Foreign Recipients of U.S. Income, and Tax Withheld, 1984

By Margaret P. Lewis*

U.S. source income paid to foreign persons (including foreign individuals, corporations and other organizations) rose 57 percent in 1984 to a record \$17.1 billion. Tax withheld on this income rose to \$970 million, an increase of just 39 percent (since nearly two-thirds of the additional income was exempt from tax withholding).

Income paid to residents of the United Kingdom (U.K.) rose by \$1.1 billion, an increase of 55 percentage points, accounting for almost 20 percent of the total increase. U.K. residents received \$3.1 billion of U.S. source income in 1984, surpassing the Netherlands Antilles (\$2.8 billion) which had an increase of 34 percentage points from 1983.

Almost 70 percent of the increase in U.S. source income paid to foreign persons was accounted for by interest payments. The Deficit Reduction Act of 1984, which became effective on July 18, 1984, exempted most types of interest payments to foreigners from U.S. tax withholding. Not all of this increase can be attributed to the enactment of this legislation, however, since only interest paid on obligations issued after July 18, 1984, was entitled to this exemption. During 1984 high U.S. interest rates helped make investment in the United States more attractive to foreign investors who thus helped finance an expanding U.S. economy. The growing U.S. economy also attracted foreign investment as the dollar appreciated against major currencies. Moreover, the large U.S. trade deficits put "strong dollars" into the hands of foreigners who in turn invested them in the United States.

BACKGROUND INFORMATION

A U.S. individual or organization paying income to a foreign individual (who, for tax purposes, is not a resident or citizen of the United States), corporation, or other organization (that is not incorporated in the United States) reports this income and the U.S. tax withheld on Form 1042S, Income Subject to Withholding Under Chapter 3, Internal Revenue Code

(this title changed, in 1985, to Foreign Persons' U.S. Source Income Subject to Withholding). While the basic tax rate is 30 percent, certain types of income are taxed at different rates. Income paid to countries that have entered into tax treaty agreements with the United States is usually taxed at lower rates. The tax withheld represents final payment of the actual tax liability in most instances. The responsibility for withholding tax belongs to the payer or the representative (usually a financial institution) of the payer rather than the recipient of the income. Income connected with the recipient's U.S. trade or business is exempt from withholding. The United States taxes this income separately, as though it were received by a U.S. citizen or corporation.

The basic tax rate on U.S. source income (30 percent) differs from the graduated tax rates for U.S. individuals and corporations because foreign individuals and corporations may receive income from an indefinite number of sources. Since most foreign persons are not required to file U.S. income tax returns and consolidate all U.S. income, their total income cannot be taxed in graduated "brackets," as one payer would have no knowledge of the amount of income other individuals and organizations had paid to the same foreign person.

RECENT LEGISLATION AND ITS IMPACT

The Deficit Reduction Act of 1984, as mentioned above, went into effect on July 18, 1984. The Act exempted from tax most types of interest payments, mainly portfolio interest, made to foreign persons [1]. The principal exception to this exemption was interest paid to a foreign individual, bank or corporation that owned at least 10 percent of the voting power of the U.S. payer. The removal of withholding tax on most types of interest is expected to increase direct foreign investment in the United States and to curtail U.S. borrowing through financial affiliates and other corporations in the Netherlands Antilles (and other tax havens, which are discussed below) [2].

U.S. bond holdings by foreigners increased by 85 percent to \$32.3 billion in 1984 due in part to the 1984 Act. Most of these issues were direct U.S. corporate Eurobond placements [3]. Borrowing from financial affiliates in the Netherlands Antilles, however, remained strong in the first three quarters of 1984 but almost ceased in the fourth quarter with the advent of the new law [4].

Tax treaty benefits that had been extended under the U.S.-U.K. treaty to British "territories" and former "territories" were cancelled as of January 1, 1984 [5]. As a result, tax withheld on payments to these "territories" rose by 22 percent, while income paid remained virtually unchanged from 1983. The effective tax rate (tax withheld as a percent of total income) for these "territories" rose from 16 percent to 19 percent.

As of 1986, only one of the "territories" signed a separate treaty agreement with the United States [6]. Many of the U.K. "territories" are generally considered to be tax havens, to some extent. Therefore, they may be reluctant to enter into agreements with the United States which would work against those very characteristics that make these "territories" tax havens (see the discussion of tax treaty countries later in this article).

Also cancelled in 1984, were benefits formerly extended under the U.S.-Belgium treaty to former Belgian territories [7]. While both income and tax withheld of these countries declined by more than half, the percentage of income exempt from withholding more than doubled. This caused the effective tax rate for these three countries combined to decline from 14.4 percent to 9.6 percent.

The Social Security Amendment Act of 1983 required withholding on benefits paid to foreign persons beginning in 1984. At the same time, a revision was made to the Railroad Retirement Act of 1937 to require withholding on certain payments to foreigners. The first complete data on these payments will be available for Calendar Year 1985.

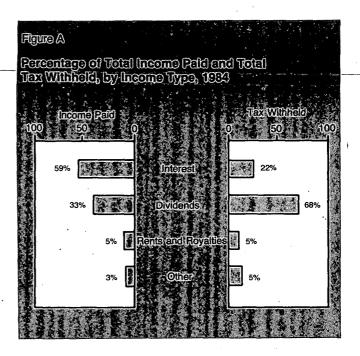

DATA HIGHLIGHTS AND TRENDS

As previously mentioned, U.S. income payments to foreigners totalled \$17.1 billion in 1984, increasing by 57 percent. The increase in 1983, in contrast, was only 4 percent. Between 1983 and 1984, income subject to withholding rose by 39 percent, while exempt income increased by 71 percent. The greater rise in exempt income was reflected in a comparatively small increase in tax withheld of 39 percent.

The average income payment rose by 21 percent to nearly \$22,000, as indicated by a 57 percent increase in income paid with only a 29 percent increase in the number of Forms 1042S filed. The average amount of tax withheld per payment rose by only 8 percent (due to the large increase in exempt payments mentioned above) to \$1,200. The average effective tax rate (tax withheld as a percent of total income for all countries) for 1984 was 5.7 percent.

Type of Income

Interest as a percent of total income paid continued to rise in 1984. Interest accounted for 59 percent of income paid (an increase of 6 percentage points) while dividends represented 33 percent, a 5 percentage point drop from 1983. Figure A shows that the gap between interest and dividends as a percentage of total income widened to 26 percentage points in 1984. For 1983, the percentage was 15.

Since 1980, interest's share of all income increased 19 percentage points, from 40 to 59 percent. The corresponding share for dividends fell by 15 percentage points, from 48 to 33 percent. Figure B shows both total and average annual increases for dividends and interest in both constant and current dollars [8].

	\$ 2,604,307 10,035,675 285.3% 40.1

Interest payments are often exempt from withholding or taxed at low rates established by treaties. With the passage of the Deficit Reduction Act of 1984, certain types of interest income, mainly portfolio interest, previously taxable, became exempt regardless of the country to which it was paid. As a result, only \$214 million of tax was withheld on interest in 1984. This represented only 21 percent of all tax withheld, even though interest represented 59 percent of all income. Dividends, which are rarely exempt from the withholding tax, represented only 33 percent of all income, while tax withheld on dividends comprised 68 percent of the total tax withheld. Figure A shows the percentage of total income paid and the percentage of total tax withheld for several income types.

Interest made up the largest percentage of income paid to all recipients in seven of the nine countries shown in Figure C. Only countries receiving more than \$500 million in U.S. source income were considered for inclusion in Figure C. As Figure C indicates, only Switzerland and France had a larger percentage of dividends than interest. This is in contrast to 1983 when dividends made up a larger percentage of income paid than interest for more than half of the top countries.

As in 1983, non-tax haven countries shown in Figure C received a greater portion of rents and royalties (7 percent average) than the Netherlands Antilles, the Netherlands and Switzerland (2.5 percent average), all of which may be considered, by some, to be tax havens to

some degree. More than half of all rents and royalties paid were industrial royalties. The latter include royalties for the use of, or the privilege of using, trademarks, patents, secret processes and formulas, goodwill, franchises, and similar rights. One would not expect these types of payments to be made to non-industrial countries and most tax havens have a narrow industial base. Switzerland and the Netherlands, tax haven countries which receive all types of income, are exceptions. Also, some U.S. corporations may use tax haven countries to set up foreign companies that license royalties, therefore, resulting in rents, royalties and license fees paid to tax haven countries. In contrast, rents and royalties accounted for 14 and 12 percent of all income paid to France and Japan, respectively, non-tax haven countries. The Japanese payments were mainly payments by "high-tech" U.S. firms to "high-tech" Japanese firms.

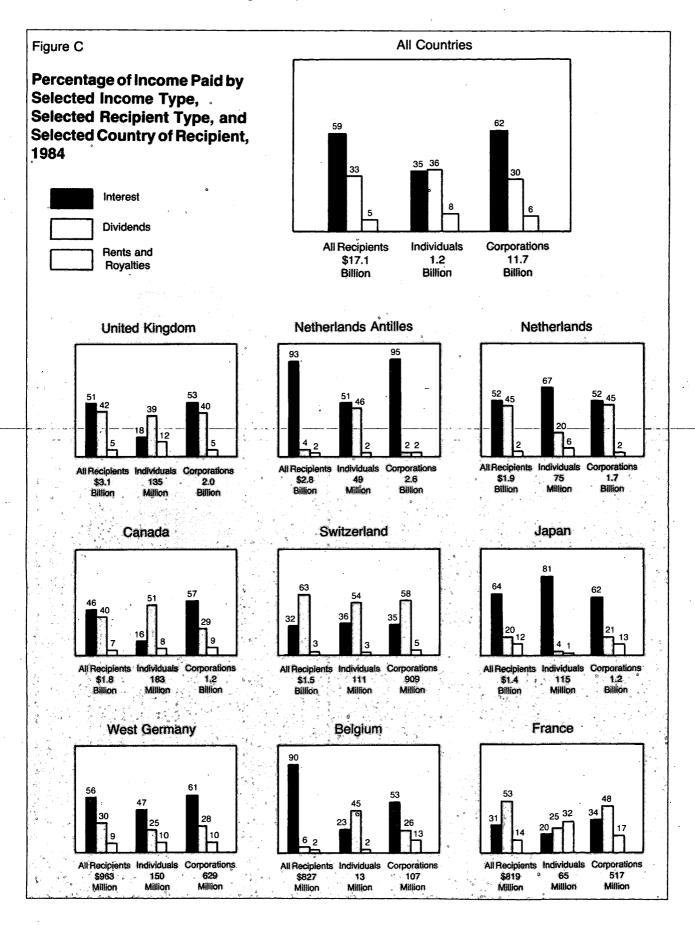

Country of Recipient

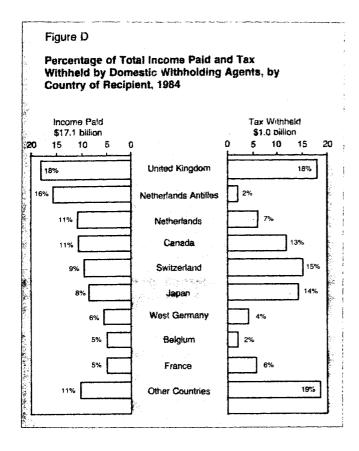

As is shown in Figure D, recipients in nine countries accounted for nearly 90 percent of all U.S. source income paid to foreigners in 1984. All of these countries showed significant increases in income received over 1983, and six of these nine received income of over \$1 billion.

The United Kingdom regained its position as recipient of the most U.S. source income, surpassing the Netherlands Antilles. Belgium posted an exceptionally large rise in income, pushing it for the first time into the position held by France in 1983, as the eighth largest recipient of U.S. source income. The nearly 700 percent rise in U.S. source income paid to Belgium may be somewhat misleading since 90 percent of the income paid to Belgium was received by Belgian nominees who may not have been the final recipients of the income. (For a further discussion of nominees, see the section on recipient types later in this article.)

Tax withheld on payments to all of the countries shown in Figure D also rose from 1983 levels. However, the rise in tax withheld was generally less than the rise in total income since there was a large rise in exempt income in 1984 (due, in part, to the 1984 Act which helped cause increases in total interest paid and, therefore, increases in total income paid to tax treaty countries).

The Netherlands Antilles was an exception to the above generality. It showed a greater rise in tax withheld than in income, thus narrowing the gap between its percentage of income paid and the percentage of tax withheld from 18 percent to 14 percent. However, this was still the largest discrepancy of the countries shown. Income paid to the Netherlands Antilles

rose by 34 percent while the rise in tax withheld on payments to Netherlands Antilles residents was 105 percent. This was a reflection of the greater relative rise in taxable income.

Effective Tax Rate by Country

Although the basic U.S. withholding tax rate is 30 percent, the actual rate can differ for a variety of reasons. First, tax treaties allow for lower tax rates on certain types of payments to certain countries. Second, as mentioned previously, the Deficit Reduction Act of 1984 exempted most types of interest from withholding tax. Third, income paid to tax exempt or governmental organizations is generally not taxed. Fourth, most U.S. income paid to foreign private foundations is taxed at only a 4 percent rate. Finally, income that is connected with the recipient's U.S. trade or business is taxed as though it were received by a U.S. individual or organization, and is therefore not subject to withholding tax (although it is subject to the regular rates of U.S. income tax on net income and may be additionally reported on Form 1042S). Because of these factors, the effective U.S. withholding tax rate (tax withheld as a percent of total income) varies by country.

Figure E shows the income paid, tax withheld by U.S. withholding agents, and the effective

withholding tax rates for the twelve countries having the lowest effective tax rates. Tax withheld by foreign governments and withholding agents is not included in this table because the tax cannot be properly attributed to income for a particular year. Only countries receiving at least 100 payments and \$1 million or more of income were considered for ranking.

Figure E.--Ranking of Countries by Effective Tax Rates, 1984

[Thousands of dollars]

Country	Total Country income		
	(1)	(2)	(3)
All countries <u>l</u> /.	\$17,106,632	\$969,553	5.67%

1/Includes all other countries, regardless of number of payments or amount of income paid.

Newcomers to this list are the United Arab Emirates, Belgium, Norway, Finland Four of the previously listed coun-Portugal. tries. United Arab Emirates, Saudi Arabia, Portugal and Singapore, are not tax treaty countries that received the benefits of reduced tax withholding rates. A substantial portion (78 percent) of Saudi Arabia's U.S. source income (\$352 million) was paid to Saudi Government organizations and therefore not subject to the withholding tax. More than 50 percent of U.S. source income paid to Portugal (\$29 million) was paid to private foundations and therefore was subject only to the 4-percent withholding rate. Former leader, Antigua, lost its position due to the cancellation of its tax treaty with the United States. In 1984. Antigua's effective tax rate rose to 2.0 percent from 0.2 percent in 1983. (Antigua was not included in Figure E because it received less than \$1 million in payments in 1984.)

Tax Treaty Countries

In order to avoid double taxation of income earned in one country by residents of another country, the United States has negotiated tax treaties with foreign countries that usually reduce the withholding rates in both countries [9]. It is generally believed that any U.S. withholding-tax revenue loss due to the tax treaty rate reduction will be at least partly offset by a decline in the foreign tax credits against U.S. income tax claimed by U.S. individuals and corporations on income from those countries enjoying reciprocal benefits.

Since tax treaties generally provide for a reduced withholding rate for U.S. individuals and corporations receiving foreign income and for foreign recipients receiving U.S. income, U.S. individuals and corporations will have less foreign tax withheld. This, in turn, should lessen their foreign tax credit claimed and consequently raise their U.S. tax liability.

Figure F shows the lower effective tax rates on payments to recipients in treaty countries as compared to payments to recipients in non-treaty countries. Table 1 lists the tax treaty and nontreaty countries and provides corresponding Form 1042S data.

Figure F.--Total Income, Tax Withheld and Effective Tax Rate for Treaty and Nontreaty Countries, 1984

[Thousands of dollars]

Country status	Total income	Tax withheld	Effective tax rate
	(1)	(2)	(3)
All countries	\$17,106,632	\$969,553	5.67%
Treaty countries Nontreaty	15,607,203	822,655	5.27
countries	1,499,429	146,897	9.80

Although residents in tax treaty countries typically enjoyed lower U.S. withholding tax rates, if the income were paid to a foreign nominee or fiduciary on behalf of a person not entitled to the treaty benefit, the full 30-percent U.S. tax should be imposed. Those U.S. treaty partners that collected the additional amounts on behalf of the United States are listed in Table 1, Column 7.

Tax Haven Countries

A tax haven is generally considered to be a country having tax laws favorable to foreign

individuals and organizations in an attempt to attract these investors. The tax haven country typically benefits by collecting certain fees or taxes (at a low rate). Foreign individuals and organizations might not invest in or through the tax haven if taxes comparable to those of their own country were imposed. Tax haven countries tend to have the following characteristics:

- No withholding tax on most payments from the tax haven country to foreign individuals and organizations,
- Low or zero effective income tax rates for foreign individuals and organizations operating within the tax haven country, or performing certain activities, and
- Secrecy laws to prevent foreign governments from obtaining financial information about their own citizens and organizations.

Low or zero withholding tax rates are usually designed to attract foreign individuals and corporations to invest through the tax haven, rather than to provide a tax benefit for their own residents, although a number of tax haven countries—have—low—tax—rates —in -an—effort—toattract real productive investment into the country also. However, many tax haven countries do not have tax treaties with the United States that allow for low or zero withholding rates on payments to the tax haven. While treaties with non-tax haven countries allow for mutually-reduced withholding tax rates, the lost tax revenue on U.S. source income paid to foreigners is, as mentioned above, at least partially recovered in income taxes due to lower foreign tax credits claimed by U.S. tax-payers. The lower credits are a result of less foreign taxes being paid by U.S. taxpayers on their foreign source income.

Figure G shows the percentage of payments made to corporations, along with their effective tax rate, for selected tax haven countries [10]. Only countries which received more than \$1 million of income and 100 payments were considered for Figure G.

As evidence that tax haven countries attract corporations to them, note that the average percentage of payments to corporations in tax haven countries is greater than the average for non-tax haven countries. The effective tax rate for all but three tax haven countries is greater than the total average effective tax rate of 4.7 percent. For these three countries, the Cayman Islands, the Netherlands and the Netherlands Antilles, as well as for Liberia and Luxembourg, at least 50 percent of income paid was interest which typically was subject to a lower tax withholding rate and was

affected by the Deficit Reduction Act of 1984. Also, two of the three countries with lower than average rates, the Netherlands and the Netherlands Antilles, are countries that benefit from reduced treaty rates.

Figure G.--Corporate Recipients in Selected Tax Haven Countries, 1984

	Percent	of	<u> </u>
Country	All payments received	All income received	Effective tax rate

Type of Recipient

Corporations received 68 percent of all income paid to foreign persons in 1984, while individuals, and nominees and fiduciaries (the next largest recipients of income) received only 7 percent and 9 percent, respectively. In contrast, the percentage of tax withheld on payments to individuals and to nominees and fiduciaries was disproportionately large relative to the income received (15 and 12 percent, respectively), while the percentage of tax withheld on corporations was a comparatively low 56 percent of all tax withheld.

This latter discrepancy is reflected in the effective tax rate for corporations of 4.7 percent, which may be compared to an effective tax rate of 7.8 percent for all other types of recipients combined. The effective tax rate for corporations remained unchanged from 1983 but has shown a steady decline after 1979 when the rate was 9.2 percent. The decline has been a result of a steady increase in payments of interest, caused by increasing U.S. interest rates, to foreign corporations which are generally subject to lower withholding tax rates.

Nominees and fiduciaries received 9 percent of all income paid in 1984 making them the sec-

ond largest recipients of income. This may be somewhat misleading due to unusually large amounts of income paid to Belgian nominees in 1984, discussed earlier. If the payments to Belgian nominees were removed, the income paid to nominees would be halved and would represent an amount in proportion to previous years' data. Without nominee payments to Belgium, nominees and fiduciaries would have received 5.7 percent of all income paid in 1983 and 4.3 percent of all income paid in 1984.

Governmental, international and tax-exempt organizations received 2 percent of income paid yet accounted for only 0.4 percent of tax withheld because more than 92 percent of income paid to government, international and exempt organizations was exempt from withholding [11].

The largest average payment (\$301,413) was received by foreign governments; 77 percent of total payments to foreign governments were made to the Government of Saudi Arabia. If Saudi Arabia were excluded, the average payment to foreign governments would have fallen to \$71,253. In contrast, the average payment by corporations was \$193,808, while individuals received by far the smallest average payment, \$2,138.

On the average, most recipient types received more interest than any other type of income, the two exceptions being individuals and private foundations, which received more dividends than interest. Partnerships were more likely to receive rents and royalties, while individuals received over 80 percent of all personal service income [12]. For every recipient type, tax withheld on dividends far exceeded tax withheld on any other income type. Figure H shows the percentages of income paid and tax withheld on various types of income for the different recipient types.

U.S. and Foreign Withholding Taxes on Corporations

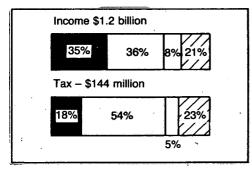

Most foreign countries impose withholding taxes similar to those of the United States. U.S. individuals and organizations that receive income from foreign countries can usually take a tax credit for the foreign taxes withheld on this income. Although foreign withholding tax rates tend to be similar to the U.S. tax rates, foreign countries, in general, withhold far more total tax on payments to U.S. corporations than the United States withholds on similar payments to foreign corporations. Although similar data dealing with the amount of income paid are not available, this withholding tax disparity is probably due to U.S. corporations receiving more foreign income than foreign corporations receive U.S. income.

While this article is primarily concerned with 1984 data, 1982 is the most recent year for which complete foreign tax credit data also

are available for comparison purposes. For 1982, \$3.2 billion of foreign tax was withheld by foreign governments on the combined total for interest, dividends, rents, royalties and license fees received by U.S. corporations claiming a foreign tax credit [13]. This amount increased by 23 percent from 1980 and was almost eight times the amount of U.S. tax withheld in 1982 (\$0.4 billion) on similar payments to foreign corporations. The latter rose by only 13 percent over the 2-year period.

Figure I shows, for 1982, U.S. tax withheld on certain payments to foreign corporations and foreign taxes withheld on similar foreign payments to those U.S. corporations claiming a foreign tax credit, by income type and country. More tax was withheld by foreign coun-

tries than by the United States for each of the income categories (dividends, interest, and rents, royalties and license fees) shown.

Foreign tax withheld on rents, royalties and license fees paid to U.S. corporations exceeded the U.S. tax withheld on rents, royalties and license fees paid to foreign corporations by more than \$1.1 billion. More than 60 percent of this difference can be accounted for by Norway, which taxed the large oil production-related royalties paid to U.S. corporations.

Foreign tax withheld on dividends paid to U.S. corporations exceeded U.S. tax withheld on dividends paid to foreign corporations by almost \$0.9 billion in 1982. This may have been caused by the excess volume of U.S. investment

 $[\]underline{1}$ /Does not include tax remitted by foreign governments and withholding agents since these amounts cannot be allocated to specific years.

^{2/}Does not include tax withheld on income received by U.S. corporations not claiming a foreign tax credit. The amounts shown are for corporation tax returns having accounting periods which ended between July 1982 and June 1983.

in foreign corporations over the volume of foreign investment in U.S. corporations. In 1982, U.S. private direct investment abroad (\$221 billion) was more than twice foreign private direct investment in the United States (\$102 billion) [14].

Another factor contributing to this difference may have been that foreign markets in most developing countries tend to be less stable than U.S. markets. Thus U.S. corporations require a greater return on their investment in these countries than foreign corporations expect on their investment in the United States. Because of the larger amount of dividends received by U.S. corporations, the foreign tax withheld on them far exceeded the corresponding amount withheld by the U.S. government on dividends paid to foreign corporations. However, the difference in tax withheld on dividends declined from \$1.1 billion for 1980 to \$0.9 billion for 1982 and possibly reflected growing investment by foreigners in the United States [15].

For 1982, tax withheld by foreign governments on interest payments to U.S. corporations also exceeded U.S. tax withheld on interest payments to foreign corporations. The difference increased by 26 percent from 1980 (\$607 million) to 1982 (\$762 million). Most of this increase was accounted for by increases in foreign taxes withheld by Brazil and Mexico. These two countries alone accounted for 67 percent of the difference for 1982. Both are heavily indebted to U.S. banks and, therefore, made large interest payments which were subject to foreign tax withholding. For 1982, over 90 percent of all tax withheld by Brazil and Mexico on interest payments to U.S. corporations was withheld on interest paid to U.S. banks (\$461 million).

SUMMARY

High U.S. interest rates, a growing U.S. economy and enactment of the Deficit Reduction Act of 1984, which exempted most types of interest from tax withholding, all contributed to a 57 percent rise in U.S. source income paid to foreign persons in 1984. Interest remained the most common type of income, rising to 59 percent of total income even though it only accounted for 21 percent of tax withheld.

Foreign corporations remained the biggest recipients of U.S. source income, receiving 68 percent of all income paid in 1984. Individuals received only 7 percent of income yet accounted for 15 percent of tax withheld. This was because individuals received more dividend income (which is rarely tax-exempt) than interest or any other income type.

Unlike corporations, which received mainly interest, and individuals, who received mainly

dividends, foreign partnerships were more likely to receive rents and royalties than any other type of income.

Foreign governments once again received the largest average payments, over \$300,000 (due mainly to large payments to Saudi Arabia). In contrast, payments to individuals were smaller.

Nine countries, all having tax treaties with the United States, received almost 90 percent of all U.S. source income. The United Kingdom was the largest recipient, receiving \$3.1 billion in 1984. The past leader, the Netherlands Antilles, received \$2.8 billion. Tax haven countries continued to receive mostly interest and to have a greater-than-average percentage of payments to corporations.

DATA SOURCES AND LIMITATIONS

Payers of most U.S. income to foreign persons must withhold tax in accordance with the Internal Revenue Code. The Form 1042S, Income Subject to Withholding Under Chapter 3, Internal Revenue Code (now entitled, Foreign Persons' U.S. Source Income Subject to Withholding), is filed to report this income and the U.S. tax withheld. Often the payer has a financial institution act as the withholding agent.

The present statistics are tabulated by calendar year, based on all Forms 1042S filed for 1984. The years indicated in the tables represent the year in which the income was paid and the U.S. tax withheld, except for U.S. tax withheld by foreign governments and withholding agents. These latter amounts are shown by the year the tax was remitted to the United States under treaty agreements. This additional tax cannot be properly attributed to specific income types and years.

Tax withheld amounts and percentages shown in Table 2 and Figures A, B, and D through I, do not include tax withheld by foreign governments and withholding agents (except for Canada which remitted its payments during the same calendar year). Income that is "effectively connected" with a foreign person's U.S. trade or business is not subject to withholding, and is therefore generally not included in these statistics [16, 17].

Since all Forms 1042S are included in the statistics, the data are not subject to sampling error. However, the data are subject to nonsampling error such as computer data entry errors and minor taxpayer reporting errors. Forms 1042S with income greater than \$500,000 were manually verified. A limited computerized program was used to test the data for certain basic numerical relationships, including the calculation of the correct tax withheld.

EXPLANATION OF SELECTED TERMS

<u>Foreign Person.--</u>For purposes of this article, a foreign person is an individual whose residence (for tax purposes) is not within the United States and who is not a U.S. citizen. Corporations and other organizations created or organized outside the United States are also considered foreign persons.

Resident (of a jurisdiction other than the United States).--A resident is a foreign "person" as described above.

Income Effectively Connected With a Trade or Business.—Income that is "effectively connected" with the conduct of a trade or business in the United States is exempt from withholding. This income is subject to substantially the same tax rates that apply to U.S. citizens, residents, and corporations. Even if a foreign corporation has an unincorporated operation in the United States, a Form 1120F must be filed and appropriate taxes paid for the income of this operation. When income is then remitted to the foreign corporation, it is considered connected with a U.S. trade or business and not retaxed. In all but rare (and indeterminable) circumstances, these amounts are not included in these statistics.

Nominee and Fiduciary. -- An entity chosen or appointed to accept income for, or act on behalf of, the eventual recipient of the income. Typically a financial institution acts as a nominee or fiduciary.

<u>Withholding Agent.</u>--Any person (individual, corporation, partnership, estate, or trust) required to withhold tax. Usually the withholding agent is the payer of the income or a "person" (usually a financial institution) acting on behalf of the payer. A foreign nominee or fiduciary required to withhold additional tax under a tax treaty is also a withholding agent.

NOTES AND REFERENCES

- [1] For an explanation of portfolio interest and other types of interest that are exempt from tax, see U.S. Department of the Treasury, Internal Revenue Service, Publication 515, Withholding of Tax on Nonresident Aliens and Foreign Corporations, November 1985.
