# **SOI** BULLETIN

Department of the Treasury Internal Revenue Service

Publication 1136 (Rev. 10-86)

Lawrence B. Gibbs Commissioner

M.-Eddie-Heironimus -Associate Commissioner (Data Processing)

**Dominic E. Pecorella**Assistant Commissioner
(Returns and Information Processing)

Fritz Scheuren
Director, Statistics of Income Division

The SOI Bulletin provides the earliest published annual financial statistics from various types of tax and information returns filed with the Internal Revenue Service. It also includes information from periodic or special analytical studies of particular interest to tax administrators. In addition, historical data are provided for selected types of taxpayers, as well as the gross internal revenue collections and other tax related items.

Information on the availability of additional unpublished data concerning the topics in this issue may be obtained by writing to the Statistics of Income Division, D:R:S, Internal Revenue Service, Washington, DC 20224.

In addition, special Statistics of Income tabulations based on income tax returns can be produced upon request on a reimbursable basis. Requests for this service should be addressed to the Director, Statistics of Income Division, at the address shown above.

Overall policy review of the SOI Bulletin was conducted by the Office of Tax Analysis, under the direction of Thomas Neubig. For this issue, those assisting in the review were Len Burman, Mordecai S. Feinberg, Marcia D.Field, Daniel Frisch, Jon Hakken, and Barbara Rollinson. Robert A Wilson and Bettye Jamerson of the Statistics of Income Division were the technical editors and were assisted by Clementine Brittain who provided editorial assistance and did the copy preparation.

### **NEW STATISTICAL SERVICES**

(Available from Statistics of Income Division)

As part of the Statistics of Income program a series of new services is now being offered (see below). Detailed information on these statistical services can be obtained by writing to Director, Statistics of Income Division (D:R:S), Internal Revenue Service, 1111 Constitution Avenue, N.W., Washington, D.C. 20224. Purchase is by check made payable to the IRS Accounting Section.

#### Studies of International Income and Taxes, Publication 1267 - Price \$45.00

Purchase price includes a 516-page document for 1979-83 that presents information from 13 Statistics of Income studies in the international area, including:

- Foreign activity of
   U.S. corporations
- Activity of foreign corporations in the U.S.
- Foreign interests in U.S. corporations
- Statistics related to individuals, trusts, and estates
- Data presented by-geographical area or industrial activity, as well as other classifiers

Purchasers of this service also will be provided with additional information for one year as it becomes available. The one year period for receiving additional information can be extended at a cost of \$35.00 per year. A long-term subscription (\$150) includes the compendium and additional information as it becomes available through August 1990. (The next compendium is scheduled for release in September 1990.)

#### Individual Income Tax Returns, Publication 1304 — Price \$30.00

Purchase price includes a 135-page document for 1984 presenting Statistics of Income data and tables on:

- Sources of Income
- Exemptions

- Itemized deductions
- Tax Computations
- Data presented by -size of adjusted gross income,marital status

Purchasers of this service also will be provided with additional articles relating to 1984 data and preliminary 1985 data as they become available and will be notified of future statistical releases relating to individual income tax returns.

# Partnership Returns, Publication 369 — Price \$22.00

Purchase price includes a 314-page document for 1978-82 presenting previously unpublished Statistics of Income data for 1980, 1981 and 1982, as well as data previously issued in other publications. Features include:

- Number of partnerships
- Limited partnerships
- Receipts
- Cost of sales and operations

- Deductions
- Net income
- Capital gains

Data presented by -industry
size of total assets
state
number of partners

Purchasers of this service also will be provided with data for 1983 and 1984 as they become available and will also be notified of future statistical releases relating to partnership returns.

# Other Services - Price dependent on the request

- Unpublished tabulations from SOI program are available. Includes detailed tables underlying those published in SOI Bulletin.
- Special tabulations produced to user specifications.
- Public use tape files, including the Individual Tax Model (1978-1984), among others. (Earlier files are available from the Machine-Readable Branch (NNSR) of the National Archives, Washington, DC 20408

### **BUSINESS SOURCE BOOKS**

(Available from Statistics of Income Division)

In addition to the Corporation Source Book, two others are now being offered by the Statistics of Income Division (see below). Information can be obtained by writing to Director, Statistics of Income Division (D:R:S) at the address above. Purchase of Source Books should be made at time of request by check payable to the IRS Accounting Section.

### Corporation Source Book, 1983, Publication 1053 - Price \$175.00

This is a 480-page document that presents detailed income statement, balance sheet, tax and investment credit items by major and minor industries and size of total assets. This report is part of an annual series and can be purchased for \$175 (years prior to 1982 at \$150). A magnetic tape containing the tabular statistics for 1983 can be purchased for \$1,500.

# Partnership Source Book, Publication 1289 – Price \$30.00

This is a 291-page document showing key partnership data for 1957 through 1983, at the minor, major and division industry level. Includes a historical definition of terms section and a summary of legislative changes affecting partnerships during that period. Tables feature:

- Number of partnerships
- Number of partners
- Business receipts
- Depreciation
- Taxes paid deductions
- Interest paid

- Payroll
- · Payments to partners
- Net income

Purchasers of this service also will be advised of the release of subsequent years' data. A magnetic tape containing the tabular statistics can be purchased for an additional \$200.

#### Sole Proprietorship Source Book - In preparation

This Source Book is a companion to that for partnerships, shown above. It is expected to be available later in 1986. Included will be data on:

- Number of businesses
- Business receipts
- Interest paid

- Depreciation
- Taxes paid deductions
- Payroll
- Net income

As with Partnerships, a magnetic tape will also be available.

### OTHER PUBLICATIONS

(Available from Superintendent of Documents GPO, Washington, D.C. 20402)

The Statistics of Income (SOI) Bulletin (Quarterly), Publication 1136 Subscription price \$20.00; Single copy price \$5.50

The SOI Bulletin provides the earliest published financial statistics from the various types of tax and information returns filed with the Internal Revenue Service. The Bulletin also includes information from periodic or special analytical studies of particular interest to tax administrators and economists.

### Statistics of Income - 1983, Corporation Income Tax Returns, Publication 16

Presents information on --

- Receipts
- Deductions
- Net income
- Taxable income
- Income tax
- Tax credits
- Distributions to stockholders
- Assets
- Liabilities

Data classified by--

- industry
- accounting period
- size of total assets
- size of business receipts

Interest Income and Deductions on Individual Income Tax Returns, 1968-1984 By Paul E. Grayson Between 1968 and 1984, average interest income and deductions reported by individuals were subject to significant year-to-year fluctuations. Overall though, the number of individual income tax returns with interest income increased from 42 percent to 62 percent and average interest income grew at double the rate of increase in adjusted gross income. The interest deduction also increased, by 17 percent, and surpassed taxes as the largest itemized deduction.	49

\*Estimate should be used with caution because of the small number of sample returns on which it is based.

1/Includes returns with no adjusted gross income.

NOTE: Detail may not add to total because of rounding.

# Statistics of Income Studies of International Income and Taxes

By Daniel F. Skelly and James R. Hobbs\*

The Statistics of Income Division of the Internal Revenue Service regularly conducts studies of international income and taxes. Historically, the main users of these studies have been the Office of Tax Analysis in the Office of the Secretary of the Treasury, and the Congressional Joint Committee on Taxation. Increasingly, however, interest in this area has been evidenced by other government agencies, universities, trade associations, corporate tax departments and private citizens. To meet the growing demand, the Statistics of Income Division recently initiated a new statistical service that will routinely provide data from the sixteen studies now being conducted in the international area. The main purpose of this article is to discuss the content and timing of each of these sixteen studies.

The Statistics of Income Division plans and conducts international studies in two broadly-defined areas. These areas are foreign investment and activity abroad by U.S. "persons" and, conversely, investment and activity in the United States by foreign "persons" [1,2]. Table 1 provides information on the cycling of the studies and shows population and sample estimates for each projected study. Specific descriptions of the studies in each area are provided below.

Foreign Investment and Activity Abroad by U.S. Persons. -- This area includes the following studies: Corporation Foreign Tax Credit, Foreign Corporation Information Returns, Domestic International Sales Corporations, Interest Charge Domestic International Sales Corporations. Foreign Sales Corporations, U.S. Possessions Corporations, International Boycott Participation, Individual Foreign Tax Credit, Individual Income Earned Abroad, Excluded Income from U.S. Possessions, and Foreign Trusts. (Seven of these studies either have been, or will be, used for Treasury Department reports to Congress that are mandated by law [3].) Investment and Activity in the United States by Foreign Persons. -- This area includes the following studies: Foreign Corporations with Income Derived from U.S. Sources, U.S. Corporations with 50 Percent or More Ownership by a Foreign Entity, Nonresident Alien Income and Tax Withheld, Nonresident Alien Estates, and Sales of U.S. Real Property Interests by Foreign Persons.

FOREIGN INVESTMENT AND ACTIVITY ABROAD BY U.S. PERSONS

This broad area consists of eleven studies. It includes the foreign activities of U.S. corporations, as well as the activities of foreign corporations controlled by U.S. corporations. For purposes of this article, U.S. corporations deriving most of their income from U.S. possessions are also included in this grouping. Other studies cover both domestic and foreign corporations that were created under legislation aimed at increasing U.S. exports. Finally, certain studies in this group focus on the foreign activities of all U.S. persons (corporations, individuals, etc.).

International operations of U.S. corporations have grown to the point that overseas income contributes substantially to U.S. corporate worldwide income; indeed, foreign investments now account for a sizable portion of total investment by U.S. corporations. According to Department of Commerce data, foreign direct investment by U.S. firms during the period of 1977 to 1983 increased 55 percent (from \$146.0 billion to \$226.1 billion, as measured in current dollars) [4].

#### Corporation Foreign Tax Credit

The general philosophy of the foreign tax credit, despite its numerous changes over time, has remained basically the same. Domestic corporations are subject to U.S. tax on their worldwide income. When part of that income is earned in foreign countries, the income may also be subject to tax in that country. In order to prevent double taxation of the same income, U.S. law permits corporations to claim a credit, thereby reducing their U.S. income tax for the taxes paid to the foreign country [5]. In effect, the corporation pays tax at

<sup>\*</sup>Chiefs, Foreign Statistics Branch and Foreign Returns Analysis Section, respectively.

the higher of the U.S. tax rate or the overall foreign country tax rate on its foreign-source income.

The corporation foreign tax credit statistics are designed to show the effects of specific provisions of the Internal Revenue Code on the income and taxes of corporations. The statistics show the country of origin of the foreign income and taxes which generate the credit. Also shown is the industry of the corporation claiming the credit. In general, the data are classified not only by country, industry, and type of foreign income, but also by size of total assets of the domestic corporation, and by ratios of foreign source taxable income to U.S. taxable income, total foreign taxes to taxable foreign income, and U.S. income tax to worldwide taxable income. detailed statistics currently most available are for Tax Year 1982. These data are summarized in Figure A. Less detailed information is also available for the period 1925-83 (see Figure C).

One indicator showing the activity of American corporations in foreign markets is the amount of "foreign source taxable income" reported by corporations claiming a foreign tax credit on their tax returns. This foreign taxable income primarily consists of profits earned by their "branches" in foreign countries, and dividends distributed to U.S. corporations by their subsidiary foreign corporations. It also includes other income received from foreign sources such as rentals, royalties, interest, and compensation for services performed.

The foreign source taxable income of corporations with foreign tax credits rose from \$3.6 billion in 1961 to \$59.5 billion in 1982. During the same period, the total worldwide taxable income (which is the basis for computing U.S. tax liability) reported by these corporations also increased, from \$22.9 billion to \$107.2 billion.

Using the amount of taxable income reported by domestic corporations that claimed a foreign tax credit, a percentage of the portion that foreign source taxable income contributed to the total taxable income can be derived [6]. That percentage is plotted for certain years in Figure B. It reveals that the percentage increased from 15.7 percent for 1961 to 55.5 percent for 1982, indicating the overall growing importance of the foreign activity of domestic corporations.

Figure C shows the growth of the foreign tax credit claimed by corporations during the past 58 years. The early eighties, unlike the sixties and seventies, began with a decline in the amount of foreign tax credit claimed. The decline for 1980 through 1982 in the credit resulted, in part, from the foreign nationalization of certain oil interests in the Middle East. This nationalization resulted in the deduction of substantial foreign income taxes in lieu of the crediting of these taxes because use of the tax credit for certain new foreign taxes was not allowed. In addition. of nationalization generally the climate brought with it a diminished role of U.S. corporations in the oil-related activities of Middle East countries. When coupled with

<sup>7/</sup> Represents foreign taxes paid or accrued and deemed paid.

NOTE: Detail may not add to total because of rounding.

generally lower corporate profits in the early eighties, which produced generally lower U.S. income taxes against which to apply foreign tax credits, the resulting total foreign tax credit claimed fell to less than \$20 billion for both 1982 and 1983.

Figure C.--Growth of the Corporation Foreign Tax Credit, 1925-1983

[For most years, figures are estimates based on samples--money amounts are in millions of dollars]

Tax year	Foreign tax credit claimed
1925 1930 1935 1940	\$ 20 29 32 58 96
1950 1955 1960 1965	
-1972	20,753 23,579 26,357 24,880
1981	21,829 18,932 19,951

NOTE: Year-to-year comparability is affected by changes in the law.

The foreign tax credit studies are conducted for even tax years, based on returns included in the same samples used for the Statistics of Income (SOI) corporate program. For Tax Years 1984, 1988, and 1990, foreign tax credit data will be compiled only by country from Forms 1118 (the foreign tax credit computation schedule) included with returns filed by "giant" corporations [7]. (These so-called "giants" reported total assets of \$250 million or more for 1984. The defining limitation will be raised to \$1 billion for giant corporations for 1988 and 1990.) In addition, for these years, summary totals (i.e., without country detail) for "non-giant" corporations will be compiled for all of the returns in the SOI corporate sample with foreign tax credits. For Tax Years 1986 and 1992, foreign tax credit data will be compiled by country for every corporation in the SOI corporate sample with a foreign tax credit. Data on the expected sample and population sizes for the foreign tax credit studies are shown in Table 1 of this

(

article. As shown in that table, the 1984 sample will consist of approximately 2,400 corporation returns from an expected population of 4,900. These 2,400 returns are comprised of all "giant" returns (900) and a sample (1,500 out of 4,000) of all other corporation returns claiming a foreign tax credit.

#### Foreign Corporation Information Returns

Information Returns with Respect to Foreign Corporations (Forms 5471) are required to be attached to the income tax returns of U.S. persons, for each foreign corporation in which a person has an "interest." These foreign corporations are frequently established by domestic corporations in order to engage in foreign business activities [8].

The 1984 study, which is in progress, will include data from all Forms 5471 attached to U.S. corporation income tax returns with total assets of \$250 million or more. While most of these forms will be filed for "Controlled" Foreign Corporations (CFC's), the 1984 study will include data on other foreign corporations in which a U.S. corporation had a relatively small amount of ownership, such as only 5 percent of the outstanding stock of the foreign corporation.—A-Controlled-Foreign-Corporationis a foreign corporation in which more than 50 percent of the total combined voting power of all classes of stock is owned (directly, indirectly, or constructively) by U.S. shareholders.

Previous studies included only data for CFC's that reported information on Form 2952. Information Return With Respect to a Controlled Corporation, attached to content of the Foreign corporation returns. With the replacement of Form 2952 with Form 5471, the content of the 1984 study is being expanded to include detail for complete income statements and balance sheets for all foreign corporations, a summary of Subpart F income for Controlled Foreign Corporations, and undistributed income and taxable dividends paid by Foreign Personal Holding Companies [9,10]. The data from similar studies have traditionally been used by the Office of the Secretary of the Treasury to determine the location of investments and sources of income abroad through investment in foreign corporations and to estimate the impact of various U.S. tax proposals regarding the deferral of tax on earnings and profits from investments abroad by U.S. corporations.

The most current available statistics are for Tax Year 1982 and are limited to foreign corporations controlled by U.S. corporations with \$250 million or more in total assets [11]. These data are summarized in Figure D, which shows that CFC's were predominantly engaged in manufacturing, trade, financial, and service activities. Manufacturing CFC's led all other industries in both numbers and

Figure D.--Returns of U.S. Corporations with Total Assets of \$250 Million or More: Number of Controlled Foreign Corporations (CFC's) and CFC Total Assets and Earnings and Profits, by CFC Industrial Division, 1982

[Money amounts are in millions of dollars]

CFC industrial division	Number of Controlled Foreign Corporations	Total assets	Current earnings and profits (less deficit) before taxes
	(1)	(2)	(3)
All industries, total	26,993	\$557,209	\$36,696
Agriculture, forestry and fishing	174	702	10
Mining	792	26,356	4,764
Construction		5,891	636

Nature of business not allocable		187	6
Inactive	5,786	3,470	-

assets; however, their relative importance has declined because of the more rapid growth of financial corporations in recent years.

Figure E shows the geographic locale of incorporation of Controlled Foreign Corporations. It should be pointed out that some corporations are incorporated in one country while conducting business in one or more other countries; however, the statistics indicate that over 90 percent of them conduct their business in the same country in which they were The countries shown in Figure E organized. represent the most prevalent countries where corporations establish foreian domestic operations via incorporation. The United Kingdom and Canada are the favorite locations of American companies in terms of CFC incorporations. Collectively, these accounted for more than one-fourth of the total number and nearly one-third of the total assets of all CFC's in the 1982 study.

Figure F presents selected historical information on the entire population of foreign corporations controlled by U.S. corporations. While the number of CFC's nearly tripled between 1962 and 1980, their activity as measured by assets, and by receipts and earnings in current dollars, increased at an even faster rate.

Future Foreign Corporation Information Returns studies will be conducted for even tax years. The studies for Tax Years 1984, 1988, and 1990 will be limited to those foreign corporations for which information is included

in "giant" U.S. corporation returns (i.e., returns of U.S. corporations with total assets of \$250 million or more). For Tax Years 1986 and 1992, foreign corporation data will be included from all returns ("non-giants" as well as "giants") in the SOI corporate sample. As shown in the sample and population estimates in Table 1, the 1984 study will encompass 1,100 U.S. parent corporation returns with 32,000 foreign corporations.

1/ Estimated.

NOTE: Data for all Controlled Foreign Corporations are not available for 1982.

#### Domestic International Sales Corporations

The Domestic International Sales Corporation (DISC) was a special type of corporation established by the Revenue Act of 1971. The purpose of this legislation was to provide a system of tax deferral and thereby stimulate U.S. exports.—The—profits—of—a DISC were not taxed to the DISC itself, but instead were taxed to the stockholders when distributed or deemed distributed. Stockholders of DISC's (typically other U.S. corporations) were deemed to receive annually a portion of the DISC's earnings and profits. U.S. income taxation was deferred indefinitely, for the most part, on the remainder of the DISC's earnings and profits.

The number of DISC returns, DISC taxable income, and amounts deemed distributed from 1972 to 1983 are presented in Figure G. The difference between the amount of DISC taxable income and the amount deemed distributed out of that taxable income for each year represents the amount of DISC income that could be deferred indefinitely from U.S. income taxation.

Figure H shows a comparison of DISC exports to total U.S. exports for the period 1973 through 1983 [12]. As might be expected, total exports and DISC exports have moved in the same direction over this period of time.

The DISC tax provisions were a point of contention between the United States and other signatory countries of the General Agreement on Tariffs and Trade. The Deficit Reduction Act of 1984, therefore, ended corporations operating and filing tax returns as Domestic International Sales Corporations. It closed every

<u>Export and Import Trade</u>, FT990, monthly.

NOTE: DISC means Domestic International Sales Corporation.

DISC tax year by December 31, 1984. As a result, the series of studies of DISC returns conducted by the SOI Division since 1972 culminates with DISC returns for accounting periods ending during the 6-month period, July 1984 through December 1984.

#### Interest Charge Domestic International Sales Corporations and Foreign Sales Corporations

While the Deficit Reduction Act of 1984 terminated the existence of Domestic International Sales Corporations after 1984, it allowed for two new tax entities, the Foreign Sales Corporation (FSC) and the Interest Charge Domestic International Sales Corporation (IC-DISC) to replace the old DISC.

The Foreign Sales Corporation study will largely consist of newly-formed foreign subsidiaries of former owners of large DISC's. An FSC is a corporation that has elected to be an FSC and is incorporated in a qualifying foreign country or U.S. possession (except Puerto Rico). FSC's receive U.S. tax benefits on a portion of their foreign trade income. The amount of this income excluded from taxation is determined by the type of pricing method used and the percentage of corporate ownership. The study\_will\_show\_FSC\_income, deductions, foreign\_trade income, tax and balance sheet items. These data will be classified by industry, country of incorporation, size of total assets, type of pricing rules, and other classifiers.

The Form 1120-IC-DISC is an information return filed by a domestic corporation that has elected IC-DISC status and meets certain other requirements. Two of the requirements are that a minimum of 95 percent of its gross receipts be "qualified export receipts" and that at least 95 percent of its assets be "qualified export assets." Corporations electing IC-DISC status and meeting all IC-DISC requirements are generally not subject to U.S. income tax. However, shareholders of an IC-DISC are taxed on a portion of the IC-DISC's income when it is deemed to be or actually is distributed and they are assessed an interest charge on the tax-deferred income. Corporations electing IC-DISC status are generally small exporters, as the tax law requires that all income from export receipts in excess of \$10 million be fully taxable to the IC-DISC shareholder(s).

In addition to basic corporate data, additional data unique to the Form 1120-IC-DISC will also be compiled. Such data will include the amount and nature of export gross receipts and the amount of tax-deferred IC-DISC income. These data will be classified by industry of the IC-DISC, product or service of the IC-DISC, size of corporate shareholder assets, type of pricing rules, and other classifiers.

The IC-DISC and FSC statistics are new for 1985 and will be compiled annually. The FSC population is currently estimated at 4,000 with a sample of 1,700. The corresponding population and sample estimates for IC-DISC's are 2,500 and 600, respectively. (See Table 1.) The FSC and IC-DISC samples are included in the complete sample of returns for each corporate program.

#### U.S. Possessions Corporations

A U.S. possessions corporation is a domestic corporation that elects to be treated as a possessions corporation by filing a Form 5712, Election to be Treated as a Possession Corporation. In general, this type of corporation is usually a subsidiary of another U.S. corporation. To qualify, the possessions corporation must derive 80 percent or more of its gross income from sources within a U.S. possession and 65 percent or more of its gross income from the active conduct of a trade or business within a U.S. possession. Corporations which meet these requirements for a period of 3 years (the current- and 2-preceding years) are allowed a credit against their U.S. tax liability for that portion of the U.S. tax liability attributable to income derived from U.S. possessions.

All of the information reported on Form 5735, Computation of Possessions Corporation Tax Credit, and selected information reported on Schedule P (Form 5735), Allocation of Income and Expenses Under Section 936(h)(5), is captured for this study. This information includes gross income from the current- and 2preceding taxable years, applicable deductions and loss adjustments for the current year, and the computation of the possessions tax credit. Also included are data items relating to the allocation of income and expenses from intangible property between possessions corporations and their U.S. affiliates. Selected Form 1120, U.S. Corporation Income Tax Return, and Form 940, Employer's Annual Federal Unemployment Tax Return, data are also included in this study. Form 940 data provide employment and payroll information related to U.S. possessions corporations. The possessions study is based on all returns with elections for treatment as possessions corporations. This study is conducted on a biennial basis for odd-numbered tax years. For 1985, nearly 700 returns are expected to be filed for U.S. possessions corporations.

The most recent data obtained by the Statistics of Income Division are for Tax Year 1982 and are summarized in Figure I. There were 544 returns for 1982 which claimed over \$2 billion of U.S. possessions tax credit (compared to 384 returns for 1976, the first year of the credit, with \$700 million of credit). The 15 return difference in Figure I

NOTE: Form 5735 is entitled "Computation of Possessions Corporation Tax Credit Allowed Under Section 936."

represents those corporations that claimed the credit but did not file the supporting information on Forms 5735. Puerto Rico has been the primary beneficiary of the possessions corporation system of taxation. More than 98 percent of U.S. possessions corporations conducted business in Puerto Rico, which is considered to be a U.S. possession for purposes of the credit.

#### International Boycott Participation

The Tax Reform Act of 1976 instituted provisions of the Internal Revenue Code denying certain benefits to taxpayers who participate in, or cooperate with, an international boycott unsanctioned by the United States. U.S. taxpayers are required to report operations (direct and indirect) in or related to a boycotting country, or that are conducted with a government, a company, or a national of a country, that requests participation in, or cooperation with, an unsanctioned boycott. The term "operations" encompasses all forms of business and commercial transactions.

The affected tax benefits include the foreign tax credit, deferral of taxation of foreign subsidiaries, and deferral of taxation on earnings of a Domestic International Sales Corporation (DISC), each of which can be denied under the 1976 Act. The Deficit Reduction Act of 1984 provided that certain tax benefits to be afforded to Interest Charge Domestic International Sales Corporations and Foreign Sales Corporations (previously mentioned as DISC replacements beginning with 1985), also be

subject to the international boycott provisions. Therefore, the tax deferral benefit of a DISC is replaced by the deferral of taxation on certain income of an IC-DISC, beginning with 1985. The income of a FSC that can be exempt from taxation is also added (beginning with 1985) to the tax benefits affected by the international boycott provisions. (The foreign tax credit that can be claimed by a FSC is also subject to these provisions.)

Data from those boycott reports indicating a reduction of tax benefits due to boycott participation are produced annually, showing the number of reports and amount of reduced benefits. Additional information based on all boycott reports, with and without tax benefit reductions, is compiled on a 4-year cycle, with the Tax Year 1982 study being the most recently completed "full-scale" study. Tabulated data from the full-scale studies include information on the "person" that filed the boycott report, countries requesting the boycotts, countries in which boycotts are directed, the number and type of requests and agreements to participate in or cooperate with boycotts, and the computations of the reductions in tax benefits.

As shown in Figure J, a loss of tax benefits is reported on only a small portion of the total boycott reports filed. For 1982 and 1983, fewer than 100 reports out of 2,800 received each year included data on the loss of tax benefits resulting from agreements to boycott requests. (U.S. taxpayers do not agree to participate in, or cooperate with, all boycott requests made of them.)

#### Individual Foreign Tax Credit

The United States imposes its income tax on the worldwide income of individual citizens and residents without regard to the geographic source of that income. U.S. individual tax-payers, who also pay or accrue foreign taxes on their foreign source income, are eligible to use those taxes to claim a tax credit (or an itemized deduction) on their U.S. income tax returns. As in the case of corporations, the credit is generally more advantageous to the individual than a deduction because it results in a dollar-for-dollar reduction of U.S. tax liability. The credit is claimed on Form 1116, Computation of Foreign Tax Credit - Individual, attached to Form 1040, U.S. Individual Income Tax Return.

Figure K compares the number of returns and amount of foreign tax credit claimed for each year of the 13 years, 1972-1984. indicates that for the few years just prior to enactment of the Economic Recovery Tax Act of 1981 (ERTA), the vast majority of the credit was claimed by individuals in the upper income classes (adjusted gross income, AGI, of \$50,000 or more). However, ERTA lowered the maximum marginal tax rate from 70 percent to 50 percent and reduced the other marginal tax rates across-the-board by approximately 23 percent over a 3-year period (1982-1984). See the "Individual Income Earned Abroad" section of this article for an additional tax law change that resulted from ERTA. A consequence of the various provisions of ERTA was a decrease in the total amount of foreign tax credit claimed, in particular a sharp decrease in the amount claimed on those returns in the higher marginal tax brackets associated with an AGI of \$50,000 or more.

The last detailed statistics on the foreign tax credit claimed by individuals, for Tax Year 1979, indicate that ten countries accounted for \$823 million of the total \$842 million of foreign tax credit claimed by individuals. The next detailed statistics are currently being compiled for Tax Year 1983. They will contain data for each type of foreign source income by the country to which foreign taxes were paid or accrued. The study is conducted once every 4 years.

#### Individual Income Earned Abroad

As previously stated, U.S. citizens are generally taxed on their worldwide income regardless of the geographic source of that income; however, qualifying citizens with earned income (i.e., salaries, wages, commissions, and fees) for personal services performed in a foreign country were accorded certain tax advantages.

The Economic Recovery Tax Act of 1981 simplified the foreign earned income provisions. For Tax Year 1982, qualifying tax-payers were allowed to exclude up to \$75,000 in foreign earned income from their adjusted gross income. The maximum annual exclusion then

<sup>1/</sup> Represents the reduction in foreign taxes eligible for a foreign tax credit computed under the "specifically attributable taxes and income" method.

<sup>2</sup>/ Represents the reduction in foreign tax credit computed using the "international boycott factor" method.

NOTE: DISC means Domestic International Sales Corporation.

increased by \$5,000 per year until Tax Year 1986, when the maximum exclusion is \$95,000. There is also an exclusion for "excess foreign housing costs." These exclusions are reported on Form 2555, Foreign Earned Income, attached to the Form 1040, U.S. Individual Income Tax Return.

The most recent study for which data are available is for Tax Year 1979. For this tax year, U.S. citizens with foreign earned income were allowed a deduction for excess foreign living expenses and an exclusion of income earned abroad while living in a hardship camp. (As previously explained, these tax benefits were replaced by the 1981 Act with a foreign earned income exclusion.) Figure L shows the number of Forms 2555 filed and total income earned abroad. This study is conducted on the same 4-year cycle as that for the Form 1116 (individual foreign tax credit) study. Statistics for Tax Year 1983 are currently being compiled.

#### Excluded Income from U.S. Possessions

A U.S. citizen who works as an employee or operates a business in certain U.S. possessions may qualify for an exclusion from gross income, as calculated for U.S. income tax purposes. The exclusion is for that income received from sources outside of the United States. When the exclusion is elected, that individual loses certain other tax benefits, such as the loss of dependent exemptions, a limitation on individual income tax deductions and denial of the

foreign tax credit. For this reason, the income exclusion is not always advantageous to qualifying individuals. A study of this income exclusion was last done for 1983. Another study is planned for 1987 and every 4 years thereafter. The statistics will show worldwide and excluded income from U.S. possessions as shown on Forms 4563, Exclusion of Income from Sources in U.S. Possessions, and selected data from related Forms 1040, U.S. Individual Income Tax Returns and from the attached Forms W-2, Wage and Tax Statements.

For Tax Year 1983, there were 134 U.S. citizens who elected to exclude \$3.3 million from their gross income for U.S. tax purposes. This excluded income was received from sources outside of the United States, with over 99 percent of it being derived from U.S. possessions. The individuals who qualified for the income exclusion either worked as employees or operated businesses in these possessions. Johnston Island was the principal location of economic activity for individuals electing the exclusion, accounting for 103 of the individuals and \$2.4 million of the excluded income.

#### Foreign Trusts

Foreign trusts which have U.S. "persons" as grantors, transferors, or beneficiaries are subject to U.S. tax laws. For purposes of this study, U.S. persons include citizens and residents of the United States, domestic corporations and partnerships, and estates and trusts. Information filed with the Internal

NOTES: Form 2555 is entitled "Deduction from, or Exclusion of, Income Earned Abroad." Total income earned abroad is before the deduction for excess foreign living expenses and the exclusion of income earned abroad while living in a hardship area camp. Adjusted gross income (less deficit) is after the deduction, exclusion, and other adjustments to income. Detail may not add to total because of rounding.

Revenue Service on Forms 3520, Creation of, or Transfers to, Certain Foreign Trusts, and Forms 3520A, Annual Return of Foreign Trusts with U.S. Beneficiaries, is used for the statistics. This study, which is based on returns sampled at a 100-percent rate, was last conducted for 1982 and will be conducted on a 4-year cycle, i.e., again for Tax Years 1986 and 1990. There are between 350 and 400 Forms 3520 and an equal number of Forms 3520A in the population. Tabulations provide data showing the type of trust, type of person filing the return, country of residence of person filing, and country where trust was created. Also shown are the number and value of transfers,

assets, income, and year when the trust was created.

As shown in Figure M, transfers by U.S. persons of \$11.3 million in money and property were made to trusts located in foreign countries during 1982. There were 342 trusts reporting transfer activity. Most trusts were located in Canada (283) and were Registered Retirement Savings Plans (244). These Canadian retirement accounts were treated for Canadian income tax purposes in a manner similar to the Individual Retirement Arrangements used by U.S. taxpayers to defer taxation on current income set aside for retirement purposes.

# INVESTMENT AND ACTIVITY IN THE UNITED STATES BY FOREIGN PERSONS

This broad area includes studies on foreign corporations with income derived from U.S. sources, domestic corporations with 50 percent or more ownership by a foreign entity, and nonresident alien income and tax withheld. Taken together, these studies show increases in the level of investment and activity in the United States. Two other studies are on nonresident alien estates and sales of U.S. real property interests by foreign persons.

#### 

A foreign corporation is generally any corporation which is not "created or organized" in the United States or under the laws of the United States or any State. Foreign corporations that have income considered "effectively connected" with a U.S. trade or business or that receive income from U.S. investments must file U.S. income tax returns (i.e., Forms 1120F). SOI studies, which are done annually, cover only those returns which show income and deduction items "effectively connected" with U.S. trade or business activities. Some of these same returns, however, also contain amounts of investment income from U.S. sources. Foreign corporations are taxed on their "effectively connected" income in the

same general manner as domestic corporations [13]. However, their U.S. investment income is generally taxed at a 30-percent rate unless a lower tax rate had been set by a tax treaty between the United States and the country in which the foreign corporation was incorporated.

Figure N presents selected data from Form 1120F returns filed for Tax Year 1983 compared to 1972 and 1977. Foreign corporations with "effectively connected" income from U.S. sources increased during the period. These corporations were primarily engaged in banking and real estate activities.

# U.S. Corporations with 50 Percent or More Ownership by a Foreign Entity

In addition to foreign corporations with income from sources in the United States described above, there are domestic corporations whose voting stock is 50 percent or more directly or indirectly owned by at least one foreign entity, such as a corporation. These foreign-owned domestic corporations could result from stock acquisitions by foreign entities, be newly-formed subsidiary corporations, or result from joint ventures between two or more corporations, at least one of which is a foreign corporation (to mention a few of the possibilities). These corporations are taxed by the United States in a manner similar to that of other domestic corporations [14].

NOTE: Data exclude returns of foreign corporations whose only income was derived from U.S. investments (subject to U.S. withholding tax).

Data for these corporations are compiled annually, generally by the industry of the domestic corporation and by the country of the foreign owner. The data include income statements, balance sheets, tax items, and distributions to stockholders.

Figure 0 shows for two years the number of domestic corporations that indicated they were 50 percent or more owned by a foreign entity, together with selected financial data for them. From 1972 to 1983, the number of these corporations rose from 6,198 to 33,622. Their assets similarly rose from \$46.9 billion to \$530.3 billion, and the receipts they generated increased from \$50.8 billion to \$389.9 billion. For 1983, these corporations accounted for 5.2 percent and 5.5 percent of total assets and receipts, respectively, for all corporation income tax returns.

#### Nonresident Alien Income and Tax Withheld

In general, U.S. individuals or organizations paying income to nonresident aliens are subject to a U.S. withholding tax. A nonresident alien is an individual who is neither a U.S. citizen nor a resident of the United States. However, the term also includes corporations, estates,

Figure 0.--Domestic Corporations Indicating 50 Percent or More Ownership by a Foreign Entity, 1972 and 1983

[All figures are estimates based on samples--money amounts are in millions of dollars]

Item	1972	1983

credits	658	3,419
Distributions to stockholders	1	, , , , ,
except in own stock	568	4,327

and trusts that are created outside of the United States. The tax liability is withheld by the U.S. payor or by its representative, usually a financial institution. Forms 1042S, Income Subject to Withholding Under Chapter 3, Internal Revenue Code, are filed each year by domestic tax withholding agents. The Form 1042S provides information on the gross income paid to nonresident aliens and the tax withheld at the source on such income. The form also provides information on the type of income paid (e.g., dividend, interest, royalty, or personal services), applicable withholding rate, type of recipient (e.g., individual, corporation, or a nominee), and the recipient's country of legal residence.

U.S. payers are generally subject to a 30-percent withholding tax on dividends, interest, and certain other income paid to nonresident aliens. However, the withholding tax rate may be reduced (even to zero) if the country of the nonresident alien has an Income Tax Convention (tax treaty) with the United States [15].

Each annual study includes all Form 1042S returns filed with the Internal Revenue Service. Most payments go to individuals, although the size of the payments are substantially less than those made to corporations. As one might expect, dividends and interest represent the majority of income paid. Figure P shows gross income paid and tax withheld

NOTE: Form 1042S is entitled "Income Subject to Withholding Under Chapter 3, Internal Revenue Code."

classified by country of recipient, for 1984. Starting with Tax Year 1985, Social Security Administration (SSA) and Railroad Retirement Board (RRB) payments made to nonresident aliens will be included in the statistics. The estimated number of additional Forms 1042S to be filed by SSA and RRB for 1985 was 240,000.

#### Nonresident Alien Estates

Forms 706NA, U.S. Nonresident Alien Estate Tax Returns, are filed for U.S. estates of decedents who at the time of death were neither residents nor citizens of the United States and for decedents who acquired U.S. citizenship solely in connection with a U.S. possession. The U.S. estates were valued above a certain limit, generally \$60,000, in order to be taxable. Statistics were recently compiled for the 169 nonresident alien estate tax returns with 1982 year of death. These estates had \$148 million of worldwide assets, of which 32 percent or \$47 million were assets located in the United States. Nonresident aliens from 36 countries left estates with large amounts of The net U.S. estate tax payable U.S. property. on the U.S. property was nearly \$4 million, or 8 percent of the value of the property.

The estimated population for the next study (for estates of 1986 decedents) is 225 returns. Tables will show data classified by country of residence at time of death and by size of the gross estate both in and outside the United States.

# Sales of U.S. Real Property Interests by Foreign Persons

This new study will be conducted beginning with sales of U.S. real property interests in 1985 and will be continued annually thereafter. In general, a 10-percent withholding tax is imposed on the buyer or other transferee when a U.S. real property interest is acquired from a foreign person. This withholding is required under the Foreign Investment in Real Property Tax Act (FIRPTA). The Form 8288 is used to report and transmit the total amount withheld, while the Form 8288A is used to show the gain realized and tax withheld attributable to each foreign transferor of U.S. real property.

Each annual study is based on the population of Forms 8288 and 8288A filed. The estimated population for Form 8288 in 1985 is 3,050 and the estimated population for Form 8288A is 9,150. Data will be produced showing the total amount realized, total tax withheld, and the number of Forms 8288A filed, by the transferor's country of residence (and the tax treaty status of the country).

#### INTERNATIONAL STUDIES PRODUCTS

The Statistics of Income Division regularly produces articles for the quarterly <u>Statistics</u> of Income <u>Bulletin</u> that present statistics on topics in the international area. In the last year, articles have appeared on Nonresident

Alien Income and Tax Withheld, 1983; Corporate Foreign Tax Credit by Industry, 1982; and Controlled Foreign Corporations by Industry, 1982. Previously, articles also appeared on International Boycotts, 1976-1982; and Domestic International Sales Corporations, 1980. In the current issue, articles appear on Nonresident Alien Income and Tax Withheld, 1984; and Foreign Tax Credit by Country, 1982. Articles are now planned on Controlled Foreign Corporations by Country, 1982; U.S. Possessions Corporations, 1983; and Individual Foreign Income and Tax, 1983.

first "compendium" on international The studies was published by the Statistics of Income Division in September 1985. This compendium contains in one volume results from all of the recent studies conducted on international income and taxes. The majority of data presented are for Tax Years 1979 through 1983. The material selected for the compendium is comprised chiefly of articles and tables previously published in the <u>Statistics</u> of Income Bulletin and facsimiles of tax forms and instructions. Also included are research papers and previously unpublished articles and tables. This material is intended as a reference source for statisticians, economists and other researchers with interests and responsibilities-in-the-international-area; however, the articles are designed so that readers unfamiliar with these studies can also gain an understanding of them.

The international compendium represents only a sampling of the statistical information that might be of value to practitioners and researchers. Although public use microdata  $% \left( \frac{1}{2}\right) =\frac{1}{2}\left( \frac{1}$ files are not now available, research efforts are underway to investigate whether they can be released in the future. This research will determine whether the microdata can be included in the files in such a way that the identity of individual taxpayers is protected. Unpublished or special tabulations from SOI studies, edited to protect taxpayer's confidentiality, are also available on a cost-reimbursable basis. Requests for these tabulations should be addressed to the Director, Statistics of Income Division, D:R:S, Internal Revenue Service, 1111 Constitution Ave., NW, Washington, DC 20224.

INTERNATIONAL INCOME AND TAXATION STATISTICAL SERVICE

The Statistics of Income Division has introduced a new statistical service relating to international income and taxes. This service was introduced in response to numerous requests for more detailed and previously unpublished information on our international studies.

Subscribers to this service will receive a copy of the report, Compendium of Studies of International Income and Taxes, 1979-1983 (Publication 1267), described above, and updated data (as it becomes available) on the studies mentioned in this article.

The price of the service is \$45.00 for the first year. The one-year period for receiving additional information can be extended at a cost of \$35.00 for each additional year. A long-term subscription (\$150.00) includes Publication 1267 and additional information as it becomes available through August 1990. The next compendium is scheduled for release in September 1990.

#### FOOTNOTES

- [1] These two areas are meant to be very broad in nature. Specific descriptions of each study are provided later in this article.
- [2] The term "persons" includes individuals, corporations, trusts, estates, partnerships, and associations.
- [3] The Congressionally-mandated reports are U.S. Possessions Corporations; International Boycott Participation Reports; Individual Foreign Tax Credit and Individual Income Earned Abroad (combined for one report); and Foreign Sales Corporations and Interest Charge Domestic International Sales Corporations (which will be combined for a report that will replace the existing reports on Domestic International Sales Corporations). These reports are prepared by the Office of Tax Analysis and issued by the Office of the Secretary of the Treasury.
- [4] U.S. Department of Commerce, Bureau of Economic Analysis, Survey of Current Business, November 1984, Vol. 64, No. 11, pp. 24-27.
- [5] U.S. corporations may deduct foreign taxes rather than claim a credit for them. However, corporations almost always benefit more by crediting the foreign taxes.
- [6] An extensive description of total taxable income is available under the heading "Income Subject to Tax," in Statistics of Income -- 1982, Corporation Income Tax Returns, pp. 76-77.
- [7] Returns of giant corporations are selected at a rate of 100 percent for the

corporate studies. These corporations account for the largest part of the totals included in the foreign tax credit studies. For instance, for 1982, giant corporations accounted for 96 percent of both foreign-source taxable income and foreign tax credit claimed by all corporations which had a foreign tax credit.

- [8] Beginning with accounting periods starting in 1985, Forms 5471 will include the new Foreign Sales Corporations. See the separate discussion on these corporations in this article.
- [9] Under Subpart F provisions of the Internal Revenue Service Code (section 952), the United States taxes U.S. shareholders of Controlled Foreign Corporations on certain types of income that, although undistributed to them, were deemed to have been distributed (and were thereby taxable, generally at the same rate(s) as dividends).
- [10] A Foreign Personal Holding Company generally derives at least 60 percent of its gross income from interest, dividends, rents, royalties, annuities, gains from stock and commodity transactions, and personal service contracts. In addition, over 50 percent of its outstanding stock is directly or in-

- directly owned by five or less U.S. citizens or residents.
- [11] Foreign corporations controlled by U.S. corporations with \$250 million or more in total assets generally account for the largest part of the CFC statistics. For instance, for 1980, CFC's owned by these "giant" U.S. corporations accounted for the major portion of total assets (94 percent) and business receipts (93 percent) of CFC's owned by all U.S. corporations.
- [12] The total U.S. export statistics come from the U.S. Department of Commerce, Bureau of the Census, Highlights of U.S. Export and Import Trade, FT 990, monthly.
- [13] Foreign corporations with income derived from U.S. sources are included in the sample used for the SOI corporate program.
- [14] Domestic corporations with 50 percent or more ownership by a foreign entity are included in the sample used for the SOI corporate program.
- [15] If income paid to nonresident aliens is considered "effectively connected" with the conduct of a trade or business within the United States, then the tax rate applicable to the income is substantially the same as that for U.S. residents.

N/A - Items not applicable because there will be no study conducted for the tax year.

1 The 1984 Form 1120-DISC study includes only returns with accounting periods ending between July and December of 1984.

2 The 1984 Forms 1120-IC-DISC and 1120-FSC studies are "special" studies. Because of the effective date of the enacting legislation, only returns with accounting periods ending between January and June 1985 will be included.

3 Data will be tabulated for only approximately 100 reports which show a denial of certain tax benefits. For the remaining reports for these years, only a count of reports filed will be obtained.

4 Counts reflect population and sample estimates for each of Forms 3520 and 3520A.

# Corporate Foreign Tax Credit, 1982: A Geographic Focus

By Chris R. Carson\*

For the first time in recent years, interest surpassed dividends as the most common type of foreign income of "giant" U.S. corporations that claimed a foreign tax credit for 1982 [1]. Branch income, which makes up 25 percent of foreign-source taxable income, is not included in this comparison because it is reported only on a net basis. While foreign non-branch gross income declined slightly from \$86.1 billion for 1980 to \$82.0 billion for 1982, non-branch interest income rose by 59 percent from \$12.5 billion to almost \$20 billion. Almost 40 percent of this increase was accounted for by just four countries: the United Kingdom, Bahamas, Mexico and Brazil. This rise in interest was due to both higher interest rates and increased lending. For the same reasons, 1982 was also the first time in recent years that foreign corporations received more U.S. interest than dividends [2].

The foreign tax credit claimed by giant U.S. corporations declined by 27 percent, from \$24.9 billion for 1980 to \$18.2 billion for 1982, while foreign-source taxable income declined by 19 percent, from \$70.5 billion to \$57.1 billion. Due mostly to the foreign and domestic losses of many U.S. corporations for 1982, the number of "giant" companies (total assets of \$250 million or more) claiming a foreign tax credit fell by 19 percent, to 741 during the same period. This amounts to 23 percent of the 3,188 active U.S. corporations meeting this "giant" criterion. It was this small group that accounted for nearly all of the foreign tax credit claimed by U.S. corporations.

U.S. corporations continued to earn more foreign-source taxable income from the United Kingdom (18 percent of the total) than from any other country during 1982. Moreover, U.K.-source income declined less than overall foreign-source income during the 1980-82 period. The United Kingdom also led with the most foreign taxes paid by U.S. corporations (\$2.9 billion).

Despite the overall drop in foreign-source taxable income from 1980, in general, the use of offshore financial centers in the Caribbean and Central America appears to have increased.

As is shown in Figure A, taxable income from the Netherlands Antilles nearly doubled and taxable income from Panama and the Bahamas also increased. These increases were generally due to rising dividends (Netherlands Antilles) or interest income (Bahamas) or both (Panama). Brazil's increase was due to a 74 percent rise in non-branch interest.

Most of the countries in Figure A (which includes countries with at least \$1 billion of foreign-source taxable income for either 1980 or 1982) showed decreases. The largest income decreases were registered by Libya, Nigeria and the United Arab Emirates, all of them due to reduced oil and gas extraction income. A sizable drop in dividend income caused West Germany's income decline.

Foreign-source taxable income of U.S. corporations doing business with members of the Organization of Petroleum Exporting Countries (OPEC) [3] continued to drop in 1982 to \$8.6 billion, a decline of almost 35 percent from 1980. Taxes paid by U.S. corporations to OPEC countries fell even faster (39 percent) to \$5.3 billion during this period. These changes were mirrored in reductions since 1980 in "foreign oil-related" income (38 percent) and taxes (36 percent) for all countries.

Nearly half the total taxes paid by U.S. banks to foreign countries were paid to Brazil and Mexico. About three-fourths of tax withheld on foreign non-branch interest payments to U.S. banks was attributed to these countries, reflecting the substantial debt they owe to U.S. banks and their high withholding taxes. (The overall effective withholding tax rate on interest was only 4.4 percent and, excluding Brazil and Mexico, only 2.1 percent for 1982.) More than 96 percent of the \$153 million increase between 1980 and 1982 in foreign withholding taxes on interest can be attributed to Brazil.

#### **BACKGROUND**

U.S. corporations are subject to U.S. tax on their worldwide income. The portion of this income derived from foreign sources is also typically subject to tax by the country in which it was earned. Since this could result in double taxation of the foreign income, U.S. tax law allows corporations a dollar-for-dollar credit against U.S. income tax for income taxes paid to foreign governments.

The original foreign tax credit provisions, as established by the Revenue Act of 1918, allowed corporations to reduce their U.S. tax liability by their total foreign income tax burden. Until passage of the Revenue Act of 1921, U.S. corporations could credit an unlimited amount of foreign taxes. As a result, corporations could use the foreign tax credit mechanism to offset their income tax liability on domestic, as well as foreign, income. To remedy this situation, the 1921 Act limited the foreign tax credit to the U.S. tax on foreign-source income. That limitation still remains, and certain further limitations have been introduced with respect to particular types of income.

Currently, corporations are subject to a limitation in which the credit is limited to the portion of total U.S. income tax that is attributable to foreign-source taxable income. For purposes of this limitation, foreign-source taxable income cannot exceed worldwide taxable income. This calculation results in a zero limitation (no credit) if a corporation has an overall foreign loss. In addition, corporations with worldwide losses would have no U.S. tax against which to claim a credit.

For 1982, this limitation was separately calculated for four categories of income: (1) section 904(d) (generally portfolio) interest income, (2) dividends from a Domestic International Sales Corporation (DISC) or former DISC, (3) foreign oil-related income, and (4) all other income from foreign sources. As of 1984, two new categories of income applied: (1) foreign trade income of a Foreign Sales Corporation (FSC), and (2) distributions of a FSC or former FSC. Also, foreign oil-related income has been merged with all other income from foreign sources, although foreign oil and gas extraction taxes are still limited through a separate calculation. The total foreign tax credit claimed is generally the sum of the separate type-of-income credits, reduced by an amount for participation in or cooperation with international boycotts [4].

To claim a foreign tax credit, a U.S. corporation must have foreign-source taxable income, pay, accrue or be deemed to have paid foreign income tax on the foreign income, and have a U.S. income tax liability. Taxes that may be credited are income taxes imposed by U.S. possessions or a foreign country. Taxes such as excise, franchise, and sales, do not qualify as creditable taxes. Any foreign tax paid, accrued or deemed paid (see "Current-year Foreign Taxes" in the Explanation of Selected Terms section) in excess of the limitation can be carried back 2 years and the remainder then brought forward 5 years.

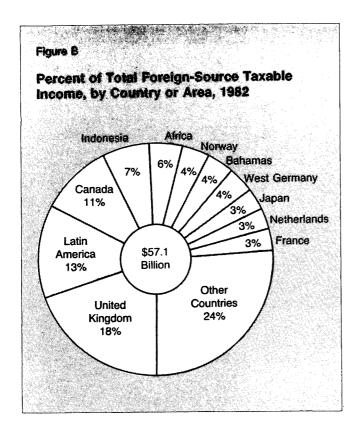

Since U.S. corporations are taxed on their worldwide income, the foreign tax credit serves to eliminate double taxation. While foreign taxes may be treated as a deduction, corporations almost always benefit more by crediting these taxes. In general, for 1982, deducting foreign taxes was preferable to crediting only when less than 46 percent of current-year taxes could be credited for the current year, or could be used as either a carryback or carryforward to other years for crediting.

FOREIGN INCOME AND TAXES BY COUNTRY

#### Income and Taxes: Totals and Industries

Figure B shows the principal countries or areas of origin of foreign-source taxable income for 1982. As for 1980, the United Kingdom (18 percent), Canada (11 percent), and Indonesia (7 percent) were the top three countries. The remaining 64 percent of income was widely distributed, with no single country accounting for as much as 5 percent of the total.

The most current-year foreign taxes were paid to the same three countries, United Kingdom, Canada and Indonesia, in the same order, although some percentages varied (see Figure C). Canada was responsible for an equal percentage of income and taxes, giving Canada an effective tax rate (current-year foreign taxes as a per-

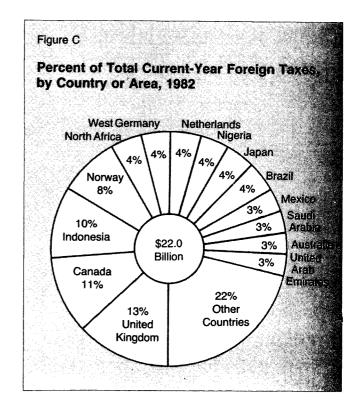

centage of foreign-source taxable income) almost identical to the all-country average. U.K. taxes, however, represented a smaller portion of the total taxes than U.K. income did of all income, suggesting that the effective U.K. tax rate was below average. The Indonesian tax percentage was greater than its income percentage, reflecting the high taxes imposed on the petroleum industry there. The same was true for Norway, which represented 4 percent of all foreign income, but 8 percent of all foreign tax. Taxes paid to the Bahamas represented only 0.2 percent of all taxes compared to the 4 percent figure for income received from the Bahamas.

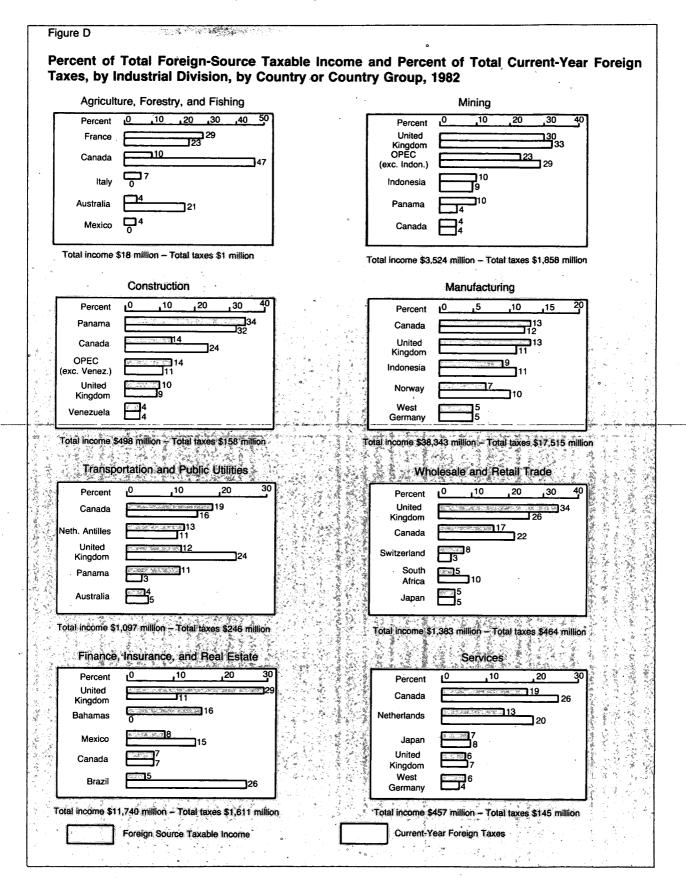

While almost all foreign-source taxable income from Indonesia originated in the petroleum industry, the income from Canada and the United Kingdom was much more diverse. Figure D shows the top five countries, or country groupings, for each industrial division, based on income levels. Canada was among the top five countries (or country groupings) in all eight industrial divisions, placing first in three and second in three others. Similarly, the United Kingdom ranked in the top five of all industrial divisions, with the exception of agriculture, forestry, and fishing, while providing 59 percent more foreign income (\$10.2 billion) to U.S. corporations than Canada (\$6.4 billion). Mining (mostly petroleum), finance, in-

surance and real estate (mostly banking), and wholesale and retail trade were the industrial divisions with corporations that received considerably more income from the United Kingdom than Canada. Twenty-five times more income was received by U.S. banks from the United Kingdom than from Canada. Generally, banking is the major component of finance, insurance, and real estate, representing 89 percent of that industrial division's foreign-source income. Canada was the exception to this, however, with 80 percent of foreign income from the insurance industry.

While the Bahamas ranked sixth in total foreign-source income, it was among the top five countries in only one industrial division, with the majority of its income (84 percent) earned by the banking industry. Although Panama was not among the top ten. countries overall, it ranked fourth or better in three industrial divisions: construction, where it ranked first; transportation (shipping); and mining. More than one-third of foreign income for U.S. corporations in the construction industry was from Panama, with virtually all of this income consisting of dividends from Panamanian firms.

The diversity of U.S. corporations operating in the United Kingdom and Canada is evident in Figure D in the distribution of total taxes by industrial division. As with income, Canada was represented in the top five countries in all eight industrial divisions. The United

Kingdom was represented in all of the divisions, with the exception of agriculture, forestry and fishing. Australia, which was represented in only two divisions for income, ranked among the top countries in four industrial divisions (including wholesale and retail trade and services) when taxes were considered. This was due to a higher-than-average effective tax rate (48 percent compared to the all-country average of 39 percent). Indonesia, with an even higher effective tax rate (56 percent), similarly ranked high in two divisions (for income) and four divisions (for taxes, including construction and transportation, in addition to the industrial divisions shown for income). Although Canadian taxes represented almost half of all taxes in agriculture, forestry and fishing, Canadian income represented only 10 percent of all income. This coincides with Canada's higher-than-average effective tax rate in this industrial division (23.6 percent) compared to "all countries" (5.1 percent).

There is a substantial disparity between the income and tax percentages shown in Figure D for four of the top five countries in the finance, insurance, and real estate division. Brazil and Mexico showed a much higher-thanaverage tax for that industrial division, while the United Kingdom and the Bahamas showed a much lower-than-average tax. The Bahamas imposed virtually no income (including withholding) taxes. The United Kingdom provided 29 percent of this division's income, but received only 11 percent of its taxes. Much of the gross income from the United Kingdom was exempt from withholding tax because of the U.S. - U.K. tax treaty. Most of this division's income from Brazil and Mexico was interest, but it was subjected to higher tax withholding rates, since the United States did not have tax treaties with either country. Canada, which shows the same percentage of income and taxes, has a tax treaty with the United States which lowbut did not eliminate, withholding Table 1 of this article provides detaxes. tailed data on the type and amount of income generated in most foreign countries.

#### Type of Income by Country

The type of non-branch foreign income U.S. corporations received varied considerably by country (income-type detail is not available for branch income), as is shown in Figure E. The variance from the overall average distribution increased as the amount of gross income decreased for each of the countries shown. Certain country trends are noted:

 The United Kingdom, which contributed the most to non-branch gross income, had a distribution of income similar to that for "all countries,"

- almost all income from the Bahamas was interest,
- two-thirds of the gross income from Norway was made up of rents and royalties, virtually all from the petroleum industry,
- U.S. firms were twice as likely to derive rents and royalties from Japan and West Germany as from other countries, and
- most U.S. investment in the Netherlands and West Germany was in corporate stock, as evidenced by the fact that the majority of income was dividends or the associated tax (dividend gross-up).

Income distribution generalizations can be made for geographic areas as well as for specific countries. A higher proportion of income from Latin America was interest (40 percent) than from countries in general (24 percent). Rents and royalties were less likely to be received from Latin America (4 percent of income compared to an overall ratio of 12 percent). This was also the case with other less-industrialized areas such as Africa (4 percent). No dividend income was received from any Eastern European Soviet-bloc country because only a handful of companies incorporated in these countries were owned by U.S. corporations [5]. About half of the gross income from these countries was interest while a third was income for services. African countries were only one-third as likely (based on percentage of all income) to pay interest to U.S. corporations as other countries. This may be because these countries  $\operatorname{did}$  not have a  $\operatorname{debt}$ burden similar to those of some industrializing Latin American countries.

# Comparison of Foreign Income to Foreign Economic Activity

U.S. corporations tend to receive large amounts of income from certain countries, compared to the general level of economic activity of those countries, as represented by their Gross National Product (GNP) [6]. (Certain countries also tend to receive large amounts of U.S. income as compared to their GNP [7].) Figure F shows foreign-source taxable income, GNP, and foreign-source taxable income as a percentage of GNP for the countries having the highest percentages and from which at least \$500 million of taxable income was received, for 1982.

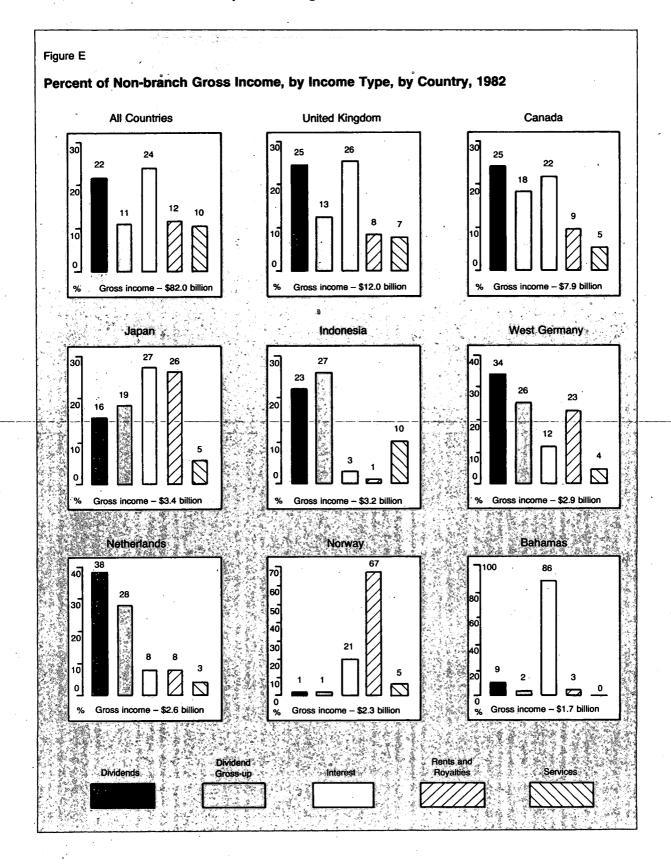

Figure F.--Foreign-Source Taxable Income as a Percentage of Gross National Product, 1982

[Millions of dollars]

Country	Foreign- source taxable income	Gross National Product	Percentage
	(1)	(2)	(3)
Bahamas Netherlands Antilles	\$2,222 1,152	\$ 840 1,370	264.5%
Bermuda	552	790	84.1 69.9
Norway	1,259 2,540	4,060 58,720	31.0 4.3
Indonesia Egypt United Arab	3,838 1,151	88,960 29,550	4.3 3.9
Emirates Libya Peru	848 674 521	27,260 27,120 22,030	3.1 2.5 2.4
Canada	6,438	278,960	2.3

The foreign-source taxable income received from the Bahamas was more than two and one-half times its Gross National Product. This suggests that many U.S. corporations were investing through, as well as in, the Bahamas. The next three countries have high percentages as well. Most of the remaining countries were oil-producing countries, where U.S. oil companies have substantial operations. The percentages shown for most of these countries seem particularly high when compared to the average for "all countries" (0.8 percent) for which GNP information was available. U.S. corporations received nearly 340 times more income from the Bahamas than the overall rate would suggest.

#### Interest Income

Interest was more likely to be received from certain countries than other types of income. Figure G shows the countries (with at least \$500 million of gross income) paying the highest percentage of non-branch gross income as interest. The Bahamas and Cayman Islands, with the highest percentages, are both offshore financial centers. Mexico, Argentina, and Brazil paid large amounts of interest on their

debts to U.S. banks. Singapore and Hong Kong are major Asian financial centers.

Figure G.--Interest as a Percentage of Total Non-branch Gross Income, 1982

[Millions of dollars]

Country	Gross income	Interest	Percent- age
	(1)	(2)	(3)
All countries.	\$82,044	\$19,937	24.3%
Bahamas	1,695 687 2,833 799 2,028 544 544 652	1,455 570 1,708 429 1,071 272 265 295	85.8 83.0 60.3 53.6 52.8 50.0 48.7 45.2

#### Type of Foreign Tax Credit Limitation

As mentioned earlier, U.S. tax law requires separate foreign tax credit limitations with respect to different categories of foreign income. Figure H shows foreign-source taxable income by country (or area) for three of the four income categories. (Country detail was not reported for the fourth, DISC dividends.) While income levels remained similar to 1980 for foreign non-business-related interest income and the residual "all other" income, foreign oil-related income fell by almost 38 percent to \$19.3 billion. DISC dividend income (\$1.2 billion), which is not shown, did not change from 1980.

Although foreign oil-related income dropped dramatically from 1980, the geographic distribution of this income did not change substantially. The combined total for OPEC countries and the United Kingdom accounted for more than half of all petroleum income, maintaining nearly identical proportions of the total, 36 percent and 18 percent, respectively. Reflecting the reduced levels of foreign oil-related income, OPEC countries provided a smaller percentage of all income paid and taxes received for 1982 than for 1980, as is shown in Figure I.

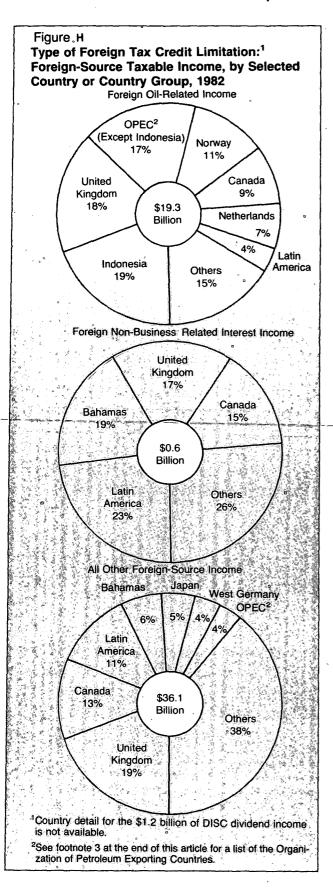

Figure I.--Foreign-Source Taxable Income and Current-Year Foreign Taxes, by Selected Oil-Producing Area, 1980 and 1982

[Millions of dollars]

Country	19	80	1982			
Country	Income Tax		Income	Tax		
	(1)	(2)	(3)	(4)		
Total	\$70,541	\$29,996	\$57,059	\$21,998		
OPEC	13,110	8,763	8,559	5,318		
Norway plus United Kingdom	14,880	6,370	12,784	4,665		
Percentage of total:						
OPEC	18.6%	29.2%	15.0%	24.2%		
Norway plus United Kingdom	21.1	21.2	22.4	21.2		

The principal North Sea oil countries (the United Kingdom and Norway) maintained almost identical proportions of foreign-source taxable income and current-year foreign taxes from 1980 to 1982. Although the taxes for these North Sea countries were proportional to income for both years, OPEC countries were responsible for a disproportionately high percentage of total taxes for both years, as shown in Figure I. This was due to the high foreign tax rates on oil income.

Foreign non-business-related taxable interest income remained virtually identical from 1980 to 1982, rising by less than 1 percent to \$566 million. The sources of this income changed dramatically, however. Latin American countries paid more than \$127 million to U.S. corporations in 1982, an increase of more than 300 percent. This increase, combined with that of the Bahamas (67 percent), seems to have come at the expense of Canada and the United Kingdom, which both fell by about half. These four countries (or geographic areas) made up nearly three-fourths of all such interest.

The largest income limitation category by far was the residual "all other foreign-source income," with more than \$36 billion of income. As with 1980, this income category was more diverse than the others with the top seven countries (or areas) comprising only 62 percent of the total income. Of the countries or country groups shown in Figure H, only the United

Kingdom showed an increased portion (5 percent) of the total, while Latin America and West Germany showed the largest drops (5 percent and 4 percent, respectively) from 1980 levels.

#### Effective Foreign Tax Rates

Because foreign tax rates varied considerably by country (and by type of income within countries), the effective tax rates (current-year foreign taxes divided by foreign-source taxable income) of countries ranged from almost 86 percent to less than 1 percent, as is shown in Figure J (see "Explanation of Selected Terms" section for information on effective tax rate limitations). Only seven of the 27 countries shown fall within 10 percentage points above or below the all-country average. For "all countries", the overall effective tax rate fell substantially from 1980, from 42.5 percent to 38.6 percent. This decrease can be attributed to both branch income and non-branch interest. While non-branch interest rose by 59 percent, tax on this interest increased by only 28 per-

 $<sup>1/{\</sup>rm Includes}$  countries with more than \$500 million of foreign source taxable income.  $2/{\rm Not}$  calculated due to foreign branch loss.

cent, at least partially due to the shift of the source of income to low tax jurisdictions and tax treaty countries.

Tax on foreign branch income fell more rapidly (45 percent) than branch income (34 percent). Even though branch income fell by a third overall, it rose by more than one-quarter in two major Caribbean countries (the Bahamas and Netherlands Antilles). These two countries had low effective foreign tax rates.

Almost all of the countries with the highest effective tax rates were oil-producing nations. Brazil was the only country with an effective rate above 50 percent that was not a major oil-producing country. Brazil's rate was more than 68 percent because interest from Brazil (53 percent of non-branch gross income) was generally subjected to a 25-percent withholding tax on the gross amount. The deductions attributable to this income reduced taxable income (on which the effective tax rate is based), and thereby increased the effective tax rate to above 25 percent.

Although the United Kingdom had the second highest amount of foreign-oil-related income, its effective rate was only 28 percent, mainly because the tax rate on its \$3.1 billion of non-branch—interest—was—less—than—0.5—percent.—At the bottom end of the range, the effective tax rates for Bermuda and the Cayman Islands were both below 1 percent.

#### Organizational Structure of Foreign Operations

There are several different organizational structures available to U.S. corporations seeking to expand their markets or business activities abroad. Most corporations wanting to establish a permanent presence abroad elect to do so by using an unincorporated foreign branch operation, investing in an existing foreign corporation, or forming a subsidiary under the laws of the foreign country. Some business activities can also be transacted without a foreign presence, e.g., certain loans and exports.

Figure J also shows foreign branch taxable income as a percentage of total foreign-source taxable income by country. Branch taxable income as a percentage of all foreign taxable income fell from 31 percent for 1980 to about 25 percent for 1982. This was because foreign branch income, which fell 34 percent from 1980, is netted against foreign branch losses, which increased during the period due to the world-wide recession.

The Bahamas had the highest proportion of income from foreign branches (75 percent), while Bermuda had the lowest (under 1 percent), as shown in Figure J. These percentages show the diversity of business structures in foreign

countries. (Percentages could not be calculated for three countries with branch losses.)

Further evidence of the organizational structures preferred by U.S. corporations (or required by foreign countries) doing business with foreign countries can be determined by looking at the proportion of dividend income (including dividend gross-up) to total foreign gross income. Eighty-three percent of the gross income from Bermuda consisted of dividends, confirming the preference U.S. corporations have for using subsidiaries to conduct their operations in that country. Only 11 percent of the gross income from the Bahamas was dividends. These figures are consistent with the branch income percentages noted above for those two countries.

#### SUMMARY

The foreign tax credit claimed by "giant" U.S. corporations declined by more than a quarter, from \$24.9 billion for 1980 to \$18.2 billion for 1982. Foreign and domestic losses helped reduce the number claiming a foreign tax credit by 19 percent, to 741. About one-fourth of all "giant" U.S. corporations claimed the credit for 1982.

—Interest—surpassed—dividends—(excluding—dividend gross—up) as the most common type of foreign non-branch income earned by U.S. corporations in 1982. Interest rose by 59 percent from 1980 to 1982 to almost \$20 billion. Much of this increase was attributable to just four countries: the United Kingdom, Bahamas, Mexico, and Brazil.

U.S. corporations earned more foreign-source taxable income (\$10.2 billion) from the United Kingdom than any other country, even though this income fell by 10 percent from 1980. Likewise, these corporations paid more taxes (\$2.9 billion) to the United Kingdom for 1982 than to any other country. The United Kingdom also led in both of these categories in 1980.

Corporate use of offshore financial centers appeared to be increasing, as of 1982, despite a decrease in income of 19 percent for "all countries." For example, income from the Netherlands Antilles nearly doubled, to \$1.2 billion. The income of certain countries also seemed high compared to the general economic activity of these countries. Income from the Bahamas was more than two-and-one-half times that country's Gross National Product (GNP). Offshore-financial-center countries consistently showed considerably higher income-to-GNP ratios than other countries.

About three-fourths of tax withheld on foreign non-branch interest payments to U.S. banks could be attributed to Brazil and Mexico. This reflects the substantial debt these countries owe to U.S. banks. More than 96 percent of the \$153 million increase from 1980 in foreign interest withholding taxes could be attributed to Brazil.

DATA SOURCES AND LIMITATIONS

### Sample Selection and Variability

The statistics shown in this article are from returns of all U.S. corporations that had \$250 million or more in total assets (so-called "giant" returns) and claimed a foreign tax credit. These statistics therefore vary slightly from data contained in a previous article entitled "Foreign Tax Credit by Industry, 1982," which was included in the Spring 1986 Statistics of Income Bulletin. That article was based on all 1982 U.S. corporation returns, giants as well as non-giants, with a foreign tax credit.

There is no sampling variability associated with these statistics because all "giant" returns were used in compiling the data. The accounting periods of corporations included in the data were those ending between July 1982 and June 1983.

There is some undercoverage of foreign income and tax data other than the minor limitation of giant-only returns (96 percent of foreign-source taxable income and 97 percent of current-year foreign taxes are accounted for by giant returns). Some corporations with foreign income and taxes operated at a deficit and had no U.S. tax liability against which a foreign tax credit could be claimed. Other corporations may have chosen to deduct their foreign taxes from gross income rather than credit them against their U.S. tax liability. For these particular returns, it is believed that the foreign income and tax amounts were insignificant. In both circumstances, these returns would have been excluded from this study.

#### General Limitations

The foreign tax credit was claimed under section 901 of the Internal Revenue Code. Corporations claiming a foreign tax credit generally provide supporting foreign income and tax data on Form 1118, Computation of Foreign Tax Credit--Corporations, attached to their U.S. corporation income tax return. Form 1118 is the source of the foreign income and tax data for this article. The statistics do not reflect any adjustments that may be made during audit examination, when the acceptability of the foreign income and taxes reported for purposes of the credit is finally determined. In addition, some corporations provided only pre-liminary foreign income and tax data with their U.S. tax returns because not all the information on their foreign operations was available at the time the U.S. income tax return was

filed. (Amended returns were not used for these statistics.)

U.S. tax law allows parent corporations to file consolidated income tax returns presenting the combined financial data of an entire group of affiliated corporations. Therefore, the actual number of corporations claiming a foreign tax credit is understated, since the statistics in this article represent the number of corporation income tax returns with foreign tax credit. For purposes of this article, however, the term "corporations" is used to denote "returns."

The term "country" as used in this article includes not only countries, but also other separate taxation authorities, such as Puerto Rico and U.S. possessions. For certain tables and figures shown in this article, data for geographic areas are presented together with countries.

#### EXPLANATION OF SELECTED TERMS

Current-year Foreign Taxes.--Generally, current-year foreign taxes available for credit included (a) foreign taxes directly paid or accrued by a U.S. corporation on profits of foreign branch operations; withholding taxes on dividends, interest, rents, royalties and license fees; and other foreign taxes paid or accrued on partnership and services income; and (b) foreign taxes indirectly, or deemed, paid by a U.S. corporation. These "deemed paid" taxes were the taxes paid or accrued by a related foreign corporation on the profits from which dividends were paid (or constructive distributions made) to the U.S. corporation.

<u>Dividend Gross-up.</u>--An amount of income equal to the foreign tax deemed paid that is associated with dividends received or includable income constructively received from foreign corporations.

Effective Foreign Tax Rate. -- For a particular country (or country grouping), this was the amount of current-year foreign taxes paid to a country as a percentage of the foreign-source taxable income from that country. The effective foreign tax rates shown in this article may vary considerably from the statutory tax rate(s) of the countries. This is because (1) foreign-source taxable income was determined under U.S. tax law, while the actual income subject to foreign tax was determined under the laws of the taxing country; (2) foreign-source taxable income was net of losses, which overstates the effective foreign tax rate; (3) many countries had progressive tax rates or taxed various types of income at different rates; (4) certain foreign subsidiary income and the associated foreign taxes were applicable to operations in countries other than the "host" country: and (5) some countries taxed selected industries at rates in excess of other industries.

Foreign Oil-related Income. -- This was income derived from foreign sources from (1) extracting minerals from oil and gas wells, (2) processing such minerals into their primary products, (3) transporting such minerals or primary products, and (4) selling or exchanging assets used in these activities.

Foreign-source Taxable Income.--Foreign-source gross income (including certain income "constructively" although not "actually" received, i.e., "foreign dividend gross-up" and "includ-able income of Controlled Foreign Corpora-tions") less or "net" of the allocable deductions determined under the Internal Revenue Code and by provisions of any tax treaty between the United States and a particular foreign country constitutes foreign-source taxable income. This taxable income was the amount on which the U.S. income tax on foreign earnings was determined. It could differ from the taxable income from overseas business operations and investments computed under foreign tax law, which was used as the basis for foreign taxation. In general, foreign-source taxable income included foreign-branch profits, dividends received from foreign corporations, rental income, royalties, license fees, gains from the sale of real property, and compensation for labor or services performed. The amounts shown in the statistics are net of losses.

Specially Allocable (Section 863(b)) Income.--Income partially earned within the United States and partially earned within a foreign country or U.S. possession constitutes specially allocable (section 863(b)) income. In general, the income covered by section 863(b) of the Internal Revenue Code was generated either by production within the United States and sales abroad or vice versa, or by transportation, telegraph, or cable services.

#### NOTES AND REFERENCES

[1] This comparison excludes dividend grossup. See the "Explanation of Selected Terms" section.

The basic statistics in this article represent U.S. corporations with \$250 million

or more in total assets that claimed a foreign tax credit. Although only 741 of the 4,941 total corporations claiming a foreign tax credit had this level of assets, these "giant" corporations were responsible for approximately 96 percent of both total foreign tax credit and total foreign-source taxable income. statistics will therefore vary slightly from the data shown in the article by Mary Barlow entitled "Foreign Tax Credit by Industry, 1982," <u>Statistics of Income</u> Bulletin, Spring 1986, which are based on all corporation returns with a foreign tax credit. The 1982 statistics are generally compared to 1980 data for all corporation returns with a foreign tax credit, because detailed information is not available for 1981.

NOTE: The data in columns 1-13 pertain to the total activity of the domestic parent corporation. Since many corporations received income from or paid taxes to more than one country, the data in these columns are additive. The data in the remaining columns are additive except for small differences due to rounding.

# Interest Income and Deductions on Individual Income Tax Returns, 1968-1984

By Paul E. Grayson\*

Interest rates figure prominently in the general public's consciousness of the economy. Interest rates and their variation are of particular concern to home builders and buyers on the one hand, and investors on the other; in other words, interest as a cost and interest as an income source. Interest plays both of these roles on the individual income tax return.

While average interest income per return and average interest deductions appeared to increase steadily throughout the 1968-84 period, their rates of increase were subject to significant year-to-year fluctuations. In the case of average interest income, the primary source of annual variation was the fluctuation in rates of interest paid on debt instruments. In the case of the average interest deduction, the primary cause of variation was the number of returns claiming the interest deduction (ID returns claiming the increasing more when the number of ID returns fell, and vice versa. Large year-to-year declines in the number of ID returns with declines in the number of returns with itemized deductions; these, in turn, reflected such changes in the tax law as the increased amounts allowed under the standard deduction and its successor, the zero bracket amount.

Before 1979, taxpayers with smaller-than-average interest deductions appear to have dominated the occasional itemizer group, which generally did not include mortgage-paying homeowners. During most of the post-1979 period, the decline in the housing market, in part brought on by high interest rates, reduced the relative frequency of returns claiming the home mortgage interest (HMI) deduction and, therefore, the relative frequency of ID returns among all returns with itemized deductions.

This article traces the reporting of interest on tax returns during the 17-year period, 1968-84, both as interest income and as interest payments claimed as itemized deductions [1]. The analysis also explores some of the factors affecting the frequency of reporting and the amounts reported.

#### INTEREST AS INCOME

Turning to interest income first, one finds that the interest proportion of adjusted gross income (AGI) more than doubled during the generally inflationary years between 1968 and 1984, from 3 percent to over 8 percent; see the bottom part of Figure A [2]. Figure A also shows that this growth, in turn, reflected the relative frequency of interest reporting and the average amount reported. This is also shown in Table 1.

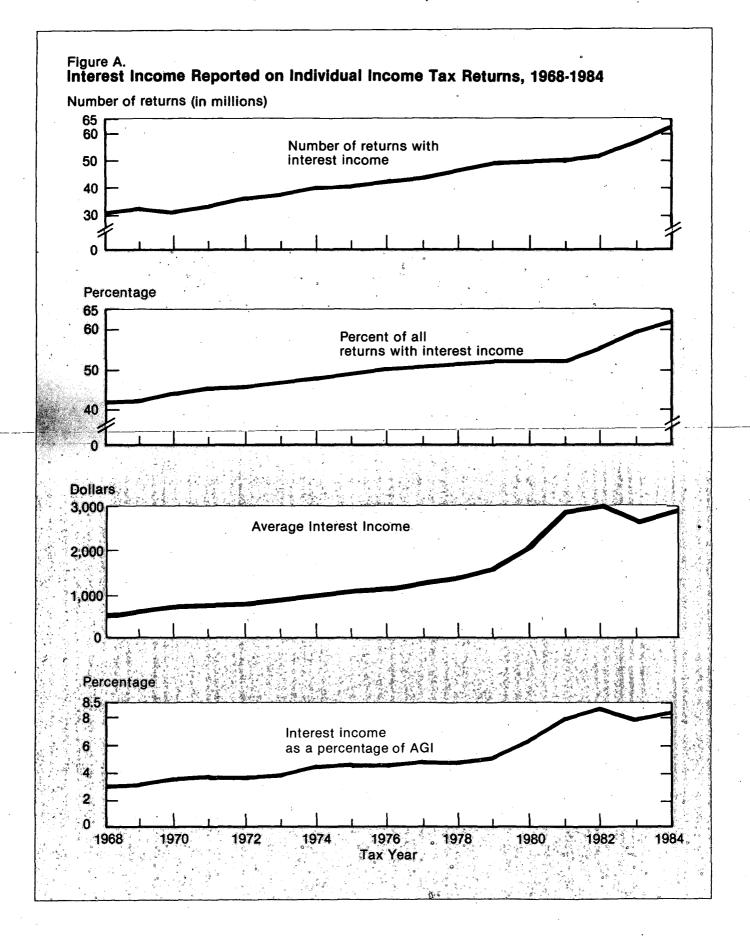

While the total number of returns filed increased during the period, from about 74 million to nearly 100 million, the number with interest income grew even faster, from 42 percent of all returns for 1968 to 62 percent for 1984. Similarly, average interest income per return grew at more than double the rate of increase in average AGI.

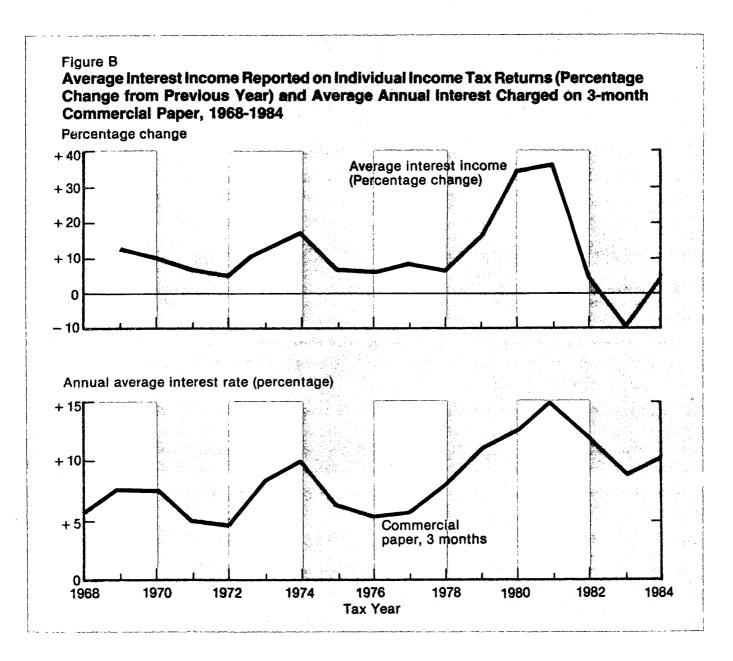

As shown in Figure A, during most of the study period the trend for average interest income--as for the other trends mentioned--appeared to to be upward and gradual until after 1978 (discussed later on). However, there were noticeable exceptions to the trend which are clearly evidenced in Figure B by the percentage differences from the previous year.

Figure B shows that percentage increases in average interest income moved through six periods:

- 1969 to 1972--declining percentage increases;
- 1972 to 1974--increasing increases;
- 1974 to 1976--declining increases;
- 1976 to 1981--increasing increases;
- 1981 to 1983--declining increases, (leading to the <u>decrease</u> in average interest income evidenced in Figure A), followed by

<sup>\*</sup>Coordination and Publications Staff, Statistics of Income Division.

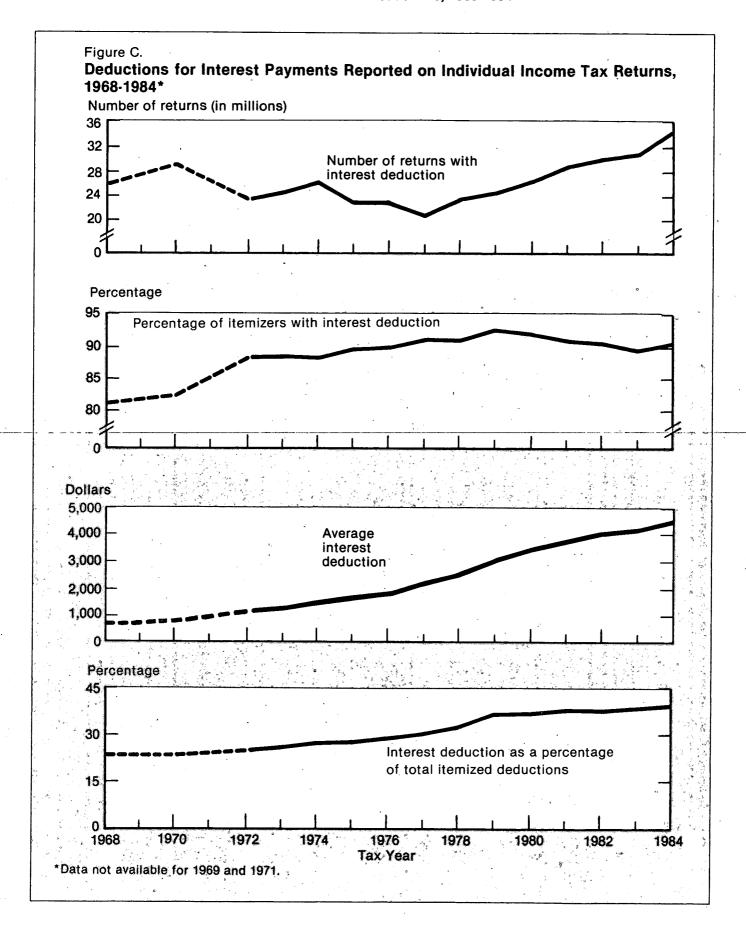

### • 1983 to 1984--an increase once again.

The lower part of Figure B strongly suggests the origin of these changes—the financial world of interest rates. Average annual interest rates on 3-month commercial paper (or any other interest rate on investments based on other indexes) rose and fell in the same periodic pattern as the year-to-year percentage changes in average interest income. The unparalleled interest rate levels of 1980-81 were reflected in the highest relative increases in interest income during the entire 17-year period.

#### DEDUCTIONS FOR INTEREST PAYMENTS

Figure C shows that the aggregate amount of interest deductions, as a percentage of all itemized deductions, increased every year; also see Table 2. The increase over the 17-year period--from about 27 percent of all itemized deductions to 44 percent--far outstripped the increases in the other four major deduction categories (medical, taxes, contributions, and miscellaneous). For 1968, the deduction for interest was 76 percent of the deduction for taxes. By 1979, interest was in first place

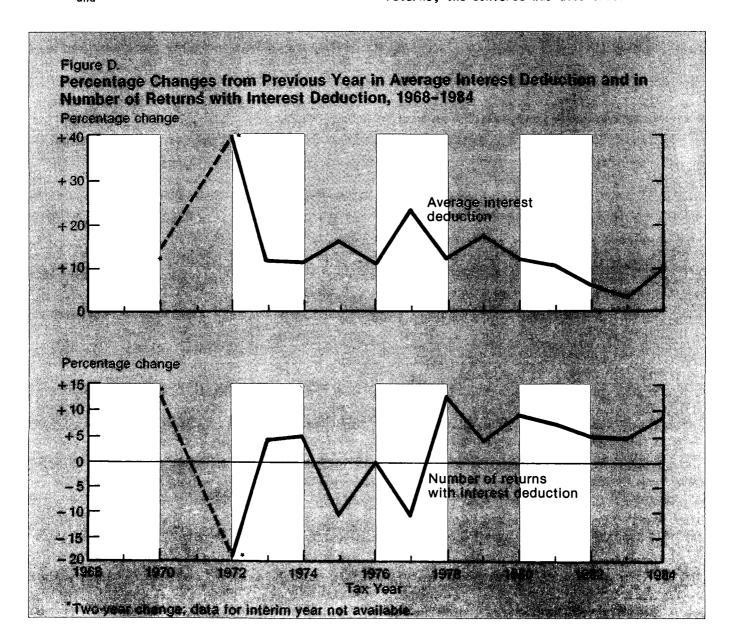

and, by 1983, the interest/taxes ratio had been reversed.

The principal elements associated with this phenomenon are shown in Figure C where the following features should be noted:

- sharp declines in the number of ID returns for certain years during the first part of the period (discussed in more detail later);
- an already high proportion (over 80 percent) of itemized deduction returns claiming the interest deduction that rose to nearly 93 percent for 1979, the proportion then declining slightly for the next 5 years as gradually as it had increased during the previous 5 years; and

 an average interest deduction that increased each year during the period (see the percentage changes in the upper half of Figure D), from about \$700 for 1968 to almost \$4,600 for 1984.

However, the trend of the average interest deduction was an uneven one. This is clearly shown by the year-to-year percentage increases in the upper half of Figure D. The lower half shows the corresponding changes in the number of ID returns. Turning Figure D 90 degrees helps point up the striking fact that, through 1980, the two lines look very much like slightly distorted mirror images of each other. When there was an increasing increase in the average interest deduction, there was a decrease, or a decreasing increase, in the number of ID returns; the converse was also true.

The reasonable inference to be drawn--and the one that is consistent with expectations--is as follows: year-to-year gains and losses in the number of ID returns were dominated by a preponderance of small deducters. Their contribution to an average deduction--an average is a ratio, after all--is greater in the denominator (number of returns) than in the numerator (the deduction amount). When a disproportionate number of small deducters stopped claiming the interest deduction as, for example, for 1972 compared with 1970, the resulting average increased markedly--by 40 percent [3]. The 1972-73 data suggest the occurrence of the reverse process.

#### TAX LAW CHANGES

Tax Years 1972, 1975, and 1977 showed decreases of 10 to 20 percent in the number of ID returns and 1979 showed a substantial drop from the previous year in the relative increase; see the bottom half of Figure D. Why the dips in these 4 years? A review of changes in the tax law provisions over the study period indicates that these were years when, among other tax law changes, the personal exemption and the standard deduction were increased (both in the percentage allowed and in the maximum amount). One objective of these law changes was to encourage the use of the standard deduction and the tax look-up tables, as against itemizing deductions and, clearly, the interest deduction statistics show the effects of the changes.

### THE HOME MORTGAGE INTEREST DEDUCTION

The deduction for interest payments on home mortgages (the HMI deduction) has been the most important single component of the interest deduction. At 53 percent for 1968, aggregate HMI deductions reached almost 66 percent of aggregate interest deductions for 1983 and 1984 (columns 4 and 7 of Table 2). During the study period, the average HMI deduction moved nearly in step with the average interest deduction (see the top half of Figure E), and changes in the number of HMI returns resembled those in the number of ID returns (the bottom half of Figure E). It is therefore logical to ask whether the tax law changes affected the number of ID returns primarily through their impact on the number of HMI returns.

On the whole, as Figure F shows, the answer would appear to be "No." In general, for years when the number of ID returns showed a drop from the previous year, HMI returns contributed only a small proportion to the drop--or actually increased. (An exception occurred only for 1977 when HMI returns accounted for 62 percent of the drop in ID returns.) For years when the number of ID returns increased, HMI returns usually accounted for 70 percent or more of the increase [4]. In other words, HMI returns

were sluggish on the downside and, with few exceptions, moved vigorously on the upside. It therefore appears that the declines (or reduced increases) in the number of ID returns for 1972, 1975, 1977, and 1979 mainly reflected declines in the number of returns with deductions for other than home mortgage payments, such as for the amounts paid on bank loans and installment or credit-card purchases. Consistent with expectations, one finds that it was taxpayers in this mixed grouping, rather than HMI deducters, on whom the tax law changes had the most perceptible effect.

This analysis is supported by the evidence charted in Figure G. In it the trend in the number of HMI returns as a percentage of all ID returns can be clearly seen in the top half. The trend rises to a 1977-79 "plateau" around 85 percent and declines thereafter to 78 percent. The bottom half of Figure G shows the variations around the trend. For 1972, 1975, 1977, and 1979--exactly the years in question--HMI returns tended to gain in relative importance, not lose.

#### INTEREST DEDUCTIONS FOR 1979-1984

The 1979-84 period is of special interest, not only because it is the most recent part of the total period studied, but also because of the rather unusual trend developments during those years. Among these trends, as observed in the tax return statistics, are the following:

- the relative increase in the number of ID returns tended to level out, at least until 1984, when it increased sharply (see Figure D, bottom half);
- ID returns as a percentage of itemized deduction returns <u>fell</u>, until the slight reversal for 1984 (see Figure C, second panel):
- the average interest deduction had a very slackened rate of increase until 1984, when there was a major increase (see Figure C, third panel);
- aggregate interest deduction dollars as a percentage of all itemized deductions, as a consequence, also had a very slackened rate of increase until 1984 (see Figure C, bottom panel);
- the year-to-year change in the average interest deduction for all of these years, including 1984, <u>paralleled</u> the percentage change in the <u>number</u> of ID returns (in- stead of moving oppositely, as in prior years; see Figure D);
- in general, the average HMI deduction had a very <u>slackened</u> rate of increase,

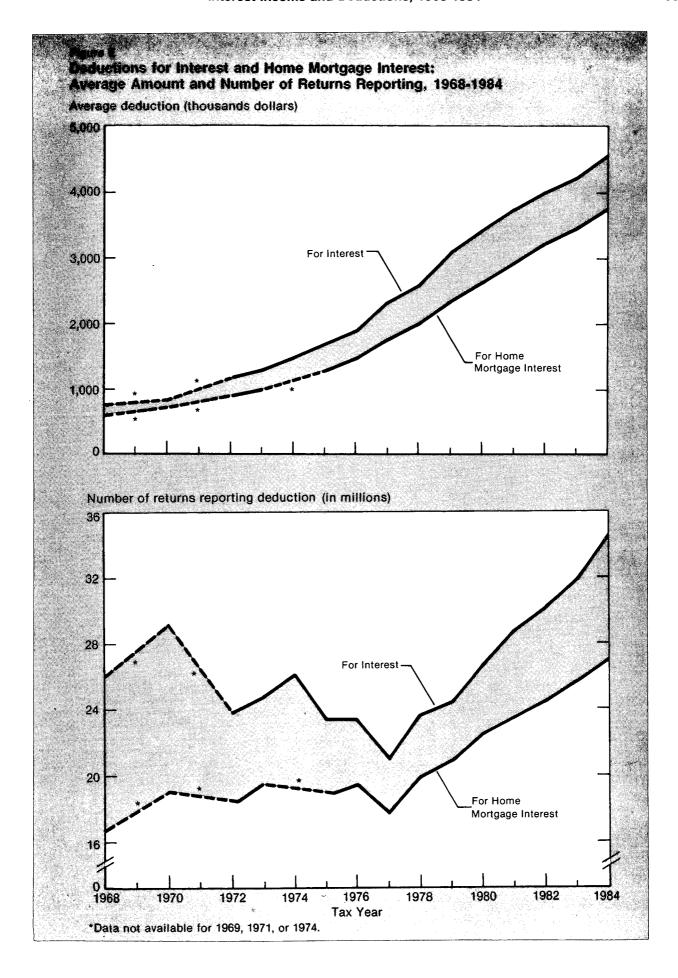

Figure F.--Changes From Previous Year in Number of Returns With Interest Deduction and Returns With Home Mortgage Interest Deduction, 1972-1984

Years with more returns with interest deduction than previous year:		·	
1970 <sup>1</sup>	3,191 1,007 2,654 968	2,431 889 2,117 1,027	76 88 80 106
1980. 1981. 1982. 1983.	2,165 2,087 1,480 1,439 2,831	1,685 967 1,033 1,020 1,406	78 46 70 71 50

and 1984 was no exception in this regard (see Figure E, top half); and

HMI returns represented a <u>declining</u> proportion of ID returns (instead of an increasing one (see Figure G, top half).

In the absence of the kind and frequency of tax law changes reflected in the previous years' data, the origin and common force behind these developments appear to be the drastic cutbacks in the home building and home financing industries. Partly brought on by the deepening recession that saw unemployment top 10.6 million (the annual average) in both 1982 and 1983, these industries were severely afflicted by high mortgage interest rates paralleling the elevation of interest rates during 1980-82 previously noted (see Figure B) [5]. What was balm of Gilead to many investors was as the boils of Job to home builders, sellers, and would-be purchasers. Figure H presents four indicators showing that this sector of the economy experienced about a 50-percent reduction in activity between between 1978-79 and 1982. Even the innocuous-looking data in column 4 tell a striking story. Between 1974 and 1978 the number of owneroccupied mortgaged dwelling units increased by 2.6 million; between 1979 and 1983, the increase was only 1.4 million, down 46 percent or 1,200,000.

With the fall-off in the number of new mortgagors came the decline in the HMI proportion of ID returns and the slackened rate of increase in the average deduction (that otherwise would have reflected the higher mortgage payments of perhaps 1,200,000-or-more purchasers). These developments, in turn, influenced the number and relative importance of ID returns and the rate of increase in the average interest deduction.

A sharp turnaround in housing activity took place in 1983 and, allowing for the time lag before it can be fully reflected on individual income tax returns, is already evidenced in the 1984 interest deduction statistics. As a result, the trends that had emerged for 1979-83 may be at an end. Statistics for 1985 will begin to tell whether 1984 becomes the base year for new trends.

### DATA SOURCES AND LIMITATIONS

The historical data based on tax returns presented in this article are based on samples. Therefore, they are subject to sampling error. For information about the samples and

<sup>2</sup>Not computed.

the magnitude of the sampling error, see Statistics of Income--Individual Income Tax Returns for the years 1968-84.

### NOTES AND REFERENCES

- [1] Data on interest income and deductions were obtained from Statistics of Income-Individual Income Tax Returns, Internal Revenue Service, U.S. Department of the Treasury, for each year, 1968-1984.
- [2] Not all interest receipts are included in this analysis. Examples are tax-exempt amounts of up to \$1,000 (\$2,000 on a joint return) received on so-called All-Savers

Certificates, issued after September 30, 1981 and before January 1, 1983; tax-exempt interest on state and local Government obligations; and tax-deferred interest on Individual Retirement Arrangements (IRA's) authorized beginning with Tax Year 1975.

Gradual growth in <u>payments</u> to IRA's during 1975-81 was succeeded by an explosion in 1982 when payments increased to six times the 1981 level. (In 1982, IRA contributions were approved for employees already covered by employer retirement plans.) Nevertheless, for that same year, interest income as a percentage of AGI, instead of

Sources: Bureau of the Census, <u>Construction Reports</u>, Series C-20; and C-30; <u>1980 Census of Housing</u>; and <u>Current Housing Reports</u>, Series H-150; and <u>Department of Housing and Urban Development</u>, <u>Survey of Mortgage Lending Activity</u>, <u>1975-79</u> and <u>monthly</u> and <u>quarterly press releases</u>, <u>1980-84</u>.

declining, reached its peak. These data are of interest in view of the analysis of "asset-shifting" (see Galper, Harvey and Steuerle, Eugene, "Tax Incentives for Saving," SOI Bulletin, Spring 1984, Vol. 3 No. 4, p. 5).

- [3] Detailed statistics on itemized deductions are not available for 1971. The rate of increase for 1972 is therefore based on 1970 data in this instance. (Statistics on itemized deductions for 1969 are also not available.)
- [4] As the 1976 and 1979 data (in Figure F) show, the year-to-year change in the

number of HMI returns is not actually a subset of the change in the total number of ID returns since, for example, a tax-payer no longer reporting an HMI deduction might still have an ID deduction for other kinds of interest expenses. This limitation, however, does not invalidate the argument as to the effect HMI returns could have contributed to changes in the number of ID returns.

[5] Data on unemployment were obtained from U.S. Bureau of Labor Statistics, Employment and Earnings, December 1985.

<sup>&</sup>lt;sup>1</sup>Includes new and pre-existing units.

# Foreign Recipients of U.S. Income, and Tax Withheld, 1984

By Margaret P. Lewis\*

U.S. source income paid to foreign persons (including foreign individuals, corporations and other organizations) rose 57 percent in 1984 to a record \$17.1 billion. Tax withheld on this income rose to \$970 million, an increase of just 39 percent (since nearly two-thirds of the additional income was exempt from tax withholding).

Income paid to residents of the United Kingdom (U.K.) rose by \$1.1 billion, an increase of 55 percentage points, accounting for almost 20 percent of the total increase. U.K. residents received \$3.1 billion of U.S. source income in 1984, surpassing the Netherlands Antilles (\$2.8 billion) which had an increase of 34 percentage points from 1983.

Almost 70 percent of the increase in U.S. source income paid to foreign persons was accounted for by interest payments. The Deficit Reduction Act of 1984, which became effective on July 18, 1984, exempted most types of interest payments to foreigners from U.S. tax withholding. Not all of this increase can be attributed to the enactment of this legislation, however, since only interest paid on obligations issued after July 18, 1984, was entitled to this exemption. During 1984 high U.S. interest rates helped make investment in the United States more attractive to foreign investors who thus helped finance an expanding U.S. economy. The growing U.S. economy also attracted foreign investment as the dollar appreciated against major currencies. Moreover, the large U.S. trade deficits put "strong dollars" into the hands of foreigners who in turn invested them in the United States.

#### BACKGROUND INFORMATION

A U.S. individual or organization paying income to a foreign individual (who, for tax purposes, is not a resident or citizen of the United States), corporation, or other organization (that is not incorporated in the United States) reports this income and the U.S. tax withheld on Form 1042S, Income Subject to Withholding Under Chapter 3, Internal Revenue Code

(this title changed, in 1985, to Foreign Persons' U.S. Source Income Subject to Withholding). While the basic tax rate is 30 percent, certain types of income are taxed at different rates. Income paid to countries that have entered into tax treaty agreements with the United States is usually taxed at lower rates. The tax withheld represents final payment of the actual tax liability in most instances. The responsibility for withholding tax belongs to the payer or the representative (usually a financial institution) of the payer rather than the recipient of the income. Income connected with the recipient's U.S. trade or business is exempt from withholding. The United States taxes this income separately, as though it were received by a U.S. citizen or corporation.

The basic tax rate on U.S. source income (30 percent) differs from the graduated tax rates for U.S. individuals and corporations because foreign individuals and corporations may receive income from an indefinite number of sources. Since most foreign persons are not required to file U.S. income tax returns and consolidate all U.S. income, their total income cannot be taxed in graduated "brackets," as one payer would have no knowledge of the amount of income other individuals and organizations had paid to the same foreign person.

#### RECENT LEGISLATION AND ITS IMPACT

The Deficit Reduction Act of 1984, as mentioned above, went into effect on July 18, 1984. The Act exempted from tax most types of interest payments, mainly portfolio interest, made to foreign persons [1]. The principal exception to this exemption was interest paid to a foreign individual, bank or corporation that owned at least 10 percent of the voting power of the U.S. payer. The removal of withholding tax on most types of interest is expected to increase direct foreign investment in the United States and to curtail U.S. borrowing through financial affiliates and other corporations in the Netherlands Antilles (and other tax havens, which are discussed below) [2].

U.S. bond holdings by foreigners increased by 85 percent to \$32.3 billion in 1984 due in part to the 1984 Act. Most of these issues were direct U.S. corporate Eurobond placements [3]. Borrowing from financial affiliates in the Netherlands Antilles, however, remained strong in the first three quarters of 1984 but almost ceased in the fourth quarter with the advent of the new law [4].

Tax treaty benefits that had been extended under the U.S.-U.K. treaty to British "territories" and former "territories" were cancelled as of January 1, 1984 [5]. As a result, tax withheld on payments to these "territories" rose by 22 percent, while income paid remained virtually unchanged from 1983. The effective tax rate (tax withheld as a percent of total income) for these "territories" rose from 16 percent to 19 percent.

As of 1986, only one of the "territories" signed a separate treaty agreement with the United States [6]. Many of the U.K. "territories" are generally considered to be tax havens, to some extent. Therefore, they may be reluctant to enter into agreements with the United States which would work against those very characteristics that make these "territories" tax havens (see the discussion of tax treaty countries later in this article).

Also cancelled in 1984, were benefits formerly extended under the U.S.-Belgium treaty to former Belgian territories [7]. While both income and tax withheld of these countries declined by more than half, the percentage of income exempt from withholding more than doubled. This caused the effective tax rate for these three countries combined to decline from 14.4 percent to 9.6 percent.

The Social Security Amendment Act of 1983 required withholding on benefits paid to foreign persons beginning in 1984. At the same time, a revision was made to the Railroad Retirement Act of 1937 to require withholding on certain payments to foreigners. The first complete data on these payments will be available for Calendar Year 1985.

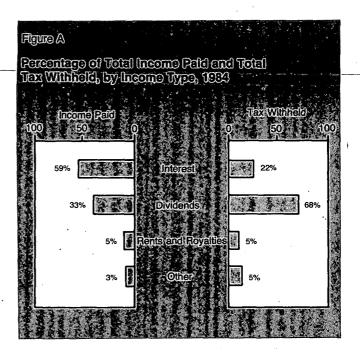

### DATA HIGHLIGHTS AND TRENDS

As previously mentioned, U.S. income payments to foreigners totalled \$17.1 billion in 1984, increasing by 57 percent. The increase in 1983, in contrast, was only 4 percent. Between 1983 and 1984, income subject to withholding rose by 39 percent, while exempt income increased by 71 percent. The greater rise in exempt income was reflected in a comparatively small increase in tax withheld of 39 percent.

The average income payment rose by 21 percent to nearly \$22,000, as indicated by a 57 percent increase in income paid with only a 29 percent increase in the number of Forms 1042S filed. The average amount of tax withheld per payment rose by only 8 percent (due to the large increase in exempt payments mentioned above) to \$1,200. The average effective tax rate (tax withheld as a percent of total income for all countries) for 1984 was 5.7 percent.

#### Type of Income

Interest as a percent of total income paid continued to rise in 1984. Interest accounted for 59 percent of income paid (an increase of 6 percentage points) while dividends represented 33 percent, a 5 percentage point drop from 1983. Figure A shows that the gap between interest and dividends as a percentage of total income widened to 26 percentage points in 1984. For 1983, the percentage was 15.

Since 1980, interest's share of all income increased 19 percentage points, from 40 to 59 percent. The corresponding share for dividends fell by 15 percentage points, from 48 to 33 percent. Figure B shows both total and average annual increases for dividends and interest in both constant and current dollars [8].

Figure B.--Interest and Dividends Paid, 1980 and 1984

[Thousands of dollars]

\$ 2,604,307 10,035,675	\$3,147,752 5,617,707
285.3%	78.5%
40.1	15.6
205.8	41.6
32.3	9.1
	\$ 2,604,307 10,035,675 285.3% 40.1

Interest payments are often exempt from withholding or taxed at low rates established by treaties. With the passage of the Deficit Reduction Act of 1984, certain types of interest income, mainly portfolio interest, previously taxable, became exempt regardless of the country to which it was paid. As a result, only \$214 million of tax was withheld on interest in 1984. This represented only 21 percent of all tax withheld, even though interest represented 59 percent of all income. Dividends, which are rarely exempt from the withholding tax, represented only 33 percent of all income, while tax withheld on dividends comprised 68 percent of the total tax withheld. Figure A shows the percentage of total income paid and the percentage of total tax withheld for several income types.

Interest made up the largest percentage of income paid to all recipients in seven of the nine countries shown in Figure C. Only countries receiving more than \$500 million in U.S. source income were considered for inclusion in Figure C. As Figure C indicates, only Switzerland and France had a larger percentage of dividends than interest. This is in contrast to 1983 when dividends made up a larger percentage of income paid than interest for more than half of the top countries.

As in 1983, non-tax haven countries shown in Figure C received a greater portion of rents and royalties (7 percent average) than the Netherlands Antilles, the Netherlands and Switzerland (2.5 percent average), all of which may be considered, by some, to be tax havens to

some degree. More than half of all rents and royalties paid were industrial royalties. The latter include royalties for the use of, or the privilege of using, trademarks, patents, secret processes and formulas, goodwill, franchises, and similar rights. One would not expect these types of payments to be made to non-industrial countries and most tax havens have a narrow industial base. Switzerland and the Netherlands, tax haven countries which receive all types of income, are exceptions. Also, some U.S. corporations may use tax haven countries to set up foreign companies that license royalties, therefore, resulting in rents, royalties and license fees paid to tax haven countries. In contrast, rents and royalties accounted for 14 and 12 percent of all income paid to France and Japan, respectively, non-tax haven countries. The Japanese payments were mainly payments by "high-tech" U.S. firms to "high-tech" Japanese firms.

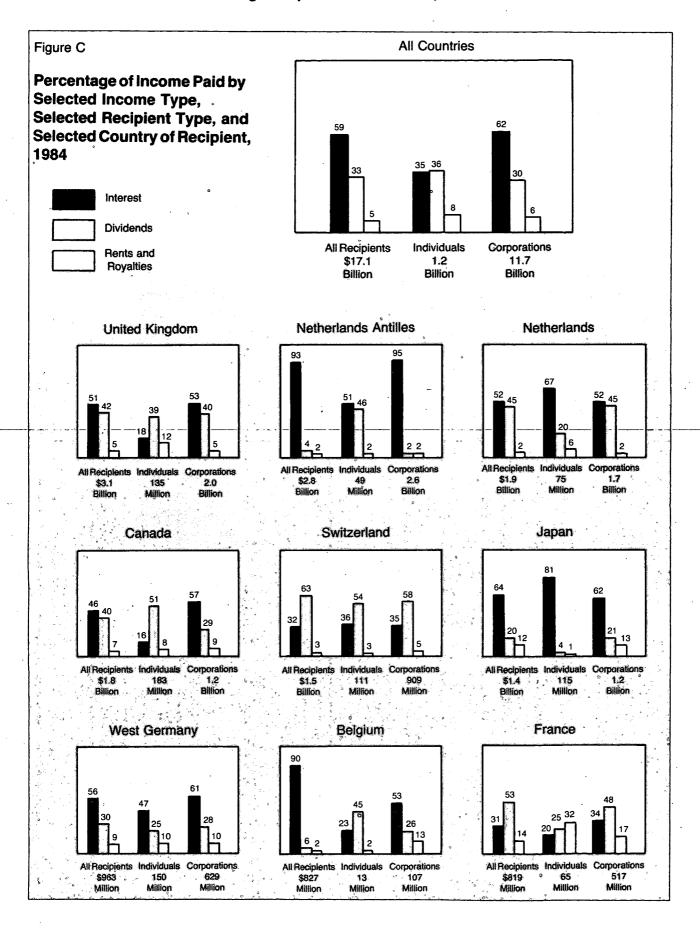

### Country of Recipient

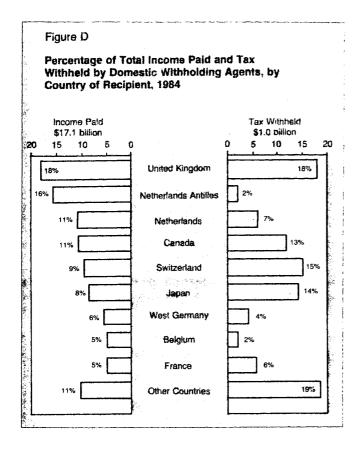

As is shown in Figure D, recipients in nine countries accounted for nearly 90 percent of all U.S. source income paid to foreigners in 1984. All of these countries showed significant increases in income received over 1983, and six of these nine received income of over \$1 billion.

The United Kingdom regained its position as recipient of the most U.S. source income, surpassing the Netherlands Antilles. Belgium posted an exceptionally large rise in income, pushing it for the first time into the position held by France in 1983, as the eighth largest recipient of U.S. source income. The nearly 700 percent rise in U.S. source income paid to Belgium may be somewhat misleading since 90 percent of the income paid to Belgium was received by Belgian nominees who may not have been the final recipients of the income. (For a further discussion of nominees, see the section on recipient types later in this article.)

Tax withheld on payments to all of the countries shown in Figure D also rose from 1983 levels. However, the rise in tax withheld was generally less than the rise in total income since there was a large rise in exempt income in 1984 (due, in part, to the 1984 Act which helped cause increases in total interest paid and, therefore, increases in total income paid to tax treaty countries).

The Netherlands Antilles was an exception to the above generality. It showed a greater rise in tax withheld than in income, thus narrowing the gap between its percentage of income paid and the percentage of tax withheld from 18 percent to 14 percent. However, this was still the largest discrepancy of the countries shown. Income paid to the Netherlands Antilles

rose by 34 percent while the rise in tax withheld on payments to Netherlands Antilles residents was 105 percent. This was a reflection of the greater relative rise in taxable income.

#### Effective Tax Rate by Country

Although the basic U.S. withholding tax rate is 30 percent, the actual rate can differ for a variety of reasons. First, tax treaties allow for lower tax rates on certain types of payments to certain countries. Second, as mentioned previously, the Deficit Reduction Act of 1984 exempted most types of interest from withholding tax. Third, income paid to tax exempt or governmental organizations is generally not taxed. Fourth, most U.S. income paid to foreign private foundations is taxed at only a 4 percent rate. Finally, income that is connected with the recipient's U.S. trade or business is taxed as though it were received by a U.S. individual or organization, and is therefore not subject to withholding tax (although it is subject to the regular rates of U.S. income tax on net income and may be additionally reported on Form 1042S). Because of these factors, the effective U.S. withholding tax rate (tax withheld as a percent of total income) varies by country.

Figure E shows the income paid, tax withheld by U.S. withholding agents, and the effective

withholding tax rates for the twelve countries having the lowest effective tax rates. Tax withheld by foreign governments and withholding agents is not included in this table because the tax cannot be properly attributed to income for a particular year. Only countries receiving at least 100 payments and \$1 million or more of income were considered for ranking.

Figure E.--Ranking of Countries by Effective Tax Rates, 1984

[Thousands of dollars]

Country	Total income	Tax withheld	Effective tax rate
	(1)	(2)	(3)
All countries <u>l</u> /.	\$17,106,632	\$969,553	5.67%
United Arab Emirates Egypt Saudi Arabia Netherlands Antilles	143,449 28,580 351,990 2,812,549	182 72 1,532	0.13 0.25 0.44 0.67
Trinidad and Tobago Belgium Norway Netherlands Finland West Germany Portugal	10,929 826,995 49,948 1,918,889 9,352 963,166 28,816 26,709	132 16,896 1,118 66,137 348 42,398 1,395 1,345	1.21 2.04 2.24 3.45 3.72 4.40 4.84 5.03
Other countries 1/	10,076,727	821,042	8.15

1/Includes all other countries, regardless of number of payments or amount of income paid.

Newcomers to this list are the United Arab Emirates, Belgium, Norway, Finland Four of the previously listed coun-Portugal. tries. United Arab Emirates, Saudi Arabia, Portugal and Singapore, are not tax treaty countries that received the benefits of reduced tax withholding rates. A substantial portion (78 percent) of Saudi Arabia's U.S. source income (\$352 million) was paid to Saudi Government organizations and therefore not subject to the withholding tax. More than 50 percent of U.S. source income paid to Portugal (\$29 million) was paid to private foundations and therefore was subject only to the 4-percent withholding rate. Former leader, Antigua, lost its position due to the cancellation of its tax treaty with the United States. In 1984. Antigua's effective tax rate rose to 2.0 percent from 0.2 percent in 1983. (Antigua was not included in Figure E because it received less than \$1 million in payments in 1984.)

#### Tax Treaty Countries

In order to avoid double taxation of income earned in one country by residents of another country, the United States has negotiated tax treaties with foreign countries that usually reduce the withholding rates in both countries [9]. It is generally believed that any U.S. withholding-tax revenue loss due to the tax treaty rate reduction will be at least partly offset by a decline in the foreign tax credits against U.S. income tax claimed by U.S. individuals and corporations on income from those countries enjoying reciprocal benefits.

Since tax treaties generally provide for a reduced withholding rate for U.S. individuals and corporations receiving foreign income and for foreign recipients receiving U.S. income, U.S. individuals and corporations will have less foreign tax withheld. This, in turn, should lessen their foreign tax credit claimed and consequently raise their U.S. tax liability.

Figure F shows the lower effective tax rates on payments to recipients in treaty countries as compared to payments to recipients in non-treaty countries. Table 1 lists the tax treaty and nontreaty countries and provides corresponding Form 1042S data.

Figure F.--Total Income, Tax Withheld and Effective Tax Rate for Treaty and Nontreaty Countries, 1984

### [Thousands of dollars]

Country status	Total income	Tax withheld	Effective tax rate
	(1)	(2)	(3)
All countries	\$17,106,632	\$969,553	5.67%
Treaty countries Nontreaty	15,607,203	822,655	5.27
countries	1,499,429	146,897	9.80

Although residents in tax treaty countries typically enjoyed lower U.S. withholding tax rates, if the income were paid to a foreign nominee or fiduciary on behalf of a person not entitled to the treaty benefit, the full 30-percent U.S. tax should be imposed. Those U.S. treaty partners that collected the additional amounts on behalf of the United States are listed in Table 1, Column 7.

### Tax Haven Countries

A tax haven is generally considered to be a country having tax laws favorable to foreign

individuals and organizations in an attempt to attract these investors. The tax haven country typically benefits by collecting certain fees or taxes (at a low rate). Foreign individuals and organizations might not invest in or through the tax haven if taxes comparable to those of their own country were imposed. Tax haven countries tend to have the following characteristics:

- No withholding tax on most payments from the tax haven country to foreign individuals and organizations,
- Low or zero effective income tax rates for foreign individuals and organizations operating within the tax haven country, or performing certain activities, and
- Secrecy laws to prevent foreign governments from obtaining financial information about their own citizens and organizations.

Low or zero withholding tax rates are usually designed to attract foreign individuals and corporations to invest through the tax haven, rather than to provide a tax benefit for their own residents, although a number of tax haven countries\_have\_low\_tax\_rates\_in-an\_effort\_toattract real productive investment into the country also. However, many tax haven countries do not have tax treaties with the United States that allow for low or zero withholding rates on payments to the tax haven. While treaties with non-tax haven countries allow for mutually-reduced withholding tax rates, the lost tax revenue on U.S. source income paid to foreigners is, as mentioned above, at least partially recovered in income taxes due to lower foreign tax credits claimed by U.S. tax-payers. The lower credits are a result of less foreign taxes being paid by U.S. taxpayers on their foreign source income.

Figure G shows the percentage of payments made to corporations, along with their effective tax rate, for selected tax haven countries [10]. Only countries which received more than \$1 million of income and 100 payments were considered for Figure G.

As evidence that tax haven countries attract corporations to them, note that the average percentage of payments to corporations in tax haven countries is greater than the average for non-tax haven countries. The effective tax rate for all but three tax haven countries is greater than the total average effective tax rate of 4.7 percent. For these three countries, the Cayman Islands, the Netherlands and the Netherlands Antilles, as well as for Liberia and Luxembourg, at least 50 percent of income paid was interest which typically was subject to a lower tax withholding rate and was

affected by the Deficit Reduction Act of 1984. Also, two of the three countries with lower than average rates, the Netherlands and the Netherlands Antilles, are countries that benefit from reduced treaty rates.

Figure G.--Corporate Recipients in Selected Tax Haven Countries, 1984

	Percent		
Country	All payments received	All income received	Effective tax rate
	(1)	(2)	(3)
All countries	7.7%	68.3%	4.7%

Bahamas	25.9 29.1 17.9	48.4 90.9 60.6	18.5 20.0 25.0
Islands		67.7 59.9 92.6 48.6 80.7	19.7 4.0 11.5 9.4 2.3 0.3
Panama Switzerland	27.3 13.3	43.6 61.3	18.9 9.1

#### Type of Recipient

Corporations received 68 percent of all income paid to foreign persons in 1984, while individuals, and nominees and fiduciaries (the next largest recipients of income) received only 7 percent and 9 percent, respectively. In contrast, the percentage of tax withheld on payments to individuals and to nominees and fiduciaries was disproportionately large relative to the income received (15 and 12 percent, respectively), while the percentage of tax withheld on corporations was a comparatively low 56 percent of all tax withheld.

This latter discrepancy is reflected in the effective tax rate for corporations of 4.7 percent, which may be compared to an effective tax rate of 7.8 percent for all other types of recipients combined. The effective tax rate for corporations remained unchanged from 1983 but has shown a steady decline after 1979 when the rate was 9.2 percent. The decline has been a result of a steady increase in payments of interest, caused by increasing U.S. interest rates, to foreign corporations which are generally subject to lower withholding tax rates.

Nominees and fiduciaries received 9 percent of all income paid in 1984 making them the sec-

ond largest recipients of income. This may be somewhat misleading due to unusually large amounts of income paid to Belgian nominees in 1984, discussed earlier. If the payments to Belgian nominees were removed, the income paid to nominees would be halved and would represent an amount in proportion to previous years' data. Without nominee payments to Belgium, nominees and fiduciaries would have received 5.7 percent of all income paid in 1983 and 4.3 percent of all income paid in 1984.

Governmental, international and tax-exempt organizations received 2 percent of income paid yet accounted for only 0.4 percent of tax withheld because more than 92 percent of income paid to government, international and exempt organizations was exempt from withholding [11].

The largest average payment (\$301,413) was received by foreign governments; 77 percent of total payments to foreign governments were made to the Government of Saudi Arabia. If Saudi Arabia were excluded, the average payment to foreign governments would have fallen to \$71,253. In contrast, the average payment by corporations was \$193,808, while individuals received by far the smallest average payment, \$2,138.

On the average, most recipient types received more interest than any other type of income, the two exceptions being individuals and private foundations, which received more dividends than interest. Partnerships were more likely to receive rents and royalties, while individuals received over 80 percent of all personal service income [12]. For every recipient type, tax withheld on dividends far exceeded tax withheld on any other income type. Figure H shows the percentages of income paid and tax withheld on various types of income for the different recipient types.

### U.S. and Foreign Withholding Taxes on Corporations

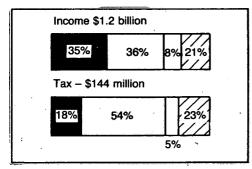

Most foreign countries impose withholding taxes similar to those of the United States. U.S. individuals and organizations that receive income from foreign countries can usually take a tax credit for the foreign taxes withheld on this income. Although foreign withholding tax rates tend to be similar to the U.S. tax rates, foreign countries, in general, withhold far more total tax on payments to U.S. corporations than the United States withholds on similar payments to foreign corporations. Although similar data dealing with the amount of income paid are not available, this withholding tax disparity is probably due to U.S. corporations receiving more foreign income than foreign corporations receive U.S. income.

While this article is primarily concerned with 1984 data, 1982 is the most recent year for which complete foreign tax credit data also

are available for comparison purposes. For 1982, \$3.2 billion of foreign tax was withheld by foreign governments on the combined total for interest, dividends, rents, royalties and license fees received by U.S. corporations claiming a foreign tax credit [13]. This amount increased by 23 percent from 1980 and was almost eight times the amount of U.S. tax withheld in 1982 (\$0.4 billion) on similar payments to foreign corporations. The latter rose by only 13 percent over the 2-year period.

Figure I shows, for 1982, U.S. tax withheld on certain payments to foreign corporations and foreign taxes withheld on similar foreign payments to those U.S. corporations claiming a foreign tax credit, by income type and country. More tax was withheld by foreign coun-

tries than by the United States for each of the income categories (dividends, interest, and rents, royalties and license fees) shown.

Foreign tax withheld on rents, royalties and license fees paid to U.S. corporations exceeded the U.S. tax withheld on rents, royalties and license fees paid to foreign corporations by more than \$1.1 billion. More than 60 percent of this difference can be accounted for by Norway, which taxed the large oil production-related royalties paid to U.S. corporations.

Foreign tax withheld on dividends paid to U.S. corporations exceeded U.S. tax withheld on dividends paid to foreign corporations by almost \$0.9 billion in 1982. This may have been caused by the excess volume of U.S. investment

 $<sup>\</sup>underline{1}$ /Does not include tax remitted by foreign governments and withholding agents since these amounts cannot be allocated to specific years.

<sup>2/</sup>Does not include tax withheld on income received by U.S. corporations not claiming a foreign tax credit. The amounts shown are for corporation tax returns having accounting periods which ended between July 1982 and June 1983.

in foreign corporations over the volume of foreign investment in U.S. corporations. In 1982, U.S. private direct investment abroad (\$221 billion) was more than twice foreign private direct investment in the United States (\$102 billion) [14].

Another factor contributing to this difference may have been that foreign markets in most developing countries tend to be less stable than U.S. markets. Thus U.S. corporations require a greater return on their investment in these countries than foreign corporations expect on their investment in the United States. Because of the larger amount of dividends received by U.S. corporations, the foreign tax withheld on them far exceeded the corresponding amount withheld by the U.S. government on dividends paid to foreign corporations. However, the difference in tax withheld on dividends declined from \$1.1 billion for 1980 to \$0.9 billion for 1982 and possibly reflected growing investment by foreigners in the United States [15].

For 1982, tax withheld by foreign governments on interest payments to U.S. corporations also exceeded U.S. tax withheld on interest payments to foreign corporations. The difference increased by 26 percent from 1980 (\$607 million) to 1982 (\$762 million). Most of this increase was accounted for by increases in foreign taxes withheld by Brazil and Mexico. These two countries alone accounted for 67 percent of the difference for 1982. Both are heavily indebted to U.S. banks and, therefore, made large interest payments which were subject to foreign tax withholding. For 1982, over 90 percent of all tax withheld by Brazil and Mexico on interest payments to U.S. corporations was withheld on interest paid to U.S. banks (\$461 million).

#### SUMMARY

High U.S. interest rates, a growing U.S. economy and enactment of the Deficit Reduction Act of 1984, which exempted most types of interest from tax withholding, all contributed to a 57 percent rise in U.S. source income paid to foreign persons in 1984. Interest remained the most common type of income, rising to 59 percent of total income even though it only accounted for 21 percent of tax withheld.

Foreign corporations remained the biggest recipients of U.S. source income, receiving 68 percent of all income paid in 1984. Individuals received only 7 percent of income yet accounted for 15 percent of tax withheld. This was because individuals received more dividend income (which is rarely tax-exempt) than interest or any other income type.

Unlike corporations, which received mainly interest, and individuals, who received mainly

dividends, foreign partnerships were more likely to receive rents and royalties than any other type of income.

Foreign governments once again received the largest average payments, over \$300,000 (due mainly to large payments to Saudi Arabia). In contrast, payments to individuals were smaller.

Nine countries, all having tax treaties with the United States, received almost 90 percent of all U.S. source income. The United Kingdom was the largest recipient, receiving \$3.1 billion in 1984. The past leader, the Netherlands Antilles, received \$2.8 billion. Tax haven countries continued to receive mostly interest and to have a greater-than-average percentage of payments to corporations.

#### DATA SOURCES AND LIMITATIONS

Payers of most U.S. income to foreign persons must withhold tax in accordance with the Internal Revenue Code. The Form 1042S, Income Subject to Withholding Under Chapter 3, Internal Revenue Code (now entitled, Foreign Persons' U.S. Source Income Subject to Withholding), is filed to report this income and the U.S. tax withheld. Often the payer has a financial institution act as the withholding agent.

The present statistics are tabulated by calendar year, based on all Forms 1042S filed for 1984. The years indicated in the tables represent the year in which the income was paid and the U.S. tax withheld, except for U.S. tax withheld by foreign governments and withholding agents. These latter amounts are shown by the year the tax was remitted to the United States under treaty agreements. This additional tax cannot be properly attributed to specific income types and years.

Tax withheld amounts and percentages shown in Table 2 and Figures A, B, and D through I, do not include tax withheld by foreign governments and withholding agents (except for Canada which remitted its payments during the same calendar year). Income that is "effectively connected" with a foreign person's U.S. trade or business is not subject to withholding, and is therefore generally not included in these statistics [16, 17].

Since all Forms 1042S are included in the statistics, the data are not subject to sampling error. However, the data are subject to nonsampling error such as computer data entry errors and minor taxpayer reporting errors. Forms 1042S with income greater than \$500,000 were manually verified. A limited computerized program was used to test the data for certain basic numerical relationships, including the calculation of the correct tax withheld.

#### **EXPLANATION OF SELECTED TERMS**

<u>Foreign Person.--</u>For purposes of this article, a foreign person is an individual whose residence (for tax purposes) is not within the United States and who is not a U.S. citizen. Corporations and other organizations created or organized outside the United States are also considered foreign persons.

Resident (of a jurisdiction other than the United States).--A resident is a foreign "person" as described above.

Income Effectively Connected With a Trade or Business.—Income that is "effectively connected" with the conduct of a trade or business in the United States is exempt from withholding. This income is subject to substantially the same tax rates that apply to U.S. citizens, residents, and corporations. Even if a foreign corporation has an unincorporated operation in the United States, a Form 1120F must be filed and appropriate taxes paid for the income of this operation. When income is then remitted to the foreign corporation, it is considered connected with a U.S. trade or business and not retaxed. In all but rare (and indeterminable) circumstances, these amounts are not included in these statistics.

Nominee and Fiduciary. -- An entity chosen or appointed to accept income for, or act on behalf of, the eventual recipient of the income. Typically a financial institution acts as a nominee or fiduciary.

<u>Withholding Agent.</u>--Any person (individual, corporation, partnership, estate, or trust) required to withhold tax. Usually the withholding agent is the payer of the income or a "person" (usually a financial institution) acting on behalf of the payer. A foreign nominee or fiduciary required to withhold additional tax under a tax treaty is also a withholding agent.

#### NOTES AND REFERENCES

- [1] For an explanation of portfolio interest and other types of interest that are exempt from tax, see U.S. Department of the Treasury, Internal Revenue Service, Publication 515, Withholding of Tax on Nonresident Aliens and Foreign Corporations, November 1985.

# Projections of Returns to be Filed in Fiscal Years 1987-1994

By Corman G. Franklin\*

The number of primary tax returns supplemental documents processed by the Internal Revenue Service (IRS) are projected to reach the 191.8 million mark in Fiscal Year (FY) 1987. This represents a 2.5 percent increase over estimated 1986 filings [1]. Current projections, following the trend established by last year's projections, continue to post declines in the rate of growth of total filings. After an estimated 5.0 percent increase in 1986, the year-to-year rate of growth in total returns to be processed by IRS is projected to progressively decline from 2.6 percent in 1988 to 1.9 percent in 1994. The level of increases, however, remain relatively constant, ranging between 3 and 5 million each year. None of these projections take into account the effects of the major tax reform Tegislation enacted in the fall of 1986.

Employment is an important determinant for estimating several different types of tax returns. Because of the high correlation between employed individuals and those filing individual returns, employment is especially important in projecting individual returns.

The 1986 employment estimates show the rate of growth decelerating throughout the 1987 to 1994 period (this trend was initially identified in 1984) [2]. Total employment is estimated to reach 104.6 million in 1986, a 2.3 percent increase over the 1985 actual, but the rate of employment growth is expected to decrease from 2.6 percent in 1987 to 0.8 percent in 1994. The decline in the rate of growth of employment is expected to be reflected in individual income tax return filings, so that a decline in the growth of these filings is anticipated.

Returns projections are developed by (1) using econometric models that relate the number of returns filed to selected independent economic and demographic variables and (2) extrapolating observed time trends. The forecasting models are initially formulated on a calendar year basis. Fiscal year projections are derived from calendar year statistics by various methods, including seasonal adjustment [3].

Except for the 1986 tax law revision, these fiscal year projections take into consideration the effects of past legislative, regulatory, and administrative changes on the filings of the various primary tax returns and supplemental documents. They do not quantify legislative or administrative changes which are under review.

#### TOTAL PROJECTED RETURNS AND DOCUMENTS

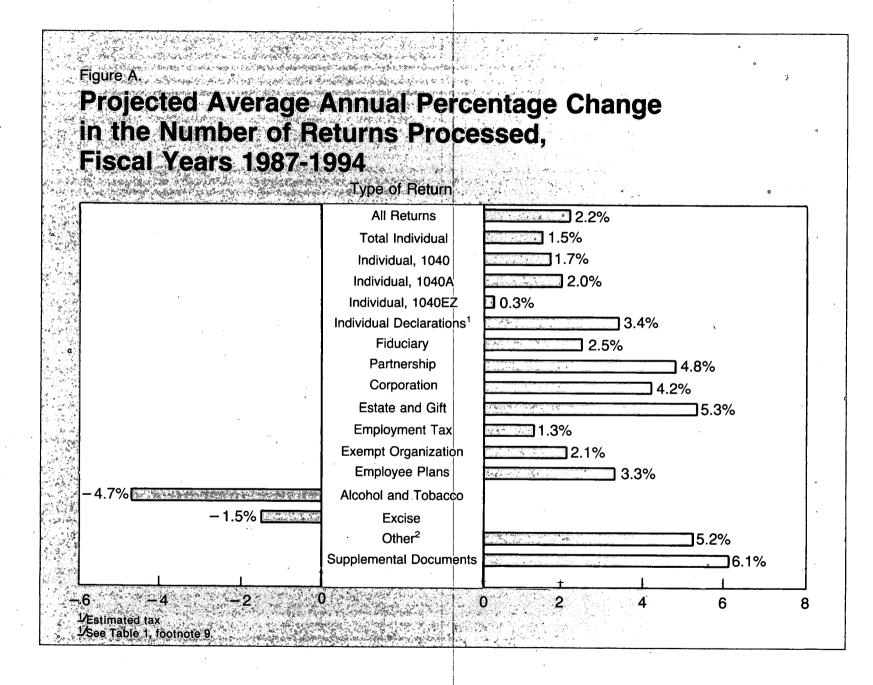

The total number of projected returns, as shown in Table 1, consists of (1) primary returns and (2) selected supplemental documents that are not a part of the IRS Master File system. Because collectively they make up the bulk of total filings, primary returns have traditionally generated most of the IRS document processing workload, and their relationship to total filings is expected to remain consistent throughout the 1987-1994 projection period.

Of the approximately 178.2 million tax forms filed in 1985, 170 million were designated as primary returns. Major elements of the primary returns category include: Forms 1040, 1040A and 1040EZ--U.S. Individual Income Tax Returns; Form 1040ES--Individual Declaration of Estimated Tax; Form 1120--U.S. Corporation Income Tax Return; and, Form 941--Employer's Quarterly Federal Tax Return.

Information documents processed by the Service, such as interest and dividend statements, and Form W-2, Wage and Tax Statement, are not included in the returns counted or projected in this article and, consequently, have been excluded from all of the previously discussed return categories. These various information documents, while large in volume (773.4 million were processed in 1985 and 823.9 million were expected in 1986), are mostly filed on magnetic media.

Figure A presents the average annual percentage changes for the major return types during the 1987-1994 projection period. Total returns increase by an average of 2.2 percent per year between 1987 and 1994. Projections

<sup>\*</sup>Economist, Projections and Forecasting Group, Research Division. Prepared under the direction of James D. Swartzwelder, Group Chief.

for 1987 and the associated rates of change from 1986 to 1987 are presented in Figure B.

Figure B.--Projections for Fiscal Year 1987

Supplemental Documents.	10,374	+ 6.5

1/An estimated 200,000 additional Form 11
returns were expected in 1986 because of a
one-time alcohol floor stock tax.

2/The 1985 Form 2290 returns filed were not processed until 1986. This caused the decline in projected 1987 filings.

#### Individual Income Tax Returns

The rate of growth of individual filings is expected to decline from the record high increase in 1985 [4]. Deceleration in growth throughout the forecast period is attributable to revised employment projections which show declining growth through the mid-1990's. Current projections call for modest annual increases that average 1.5 percent per year.

Over the projection interval, the filing of Forms 1040 and 1040A are expected to increase slightly as a proportion of total individual filings, while Forms 1040EZ decrease. Growth in 1040EZ filings is expected to decline as the 18-24 year old workforce declines (18-24 year olds are the primary users of 1040EZ's) [5].

Figure C compares the number of Forms 1040, 1040A, 1040EZ and total individual returns expected to be filed in 1987 and 1994, respectively.

#### Individual Declarations of Estimated Tax

Projections of Individual Declarations of Estimated Tax (Form 1040-ES "vouchers") are

developed from a regression of vouchers on the number of their taxpayer counterparts. Progressively higher taxpayer projections and the same "voucher-to-taxpayer" ratio forecasts result in progressively increasing growth in the number of Forms 1040ES. Current projections call for increases ranging from 2.2 percent in 1987, 3.5 percent in 1990, to 4.0 percent in 1994.

#### Fiduciary

Estimates of fiduciary income tax returns (Forms 1041) were prepared by regressing Form 1041 returns filed on current dollar personal income (a proxy for wealth) and the U.S. population. Fiduciary returns are projected to post small gains throughout the forecast horizon, ranging from 2.6 percent in 1987 to 2.3 in 1994.

### Partnership

Partnership (Form 1065) return projections are closely allied to movements in current dollar personal income. This year's forecast calls for growth averaging 4.8 percent per year through 1994.

#### Corporation

A variety of forms, including U.S. Corporation Income Tax Return (Form 1120) and U.S. Income Tax Return for an S Corporation (Form 1120S), which are the two principal returns, comprise the corporation category. Total corporation filings are projected to show steady growth, with gains averaging 4.2 percent per year from 1987 through 1994.

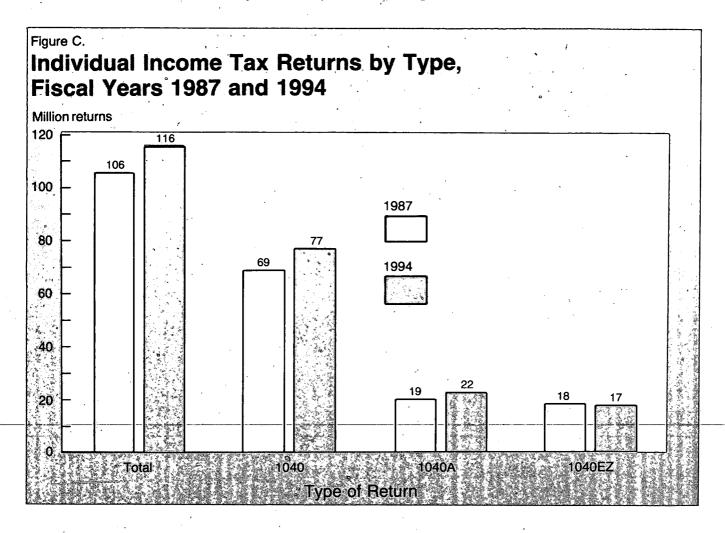

#### Estate and Gift Tax

The Economic Recovery Tax Act of 1981 stipulated that the filing threshold for a U.S. Estate Tax Return (Form 706) be gradually increased on an annual basis through 1988. Current projections reflect this rising threshold; the result is a decline in filings through 1988. After the filing threshold stabilizes in 1988, filings are expected to gradually increase throughout the balance of the forecast interval at an annual rate averaging 5.4 percent per year.

Filings of the U.S. Gift Tax Return (Form 709) are expected to grow rapidly and then taper off towards the mid-1990's. Year-to-year growth ranges from 14.4 percent in 1988 to 5.1 percent in 1994.

#### **Employment Tax**

Employment tax returns consist of employer's annual Federal unemployment tax returns, employer's annual/quarterly Federal tax return, and employer's annual railroad retirement tax returns. Projections for the forecast period

1987-1994 show small year-to-year increases that average 1.3 percent.

# Tax-Exempt Organizations

A host of returns of tax-exempt entities, including those for farmers' cooperative associations, private foundations, and "other" exempt organizations, comprise this category of returns. The magnitude of this return category is dictated by changes in the "other" exempts, i.e., Form 990, Return of Organization Exempt From Income Tax, which accounts for approximately 80 percent of exempt organization filings. Total exempt organization returns projections show a declining growth throughout the forecast interval, with increases ranging from 3.8 percent in 1987 to 1.7 percent in 1994.

#### **Employee Plans**

Projections of employee plan returns (Forms 5500, 5500C, and 5500R) have been adjusted to

include owner-employee plan participants that the Tax Equity and Fiscal Responsibility Act of 1982 will add to the filing population. It is anticipated that the Act will increase the filing population by over 500,000 returns, thus increasing 1986 filings by over 95 percent. In subsequent years, year-to-year advances will resume a more normal growth path, with growth averaging 3.3 percent per year from 1987 through 1994.

#### Alcohol and Tobacco

Forms 11 (Special Tax Return and Application for Registry) and 5000.24 (Consolidated Excise Tax Return Form) comprise the alcohol and tobacco returns category. Total filings are expected to post sharp declines in 1987 as a result of a one-time floor tax imposed in 1986, which increased Form 11 filings by an estimated 200,000. After 1987, total filings are expected to post declines ranging from 7.1 percent in 1988 to 0.8 percent in 1994.

#### Excise

Total excise tax returns are the sum of the following four categories of returns: (1) Form 11C (Special Tax Return and Application for Registry-Wagering); (2) Form 72O (Quarterly Federal Excise Tax Return); (3) Form 73O (Tax on Wagering); and (4) Form 229O (Heavy Vehicle Use Tax Return). Processing of Form 229O returns filed in 1985 were postponed until 1986. That accounts for the apparent jump in filings between 1985 and 1986. After 1986, total filings are expected to show only marginal growth, with annual increases ranging from 0.2 percent in 1988 to 1.1 percent in 1994.

## Supplemental Documents

Supplemental documents are composed of amended returns and requests for filing extensions from both individuals and corporations. The current forecast calls for increases ranging from 6.5 percent in 1987 to 4.8 percent in 1994.

#### DATA SOURCES AND LIMITATIONS

The number of returns filed (as used in this article) represents returns processed at IRS service centers during a fiscal year [6]. Data for 1986 include actual returns processed through June, with the remainder of the year estimated, in general, on the basis of 1985 filing patterns.

illustrate the general forecasting process, projections for the combined total of Forms 1040, 1040A and 1040EZ returns were developed based on a multiple regression relating total 1040 returns to total employment; an interaction variable involving both total employment and employed married women with husbands present (used as a proxy for potential joint filers); pension beneficiaries and annuitants; and a qualitative "dummy" variable which accounts for the effects of the Tax Reduction and Simplification Act of 1977 [7]. The historical base period for this regression was 1949-1986, with 1986 estimated on January-June processed returns and 1985 filing patterns.

Return projections were primarily formulated on a calendar year basis and subsequently

converted to fiscal year projections by the Census Bureau's X11-Q Seasonal Adjustment Program by applying resultant seasonal factors to calendar year projections [8].

#### NOTES AND REFERENCES

- [1] All statistics are cited on a fiscal year basis, unless otherwise noted. Actual counts for all of Fiscal Year 1986 were incomplete at the time this article was written (see the Data Sources and Limitations section). For complete counts, see U. S. Department of the Treasury, Internal Revenue Service, 1986 Annual Report, Commissioner and Chief Counsel, Internal Revenue Service (in preparation). As defined in Table 1, primary tax returns are equal to total returns minus supplemental documents.
- [2] Employment projections were obtained from Data Resources, Inc. (DRI), in June 1986.

# Crude Oil Windfall Profit Tax, 1985

By Edward Chung\*

Crude oil windfall profit tax (after adjustments) for the fourth quarter of 1985 was \$1.0 billion. This was the lowest amount of windfall profit tax reported since the first full quarter (June 1980) for which the tax was reported. The total reported windfall profit tax after adjustments since the enactment of the Crude Oil Windfall Profit Tax Act of 1980 amounted to almost \$78 billion through December 1985.

The Crude Oil Windfall Profit Tax Act imposed a Federal excise tax on domestic crude oil extracted on or after March 1, 1980. The tax was enacted in response to the planned phaseout of Government price controls on domestic crude oil. The Act was intended to tax a fair share of the additional revenues received by oil producers and royalty owners as a result of oil price decontrol, yet not adversely affect domestic production. Congress designated the windfall profit tax to be temporary, with a 33-month gradual phaseout. This phaseout will begin in January 1988, if

\$227.3 billion in net revenue (see the Definitions) will have been realized by then; otherwise, no later than January 1991 [1].

The formula to calculate the "windfall profit" (WP) is:

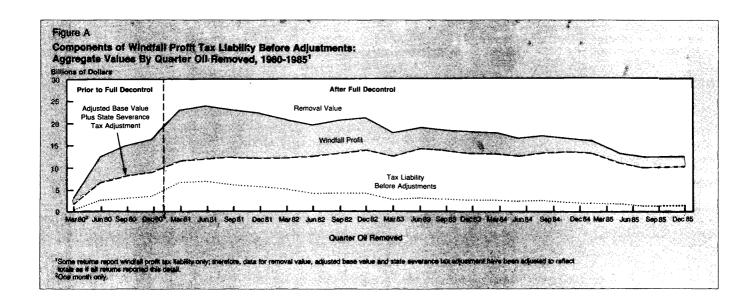

WP = RP - (ABP + SST)

where:

RP = Removal Price
ABP = Adjusted Base Price

SST = State Severance Tax Adjustment

The windfall profit declined from a high of \$11.9 billion for the quarter ending June 1981 to \$1.6 billion for the quarter ending December 1985 (Figure A) [2]. This decrease was a result of declines in the "removal price" (generally the price for which oil is sold) and rises in the "adjusted base price" and State severance tax adjustment (see the Definitions at the end of this article).

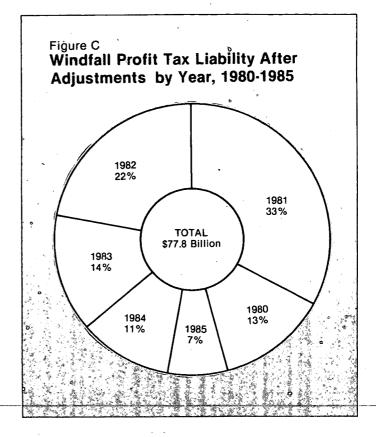

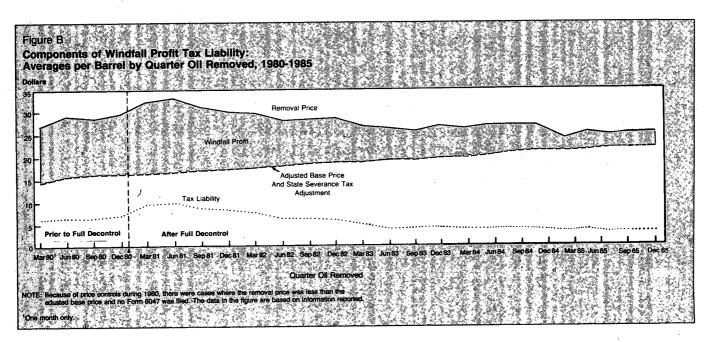

<sup>\*</sup>Foreign Special Projects Section. Prepared with the assistance of Patricia Slaughter under the direction of Michael Alexander, Chief.

Since June 1981, when the average removal price for domestic crude oil was at its height, the removal price had fallen by almost 23 percent, from \$33.09 to \$25.43 per barrel for the quarter ending December 1985 (Figure B).

The total windfall tax liability reported (after adjustments) for Calendar Years 1980-1985 totalled \$77.8 billion. Of the total tax, 1981 accounted for the largest proportion (33 percent) and 1985 the lowest (7 percent)--a decline from 1981 to 1985 of 78 percent (Figure C). Some returns report windfall profit tax only; therefore, data for removal value, adjusted base value, State severance tax, and the resulting windfall profit have been adjusted to account for the missing detail. Concomitant with this decline in tax liabilities was a decrease in reported windfall profit of 78 percent from 1981 to 1985.

The immediate cause for falling profits was the combined effect of declining removal price (down by 36 percent from 1981) accompanied by a 1 percent growth in the sum of the adjusted base value and State severance tax (Figure D). The adjusted base price increased chiefly as a result of a required inflation adjustment derived from the Gross National Product (GNP) implicit price deflator [3].

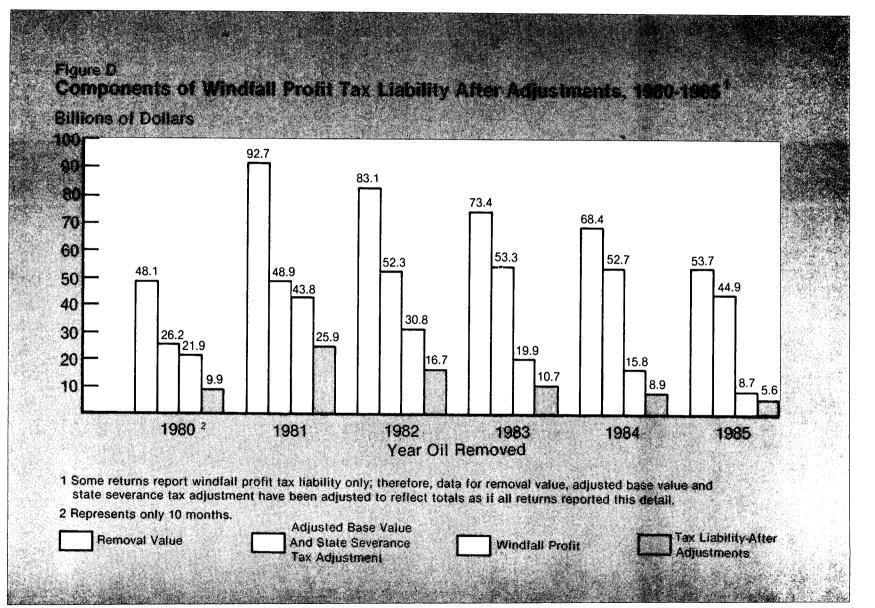

Figure E is a summary, by quarter, of tax liability before and after adjustments since the tax went into effect in 1980, as shown on windfall profit tax returns. The adjustments were necessary because of errors by withholding agents during previous quarters or, more frequently, because of application of the net income limitation.

Figure E--Windfall Profit Tax Before and After Adjustments

June 1985 Sept. 1985 Dec. 1985	1,442	-132 -146 -209	1,521 1,296 1,045

One month only.

The net income limitation generated an adjustment because it limits the windfall profit to 90 percent of the net income per barrel of oil and was estimated by certain taxpayers for the current quarter ending December 1985. The adjustments to the previous quarter were for under- or over-withholding from previous quarters that the depositing or withholding agent (usually the first purchaser) corrected by adjusting the amounts withheld in succeeding quarters. Producers claimed as a refund or a credit on their income tax returns additional over-withholding of windfall profit tax, due to error or the net income limitation, that was not corrected by the withholding agent. The amount of the two types of tax adjustments for the fourth quarter of 1985 is shown below:

# Adjustments to tax, fourth quarter 1985 (Millions)

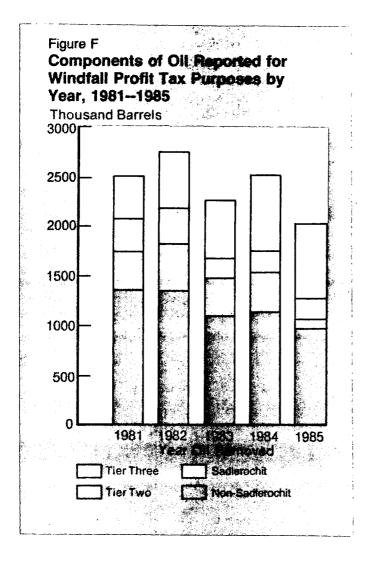

Net income limitation	-\$190
Prior quarters	-19
Total Adjustments	<del>-</del> \$209

Based on returns of taxpayers that provided complete detail on the windfall profit tax computation [4], "tier one oil" continued to dominate production for the quarter ending December 1985. Tier one oil (all domestically produced crude oil other than oil specifically classified as tier two or tier three, or oil explicitly exempted from the tax) represented 46 percent of total production. "Tier two oil," which represented 11 percent of total production, is oil produced from stripper well property not qualifying for the stripper exemption and oil from economic interests in a Naval Petroleum Reserve held by the United States. "Tier three oil," which is heavy oil, incremental tertiary oil and newly discovered oil (the latter represented 53 percent of tier three oil), accounted for 43 percent of total production (Figure F). Since the inception of the tax, tier three oil, which is generally taxed at a rate lower than tier one oil, has accounted for a steadily increasing percentage of\_total\_production.

#### DATA SOURCES AND LIMITATIONS

The windfall profit tax is reported on the Quarterly Federal Excise Tax Return, Form 720. Form 6047, Windfall Profit Tax, shows how the tax is computed and is filed as an attachment to Form 720. Tabulations in this article are based on the Forms 6047 reporting a tax liability. Therefore, total domestic taxable production will be somewhat understated. Returns are due 2 months after the end of the quarter in which the oil is removed. Data are based on all returns with a tax liability of \$1 million or more before adjustments and a 10-percent sample of all other returns.

Sampling and nonsampling error was controlled by a variety of methods. Although efforts were made to secure missing returns, some returns may have been omitted because of time and other statistical processing constraints. Attempts were made to correct imbalances in taxpayer entries for the components of windfall profit. If this proved impossible, an out-of-balance return was treated as a return on which the components were not reported, and therefore only the tax liability for each tier was tabulated from it. However, for returns that did not report the tax computation detail (for Figures A and D only), the components were estimated using a factor derived from the relationship of the tax liability for those reporting all of the tax computation detail to the total reported tax liability. A number of

verification checks were performed at all stages of manual data abstraction and computer compilation.

The Statistics of Income Bulletin includes data on excise tax collections. The excise tax collection figures show the liability after adjustments, as reported on Form 720, from returns entered into the Internal Revenue Service (IRS) computerized Business Master File (BMF) each quarter. A number of considerations affect comparisons of data from these two sources. Returns are not due until 2 months after the close of the taxable quarter; however, the interval between the close of the taxable period and the final recording of the return often varies, so that the quarterly BMF totals may represent more than one taxable period. On the other hand, the data presented here have been tabulated for specific taxable periods. As a result, the two sets of statistics are not directly comparable.

#### **DEFINITIONS**

The follwoing are brief definitions of the terms used in the tables.

Adjusted Base Price.--The base price multiplied by the "inflation adjustment," which was derived from the Gross National Product (GNP) "implicit price deflator."

Adjustments to Tax Liability.--Corrections applied to the current quarter's tax liability to correct for the "net income limitation" and over- and under-withholding in previous quarters.

Base Price.--For tier one oil, the upper tier ceiling price, as defined by Department of Energy price control regulations, which would have applied to the oil had it been produced and sold in May 1979, reduced by \$0.21. For tiers two and three oil, the base prices were \$15.20 and \$16.55, respectively, adjusted for grade and quality.

Crude Oil.--The term applied only to natural crude petroleum and did not include synthetic petroleum, such as oil from shale or tar sands. It did, however, include natural gas liquids treated as crude oil under the June 1979 energy pricing regulations issued by the Department of Energy.

Deposit Requirements.--The timing of any first purchaser to deposit amounts withheld depended on the identity of the first purchaser. Major refiners, other than independent refiners, were required to make semi-monthly deposits of the withholding tax. All other first purchasers were required to make withholding deposits no later than 45 days after the oil was removed from the premises, except independent refiners that purchased oil under delayed payments contracts. The latter were required to make deposits by the first day of the third month beginning after the month of removal.

Exempt Alaskan Oil.--Oil from a reservoir other than the Sadlerochit reservoir that had been commercially exploited by any well north of the Arctic Circle and oil produced north of the divides of the Alaska and Aleutian Ranges, and at least 75 miles from the nearest point of the Trans-Alaskan Pipeline System.

Exempt Charitable Oil.--Oil produced from economic interests held by qualified charitable medical facilities, educational institutions, and child care organizations (as defined in Internal Revenue Code section 170), if such interests were held on January 21, 1980, and at all times thereafter; and oil produced from interests held by a church on January 21, 1980, if, before January 22, 1980, the net proceeds

from such oil were dedicated to the support of a medical facility, educational institution, or child care facility.

Exempt Governmental Oil.--Oil produced from an economic interest held by a State or a political subdivision (including agencies and instrumentalities), the net income from which was used for public purposes.

Exempt Indian 0il.--Oil produced from mineral interests held by or on behalf of Indian tribes or individuals on January 21, 1980, which was one of the following: (a) production received by Indian tribes and individuals from Tribal Trust Lands (the title to such land was held by the United States in trust for the tribes); (b) production from land or mineral interests held by an Indian tribe eligible for services provided to Indians by the Secretary of the Interior; or (c) oil, the proceeds from which were paid into the U.S. Treasury to the credit of tribal or native trust funds pursuant to law. This exemption also applied to production by any Alaskan Native Corporation prior to 1991, including wholly-owned subsidiaries of such corporations.

Exempt Royalty Oil.--Qualified royalty owners were exempt from the windfall profit tax on two barrels of oil per day for each day of the calendar quarter for oil removed after December 31, 1981. For 1985 and thereafter, three barrels per day were to be exempt.

<u>Exempt Stripper Oil.--Oil</u> removed from stripper wells could qualify for exemption from the windfall profit tax if the following conditions were met:

- The oil had to be removed from a stripper well property after 1982;
- (2) The oil had to be extracted by an independent producer;
- (3) The oil had to be attributable to the independent producer's working interest in the property; and
- (4) The stripper well property could not be a property transferred by a nonindependent producer on or after July 23, 1981.

Net Income Limitation.--The windfall profit on a barrel of oil could not exceed 90 percent of the net income attributable to the barrel.

Net Revenue.--This equaled the gross revenue from the windfall profit tax or excise tax (excluding that amount attributable to U.S. Government interests), less the reduction of income tax resulting from taxpayers claiming income tax deductions for windfall profit tax paid. Figures presented in this report are the gross tax liabilities reported by the withholding agents on Form 6047 and are before the reductions mentioned above.

Removal Price. -- Generally, the price for which a barrel of oil was sold. In some instances, a constructive sales price was used.

<u>Sadlerochit Oil.--Crude oil production from</u> the <u>Sadlerochit</u> reservoir in the Prudhoe Bay oil field in Alaska.

State Severance Tax Adjustment.--A tax imposed by a State with respect to the extraction of oil. The windfall profit was reduced by the amount by which the severance tax exceeded that which would have been imposed had the oil been valued at its adjusted base price.

Stripper Oil.--In general, oil from a property for which the average daily production per well was 10 barrels or less for any consecutive 12-month period after 1972.

<u>Tier One Oil.--All</u> domestically-produced crude oil other than any oil classified in tier two or three, or explicitly exempted by law from the tax. This included the bulk of domestic oil from reservoirs proven to be productive before 1979.

Tier Two Oil.--Any oil from a stripper well property—within—the—meaning—of—the—June—1979—Department of Energy pricing regulations and oil from a U.S. economic interest in a Naval Petro-leum Reserve. Note that the Crude Oil Windfall Profit Tax Act of 1980 defined tier two oil as from a "National" Petroleum Reserve. This was amended to read "Naval" Petroleum Reserve by the Technical Corrections Act of 1982.

Tier Three Oil, Heavy Oil.—All crude oil (1) produced from property that had a weighted average gravity of 16.0 degrees or less on the American Petroleum Institute (API) scale, corrected to 60 degrees Fahrenheit, for the last month of production before July 1979, or (2) oil from a property with a weighted average gravity of 16.0 degrees API or less, corrected to 60 degrees Fahrenheit, for the taxable period.

Tier Three Oil, Incremental Tertiary Oil.--Production in excess of a base level on a property on which a qualified tertiary recovery project (one using one of several specific chemical, fluid or gaseous recovery methods to extract oil not recoverable using standard techniques) had been undertaken. The non-incremental oil (i.e., the amount of production up to the base level) remained in the otherwise applicable tier.

Tier Three Oil, Newly Discovered Oil.--Crude oil sold after May 31, 1979, and produced from (1) an outer continental shelf area for which the lease was entered into on or after January 1, 1979, and from which there was no production

in Calendar Year 1978 or (2) an on-shore property developed after Calendar Year 1978.

<u>Windfall Profit.</u>—The excess of the removal price of the barrel of oil over the sum of the adjusted base price and the State severance tax adjustment.

### General notations

N/A - Not applicable

n.a. - Not available

p - Preliminary

r - Revised

### Table 1

- [1] Includes total itemized deductions, charitable contributions for nonitemizers, and zero bracket amounts on nonitemized returns.
- [2] Includes surcharge of \$2,018,078,000.
- [3] Includes credits not shown separately below.
- [4] For Tax Year 1983, the alternative minimum tax was revised and the minimum tax was abolished. The revised alternative minimum tax starting with 1983 covered many of the tax preference items that had previously been subject to the minimum tax. Also, the alternative minimum tax rate was increased. (For 1983 and 1984, data on the former minimum tax could be reported on prior-year returns processed during the current-year filing period).

SOURCE: Statistics of Income--Individual Income Tax Returns, appropriate years. Data are subject to sampling error. Tax law changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of law changes.

### Table 2

- [1] Includes exemptions for age and blindness.
- [2] Totals in Table 2 do not agree with Tables 1 and 3 because they were obtained from a different source. For purposes of Table 2:
  - a. Number of returns by state include, in addition to Forms 1040, 1040A and 1040EZ filed by U.S. citizens and residents, Forms 1040NR filed by nonresident aliens, as well as self-employment tax returns used in Puerto Rico and certain U.S. territories and possessions.
  - b. "Total tax" liability includes total income tax plus tax from recomputing prior-year investment credit, tax applicable to Individual Retirement Arrangements (IRA's), self-employment

- tax, social security tax on tip income, and certain other incomerelated taxes. Total tax is before reduction by earned income credit (see also footnote (c), below).
- c. Earned income credit, available to certain low-income workers, could result in a refund (1) if there was no "total tax" (as defined in footnote (b), above), in which case the full amount was refundable, or (2) if the credit exceeded "total tax," in which case the excess was refundable. The difference between columns 19 and 21 is the refundable portion.

Total tax (column 16) minus earned income credit (column 21) is the amount most comparable to total tax in Tables 1 and 3. The total tax which results from this subtraction differs from Tables 1 and 3 because it includes additional taxes (see footnote (b), above) and because earned income credit used to offset tax (column 21) also includes amounts offset against these additional taxes.

[3] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by servicemen and women stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. Government employees.

NOTE: This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 1985. Data have not been edited for Statistics of Income purposes.

SOURCE: Internal Revenue Service, Software Division, IMF Returns Systems Branch.

### Table 3

- [1] Includes income tax after credits and the additional tax for tax preferences, i.e., minimum tax and alternative minimum tax.
- [2] For many taxpayers in this size class includes additional tax for tax preferences not included in "taxable income."

SOURCE: Statistics of Income--Individual Income
Tax Returns, appropriate years. Data are
subject to sampling error. Tax law changes
affect the year-to-year comparability of the
data. See the specific Statistics of Income
reports for a description of sampling error and
of law changes.

### Table 4

[1] Includes breakeven businesses.

SOURCE: Statistics of Income--Sole Proprietor-ship Returns, appropriate years, and SOI Bulletin, Summer issues. Data are subject to sampling error. Tax law changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of law changes.

### Table 5

- [1] Total assets, total liabilities and partners' capital account are somewhat understated because not all partnership returns included a complete balance sheet.
- [2] Short-term debt is the abbreviated title given to mortgages, notes and bonds payable in less than I year.
- [3] Long-term debt is the abbreviated title given to mortgages, notes and bonds payable in I year or more. In addition, for Tax Year 1975, long-term debt included nonrecourse loans.
- [4] See footnote 4 Table 6, for changes in the comparability of the statistics for receipts and deductions starting with 1981. Also, statistics for interest received are combined with dividends beginning with 1982.
- [5] Beginning with 1981, represents the more all-inclusive amounts reported in depreciation computation schedules rather than the amounts reported as the depreciation deduction (plus depreciation identified in cost of sales and operations schedules).

SOURCE: Statistics of Income--Partnership Returns, appropriate years, and SOI Bulletin, Summer issues. Data are subject to sampling error. Tax law changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of law changes.

### Table 6

- [1] Size classes are based on business receipts, i.e., gross amounts from sales and operations, for industries except finance, insurance and real estate. For the latter industries, total receipts, which is the sum of business receipts and investment income, was used. For partnerships, see also footnote 3, below.
- [2] Includes returns with no receipts as defined in footnote 1.

- [3] Includes corporations with zero assets and liabilities.
- [4] Beginning with 1981, "total receipts" in Table 5 includes, in part, only the net income or loss from farming and rentals. Previously, "total receipts" included the gross receipts from farming and rentals and, if rental receipts were the principal source of total receipts, they were treated as "business receipts" for the statistics. To help minimize the break in comparability caused by this change in statistical treatment of farm and rental income, an effort was made for 1981-82 to include rental (though not farm) gross receipts in the receipts used for the size distribution in Table 6.

In Table 5, since only the net income or loss from farming and rentals was included starting with 1981, the deductions reported in computing these net incomes are excluded from the deduction statistics. For previous years, these deductions are reflected in the deduction statistics.

[5] Prior to 1979, partnerships that had liquidated were assumed to have zero assets—and—liabilities, even—if—their-balance sheets showed otherwise, and were included in the "under \$25,000" asset size class. Beginning with 1980, balance sheet data reported for liquidated partnerships were tabulated as reported and were included in the appropriate asset size classes.

SOURCE: Statistics of Income--Corporation Income Tax Returns, appropriate years, Statistics of Income--Partnership Returns, appropriate years, Statistics of Income--Sole Proprietorship Returns, appropriate years, and SOI Bulletin, Summer issues. Tax law changes affect the year-to-year comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of law changes.

### Table 7

- [\*] Estimate should be used with caution because of the small number of sample returns on which it is based.
- [1] Included in "Number of returns, total" and "Number with net income."
- [2] Corporations with no more than 10 shareholders (35 beginning with 1983), most of them individuals, electing to be taxed at the shareholder level.

- [3] Domestic International Sales Corporations were taxed through parent corporations when profits were distributed or deemed distributed to them.
- [4] Includes dividends reported in combination with interest on Form 1120-S by Small Business Corporations electing to be taxed through shareholders. The combined amount totalled \$2,044,206,000. Based on prior years, when Form 1120-S required each to be reported separately, nearly all of the combined amount represents interest.
- [5] Includes a surcharge of \$784,437,000.

NOTES: Detail may not add to totals because of rounding.

SOURCE: Statistics of Income--Corporation Income Tax Returns, appropriate years. Data are subject to sampling error. Tax law changes affect the year-to-year comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of law changes.

### Table 8

- [1] Revisions shown in Table 8 for total assets, total liabilities, net income (less deficit), net income, total income tax after credits and distributions to stockholders except in own stock, were not tabulated by industry.
- [2] Includes additional tax for tax preferences (minimum tax), tax from recomputing prior year investment credit and Personal Holding Company tax.

SOURCE: Statistics of Income--Corporation Income Tax Returns, appropriate years. Data are subject to sampling error. Tax law changes affect the year-to-year comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of law changes.

### Tables 9 and 10

[1] Individual income tax collected includes that portion which was designated for the presidential election campaign fund by taxpayers on their returns. Also included is the fidiciary income tax collected (from estates and trusts). Fidiciary income tax collected was \$4.1 billion in 1985, \$2.9 billion in 1984, \$2.7 billion in 1983, and \$2.6 billion in 1982. Presidential election campaign designations amounted to \$34.8 million in 1985 and 1984, \$35.5 million in 1983, and \$39.0 million in 1982.

- [2] Corporation income tax collected includes the tax on "unrelated business income" of tax-exempt organizations. Unrelated business income tax collected was \$69.8 million (1985), \$50.0 million (1984), \$45.1 million (1983), and \$64.7 million (1982).
- [3] Excise taxes are imposed on selected products, services and activities, such as those on alcohol and tobacco products and the windfall profit tax on domestically-produced crude oil.
- [4] Employment taxes include payroll taxes levied on salaries and wages, such as social security, railroad retirement and unemployment taxes; plus the self-employment tax imposed on "self-employment income".

NOTES: Collections (or refunds) are those made during the time periods indicated, regardless of the year or other period during which the tax liability was incurred (or to which the refund applied).

Collections represent the gross amounts before refunds and include amounts paid with the return; prior to filing the return (as applicable, income tax withheld by employers and estimated tax payments); and subsequent to filing the return (chiefly the result of initial return processing or of examination and enforcement activities). Collections also include interest and penalties.

Refunds result chiefly from tax overpayments determined at time of filing a return. Included are amounts subsequently determined as due the taxpayer as a result of an amended return or a claim for refund (including those produced by "net operating loss" and other carryback adjustments from future taxable years); or as a result of initial return processing or of examination and other activities. Individual income tax refunds are net of offsets under a law which requires IRS to act as collection agent for state welfare agencies so that these agencies can be reimbursed for the support they furnished through Aid to Families with Dependent Children (AFDC) programs. All refund data include interest paid by IRS.

Detail may not add to totals because of rounding.

### Table 11

- [1] Includes a one-time tax of 5 cents per gallon on gasoline and 4 cents per gallon on gasohol imposed on inventories of dealers as of April 1, 1983. Taxes on lubricating oil were repealed effective January 5, 1983.
- [2] Effective January 1, 1984, taxes on tubes and tread rubber were repealed, and dealers holding taxable tires were assessed a one-time floor stock tax.
- [3] Effective January 7, 1983, the excise taxes on parts and accessories for trucks and buses, which are included in this classification, were repealed. Beginning with the quarter ending December 1983, motor vehicles are excluded.
- [4] Special fuels, total includes diesel and special motor fuels which were classified as miscellaneous excise taxes in 1970. Beginning with the quarter ending December 1983, motor vehicles are included.
- [5] Effective January 1, 1983, the excise tax increased from 1 percent to 3 percent.
- [6] The negative amounts are due to refunds of this tax under the United States United Kingdom Income Tax Treaty, which provides for an exemption from the tax retroactive to January 1, 1975. Also, a similar United States France treaty provides for an exemption retroactive to January 1, 1979.
- [7] This amount reflects adjustments made for prior quarters.

NOTES: For 1970 and 1975, the fiscal year was defined as July of the previous calendar year through June of the year noted. For 1980-84, the fiscal year was defined as October of the previous calendar year through September of the year noted.

Correction of errors that occurred in the Fiscal Year 1982 data (previously published in the SOI Bulletin) for three classes of excise taxes (Manufacturers, Special Fuels and Retailers, and Miscellaneous) follows:

Selected class of tax	1982 (As published)	1982 (As corrected)
	[Money a in thou	
MANUFACTURERS EXCISE TAXES, TOTAL Gasoline and lubri-	6,382,900	6,382,900
cating oil Tires, tubes and	4,320,856	4,320,856
tread rubber Motor vehicles, bodies	668,902	616,785
bodies, parts	914,524	884,845
Recreational products	158,054	131,288
Black Lung taxes	237,097	426,620

### Table 13

- [1] Estimates of returns with paid assistance for 1984 and earlier years are based on the full-year sample of returns used for Statistics of Income-Individual Income Tax Returns. The earlier estimate for 1984 was derived in the same manner as the estimate shown for 1985. For 1985, the estimates are projections based on an extrapolation of the 1985 Taxpayer Usage Study (TPUS) sample to the equivalent of the Statistics of Income (SOI) sample. The TPUS sample includes returns filed only through April 1986, while the SOI sample includes returns filed during the entire calendar year. For additional information about the TPUS sample, see the Summer 1986 issue of the SOI Bulletin.
- [2] 1984 projections are based on converting 1984 Taxpayer Usage Study sample (TPUS) to the equivalent of the Statistics of Income

- (SOI) sample. This was done because the TPUS sample represents returns filed through April, while the SOI sample represents all individual income tax returns filed for a calendar year. For additional information about the TPUS sample, see the Summer 1985 issue of the SOI Bulletin.
- [3] Data on IRS Taxpayer Service Programs are collected on a fiscal-year basis. In general, assistance rendered in a given fiscal year may be related to returns due on April 15th during the fiscal year and are for the tax year ending with the previous December. Therefore, data in Table 13, which are presented on a tax year basis are actually for a fiscal year, e.g., data shown as for Tax Year 1982 are actually for Fiscal Year 1983.

NOTE: Data on IRS assistance represent taxpayer contacts. Some taxpayers make more than one contact. The number of taxpayers assisted (in contrast to the number of contacts made) is not known.

SOURCE: Data on paid preparers obtained from Statistics of Income and Taxpayer Usage Study samples. Data on IRS assistance were compiled by the Taxpayer Service Division.

# Appendix\*

# **General Description of Statistics of Income Sample Procedures and Data Limitations**

This appendix discusses typical sampling procedures used in most Statistics of Income (SOI) programs. Aspects covered briefly include sampling criteria, selection techniques, methods of estimation, and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specific SOI studies can be found in the separate SOI reports (see References). More technical information is available, upon request, by writing to the Director, Statistics of Income Division, Internal Revenue Service, Washington, DC 20224.

#### SAMPLE CRITERIA AND SELECTION OF RETURNS

Statistics compiled for the SOI studies are generally based on stratified probability samples of income tax returns or other forms filed with the Internal Revenue Service (IRS). The statistics do not reflect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. The samples are based on such criteria as: industry, presence or absence of a return form schedule, accounting period, state from which filed and various income factors or other measures of economic size (such as total assets in the case of corporations).

The probability of a return being designated depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include the number of returns in the stratum, the diversity of returns in the stratum, and interest in the stratum as a separate subject of study. All this is subject to constraints based on the allowable total cost or predetermined size of the total sample for the program.

For most SOI studies, returns are designated by computer from the IRS Master File based on the taxpayer identification number (TIN) which is either the social security number (SSN) or the employer identification number (EIN). A fixed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specified for a return's sample stratum, then it is selected and processed for the study. Otherwise it is counted (for estimation purposes) but not selected. In some cases, the TIN is used directly by matching specified digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TIN's designed from one year's sample are for the most part selected for the next year's, so that a very high proportion of the returns selected in the current sample are from taxpayers whose previous years' returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from one year to the next.

### METHOD OF ESTIMATION

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classified. Weights are, in general, computed by dividing the count of returns filed for a given stratum by the count of sample returns for that same stratum. "Weights" are used to adjust for the various sampling rates used—the lower the rate, the larger the weight.

The data on each return in a stratum are then multiplied by that weight. To produce the tabulated estimates, these weighted data are summed to produce the published statistical totals.

### SAMPLING VARIABILITY

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the

<sup>\*</sup>Compiled by Bettye Jamerson, Coordination and Publications Staff, under the direction of Robert Wilson, Team Leader. Major contributions were made by Paul McMahon, Corporation Statistics Branch, Operations Section.

same sample design. Estimates derived from the different samples usually vary. The standard error of the estimate is a measure of the variation among the estimates from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the possible samples. The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed confidence that this interval includes the actual population value.

In SOI reports the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in decimal form. This ratio is called the coefficient of variation (CV). The user of SOI data may multiply an estimate by its coefficient of variation to recreate the standard error and to construct confidence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coefficient of variation of 0.02, then the following arithmetic procedure would be followed to construct a 68 percent confidence interval estimate:

	(sampie estimat	
x 0.02	(coefficient of	variation)
= 3,000	(standard error	of estimate)

150,000 (sample estimate) + or - 3,000 (standard error) = 147,000-153,000 (68% confidence interval)

Based on these data, the interval estimate is from 147 to 153 thousand returns. A conclusion that the average estimate of the number of returns lies within an interval computed in this way would be correct for approximately two-thirds of all possible similarly selected samples. To obtain this interval estimate with 95 percent confidence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Further details concerning confidence intervals, including the approximation of CV's for combined sample estimates, may be obtained on request by writing the Director, Statistics of Income Division.

Generally in the SOI <u>Bulletin</u> only conservative upper limit CV's are provided for frequency estimates. These do, however, provide a rough guide to the order of magnitude of the sampling error.

### NONSAMPLING ERROR CONTROLS AND LIMITATIONS

Although the previous discussion focuses on sampling methods and the limitations of the

data caused by sampling error, there are other sources of error that may be significant in evaluating the usefulness of SOI data. These include taxpayer reporting errors, processing errors, and effects of an early cut-off of sampling. More extensive information on nonsampling error is presented in SOI reports, when appropriate.

In transcribing and tabulating the information from the returns or forms selected for the sample, checks are imposed to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during statistical "editing" in order both to improve data consistency from return to return and to achieve definitions of the data items that are more in keeping with the needs of major users. In some cases not all of the data are available from the tax return as originally filed. Sometimes the missing data can be obtained through field followup. More often though, they are through methods. imputation examples, other information in the return or in accompanying schedules may be sufficient to enable an estimate to be made; prior-year data for the same taxpayer may be used for the same purpose; or data from another return for the same year that has similar characteristics may be substituted. Research to improve methods of imputing data that are missing from returns continues to be an ongoing process [1].

Quality of the basic data abstracted from the returns is subjected to a number of quality control steps including 100-percent key verification. The data are then subjected to many tests based on the structure of the tax law and the improbability of various data combinations. Records failing these tests are then subjected to further review and any necessary corrections are made. In addition, the Statistics of Income Division in the National Office conducts an independent reprocessing of a small subsample of statistically-processed returns as a further check.

Finally, before publication, all statistics are reviewed for accuracy and reasonableness in light of provisions of the tax laws, taxpayer reporting variations and limitations, economic conditions, comparability with other statistical series, and statistical techniques used in data processing and estimating.

### TABULAR CONVENTIONS

Estimates of frequencies and money amounts that are considered unreliable due to the small sample size on which they are based are noted by an asterisk (\*) to the left of the data item(s) in the tabulations. The presence of an asterisk indicates that the sample rate is less than 100 percent of the population and there are fewer than 10 sample observations available for estimation purposes.

A dash in place of a frequency or amount indicates that no sample return had that characteristic. In addition, a dash in place of a coefficient of variation for which there is an estimate indicates that all returns contributing to the estimate were selected at the 100-percent rate.

Whenever a weighed frequency in a data cell is less than 3, the estimate is either combined with other cells or deleted in order to avoid disclosure of information about individual taxpayers or businesses [3]. These combinations and deletions are indicated by a double asterisk (\*\*).

### NOTES

- [1] For an example of the recent SOI Division research, see Hinkins, S., "Matrix Sampling and the Effects of Using Hot Deck Imputation," in 1984 Proceedings: American Statistical Association, Section on Survey Research Methods p. 245. Other research efforts are included in Statistical Uses of Administrative Records: Recent Research and Present Prospects, Volume 1, pages 179-184, Internal Revenue Service, March 1984.
- [2] Quality control activities for all SOI studies will be published in a series of

- forthcoming reports. These reports will provide detailed information relating to quality in all phases of SOI processing.
- [3] In the case of geographic statistics, steps to avoid disclosure are taken when a weighted frequency is less than 10.

## USER SURVEY SOI BULLETIN Fall 1986

Please take a few moments to answer the following questions concerning this *Statistics of Income* publication. Your responses will enable us to direct our efforts to meeting the needs of our users. After indicating your responses, please cut, tape, and mail. No postage or envelope is required. Thank you for your cooperation.

1.	How did you obtain this publication?						
1.	□ Purchased from the Government Printing Office □ Subscription □ Single copy □ From a public library □ From a university or college library □ Other (Specify) □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □						
2.	Have you ever used any other Statistics of Income publication?  ☐ Yes (Specify) ☐ No						
3.	What subject matter in the report interests you particularly?  ☐ SOI Studies of International Income and Taxes ☐ Projections of Tax Return Filings, 1987-1994 ☐ Corporate Foreign Tax Credit, 1982 ☐ Crude Oil Windfall Profit Tax, 1985 ☐ Interest Income and Deductions, 1968-1984 ☐ Selected Statistical Series, 1970-86 ☐ Foreign Recipients of U.S. Income, 1984						
<del></del>	Which table(s) in the Selected Statistical Series did you find helpful to your needs?						
	<ul> <li>□ Individual income tax returns</li> <li>□ Income and tax data by state</li> <li>□ Individual average tax rates</li> <li>□ Sole proprietorship returns</li> <li>□ Partnership returns</li> <li>□ Individual average tax rates</li> <li>□ Corporation industry statistics</li> <li>□ Corporation income tax returns</li> <li>□ Gross Internal Revenue collections</li> <li>□ Internal Revenue refunds</li> </ul>						
5.	If microdata files on computer tape were available in these subject matter areas, would you be interested in purchasing them?						
	□ Yes □ No						
	If yes, which area(s)? (Specify)						
— 6.	How would you describe the useability of the text?						
	<ul> <li>□ Too technical</li> <li>□ Not detailed enough</li> <li>□ Did not use text</li> </ul>						
7.	What type of organization are you connected with?						
	<ul> <li>□ Federal government</li> <li>□ State or local government</li> <li>□ Trade association</li> <li>□ Other nonprofit organization</li> <li>□ Other (Specify)</li> </ul> □ Consulting firm □ University or college □ Legal firm						
8.	What changes (additions, deletions, alterations) would you like to see in the contents or format of this publication?						
9.	Other comments (Use other side if needed.)
