

ASSIGNED COMPONENT LOCATION GUIDELINES

1. Parent Systems*: Note that some Parent Systems have no components, as they are components for other Parent Systems. They are not removed as Parent Systems since they are already used in the OMS for identifying "Events". New Parent Systems must be added when they occur, i.e. no "Other".
2. Laptops are components of a specific Parent System until un-deployed at which time they become components of LAPTOPS/UN-DEPLOYED.
3. When components arrive at a site (vecierol form) they remain with SPARES/UN-DEPLOYED as a Parent System but update location to the site, i.e., ARCS-1, ARCS-2, etc.
4. From RESET audits components can change from Parent SPARES/UN-DEPLOYED to a deployed Parent System and a specific location, i.e., SKYRAD1, IVAN2, etc.
5. Instruments with components in the field such as Ceilometer will have "deployed" locations such as ARCS-1, ARCS-2, etc.
