by 14.2 percent. This was related to the decline in the national unemployment rate from 7.4 percent for 1992 to 6.8 percent for 1993 [2]. On the other hand, dividend income rose by 7.4 percent.Taxable income from retirement plans increased as well. Taxable Individual Retirement Arrangement (IRA) distributions increased by 15.0 percent, from $\$ 28.9$ billion for 1992 to $\$ 33.3$ billion. This followed a 35 -percent increase, from $\$ 21.4$ billion for 1991 to $\$ 28.9$ billion, for 1992 . Taxable

pensions and annuities also increased, by 6.2 percent, from $\$ 165.2$ billion to $\$ 175.5$ billion.

Under statutory adjustments to income (which serve to reduce AGI), payments to'self-employed (Keogh) retirement plans increased by 31.6 percent to $\$ 7.9$ billion from $\$ 6.0$ billion. For 1993 , there was a 62.3 percent increase in the statutory adjustment for self-employment health insurance benefits compared to the amount reported for 1992. However, the 1992 amount, almost $\$ 1.0$ billion, was drastically understated due to the July 1, 1992, expiration of the provision authorizing this adjustment. The Omnibus Budget Reconciliation Act of 1993, enacted in August 1993, after virtually all 1992 returns were filed, extended this provision in the tax code retroactively to cover the period July 1, 1992, through December 31, 1993. Taxpayers
would have had to file their 1992 return after August 1993, or to have filed an amended return, to claim the full benefit of this adjustment for 1992. The returns used to produce the ETE article for 1992, however, were all filed by the end of April 1993, and do not reflect later amendments of those returns. Consequently, the 1992 ETE data understate the final adjustment claimed for 1992. (It should be noted that since the full SOI sample excludes amended returns, the final 1992 data for this adjustment will also be understated.)

## Itemized Deductions

The number of taxpayers itemizing deductions and the amount they claimed remained essentially unchanged for 1993, although there were some noticeable changes for

NOTE: All data are for retums filed through April.
specific deductions, such as for interest paid and for charitable contributions (Figure C). Falling interest rates in 1993 again contributed to a decline in interest deductions, which fell 4.1 percent to $\$ 168.7$ billion. Deductions for charitable contributions increased by 7.9 percent to $\$ 58.4$ billion. Additional data on itemized deductions classified by size of adjusted gross income are presented in Table 4.

## Taxable Income and Total Income Tax

The 2.3 percent growth in AGI was roughly matched by a 2.2 percent increase in "taxable income" (Figure D). However, total income tax, the sum of income tax after credits and the alternative minimum tax (AMT), increased 4.9 percent. A substantial portion of this increase was caused by the new marginal tax rates of 36 and 39.6 percent applicable to higher levels of income. As can be seen from

| Taxable income................................................... | 84,266 | 2,102,889 | - 84,150 | $\therefore 2,150,181$ | 以-2.2 |
| Total income tax ${ }^{2}$ | 80,547 | 408,219 | 79,957: | 428,299 | 49 |
|  | 21) 80,531 | 407,531 | 79931 | 427,337 | 4.9 |
| Altemative minimum tax................................................ | 190 | 688 | 289 | - 962 | 39.8 |

${ }^{1}$ Data are based on the Earty Tax Estimates (ETE) subsamples of returns used for Statistics of Income-Individual Income Tax Retums.
${ }^{2}$ The number of returns, with total income tax is less than the sum of returns with income tax after credtis and returns with altemative minimum tax because some returns reported both. The amount of total income tax is the sum of income tax after credits and altemative minimum tax less total eamed income credit. If this calculation was negative, total income tax was limited to zero:

NOTE: All data are for returns filed through April.

Figure $E$, which presents a comparison of total income tax as a percentage of AGI by size of AGI for 1992 and 1993, the only AGI size class which shows a significant increase in total income tax as a percentage of AGI is the $\$ 200,000$ -and-over category. A majority of taxpayers in this
category would have been subject to the new marginal rates. Indeed, roughly half of these taxpayers included a Form 8841 Deferral of Additional 1993 Taxes with their tax return. Form 8841 permitted taxpayers to elect to pay onethird of the additional 1993 tax caused by the new rates

## Figure E

Total Income Tax as a Percentage of Adjusted Gross Income (AGI); by Size of AGI, Tax Years 1992-1993

## Individual Income Tax Returns, 1993: Early Tax Estimates

with their 1994 return and one-third with their 1995 return. (See 1993 Tax Law Changes for additional information.) The final statistics for 1993 will undoubtedly show larger numbers of returns in these two categories because many high-income returns are filed after April.

## Eamed Income Gredit and Other Tax Credits

For Tax Year 1993, about 14.3 million taxpayers filed a return claiming an earned income credit (EIC), up by 6.2 percent compared to 1992. The total amount of EIC claimed was up 17.4 percent to $\$ 14.6$ billion (Figure F). Like most tax credits, the EIC offsets income tax before credits (as well as certain additional income-related taxes). However, with the EIC, any remaining or "excess" credit is refundable. The number of individuals receiving a refundable amount, or, in other words, the number of individuals who received a refund only because of the EIC, increased 10.7 percent to 11.5 million. The amount refunded increased by 18.1 percent for 1993 , to $\$ 11.4$ billion. At least some portions of these increases were related to the indexing of the EIC. Another factor, however, was the increase in the percent of a taxpayer's earned income that could be claimed as EIC. For 1992, taxpayers who claimed only one qualifying child could claim 17.6 percent of the first $\$ 7,520$ in earned income as their EIC. For 1993, this percentage was increased to 18.5 percent of the first $\$ 7,750$ in earned income. (The increase in the
maximumearned income amount from $\$ 7,520$ to $\$ 7,750$ reflects indexing.)
"Total tax credits" (which includes the EIC to the extent that it could be used to offset income tax before credits) increased by 13.6 percent to $\$ 6.1$ billion for 1993 . Excluding the EIC that was used to offset income tax before credits, total tax credits increased by 14.0 percent to $\$ 3.9$ billion for 1993. After the EIC, the largest specific increase was for the foreign tax credit, which doubled from $\$ 482$ million for 1992 to $\$ 969$ million. However, some of the increase in the foreign tax credit may be due to the addition of two new tax rates for high-income taxpayers. As taxpayers enter higher tax brackets, the amount of the foreign tax credit that can be claimed against foreign tax payments may increase. Evidence that might support this assertion can be found in the more than $\$ 300$ million increase in the foreign tax credit for taxpayers with an AGI of $\$ 200,000$ or more. Table 5 presents more detailed data on tax credits, as well as on selected deductions, taxes, and tax payments, classified by size of adjusted gross income.

## Filing Patterns and Characteristics of Returns

As of the end of April 1994, when sampling of returns for the ETE statistics was completed, 106.8 million taxpayers had filed their individual income tax returns. This represents an increase of 0.5 percent compared to 1992 (Figure G). As a percentage of returns expected to be filed,

${ }^{1}$ Projected total by the IRS Compliance Research of Forms 1040, 1040A, 1040EZ, and electronically-filed returns; as adjusted for Statistics of Income.
${ }^{2}$ Estimated on the basis of projections for Tax Year 1993.
r-revised.
NOTE: Ail data are for retums filed through April
93.2 percent of returns were filed by the end of April, compared to 93.4 percent for 1992 [3]. For the preceding 5 years, returns filed through the end of April ranged between 93.0 and 94.2 percent of all returns filed during the Internal Revenue Service (IRS) processing year (Figure G) [4].

Figure H shows that the three major changes in the types of returns filed for 1993 were the increase in the share of Forms 1040EZ (U.S. Individual Income Tax Return for Single and Joint Filers with No Dependents) filed, (which reversed a 5 -year long downward trend), the marked decrease in the proportion of Forms 1040A (U.S: Individual Income Tax Return) filed, and a continued increase in the percent of returns filed electronically. Filing of the Form 1040EZ increased by 8.1 percent to 17.2 million.

Some of the increase was due to a change in the filing requirements which enabled joint filers to use the Form 1040EZ for the first time. For 1993, almost 800,000 married couples took advantage of this change by filing a Form 1040EZ. Meanwhile, the number of Form 1040A returns filed decreased by 7.3 percent to 18.2 million.

The number of electronically-filed returns ( 1040 ELF) increased by 7.9 percent, to 13.4 million. Filing of Form 1040 PC, 1993.U.S. Individual Income Tax Return 1040PC Format, which is an IRS-approved computer printout of only those items for which the taxpayer is providing information, increased 2.6 percent to 4.1 million for 1993 [5]. Table 1 at the end of this article presents return characteristics by income size and filing status for each Form 1040 return type.

## Individual Income Tax Returns, 1993: Early Tax Estimates

## 1993 Tax Law Changes

The two most significant changes in Federal tax law affecting the statistics for 1993 , in addition to the changes in the EIC noted earlier, were the creation of two new tax brackets applicable to high-income taxpayers, and the increase in and graduation of tax rates for the "alternative minimumtax."

The new tax brackets provided marginal tax rates of 36 and 39.6 percent. Figure I shows the various levels of taxable income by filing status where the new marginal rates apply. Note that the income ranges for the amount of income taxed at the 15,28 , and 31 percent tax brackets were increased. These new ranges were set by statute and any future indexing of the tax brackets will be based on the 1993 boundaries.

The Omnibus Budget Reconciliation Act of 1993, which created the 36 and 39.6 percent tax rates, was enacted in August 1993 and made retroactive to the beginning of the year. As a result, taxpayers affected by the new tax rates were permitted the option of deferring payment on twothirds of the tax owed that was in excess of the tax that would have been owed at the 31 percent rate. Taxpayers
electing the deferment option were required to file Form 8841, Deferral of Additional 1993 Taxes, with their tax return. Half of the deferred taxes must be paid with the taxpayer's 1994 return and the remaining half with the 1995 return.

For tax years beginning after 1993, the basic alternative minimum tax rate was increased from 24 to 26 percent. In addition, a second rate of 28 percent was introduced which applied to amounts of "alternative minimum taxable income" (AMTI) in excess of $\$ 175,000(\$ 87,500$ if married filing separately). This increase in tax rates was partially offset by an increase in the alternative minimum tax exemption, which rose from $\$ 40,000$ to $\$ 45,000$ for married persons filing jointly and qualifying widow(er)s, from $\$ 30,000$ to $\$ 33,750$ for single persons and heads of households, and from $\$ 20,000$ to $\$ 22,500$ for married persons filing separately.

In addition to all of these changes, Federal tax law requires that standard deductions, personal exemptions, and the earned income credit be indexed so that inflation does not erode them, thereby causing taxpayers to be subjected to higher tax rates. For 1993, these amounts were increased by approximately 3 percent.

## Figure 1

[^5]Individual Income Tax Returns, 1993: Early Tax Estimates.

## Data Sources and Limitations

The statistics presented in this article were derived from a sample of all individual tax returns received in the ten IRS service center mailrooms from January 1, 1994, through April 29, 1994. The sámple was selected based on the primary social security number (SSN) (i.e., the SSN of the "primary" or first listed taxpayer in the case of joint returns) ending in one of two pre-defined orders for the last four digits. Specifically, two numbers between 0000 and 9999 were chosen, so that all returns ending in one of these two numbers were sampled. Electronically-filed returns with a primary SSN ending in one of these two four-digit combinations were also included in the sample. This method of sampling provides the same results as a random sample. The returns studied for the ETE statistics are a subset of the returns included in the sample used for Statistics of Income -- Individual Income Tax Returns.

Since two SSN endings out of a possible 10,000 were selected, each return represented one out of 5,000 returns in the population. The size of the entire ETE subsample from January 1 through April 29, 1994, was 21,196 returns. Weights were adjusted for returns identified as missing from the sample.

Since the data presented in this article are estimates based on a sample, they are subject to sampling (as well as non-sampling) error. Non-sampling error may be higher for ETE data than for other SOI data because approximately $20^{\circ}$ to 25 percent of the returns included had not yet been subjected to any of the regular IRS return-processing steps, which would have corrected many taxpayer reporting errors. These returns showed a tax due at time of filing and are typically processed after April 15th, to permit refund returns to be given a higher priority. Sample returns with tax due were identified when they were received at the IRS centers and forwarded for SOI processing prior to regular IRS processing. During SOI processing they were tested for internal consistency, however, so that the more obvious taxpayer omissions and math errors were corrected.

If statistical data are to be used properly, the magnitude of the sampling error must be known. Coefficients of variation (CV's), computed from the sample, are used to measure the magnitude of the sampling error [6]. Figure J presents approximate CV's for frequency estimates. These CV's are intended only as a general indication of data reliability. For numbers of returns other than those shown, the corresponding coefficients of variation can be estimated by interpolation.

## Figure J

## Notes and References

[1] U.S. Department of Labor, Bureau of Labor Statistics, Monthly Labor Review. Represents annual averages of monthly figures; reflects buying patterns of all urban consumers. Indices used were 1992 CPI-U = $140.3 ; 1993$ CPI-U $=144.5$.
[2] U.S. Department of Labor, Bureau of Labor Statistics, Employment and Earnings, monthly.
[3] In the 1992 ETE article, it was noted that the percentage of returns filed through the end of April 1993 was the lowest since 1987. This was based on an IRS projection of $114,722,000$ returns for the full processing year. Às can be seen from Figure G, the actual number of returns filed in 1993 was only $113,754,000$. Consequently, the percentage of returns filed through the end of April 1993 for Tax Year 1992 did not change as dramatically as previously asserted, although it did decline markedly from Tax Year 1991.
[4] Taxpayers could legitimately file after April 15 if:
(a) they lived outside the United States and Puerto Rico and their main place of business or military post of duty was outside the United States and Puerto Rico (these taxpayers were permitted an automatic extension to August 17);
(b) they filed a Form 4868 for an automatic extension of the filing deadline, paying the estimated balance due with this form (these taxpayers were permitted an automatic extension to August 17); or

## Individual Income Tax Returns, 1993: Early Tax Estimates

c) they filed a Form 2688 for an additional extension of time to file (these taxpayers were granted an extension of 2 or more additional months, provided that there was a good reason why the previous 4-month extension was inadequate).
[5] Form 1040PC returns are computer-generated returns which contain only line numbers and data entries. Only those lines of the tax form which contain an entry appear on the Form1040PC, resulting in a return
containing fewer pages than if the same return had been prepared using the standard IRS form and schedules.
[6] The coefficient of variation is the ratio of the standard error of the estimate to the estimate itself. For more information on the coefficient of variation and how to use it in interpreting ETE data, see "SOI Sampling Methodology and Data Limitations," in the Appendix to this issue of the Bulletin.

## Individual Income Tax Returns, 1993: Early Tax Estimates

Table 2.-All Returns: Total Income and Sources of Income, by Size of Adjusted Gross Income-Continued [All figures are estimates based on samples--number of retums is in thousands, amounts are in millions of dollars]

[^8]
## Individual Income Tax Returns, 1993: Early Tax Estimates

Table 3.-All Returns: Total Income, Selected Statutory Adjustments, and Adjusted Gross Income, by Size of Adjusted Gross Income
[All figures are estimates based on samples-number of retums is in thousands, amounts are in millions of dollars]

${ }^{1}$ The sum of ail sources of income less loss, before reduction by statutory adjustments. Total income less statutory adjustments equals adjusted gross income.
${ }^{2}$ Includes 65,000 returns with other statutory adjustments not shown separatelly. Other stautory adjustments totaled $\$ 59$ million.
${ }^{3}$ Returns with adjusted gross deficit.

- Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTES: Detail may not add to totals because of rounding. All data are based on retums filed through April.

## Individual Income Tax Returns, 1993: Early Tax Estimates

Table 4:-Returns with Itemized Deductions: Selected Income and Deduction Items; by Size of Adjusted Gross Income
[All figures are estimates based on samples-number of returns is in thousands; amounts are in millions of dollars]

1 Exctudes electronically-filed returns and computer-generated returns (Form 1040 PC), shown separately.

- Estimate should be used with caution because of the small number of returns on which it is based.

N/A - Not applicable.
NOTES: Detail may not add to totals because of rounding. All data are based on returns filed through April. Differences exist between the number of raturns with a specitic characteristic and the rumber with a specific schedule in support of the characteristic, e.g., an individual may attach Schedule A (temized Deductions) in error, but use the standard deduction on Form 1040. Therefore, data in this table may not be consistent with the statistics in other tables.

# Sole Proprietorship Returms, 1992 

by Michael Strudler and Marty Shiley

Non-farm sole proprietorship profits for 1992 increased from $\$ 141.5$ billion to $\$ 154.0$ billion (Figure A): This 8.8 percent increase reflects the recovery from the recession that began in the third quarter of 1990. For 1992, both receipts and deductions also increased, but receipts grew at a slightly faster rate, enabling profits to increase by a larger percentage than either receipts or deductions; receipts increased by 3.4 percent to $\$ 737.1$ billion and deductions increased by 2.1 percent to $\$ 583.1$ billion. The growth in profits was led by firms in the construction and finance, insurance, and real estate industries. The services division, the largest industrial division for sole proprietorships, also displayed a major increase in profits for 1992. Among services, which included over 60 percent of all sole proprietorship profits, the medical and health service industries continued to account for the largest amount of profits, $\$ 32.4$ billion for 1992. However, the 4.7 percent rate of growth in profits for this group lagged behind that for other industrial groups, with the percentage increase representing the lowest for this group since 1981. On the other hand, profits reported for legal services (\$11.2 billion) were up shárply, nearly 14 percent, compared to 1991.

## Recelptsand Profits

The number of individual income tax returns reporting nonfarm sole proprietorship activity for 1992 rose 2.1 percent from 1991, to 15.5 million [1]. Sole proprietorship total receipts (the sum of "income from sales and operations" and "other income") increased from $\$ 712.6$ billion to $\$ 737.1$ billion over this period (3.4 percent) [2]. For 1992, all of the sole proprietorship industrial divisions reported increases in receipts, except for mining. Most reported moderate gains, with the largest relative increase being the 16.6 percent recorded for manufacturing. However, manufacturing is à small industrial division as far as sole proprietorships are concerned. Of the major sole proprietorship industrial divisions, services experienced the largest growth in total receipts, increasing 5.1 percent from $\$ 246.9$ billionto $\$ 259.5$ billion.

Profits for 1992 increased 8.8 percent over 1991, from $\$ 141.5$ billion to $\$ 154.0$ billion [3]. This increase represented a rebound from the small increase ( 0.1 percent) for 1991. When inflation is taken into account, 1991 profits actually decreased by 4.0 percent, while 1992 profits went up by 5.6 percent (Figure B) [4]. Using the inflation-

[^11]"adjusted figures, 1992 was characterized by the largest increase in sole proprietorship net income less deficit since 1988. After the economy recovered from the recession of the early 1980 's, sole proprietorship profits had risen sharply each year from 1983 through 1988, as receipts grew more rapidly than deductions. Since 1989 the growth in receipts slowed in terms of constant dollars, resulting in a small increase or decrease in each year (Figure C). For 1992, receipts grew by just 0.4 percent in constant dollars. Further, despite the apparent rebound for 1992, inflationadjusted levels for receipts were still below 1987 levels.' Figure D, which presents profits as a percentage of business receipts, shows that since 1983; profits had gradually increased as a percentage of receipts. This trend continued for 1992, with the strongest increase in profits as a percentage of receipts since 1988.

## Deductions and Losses

Business deductions (business expenses, plus expenses for a home office, plus cost of sales and operations) increased 2.1 percent to $\$ 583.1$ billion for 1992 (Figure E) [5]. Most of this gain can be attributed to an increase of 3.5 percent in business expenses, which accounts for a

## The 8.8 percent

increase in non-farm
profits reflects the
recovery from the
1990-1991 recession. increased only slighty for 1992 (0.6 percent) to $\$ 274.2$ billion. Home office expenses increased by 2.4 percent from 2.9 billion for 1991 to $\$ 3.0$ billion. In constant dollars, total deductions decreased by 0.9 percent for 1992 (Figure C). This was the fourth. consecutive decline for sole proprietorship deductions (in constant dollars) since 1988.

The depreciation deduction increased by only 0.9 percent, the first increase since 1988. The deduction began to decline for 1987, following enactment of the Tax Reform Act of 1986 (TRA). The Act reduced the allowable depreciation deduction by lengthening the cost recovery periods and changing the depreciation methods for property placed in service after 1986. Depreciation fell 3.0 percent for 1987, the first such decrease since 1961. After increasing slightly for 1988, its decline resumed. The 1992 amount, $\$ 23.3$ billion, accounted for 4.0 percent of total deductions. For 1986, the last year prior to TRA, depreciation was $\$ 26.4$ billion and accounted for 5.6 percent of total deductions. Even with the increase in depreciation

reported for 1992, the deduction was still less than that recorded for 1984 (Figure F).

TRA also placed restrictions on "passive losses," effective for 1987, in an effort to curb investment in "tax shelters" [6]. Although this change affected certain industrial groups more than others, the restrictions continued to have a very limited effect on overall sole proprietorship profits. Overall passive losses declined in
sole proprietorships by 24.0 percent, from $\$ 132.3$ million to $\$ 100.6$ million for 1992 (Figure G). Disallowed passive losses for services (concentrated in hotels, medical, and legal services) increased 13.5 percent from 1991 to 1992, accounting for 56.9 percent of total sole proprietorship disallowed passive losses. Disallowed losses reported for finance, insurance, and real estate (concentrated in insurance service and real estate), decreased dramatically from $\$ 42.2$ million for 1991 to $\$ 12.7$ million for 1992.

## Industry Trends

All industrial divisions showed an increase in profits for 1992. Of the principal industrial divisions that characterize sole proprietorship activity, construction showed the largest percentage increase. Net income less deficit for this division grew by 12.7 percent, from $\$ 14.9$ billion for 1991 to $\$ 16.9$ billion for 1992 (Figure A). This was followed by a 10.7 percent increase for the finance, insurance, and real estate division. Net income less deficit for this division increased from $\$ 15.4$ billion for 1991 to $\$ 17.1$ billion. Lower interest rates and the accompanying economic recovery appear to have had a positive effect on both of these divisions. The services industrial division showed the largest dollar gain in profits, increasing from $\$ 87.0$ billion for 1991 to $\$ 93.1$ billion. The 1992 total for this division represented 60.5 percent of all sole proprietorship profits. Mining and manufacturing showed the largest percentage increases in profits. However, these are both relatively minor industrial divisions for sole proprietorships since the bulk of mining and manufacturing receipts are concentrated in the corporate area.

Using receipts as a measure of business size, services
continued to be the largest sole proprietorship division with 35.2 percent of all receipts for 1992. Total receipts for this division were 5.1 percent more than 1991, at $\$ 259.5$ bilion. Total deductions for the services division increased 4.0 percent to $\$ 166.4$ billion, which was smaller than the increase in receipts; the resulting profits of \$93.1 billion were 7.1 percent more than 1991.

For 1992, the largest profits of any industrial group within the services division was recorded for medical and health services. Profits increased 4.7 percent to $\$ 32.4$ billion. However, this increase was the smallest percent-age-wise since 1981 (Figure H). For every year from 1984 through 1990, annual profits had shown double digit growth over the previous year for this industrial group. For 1991, when overall sole proprietorship profits were stagnant, profits for this group still increased by 8.7 percent. In comparison, net profits for all services increased by 3.4 percent. Yet, for 1992, when overall sole proprietorship profits increased by 8.8 percent, the profits for the medical field trailed other groups. On the other hand, the rate of growth in profits for legal services increased 13.6 percent, from $\$ 9.8$ billion for 1991 to $\$ 11.2$ billion for 1992. This continued the double-digit annual growth rate in profits for this industrial group reported for most years since 1984 (with 1989 and 1991 the exceptions).

Wholesale and retail trade was the second largest sole proprietorship division in terms of receipts, with 33.6 percent of all receipts for 1992. For this division, both receipts and deductions increased slightly, by 0.6 percent and 0.2 percent, respectively. Automotive dealers and service stations reported fairly healthy increases in both receipts and deductions over 1991 ( 6.2 percent and 6.9 percent, respectively). However, since their deductions increased more than receipts, their combined net profits decreased from $\$ 1.5$ billion to $\$ 1.2$ billion. On the other hand, food stores reported fairly large decreases in receipts and deductions (7.1 percent and 7.5 percent, respectively). The net effect of these changes was that profits for sole proprietorship food stores increased by 5.9 percent, from $\$ 1.1$ billion for 1991 to $\$ 1.2$ billion for 1992 . Total profits for the entire trade division increased from $\$ 13.1$ billion ( $\$ 4.9$ billion for wholesalers and $\$ 8.2$ billion for retailers) to $\$ 13.9$ billion ( $\$ 5.4$ billion for wholesalers and $\$ 8.5$ billion for retailers) (Figure A).

The third largest industrial division for sole proprietorships was construction, with receipts totaling $\$ 96.6$ billion. This amount was 13.1 percent of all sole proprietorship receipts for 1992. This represented a 4.4 percent increase in comparison to $\$ 92.5$ billion the year before. Meanwhile, deductions only increased by 2.8 percent, from $\$ 77.6$ billion to $\$ 79.7$ billion. This led to the

NOTE: Net income (less deficit) after 1986 is after passive loss limitations.
largest percentage increase in profits of the principal industrial divisions. The fourth largest division was finance, insurance, and real estate, with 6.2 percent of sole proprietorship receipts for 1992. These receipts increased by 5.1 percent, from $\$ 43.6$ billion for 1991 to $\$ 45.9$ billion for 1992. When combined with only a 1.9 percent increase in deductions, the resulting increase of 10.7 percent in net profits gave finance, insurance, and real estate the second largest percentage gain in profits of all the principal industrial divisions.

## Summary

For 1992, profits for sole proprietorships rose by 8.8 percent to $\$ 154.0$ billion; both receipts and deductions also increased, but by lèsser percentages. Construction ( 12.7 percent) and finance, insurance, and real estate (10.7 percent) reported the largest percentage increase in profits among principal industrial divisions for 1992: The services division accounted for 60.5 percent of the overall profits for 1992, as profits increased by 7.1 percent to $\$ 93.1$ billion. This was exemplified by legal services, whose profits grew by 13.6 percent. However, medical services experienced its lowest increase in profits since 1981, despite the fact that this group had the largest profits in the services industry division for 1992. The 1992 depreciation deduction increased slightly, but with the gradual decline that began after enactment of the Tax Reform Act of 1986, was still lower than 1984 levels. Disallowed "passive losses" declined by 24.0 percent. However, the passive loss' restrictions imposed by the Act continued to have only a minimal effect on the profits of proprietorships.

## Data Sources and Limitations

The appendix to the Bulletin presents a general description of sampling procedures and data limitations applicable to the Statistics of Income (SOI) tabulations. Specific information applicable to sole proprietorship data for 1992 is presented below.

## SampleSelection Grtieria

The 1992 sole proprietorship estimates are based on a sample of individual income tax returns, Forms 1040 and 1040PC, processed by the Internal Revenue Service (IRS) during 1993. The sample was stratified based on presence or absence of Schedule C, Profit or Loss from Business (Sole:Proprietorship); Schedule F, Farm Income and Expenses; the larger of total positive income or total negative income (i.e., income or loss before statutory adjustments) and tax year. The returns were selected at rates that ranged from 0.03 percent to 100 percent. For 1992, there were 32,978 non-farm sole proprietorship returns included in the sample. These were drawn from a population of $15,495,419$ returns. By comparison, 40,248 returns were drawn from a population of $15,180,722$ for 1991.

## Unitrations

Because the data presented in this article are estimates based on a sample of returns, they are subject to sampling as well as nonsampling error. To insure proper use of the estimates, the magnitude of the potential sampling error should be known.

Figure I presents approximate coefficients of variation
(CV) for frequency estimates. These CV's can be used to obtain measures of the potential sampling error. They are shown here only as a general indication of data reliability. For numbers other than those shown, the corresponding CV's can be estimated by interpolation. The reliability of estimates based on samples and the use of CV's for evaluating the precision of sample estimates are also discussed in the Appendix.

## Notes and References

[1] For 1992, the 15,495,419 non-farm sole proprietorship returns filed accounted for $17,292,286$ non-farm businesses. Actually, there may have been more businesses than those counted; processing for tax administration purposes allows only three businesses (reported on separate Schedules C) per return, and combines any remaining businesses on one (or more) of the three Schedules C. Statistics of Income-1981, Sole Proprietorship Returns contains a more detailed explanation of the relationship between proprietors and proprietorships.

For purposes of the statistics, if a proprietor owned more than one business, the statistics for each were combined with those of the proprietor's dominant business and included in the industrial group for that business activity. When this occurred, the sum of net incomes (for businesses reporting a positive net income) reduced by the sum of net deficits (for businesses reporting a deficit) yielded the profits for a specified industrial group.
The Standard Industrial Classification Manual, 1987, issued by the U.S. Office of Management and Budget, was used to classify data by industry. These classifications are applied on a "per business" (rather than on a "per establishment") basis for Statistics of

Income by combining various industry groups, although businesses were further combined as described above.
[2] Statistics for "business receipts" in Table 2 represent the total receipts of the business, mainly gross receipts from sales and operations. Business receipts also include miscellaneous business receipts, such as incidental sales of scrap, shown separately in the statistics as "other income." However, business receipts exclude incidental investment income received through the business. Examples are interest, dividends, income or loss from rents or royalties, and capital or ordinary gain or loss from the sale of investment and business property. Sole proprietors report incidental investment income, which qualify as personal income, in combination with nonbusiness related investment income directly on page one of their individual income tax returns.
[3] Net income minus deficit (loss) before Federal income tax, yields profits. Proprietors compute their tax on total "taxable income," which includes their business profits plus any other income.
[4] U.S. Department of Labor, Bureau of Labor Statistics, Consumer Price Index Detailed Report, August, 1993. Represents annual averages of monthly figures; reflects buying patterns of all urban consumers; based on 1982-84 $=100$. Indices used for Figures B and C were:

| Year | Indices | Year | Lndices |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
| 1981 | 90.9 | 1987 | 113.6 |
| 1982 | 96.5 | 1988 | 118.3 |
| 1983 | 99.6 | 1989 | 124.0 |
| 1984 | 103.9 | 1990 | 130.7 |
| 1985 | 107.6 | 1991 | 136.2 |
| 1986 | 109.6 | 1992 | 140.3 |

[5] Sole proprietors report all personal income and expense items on to their individual income tax returns, not on the attached Schedules C. Salaries paid to owners, for example, qualify as personal income, not as a business expense, and are therefore part of the owner's taxable income. Similarly, sole proprietors deduct charitable contributions made through the business as personal expenses on Schedule A. However, the owner of a sole proprietorship may

Sole Proprietorship Returns, 1992
choose to deduct any foreign taxes paid as a business expense, unless the owner elects to claim these taxes as a credit against U.S. income tax.
[6] Losses generated by any flow-through business activity in which the taxpayer did not "materially participate" (i.e., was not involved regularly and. substantially in the operations of the activity) qualified as passive activity losses. The Tax Reform Act of

1986 (TRA) gradually eliminated the use of passive losses as a means to offset nonpassive income, such as wages or dividends. TRA provided for a 5 -year phase-in of the limitations on passive losses for investments made prior to 1987 ; for 1992, the restrictions applied to all passive losses. However, exceptions up to $\$ 25,000$ were made for certain real estate losses. Under prior law, passive losses were fully deductible.

. I Interest paid is the sum of mortgage interest and other interest on indebtedness (see Table 2).
${ }^{2}$ Payroll is the sum of net salaries and wages paid plus the cost of labor reported as part of cost of sales and operations (see Table 2).
*Estimate should be used with caution because of the small number of sample returns on which it is based.
NOTE: Detail may not add to totals because of rounding.

small number of sample returns on which it is based.

# Partnership Returns, 1992 

by Timothy D. Wheeler

For 1992, partnerships reported the largest annual increase in profits in recent history, as net income (less deficit) more than doubled, from $\$ 21.4$ billion to $\$ 42.9$ billion (Figure A). This increase continued the trend that began after enactment of the Tax Reform Act of 1986, a trend that was re-enforced for 1992 by the acceleration of the economic recovery following the recession of 1990-1991. The 1992 increase in net income (less deficit) was caused by both an increase in net income and a decline in net deficit. Net income increased 7 percent, from $\$ 113.4$ billion for 1991 to $\$ 121.8$ billion for 1992, the third largest increase in over two decades. At the same time, net deficit decreased 14 percent, from $\$ 92.0$ billion to $\$ 78.9$ billion, the largest decline in over two decades. Although the industry group of real estate operators and lessors of buildings has historically reported the largest deficits ( $\$ 33.1$ billion for 1992), this group was the largest contributor to the rise in net income (less deficit), accounting for $\$ 8.5$ billion ( 40 percent) of the overall $\$ 21.5$ billion increase (Figure B) [1-7].

## Partnership Activity in 1992

Notwithstanding the overall increase in partnership profits for 1992, both the number of partnerships ( 1.5 million) and the number of partners ( 15.7 million) declined slightly (Figures C and D). Even though the number of limited gain partnerships decreased slightly, while the number of limited loss partnerships showed a small increase, the net deficit for all limited partnerships showed one of the

Timothy D. Wheeler is a statistician with the Corporation Special Projects Section. This article was prepared under the direction of Alan Zempel, Chief.
largest declines in recent years, from $\$ 16.7$ billion for 1991 to $\$ 3.3$ billion for 1992. (Limited, as well as general partnerships, are discussed in the Explanation of Selected Terms section under "Partners.") About threefourths of all limited partnerships and almost 70 percent of the total number of partners in all partnerships were in the finance, insurance, and real estate industrial division. The 1992 net losses (losses in excess of gains) reported by limited partnerships in finance, insurance, and real estate totaled $\$ 6.3$ billion, compared to the net loss of $\$ 3.3$ billion reported for all limited partnerships. In contrast, for 1991, limited partnerships in finance, insurance, and real estate had a net loss of $\$ 13.8$ billion, and all limited partnerships showed a net loss of $\$ 16.7$ billion (Figure E).

The continuing improvement of partnership profitability is further indicated since, from 1990 to 1991, only two industrial divisions (finance, insurance, and real estate and services) showed increased profits, while from 1991 to 1992 every industrial division except wholesale and retail trade showed increases. For 1992, as for previous years, partnership business operations continued to be dominated by activities in either finance, insurance, and real estate, or services (Figures E and F). Together, these two industrial divisions accounted for more than threefourths of each of the $\$ 121.8$ billion in positive net income (gain), $\$ 78.9$ billion in net deficit (loss), and $\$ 42.9$ billion total for net income (less deficit). Most of the $\$ 13.1$ billion overall decline in net deficit for 1992 was also concentrated in these two divisions, $\$ 9.6$ billion in finance, insurance, and real estate and $\$ 1.8$ billion in services.

For 1992, the losses generated by partnerships in the real estate industry no longer overwhelm the gains in the finance and insurance industries, as they have in recent years. The $\$ 14.8$ billion net gain shown for the finance and the insurance industries almost equalled the $\$ 15.4$ billion net loss generated by the real estate industry. The net income (less deficit) for finance and insurance increased ( 14 percent) from $\$ 12.8$ billion for 1991 to $\$ 14.6$ billion for 1992. For the same period, the net loss reported for the real estate industry declined ( 40 percent), from $\$ 25.6$ billion for 1991 to $\$ 15.4$ billion for 1992. Within the finance and insurance industries, holding and investment companies accounted for 69 percent of net income (less deficit) and the security and commodity brokers and service industry accounted for an additional 29 percent.

Within real estate, businesses that were operators and lessors of buildings led the way (Figure E), followed by businesses that were subdividers and developers. Real estate as a whole accounted for 82 percent of the limited

partnerships in finance, insurance, and real estate. Limited partnerships in real estate had a net deficit of $\$ 17.2$ billion, while the net deficit for the entire finance; insurance and real estate division was a comparatively modest $\$ 6.3$ billion. Of the $\$ 9.6$ billion decline in net losses for finance, insurance, and real estate; operators and lessors of buildings accounted for about two-thirds, and real
estate subdividers and developers accounted for most of the remaining decrease in losses.

While real estate partnerships dominated losses, part-: nerships in the services industrial division dominated profits (Table 1). Although the service industries accounted for only 17 percent $(252 ; 517)$ of all partnerships, they accounted for almost 77 percent ( $\$ 33.0$ billion) of the

'Total includes partnerships whose principal business activity could not be determined.
net income (less deficit) for all partnerships. Over half of the net income (less deficit) for partnerships classified in services was attributable to legal services, with medical and health services a distant second ( $\$ 7.3$ billion), followed by accounting, auditing, and bookkeeping services ( $\$ 4.2$ billion). Profits for all of these groups were up for 1992.

## Real Estate Operators and Lessors of Buildings and Rental Real Estate Income

Although its impact on total partnership losses has lessened, the real estate operators and lessors of buildings industry still remains the most important overall industry for these partnership statistics, accounting for 38 percent of the total assets for all partnerships (Figure F). In addition, almost one-third of all partnerships and almost one-half of all partners are classified in this industry. Even though the number of partnerships in this industry remained relatively constant over the 1983-1992 decade at between 32 and 36 percent of all partnerships, 1992 marked the fourth consecutive year for which their
number declined (Table 5).
This same group, which historically accounted for a dominant portion of the losses recorded for all partnerships, was responsible for almost 40 percent ( $\$ 8.5$ billion) of the total increase in profits ( $\$ 21.5$ billion) for all partnerships (Figure A). Real estate operators and lessors of buildings, as a group, accounted for 19 percent of the gains and 43 percent of the losses reported by all partnerships. Gains alone for the group rose, for 1992, to $\$ 23.7$ billion, up $\$ 1.6$ billion, or 7 percent. Losses dropped dramatically ( 17 percent) for 1992 , from $\$ 40.7$ billion, for 1991 , to $\$ 33.8$ billion, continuing the trend of declining losses that started in 1990. Losses declined 8 and 15 percent for the periods 1989-1990 and 1990-1991, respectively (1989, $\$ 52.2$ billion; 1990, $\$ 47.8$ billion).

The 1992 increase in the net profits for this industry was largely due to a 41 percent ( $\$ 11.7$ billion) increase in real estate rental income (less loss), from $\$-28.6$ billion for 1991 to $\$-16.9$ billion for 1992 . Over three-fourths of this increase was attributable to partnerships classified in the real estate operators and lessors of buildings industry.

Partnership. Returns, 1992

## Figure F

## Partnership Total Assets and Receipts, by Industrial Groupings, Tax Year 1992

## Partnership Returns, 1992

While net rental income for all partnerships went up from $\$ 20.2$ billion in 1991 to $\$ 22.2$ billion in 1992, it was the drop in net rental loss, from $\$ 48.7$ billion in 1991 to $\$ 39.1$ billion in 1992 that was most significant. The majority of this increase in net rental income (less loss) was caused by a $\$ 5.6$ billion increase in gross rental income, from $\$ 148.0$ billion for 1991 to $\$ 153.6$ billion. Also contributing to this increase was a $\$ 4.8$ billion decrease in the interest deduction, from $\$ 65.2$ billion in 1991 to $\$ 60.4$ billion in 1992 (Table 3). The number of partnerships reporting rental income on Forms 8825 dropped from 634,309 for 1991 to 624,512 for 1992, a decline of 1.5 percent, after having dropped by 7 percent over the entire previous 3 years. (Rental real estate income and expenses items are reported on the Form 8825, Rental Real Estate Income and Expenses of a Partnership or an S Corporation, attached to partnership returns.)

## Total Assets and Total Receipts

Table 2 presents balance sheet data by industrial group and by profit status for partnerships required to file balance sheets with their returns. Approximately 7 percent of partnerships -- generally partnerships with both total receipts and total assets of less than $\$ 250,000$-- were not required to file balance sheets. Over the 1980-1989 period, reported total assets grew in 7 of the 9 years. Almost 80 percent of the overall growth during that period occurred in finance, insurance, and real estate. While only modest annual growth rates occurred for 1990 (1 percent) and for 1991 (2 percent), for 1992 total assets for all partnerships grew by 5 percent ( $\$ 90.8$ billion) to $\$ 1.9$ trillion. Nearly 60 percent of the 1992 increase occurred in the finance, insurance, and real estate division. Most of this increase was concentrated within the security and commodity brokers and service industry, as well as the holding and investment company industry.

Total receipts increased slightly over 6 percent or $\$ 37.2$ billion, to $\$ 648.8$ billion (see the Explanation of Terms section for the definition of total receipts). Most of the increase was due to "business receipts," i.e., gross receipts from sales and operations, especially in the services division ( $\$ 13.3$ billion), manufacturing ( $\$ 12.8$ billion), wholesale and retail trade ( $\$ 8.1$ billion), and transportation and public utilities ( $\$ 4.5$ billion). The receipts in services accounted for 30 percent of the partnership total. Business receipts for finance, insurance, and real estate were not significant in the statistics because most of the operating income of these partnerships is not included in business receipts, but in other types of income such as rental income.

## Distributions to Partners

Partnerships are not taxed. Instead, their income, credits, and deductions flow through to the partners who are liable for the tax. Partners may be individuals, corporations, other partnerships, tax-exempt organizations, nominees, or other legal entities. Table 4 presents data on the distributions (or allocations) of partnership income (or losses) to limited and general partners by industrial division. These data were obtained from Schedule K of the partnership return which reports the partners' shares of each separately allocable component of the partnership's distributive income, deductions, and tax credits, as totals and by type of partner. The amounts distributed or allocated reflect the ownership shares of partnership income (or loss) by the various types of partners.

For 1992, the total amount of income (less loss) available for distribution -- without regard to separately allocable deductions -- increased 34 percent, from $\$ 68.6$ billion to $\$ 91.6$ billion. Deductions increased by $\$ 0.5$ billion to $\$ 22.9$ billion. The difference between the income (less loss) and deductions resulted in $\$ 68.7$ billion available for distribution or allocation to partners. Of this amount, $\$ 59.6$ billion ( 87 percent) was actually identified by type of partner. The difference was due to partnerships which failed to report distributions or allocations by type of partner.

Individuals who were general partners were the principal category of income recipients for every industrial division except mining and transportation and public utilities. For mining, distributions or allocations were mostly to general partners that were corporations and to limited partners that were partnerships. For transportation and public utilities corporate general partners and taxexempt organization general partners predominated.

Even though the real estate industry group produced losses for its partners, general partners who were individuals received positive income of nearly $\$ 7.0$ billion, up from $\$ 2.5$ billion for 1991 . Individual limited partners were still characterized by net losses. For 1992, these net losses amounted to $\$ 2.3$ billion, a one-third increase over the $\$ 1.7$ billion reported for individual limited partners for 1991.

## Summary

Although both the number of partnerships and partners declined slightly for 1992, net income (less deficit) doubled to $\$ 42.9$ billion, the largest increase in recent years (Table 5). This increase was the net result of an $\$ 8.4$ billion increase in positive net income and a $\$ 13.4$ billion decrease in the net deficit. Real estate operators and lessors of buildings, an industry group prominent in
"tax sheltering" activities of the early to mid-1980's, accounted for 40 percent of the $\$ 21.5$ billion increase in total partnership net income (less deficit). The increase in the overall profits of partnerships for 1992 was mainly caused by increased real estate rental revenues, as well as by the decreased interest deductions associated with these revenues. In addition, the services division continued to dominate the statistics for partnership receipts, accounting for 30 percent of the total.

Most of the pre-tax reform tax shelter activity occurred through usé of limited partnerships. Although the number of limited partnerships remained fairly constant, they accounted for 63 percent of the increase in net income (less deficit) for the year.

## Sample Selection

Tax Year 1992 statistics are estimates based on a stratified probability sample of slightly over 29,000 returns selected from a population of approximately 1.5 million partnerships. Tax Year 1992 covers returns processed by the Internal Revenue Service during Calendar Year 1993. All partnerships engaged in business in, or haying income from sources within, the United States were required to file a Form 1065, U.S. Partnership Return of Income, to report income or loss, deductions, tax credits and other tax-related items generated by the partnership. The statistics are only for active partnerships, which are defined as those that reported any items of income or deduction derived from a trade or business, or from rental or portfolio income.

The sample was stratified into classes based on size of total assets, receipts, net income (or deficit) and industry. Returns were selected from these classes at various probabilities ranging from 0.12 percent to 100 percent, and were weighted to represent the total population. Approximately 2 percent of the returns selected for this sample were not included in the tabulations because they represented inactive partnerships or because multiple returns had been filed by the same partnership.

Because the data presented in this article are based on a sample of returns, they are subject to sampling error. To properly use the data, the magnitude of the potential sampling error needs to be known. Coefficients of variation (CV's) are used to measure this magnitude. Figure G presents the coefficients of variation for certain money amounts, for selected industrial groups. The smaller the coefficient of variation, the more reliable the estimate is judged to be [8].

receipts and total assets of $\$ 250,000$ or more. No attempt was made to estimate the assets and liabilities of those not required to provide this information. Although efforts were made to overcome the effects of nonuniform reporting, especially by firms that used balance sheets of their own design instead of that provided on the return; certain anomalies were accepted, e.g., when a negative amount was reported for an asset or liability account.

Partiners.-- Partners can be individuals, corporations, other partnerships, or any other legal entity. Partners are classified as either general or limited. General partners are those who assume liability for the partnership's debts and losses. Limited partners are those whose liability in the partnership does not exceed their investment. By definition, a partnership must have at least two partners, at least one of which must be a general partner. A general partnership is composed entirely of partners who are general partners. A limited partnership has at least one general partner and one or more limited partners.

Partnerships.-- A partnership is the relationship between two or more entities or persons which join to carry on a trade or business, with each partner contributing money, property, labor, or skill and each expecting to share in the profits and losses. Every partnership that
engages in a trade or business or has income from sources in the United States must file an annual information return, Form 1065, U.S. Partnership Return of Income, with the Internal Revenue Service, showing the partnership's taxable income or loss for the year. A partnership must file even if its principal place of business is outside the United States or if all its members are nonresident aliens.
Partnership Net Income (Less Deficit).-- Through Tax Year 1986 partnership net income (less deficit) represents "ordinary income" (loss). Beginning with Tax Year 1987 (because of tax law changes and form revisions), a similar net income (less deficit) figure has been computed for Statistics of Income as the sum of: ordinary income or loss from trade or business, portfolio income distributed directly to partners (excluding net short-term and longterm capital gains and losses and other portfolio income), net income or loss from rental real estate activities, and net income or loss from other rental activities. The sum of these components is a comprehensive measure of overall partnership profits which enables comparisons to be made with amounts of net income (less deficit) reported for years prior to 1987. The profit status of partnerships is determined as the sum of the gains or losses from the four activities listed above. Partnerships with a breakeven between gains and losses are included with loss partnerships.

Receipts.-- Total receipts, for this article, is defined as the positive income (negative amounts or losses are not included) received by partnerships for the specific items listed below. For 1992, total receipts of partnerships consisted of: gross receipts or sales less returns and allowances, i.e., "business receipts" in the statistics; ordinary income from other partnerships and fiduciaries; net farm profit; net ordinary gain from sales of business property; other income from a trade or business; net income from rental real estate activities; net income from other rental activities; portfolio interest income; portfolio dividend income; portfolio royalty income; net short-term capital gain; net long-term capital gain; other portfolio income; net gain from sales or exchanges of property used in a trade or business (Internal Revenue Code section 1231); and other income except that from trade or business. Therefore, total receipts differs from the total receipts presented in Table 11 in the Selected Historical and Other Data section of this issue in that certain income and deductions distributed or allocated directly to partners is excluded in the latter.

# Individual Foreign-Earned Income and Foreign Tax Credit, 1991 

by Lissa Redmiles

For 1991, U.S. taxpayers living abroad excluded nearly $\$ 9.7$ billion of foreign-earned income and employer-provided housing expenses from their U.S. adjusted gross income on approximately 220,000 U.S. individual income tax returns. U.S. taxpayers also increased their total statutory adjustment used to compute their adjusted gross income by about $\$ 43.5$ million using the housing deduction on about 3,000 returns. In addition, U.S. taxpayers claimed $\$ 1.8$ billion of the foreign taxes they paid as a credit to reduce their U.S. individual income tax on about 873,000 returns.

## Foreign-Earned Income Exclusion

For 1991, U.S. citizens who lived in a foreign country for the entire tax year and U.S. citizens or resident aliens who maintained a tax home in a foreign country for 11 months out of a consecutive 12 -month period could exclude up to $\$ 70,000$ of their foreign-earned income and a certain portion of their employer-provided foreign housing expenses (see Explanation of Selected Terms) from their adjusted gross income (see Explanation of Selected Terms). The purpose of the foreign-earned income exclusion, which was enacted by Congress in 1926, is to make the tax burden of U.S. citizens abroad more equitable with the tax burden of U.S. citizens at home.

The excludable portion of employer-provided housing expenses, the so-called housing exclusion, represented housing expenses in excess of an allowable housing cost (see Explanation of Selected Terms), subject to a limitation based on employer-provided housing expenses and total foreign-earned income [1]. Housing expenses which exceeded the limitation comprised the housing deduction, one of the statutory adjustments used in computing adjusted gross income.

To compute the exclusion, the taxpayer first subtracted the housing exclusion from the foreign-earned income. The taxpayer then added the housing exclusion to the lesser of this difference or $\$ 70,000$.
U.S. taxpayers filed Form 2555, Foreign Earned Income, with their Form 1040, U.S. Individual Income Tax Return, to claim the exclusion and housing deduction. For 1991, of the approximately $114,730,000$ individual income tax returns filed with the Internal Revenue Service, there were 220,000 with a Form 2555 attached, only 0.2 percent of the total [2].

## Foreign-Earned Income

Foreign-earned income includes salaries and wages, pro-

[^33]rata shares of foreign partnership income, certain business income and other forms of compensation, such as housing and meals. It does not include pensions, annuities, compensation by the U.S. Government, and income excluded by the employer to compensate for meals and lodging provided for the convenience of the employer. For 1991, U.S. taxpayers reported nearly $\$ 14$ billion of total foreign-earned income, an increase of 69 percent since 1987 (in current dollars) [3]. Over the same time period, worldwide income (see the Explanation of Selected Terms) for U.S. taxpayers increased 25 percent. The increase in foreign-earned income can be attributed to higher earnings received by U.S. taxpayers living abroad and to a greater number of U.S. taxpayers reporting the exclusion. The average foreign-earned income rose roughly 31 percent, from approximately $\$ 48,000$ in 1987 to about $\$ 62,000$ for 1991 , while the number of U.S. individual income tax returns with Form 2555 increased 29 percent.

Of the approximately 220,000 individual income tax returns with a Form 2555 for 1991, about 11.5 percent reported Germany as the tax home; 10.4 percent reported the United Kingdom; 9.3 percent, Canada; 9.1 percent,
> U.S. taxpayers excluded

> S9.7 billion from "adjusted gross income" under the foreign-earned income provisions and reduced their U.S. income tax by $\mathbf{\$ 1 . 8}$ billion in foreign tax credits.

Japan; and 5.9 percent, Saudi Arabia. The countries with the largest amounts of foreign-earned income were, in descending order, the United Kingdom ( 16.4 percent), Japan ( 9.5 percent), Canada ( 8.7 percent), Germany ( 7.3 percent), Saudi Arabia ( 6.3 percent), and France ( 4.8 percent). Other countries with large amounts of foreignearned income included Hong Kong, Switzerland, Taiwan, Singapore, and Indonesia. Taxpayers who lived in the United Kingdom and Japan received a higher percentage of their income in the form of noncash items and allowances, reimbursements, or expenses paid by employers than taxpayers living in Canada, Germany, Saudi Arabia, or France (Figure A).

Salaries and wages comprised 71 percent of the total foreign-earned income for 1991, while allowances, reimbursements, or expenses paid by employers accounted for approximately 20 percent. Noncash, business, partnership, and other income comprised the remaining nine percent. The overall average for salaries and wages earned outside the United States by taxpayers claiming the exclusion was $\$ 46,000$. The average, however, varied greatly among countries. For example, the

## Figure A

Total Foreign-Earned Income, by Selected Country, Tax Year 1991

[^34]average was about $\$ 28,000$ for Peru, but $\$ 65,000$ for Singapore. Among the seven countries with the highest frequencies of returns with Form 2555 attached, the average salaries and wages ranged from $\$ 33,400$ for Germany to $\$ 65,500$ for Hong Kong (Figure B).

## Housing Exclusion, Housing Deduction, and Total Exclusion

Between 1987 and 1991, the exclusion for foreign-earned income and employer-provided housing expenses grew by 51 percent (in current dollars), from approximately $\$ 6.4$ billion for 1987 to almost $\$ 9.7$ billion [4]. The housing deduction also increased, from nearly $\$ 17$ million for 1987 to about $\$ 44$ million.

The allowable portion of employer-provided expenses, i.e., the housing exclusion, was about $\$ 1$ billion for 1991. The average housing exclusion for those taxpayers who reported it was approximately $\$ 22,000$. Thus, of the total housing exclusion, 21 percent was for Japan, 18 percent for the United Kingdom, and 11 percent for Hong Kong.

Taxpayers with foreign-earned income used the housing deduction to increase their total statutory adjustments (and thus reduce their adjusted gross income) from about $\$ 106$ million before the deduction to roughly $\$ 149$ million, a 41 percent increase. The average housing deduction for the taxpayers who claimed it was approximately $\$ 14,400$.
U.S. taxpayers claiming the exclusion for foreignearned income and employer-provided housing expenses used it to reduce their worldwide income by approximately $\$ 9.7$ billion, or 52 percent. Most of the total exclusion, about 82 percent, was reported by taxpayers with an adjusted gross income after the exclusion of less than $\$ 100,000$. Forty-five percent of those claiming the exclusion had no U.S. income tax liability after taking the exclusion and any applicable tax credits.

## Forelgn Tax Credit

For 1991, U.S. taxpayers with income from sources outside the United States, regardless of their residency, could claim a credit against their U.S. income tax liability for the foreign taxes they paid (except for taxes paid on income excluded under the foreign-earned income provisions). The purpose of the credit; originally created in 1918, is to prevent double taxation on foreign-source income, since the United States taxes its citizens and resident aliens based on their worldwide income. Creditable foreign taxes are subject to a limitation based on the taxpayer's total U.S. income tax liability. Taxpayers compute the limitation separately for different types of income. The allowable credits for each type of income are then added together. These limitations prevent taxpayers from using taxes paid in relatively high tax rate countries

## Figure B

Average Foreign Salarles and Wages Earned by U.S. Taxpayers Claiming the Forelgn-Earned Income Exclusion by Selected Country, Tax Year 1991

to offset taxes paid on their U.S.- source income.
For 1991, taxpayers had to calculate a separate limitation for eight different types of income: passive, high withholding tax interest, financial services, shipping, dividends from Interest-Charge Domestic International Sales Corporations (IC-DISC's), distributions from Foreign Sales Corporations (FSC's), lump-sum distributions from certain retirement plans, and other (general limitation) income. (The separate limitation for dividends from non-controlled Internal Revenue Code section 902 corporations was eliminated beginning with Tax Year 1988; the lump-sum distributions category was first added for Tax Year 1990.)

Passive income generally includes dividends, interest, rents, royalties, and annuities. High withholding tax interest is interest income subject to a gross withholding tax of at least 5 percent. Financial services income includes income from active banking or financing and certain insurance income. Shipping income is income from foreign-based U.S. shipping companies. IC-DISC dividends represent the proportion of IC-DISC dividends which are from a foreign-source, while FSC distributions are derived from earnings and profits attributable to foreign trade income, or from qualified interest and carrying charges. Lump-sum distributions are distributions from a retirement plan which are subject to U.S. tax using income averaging. General limitation income is all
other income from sources outside the United States.
The limitation on creditable taxes for each different type of income is calculated by multiplying the total U.S. income tax liability before credits by the ratio of the foreign-source taxable income for that type of income to total U.S. taxable income. Foreign taxes paid in excess of the limitations can be carried back 2 years and then forward up to 5 years. Taxes carried to another year are added to the taxes available for credit for that year for the same limitation income. To claim the foreign tax credit, taxpayers filed Form 1116, Individual Foreign Tax Credit, with their Form 1040.

## Gross Foreign-Source Income

Gross foreign-source income is all income earned outside of the United States, except for income used to claim the foreign-earned income exclusion. The approximately $\$ 15$ billion of gross foreign-source income reported for 1991 represents about 10.1 percent of the total worldwide income for those taxpayers who reported it, and 0.4 percent of the total worldwide income of all U.S. taxpayers. (These statistics include just the gross foreign-source income reported on Form 1116. Some taxpayers with foreign-source income do not file Form 1116 [5].) Of the total amount, 17.2 percent was earned in the United Kingdom, 16.7 percent in Canada, and 9.2 percent in Japan (Figure C ). The average gross foreign-source income

## Figure $\mathbf{G}$

Foreign-Source Gross Income, by Selected Country or Region, Tax Year 1991

'Includes all income from sources outside' the United States, except income excluded under the foreign-earned income provisions NOTE: Detail may not add to totals because of rounding.
reported by U.S. taxpayers for these countries was approximately $\$ 15,500, \$ 14,700$, and $\$ 50 ; 500$, respectively. The average gross foreign-source income overall was about \$16,600.

## Foreign Taxes and Foreign Tax Credit

For 1991, U.S. taxpayers paid or accrued over $\$ 3.3$ billion in foreign taxes before carrybacks, "carryovers, and reductions (see Explanation of Selected Terms). Almost half of these taxes were paid to three countries, the United Kingdom ( 22 percent), Cañada ( 14 percent), and Japan ( 10 percent). Other countries with large amounts of foreign taxes paid or accrued included Germany (8 percent), Australia (4 percent), and Puerto Rico (3 percent) (Figure D): The total foreign taxes available for credit after carrybacks, carryovers, and reductions was over \$3:6 billion.

For 1991, the total foreign tax credit claimed, over \$1.8 billion, reduced the average U.S. income tax liability of those taxpayers who claimed it by 5.8 percent. The average foreign tax credit was approximately $\$ 2,100$. Eighty percent of the total foreign tax credit was claimed by taxpayers whose adjusted gross income was $\$ 100,000$ or more. Almost all ( 96 percent) of the taxpayers who reported the credit were still liable for U.S. taxes after
claiming the credit.
Between 1987 and 1991, the total foreign tax credit (Figure E) climbed by roughly 76 percent,(in current dollars). The foreign-source gross income of those taxpayers who claimed a foreign tax credit and filed a Form 1116 rose from roughly $\$ 7$ billion for 1987 to over $\$ 14$ billion for 1991 [6]. Most of the foreign tax credit before adjustments (see Explanation of Selected Terms), 84 percent, was reported for general limitation income. Credit for passive income comprised an additional 14 percent of the total. Credit for the newest income category, lump-sum distributions, accounted for only 0.07 percent of the total foreign tax credit before adjustments.

## Summary

For 1991, about 220,000 U:S: taxpayers excluded more than $\$ 9.7$ billion of foreign-earned income and employerprovided housing expenses from their U.S adjusted gross income and about 873,000 credited $\$ 1.8$ billion of foreign taxes against their U.S. tax liability. The total foreignearned income exclusion increased 51 percent between Tax Years 1987 and 1991, from $\$ 6.4$ billion to almost $\$ 9.7$ billion while the total foreign tax credit grew by 76 percent, from about $\$ 1.0$ billion to over $\$ 1.8$ billion (in : current dollars). The countries with the largest amounts of

foreign-earned income and gross foreign-source income were the United Kingdom, Canada, and Japan. The average foreign salaries and wages of U.S. taxpayers claiming the exclusion was about $\$ 46,000$. Those U.S. taxpayers living in Hong Kong had the highest average salaries, about $\$ 65,500$. The overall average gross foreign-source income (from Form 1116) was approximately $\$ 16,600$.

## Data Sources and Limitations

The 1991 data presented in this article are based on a sample of individual income tax returns, Forms 1040, processed during Calendar Year 1992, with either a foreign tax credit, an attached Form 1116, a foreignearned income exclusion or deduction, or an attached Form 2555. Foreign-source income and taxes are underreported in this article to the extent that these amounts were not adequately reported on Form 1116 to support the foreign tax credit claimed on Form 1040. About 4.7 percent of Forms 1040 (as originally filed) with a foreign tax credit did not include the supporting Form 1116. Foreign-source income and losses are also underreported to the extent that taxpayers who were not eligible for a credit did not file Form 1116. Taxpayers who had foreignsource income but paid no taxes or had no U.S. tax liability before credits could not claim a foreign tax credit.

About 5.6 percent of the sampled returns with a foreign tax credit or an attached Form 1116 and 12.2 percent of the sampled returns with an attached Form 2555 were for tax years prior to 1991, reported on delinquent returns processed during the current year filing period. These prior-year returns were included as a representation of 1991 returns filed after December 31, 1992. The sampled returns used for the statistics do not reflect adjustments

## Individual Foreign-Earned Income and Foreign Tax Credit, 1991

made during audit examination which determines the acceptability of the reported foreign income and taxes.

The sample was stratified based on the size of total income or loss and the size of business plus farm receipts, and the presence or absence of: Form 2555; Form 1116; foreign tax credit reported on Form 1040; Form 1040, Schedule C, Profit (or Loss) from a Business or Profession; and Form 1040, Schedule F, Farm Income and Expenses. For a general description of the sampling procedures and data limitations of Statistics of Income tabulations, see Statistics of Income-1991, Individual Income Tax Returns and the Appendix to this report.

## Explanation of Selected Terms

Adjusted Gross Income.--This is the sum of total income or loss less total statutory adjustments. These adjustments include individual retirement account deductions, one-half of self-employment tax, self-employed health insurance deduction, Keogh retirement plan and self-employed SEP deduction, penalty on early withdrawal of savings, alimony paid, other adjustments and the foreign housing deduction.

Allowable Housing Cost.--This amount was 16 percent of the daily salary of a U.S. Government employee paid at the grade GS-14, step 1 level, multiplied by the number of days of the applicable tax year that the taxpayer lived in the foreign country.- For 1991, the GS-14 daily rate (annual salary divided by 365 days) was $\$ 137.94$, so the daily rate used to calculate allowable housing cost was $\$ 22.07$.

Employer-Provided Foreign Housing Expenses. - This is the amount of housing expenses paid directly or indirectly by the employer. Where the total amount of foreign compensation received by the employee exceeded the cost of housing, the entire housing cost became the employerprovided housing expenses.

Foreign Tax Credit Adjustments.-These include reductions for participation in unsanctioned international boycotts and increases permitted by tax treaties between the United States and certain foreign countries:

Foreign Tax Reductions.--These reductions are for taxes paid on income excluded under the foreign-earned income provisions, taxes specifically attributable to unsanc-tioned international boycott participation, taxes paid on foreign mineral income when the taxpayer claimed a ded-uction for percentage depletion for any part of the mineral income, and any penalties for filing Form 1116 past the due date. (In addition to the general penalties applied for filing late, taxpayers filing Form 1116 past the due date had to reduce their total foreign taxes by 10 percent.)

Taxable Foreign-Source Income.--This is foreignsource gross income less deductions. The deductions
8 included any expenses directly related to foreign-source
income plus a prorated share of the taxpayer's itemized or ; standard deductions. Taxable foreign-source income does not include any income excluded under the foreign-earned income provisions.

Worldwide Income.-This is the total income or loss reported on Forms 1040 before the foreign-earned income exclusion has been taken. It includes salaries and wages; taxable interest; dividends; taxable refunds of state and local government income tax; alimony received; business income or loss; capital gains or losses; taxable distribu-. tions from an individual retirement arrangements; taxable pensions and annuities; income or loss from rents, royalties, partnerships, and estates and trusts; farm income or loss; unemployment compensation; taxable social security benefits; and other income or losses.

## Notes and References

[1] To calculate the limitation on the excludable portion of housing expenses, taxpayers multiplied the excludable portion by the ratio of employer-provided expenses to foreign-earned income. The allowable portion of housing expenses was the lesser of this product or the employer-provided housing expenses.
[2] Data for all taxpayers who filed a Form 1040 for 1991 cited in this article are from Statistics of Income1991, Individual Income Tax Returns.
[3] Data in this article are compared to 1987 because this is the last prior year for which comparable statistics are available.
[4] The data for this article differ slightly from the data reported in Statistics of Income-1991, Individual. Income Tax Returns, primarily because the sample used for the statistics presented in this article did not include the small number of returns filed in 1992 for tax years prior to 1987 (these returns were excluded to facilitate processing), and because the foreign tax credit frequency and amount reported in the latter publication include reductions in U.S. taxes for taxes paid to the Virgin Islands. (The rules and form used to determine the reduction allowed for Virgin Island taxes differ from those which specify the allowable foreign tax credit for all other countries.)
[5] Some taxpayers with a foreign tax credit fail to file a Form 1116 with their return as originally filed. Others file a Form 1116 even though they are not eligible for a credit to report a foreign tax carryover from a prior year, to provide the basis for reporting a carryover the following year, or simply because they claimed a credit in another year and wish to maintain

## Individual Foreign-Earned Income and Foreign Tax Credit, 1991

consistency in their reporting of foreign-source income and losses.
[6] For 1991, gross foreign-source income and taxable foreign-source income were based on all returns with a Form 1116 attached regardless of whether a foreign
tax credit was actually claimed, while for 1987, these amounts were based on those returns with both a foreign tax credit claimed on Form 1040 and a Form 1116 attached. Thus, the 1991 statistics for foreignsource income are more complete than the 1987 statistics.

[^36]
# Self-Employed Nonfilers, Post-Audit, Tax Year 1988 

by Laura Rosage

or Tax Year 1988, an estimated 1.7 million sole proprietors failed to file an individual income tax return. Of these, an estimated 1.5 million returns were secured through enforcement efforts. Approximately 68 percent owed tax and their average total income was $\$ 15,000$. However, based on a line-by-line examination of a sample of these returns, an estimated 82 percent owed tax and the average total income was nearly $\$ 21,000$. The most frequent occupation of self-employed nonfilers was handlers, equipment cleaners and laborers, followed by construction trades.

Because the self-employed have sources of income not subject to "information reporting" (and tax withholding), there is a concern that those who fail to file an income tax return may escape detection [1]. Even when their returns are secured, it is difficult to determine how accurate they are unless they can be audited. For purposes of this article, an individual taxpayer (or couple if the tax return was a joint return) was considered self-employed if, after examination, it was determined that he or she had gross receipts from a business or profession reported on a Schedule C, Profit or Loss from Business (Sole Proprietorship); farm income on a Schedule F, Profit or Loss from Farming; or self-employment tax on a Schedule SE, Self-Employment Tax. An estimated 1.5 million, or 43 percent, of the 3.5 million nonfilers from whom delinquent returns for Tax Year 1988 were secured were selfemployed.

## Characteristics of Self-Employed Nonfiler Returns

Although the Internal Revenue Service (IRS) was able to secure returns from nonfilers, this does not mean that the income and deductions reported on these returns were accurate. Overall, more than 36 percent of the returns secured from wage earners, taxpayers all of whose income was from wages, were adjusted during IRS audit. However, nearly 87 percent of the returns secured from self-employed nonfilers were similarly adjusted.

## Total Income

While average total income before statutory adjustments reported on returns secured from wage earners was almost $\$ 18,500$, the average for a self-employed nonfiler was little more than $\$ 15,000$, with income ranging from a negative $\$ 0.9$ million to a positive $\$ 5.1$ million. However, after examination, the average total income for wage earners increased to slightly over $\$ 19,000$, while the

Laura Rosage is a statistician with the Research Team. This article was prepared under the direction of William L. Lefbom, Research Team Leader, Statistics of Income.
average income of the self-employed nonfiler rose to nearly $\$ 21,000$. In total, wage earners reported $\$ 38.2$ billion of income on their returns as filed. After examination, the amount rose to $\$ 40.0$ billion, resulting in a difference of $\$ 1.8$ billion and a "voluntary reporting percentage" (VRP) of 95.4 .

VRP is a compliance measure, calculated by dividing an income or deduction item as reported by the taxpayer on the return by the corrected amount as determined by the IRS examiner, then multiplying by 100 [2]. If deductions or credits are overstated, the VRP will exceed 100; if they are understated, the VRP will be less than 100 . The self-employed reported only $\$ 22$ billion of the $\$ 30$ billion total income that examination uncovered, resulting in a difference of $\$ 8$ billion and a lower VRP of 72.8 .

Because the self-employed have income not subject to "information reporting," i.e., statements provided to IRS and the taxpayer on amounts paid out or withheld, they can more easily understate their income than can wage earners, whose incomes are reported on Forms W-2. Before examination, the largest percentage of the selfemployed (44 percent) reported a total income (which includes sole proprietorship business and farm profits) ranging from $\$ 1,001$ to $\$ 10,000$ (Table 1). Al-

IRS secured income tax returns from 1.5 million of the estimated 1.7 million sole proprietors who failed to file for 1988. most 13 percent of the selfemployed nonfilers reported total income of $\$ 1,000$ or less; this category includes all those whose total income was negative. For 21 percent, the income range was $\$ 10,001$ to $\$ 20,000$, and slightly more than 16 percent reported income between $\$ 20,001$ and $\$ 50,000$. Less than 6 percent had income above $\$ 50,000$.

This distribution changed after audit (Table 1): After "in-depth examinations" for compliance research purposes, the percentage of self-employed with total income of $\$ 1,001$ to $\$ 10,000$ decreased to 33 percent. Only 9 percent actually had a total income of $\$ 1,000$ or less (or a total loss). For 24 percent, the income range was $\$ 10,001$ to $\$ 20,000$, while for a little more than 27 percent the income range was between $\$ 20,001$ and $\$ 50,000$. This 27 percent represents a 69 percent increase over what was originally reported on the return. Finally, just over 7 percent had total income above $\$ 50,000$.

Although the voluntary reporting percentage (VRP) for the total income of self-employed individuals was only 72.8, it was even lower when only considering nonfarm sole proprietorship (Schedule C) net income or loss. Self-

# Self-Employed Nonfilers, Post-Audit, Tax Year 1988 

employed nonfilers reported a net total of almost $\$ 10$ billion in nonfarm sole proprietorship income. However, after examination, the figure rose to nearly $\$ 16$ billion, an increase of $\$ 6$ billion and a VRP of 62.1.

It should be noted that unreported gross receipts are difficult to detect, but overstated business expenses are more noticeable upon examination. Thus, the change in net income on Schedule $C$ is due both to an understatement of receipts, as well as an overstatement of expenses. This is also true of farm profits reported on Schedule F. Overall, the self-employed reported a farm net loss of \$64 million. After examination this amount rose to a positive $\$ 556$ million, a difference of $\$ 620$ million. Even though VRP cannot be calculated when comparing a negative amount to a positive amount, data show that the selfemployed are not "voluntarily reporting" their farm income (Table 2).

In total, more than 55 percent of the secured returns from self-employed nonfilers had an increase in "total income" due to examination. Slightly more than 40 percent had no change in income, and only 4 percent realized a small decrease.

## Itemized Deductions

While income is generally understated on delinquent returns, itemized personal deductions are commonly overstated. However, because the self-employed have'a greater opportunity to understate their income due to the lack of information reporting, their itemized deductions are generally not as overstated as those of wage earners. In fact, for the secured returns of self-employed nonfilers, total itemized deductions were understated by 1.5 percent. The self-employed claimed $\$ 3,590.5$ million in itemized deductions, but were allowed nearly $\$ 3,646.6$ million after examination, resulting in a difference of $\$ 56.1$ million and a total VRP of 98.5.

These totals, however, can be misleading. Deductions aid to minimize total taxable income and, consequently, the total amount of tax due. However, a taxpayer may not need to claim the total amount of deductions to which he or she is entitled in order to offset their tax. Taxpayers may simply claim the standard deduction or a partial total for itemized deductions sufficient (in combination with deductions for personal exemptions and tax credits) to reduce their tax to zero. More than 79,000 of the selfemployed nonfilers were able to increase their total deductions enough to offset an increase in total tax liability resulting from audit. Only 2,000, (1.9 percent) of these claimed a business loss before audit, but reported a profit after audit, and the total income of nearly 64,000 ( 80.6 percent) increased after examination. In addition, there were nearly 14,000 ( 17.5 percent) who increased the
amount of total itemized deductions claimed despite a decrease in total income as a result of examination.

## Exemptions

The number of personal exemptions a taxpayer is able to claim directly affects the amount of his or her tax liability. As in the case of deductions, wage earners were more likely to overstate their exemptions than the self-employed. In total, wage earners claimed nearly 3.2 million exemptions, worth $\$ 6.2$ billion, before examination and 2.9 million, worth $\$ 5.7$ billion, after examination. The resulting VRP was 108.9 , or a net overstatement of 8.9 percent. Most of this overstatement was due to the claiming of 37 percent more dependent children living at home than were allowable. This difference accounted for 92 percent, or $\$ 461$ million, of the $\$ 501$ million in exemption overstatements.

Although the self-employed claimed more exemptions than wage earners on delinquent returns, their exemptions were measurably more accurate. Self-employed nonfilers claimed 3.5 million exemptions, worth $\$ 6.8$ billion, before examination, but were allowed 3.4 million exemptions, worth $\$ 6.6$ billion after examination. The corresponding VRP was 102.8. This overstatement was due primarily to the claiming of 7 percent more for dependent children at home than they were entitled to. This situation accounts for 79 percent or $\$ 148$ million of the $\$ 187$ million overstatement.

## Filing Status

Of all the return items that could affect a taxpayer's total tax liability, filing status (i.e., the marital status categories recognized under the tax code) was one of the most accurately reported. Only 2 percent of the total selfemployed secured returns had a change in filing status. Of those changed after audit, most claimed head of household status, when they should have claimed they were either single or married filing separately. Thus, after examination, 33 percent of the self-employed claimed single filing status; 54 percent, married filing jointly; only 10 percent, married filing separately; and less than 3 percent; head of household status.

## Total Income Tax

Since return items used to calculate total income tax were changed as a result of examination, it follows that the amount of total income tax also changed. Before audit, the self-employed reported almost $\$ 5.0$ billion in total taxes; however, after examination, this number increased 37 percent, to more than $\$ 6.8$ billion. This was partially due to the fact that more than 101,000 of the 170,000 selfemployed who reported they had no tax liability before

## Self-Employed Nonfilers, Post-Audit, Tax Year 1988

they were examined had a tax balance due afterwards. In total, more than 56 percent $(816,000)$ of the returns secured from self-employed nonfilers reported an increase in total tax, after examination. (Only 2 percent reported a decrease; there was no change in the reported tax on the remaining 42 percent.) While tax increased by $\$ 100$ or less for 4 percent of the self-employed, nearly 22 percent reported increases of between $\$ 100$ and $\$ 1,000$, and more than 30 percent reported increases of more than \$1,000 (Table 3).

## Type of Return

The secured delinquent returns were classified into three types: "balance due," if the taxpayer owed taxes before any remittances with the returns were credited; "refund," if prepayments (e.g., taxes withheld or estimated tax payments) and refundable earned income credits exceeded the tax liabilities, and "even," for returns where there were no tax liabilities; or no prepayments or refunds due, or where prepayments exactly matched tax liabilities. These types of returns were compared before and after examination (Figure A).

Before examination, more than 68 percent $(994,000)$ of the returns secured from self-employed nonfilers showed a balance due. Another 25 percent were refund returns and 7 percent were "even." Those self-employed taxpayers whose returns showed a balance due owed more than $\$ 3.4$ billion, while taxpayers filing for refunds were owed almost $\$ 0.4$ billion. The resulting total net tax balance due from self-employed nonfiler returns before examination was, therefore, estimated at $\$ 3.0$ billion.

After examination, however, the numbers tell a different story. Because of increases in income and decreases in deductions, more than 82 percent $(1,200,000)$ of the secured self-employed returns were reclassified as balance due returns. Only 14 percent of the nonfilers were due refunds, and only 4 percent were "even." The total balance due increased more than 50 percent from $\$ 3.4$ billion to more than $\$ 5.1$ billion, while total refunds claimed dropped from $\$ 0.4$ billion to $\$ 0.2$ billion. The result was a total net balance due after examination of $\$ 4.9$ billion, more than one-and-a-half times the amount reported on the returns as originally filed [3].

## Occupation

Initially, the taxpayer's occupation was coded only from what was entered on his or her delinquent return. Approximately two-thirds of the self-employed nonfilers did not provide their occupations on their returns when filed. Of those returns where occupation was available, "retired" was most frequent at 8.3 percent of the total self-employed population. Although retired status is not
normally an income generating activity, this was the largest single occupation reported on secured returns. It should also be noted that taxpayers with this occupation are not likely to be full-time self-employed. Leading occupations after retired persons, were those in construction trades ( 5.9 percent), mechanics and repairers ( 2.1 percent), management-related occupations ( 2.0 percent) and occupations in transportation and material-moving (1.6 percent) [4].

During the examination phase, tax examiners were required to code the occupation of the "primary taxpayer" (i.e., if the return is a joint return, the spouse with the larger income), regard-

## After IRS examination, the

tax balance due (net of

## refunds) from sole propri-

etors who filed delinquent
returns was $\mathbf{\$ 4 . 9}$ billion,
1.5 times the amount
originally reported. filed. The largest occupation group for the self-employed nonfilers became handlers, equipment cleaners, and laborers ( 17.5 percent). Construction trades were second ( 13.5 percent), followed by mechanics and repairers ( 7.8 percent); retired persons ( 7.2 percent); and occupations in insurance, securities, real estate, and business service sales ( 5.8 percent) (Figure B).

Many laborers; construction workers; mechanics; and real estate, insurance, securities, and business services salespersons were not only noncompliant in filing their income tax returns, but also tended to be inaccurate in what they reported. After examination, tax increased for those in construction trades alone by a net amount of more than $\$ 282$ million. Tax of handlers, equipment cleaners, and laborers increased by a net $\$ 252$ million, while the taxes owed by mechanics and repairers increased by nearly $\$ 191$ million (Figure C).

Many States or local jurisdictions require a license before a person can practice certain trades. Using listings of licensed occupations and professions from several States, licensing requirements were identified for 30 occupations. Based on these lists, 105,000 ( 7.2 percent) of the estimated $1,455,000$ nonfilers identified as self-employed, before examination, would have been subject to some sort of licensing requirement. Before examination, they reported a total balance due of $\$ 255$ million and claimed refunds totaling almost $\$ 96$ million, resulting in a net balance due of $\$ 159$ million.

Returns of Self-Employed Nonfilers by Tax Status, Before and After Examination, Tax Year 1988

Percentage Before Examination

Percentage After Examination

## Figure B

Ten Most Frequent Occupations of Self-Employed Nonfilers After Examination, Tax Year 1988
[Number of returns is in thousands]

| Occupation | Number of returns | Percentage of total |
| :---: | :---: | :---: |
|  | (1) | (2) |
| All occupations............................................... | 1,455 | 100.0 |
| Handlers, equipment cleaners, and laborers........ | 254 | 17.5 |
| Construction trades....................................... | 196 | 13.5 |
| Mechanics and repairers................................. | 113 | 7.8 |
| Retired persons............................................ | 104 | 7.2 |
| Sales of insurance, securities, real estate, and business services. | 84 | 5.8 |
| Helpers of handlers and faborers...................... | 72 | 4.9 |
| Management-related occupations..................... | 67 | 4.6 |
| Service occupations, except private households. Transportation and material-moving $\qquad$ | 64 | 4.4 |
| occupations................................................ | 60 | 4.2 |
| Writers, artists, performers, and related workers. $\qquad$ | 41 | 2.8 |
| All other occupations...................................... | 400 | 27.4 |

## Figure C

Ten Most Frequent Occupations of Self-Employed Nonfilers With the Largest Tax Increase After Examination, Tax Year 1988
[Money amounts are in millions of dollars]

| Occuptation | $\begin{gathered}\text { Net } \\ \text { tax } \\ \text { increase }\end{gathered}$ |
| :---: | :---: |
| All Occupations | 2,530.6 |
| Construction trades...................................................... | 282.6 |
| Handlers, equipment cleaners, and laborers..................... | 252.2 |
| Mechanics and repairers.............................................. | 190.7 |
| Transportation and material-moving occupations.............. | 172.3 |
| Officials, and administrators, other than government.......... | 123.8 |
| Supervisory, marketing, and sales occupations................. | 111.3 |
| Investors.................................................................... | 104.7 |
| Sales of insurance, securities, real estate, and business services. | 100.8 |
| Farm operators and managers....................................... | 81.8 |
| Sales-related occupations............................................. | 57.2 |
| All other occupations.................................................... | 1,053.2 |

However, after examination, it was determined that there were actually 223,000 ( 15.3 percent) who were in occupations subject to a licensing requirement. The total balance due on this larger number was $\$ 867$ million, while refund claims totaled only $\$ 59$ million, resulting in a net
balance due of $\$ 808$ million, 16.4 percent of the $\$ 4,930$ million net tax due by all self-employed nonfilers whose returns were secured.

## Dath Sources

The Taxpayer Compliance Measurement Program (TCMP) is a system created to measure the success of the Internal Revenue Service (IRS) in fulfilling its tax collection mission [5]. For this purpose, two nationwide surveys were conducted to measure nonfiling of individual income tax returns. The first TCMP individual survey was conducted for Tax Year 1979. The survey sample was primarily limited to leads on nonfiling provided by information returns received by the IRS. Therefore, those individuals not subject to information return reporting (including tax withholding) were largely undetectable, and were not included in the estimate of 2.6 million nonfilers for that year [6].

The more recent TCMP individual nonfiler survey was a random stratified sample of approximately 24,000 individual apparent nonfilers for Tax Year 1988 [7]. The sample was constructed by matching a list of all existing social security numbers or SSN's (approximately 313 million), less those listed on the "Death Master File" (35 million), against all those who filed a tax return in 1989 [8]. The SSN's that matched were eliminated, leaving 100 million SSN's for which there was no matching return. These became the potential nonfilers. A stratified sample of 24,000 SSN's was drawn from the 100 million for further investigation to determine if these potential nonfilers had sufficient income to file tax returns. Approximately 3,500 returns were then secured through collection efforts [9].

These 3,500 returns were then sampled for further examination. They were first stratified into three segments: total tax on the return either zero or unreported, total tax reported $\$ 1$ to $\$ 1,999$, and total tax reported $\$ 2,000$ or more. The sample selection rate was 54 percent when the total tax reported ranged from $\$ 1$ to $\$ 1,999$, and 100 percent for the remaining strata, resulting in more than 2,200 returns being selected for audit. These returns, when weighted, represented approximately 3.5 million nonfilers, wage earners, and self-employed. The results of their subsequent examinations provide the basis for the statistics in this paper [10].

## Notes and References

[1] Information reporting is the process by which employers and other financial entities report wages and other monies paid out to taxpayers and withheld from taxpayers on Form W-2, Wage and Tax State-

## Self-Employed Nonfilers, Post-Audit, Tax Year 1988

ment; Form 1099-MISC, Miscellaneous Income; and the like. These reports are sent to the payee for his or her records and for use in tax return preparation, as well as to the Internal Revenue Service for comparison with what is subsequently reported by the taxpayer on his or her income tax return.
[2] For more detailed information on the development of additional compliance measures for individual income tax returns, see Ho, Chih-Chin and Sattler, Carol E., "Developing Measures of Reporting Compliance for Individual Tax Returns," The IRS Research Bulletin, Research Division, Internal Revenue Service, U.S. Department of the Treasury, 1992.
[3] For more detail see Table 4 and Table 5.
[4] Occupation codes were based on the Standard Occupational Classification Manual, 1980, Office of Federal Statistical Policy and Standards, U.S. Dêpartment of Commerce
[5] The Service's objectives in conducting the 1988 Nonfiler TCMP survey were to obtain information for the continuing development and improvement of the system to identify noncompliant taxpayers; to estimate the total number of nonfilers, those who were unknown to the IRS, as well as those for which the Service had an investigative lead developed from information returns; to estimate the value of the tax owed by these nonfilers; to develop profiles of the various types of nonfilers in order to evaluate alternative strategies for dealing with delinquent taxpayers; and to measure the accuracy of secured delinquent returns.
[6] Graeber, Michael J., Nichols, Bonnie L., and, Sparrow, D. Arthur, "Characteristics of Delinquent Re-
turns," The IRS Research Bülletin, Research Divi ${ }_{7}$ sion, Internal Revenue Service, Department of the Treasury, 1992.
[7] There was also a TCMP study of individưal income tax returns that were timely filed for Tax Year 1988. For information on the reporting compliance of selfemployed individuals who filed their returns on time, see Chistian, Charles W.; "Compliance of Sole Pro-prietors-Findings From 1988 TCMP Phase III, Cycle 10,".The IRS Research Bulletin, Research Division, Internal Revenue Service, U.S. Department of the Treasury, 1992.
[8] The Death Master File is an incomplete list of deceased individuals with social security numbers (SSN's). The Death Master File and the list of existing SSN's, with the corresponding names and ages, were obtained from the Social Security Administration for use in tax administration.
[9] For the characteristics of the 3,500 secured returns; see Rosage, Laura R., "Self-Employed Nonfilers, 1988," Statistics of Income Bulletin, Summer 1993, Volume 13, Number 1.
[10] Taxpayer Compliance Measurement Programexaminations are normally much more extensive than normal operational audits. In normal operational audits, examiners concentrate only on those issues for which there is the greatest likelihood of a substantial error having a bearing on tax liability: However, since TCMP examinations are designed to provide statistics for use in tax administration research, all potential issues, i.e., unreported income, overstated deductions, and credits, as well as any other discrepancies, such as in the reporting of occupation or in dustrial activity code, are all verified.

## Self-Employed Nonfilers, Post-Audit, Tax Year 1988

Table 1.-Self-Employed Nonfilers: Number of Returns by Size of Total Income, Before and After Examination [All data are estimates based on samples]

| Size of total income before examination |  |  | Size of total income after examination |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

# Charities and OtherTax-ExemptOrganizations, <br> 1990 

Data Release

The Internal Revenue Code classifies tax-exempt, nonprofit organizations into 31 groups, some of which are eligible to receive tax-deductible donations under Code section 170 [1]. One of these groups, organizations that are exempt under section 501 (c)(3), receives the largest part of tax-deductible donations. This data release discusses them and also the organizations that are exempt under sections 501(c)(4) through (9).

## Charitable Organizations Tax-Exempt Under Internal Revenue Code Section 501(c)(3)

Organizations that are exempt under section 501(c)(3) are those whose purposes are religious, charitable, scientific, or are for the purpose of testing for public safety. Their activities are restricted in that they must further one or more of these exempt purposes. Examples of these "charitable". organizations include nonprofit hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, and environmental preservation groups. Each must serve the public good (as opposed to private interests) to qualify for tax-exempt status. Under the Code, exempt organizations may not distribute net earnings to a private shareholder or individual. In addition, they are restricted in activities that can influence legislation, and cannot participate in any political campaign on behalf of, or in opposition to, any candidate for political office.

The revenue and assets of organizations exempt under Internal Revenue Code section 501(c)(3), excluding private foundations and religious organizations, continued to increase for 1990 [2]. Total revenue rose by 9 percent to $\$ 435.6$ billion, and total assets grew to $\$ 697.3$ billion, an increase of 6 percent (Figure A). These statistics are based on data from Form 990, Return of Organization Exempt from Income Tax, and Form 990EZ, the short form [3].

Of the 416,209 nonprofit charitable organizations recognized by the Internal Revenue Service (IRS) under Code section $501(\mathrm{c})(3)$, there were 141,757 returns filed for 1990 [4]. (Those not required to file included religious organizations and organizations with annual gross receipts of less than $\$ 25,000$.) The number of returns filed showed a 6-percent increase from '1989. This substantial increase was due mainly to the larger number filed by smaller organizations, those with assets of less than $\$ 1$ million. These organizations represented more than three-quarters of the returns filed for 1990. The number of Form 990EZ

This data release was written by Cecelia Hilgert, an economist with the Foreign Special Projects Section, under the direction of MichaelAlexander, Chief.

returns increased to about 20 percent of total returns filed, up from about 10 percent in 1989 , the year for which the short form was introduced for organizations with gross receipts of less than $\$ 100,000$ and assets of less than $\$ 250,000$. (Tables 1 and 2 ).

## Organizations Tax-Exempt Under Intemal Revenue Code Sections 501(c)(4) Through (9)

Unlike the nonprofit charitable organizations that are taxexempt under section 501 (c)(3), most of the organizations exempt under section 501 (c)(4) through (9) are not eligible for tax-deductible contributions. They are quite diverse in their program activities, as well as in their organizational structures.

Three types of organizations exempt under these sec-tions--civic leagues and social welfarè organizations, section 501 (c)(4); labor, agricultural, and horticultural organizations, section 501(c)(5); and business leagues, chambers of commerce, and real estate boards, section 501 (c)(6)-each filed over 21,000 Forms 990 and 990 EZ for 1990 (Figure B). Together, these three categories represented two-thirds of the returns filed by all organizations included in these six Code sections. Civic leagues and social welfare organizations showed the largest increase, with a 6-percent gain in the total number of returns filed. The short forms ( 990 EZ ) represented one-third of the returns filed by all organizations under this Code section.

Civic leagues and social welfare organizations, and voluntary beneficiary associations, section 501 (c)(9), reported the most assets for 1990 , about $\$ 35.1$ billion and $\$ 33.0$ billion, respectively. The largest of these organiza-tions--those with assets of $\$ 10,000,000$ or more--represented more than 70 percent of the total assets of the

| 501(c)(9)........ | 9,534 | 33.0 | 11.7 | 21.3 | 55.2 | 54.0 |

NOTE: Detail may not add to totals because of rounding and processing tolerances.
organizations exempt under these two sections. Fraternal beneficiary associations, section 501 (c)(8), showed the largest rise in assets, 19 percent, from $\$ 25.1$ billion for 1989 to nearly $\$ 30.0$ billion for 1990 , due primarily to increases in holdings of securities. For each of the six Code sections for which statistics are shown, organizations with assets of less than $\$ 1,000,000$ accounted for a greater percentage of total assets than similarly-sized nonprofit charitable organizations exempt under section 501(c)(3).

All organizations exempt under these six Code sections registered increases in revenue for 1990. Program service revenue was the primary type of revenue under four of the Code sections: civic leagues and social welfare organizations; business leagues, chambers of commerce, and real estate boards; fraternal beneficiary associations; and voluntary beneficiary associations. For business leagues, chambers of commerce, and real estate boards, 1990 was the first year for which program service revenue exceeded membership dues and assessments as a source of revenue. While program service revenue is generally composed of fees for services on which the tax exemption is based, including hospital and tuition charges in the case of charitable organizations, for fraternal beneficiary associations and voluntary beneficiary associations, the program service revenue was, instead, payments for health and
welfare benefits coverage. Organizations under the other two sections--labor, agricultural and horticultural organizations, and social and recreational clubs, section 501(c)(7)-reported membership dues and assessments as their leading source of revenue.

Tables 1 and 2 present selected income statement and balance sheet items for Form 990 and Form 990EZ filers, respectively, under Code sections 501(c)(3) through (9). Because less information is required of smaller organizations filing Form 990EZ, the items shown in Tables 1 and 2 do not always match.

## Notes and References

[1] These groups are defined further in the following Internal Revenue Code sections: 401(a), 408(e), 501(c) (2)-(25),501(d)-(f), and521(a).
[2] For information on private foundations see Meckstroth, Alicia, "Private Foundations and Charitable Trusts, 1990," Statistics of Income Bulletin, Winter 1993-1994, Volume 13, Number 3, pp. 32-79.
[3] Data for previous years were published in Statistics of Income, Compendium of Studies of Tax-Exempt Organizations, 1974-1987, and Compendium of Studies of Tax-Exempt Organizations, 1986-1992, Volume 2. See also Hilgert, Cecelia, and Arnsberger, Paul, "Charities and Other Tax-Exempt Organizations, 1989,"Statistics of Income Bulletin, Winter 1993-1994, Volume 13, Number 3, pp. 80-93.
[4] Data presented in this article are from 1990 Forms 990 and 990EZ. Organizations used the 1990 forms when their accounting periods ended during the time period, December 31, 1990, through November 30, 1991. The total number of nonprofit charitable organizations, including those not required to file Form 990 or Form 990 EZ , was obtained from Internal Revenue Service, Employee Plans and Exempt Organizations, Office of Systems Development and Administration, as reported in Monthly Exempt Organizations Statistical Summary, and does not include private foundations filing Form 990-PF, Return of Private Foundation.

## General notations and statement

N/A - Not applicable.
n.a. - Not available.
p - Preliminary.
r-Revised.

*     - Estimate should be used with caution because of the small number of sample returns on which it is based. See "Appendix-SOI Sampling Methodology and Data Limitations.'
** - Not shown to avoid disclosure of information about specific taxpayers. However, the data are included in the appropriate totals.

Detail may not add to totals because of rounding.

## Table 1

[1] Includes "standard" electronically-filed (ELF) returns starting with 1985, returns filed electronically by telephone ("TeleFile") starting with 1991, and computer-generated "paper" returns (Form 1040PC) starting with 1992, reclassified as Form $1040,1040 \mathrm{~A}$, and 1040 EZ returns for Statistics of Income, depending on the filing characteristics of each return.
[2] Less deficit. Starting with 1987, data are not comparable with earlier years because of major changes in the law, many of which are referred to in other footnotes.
[3] Not included in AGI.
[4] Starting with 1987, represents total dividends; previously, represented total dividends after statutory exclusion.
[5] Starting with 1987 , losses are after "passive loss" limitation.
[6] Starting with 1987, represents total capital gains; previously, represented total capital gains after statutory exclusion. For other changes affecting capital gains, see Statistics of Income-Individual Income Tax Returns, various years.
[7] Before 1980 and starting again after 1987, excludes Individual Retirement Arrangement (IRA) distributions; for intervening years, pensions and IRA distributions in AGI were reported together on the tax return. Effective during 1986, the more liberal of the two methods of computing the nontaxable
portion of pensions and annuities (representing taxpayer contributions to certain pension plans) was repealed.
[8] Starting with 1987, represents total unemployment compensation; previously, all or part was excludable under certain conditions.
[9] Excludes sole proprietorship (including farm) rental income or loss. Starting with 1987, rental losses are before "passive loss" limitation and, therefore, exceed the amount included in AGI.
[10] Excludes certain royalties included in computations of capital gain or loss and of ordinary gain or loss, sales of noncapital assets.
[11] Prior to 1981, amounts for net income are actually for net income (less loss). Net income and loss were not separately tabulated. Also, for these years, the number of returns shown with net income was rounded to millions during processing; the more exact number was not tabulated.
[12] See footnote 5.
[13] See footnote 11.
[14] See footnote 5 .
[15] Includes adjustments not shown separately in Table 1. Starting with 1987, excludes employee moving and certain other business-related expenses, deduction for married two-earner couples, and certain alimony payments, but includes self-employed health insurance deduction; see also footnotes 16 and 17. Starting with 1990, adjustments include deduction for one-half of self-employment (social security) tax. For changes in adjustments for earlier years, see Statistics of Income--Individual Income Tax Returns.
[16] Deductible Individual Retirement Arrangement (IRA) contributions, reflected in adjustment statistics starting with 1980, were limited starting with 1987.
[17] Deduction expired July 1992, but was later reinstated retroactively. Data for 1992 are understated because they exclude amounts subsequently claimed on amended returns.
[18] Inclúdes exemptions for blindness repealed effective 1987. Deduction for exemptions was limited for higher-income taxpayers starting with 1991. Exemption amounts were indexed for inflation starting with 1985 and were limited for certain high-income taxpayers starting with 1987.

## Notes to Selected Historical and Other Data Tables

[19] In general, represents the sum of standard and itemized deductions. For 1980 and 1985 data, includes total itemized deductions before subtraction of "zero bracket amount," plus, for non-itemized deduction returns, the zero bracket amount and, for 1985 data only, charitable contributions deduction. Starting with 1987, includes revised itemized deductions (see also footnotes 21-24), "basic" standard deduction and "additional" standard deductions for age 65 or over for blindness (for changes in the standard deduction and its relation to the zero bracket amount, see Statistics of IncomeIndividual Income Tax Returns, for appropriate years). Starting with 1991, total itemized deductions are after statutory limitation (see footnote 21).
[20] For 1980 and 1985 data, represents "zero bracket amount" used on returns of non-itemizers; see also footnote 25. Zero bracket amount for 1985 and standard deduction, starting with 1986 , were indexed for inflation.
[21] Includes itemized deductions not shown separately in Table 1, including revised deductions, starting with 1987, for "miscellaneous expenses" after limitation and for employee moving expenses; see also footnotes 22-24. In general, total itemized deductions were limited for certain high-income taxpayers starting with 1991. For changes in deductions for earlier years, see Statistics of In-come-Individual Income Tax Returns.
[22] Deductible medical and dental expenses were limited, starting with 1987, based on a revised percentage of AGI. For changes in the deduction for 1987 and earlier years, see Statistics of Income Individual Income Tax Returns.
[23] Starting with 1987, State sales taxes were no longer deductible.
[24] Starting with 1987, deductions for "personal" interest and mortgage real estate loan interest were limited and, starting with 1991, personal interest was no longer deductible.
[25] For 1980 and 1985 data, taxable income includes the "zero bracket amount," repealed effective 1987 and partially replaced by standard deductions which were subtracted in computing taxable income. A standard deduction was similarly used prior to 1980 . For the percentages of AGI used for the standard deduction and the limitation on the deduction, see Statistics of Income-Individual Income Tax Returns.
[26] Different tax rate structures applied to Tax Years 1970, 1971-1978, 1979-1981, 1982-1986, 1987, and 1988-1992. Indexing of tax rate boundaries for inflation was introduced starting with 1985. The preferential maximum tax rate on long-term capital gains under "alternative tax" was revised over the years. Alternative tax was abolished effective 1987, but a maximum capital gains tax rate slightly less than the maximum regular tax rate continued to apply under certain conditions starting with 1991. For additional information on changes affecting tax computations, see Statistics of Income-Individual Income Tax Returns.
[27] For 1970, includes tax surcharge of $\$ 2,018,078,000$.
[28] Includes credits not shown separately in Table 1, such as the political contributions credit (repealed effective 1987), earned income credit (liberalized starting with 1987 and 1991), and low-income housing credit (introduced effective 1987); see also footnote 29. For changes in credits allowed for earlier years, see Statistics of Income-Individual Income Tax Returns.
[29] Investment credit was included in the more-inclusive general business tax credit starting with 1984. With exceptions, investment credit was repealed effective 1986.
[30] Includes income tax after credits and additional tax for tax preferences, i.e, "minimum tax" or "alternative minimum tax" (see footnote 31).
[31] The add-on "minimum tax" on "tax preferences" (chief among which were long-term capital gains) was introduced starting with 1970. (This tax was formerly described in Statistics of Income as the "additional tax for tax preferences.") The minimum tax computation, using a base related to taxable income, was revised and the tax rate increased effective 1976. The number of preferences subject to tax was also revised effective 1976 and 1981. Starting with 1979, two major preferences formerly subject to minimum tax (including long-term capital gains) were subjected, instead, to the new "alternative minimum tax" (AMT) which required taxpayers to pay the larger of the regular income tax or AMT. Computation of AMT was revised effective 1980 (to allow tax to be reduced by certain credits) and, again, effective 1981 (to modify the graduated rate structure). Minimum tax was abolished effective 1983 and many of the tax preferences subject to this tax subjected, instead, to a revised AMT. AMT was

## Notes to Selected Historical and Other Data Tables

increased starting with 1983 by introduction of a single tax rate which replaced the two graduated rates that were lower; the single rate was increased effective 1987 and 1991. (Preferential tax treatment of long-term capital gains was removed effective 1987, and the gains exempted from AMT as a result.)
[32] Includes refunds and credits to the following year's estimated tax and refundable portion of earned income credit. Reflects overpayments of income tax, tax recapture of certain prior-year tax credits, tax applicable to Individual Retirement Arrangements (IRA's), self-employment (social security) tax, social security tax on certain tip income; and certain other income-related taxes (for the taxes applicable to the years shown; see Statistics of Income-Individual Income Tax Returns).
[33] Reflects taxes mentioned in footnote 32.
SOURCE: Statistics of Income-Individual Income Tax Returns, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-toyear comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 2

[1] Includes returns with adjusted gross deficit.
[2] U.S. totals in Table 2 do not agree with Tables 1 and 3 mostly because Table 2 also includes (a) "substitutes for returns," whereby the Internal Revenue Service constructs returns for certain known nonfilers on the basis of available information and imposes an income tax on the resulting estimate of "taxable income," and (b) returns of nonresident or departing aliens. In addition, for purposes of Table 2 :
a. "Number of exemptions" also includes responses of taxpayers who checked the boxes on their tax return for age 65 or over or for blindness in order to claim the additional standard deductions for age or blindness. This treatment enables some comparability to be maintained between State data starting with 1987 and data for years prior to 1987. Number of exemptions are still understated, however, because these boxes are not checked if taxpayers itemize deductions. (Prior to 1987, checking these boxes entitled taxpayers to additional personal exemptions.)
b. "Itemized deductions". includes any amounts re-
ported by the taxpayer, even if they were not used in computing taxable income, e.g., amounts reported on returns with no adjusted gross income.
c. "Total tax liability" includes income tax after credits, alternative minimum tax, tax recapture of prior-year investment or low-income housing credits, tax applicable to Individual Retirement Arrangements (IRA's), self-employment (social security) tax; social security tax on certain tip income, and certain other income-related taxes. Total tax liability is before reduction by earned income credit (see footnotes 2(d) and 3, below).
d. "Earned income credit" includes both the refundable and nonrefundable portions. The nonrefundable portion could reduce income tax and certain related taxes to zero. See also footnote 3.
[3] "Excess earned income credit" represents the refundable portion of the credit (see footnote $2(\mathrm{~d})$ ) and equals the amount in excess of total tax liability (defined in footnote 2(c)), including any advance earned income credit payments for those returns which had such an excess.
[4] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside of Puerto Rico or with income earned as U.S. Govërnment employees.

NOTE: This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 1993. Data have not been edited for Statistics of Income purposes.
SOURCE: Internal Revenue Service, Corporate Systems Division, Individual Systems Branch.

## Table 3

[1] There were major changes in filing requirements and conceptual changes in the definitions of adjusted gross income (AGI) and taxable income starting with 1987. Percentages based on AGI starting with 1987 are therefore not comparable with 1986 and earlier years. For explanations, see "Individual Income Tax Returns, Preliminary Data, 1987," Statistics of Income Bulletin, Spring 1989, Volume 8, Number 4, and Statistics of Income-1987, Individual Income Tax Returns:

## Notes to Selected Historical and Other Data Tables

[2] Includes income tax after credits and the "alternative minimum tax" (see footnote 3).
[3] In addition to low-income taxpayers, this size class (and others) includes taxpayers with "tax preferences," not reflected in adjusted gross income or taxable income, which are subject to the "alternative minimum tax" (included in "total income tax") defined in footnote 31, Table 1.

SOURCE: Statistics of Income-Individual Income Tax Returns, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-toyear comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 4

[1] Represents "income" from owner-occupied nonfarm housing (less actual rental income and subsidies); proprietors' income; services to individuals furnished without payment by financial intermediaries (except life insurance carriers and private non-insured pension plans); employment-related food to employees, including that related to military and domestic service; standard military clothing issued to military personnel; and employees' lodging. Excludes employer-paid health and life insurance premiums.
[2] Represents imputed interest received by persons from life insurance carriers and private non-insured pension plans.
[3] Starting with 1990, the procedure for estimating the difference between NIPA and IRS treatment of depreciation was revised. Therefore, the data for years before 1990 are not comparable to data for later years.
[4] Represents income of low-income individuals not required to file individual income tax returns, unreported income, and statistical errors or omissions and effects of errors in data for adjusted gross income or personal income.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, The National Income and Product Accounts of the United States, Volume 1, 1929-58, 1993, and Volume 2, 1959-88, 1992; for years after 1988, Survey of Current Business, various issues. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Tables 5 and 6

[1] See Table 4 for the differences between personal income and adjusted gross income.
[2] Beginning with 1987, data are not comparable with earlier years because of major changes in the definition of adjusted gross income.
SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, The National Income and Product Accounts of the United States, 1929-58, Volume 1, 1993, and Volume 2, 1959-88, 1992; for years after 1988, Survey of Current Business, various issues. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 7

[1] Returns with standard deduction, starting with 1955, include a small number with no adjusted gross income and no deductions. (For 1977-1986, standard deduction is the "zero bracket amount," which was also reported on a small number of returns included in the 1987-1988 statistics; see footnote 2.) For 1944-1954, returns with no adjusted gross income are included in the number of returns with itemized deductions.
[2] Amount of standard deduction for 1944-1957 was estimated by Joseph A. Pechman, The Brookings Institution, on the basis of the distribution of the number of returns by income class and marital status in Statistics of Income-Individual Income Tax Returns, and, starting with 1958, was obtained directly from Statistics of Income tabulations for these years. Represents "zero bracket amount" for 1977-1986. Starting with 1987, represents the sum of "basic" and "additional" standard deductions (for age 65 or over and for blindness); also includes zero bracket amount reported on the small number of prior-year returns filed in 1988-1989 that were included in the 1987-1988 statistics.
[3] For 1977-1986, itemized deductions are before subtraction of "zero bracket amount."
[4] Sum of standard and itemized deductions, plus charit-able deduction reported on standard deduction returns for Tax Years 1982-1986. For 1987-1988, total deductions also include "zero bracket amount" reported on a small number of returns (see footnote 2).

## [5] See footnote 2, Tables 5 and 6.

SOURCE: Except as indicated in footnote 1, Statistics of Income-Individual Income Tax Returns, and unpublished tables, appropriate years. Data are subject to sampling error. Tax law and form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 8

[1] See Table 4 for the differences between personal income and adjusted gross income.
[2] Excludes the "zero bracket amount" for 1977-1986. Because of major changes in law, taxable income starting with 1955 and 1987 is not comparable with earlier years. See also footnote 25, Table 1:
[3] For the definition of total income tax, see footnote 30, Table 1.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, The National Income and Product Accounts of the United States, Volume 1,:1929-58, 1993, and Volume 2, 1959-88, 1992; for years after 1988, Survey of Current Business, various issues; and Statistics of Income-Individual Income Tax Returns, appropriate years. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 9

[1] Starting with 1975 , includes refundable portion of the earned income credit.
SOURCE: Statistics of Income-Individual Income Tax Returns, and unpublished tables, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 10

[1] Total deductions include amounts not shown separately in Table 10, as well as amounts not reported separately on Schedule C-EZ (short form) used by certain of the smaller businesses starting with 1992. Most deductions for which statistics are shown are slightly understated to the extent that only
total deductions had to be reported on Schedule CEZ. After 1986, total deductions exclude disallowed "passive losses"; net income (less deficit), net income, and deficit include these losses. In addition, net income (less deficit), net income, and deficit are after adjustment for the passive loss carryover from prior years. Therefore, business receipts minus total deductions do not equal net income (less deficit).

## SOURCE: Statistics of Income-Sole Proprietorship

Returns, appropriate years, and Statistics of Income Bulletin, Summer issues (for most years). Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data: See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 11

[1] Includes assets and liabilities not shown separately. Totals are somewhat understated because not all partnership returns included a complete balance sheet.
[2] Short-term debt is the abbreviated title for mortgages, notes, and bonds payable in less than 1 year.
[3] Long-term debt is the abbreviated title for mortgages, notes, and bonds payable in 1 year or more. In addition, for Tax Year 1975, long-term debt included nonrecourse loans.
[4] "Total receipts" and "total deductions" include amounts not shown separately. Prior to 1981, "total receipts" included gross income from farming, rents, and royalties. Expenses related to this income were included under "total deductions." Starting with 1981, only the net incomes or deficits from farming, rents, and royalties were tabulated; the positive amounts were included under "total receipts" and the negative amounts under "total deductions." The related expenses were not tabulated. Because of a redesign of the partnership return, starting with 1987 , total receipts was computed as the sum of "total income from a trade or business"; "portfolio income" distributed directly to partners, from interest, dividends and royalties, but not from net capital gains; rental real estate income (positive amounts only); and income from other rental activities (positive amounts only). Most, but not all, of these types of income were included in receipts data for 1986 and earlier years. Portfolio income from capital gains, starting with 1987, was intentionally omitted to improve the
comparability of the data with earlier years.
[5] In finance, insurance, and real estate prior to 1981, only gross rentals reported as investment income were treated as business receipts and only if they were the principal operating income.
[6] For 1982-1986, also includes certain dividends reported in combination with interest.
[7] After 1980, represents the more complete amounts reported in depreciation computation schedules rather than the amounts reported as the depreciation deduction (augmented by depreciation identified for the statistics in cost of sales and operations schedules).

SOURCE: Statistics of Income-Partnership Returns, appropriate years, and Statistics of Income Bulletin, Summer or Fall issues (for most years). Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 12

[1] Size classes are based on "business receipts," i.e., gross amounts from sales and operations, for industries except those in finance, insurance, and real estate. For the latter industries, "total receipts," which is the sum of business receipts and investment income, was used. For partnerships, comparability of data by size of receipts is affected by revisions to the definition of receipts; see also footnotes 4 and 5, Table 11. To help minimize the break in comparability caused by the change in statistical treatment of partnership farm and rental income, an effort was made for 1981-1987 only, to include rental (though not farm) gross income in the receipts used for the size distribution in Table 12. Starting with 1988 though, only partnership net rentals are reflected in the size distribution.
[2] Includes returns with no business receipts.
[3] Includes corporations and partnerships with zero assets and liabilities. In addition, for partnerships, includes partnerships without balance sheet information (see also footnote 5 , below).
[4] See footnote 4, Table 11.
[5] Prior to 1979, partnerships that had liquidated were assumed to have zero assets and liabilities, even if their balance sheets showed otherwise, and were
included in the "under $\$ 25,000$ " asset size class. Beginning with 1980 , balance sheet data for liquidated partnerships were tabulated as reported and were included in the appropriate asset size classes.
[6] For the difference between the number of business returns and the number of businesses, see Table 10.
SOURCE: Statistics of Income-Corporation Income Tax
Returns; Statistics of Income-Partnership Returns, Sole Proprietorship Returns, and Business Income Tax Returns, depending on the year; and Statistics of Income Bulletin, Summer or Fall issues (for most years). Tax law and tax form changes affect the year-to-year comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 13

[1] Starting with 1985 , number of returns excludes taxable cooperatives, and, starting with 1988 , excludes returns filed by Foreign Sales Corporations (FSC's) and Interest Charge-Domestic International Sales Corporations (IC-DISC's); see also footnotes 5 and 6 , below. Because of the omission of these returns, totals for all income and financial items shown in the statistics (except those not applicable to IC-DISC's and FSC's, such as "income subject to tax," "income tax," and tax credits) are slightly understated.
[2] Consolidated returns were filed on an elective basis for groups of affiliated corporations (with exceptions), in general, if 80 percent or more of the stock of the affiliates was owned within the group and a common parent corporation owned at least 80 percent of the stock of at least one of the affiliates.
[3] Included in "number of returns, total" and "number with net income."
[4] In general, certain small, closely-held corporations that elected to be taxed at the shareholder level, with no more than 35 shareholders ( 25 for 1982; 15 for 1979-1981; 10 or 15 for 1977-1978, depending on conditions contained in the law; and 10 for earlier years).
[5] Domestic International Sales Corporations (DISC's) were designed to promote U.S. exports. They were taxed through parent corporations, but only when profits were distributed or deemed distributed to them. This system of tax deferral was generally replaced after 1984 with a new system of Foreign

## Notes to Selected Historical and Other Data Tables

Sales Corporations (FSC's); see footnote 6. Tax benefits of DISC's remaining after 1984 were ; limited and an interest charge for tax-deferred amounts was imposed on the parent corporations whose DISC subsidiaries were unable to meet the FSC requirements and that elected to continue as ICDISC's. Counts presented for DISC's after 1984 are, therefore, limited to IC-DISC's.
[ 6] Foreign Sales Corporations (FSC's) generally replaced DISC's as a means of promoting U.S. exports (see footnote 5). Under the FSC provisions, a portion of these subsidiaries' "foreign trade income" was exempt from U.S. income tax.
[7] Starting with 1985, inventories includes amounts reported by real estate subsidividers and developers previously included in "other investments."
[ 8] For 1980 and 1985 data, tax-exempt securities, representing investments in State and local Góvernment obligations, were reported with investments in U.S. Government obligations as a combined total on the tax return. Starting with 1989, tax-exempt securities were again reported separately, but were defined to include, not only investments in State and local Government obligations, but also stock in investment companies that distributed dividends during the current year representing tax-exempt interest on such obligations.
[9] Starting with 1991, accounts payable of banking and savings and loan institutions includes deposits and withdrawable shares previously reported in "other current liabilities."
[10] In general, starting with 1983, statistics for receipts, deductions, and net income (or deficit) of S Corporations are limited to those attributable to a trade or business. Therefore, most investment income or loss, such as from taxable interest, dividends, rents, royalties, and gain (loss) from sales of investment property; the deductions related to this income; as well as deductions for charitable contributions, intangible drilling and development costs, oil and gas depletion, foreign taxes paid, and the limited expensing of the cost of depreciable assets (Code section 179), are not reflected in net income (because they were allocated directly to shareholders, instead). See also footnote 11.
Starting with 1992, "cost of sales and operations" exclude amounts previously estimated for the statistics from other information reported (often in
"other deductions") on the tax returns of corporations reporting "business receipts," without a corresponding cost of sales and operations. Most of these corporations were classified either in transportation and public utilities or in services.
[11] Starting with 1987, "business receipts" includes the full amount reported by stock and commodity brokers and exchanges, and by real estate subdividers, developers and operative builders, even when they bought and sold securities, commodities and real estate on their own account. Previously, such transactions were treated as "net gain (loss), noncapital assets."
[12] See footnote 10.
[13] Starting with the 1985 statistics, includes any dividends reported in combination with interest on Form 1120-S by S Corporations, i.e., certain corporations that elect to be taxed through shareholders (see footnote 4). Based on prior years when Form 1120-S required each to be reported separately, nearly all of the combined amount represents interest.
[14] For the 1985 statistics, "other deductions" includes depletion and employer contributions to pension, profit-sharing, stock bonus; and annuity plans, and to employee benefit programs, reported on the Form 1120-A short form. Starting with 1988, identifiable amounts reported on Form 1120-A for any of these items are included in the statistics for the appropriate deduction. For the 1985 statistics, "other deductions" include depletion and employer contributions to pension, profit-sharing, stock bonus, and annuity plans, reported on the Form 1120-A short form. Starting with 1988, identifiable amounts reported on Form 1120-A for any of these items are included in the statistics for the appropriate deduction. Starting with 1992, "other deductions" include certain amounts previously treated as part of the cost of sales and operations for Statistics of Income. See also footnote 10.
[15] In general, "total receipts less total deductions" includes nontaxable interest on State and local Government obligations, but excludes income from related foreign corporations only "constructively" received. As such, "total receipts less total deductions" represents all income, taxable and nontaxable, "actually" received by the corporation, as reported on the corporation income tax return, and excludes all income only "constructively" received. In
contrast, "net income (less deficit)" represents all taxable income, actually or constructively received. Therefore, in the statistics, "total receipts less total deductions" minus "nontaxable interest on State and local Government obligations" and "constructive taxable income from related foreign corporations" equals "net income (less deficit)." For the exception, see footnote 16.
[16] "Net income (less deficit)," "net income," and "deficit" for 1988 and 1990-1991 exclude net longterm capital gain reduced by net short-term capital loss reported by regulated investment companies. See also footnote 15.
[17] For most years, "income subject to tax" (the corporate tax base) exceeds "net income (less deficit)" chiefly because of the deficits reported on returns without net income. Moreover, it is the sum of the several tax bases applicable over time to different classes of corporations, not all of which were directly related to net income. Income subject to tax thus includes the "taxable income" base used by most companies (and defined as net income minus certain statutory special nonbusiness deductions); prior to 1988, a variation of this base in combination with net long-term capital gains in certain situations where the lower capital gains tax applied; and the special tax bases applicable to $S$ Corporations (otherwise taxed through their shareholders), insurance businesses, and certain investment companies. Profits of Domestic International Sales Corporations were tax-deferred; most of those of qualifying Foreign Sales Corporations were taxexempt and those of $S$ Corporations were taxed through their individual shareholders. Therefore, the net income of all these corporations is excluded from income subject to tax for years for which data for these companies are included in the statistics (see also footnote 1.)
[18] For 1970, includes tax surcharge of $\$ 784,437,000$. For 1975-1980, includes tax from recapture of Work Incentive Program (WIN) credit; starting with 1985, includes Personal Holding Company tax; starting with 1988, includes tax on "branch profits" of foreign corporations with U.S. operations; and, starting with 1989, includes certain lesser taxes, including special taxes applicable to real estate investment trusts and foreign corporations with U.S.source income.
[19] Different tax rate structures applied for Tax Years 1970, 1971-1974, 1975-1978, 1979-1981, 1982,

1983-1986, and 1987-1991. In general, starting with tax years beginning in 1987, "alternative tax" was repealed. This tax included a maximum rate on long-term capital gains that produced a tax that was less than that produced by the regular tax rates.
[20] Effective during 1987, the "alternative minimum tax" replaced the "minimum tax" (formerly referred to in the statistics as the "additional tax for tax preferences"), which was introduced for tax years that ended in 1970. The tax rate for minimum tax was increased and the computation revised starting with Tax Year 1976; computation was further modified effective with Tax Years 1977, 1983, 1984, and 1990. Tax preferences subject to the tax were redefined starting with Tax Year 1976, and slightly expanded starting with Tax Year 1977. The alternative minimum tax rate exceeded that applicable under the former minimum tax.
[21] Starting with the 1985 statistics, general business credit includes alcohol fuel, investment, jobs and employee stock ownership plan (ESOP) credits which were reported separately for previous years. Also included are the research credit (starting 1986) and the low-income housing credit (starting 1987). With exceptions, investment credit was repealed effective 1986; employee stock ownership plan contributions credit was repealed effective 1987. For changes in definitions of component credits, see Statistics of Income-Corporation Income Tax Returns, for the years concerned.
SOURCE: Statistics of Income-Corporation Income Tax Returns, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-toyear comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 14

[1] See footnote 1, Table 13.
[2] See footnote 10, Table 13.
[3] See footnote 11, Table 13.
[4] See footnote 13, Table 13.
[5] See footnotes 18 and 19, Table 13.
[6] In addition to regular (and alternative tax, for years prior to 1988), includes certain other taxes either shown in Table 13, or specified in footnote 18, Table 13. See Statistics of Income-Corporation Income

## Notes to Selected Historical and Other Data Tables

Tax Returns, for the years concerned for more detailed explanations.

SOURCE: Statistics of Income-Corporation Income Tax Returns, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-toyear comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 15

[1] Profits shown are without inventory valuation and capital-consumption adjustments.
[2] "Net income (less deficit)" and "income subject to tax" exclude taxable cooperatives starting with Tax Year 1980. Net income (less deficit) starting with 1985 excludes Foreign Sales Corporations (FSC's) and Interest-Charge Domestic International Sales Corporations (IC-DISC's); see also Table 13, footnote 1 . For regulated investment companies, see Table 13, footnote 16.
[3] For the definition of "income subject to tax," see footnote 17 , Table 13. See also footnote 2 , above.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, The National Income and Product Accounts of the United States, Volume 1, 1929-58, 1993, and Volume 2, 1959-88, 1992; for years after 1988, Survey of Current Business, various issues; and Statistics of Income-Corporation Income Tax Returns, appropriate years. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Table 16

[1] Total adult deaths represent those of individuals age - 20 and over, plus deaths for which age was unavailable.
[2] Prior to 1982, number of taxable returns by year of death is only approximate because, while the majority of returns filed in a given calendar year represent estates of decedents who died in the immediately-preceding year, many represent estates of decedents who died in earlier years. Therefore, the number of taxable returns shown as for 1976 decedents are actually the number of taxable returns filed in 1977, regardless of year of death. Starting with 1982, statistics for year of death are more
accurate, since they are based on year of death as reported on return filings over a period of 3 successive years. Thus, returns of 1989 decedents, for example, are based on the year of death reported on returns that were filed in 1989-1991.

Data for 1965 and subsequent years are not altogether comparable with earlier years. Starting with 1965, the number of taxable returns with taxable estate was based on estate tax after credits; previously, it was based on estate tax before credits.

Year-to-year comparability is affected by changes in the gross estate filing threshold which is based on date of death: $1934(\$ 50,000) ; 1935(\$ 50,000$ changing to $\$ 40,000$ ); 1936-1941 (\$40,000); 1942 ( $\$ 40,000$ changing to $\$ 60,000$ ); 1943-1976 (\$60,000); 1977 (\$120,000); 1978 (\$134,000); 1979 (\$147,000); 1980 (\$161,000);1981 (\$175,000); 1982 (\$225,000); 1983 (\$275,000); 1984 (\$325,000); 1985 (\$400,000); 1986 (\$500,000); and 1987 and thereafter $(\$ 600,000)$.
SOURCE: For years after 1953, Statistics of Income Estate Tax Returns; Estate and Gift Tax Returns; Fiduciary, Estate and Gift Tax Returns, depending on the year; or the Statistics of Income Bulletin, selected issues. For years prior to 1954, Statistics of Income-Part 1. Adult deaths are from National Center for Health Statistics, Public Health Service, U.S. Department of Health and Human Services, Vital Statistics of the United States, unpublished tables.

## Tables 17 and 18

[1] Collections include that portion which was designated for the Presidential election campaign fund by taxpayers on their tax returns. Also included is the fiduciary income tax collected (from estates and trusts). Fiduciary income tax collected in 1993 was $\$ 6.0$ billion; in 1992, $\$ 6.1$ billion; in 1991, $\$ 4.8$ billion; in 1990, $\$ 5.9$ billion; in 1989, 6.0 billion; in 1988, $\$ 6.5$ billion; and, in 1987, $\$ 8.4$ billion. Presidential election campaign designations amounted to $\$ 24.9$ million in 1993; $\$ 29.6$ million in 1992; $\$ 32.3$ million in $1991 ; \$ 32.5$ million in 1990 ; $\$ 32.3$ million in 1989 ; $\$ 33.2$ million in 1988 ; and \$33.2 million in 1987.
[2] Includes various taxes applicable to tax-exempt organizations, including the tax on "unrelated business income." Total taxes collected from taxexempt organizations were $\$ 173.6$ million in 1993, $\$ 181.6$ million in 1992, $\$ 155.6$ million in 1991,
$\$ 127.9$ million in $1990, \$ 115.6$ million in 1989 , $\$ 137.5$ million in 1988 , and $\$ 119.9$ million in 1987.

Refunds include the refundable portion of the earned income credit; see footnote 3, Table 2. Individual income tax refunds are net of offsets under laws which require IRS to act as collecting agent for delinquent payments owed various U.S. Government agencies under specific programs.
[3] Excise taxes are imposed on selected products, services and activities, such as on alcohol and tobacco products and on gasoline. Statistics shown in Table 17 have been revised, starting with Fiscal Year 1988, to include alcohol and tobacco taxes, collection of which was transferred from the Internal Revenue Service to the Bureau of Alcohol, Tobacco, and Firearms, starting with that year. Collections and refunds of manufacturers tax on recreational products include taxes on firearms, responsibility for which was transferred from the Internal Revenue Service to the Bureau of Alcohol, Tobacco, and Firearms starting January 1991. Collections exclude taxes on cargoes paid to the U.S. Customs Service; however, refunds include these taxes.
[4] Employment taxes include payroll taxes levied on salaries and wages, such as social security, railroad retirement, and unemployment taxes; plus the selfemployment (social security) tax imposed on "self-employment income."

NOTES: Refunds in Table 18 are associated with the taxes (including alcohol, tobacco, and firearms taxes) described in footnotes 1-4, Table 17. Collections (or refunds) are those made during time periods indicated, regardless of the year or other period during which the tax liability was incurred (or to which the refund applied).
Collections represent the gross amounts before refunds and include amounts paid with the tax return; prior to filing the return (as applicable, income tax withheld by employers and estimated tax payments); and subsequent to filing the return (chiefly the result of initial return processing or of examination and enforcement activities). Collections also include interest and penalties.
Refunds result chiefly from tax overpayments determined at time of filing a return. Also included are amounts subsequently determined as due the taxpayer as a result of an amended return or a claim for refund (including those produced by "net operating loss" and other carryback adjustments from future taxable years); or as a result of initial return processing or of IRS examination and other activities.

All refund data include interest paid by IRS (in 1993, \$2.1 billion; in 1992, $\$ 3.2$ billion; in 1991, $\$ 2.8$ billion; in 1990, $\$ 2.4$ billion; in 1989, $\$ 0.5$ billion; in 1988, $\$ 0.4$ billion; and, in 1987, 0.4 billion.

For 1970 and 1975, the fiscal year was defined as July of the previous calendar year through June of the year noted. Starting with 1980, the fiscal year was redefined as October of the previous calendar year through September of the year noted. (For Fiscal Year 1976, data are not shown for the interim period, July-September 1976.)

Starting with Fiscal Year 1988, additional detail on manufacturers excise taxes, retail and special fuel taxes, and miscellaneous excise taxes is available in the fourth quarter Internal Revenue Report of Excise Taxes; previously this information was published in the Internal Revenue Service Annual Report. For additional detail on alcohol, tobacco, and firearms taxes, see the Statistical Release, Alcohol and Tobacco Tax Collections, Bureau of Alcohol, Tobacco, and Firearms, U.S. Department of the Treasury.
SOURCE: U.S. Department of the Treasury, Internal Revenue Service, Case Processing Division, Accounting Branch.

## Table 19

[1] Alcohol and tobacco taxes each include special (occupational) taxes prior to Fiscal Year 1988. Starting with Fiscal Year 1988, occupational taxes are excluded from the separate amounts shown for alcohol and for tobacco taxes, although they are reflected in the combined total for all alcohol and tobacco taxes.
[2] Also includes lubricating oil taxes. Effective January 7, 1983, taxes on lubricating oil were repealed.
[3] Effective January 1, 1984, taxes on tubes and tread rubber were repealed.
[4] Effective January 7, 1983, the manufacturers excise taxes on parts and accessories for trucks and buses, which are included in this classification, were repealed. Beginning with the quarter ending December 1983, taxes on motor vehicles are excluded.
[5] Includes taxes on diesel and special motor fuels which were classified as miscellaneous excise taxes in 1970. Starting with the quarter ended December 1983, includes taxes on motor vehicles and, starting with the quarter ended March 1990, leaking underground storage tank trust fund tax (except for fuel used in aviation, which is classified under environmental excise taxes).

## Notes to Selected Historical and Other Data Tables

[6] Repealed effective August 23, 1988. Amounts reported for more recent time periods result from amended filings, delinquent taxes, examination activities and refunds of tax deposited in excess of tax liabilities.
[7] : Environmental "Superfund" tax expired September 1985, but was reimposed January 1987. Data include oil spill trust fund and ozone-depleting chemical taxes, effective January 1990. Also includes leaking underground storage trust fund tax for quarters ended March 1988 through December 1989; thereafter, except for the tax on aviation fuel use, this tax is classified under special fuels tax.

NOTE: Amounts reported for specific excise taxes are the total tax liabilities reported on returns processed during the period shown and thus differ from amounts collected during the same period through deposits and payments attached to returns, some of which were processed in other quarters. Gross excise tax collections are shown in Table 17.

SOURCE: U.S. Department of the Treasury, Internal Revenue Service, Case Processing Division, Accounting Branch; and Financial Management Service.

## Table 20

[1] Form 1040 is the "long form;" Form 1040A, the "short form." Prior to 1994, Form 1040EZ was a special short form for single taxpayers with no dependents; starting with 1994, certain married taxpayers with no dependents could also file on this form. Starting with Calendar 1992, each of these three categories exclude "paper" returns (so-called Form 1040PC returns), filed by taxpayers (or tax preparers) using an IRS-approved computer soft-ware-generated format. "Other" includes Form 1040C (departing aliens) in years before 1992; 1040NR (nonresident aliens); 1040PR (self-employment tax, Puerto Rico); and 1040SS (self-employment tax, Virgin Islands, Guam, and American Samoa). However, "other" excludes Form 1040X (amended returns) and "substitutes for returns" (returns "constructed" by the Internal Revenue Service for certain known nonfilers on the basis of available information).
Totals for Forms 1040, 1040A, and 1040EZ (including so-called Forms 1040PC) are comprised of "business" and "nonbusiness" returns." "Business" returns are filed on Form 1040 (or on "Form 1040PC," starting with the statistics for Calendar
year 1993); "nonbusiness" returns are filed on Forms 1040, 1040A, and 1040EZ (or on "Form 1040PC," also starting with Calendar Year 1993). Schedule C is for reporting nonfarm sole proprietorship businesses and Schedule $F$ is for reporting farm income and expenses.
Starting in 1986, totals for Forms 1040, 1040A, and 1040 EZ , as well as for nonbusiness and nonbusiness Form 1040 returns, are comprised of "paper returns" (including those classified as "Form 1040PC," starting in 1993), plus "standard" electronically-filed (ÉLF) returns (usually filed by tax preparers).
Starting in 1992, the totals also include returns filed by telephone ("TeleFile").
[2] Form 1120 is the basic corporation income tax return; Form 1120A is the short form; and Form 1120S is for S Corporations (certain small companies electing to be taxed through their shareholders, no more than 35 shareholders starting with 1983, and either 15 or 10 , for earlier years). "Other" includes Forms 1120F (most foreign companies with U.S. income); 1120L (life insurance companies) starting in 1992 (included in the statistics for Form 1120 in the earlier years); 1120 POL (certain political associations); 1120 H (homeowners associations); 1120-FSC (Foreign Sales Corporations or FSC's) starting in 1986; starting in 1988, 1120-REIT for real estate investment trusts, 1120-RIC for regulated investment companies (both of which formerly filed on Form 1120), and 1120-PC for property and casualty insurance companies (which formerly filed on Form 1120 or 1120 M , described below). "Other" also includes Form 1120 DF (for designated funds) starting in 1988; and for years before 1988, Form 1120 M , discontinued, for mutual non-life insurance companies which now file on Form 1120 or Form 1120-PC (and are included in the statistics for Form 1120 in the earlier years). "Other" excludes Forms 1120-DISC for Domestic International Sales Corporations or DISC's, discontinued after 1985 and mostly replaced by FSC's (see above); 1120 IC-DISC for Interest Charge-Domestic International Sales Corporations, which replaced certain DISC's after 1985; and 1120X, amended returns.
[3] Form 1041 is the regular fiduciary income tax return filed for estates and trusts. For 1988-1990, includes Form 1041S (short form). For 1970, includes Form 1041A (trust accumulation of charitable trusts, information return).
[4] Form 706 is the regular estate tax return; Form 706NA is for U.S. estates of nonresident aliens.
[5] Form 990 is for tax-exempt organizations, except private foundations (Form 990-PF). Form 990EZ is the short form. Form 990-T is the income tax return filed for businesses conducted by tax-exempt organizations. Form 990-C is for farmers' cooperatives. Form 4720 is for computing the special excise taxes applicable to certain private foundations and Form 5227 is for split-interest trusts treated as private foundations. The 1970 total on the line for Forms 990 and 990EZ also includes Forms 990A filed for tax-exempt charitable organizations.
SOURCE: U.S. Department of the Treasury, Internal Revenue Service, Compliance Research, Projections and Forecasting Group.

## Table 21

[1] Number of returns with a paid preparer signature is based on different sources, depending on the year. Data for 1988 are estimated based on the Statistics of Income sample for that year. Data for 1989-1993 are from the Individual Master File of all individual income taxpayers, with the following exceptions: starting with 1989, the number of returns with itemized deductions; starting with 1990, the number of returns that were filed electronically. These latter numbers were estimated from the Statistics of Income-Taxpayer Usage Study (TPUS) samples of returns filed during the first 4 months for these years and, for 1992, from the full Statistics of Income sample.
[2] Data on electronically-filed returns are included in the counts of Form 1040 returns shown above in Table 21, for all years. For Tax Years 1990 and 1991, data are based on the TPUS sample (see footnote 1) of returns filed, extended to cover the first 8 months of the filing year. No adjustment was made for the returns filed after the first 8 months on the assumption that few were likely to have been filed electronically during these months. For Tax Year 1992, data are based on the full sample of returns filed throughout Calendar Year 1993.
[3] Data on IRS Taxpayer Service Programs are collected either on a fiscal-year or calendar-year basis, depending on the program. In general, assistance rendered in a given fiscal year may be related to returns due on April 15th during that fiscal year and is for the tax year ending with the previous December. As a result, data in Table 21 on telephone and written inquiries; office walk-in's, information; and taxpayer contacts through community classes and seminars, which are presented on a tax year basis, are actually for a fiscal year. Therefore, data for these contacts shown as for Tax Year 1992, for example, are actually for Fiscal Year 1993.

NOTE: Data on IRS assistance represent taxpayer contacts. Some taxpayers make more than one contact. The number of taxpayers assisted (in contrast to the number of contacts made) is not known.
SOURCE: Data on paid preparers were obtained from Statistics of Income; and Corporate Systems Division, Individual Systems Branch. Data on IRS assistance were obtained from Taxpayer Service.

# SOI Sampling Methodology and Data Limitations 

## Appendix

This appendix discusses typical sampling procedures used in most Statistics of Income (SOI) programs. Aspects covered briefly include sampling criteria, selection techniques, methods of estimation, and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specific SOI studies can be found in the separate SOI reports (see the References at the end of this appendix). More technical information is available, upon request, by writing to the Acting Director, Statistics of Income CP:R:S, Internal Revenue Service, P.O. Box 2608, Washington, DC 20013-2608.

## Sample Griteria and Selection of Returns

Statistics compiled for the SOI studies are generally based on stratified probability samples of income tax returns or other forms filed with the Internal Revenue Service (IRS). The statistics do not reflect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. As returns are filed and processed for tax purposes, they are assigned to sampling classes (strata) based on criteria such as: industry, presence or absence of a tax form or schedule, accounting period, State from which filed, and various income factors or other measures of economic size (total assets, for example, is used for the corporation and partnership statistics). The samples are selected from each stratum over the appropriate filing periods. Thus, sample selection can continue for a given study for several calendar years - 3 for corporations because of the prevalence of fiscal (non-calendar) year reporting. Because sampling must take place before the population size is known precisely, the rates of sample selection within each stratum are fixed. This means, in practice, that both the population and the sample size can differ from that planned. However, these factors do not compromise the validity of the estimates.
The probability of a return being designated depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include the number of returns in the stratum, the diversity of returns in

Information for this appendix was compiled by Bettye Jamerson, Coordination and Publications Staff, under the direction of Robert Wilson, Technical Advisor. Major contributions were made by Paul McMahon, Mathematical Statistics Team.
the stratum and interest in the stratum as a separate subject of study. All this is subject to constraints based on the estimated cost or the target size of the total sample for the program.
For most SOI studies, returns are designated by computer from the IRS Master Files based on the taxpayer identification number (TIN), which is either the social security number (SSN) or the employer identification number (EIN). A fixed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specified for a return's sample stratum, then it is selected and processed for the study. Otherwise, it is counted (for estimation purposes), but not selected. In some cases, the TIN is used directly by matching specified digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TIN's designated from one year's sample are for the most part selected for the next year's, so that a very high proportion of the returns selected in the current sample are from taxpayers whose previous years' returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from one year to the next.

## Method of Estimation

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classified. Weights are, in general, computed by dividing the count of returns filed for a given stratum by the count of sample returns for that same stratum. "Weights" are used to adjust for the various sampling rates used - the lower the rate, the larger the weight. For some studies, it is possible to improve the estimates by subdividing the original sampling classes into "post-strata," based on additional criteria or refinements of those used in the original stratification. Weights are then computed for these post-strata using additional population counts. The data on each return in a stratum are multiplied by that weight. To produce the tabulated estimates, these weighted data are summed to produce the published statistical totals.

Sample returns are designated by computer from the IRS Master Files based on the tax-
payer identification number.

## SOI Sampling Methodology and Data Limitations

## Sampling Variability

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the same sample design. Estimates derived from the different

## In transcribing and

tabulating data from
tax returns, checks
are imposed to
improve the quality
of the-statistics. samples usually vary. The standard error of the estimate is a measure of the variation among the estimates from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the possible samples. The sample estimate and an estimate of its standard efror permit the construction of interval estimates with prescribed confidence that this interval includes the actual population value.

In SOI reports the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in decimal form. This ratio is called the coefficient of variation (CV). The user of SOI data may multiply an estimate by its coefficient of variation to recreate the standard error and to construct confidence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coefficient of variation of 0.02 , then the following arithmetic procedure would be followed to construct a 68 percent confidence interval estimate:

> 150,000 (sample estimate)
> $\times 0.02$ (coefficient of variation)
> $=3,000$ (standard error of estimate)
> 150,000 (sample estimate)
> + or $-3,000$ (standard error)
> $=147,000-153,000$ (68 percent confidence interval).

Based on these data, the interval estimate is from 147 to 153 thousand returns. A conclusion that the average. estimate of the number of returns lies within an interval computed in this way would be correct for approximately two-thirds of all possible similarly selected samples. To obtain this interval estimate with 95 percent confidence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Further details concerning sample design, sample selection, estimation method, and sampling variability for a particular SOI study may be obtained on request by writing the Acting Director, Statistics of Income, at the address given above.

## Nonsampling Error Controls and Limitations

Although the previous discușsion focuses on sampling. methods and the limitations of the data caused by sampling error, there are other sources of error that may be. significant in evaluating the usefulness of SOI data. These include taxpayer reporting errors, processing errors and effects of an early cut-off of sampling. More extensive information on nonsampling error is presented in SOI reports, when appropriate.

In transcribing and tabulating the information from the returns or forms selected for the sample, checks are imposed to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during statistical "editing" in order both to improve data consistency from return to return and to achieve definitions of the data items that are more in keeping with the needs of major users. In some cases not all of the data are available from the tax return as originally filed. Sometimes the missing data can be obtained through field follow up. More often, though, they are obtained through imputation methods. As examples, other information in the return or in accompanying schedules may be sufficient to enable an estimate to be made; prior-year data for the same taxpayer may be, used for the same purpose; or data from another return for the same year that has similar characteristics may be substituted. Research to improve methods of imputing data that are missing from returns continues to be an ongoing process [1].

Quality of the basic data abstracted from the returns is subjected to a number of quality control steps including 100 -percent key verification. The data are then subjected to many tests based on the structure of the tax law and the improbability of various data combinations. Records failing these tests are then subjected to further review and any necessary corrections are made. In addition, Statistics of Income in the National Office conducts an independent reprocessing of a small subsample of statisticallyprocessed returns as a further check [2].

Finally, before publication, all statistics are reviewed for accuracy and reasonableness in light of provisions of

## SOI Sampling Methodology and Data Limitations

the tax laws, taxpayer reporting variations, as well as limitations, economic conditions, comparability with other statistical series, and statistical techniques used in data processing and estimating.

## Tabular Conventions

Estimates of frequencies and money amounts that are considered unreliable due to the small sample size on which they are based are noted in SOI tables. The presence of the indicator means that the sampling rate is less than 100 percent of the population and that there are fewer than 10 sample observations available for estimation purposes.

A dash in place of a frequency or amount indicates that no sample return had that characteristic. In addition, a dash in place of a coefficient of variation for which there is an estimate indicates that all returns contributing to the estimate were selected at the 100 -percent rate.

Whenever a weighted frequency in a data cell is less than 3, the estimate is either combined with other cells or deleted in order to avoid disclosure of information about individual taxpayers or businesses. These combinations and deletions are indicated in the tables.

## Notes

[1] See, for example, Hinkins, Susan M., "Matrix Sampling and the Effects of Using Hot Deck Imputation," in 1984 Proceedings of the American Statistical Association, Section on Survey Research Methods. Other research efforts are included in Statistical Uses of Administrative Records: Recent Research and

## Present Prospects, Volume 1, Internal Revenue

 Service, March 1984.[2] Quality control activities for all SOI studies are published from time to time in a series of separate reports. These reports provide detailed information relating to quality in all phases of SOI processing.

## Compendiums

## Studies of Tax-Exempt Organizations, 1974-1987

Publication 1416 - Price $\$ 26.00$
This publication presents 22 articles from Statistics of Income studies on tax-exempt organizations. The articles emphasize important issues within the nonprofit sector, and also include several other articles previously unpublished in the SOI Bulletin, as well as papers published in proceedings of the American Statistical Association and the Independent Sector Research Forum. Topics featured are:

- nonprofit charitable organizations (primarily charitable, educational, and health organizations);
- private foundations and charitable trusts; and - unrelated business income of exempt organizations.

## Studies of Tax-Exempt Organizations, 1986-1992

Publication $1416-$ Price $\$ 26.00$
This is the second volume in a series of Statistics of Income (SOI) publications on tax-exempt, nonprofit organizations. The volume includes data covering 1986-

1992 and contains 12 previously-published articles from SOI studies, including articles from the SOI Bulletin, as well as papers prepared for the Journal of Nonprofit Management and Leadership, Trusts and Estates, the Independent Sector Research Forum, the National Research Council's Committee on National Statistics, and the American Statistical Association.

## Studies of International Income and Taxes, 1984-1988

Publication 1267 - Price $\$ 26.00$
This report presents information from 13 Statistics of Income studies in the international area (many of them previously published in the SOI Bulletin), including:

- foreign activity of U.S. corporations;
$\square$ activity of foreign corporations in the United States;
- foreign controlled U.S. corporations;
- statistics related to individuals, trusts, and estates; and
- data presented by geographical area or industrial activity, as well as other classifiers.

## Compendium of Federal Estate Tax and Personal Wealth Studies <br> Publication 1773 - $\$ 26.00$

Part I of this report focuses on data from estate tax returns, describing decedents, their beneficiaries, and the composition of their estates. It contains a methodological discussion of the strategy used in weighting the sample data for the estate studies and also statistics on selected components of decedeñts' èstates', 1916-1990 Information on charitable giving is also included.

Part II presents a series of articles describing the estatemultiplier technique and its applications for personal wealth estimates, estimates of personal wealth for selected years, 1962-1989, as well as a discussion of the relationship among realized income, wealth, and well-being.

## Reimbursable Services

## Corporation Source Book, 1991

Publication 1053 - Price $\$ 175$
This 478-page document presents detailed income state-

## Publications \& Tapes

ment, balance sheet, tax, and selected other items, by major and minor industrial groups and size of total assets, for all returns and separately for returns with net income. The report, which underlies the Statistics of Income-Corporation Income Tax Returns publication, is part of an annual series and can be purchased in its entirety or by page. (The Source Book is also available on 35 mm microfilm for $\$ 175.00$. Issues prior to 1982 are for sale at $\$ 150$ per year.) A magnetic tape or diskette containing the tabular statistics for 1991 can be purchased for \$1,500.

## Public-Use Magnetic Tape Microdata Files

(Price depends on the request.)
This includes individual income tax returns for 19791990. A limited number of files for 1989 are also available on CD-ROM. (Individual income tax returns for 1966-1978 are available for sale by writing to the Center for Electronic Records (NNX) of the National Archives and Records Administration, Washington, DC 20408.) Files containing more limited data for each State are also available for 1985 and 1988. All of these files have been edited to protect the confidentiality of individual taxpayers. Files for private foundations for 1982-1983 and 1985-1991 and nonprofit charitable organizations for 1982-1983 and 1985-1990 are also available from Statistics of Income. The individual, private foundation, and charitable organization files are the only microdata files that can be released to the public.

## Migration Data

## (Price depends on the request.)

Compilations are available showing migration patterns, from where to where, by State and county, based on year-to-year changes in the individual income tax return address. Data are also available for selected time periods (according to the years in which the returns were filed) between 1978 and 1992 and include counts of the number of returns and the number of personal exemptions (which can be used to approximate population). Tabulations are available as hard copy for all years, on magnetic tape for all years except 1983, and diskette starting with 1989. (Compilations showing State-to-State migration flows only are also accessible through the SOI electronic bulletin board starting with 1988; see below.)

## County Income Data

(Price depends on the request.)

Tables present adjusted gross income by source and number of personal exemptions (which can be used to approximate population) reported on individual income tax returns for Income Years 1982 and 1984 through 1991. Data are available as hard copy or on magnetic tape for each year, or on diskette starting with 1988.

## ZIP Code Area Data

## (Price depends on the request.)

Recent statistics are available for Income Year 1991 only, either on computer tape or diskette, showing the number of individual income tax returns, the number of personal exemptions (which can be used to approximate population), adjusted gross income, and income tax, by 5-digit ZIP Code.

## Other Unpublished Tabulations

(Price depends on the request.)
Unpublished tabulations are also available, including detailed tables underlying those published in the SOI Bulletin. Special tabulations may also be produced, depending on the availability of resources.

## Other Publications

The following Statistics of Income publications are available from the Superintendent of Documents, U.S. Government Printing Office. For copies, please use the order form following this section or write:

> Superintendent of Documents
> P. O. Box 371954
> Pittsburgh, PA 15250-7954.

If you determine from the Government Printing Office that any of the next three items is out-of-print, please telephone the Statistical Information Services Office on (202) 874-0410, for assistance.

## Statistics of Income (SOI) Bulletin

Quarterly Publication 1136, Stock No. 748-005-00000-5
Subscription price, $\$ 25.00$; Single copy price, $\$ 13.00$

This series provides the earliest published financial statistics from individual and corporation income tax returns. The Bulletin also includes annual data on nonfarm sole

## Publications \& Tapes

proprietorships and on partnerships, as well as from periodic or special studies of particular interest to tax analysts ;and administrators and to economists. Historical tables include data from SOI, as well as on tax collections and refunds by type of tax.

Statistics of Income-1990,
Corporation Income Tax Retums
Publication 16, Stock No 0480004.02322.9
Price $\$ 19.00$
This report presents data on corporation income tax returns with accounting periods that ended July 1990 through June 1991, that are more comprehensive than those published earlier in the SOI Bulletin.

| Presents information on: - receipts; | Data are classified by: - industry; |
| :---: | :---: |
| - deductions; - | - accounting period; |
| - net income; | - size of total assets; and |
| - taxable income; | - size of business receipts |
| - income tax; |  |
| - tax credits; |  |
| assets; and |  |
| - liabilities. |  |

## Statistics of Income - 1991, Indjvidual Income Tax Returns

Publication 1304, Stock No. 048-004-02326-1
Price $\$ 11.00$
This report presents more comprehensive and complete data on individual income tax returns for 1991 than those published earlier in the SOI Bulletin.
Presents information on: Data are presented by: - sources of income; $\quad$ size of adjusted gross
exemptions;
itemized deductions; and income; and

- marital status.
- tax computations.

The following Statistics of Income publication is available
from Statistics of Income by writing to the Acting Director at the address shown at the beginning of this section.

## Turning Administrative Systems Into Information Systems-1993

## Publication 1299-Free of Charge

This report is the second edition of the IRS' methodology, reports series, which documents technological and methodological changes in Statistics of Income programs and other related statistical uses of administrative records.
Previous volumes in the series were called Statistics of Income and Related Administrative Record Research. Topics featured are:

- reinvention of the Federal statistical system;
- data on individuals from the IRS population -- filers and nonfilers;
- data on economic conditions;
- sample design issues;
- methodological approaches to analysis;
- quality measurement and productivity; and
- technological improvements.

## SOI Electronic Bulletin Board

Since June 1992, over 515 files have been added to the SOI electronic bulletin board system (BBS) and are available for access. They include data from recent SOI Bulle-' tin pubilications for returns covering individuals, corporations, partnerships, sole proprietorships and estates. The BBStalso contain's files on personal wealth and international topics, such as foreign tax credits and Controlled Foreign Corporations, as well as tax collections and refunds from the IRS administrative system.

## Electronic Bulletin Board Numbers:

(202) 874-9574 (Analog - Most Users)

Systems Administrator: Jim Willis (202) 874-0277
Systems Coordinator: Jim Hobbs (202) 874-0268.

## Compendium of Federal Estate Tax and Personal Wealth Studies

In this publication, Statistics of Income (SOI) of the Internal Revenue Service has assembled, for the first time, the complete record of its efforts to estimate the wealth of the Nation's living population using Federal estate tax returns. In addition, papers are presented discussing the most recent Federal estate tax studies, as well as new tabulations of historical estate tax data collected between 1963 and 1990.

The volume contains statistical data and articles on these subjects:
■ Personal Wealth Estimates, 1962-1989

- The Relationship Between Income and Wealth
- Charitable Bequests and Lifetime Gifts
- Federal Estate Tax Data
- The Estate Multiplier Technique

For further information or to order copies, please contact SOI's Statistical Information Services Office at (202) 874-0410, or write to:

## U.S. Census Bureau Announces Census Catalog and Guide: 1994

## It's official all right, though not your usual government catalog-

## A 360-page One-Stop Guide to all kinds of statistics!

You'll quickly find enough information about each source to help you select what you need. You'll find the where, the when, and especially the what-in detail.
A major reference resource, it covers everything from mid- 88 through ' 93 -and shows how to get the latest version.

## Want More?

You'll find thousands of phone numbers and addresses for easy access to information and assistance. Why pass up help-State or local, public or private?

The catalog describes what you'll find on CD-ROM, paper, floppy disk, or tape:

* 1990 Census of Population and Housing
* Current Surveys of Population and Housing

Plus all our other topics too-

```
* Agriculture
* Governments
* Business
* International
* Construction * Manufacturing
* Foreign Trade * Mineral Industries
* Geography * Transportation
```

Statistics of income studies of international income and taxes: Winter 1993-94 (13-3)

Trends in business structure and activity:
1980-1990, Spring 1994 (13-4)

## Estate tax returns:

1986-88, Spring 1990 (9-4)
1989-91, Spring 1993 (12-4)
Tax-bases research and data on nonprofit organizations:
1975-1990, Summer 1994
Nonresident alien estates:
1986, Spring 1992 (11-4)
1990, Summer 1993 (13-1)

## Exclse taxes:

1992, Fall 1993 (13-2)

Environmental:
1990, Winter 1992-93 (12-3)
1991, Summer 1993 (13-1)

## Exempt organizations:

Business income and tax:
1987, Winter 1991-92 (11-3)
Nonprofit charitable and other organizations (except foundations):
1988, Summer 1992 (12-1)
1989, Winter 1993-94 (13-3)
Private foundations and charitable trusts:
1989, Winter 1992-93 (12-3)
1990, Winter 1993-94 (13-3)

Foreign recipients of U.S. income:
1990, Spring 1993 (12-4)
1991, Summer 1994 (14-1)
Recipients of partnership income:
1990, Fall 1992 (12-2)

## Individual Income tax retums:

(See also International income and taxes)

Evidence on delinquent filing
1980-1989, Spring 1994 (13-4)
High-income tax returns:
1989, Spring 1993 (12-4)
1990, Winter 1993-94 (13-3)
Marginal and average tax rates:
1988-89, Spring 1993 (12-4)
1990, Summer 1994 (14-1)
Nonfiler profiles:
1991, Summer 1993 (13-1)
Preliminary data:
1992, Spring 1994 (13-4)
Intemational income and taxes:
Controlled Foreign Corporations:
1988, Fall 1992 (12-2)
1990, Summer 1994 (14-1)
Corporation foreign tax credit:
1988, Summer 1992 (12-1)
1990, Spring 1994 (13-4)

Domestic corporations controlled
by foreign persons:
1989, W inter 1992-93 (12-3)
1990, Fall 1993 (13-2)
Foreign corporations with
U.S. operations:

1988, Spring 1992 (11-4)
1989, Summer 1993 (13-1)
Foreign trusts:
1990, Winter 1992-93 (12-3)
Individual foreign income and
taxes:
1987, Winter 1991-92 (11-3)
1987, Winter 1992-93 (12-3)
International boycott
participation:
1990, Fall 1992 (12-2)
Transactions between foreign controlled corporations and related foreign persons:
1989, Spring 1993 (12-4)

[^0]:    Footnote at end of table.

[^1]:    Footnote at end of table.

[^2]:    Michael E. Weber is an economist with the Individual Statistics Branch. This article was prepared under the direction of Peter Sailer, Chief, Individual Special Projects Section.

[^3]:    1 Data are based on the Earty Tax Estimates (ETE) subsample of returns used for Statistics of Income--Individual income Tax Retums.
    2 Returns with no adjusted gross income are not included in the deduction counts. For this reason, the sum of returns with total itemized deductions after limitation and returns with total standard deduction is less than the total number of returns for all filers.
    ${ }^{3}$ Includes amounts not shown separately below.
    NOTE: All data are for returns filed through April.

[^4]:    I Data are based on the Early Tax Estimates (ETE) subsample of retums used for Statistics of Income-individual Income Tax Retums.
    2 Detail does not add to totals because of prior- year retums included in the sample used for the statistics, without a Schedule EIC attached. Schedule EIC did not exist until Tax Year 1991. Therefore, on retums for years prior to 1992, the detail could not be detemined.
    ${ }^{3}$ Not tabulated.
    4 In addition to the eamed income credit used to offiset income tax before credits shown above, includes tax credits not shown separately.
    NOTE: All data are for retums filed through Aprit.

[^5]:    N/A- Not applicable.

[^6]:    Footnotes at end of table.

[^7]:    1 Includes returns with adjusted gross deficit.
    2 Excludes electronically-filed returns and computer-generated retums (Form 1040 PC), shown separately.

    - Estimate should be used with caution because of the small number of sample retums on which it is based.

    N/A - Not applicable.
    NOTES: Detail may not add to totals because of rounding. All data are based on returns filed through April.

[^8]:    ${ }^{1}$ The sum of all sources of income less loss, betore reduction by statutory adjustrients. Total income minus statutory adjustments equals adjusted gross income.
    ${ }^{2}$ Not included in total income or adjusted grosśs income.
    ${ }^{3}$ Returns with adjusted gross deficit.
    ${ }^{4}$ Net capital gain (columns 19-20) excludes capital gain distributions (columns 23-24).
    ${ }^{5}$ Less than $\$ 500,000$.
    ${ }^{8}$ Includes estate or trust net income not shown separately.

    - Estimate should be used with caution because of the small number of sample' returns on which it is based.

    NOTES: Detail may not add to totals because of rounding. All data are based on retums filed through April.

[^9]:    Footnctee at end of table.

[^10]:    1 includes returns with adjusted gross deficit.

[^11]:    Michael Strudler and Marty Shiley are both economists with the Individual Statistics Branch. This article was prepared under the direction of Jeff Hartzok, Chief, Individual Returns Analysis Section.

[^12]:    1 Constant dollars are based on the Consumer Price Index (CPI-U, 1982-1984=100), computed and reported by the U.S. Department of Labor, Bureau of Labor Statistice and published in the Coneumer Price Index Detalled Report, Data for July 1983.

[^13]:    I Constant dollars are based on the Consumer Price Index (CPI-U, 1882-1884=100), computed and reported by the U.S. Department of Labor, Bureau of Labor Statistics and published in the Consumer Price Index Detalied Report, Data for July 1898.
