NOTE: See Reject Code 124 for the proper sequence for transmitting all forms, schedules and statements within the return. Also refer to the “**NOTES**” at the end of Reject Code 124.

.04 REMITTANCES

There are two methods to *electronically* pay a balance due on an electronically filed Form 1041 return:

(1) The fiduciary may authorize the U.S. Department of Treasury (through a Treasury Financial Agent) to transfer money (direct debit) from their bank account to the Treasury account. The fiduciary must sign the Jurat on Form 8453-F to authorize the agreement between IRS and their Financial Agent to initiate an EFW (electronic funds withdrawal). The fiduciary must then submit with each electronically filed return a Payment Record form as shown in Section B (Record Layouts).

(2) Payments also may be made through the Electronic Filing Tax Payment System (EFTPS) (This method is *not* part of the electronically filed form 1041 record.) Contact an EFTPS Financial Agent at 800-555-4477 or 800-945-5300 for information. IRS EFTPS Contact: 1-800-255-0654

NOTE:

Payment of balances due may also be made via **paper check** which may be attached to the Form 8453-F, or by mailing the check directly to the Submission Processing Center identified in the 1041 Instruction booklet. Currently, there are no plans to create a payment voucher for Form 1041. Therefore, paper checks mailed separate from Form 8453-F should be attached to a letter to assure the payment is credited to the correct account. The letter should provide the following information for the Estate or Trust:

- Form 1041
- Employer Identification Number of the Estate or Trust
- Name of Estate or Trust
- Tax year for which the payment is intended.
- Name, address, and telephone number of the Fiduciary.
- Amount of payment

The Paper Remittance Register and Electronic/Magnetic Media Remittance Register are no longer accepted.

.05 FED/STATE RETURNS

Filers must include all Federal Data required by the State, in one of the State attachments, i.e. Attachment E.

Fed/State Electronic Filing is a cooperative one-stop filing program between IRS and state tax administration agencies. This program allows the filing of both Federal and State income tax returns as a combined return through the IRS Electronic Filing System.

The general concept is to emulate current operations used for the electronic filing of federal tax returns (EFS). The tax return data must be placed into the transmission format specified by the IRS and the state.

The combined return will be rejected in its entirety if it contains any error conditions specified in this publication. If the error(s) is of such a nature that it can be corrected and the return(s) processed, the combined return may be retransmitted to ECC-MEM. The participant may elect to retransmit the federal tax portion of a rejected return and then file the state return using state tax paper forms.

How to Transmit

See Page 20, item D.

Form 1041 returns can no longer be transmitted over the Public Switched Telephone Network to the ECC-MEM using dial-up. The methods to transmit the returns are either via the Internet or using a dedicated leased line. See Section B; Data Communications, detailed information.

The Front End Processing Subsystem (FEPS) uses a menu-driven instead of a prompt-mode Trading Partner Interface.

Transmitters who expect to handle a large volume of electronic returns may request to lease their own dedicated line(s) at ECC-MEM. They must arrange to lease and install the lines and purchase modems at both ends. They may also purchase equipment to use one of the high-speed file transfer protocols, such as FTP, on 56 kbs or ISDN lines at ECC-MEM. For more information and approval, contact:

SECTION 2 TRANSMISSION FILE FORMAT

.01 General Description

1. All transmission data must be in ASCII format. No binary fields may be transmitted.
2. A transmission session will normally consist of three parts:
 - a. First, the communications link must be established using acceptable protocol.
 - b. Next, the transmitter will receive the acknowledgment transmission containing information about the previous transmission session, if an acknowledgment file exists.
 - c. Then, the return record transmission may commence. The return record transmission will consist of 1) a series of logical records, beginning with the TRANA record, 2) some number of logical return records, and 3) a RECAP Record.
3. All return records must be in ascending order by Return Sequence Number (RSN).
4. Two four-byte fields (the Record Control Information) must precede each record within a transmission. The first four-byte field is a record Byte Count that will contain a count of the number of bytes within the logical record including the four bytes for the counter itself, four bytes for the Start of Record Sentinel (****), and one byte for the Record Terminus Character (#). The second four-byte field will be the Start of Record Sentinel, which must be four asterisks (****).
5. Every record must have the Record Terminus Character (#) as its last significant byte. Note that provisions have been made to allow for non-significant padding to exist following the Record Terminus Character, i.e., **CR or LF** may be added after the Record Terminus Character to fill up a physical block size. This is permitted to accommodate all the different computer systems being used to transmit data.

SECTION 2 TRANSMISSION FILE FORMAT

.01 General Description (Continued)

6. The first records on a transmitted file, the TRANA and TRANB Records, contain information regarding the transmitter and file format. These records should be followed by the records comprising the tax returns being transmitted.
7. The end of the logical transmission is signaled by the literal "RECAP". It is followed by the RECAP Record data and the Record Terminus Character (#).
8. The TRANA, TRANB and RECAP records are fixed-length records of 120 bytes each. Any non-significant field should be blank-filled.
9. A tax return will consist of a variable number of fixed length or variable length records. The size and format of the logical record for each page of each schedule, form, etc., are specified in Section 11 Record Layouts.
10. Each logical record should contain all data fields pertaining to one printed page of an official schedule, form, or line of a Statement Record. Therefore, the logical record contains an entire schedule or form, or a logical part (i.e., PG01 or PG02) of a schedule or form, or line of a Statement Record.
11. Each complete tax return must consist of all logical records pertaining to it in the following sequence:
 - Form 1041 Page 1 – 2;
 - Schedules in alphabetical order or in Attachment Sequence Number order as preprinted on the official IRS form;
 - Forms in numerical order or in Attachment Sequence Number order as preprinted on the official IRS form;
 - Statement Records;
 - Summary Record.
12. Schedule, Form, and Statement Records can contain additional sequential Page Records if the record consists of more than one printed page. (Pages are only numbered within a schedule, form, or statement record, not across the return.) All records must appear in the order above with the proper control information. The counts of the schedules and forms must match the counts in the Summary Record or the return will be rejected.
13. The file should be unlabeled (no standard header or trailer records).

SECTION 2 TRANSMISSION FILE FORMAT

.01 General Description (Continued)

14. Each file must contain only complete returns.
15. The page should not be generated if there are no entries on a page record of a schedule or form. A blank page (Record ID Group only) will cause the return to be rejected, except in cases where multiple forms require that one page be present when the other page is present.

SECTION 2 TRANSMISSION FILE FORMAT

.02 Fixed and Variable Length Options

There are two options available for transmitting logical tax return records: fixed length (fixed format) and variable length (variable format). (The Transmitter Records TRANA, TRANB, and RECAP Record are not tax return records.)

1. Fixed Length Option (Fixed Format)

The fixed length option requires the complete tax return to be transmitted exactly as defined in Section 11 Record Layouts. All fields must be present. If a field contains no data, it must be blank-filled or zero-filled. The fixed length option is indicated by an "F" in the Record Type (SEQ 100) of the TRANS Record A (TRANA).

When the fixed length option is used, the following data field conventions must be followed:

a. Alphanumeric Fields - Fixed Format

- (1) Left-justify the field with trailing blanks.
- (2) When a "literal" is included in the field description, enter the literal value exactly as specified in Section 11 Record Layouts, left-justified. Trailing blanks must be entered.

NOTE: The trailing blanks are not shown in the Record Layouts.

b. Numeric Fields - Fixed Format

- (1) Unsigned numeric fields: Right-justify with leading zeros.
- (2) Signed numeric fields (money amounts): Right-justify with leading zeros, reserving the right-most position for the sign. A blank () indicates a gain and a minus sign (-) indicates a loss.
- (3) Signed numeric fields that can also contain literal values:
Enter signed numeric fields as described above. When entering a literal value, left-justify and blank-fill the field.

SECTION 2 TRANSMISSION FILE FORMAT

.02 Fixed and Variable Length Options

2. Variable Length Option (Variable Format)

The variable length option provides for the transmission of only control information, including the record ID group, significant data fields, and significant data within individual fields. The variable length option is indicated by a "V" in the Record Type (SEQ 100) of the TRANS Record A (TRANA).

When the variable length option is used, the following data field conventions must be followed:

a. Alphanumeric Fields - Variable Format

- (1) Left-justify data in the field. Do not enter leading blanks. Trailing blanks are dropped.
- (2) When a "literal" is included in the field description, enter the literal value exactly as specified in Section 11 Record Layouts, left-justified. Only the value of the literal (including embedded blanks) must be entered. Trailing blanks are dropped.

b. Numeric Fields - Variable Format

- (1) Unsigned numeric fields: In most cases, leading zeros may be dropped.

Leading zeros cannot be dropped from the following:
Date fields, Ratio (percentage) fields, Business Code field of Schedules C and Agricultural Activity Code field of Schedule F.

- (2) Signed numeric fields (money amounts): Leading zeros are dropped. For a positive value, the trailing blank that indicates a gain is dropped. For a negative value in a field that can contain either a gain or a loss, the minus sign (-) must be entered in the last position of the signed numeric field.

SECTION 2 TRANSMISSION FILE FORMAT

.02 Fixed and Variable Length Options (Continued)

- (3) Signed numeric fields that can also contain literal values: Enter signed numeric fields as described above. When entering a literal value, left-justify the field; it is not necessary to enter trailing blanks.

c. Tax Form, Schedule, and Form Records - Variable Format

When transmitting in variable format, each Tax Form (Form 1041) Schedule and Form Record will begin with the Record Control Information (Byte Count and Start of Record Sentinel fields) in the same fixed format shown in the record layouts. This is followed by the Record ID Group. Following the Record ID Group are the data fields. Each data field is preceded by the applicable Field Sequence Number, which is enclosed by square bracket field delimiters, “[” and “]”. The Field Sequence Number is a 4 position number. However, it is permissible to drop the first zero when bracketing the field sequence number. A minimum of three position must be present. For example, you can use [0010] or [010] for Primary SSN of Page 1 of the Tax Return record. The Record Terminus Character (#) follows the last data field in the record.

Example:

nnnn****RECORD ID GROUP [1st field sequence number]DATA...[next field sequence number]DATA...# ("nnnn" is the record byte count)

NOTE: THE FOLLOWING THREE CHARACTERS "[", "]", and "#" ARE RESERVED AS DELIMITERS AND CANNOT APPEAR AS DATA CHARACTERS. See SECTION 4 for information about types of characters in electronically filed returns.

d. Statement and Summary Records - Variable Format

All data fields of the Statement and Summary Records must be formatted as fixed length fields. If a field contains no data, it must be blank-filled or zero-filled, as appropriate.

When transmitting in variable format, each Statement and Summary Record will begin with the Record Control Information (Byte Count and Start of Record Sentinel fields) in the same fixed format shown in the Part II Record Layouts. This is followed by the Record ID Group, the data fields formatted as fixed length fields, and the Record Terminus Character (#).

SECTION 3 FILE FORMAT

.01 GENERAL DESCRIPTION

All transmission data must be in ASCII Format. No binary fields may be transmitted.

- (1) All logical records must be transmitted electronically in a series of logical blocks. A four-byte counter must precede each logical record within a block. The byte count must include the length of the record plus the length of the byte count, the Start of Record Sentinel 4 asterisks ("****") and the Record Terminus Character pound sign or hash mark ("#").

NOTE: IBM byte counts must not be used. Using the IBM Byte Count will add four (4) positions to each record. This will increase the size of the record and shift everything over four (4) positions. This is not compatible with the Form 1041 programs.

- (2) Every logical record must have as its last significant byte the Record Terminus Character ("#").
- (3) Records must be fixed (all records within the return are the same length) or variable (each record within the return is of the length shown on the Form/schedule in Section 11).

The following data structures are acceptable:

1. Variable Length, unblocked records
2. Variable Length, blocked records
3. Fixed Length, unblocked records

A fixed length, blocked record, data structure is unacceptable, as this format will produce blank padding between logical records within the block.

- (4) Files must not contain more than 500 Form 1041 tax returns in a single transmission when using a dial-up connection.
- (5) The first record on a transmitted file (the TRANA and TRANB records) contains information regarding the transmitter and file format. The records comprising a tax return being transmitted should follow this record. The record after the Summary Record of a transmitted file is the RECAP Record, which provides a total return count (Field #0030) which is compared to the IRS computer count. The TRANA Record also uniquely identifies each file transmitted. Field #0080 (Transmission Sequence Number) of the record is used for this purpose.

SECTION 3 FILE FORMAT

.01 GENERAL DESCRIPTION – (Continued)

- (6) A tax return will consist of a variable number of fixed-field records. The size and format of the logical record for each page of each form, schedule etc., are specified in Section 11. In addition, a variable field/record format for Schedule K-1 is acceptable. See details under Variable Length Option.

- (7) Each logical record should contain all data fields pertaining to one printed page of an official form or schedule or to a line of a statement. Therefore, the logical record contains an entire form or schedule, or a logical part (i.e., PG01 or PG02 of a form or schedule, or a line of a statement).

SECTION 3 FILE FORMAT

.02 RETURN SEQUENCE ORDER

The sequence of a complete Form 1041 tax return file submission is as follows:

- (1) Transmission (TRANA and TRANB) Record (REQUIRED)
- (2) Form 1041Return (RET) Record Pages 1 and 2 (REQUIRED)
- (3) Schedule (SCH) Records - must be transmitted in ascending alpha sequence.
- (4) Form (FRM) Records - must be transmitted in ascending numeric sequence.
- (5) Payment Record
- (6) Authentication Record
- (7) Statement (STMnnn) Records for forms and schedules other than Schedule K-1.
- (8) Preparer Note Explanation
- (9) Election Explanation
- (10) Regulatory Explanation
- (11) Schedule K-1 (Form 1041) Records - must be transmitted in ascending numeric sequence.
- (12) Schedule K-1 (Form 1041) Statement (Stmb99) Records if applicable, must be transmitted in ascending numeric sequence and **must** trail the corresponding Schedule K-1.
- (13) State Record (Optional)
- (14) Summary Record (REQUIRED)
- (15) RECAP Record (REQUIRED): The end of a logical transmission will be signaled by the literal "RECAPb" Field #0000 of the Record ID) followed by the RECAP Record data and then the Record Terminus Character.

Note: Do not generate a page of a form or schedule if there are no entries on the page record. A blank page (Record ID only) will cause the return to reject. (Except in cases where multiple forms or schedules require that one page be present if the other is).

SECTION 3 FILE FORMAT

.03 FIXED LENGTH OPTION (Fixed Format)

The Fixed Length Option requires that the entire tax return be transmitted exactly as defined in the record layouts, and all fields must be present. If a field contains no data, it must be blank-filled or zero-filled. A "F" in the Record Type Indicator (Field #0100) of the Transmission (TRANA) Record should indicate the Fixed Format.

NOTE: Fixed and Variable data should not be submitted in the same transmission.

When the fixed length option is used, the following data field conventions must be followed:

(1) Alphanumeric Fields - Fixed Format

- (a) Left-justify the field with trailing blanks.
- (b) Fields defined, as containing literal values (including embedded blanks) must be as specified in the Record Layouts. Trailing blanks must be entered.

NOTE: The trailing blanks are not shown in the Record Layouts.

(2) Numeric Fields - Fixed Format

- (a) Unsigned numeric fields: Right-justify with leading zeros.
- (b) Signed numeric fields (money amounts): Right-justify with leading zeros, reserving the right-most position for the sign. A blank () indicates a gain and a minus sign (-) indicates loss.
- (c) Signed numeric fields that can also contain literal values: Enter signed numeric fields as described above. When entering a literal value, left-justify and blank-fill the field.

SECTION 3 FILE FORMAT

.04 VARIABLE LENGTH OPTION (Variable Format)

The Variable Length Option provides for the transmission of only key fields and significant data fields within a return record. The Authentication Record, TRANA, TRANB, Statement Record, Summary, RECAP Records, Preparer Note, Election Explanation and Regulatory Record must be transmitted in a Fixed Format.

- (1) A "V" in the Record Type Indicator will indicate the Variable Format (Field #0100) of the Transmission (TRANA) Record. In this format, the data field is preceded by the applicable field identification number shown in specific record layouts. The field identification number is enclosed within square bracket field delimiters ([]).

NOTE: Variable and Fixed data should not be submitted in the same transmission.

NOTE: The Record Control Information must precede any variable format but must not be preceded by Field Numbers.

- (2) The Record Control Information and the Record Terminus Character must remain in Fixed Format. The individual data fields need only contain the significant data (i.e., no leading zeros or trailing blanks).
- (3) **IMPORTANT: THE FOLLOWING THREE CHARACTERS** left bracket "[", right bracket "]", and pound sign or hash mark "#" **ARE RESERVED AS DELIMITERS AND MAY NOT APPEAR AS DATA CHARACTERS.**
- (4) For Variable Length Records the following data field conventions must be followed:
Alphanumeric Fields - Variable Format
 1. Left - justify data in field. Do not enter leading blanks. Trailing blanks may be dropped.
 2. Fields defined as containing literal values must be as specified in the Record Layouts. Only the value of the literal (including embedded blanks) must be entered. Trailing blanks may be dropped.

Numeric Fields - Variable Format

1. Unsigned numeric fields, leading zeros must be dropped, except for date and percentage fields.

SECTION 3 FILE FORMAT

.04 VARIABLE LENGTH OPTION (VARIABLE FORMAT) – (Continued)

2. Signed numeric fields (money amounts): Leading zeros may be dropped. For a positive value, the trailing blank that indicates a gain is dropped. For a negative value in a field that can contain either a gain or loss, the minus sign ("-") must be entered in the last position of the signed numeric field.
3. Signed numeric field that can also contain literal values: Enter signed numeric fields as described above. When entering a literal value, left-justify the field, it is not necessary to enter trailing blanks.
4. Data is "butted up" (or concatenated) to field identifier with no intervening spaces.

NOTE: The Byte Count must include the four character Byte Count field, the record sentinel field and all left/right brackets including the field numbers.

(5) Statement and Summary Records - Fixed Format

Because the individual data fields of the Statement and Summary Records are not keyed to Field Sequence Numbers, all the data fields must be formatted as fixed length fields, so the data will appear in the correct positions. If a field contains no data, it must be blank-filled or zero-filled.

When transmitting in fixed format, each Statement and Summary Record will begin the Record Control Information (Byte Count and Start of Record Sentinel fields) in the same fixed format as shown in the Record Layouts. This is followed by the opening square bracket field delimiter ([), the Record ID, the data fields formatted as fixed length fields, the closing square bracket field delimiter (]), and the Record Terminus Character (#).

See SECTION 4 for Statement Record information.

SECTION 4 TYPES OF RECORDS

.01 TRANSMISSION RECORD (REQUIRED)

The first record on each file must be the Transmission (TRANA and TRANB) Record that will identify the Transmitter, the file format and the specific file being transmitted. The Transmitter is the firm transmitting directly to the IRS.

.02 TAX RETURN RECORD (Form 1041) (REQUIRED)

The second record is the Return Record. Each tax return must start with a Form 1041 Page 1 and followed by a Form 1041 Page 2, 3 and 4.

.03 SCHEDULE RECORD

If Schedule Records are included in the return they should follow the Form 1041 return and be the second series of records. Each Schedule Record within a Form 1041 contains a Schedule Occurrence Number (Field #0005 for page 1). The Schedule Occurrence Number increments by one for each succeeding schedule. If a return contains several Schedules C and Schedules F, the Schedule C Schedule Occurrence Number would begin with 0000001 for both pages, incremented by one for each succeeding Schedule C. The first Schedule F Schedule Occurrence Number would also begin with 0000001 on both pages 1 and 2 and would also be incremented by one for each succeeding Schedule F (i.e., 0000002, 0000003, 0000004, etc). Each schedule page should appear in ascending alphabetical order by schedule type. For each schedule page filed the appropriate summary count should be incremented.

.04 FORM RECORD

If Form Records are included in the return they should be the third series of records and should follow the schedules if present. Each form record within a Form 1041 return contains a Form Occurrence Number (Field #0005). The Form Occurrence Number increments by one for each succeeding form. If a return contains several Forms 4562 and Forms 4684, the Form 4562 Form Occurrence Number would begin with 0000001 for both page 1 and 2, incremented by one for each succeeding Form 4562. The first Form 4684 Form Occurrence Number would also begin with 0000001 on both pages 1 and 2 and would also increment by one for each succeeding Form 4684 (i.e., 0000002, 0000003, 0000004, etc). Forms must be in ascending numeric sequence order.

SECTION 4 TYPES OF RECORDS

.05 STATEMENT RECORD - (STMnnn)

- (1) Statement Records are the series of records after Returns, Schedules, Forms and Payment Record (if applicable), and can be used only where the Record Layout specifies "**STMbnn**". Statement Records are only used WHEN:
 - a. The number of data items exceeds the number that can be contained in the Field provided on the electronic form or schedule. Data must be provided on a separate Statement (STM) Record; or
 - b. A statement of explanation is necessary under certain conditions (REQUIRED)
- (2) An optional statement (marked with an asterisk "*" sign in the record layout) or a required statement (marked with a commercial at sign "@" in record layout) will contain at least one statement line record if corresponding fields contain significant data, otherwise the fields should contain blanks.
- (3) All Statement Records must be in Fixed Format.
- (4) The first 55 characters of a statement record are a combination of specific data and reserved fields. The record begins as: 0136, followed by ****. The total bytes for each line must equal 136.
- (5) Each line of a statement must contain the EIN of the primary taxpayer and is considered a record itself.
- (6) The Data Record field begins at position 56 and continues for 80 positions through position 0135. All 80 positions must be populated. The record concludes at position 0136 with the Record Terminus character.
- (7) Each Statement Record is given a sequential number from 001-96. Statement References 97, 98, and 99 are for Schedules D,J, and K-1, respectively. See Reject Code 296. References to statements on the tax return must be in ascending numeric sequence and must be referenced in the same sequence as they appear on the forms and schedules.

NOTE: Although Statement Record reference numbers must be in ascending sequence, they do not have to be in consecutive numerical sequence.
- (8) Each Statement Record may have up to 99 pages and each page may consist of 50 lines per page.

SECTION 4 TYPES OF RECORDS

.05 STATEMENT RECORD - (STMbnn) – (Continued)

- (9) The 80 character literal description of data corresponding to any Statement Record within the return, containing non-tabular data (e.g. Field #0380 in Form 1041), will begin with line 1. Data should appear left justified as a continuous print line. The same statement may be continued with additional lines, consecutively numbered, until a maximum of 50 lines have been formatted for the first page or the end of the information needed to be formatted as a statement has been reached, whichever comes first. If additional lines are needed to complete a statement, an additional page with a maximum of 50 lines may be formatted continuing with the line numbering sequence starting with line one.

- (10) The Statement Record with tabular data may contain column headings (tabular column titles) spaced with the headings as they would appear on the printed form. If the statement data does not require tabulation, free format is allowed.

SECTION 4 TYPES OF RECORDS

.06 SCHEDULE K-1 (Form 1041) STATEMENT RECORD - (STMb99)

Statement (STMb99) – The Statement Record Literal for Schedule K-1 (Form 1041) must be written as STMb99.

Free form Statement Record for Schedule K-1. The Statement Record for a Schedule K-1 is used in place of paper attachments to the Schedule K-1. There is only 1 statement (STMb99) per Schedule K-1. The Schedule K-1 sequence range is 0000001-9999999. Statements Records and the Schedule K-1 must have the same sequence number and Employer Identification Number (EIN). A Schedule K-1 Statement Record (STMb99) must trail the corresponding Schedule K-1. The Statement Record (STMb99) for Schedule K-1 page 1 must trail the corresponding Schedule K-1 page 1. Each Statement Record may have up to 99 pages and each page may consist of 50 lines per page.

Example: (STM099)

Schedule K-1	Page 1	00-0000000		Sequence 1
STMb99	Page 1	00-0000000	LN 1	Sequence 1

Schedule K-1	Page 1	00-0000000		Sequence 1
STMb99	Page 1	00-0000000	LN 1	Sequence 1
STMb99	Page 1	00-0000000	LN 2	Sequence 1

Note: Statement Records (STM099 and STM100) may have up to 999 pages with 50 lines per page.

.07 PREPARER NOTE EXPLANATION

The preparer record is to provide additional voluntary information related to the tax return but not required to be attached to the return.

SECTION 4 TYPES OF RECORDS

.08 ELECTION EXPLANATION

The election explanation record can be used when the taxpayer makes an election for certain tax treatment, status, exception or exemption based on an instruction for the tax form or in a related tax publication when there is no official IRS form designed for that purpose.

.09 REGULATORY EXPLANATION

The regulatory explanation can be used when the taxpayer cites a specific regulation for certain tax treatment, status, exception or exemption when there is no official IRS form designed for that purpose.

.10 SUMMARY RECORD (REQUIRED)

The Summary Record or Schedule K-1 Summary Record is the final record for each Form 1041 tax return. This record will contain filer identification data; counts of the schedules, forms and statements included in one return; and indicators for paper documents that are attached to Form 8453-F.

.11 RECAP RECORD (REQUIRED)

The RECAP Record is the final record in a return file. Fields in this record cross-reference the transmitter's information from the first record of the Transmission (TRANA and TRANB) Record. The RECAP Record contains a field that specifies the Total Return Count (Field #0030) for all the records submitted within the transmission.

Note: The Preparer Note, Election Explanation and Regulatory Explanation Records are allowed a maximum of 20 pages and 4,000 characters per page.

SECTION 5 TYPES OF ACCEPTABLE CHARACTERS, ETC.

ALERT! The rules for assigning the name control have changed significantly for trusts that applied for their Employer Identification Number (EIN) via the INTERNET. **SEE below for more information.**

The following information is provided to assist Fiduciaries in determining the correct name control for electronically filed Form 141 returns when the information is not indicated in the Fiduciary's files or otherwise is not readily available.

TRUSTS that received their EIN via the **Internet** must use the same rules as corporations when determining their correct Name Control. The IRS Internet computer program assigns the first four characters of the ***first name*** of the trust as the name control, ignoring leading terms such as "...Trust for...", etc., and selects the first four characters of first name of the individual, organization, etc. This is a departure from procedures used for EIN applications for trusts that were filed on paper.

Employer Identification Numbers for Trusts that were assigned via completion of an Internet application begin with either 20 or 26, i.e. 20-nnnnnnn. Also, IRS notice CP 575B is used to notify an applicant of the EIN assigned to the entity named in the application and includes a tear-off tab that references the Name Control assigned to the EIN. The Name Control should also appear at the top of the second page. In the following example, NAME represents the Name Control.

(IRS USE ONLY) 575B 10-31-2008 NAME B 9999999999 SS-4

Trusts that applied for their EIN via a paper application i.e. form SS-4 were assigned name controls using the first four characters of the ***last name*** of the trust. Please refer to the following examples to determine your correct name control when completing the entity section of your electronic form 1041.

The procedures for assigning the name control for an Estate has not changed.

We encourage you to participate in BATS testing to ensure your returns reflect the correct EIN/Name Control match when you file your production returns. BATS testing begins December 1, 2008.

SECTION 5 NAME CONTROL, continued

.00 Name Controls in General:

- The Name Control consists of up to four alpha and /or numeric characters.
- The ampersand (&) and hyphen (-) are the only special characters allowed in the Name Control.
- The Name Control can have less but no more than four characters.
- **Note:** Do not include “dba” (doing business as) or “fbo” (for benefit of) as part of the Name Control.

04. ADDRESSES

1. Words may be abbreviated, using the standard abbreviations in Section 1, unless the word is a proper name. See item .07 for a more detailed list.

EXAMPLES

ENTER AS

South Court Street

S COURT ST

Circle Drive

CIRCLE DR

Lane Building

LANE BLDG

Northeast Street

NORTHEAST ST

Third Street

THIRD ST

3 Ave.

3RD AVE

2. Do not use "#" symbol, "No.", or "Number" as a prefix to a house, apartment, route, or P.O. Box.
3. Always add st, nd, rd, th, to a numbered street or avenue.

EXAMPLES: 1 = 1ST; 2 = 2ND; 3 = 3RD, etc.

4. Enter 1/2 as 1/2 (no blanks).
5. For a military overseas address, enter the letters "APO" or "FPO" in the first three leftmost positions of the City Field.
(See Exhibit for list of valid APO/FPO City/State/Zip Codes).
6. When it is necessary to abbreviate the street address data, see Section 1 for the recommended abbreviations.

05. CITY

The City Field will be invalid if it contains characters other than alpha or blank for cities that are not foreign. (The only special character allowed is the blank, but it must never be the first character). If the name of a city contains two words or more, only one intervening space is allowed between consecutive words (e.g., New York).

SECTION 5 TYPES OF CHARACTERS – (Continued)

Special Cases for Special Fields – (Continued)

.06 STATE

The State Abbreviation must be alpha and consistent with the standard state abbreviations issued by the Postal Service. **(See Pages 85 - 87 for the standard Postal Service State Abbreviations, and Page 87 for the valid City/State/Zip Code combinations for military personnel with an overseas address).** The abbreviations must be used for the State Abbreviation field and must correspond with the valid range of the three high order zip code digits for each state.

NOTE: For Foreign Addresses enter a period and a blank (".b") in the State Code field on the Schedule K-1 (Form 1041).

.07 ZIP CODE

Zip Code should be left justified. If there are only 5 zip code characters, the last 7 remaining digits may be either blank or zero-filled. If there are only 9 zip code characters the last 3 remaining digits may be either blank or zero-filled. Zip Codes must be within the valid range for that state.

SECTION 6 ACKNOWLEDGEMENT FILE COMPONENTS

.01 ACKNOWLEDGEMENT FILE COMPONENTS

1. Every transmission will be acknowledged by the return of an Acknowledgement File (ACK File) to the transmitter. The Acknowledgement File identifies which returns have been accepted, rejected, or identified as duplicates. The Acknowledgement File will be available from the IRS service center to the Transmitter within **two workdays** from the original transmission. The Acknowledgement File must be retrieved before sending a return file transmission.
2. If the entire transmission is rejected **by the Unisys programs**, the ACK File will contain the following:
 - a. The original transmitter records (TRANA and TRANB).
 - b. One ACK Record Set consisting of an ACK Key Record with a “T” in the Acceptance Code Field, and one ACK Error Record containing all transmission reject errors related to this transmission.
 - c. The RECAP Acknowledgement Record (ACK RECAP Record) with fields pertaining to accepted and rejected returns zero-filled.
3. If the **transmission is accepted**, the Acknowledgement File will contain the following:
 - a. Next, an Acknowledgement Record (ACK Record Set) is sent for each recognizable return transmitted.
 - b. Next, the RECAP Acknowledgement Record (ACK RECAP Record), which is the original RECAP Record updated with counts of the total accepted, duplicated, rejected returns, and IRS computed return count.
 - c. Finally, the FEPS generated Acknowledgement File Name containing an ETIN and an IRS generated sequence number.

SECTION 6 ACKNOWLEDGEMENT FILE COMPONENTS

.01 ACKNOWLEDGEMENT FILE COMPONENTS – (Continued)

4. The acknowledgement of a partnership return is the ACK Record Set. An ACK Record Set consists of one ACK Key Record for an accepted return, or one ACK Key Record followed by up to 12 ACK Error Records for a rejected return.
 - a. The ACK Key Record contains information to identify the return it represents, plus a field to indicate how many (if any) ACK Error Records follow. See the Acknowledgement Key Record Layout for the Values of the Acceptance Code.
 - b. If present, each ACK Error Record will contain data defining the Form Record Number, the Form Occurrence for multiple occurrences of forms or schedules, the Field Sequence Number, and the Error Reject Code describing the specific error encountered – for up to eight unique errors.
5. Any tax return with an “**A**” in the Acceptance Reject Code Field has been accepted as a filed tax return and will be processed in the same manner as a return submitted as a paper document. This does not imply that the return will pass all IRS Service Center validity checks or post to the IRS Master File without delays.
6. If an ACK KEY Record contains a “**R**” in the Acceptance Code Field, the return has been rejected due to a fatal error involving the return format, internal consistency, or data errors in a key field, and must be corrected and resubmitted to the IRS to be considered as a filed return.
7. If an ACK KEY Record contains a “**D**” in the Acceptance Code Field, the return has been identified as a duplicate record, (i.e., a return record has previously been transmitted and accepted for the Primary EIN) or 2 or more returns with the same Primary EIN have been submitted on one transmission.
8. **Up to 96, three –position, Reject Codes** may be furnished to the Electronic Filer on the ACK Error Record(s). Filers should use these Error Reject Codes to determine the source of the error causing the return or transmission to reject. Error Reject Code “999” is generated if more than the maximum number of reject conditions (96) are identified.
9. Error Reject Codes and references to validation criteria related to the errors are listed in SECTION 7. Filers should use this information to resolve reject conditions. When a condition cannot be resolved with the information provided, the filer should contact the Electronic Filing Unit at the Ogden IRS Center for assistance at (866) 255-0654.

SECTION 6 ACKNOWLEDGEMENT FILE COMPONENTS

02. RECEIVING THE ACKNOWLEDGEMENT FILE

1. After the FEPS has verified that the transmitter is an authorized user and after a VALID logon, the following messages are sent from the FEPS back to the transmitter:

ARE YOU READY TO RECEIVE ACKNOWLEDGMENT FILE(S) - (Y/N)? [N]

NOTE: The default is N, to receive acknowledgment files, you must enter "Y" or "y", followed by carriage return "<cr>" to override. If not, you will be disconnected because it is a requirement of IRS e-file to pick up ACK Files timely. The next time you logon, you will be sent a Communications Error Acknowledgment File with the following message:

TRANSMITTER WAS NOT READY TO RECEIVE ACKNOWLEDGMENT FILE

2. If an Acknowledgment File (Ack File) for a previous transmission of electronic returns or any Communications Error Acknowledgment Files from a previous aborted transmission is ready, it will be transmitted from the FEPS to the filer before any new returns can be transmitted to the Service. Be aware of multiple ACK Files.
3. If the Acknowledgment File is not received within two workdays, or if acknowledgments are received for returns which were not transmitted on the designated transmission, immediately contact the Electronic Filing Unit Help Desk at the Ogden IRS Center for assistance at (866) 255-0654.
4. The transmitter should match the Acknowledgment File back to the original file transmitted by using the IRS-assigned file name, a combination of ETIN and sequence number. If no ACK File is received, call the Help Desk to be sure that there is not a processing delay. Any electronically transmitted return which is not acknowledged by the Service has NOT been accepted for processing, and must be resubmitted and acknowledged as accepted before it is considered a filed return.
5. When a return has been rejected after three attempts, contact the Electronic Filing Unit Help Desk at the Ogden IRS Center for assistance.
6. **NOTE:** If using XMODEM and any other YMODEM protocol, the Acknowledgment Files are concatenated within a single transmission. The receiver must name the file and must look for each RECAP Record to find each Acknowledgment File.

SECTION 6 ACKNOWLEDGEMENT FILE COMPONENTS

02. RECEIVING THE ACKNOWLEDGEMENT FILE – (Continued)

7. **NOTE:** If using YMODEM-BATCH (FTPI “y” or “Y”), then the Acknowledgement Files are sent separately within the transmission. Block zero (“0”) identifies the filename. Data is transmitted starting in Block one (“1”) up to Block “255” and then rolls to Block “0”. The last block for the file is padded with “Ctrl Z” characters. The next transmission packet should be the End of Transmission (EOT) character. If there is another file, the next block, Block “0” will contain the next filename. Otherwise a Block “0” without a filename will be followed by the EOT character.

8. **NOTE:** If using ZMODEM or YMODEM Batch, Acknowledgment Files are sent separately within the transmission, with “zfile” and “eof” in between each file, with a “zfin” at the end of all files. The IRS system will supply the file name (ETIN plus sequence number) to the Transmitter at the end of the “Successful Completion” message.

.01 GENERAL DESCRIPTION

- (1) The tax return data must be placed into a format for transmission as specified by the IRS and the State.
- (2) If the federal tax return is rejected due to error conditions specified in Publication 1438, the combined return will be rejected in its entirety. If the error(s) is of such a nature that it can be corrected and the return(s) processed, the combined return may be retransmitted to the IRS computing center. The transmitter may elect to retransmit the Federal tax portion of a rejected return and then file the state return using state tax paper forms.
- (3) After the receipt acknowledgment has been provided to the transmitter, the IRS is responsible for making the accepted return available to the state agency. Once the State agency has successfully completed the transmission session and received the return, the responsibility for data integrity is that of the State agency. Should subsequent errors of any type be detected during State processing, they are resolved between the State agency and the fiduciary using normal State paper procedures.
- (4) Form 8821, Tax Information Authorization is no longer required to participate in the Federal/State e-file program.

(5) Requirements for Electronic Filing

In order to file a state electronic Fiduciary Income Tax Return the following conditions **must** be met.

1. The state return must be electronically filed with the federal return through the Tennessee Computing Center.
2. The return must be filed between January 26, 2009 and October 20, 2009.
3. When preparing electronic returns, fiduciaries may elect to have their overpayments:
 - a. applied to their estimated tax for the next tax year,
 - b. sent to them in the form of a refund check, or
 - c. split: part applied to their estimated tax for the next tax year, and the remainder issued in the form of a refund check.

(6) **Exclusions from Electronic Filing**

Returns meeting **any** of the following criteria may not be filed electronically:

1. amended returns,
2. returns filed for a tax period other than January 1, 2007 through December 31, 2007,
3. returns for part-year residents of a state, or cities associated with that particular state,
4. returns reporting liabilities for nonresident earnings tax for cities associated with that particular state,
5. returns for decedents with Social Security Numbers in the following ranges:

000-00-0000 through 001-00-9999

691-00-0000 through 699-99-9999

6. returns with Power of Attorney currently in effect in which the refund is to be sent to a third party, or
7. returns with any correspondence requesting special consideration or procedures.

.02 RETURN SEQUENCE ORDER

The State return Header and Attachments must be received immediately following the Federal return and preceding the Summary Record.

efileD is used for **Production** returns that are processed at ECC-MTB

efileB is used for **Test** returns that are processed at ECC-MEM

efileC is used for **Production** returns that are processed at ECC-MEM

Note: See the data communication section of the appropriate file specifications at www.irs.gov.

Questions or problems should be directed to the e-Help Desk at 1-866-255-0654 (toll free), or e-mailed e-helpmail@irs.gov.

DATA COMMUNICATION

Electronic Filers will transmit over the Public Switched Telephone Network or through the internet to the Front End Processing System (FEPS), also known as Electronic Management System (EMS) located at the Enterprise Computing Center (ECC) at Memphis, Tennessee and Martinsburg, West Virginia.

HISTORICAL NOTE: In 1996, IRS began phasing in a UNIX-based Front End Processing Subsystem (FEPS), also known as the Electronic Management System (EMS), at the Enterprise Computing Center (ECC) at Memphis (formerly known as Tennessee Computing Center (TCC)) to eventually replace all of the IBM Series/1 Data Communications Subsystem (DCS). In processing year 1997, the Tennessee Computing Center (TCC) replaced the Series/1 DCS with the new FEPS.

In 1997, the Austin Service Center (AUSC) also began phasing in the FEPS and in 1999 phased out the IBM Series/1. Beginning with PATS 1999, the IBM Series/1 mini-computers were retired from Andover (ANSC), Cincinnati (CSC), and Ogden Service Centers (OSC). Instead of installing the new FEPS in these centers all sites began using the FEPS in the ECC at Martinsburg, WV and Memphis, TN.

DATA COMMUNICATION

After pre-processing on the FEPS, the returns will be routed to their appropriate UNISYS machines at the ECC located at Martinsburg. All inquiries regarding transmission, rejects, problems, and BATS should be directed to OSPC by calling the toll-free e-Help Desk number 1-866-255-0654.

NOTE: Transmitters who elect to use high-speed lines or expect to handle a large volume of electronic returns may request to lease their own dedicated line(s) at either the ECC located at Martinsburg. They must arrange to lease and install the lines and purchase modems or routers at both ends. See Appendix C – Digital Service Information.

NOTE: Transmitters who wish to file through their Internet Service Provider (ISP) must acquire e-file software that incorporates Secure Socket Layer (SSL) with a telnet/s protocol and the interface to the IRS gateway to the FEPS. See Appendix C – Internet Service information.

NOTE: The FEPS uses a menu driven interface. The IRS systems are designed to handle large volume transmissions. The practice of transmitting many small batches saturates the indices and degrades the systems. It is recommended that Internet transmitters should file no more than 500 returns per transmission in case the session terminates prior to completion. If fewer than 500 returns are to be transmitted, it is recommended these returns be filed not more than once per drain. (See processing schedule on www.irs.gov)

Dedicated, leased line transmitters may file up to 10,000 returns per transmission (Return Sequence Numbers 0000-9999); **if fewer** than 10,000 returns, the IRS recommends filing once per drain. Peak filing occurs around the "drain" times, which are posted on the Electronic Filing Bulletin Board System and the e-file professional page at www.irs.gov.

(859) 292-0137 – **not** a toll-free call)

To assist transmitters in scripting automated logins and transmissions, see Appendix F.

NOTE: Please note that additional text has been added throughout which incorporates information retrieved from the Trading Partners Users Manual.

DATA COMMUNICATION

.01 IRS Front-end Processing Subsystem (FEPS)

1. FILE TRANSFER PROTOCOLS CHARACTER CODE AND FILE COMPRESSION

- a. File Transfer Protocols
 - (1) FTP (with special permission – see note above)
 - (2) XMODEM-1K
 - (3) YMODEM-Batch
 - (4) ZMODEM

Transmitters may use any telecommunications software that is compatible with the above file transfer protocols.

- b. Character Codes
American Standard Code for Information Interchange (ASCII)
- c. File Compression
COMPRESS
GZIP (Freeware available from www.gzip.org)

NOTE: IRS does not support WINZIP or PKZIP.

2. TRADING PARTNER/TRANSMITTER INTERFACE (TPI)

The Trading Partner/Transmitter Interface (TPI) of the Front-End Processing Subsystem (FEPS) has two components: the Operating System Interface (OSI) and the Electronic Filing Systems Interface (EFSI). The OSI and EFSI prompts and messages are in upper/lower case. **The delete key (if the TP's terminal emulation software sends X'7F') or simultaneously entering the Control ("Ctrl") and Backspace keys** may be used to correct a mistake while entering the login identification and password, (OSI interface). After successful login, the transmitter can use the Backspace key (also generated by simultaneously entering the Control ("Ctrl") and "h" keys), (EFSI interface). All responses may be in upper or lower case EXCEPT the **login identification and password**, which are case-sensitive and must be entered with the exact case as it appears in the letter with your password and in the Transmitters Profile Data Base (TPDB).

All responses are echoed back except the password. On default prompts, the cursor will be to the right of the **colon and blank** (": ").

DATA COMMUNICATION

.01 IRS Front-end Processing Subsystem (FEPS)

3. TRANSMITTER PROFILE DATA BASE (TPDB)

The Transmitter Profile Data Base (TPDB) keeps track of the sequence number for the ETIN to date. The sequence number is in the Acknowledgement Reference File Name on the FEPS. The Acknowledgement Reference File Name is composed of MMDDnnnn. The 4-digit sequence number represents the number of the transmissions to date for that ETIN. The Acknowledgement Reference File Name as well as ETIN, Julian Day and 2-digit sequence number for the Julian Day, and FEPS-assigned Global Transaction Key (GTX Key) are linked to your Acknowledgement files and can be searched by the e-Help Desk Staff Assistors to research the status of a transmission.

4. ASYNCHRONOUS COMMUNICATIONS TRANSMITTER INTERFACE

After dialing the assigned telephone number to the FEPS, the transmitter must first enter the carriage return <cr> character, which typically can be generated by simultaneously entering the Control ("Ctrl") and "m" keys. This alerts the Operating System to transmit an ASCII login prompt.

NOTE: Turn off call waiting (*70) before logging onto the FEPS to avoid aborted sessions. **(Check with your phone company to verify use of *70 to disable call waiting).**

5. EXAMPLES

In the examples below, boldface text indicates information sent by the transmitter. The system will echo transmitter input and send a carriage return "<cr>", followed by line feed "<lf>" after receipt of a "<cr>" from the transmitter.

6. SUSPENDED TRANSMITTER

A suspended transmitter will be allowed to log into EMS to continue to receive Acknowledgements, but will not be allowed to transmit. See Section 1-Data Communication .01.11.a.

DATA COMMUNICATION

.01 IRS Front-end Processing Subsystem (FEPS)

7. VIRUS DETECTION PROCEDURES FOR E-FILED TRANSMISSIONS FOR TRADING PARTNERS

- a. The Front-End Processing System (FEPS) will scan every transmission.
- b. If a virus is detected, FEPS will quarantine the file and immediately put a transmission Suspend Indicator on the Trading Partner (TP)'s profile.
- c. While online, the TP (transmitter) will see "SUSPENDED", but will be permitted to pick up Acknowledgement Files.
- d. The FEPS will create a Communications Error Message in a Communications Error Acknowledgement File, which will be in XML format, with the message VIRUS DETECTED and the name of the virus.
- e. The next time the TP logs in, the TP will receive this ACK file, but will not be able to transmit. The TP can continue to pick up all ACK Files.
- f. TP must remove infected data and call the appropriate e-Help Desk (e-HD) at 1-866-225-0654 (toll free) when ready to re-transmit.
- g. The e-HD will remove the Suspend Indicator so that the TP can re-transmit the file and begin transmitting new files.
- h. If another virus is detected, everything above will happen again.

DATA COMMUNICATION

.01 IRS Front-end Processing Subsystem (FEPS)

8. LOGON VALIDATION SPECIFICATIONS

a. Transmission Inactivity

Any period of inactivity for 60 seconds will cause the line to be disconnected. It is assumed that the line is bad or that there are problems in transmission, so the line is disconnected to prevent the transmitter from being charged by the long-distance carrier for an inactive open line.

b. Changing File Transfer Protocol Indicator (FTP)

The File Transfer Protocol indicated by the Trading Partner is shown by menu item number 3 in brackets. If the Trading Partner has not specified a protocol, Z-modem is assigned as a default protocol. A Trading Partner can choose menu Item 3 to change protocol.

c. Changing File Compression

The FEPS assigns by default no compression on the file transfer. If the Trading Partner wants to use UNIX compression or GZIP compression, this can be selected from menu Item 4. See Exhibit 4-11.

9. TRADING PARTNER (1040, 1041 and ETD) SESSION EXAMPLE

The following discussion describes how a Trading Partner (TP) who files Forms 1040 and ETDs will interact with the FEPS. The figures are formatted for a word processing document and do not necessarily display the exact spacing that is used by the FEPS.

Note: Password rules can be found in Appendix G.

The following discussion describes how a TP logs on to the system. When a TP connects to EMS, the "Authorized Use" banner shown in Exhibit 3-1 is displayed.

If the TP correctly enters his/her EMS Login ID and password, there are several possible next steps:

- The TP may be asked to register his/her Shared Secrets as described in Section 9d
- The TP may be asked to change his/her password as described in Section 9e
- The official use banner and TP Main Menu may be displayed as described in Section 9h, if there are more than seven days until the TP's password expires
- The log on process may continue as described next in this section if the TP's password expires in seven days or less

b. Successful Login Password Change Required

If the TP's password will expire in seven days or less, then the message shown in Exhibit 3-3 is displayed and processing continues. (**Note:** "N" is replaced by the number of days remaining until the password must be changed.) Once the password has expired (90 days after the last password change) the TP must change his/her password as described in Section 9e.

c. Unsuccessful Logon

After each unsuccessful login attempt due to the TP entering an incorrect EMS Login ID or password, the system displays the message shown in Exhibit 3-4.

Login incorrect

Exhibit 3-4 Login Incorrect Message

After three consecutive unsuccessful login attempts, the TP is disconnected. After three consecutive unsuccessful attempts with a correct EMS Login ID and an incorrect password (in one or more sessions), the TP's account is disabled. After the next log on attempt, the TP may then use his/her Shared Secrets to re-enable the account and reset his/her password as described in Section 9f.

If the TP's account has been disabled prior to the TP's current session, the processing will continue as described in Section 9f. This would happen after a TP's account has been inactive for 45 days on a PY2009 system or the TP previously failed to provide the correct password in his/her last three consecutive attempts.

d. Registration of Shared Secrets

There are times when a TP correctly supplies his/her EMS Login ID and password, and then is required to register his/her Shared Secrets before proceeding. These include:

- The TP is a new user and the TP logs in to the system for the first time
- The TP is an active PY2008 user and logs in to the system for the first time during the PY2009 filing season
- The password was reset by the EMS System Administrator upon request from the TP

Initially, the TP is prompted to register his/her Shared Secrets (ETIN, EFIN, zip code, phone number, and secret phrase). The TP is prompted to enter the Electronic Transmitter Identification Number (ETIN) as shown in Exhibit 3-5.

If this is the third unsuccessful attempt to enter a valid ETIN, the TP is disconnected.

If the TP's responses have met the rules for Shared Secrets, the Shared Secrets are stored and the message shown in Exhibit 3-17 is displayed. After the TP successfully enters his/her Shared Secrets, processing continues as described in Section 9e. with prompting the TP to enter his/her new password if one of the following conditions exist:

- The TP is a new user and the TP logs in to the system for the first time
- The password was reset by the EMS System Administrator upon request from the TP
- The TP's password has expired

Otherwise, if the TP is an existing user and successfully registers his/her Shared Secrets, Main Menu processing continues as described in Section 9h.

Registration of Shared Secrets Successful.

e. Changing Password

A TP is required to change his/her password before proceeding to the Main Menu when one of the following conditions occurs:

- The TP's current password has expired after 90 days
- The TP successfully completed registration of Shared Secrets after the TP's password was reset by the EMS System Administrator
- The new TP successfully completed registration of Shared Secrets
- The TP did not successfully change his/her password when required during his/her previous log on session
- The TP's account was disabled and the TP used his/her Shared Secrets to authenticate and re-enable the TP's account

When any of these situations occur, the TP is prompted to enter a new password and to confirm his/her new password by re-entering it as shown in Exhibit 3-20.

However, if the TP's responses to the password prompts do not meet the rules for changing the password, then an error message is displayed and the TP is prompted again as shown in Exhibit 3-20 to enter his/her password. A TP is given three tries to change his/her password.

If the TP does not enter the same password in response to the "Enter new password" and "Re-enter new password" prompts, then the password is not changed and the message shown in Exhibit 3-22 is displayed. The possible file transfer protocols and compression method values are identified in Section 4 where the "File Transfer Protocols" and "File Compression Methods" menus are discussed.

It should be noted that a TP's initial compression method is "NONE." Since EMS does not auto-sense compressed files, a TP must select a compression method before submitting compressed files. If the TP has selected a compression method, his/her acknowledgment files and Transmission Status Report are compressed and returned using the selected compression method.

At any prompt, if the TP does not respond in 60 seconds the following message is displayed: "DISCONNECTING FROM EFS." and the TP is disconnected.

Note: The two supported compression methods are gzip (a freeware program available at www.gzip.org) and compress (a Unix compression utility). If the TP chooses 3) GZIP or 4) COMPRESS and sends a file that was compressed using PKZIP file format 2.04g, EMS is able to decompress the file. EMS Ack files that are returned to the TPs are named based on the compression method chosen. For example, a TP sends in a file named abc.zip compressed with PKZIP 9 and chooses option 3) GZIP. The Ack file returned will have the extension beginning with .GZ. See Exhibit A-1 in Appendix A for the complete list of possible Ack file names. PKZIP and WINZIP will then decompress these files successfully. PKZIP 9 and WINZIP 9 were both successfully tested with EMS. EMS does not support the use of PKZIP's new encryption capabilities because of the "key management" issue.

APPENDIX A

GTX Key and Acknowledgment File Name Formats

GTX KEY AND ACKNOWLEDGMENT FILE NAME FORMATS

The format of the GTX Key is SYYYYMMDDhhmmss.xxxx where S is the processing site identifier, YYYY=year, MM=month, DD=day, hh=hour, mm=minutes, ss=seconds, and xxxx=milliseconds. The GTX Key identifies the system (site identifier) that received the transmission and that will provide the transmission's acknowledgment. The site identifiers are:

- D Test system at Enterprise Computing Center at Memphis, TN (ECC-MEM)
- E Test system at Enterprise Computing Center at Martinsburg, WV (ECC-MTB)
- T Production system at ECC-MEM
- U Production system at ECC-MTB

When the Individual Master File (IMF) Participants Acceptance Testing (PATs) begins, the assigned site identifier will either be 'D' or 'E' for test transmissions. When Production filing begins, the assigned site identifier will either be 'T' or 'U' for production transmissions.

The format of the ACK File Reference Name is MMDDnnnn where MM month and DD day match the GTX Key. The nnnn number is a 4-digit sequence number generated by the EMS. The ACK File Reference Name is used to generate the acknowledgment file name.

The acknowledgment file can be positive or negative. If the acknowledgment filename ends with ".NAK", then the EMS detected an error in the file submitted by the TP and processing of the file was discontinued.

Based on the TP compression settings, the EMS acknowledgment files will be named as described in Exhibit A-1. Any version of PKZIP or WINZIP that supports the PKZIP 2.04g file format, will successfully decompress ACK files compressed with GZIP or COMPRESS. (Also see the Note on page 25 after Exhibit 4-10.)

Exhibit A-1 Ack File Names

GTX Key and Acknowledgment File Name Formats continued

GTX Key and Acknowledgment File Name Formats continued

Note 1: MM = month

DD = day

nnnn = 4 digit sequence number

MMDD is taken from the GTX Key

nnnn is a 4-digit sequence number generated by the EMS at the time the TP submitted his/her file.

Note 2: GZIP preserves the uncompressed ACK file name (e.g., MMDDnnnn.ACK) in its archive.

Note 3: Compress does not preserve the uncompressed ACK file name.

If a TP submits a file that is given the GTX Key "U20091020154710.0800", the first four digits of the ACK File Reference Name would be "1020". The next four digits would be a sequence number generated by the EMS, e.g., "0001". The ACK File Reference Name would then be "10200001". An EMS error acknowledgment file would be named "10200001.NAK". An acknowledgment from the Unisys system would be named "10200001.ACK". If the acknowledgment file is compressed with gzip it will be named "10200001.GZ". If the acknowledgment file is compressed with Unix compress it will be named "10200001.Z".

Note 4: For State Ack files that are redirected to a TP ETIN, the ack file will have the file extension "Sss" where "ss" is the standard postal abbreviation published in IRS Publication 1346 "Standard Postal Service State Abbreviations and Zip Codes." For example, the file extension "SMD" will be used for an ack file from the state of Maryland. If the State Ack file contains a code that does not appear in Pub 1346, then "ss" will be replaced with "XX". In this case, the file extension would be "SXX".

Note 5: The acknowledgment file names shown in this appendix use upper case letters. These are the names as they appear on EMS. Some file transfer protocols and/or some operating systems may translate the names into lower case.

XML Error Acknowledgment Format

XML ERROR ACKNOWLEDGMENT FORMAT FOR DETECTED VIRUSES

EMS checks all incoming files for viruses. If a virus is detected, EMS returns an error acknowledgment to the TP in XML format. If EMS detects a virus, the TP is placed in suspended status. Should this occur, the TP must contact the **IRS e-Help Desk** to request removal of the suspended status.

Below is the format for the error acknowledgment that is returned to the TP when a virus is detected in the transmission. All TPs receive the XML format acknowledgment, even if the transmission was sent using a different IRS approved format. Note that the second line of the file, the Content-Description contains a plain English description of the problem; therefore, an understanding of XML is not required to interpret the message. The shaded areas contain the GTX key, a timestamp, and the virus name. These values vary for each returned acknowledgment. The remainder of the message is constant.

XML ERROR ACKNOWLEDGMENT FORMAT FOR DETECTED XML THREATS

EMS checks incoming XML files for XML threats. If an XML threat is detected, EMS returns an error acknowledgment to the TP in XML format. The error acknowledgment contains a description of the XML threat. For certain detected threats, the TP is suspended. Should this occur, it will be reflected in the error acknowledgment and the TP must contact the IRS e-Help Desk to request removal of the suspended status.

Two examples follow showing the format for the error acknowledgments that are returned to the TP when an XML threat is detected in the transmission. The first example is an error acknowledgment when the TP is not suspended and the second example is an error acknowledgment when the TP is suspended. Note that the second line of the file, the Content-Description, contains a plain English description of the problem; therefore, an understanding of XML is not required to interpret the message. The shaded areas contain the GTX Key, a timestamp, and the XML threat. These values vary for each returned acknowledgment. The remainder of the message is constant.

EMS COMMUNICATIONS AND ENCRYPTION

EMS can accept tax returns and tax documents via a non-Web-based Internet solution or via dedicated leased lines as described below. Since December 2005, IRS-provided analog and ISDN lines were removed. However, it may be possible for a TP to use ISDN if he/she provides his/her own equipment.

C.1 Internet Service

To use the Internet service, a TP accesses EMS via his/her own Internet Service Provider (ISP) and does not need to have a static IP address. **However, the TP must use Secure Socket Layer (SSL) with Telnet/S layered on top of it.** His/her Telnet/SSL software must conform to the relevant standards:

RFC 854 – Telnet Protocol Specification

SSL 3.0 Specification (<http://wp.netscape.com/eng/ssl3>)

TLS 1.0 Specifications (<http://www.ietf.org/rfc/rfc2246.txt>)

The TP can use one of the following encryption standards, listed in order of priority, using SSL and Telnet/S:

AES 256-bit (FIPS-197)

AES 128-bit (FIPS-197)

TDES 168-bit (FIPS-197)

RC4 128-bit

When the TP connects over the Internet, the IRS system will automatically negotiate the encryption standard so that the highest prioritized standard that is available is used.

The Telnet/SSL traffic must be transmitted to EMS on **Transmission Control Protocol (TCP) Port 992**. The TP may need to configure his/her firewall(s) to allow this traffic to pass through. **This has been the most common cause of failure to connect to EMS through the Internet.** For security reasons, most businesses routinely block traffic on ports not commonly used for security reasons. The TP connects to EMS using one of the following fully qualified Domain Name Service (DNS) names.

**efileA.ems.irs.gov efileB.ems.irs.gov efileC.ems.irs.gov
efileD.ems.irs.gov**

The EMS URL Chart with specific returns and dates, and the processing schedules for draining the test and production transmissions for processing are found on www.irs.gov.

If the TP's software allows him/her to establish concurrent sessions to the same computing center, the TP may submit files over multiple concurrent sessions. However, only one session can retrieve acknowledgment files. TPs should note that FTP is not available as a file transfer protocol when using the Internet service.

Configuring Terminal Emulation Software

A TP may need to provide the following information when he/she is configuring their terminal emulation software.

- **Terminal Name.** Should be something meaningful to the TP. This information is not transmitted to EMS.
- **Terminal Type.** Select a member of the Virtual Terminal (VT) family (e.g., VT100 or VT220).
- **SSL Version.** SSL3. In many terminal emulation packages this is a pull-down menu beside the Destination or Host Name and is not labeled. TLS-1 defaults since it is the latest SSL version but SSL-3 must be chosen.
- **Port 992.** This port number is often filled in automatically by the terminal emulation software if Telnet/SSL is chosen.
- **Destination or Host Name.** One of the fully qualified names listed previously.
- **Destination Host Type.** Unix.
- **User Certificate Mode.** No user certificate is required. However, EMS accepts any certificate from the TP. If the TP wants to send a certificate it can be self-generated.
- **Host Certificate.** EMS sends an Entrust certificate, which the terminal emulation software must accept.
- **Certificate Viewing.** If the TP wants to see the certificates being exchanged and the terminal emulation software supports certificate viewing, then this feature should be turned on.
- **Operating System (OS).** If your terminal emulation software asks for an OS, it is asking about the Trading Partner's system, not the EMS system. Enter the local system parameters upon which the terminal emulation software will be running.
- **Data Characters.** Please specify eight bit data characters if your terminal emulation software does not default to it.

The IRS has tested several terminal emulation software packages supporting Telnet-SSL. Many commercial and open-source packages can also be used as long as they support the Telnet specification RFC 854 and the SSL 3.0 specification. TPs are encouraged to research and evaluate different terminal emulation software packages, which can often be evaluated for free, to verify the connectivity parameters outlined above. **Additional guidance is given in C.3 and C.4**

C.2 Dedicated/Leased Line Service

Use of dedicated/leased line services requires authorization from the IRS. Please contact Darryl Giles at (202) 283-5193, e-mail darryl.s.giles@irs.gov.

All dedicated lines must be encrypted using at least 128-bit encryption provided by a Federal Information Processing Standards (FIPS) approved method. A TP, using the dedicated/leased line service, is responsible for choosing, procuring, and installing his/her cryptographic solution. To determine if a cryptographic solution meets FIPS standards obtain the "NIST Validation List Certification Number and Date" from the solution provider. This information can be verified by checking the **National Institute of Standards and Technology (NIST)** website at <http://csrc.nist.gov/cryptval/>. There are validation lists for each major FIPS Cryptographic Standard. Each list has a sequence number, and lists the manufacturer/supplier, date of validation, name of the implementation, its operational environment, and a further description of other characteristics.

Dedicated/leased line filers must be FIPS 140-x compliant and must send to the IRS annually a NIST certificate for the device they use, which would use Advanced Encryption Standard (AES) or Triple Data Encryption Standard (TDES).

The IRS recommends the use of Internet Protocol Security (IPsec) as the cryptographic solution for the dedicated/leased line service.

The following paragraphs describe the hardware and software necessary to use the digital communication service.

C.2.1 Dedicated/Leased Lines

For a TP to connect over a dedicated line he/she must purchase the circuit. Once the TP's request for **dedicated/leased line** service is approved, the IRS provides him/her with IP addressing and routing information.

C.2.2 Communication Services

Connection to the EMS system using the digital communications services provides the TP with a Transmission Control Protocol/Internet Protocol (TCP/IP) interface. To use this service the TP must have the following:

- A system that supports the TCP/IP protocols.
- The ability to make a Telnet connection from his/her system to an EMS host.

C.2.2 Communication Services, continued

- If the TP plans on using Secure File Transfer Protocol (FTP) for data transfer, his/her system must support an FTP server and have the ability to accept an FTP connection from the EMS. The TP must supply a user logon and password for the EMS system to use when connecting to his/her FTP server.
- A pair of routers capable of supporting communication over the digital circuit procured by the TP.

EMS Communications and Encryption continued

Once the TP establishes a connection using EMS dedicated/leased line services the following capabilities are available.

- Connecting over a TCP/IP link allows a TP to connect to any host available to him/her at the computing center.
- Backup protection. EMS systems have a fail over capability and if there is a system failure a backup system becomes available. However, TPs may need to reconfigure their routers and their communication servers if they have not initially configured them to communicate with the backup system as well as the primary system.
- Transfer of data using FTP. If a TP has a host system that supports FTP, he/she may use this as a protocol to send and receive files to the EMS system. For TPs using this transfer method the only configuration needed is to setup a user account for EMS to use and directories for EMS to use to “get” return files and “put” acknowledgment files. EMS transmits one file for each acknowledgment file available for processing. The file transfers are binary and the “#” hash mark is displayed for every 1,024 bytes of data transferred.
- File transfers over Telnet. If a TP uses TCP/IP to connect to the EMS system, his/her logon to the system is through Telnet. If the TP does not want to use FTP to transfer files, he/she may use another file transfer protocol such as Zmodem over the Telnet session. This capability is currently available in many of the Telnet application programs. The file transfer rate of Zmodem over a Telnet session is not as fast as FTP. See Sections C.3 and C.4 for more details.
- One final aspect of a TCP/IP connection to the EMS is that TCP/IP supports multiple simultaneous connections to the same host or multiple hosts. A TP may submit files over multiple concurrent sessions. However, only one session per host can retrieve acknowledgment files.

C.3 Telnet Options

If the TP uses Zmodem, Xmodem-1K, or Ymodem-batch to transfer files over the Telnet session, to be successful the TP's Telnet program must support connections that allow all eight bits of the data to pass through. This is often accomplished on the Telnet command line as "telnet -8 host". If the TP uses the "telnet -8" method, the screen display may appear distorted and after typing in the TP identification information the systems appears to be hung. If this occurs the TP should terminate his/her responses with a Line-Feed Character. On a standard keyboard, pressing the Control Key and the "j" generates this character. As an alternative to the "telnet -8" option, the TP may set binary mode before beginning a file transfer and unset binary mode upon completion of the transfer.

Most versions of Telnet have a sequence of characters (called an Escape Sequence) that, when encountered by the Telnet program, interrupts the Telnet session. Unless hidden by the TPs terminal emulation software, the TP normally sees a message displaying the Escape Sequence when the Telnet connection is first started. Although it is possible for the TP to have a successful session when an Escape Sequence exists, at some point a file transfer may abort based on its size or the data in the file. For this reason it is recommended that the Escape Sequence be disabled, if possible. The TP should check his/her Telnet documentation to determine how to do this.

EMS Communications and Encryption continued

C.4 Zmodem Options

The most common file transfer software used over the Telnet Session is Zmodem. The package consists of the “sz” command for sending files and the “rz” command for receiving files. As with the Telnet session options described in Section C.3, there are options that may need to be invoked to achieve a successful file transfer. In addition, it is important to note that these options are not necessarily mutually exclusive from the Telnet options. It may be that having a specific Zmodem option set might mean that a Telnet option does not need to be invoked. It is recommended that TPs explore the Zmodem options first. These options are available if the TP is experiencing problems:

- **Zmodem Escape Control Characters.** This option, usually “-e”, will have Zmodem watch for control characters and modify them so that they pass through undetected as control characters. The option is sometimes available on both the “sz” and “rz” commands. Other versions have the -e option available only on the “rz”.
- **Zmodem Binary.** This is another option available on some versions of Zmodem. The TP should check his/her documentation for any option that attempts to make the link transparent to control character sequences.
- **Zmodem Timeout Values.** Within Zmodem there are options for how long to wait for an expected packet of data. The default is normally 10 seconds. In most cases this value should be acceptable. However, the TP should never set these values to wait forever.
- **Zmodem buffer timeout.** There may be times when the timeout values may need to be changed. This can occur with TPs, whose connection to their ISP is through a dial-up line. Because of the buffering ability of telecommunications equipment and the amount of communications equipment usually in place for an Internet connection, the amount of data that can be stored could cause an error. This can happen if a file that is to be transmitted is approximately the same size as one of the buffers present in the data link. The sending program will have completed the streaming of all the data in the file but the receiving side may not have gotten any data yet. If the sending side has its receive packet timeout set too low, it may timeout before the receiver can receive and transmit the packet.

C.4 Zmodem Options, continued

- **Zmodem sliding window.** If this option is not enabled, the sender transmits all of a file without waiting for an acknowledgment. This results in a faster file transfer. However, some of the intermediate communications equipment may store data while it is transferred to the receiver. Sometimes this causes the sender to "get ahead" of the receiver. In this case, the TP may need to enable the sliding window option. This results in intermediate acknowledgments and a slower file transfer. The smaller the value of the sliding window setting the slower the file transfer.
- **Zmodem Debugging.** When testing the TP's Internet connectivity, the TP should become familiar with the debug capabilities of his/her Zmodem software. If the TP experiences problems with the transfer of data, generating a debug file could assist the TP and IRS system support personnel in determining the nature of the problem.
- **Crash Recovery.** EMS does not retain partial files. Therefore, if a transmission to EMS is interrupted, the TP must retransmit from the beginning of the file. For acknowledgment files and state return files, EMS can resume the transmission from where the interruption occurred in the transmission if the TP's software supports it.

EXAMPLES OF TRANSMISSION STATUS REPORTS

This section shows the following examples of a Transmission Status Report:

- Exhibit D-1 Browser View of State Transmission Report (When No Data is Available)
- Exhibit D-2 Text View of State Transmission Report (When No Data is Available)
- Exhibit D-3 Browser View of State Transmission Report
- Exhibit D-4 Text View of State Transmission Report
- Exhibit D-5 Excel Spreadsheet View of State Transmission Report
- Exhibit D-6 Browser View of TP Transmission Report

The Transmission Status Report is returned to the TP within a file that is suitable for display with a Web browser. The file can also be imported into newer versions of Excel as an Excel spreadsheet. The file name is MMDDhhmm_rpt.html where MM=month, DD=day, hh=hour, and mm=minute. If the TP had previously requested Unix file compression, the file name would be MMDDhhmm_rpt.html.Z. If the TP has previously selected GZIP compression, the file name would be MMDDhhmm_rpt.html.GZ. Some file transfer protocols or operating systems may translate the “Z” or “GZ” to lowercase “z” or “gz.” The ACK Reference File Name column on the State and TP Transmission Reports corresponds to the uncompressed ACK File Name described in Appendix A.

Guidelines for Trading Partners Using EMS

GUIDELINES FOR TRADING PARTNERS USING EMS

While the following information is provided primarily for those who use scripts to control interaction with EMS, it is also useful for individuals who login and conduct their sessions “manually.”

1. Use ***pattern matching, not timers***, to control the flow of scripts. Scripts should be able to handle all messages and prompts from EMS, not just the main “retrieve acknowledgment” and “submit a file” paths. See Appendix F for an example of a script that is entirely controlled by simple pattern-matching.
2. If it is absolutely necessary to use a timer when waiting for a message or prompt, then the timer value should not be less than 100 seconds. EMS always sends a response within 100 seconds (worst case) after the last user-interaction (EMS prompt or user response). The timer in the script should function only as a “fail-safe” device in case of unanticipated system behavior.
3. Log off using the “Logoff” menu option on the main menu, instead of simply hanging up. Do not hang up until the “DISCONNECTING FROM EFS” message has been received. This is true for both scripted and human interaction with EMS.
4. When a message is received indicating that EMS is unavailable, don’t try again immediately. Wait at least 10 minutes.
5. Do not login repeatedly when there is no work to do (i.e., no files to submit or acknowledgments to pick up). In most cases, EMS provides a negative acknowledgment within 10 minutes of submission if the file is not accepted for further processing. If EMS has not provided a negative acknowledgment within 35 minutes, the file, except in rare circumstances, has been forwarded to the appropriate tax-return-processing system. For 94X files, which are forwarded immediately to the tax-return-processing system, acknowledgements are available shortly after that system has processed each file. For files that are batched and “drained” at published times, acknowledgments from the tax-return-processing system will not be available for hours.
6. If a TP has multiple concurrent sessions at the same physical site using the same Login ID, only one session will retrieve acknowledgments.

APPENDIX F

Example Script to Pick Up Acks and Send a File

EXAMPLE SCRIPT TO PICK UP ACKS AND SEND A FILE

The following example is meant to illustrate how a script can communicate with EMS using only pattern-matching to control logic flow. The example is for reference only, and is not intended for actual use by trading partners.

This particular script is written in “expect”, designed for a Unix operating system, and takes advantage of “expect’s” ability to specify a set of strings and events to be watched for if there is a failure to match the string that is anticipated. It also assumes that files are to be sent and received using the FTP protocol. A script that instead used the Zmodem protocol, for example, would differ noticeably in those parts of the script that accomplish the actual sending and receiving of files.

Most “expect” commands and syntax appearing in the script are reasonably intuitive, at least for the limited purposes of illustration for which this script is intended. But it is worth mentioning that the command “send” directs output to the telnet session, while the command “send_user” directs output to “standard output”, which is assumed to be directed to a local log file. Lines beginning with “#” are comments.

```
#!/opt/sfw/bin/expect -f $1 $2 $3 $4 $5 $6

EEC Form Identification Error Codes

COMMUNICATIONS ERROR MESSAGES

Below are the Communications Error Messages that will be transmitted from the Electronic Management System (Front-End Processing Subsystem (FEPS) in a Communications Error Acknowledgement File, upon detection of a transmission validation error.

1. **“A VIRUS <Virus Name> WAS DETECTED IN THIS FILE”** -- The FEPS (Front-End Processing System) has detected a virus in a transmission file and will quarantine and not process the file. The TP will be temporarily suspended. The TP must clean up the file and call their appropriate e-Help desk for permission to transmit. Please note that this error Acknowledgement is in XML format.

Below is the format for the error Acknowledgement that is returned to the TP when a virus is detected in the transmission. All TP's receive the XML format Acknowledgement, even if the transmission was sent using a different IRS approved format. Note that the second line of the file, the Content Description contains a plain English description of the problem and an understanding of XML is not required to interpret the message. The shaded areas contain the GTX key, a timestamp, and the virus name. These values vary for each returned Acknowledgement. The remainder of the message is constant.

MIME-Version: 1.0

Content-Description: Notification that transmission file T200303211345.0100 was rejected because it contained a virus

2. **“ACK COUNT IN TRANSMISSION RECAP RECORD DOES NOT MATCH THE COUNT OF ACKS RECEIVED”** -- The FEPS will reject the entire transmission for State acks, if the number of acknowledgements “inner envelopes” does not match The count in Field 0030 of the “outer envelope” RECAP record. *Applicable to State Acknowledgement Transmissions Only.*
3. **“ADDITIONAL TAX DATA AFTER RECAP”** -- The FEPS will reject the entire transmission when data exists after the RECAP record.

7. **“EMS RECEIVED YOUR FILE, BUT COULD NOT PROCESS IT. PLEASE CHECK YOUR FILE AND RE-TRANSMIT.”** -- This error ack is returned in XML format when EMS receives a file, but fails to decompress and process it.
8. **“FIRST RECORD WITHIN INNER ENVELOPE MUST BE ACK KEY AT RECORD nnnnnn”** -- The FEPS will reject the entire transmission if there is no ACK key record as the first record within an inner envelope. *Applicable to State Acknowledgement Transmissions Only.*
9. **“INVALID DCN VALUE DETECTED WITHIN ACK KEY RECORD AT RECORD <n>”** -- The return DCN in Field 0090 of the Ack Key record is not present and the first two digits are not zeros. *Applicable to State Acknowledgement Transmissions Only.*
10. **“INVALID ETIN MISMATCH IN INNER TRANA RECORD AND ACK KEY RECORD AT RECORD <n>”**-- The ETIN in Field 0060 of the inner TRANA record does not match the ETIN in the first five digits of Field 0030 of the Ack Key record. *Applicable to State Acknowledgement Transmissions Only.*

Communication Error Messages continued

11. **“INVALID FORM FORMAT BEGINNING AT RECORD n” -- For ETD transmissions**, the FEPS will reject the entire transmission when a form does not begin with a FRM record (valid Record ID, Form Number and Page Number fields) or does not end with a summary record. In addition, the form record must contain a numeric TIN that matches the TIN in the summary record.

 - a) TRANA record is not equal to 120 bytes in length or contains an embedded pound sign.
 - b) TRANB record is not equal to 120 bytes in length or contains an embedded pound sign.
 - c) RECAP record is not equal to 120 bytes in length or contains an embedded pound sign. The FEPS shall generate an error ACK File. *Applicable to State Acknowledgement Transmissions Only.*
