

VITAL & HEALTH STATISTICS

Nursing and Related Care Homes as Reported From the 1982 National Master Facility Inventory Survey

Statistics on nursing and related care homes include the number of homes, beds, residents, and nurses, as well as types of ownership, geographic distribution, and level of certification. This report is based on data from the 1982 National Master Facility Inventory Survey.

Nursing and Related Care Homes

by Dorothy Ann Roper, Division of Health Care Statistics

Introduction

This report presents data from the 1982 National Master Facility Inventory Survey, which was limited to nursing and related care homes in the United States. Tables shown in this report include statistics on number of homes, beds, residents, nurses, inpatient days, occupancy rates, admissions, and discharges. These variables are distributed by ownership, bed-size group, geographic region, level of certification, and State.

The National Center for Health Statistics (NCHS) conducted its first NMFI Survey in 1963, followed by surveys in 1967, 1969, 1971, 1973, 1976, 1978, 1980, and 1982. Prior to the 1978 survey, the National Master Facility Inventory (NMFI) included hospitals, nursing and related care homes, and other types of inpatient health facilities. Those other types included homes for the blind, deaf, mentally retarded, and emotionally disturbed. The 1978,¹ 1980,² and 1982 inventories have data only on nursing and related care homes. Data for hospitals are now obtained directly from the American Hospital Association. For convenience, the terms "nursing and related care homes" and "nursing homes" are used interchangeably in this report.

The NCHS definition of "nursing homes" (see appendix III) generally states that a home must maintain three or more inpatient beds and, at the minimum, it must provide one or more personal care services (such as help with eating, walking, correspondence, dressing, bathing, or using the toilet). A facility that only provides services to the mentally ill or the mentally retarded is not classified as a nursing home (it is out of scope) by NMFI definition. A facility that provides services to all types of residents but at present serves only the mentally ill and/or the mentally retarded is classified as a nursing home (that is, in scope).

A total of 26,817 inpatient facilities in the United States can be labeled as "nursing homes." These include not only the nursing homes covered by the NMFI but also the hospital-based homes. (See table I, appendix IV.) This report focuses on those facilities covered by the NMFI.

Prior to 1976, NCHS collected NMFI data via a mail questionnaire sent to each facility. After that time, NCHS purchased data tapes from States that compiled facility information as part of their licensure process. NCHS still uses the mail questionnaire in those States where licensure data are not available. Use of State data has resulted in the additions and deletions to the NMFI described in the following paragraphs.

In 1980, California was able to identify more than 1,000

residential community care facilities (RCCF's)² and in 1982 2,000 more. These were in addition to those RCCF's that were on the NMFI file before 1980. The addition of the 1982 RCCF's brought the total of RCCF's to about 5,000. In 1980, for the first time, Michigan furnished NCHS with a data file containing more than 2,500 adult foster care homes (AFCH's). Results from the 1982 NMFI survey showed that many of these homes were out of scope because they provided services only to mentally ill and mentally retarded patients.

The 7,228 RCCF's and AFCH's in California and Michigan are presented separately and are referred to as "residential facilities" in tables 1-3. These residential facilities are presented separately because the data as submitted to NCHS did not include enough information to determine the number of homes that were in scope.

The 1982 NMFI for the first time identifies family care homes in Florida and Kentucky. The 429 Florida adult congregate living facilities and the 373 Kentucky family care homes are defined in the Technical notes section (appendix I). Totals for these types of homes are shown separately in tables under the category "residential facilities."

Beginning in 1980, all identifiable hospital-based nursing homes and extended care facilities were excluded from the NMFI because some States did not include them in their files. The Health Care Financing Administration (HCFA) file was obtained to more effectively remove all hospital-based nursing homes from the NMFI file. The data displayed in table I of this report from the HCFA file exclude those hospital-based homes that only serve the mentally ill or mentally retarded. There were 730 hospital-based homes with 58,677 beds. Table I shows data about these homes and their beds by State. (See appendix IV.) Both files, HCFA and NMFI, exclude hospital-based homes operated by the Veterans Administration. There were about 100 such homes with approximately 9,000 beds at the end of fiscal year 1981 according to the Veterans Administration.³ Counts of these homes do not appear in tables of this report.

This report also shows the number of nonresponding homes for which imputation could not be made because no data from previous years (before 1982) were available. There are 238 such homes. Table I also distributes these homes by State. (See appendix IV.)

To compare 1982 with 1980 figures, it is suggested that one use the figures posted under "total homes," because these

figures do not include the hospital-based and nonresponding homes. In addition to the recommendation made above, any comparison between data from the 1980 or the 1982 NMFI's and earlier NMFI's must be made with extreme caution.

If comparisons are attempted, it is suggested that they be made among larger homes (25 beds or more), because the ad-

ditions, deletions, and definitional changes to the surveys generally apply to smaller homes. A comparison of data from the NMFI for selected years 1969–80 is available.⁴ The counts of hospital-based nursing homes should also be subtracted when comparing data from those pre-1980 surveys with the 1980 and 1982 surveys.

Highlights

The following statistics represent highlights from the tables presented in this report (see detailed tables). Additional tables and an overview of the 1982 NMFI Survey data have been published elsewhere.⁵

Table 1

Of the 25,849 nursing and related care homes, about 31 percent of the homes were accounted for by residential facilities. (See appendix III for definition of residential facilities.) Because only four States (California, Michigan, Florida, and Kentucky) reported having residential facilities, many may be reported as “nursing homes” in the remaining 46 States plus the District of Columbia.

Tables 2 and 3

Nursing and related care homes contained a total of 1,642,067 beds and 1,493,406 residents. Beds and residents in homes of four States, California (13 percent), Illinois (6 percent), New York (7 percent), and Texas (6 percent) accounted for one-third of the Nation’s total.

Table 4

The U.S. average for the number of nursing home beds per 1,000 persons age 65 years and over was 56.2. The States with the four highest averages were Iowa (97.2), Nebraska (90.2), South Dakota (86.8), and Wisconsin (86.0). At the other extreme, New Mexico (22.4), Florida (23.8), Arizona (30.7), and Hawaii (31.9) had the four lowest averages.

Table 5

Female residents represented 71 percent of all residents (990,601) in nursing and related care homes for which age and sex of residents are reported. Forty percent of the total number of female residents in nursing homes were 85 years and over. Male residents represented 29 percent of residents in nursing and related care homes. Twenty-five percent of all males were 85 years of age and over. The ratio of women to men increased with age. The population of residents under 65 years of age contained about the same number of men as women, but the 85 years and over age group had almost four times as many women as men.

Table 6

Of the 17,819 nursing homes, only 34 percent were homes with bed size less than 50. Three States—Maine, Hawaii, and North Carolina—accounted for 62 percent of homes with bed size 3–9. About 2 percent of homes had a bed size of 300 or more. Thirty-eight percent of those homes were in New York and Illinois. New York and Illinois also accounted for 28 percent of homes with 200–299 beds.

Tables 7 and 8

Homes of Hawaii, Maine, New Mexico, North Carolina, Vermont, and West Virginia had a high proportion of their beds in small homes (3–24 beds). When examining the Nation’s proportion of beds in small homes, it was discovered that those States mentioned above had proportions that were three times greater than the national average. In contrast, homes of the District of Columbia, New York, and Pennsylvania had a greater proportion of their beds in large homes (300 beds or more). These States had proportions more than two times greater than the national average.

Tables 9–11

Twenty-five percent of the Nation’s nursing homes were government and nonprofit operated homes, while the remaining 75 percent of homes were proprietary homes. Nursing homes operated by the government have the smallest percent (7 percent) of beds, and nonprofit homes were second with only 22 percent.

Despite the national average, one in every five States had more than 50 percent of its nursing home residents in government and nonprofit operated homes. These States were Alaska, Pennsylvania, North Dakota, South Dakota, Wisconsin, Wyoming, Minnesota, Montana, and Nebraska, plus the District of Columbia.

Tables 12 and 13

Nursing homes in the North Central and the South Regions of the country made up 64 percent of all homes (17,819). There was a larger number of small nursing homes with bed size 3–24 in the Northeast and South Regions of the country. This also was true for proprietary homes.

Table 14

Of the 17,819 nursing homes, about 40 percent of the homes were certified as skilled nursing facilities (SNF's), while 31 percent were certified as intermediate care facilities (ICF's). (Facilities certified as both SNF's and ICF's have been classified as SNF's.) One State, California, had 1,085 homes certified as SNF's.

Table 15

Of the 1,508,732 beds in nursing homes, approximately 57 percent were in homes certified as SNF's, 29 percent were in homes certified as ICF's, 13 percent were in homes not certified, and less than 1 percent were in homes the certification of which is unknown.

Table 16

Data presented in table 16 show that there were 681,958 beds certified by medicare and medicaid to provide skilled care and 417,185 beds certified by medicaid to provide intermediate care. The difference between data in this table and data in table 15 is that this table provides certified beds by their particular level of certification while table 15 shows total beds by the certification of the facility.

Table 17

There were more residents living in nursing homes certified as SNF's than ICF's. About 58 percent of all residents lived in SNF's¹ and about 29 percent of all residents lived in ICF's. One State, California, accounted for 12 percent of the residents in SNF's.

Tables 18–22

Tables 18–22 show the distribution of nurses by State, geographic region, type of ownership, and bed size. Because data on nurses by ownership and bed size were not available for Connecticut and Florida, data for 1982 were imputed by using 1980 data. As a result of not being able to impute data on nurses by type of ownership and bed size, totals in table 18 are greater than totals in tables 19–22. When using data from this section, it should be taken into consideration that those nurses

hired under contract are not included in figures from these tables.

In 1982, a total of 45,391 full-time registered nurses (RN's), 37,847 part-time RN's, 67,221 full-time licensed practical nurses (LPN's), and 37,645 part-time LPN's provided health and related care services to nursing home residents in the United States. Nursing homes in most States employed more full-time LPN's than full-time RN's. In Alabama, Arkansas, Georgia, Kentucky, Mississippi, Oklahoma, Tennessee, Texas, and Utah, the number of full-time LPN's was double the number of full-time RN's. Conversely, Connecticut, New Jersey, and Washington were the States that had at the minimum 200 more full-time RN's than full-time LPN's. When the national rates for nurses per 100 beds were calculated using the imputed data on nurses for Florida and Connecticut (see tables A and B), the rate was 4.5 for full-time LPN's, 2.5 for part-time LPN's, 3.0 for full-time RN's, and 2.5 for part-time RN's.

Data from tables 19 and 21 indicated that the proprietary homes hired the most full-time RN's and LPN's. This is not surprising when one takes into consideration the large percent of the Nation's total of nursing homes that proprietary homes constitute. The proprietary homes in general had the lowest rates for full-time nurses per 100 beds. After the rates for full-time nurses per 100 beds were computed, the government homes were found to have a rate of 4.2 for RN's and 5.6 for LPN's, followed by the nonprofit homes (3.3 RN's per 100 beds; 3.8 LPN's per 100 beds) and proprietary homes (2.5 RN's per 100 beds; 4.2 LPN's per 100 beds).

Of government homes, 44 percent were classified as skilled nursing facilities (SNF's) and 32 percent were classified as intermediate care facilities (ICF's), while 38 and 32 percent of the proprietary homes were classified as SNF's and ICF's, respectively. (See table C.) The government also had more homes of larger size (the average number of beds per home was 121; 24 homes had 500 beds or more). The nonprofit homes were second (the average number of beds per home was 95; 22 homes had 500 beds or more), and proprietary homes were last (the average number of beds per home was 80; 9 homes had 500 beds or more).

As noted in a previous report, nursing home staffing patterns are particularly influenced by certification status and sizes of nursing homes.² One reason SNF's have more RN's than noncertified facilities is that SNF's are required to main-

Table A. Number of full-time registered nurses (RN's), full-time RN's per 100 beds, part-time RN's, and part-time RN's per 100 beds: United States, 1982

<i>Geographic region</i>	<i>Full-time RN's</i>	<i>Full-time RN's per 100 beds</i>	<i>Part-time RN's</i>	<i>Part-time RN's per 100 beds</i>
	Number

¹Facilities certified as both skilled nursing facilities (SNF's) and intermediate care facilities (ICF's) have been classified as SNF's.

²Excludes 8,030 residential facilities (only 4 States—California, Michigan, Florida, and Kentucky—reported information that distinguished these types of facilities from nursing homes), 730 hospital-based homes, and 238 nonresponding homes. (See appendix IV for data about hospital-based homes and nonresponding homes.)

tain 24-hour coverage by RN's. The ICF's are also required to have nurses. In general, larger homes have more nurses because they are more likely to be an SNF or an ICF.

Imputations made to Connecticut and Florida data on nursing homes were added to the appropriate regions. (See tables A and B.) The Northeast and the West Regions had the highest rates of RN's per 100 beds. Both regions had a rate of at least 4.0 for full-time RN's, above the national average of 3.0.

The Northeast had the highest rate of part-time RN's, 4.0 per 100 beds, and the West ranked second with 2.9. Although the South had the lowest rates of RN's, it had the highest rate of full-time LPN's (5.6 per 100 beds). With the exception of the Northeast, all regions had more LPN's than RN's per 100 beds.

When rates for full-time equivalent (sum of full-time employees plus part-time employees divided by 2) RN's were added to those for full-time equivalent LPN's, the Northeast had the highest rate, 12.0 nurses per 100 beds; the West was second with a rate of 11.5; the South had 9.3; and the North Central had 8.6. A possible explanation for the North Central low rate might be that nursing homes in the North Central Region utilized some other means to obtain nurses, such as contract. Data from the 1977 National Nursing Home Survey, which included contracted nurses, tended to substantiate this hypothesis. In that survey the Northeast ranked the highest with a nurse rate of 14.3 per 100 beds, followed by the South with a nurse rate of 10.0 per 100 beds, the West with a nurse rate of 9.9, and the North Central with a nurse rate of 9.7 per 100 beds.⁶ Another explanation might be that many of the

homes in the North Central Region are residential facilities. Generally, these facilities do not have nurses because their residents are in fairly good health and are independent.

Table 23

From the 15,840 homes that reported inpatient days (out of 17,819), 419,053,354 days of care were provided to patients in nursing homes. Homes in the North Central Region provided the most days of care (154,404,474 inpatient days). Homes in the South Region ranked second (139,383,315 inpatient days).

Table 24

The occupancy rate for nursing homes was 91 percent. In five States (Connecticut, 96; Hawaii, 97; South Carolina, 96; South Dakota, 96; North Dakota, 96), more than 95 percent of nursing home beds were occupied by residents in nursing homes. Even the State with the lowest occupancy rate (Texas) was higher than 79 percent.

Table 25

According to the 14,518 homes (out of 17,819 nursing homes) that reported data on admissions and discharges for the year 1981, turnover rates (admissions per beds and discharges per beds) were higher for the medium size nursing homes (50–299 beds) than either the small or the large homes. These rates were also higher for proprietary homes and homes in the West.

¹Adjusted for States whose highest age group was 75 years and over. See Technical notes.

²Excludes those residents for whom age and sex were not reported, 8,030 residential facilities (only 4 States—California, Michigan, Florida, and Kentucky—reported information that distinguished these types of facilities from nursing homes), 730 hospital-based homes, and 238 nonresponding homes. (See appendix IV for data about hospital-based homes and nonresponding homes.)

¹Excludes 8,030 residential facilities (only 4 States—California, Michigan, Florida, and Kentucky—reported information that distinguished these types of facilities from nursing homes), 730 hospital-based homes, and 238 nonresponding homes. (See appendix IV for data about hospital-based homes and nonresponding homes.)

²Data for 2 States—Connecticut and Florida—are not included in this total, because no data were available by bed size and ownership.

Technical notes

All of the National Master Facility Inventory (NMFI) surveys (of nonhospitals) through 1973 were conducted by the National Center for Health Statistics (NCHS) with the assistance of the U.S. Bureau of the Census. The Cooperative Health Statistics System (CHSS) was active from 1976 to 1980. This system decentralized the responsibility for collecting data from the Federal to the State level. In 1976, 16 States within CHSS collected some or all of the NMFI data. In 1978 there were 26 States, and in 1980 there were 38 States collecting NMFI data. In each of these years, NCHS surveyed in the non-CHSS States.

Although CHSS was not active in 1982, arrangements were made with 36 States (Alabama, Alaska, Arizona, California, Colorado, Connecticut, Florida, Georgia, Idaho, Indiana, Illinois, Kansas, Kentucky, Maine, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, West Virginia, Wisconsin, and Wyoming) plus the District of Columbia to obtain their data. A number of these State surveys did not include every type of nursing and related care home that NCHS includes in its universe. Where this occurred, NCHS surveyed those homes excluded from the State's survey.

The agency within the CHSS States that collected the NMFI data for NCHS was usually the licensing agency. There were differences in definition, scope, and timing of the surveys among CHSS States because State survey coverage was structured according to licensing laws. Whereas NCHS surveys included such facilities as personal care homes, homes for the aged, and rest homes, some States did not license these types of homes and, therefore, did not survey them.

For States that were surveyed by NCHS, a mailing list was compiled by merging the following two files: The final inventory of facilities from the 1980 NMFI Survey and a list of new facilities gathered through the Agency Reporting System.⁷ The resulting list is then matched against the latest (1980 NMFI) listing to locate new facilities.

Although the 1980 NMFI Survey was a universe rather than a sample survey, and hence not subject to sampling error, it is subject to other types of errors, such as nonresponse to questionnaire items. To minimize nonresponse items as well as

overall nonresponse, NCHS used a two-part procedure in States that were surveyed. The first part uses a series of follow-ups to reduce overall nonresponse. This procedure included (as needed) a postcard reminder, two questionnaire followups, and an abbreviated questionnaire (see appendix II) to responding facilities that failed to answer certain critical items on the initial questionnaire. Facilities were asked to complete only those critical items originally left blank.

The following imputations were made to the 1982 NMFI data:

- 1980 data were used for approximately 500 nursing homes in New York.
- Little or no data were available for the 4,985 California residential community care facilities, or for the 2,243 Michigan adult foster care homes. Although a number of these facilities served only the mentally ill or mentally retarded, there was not enough information available to identify and remove them. As a result, all residential community care facilities and adult foster care homes were kept, and beds and residents were imputed using 1980 averages.
- No resident or employee data were available for the 429 Florida adult congregate living facilities or the 373 Kentucky family care homes. Total residents were imputed by multiplying beds by 0.90 (the average occupancy rate for nursing homes).
- Registered nurse and licensed practical nurse data were imputed for Florida and Connecticut using 1980 data.
- In four States (Alaska, Minnesota, Montana, and Texas) the highest resident age group was 75 years and over. Estimates for residents 85 years and over in these States were obtained by subtracting 50 percent from the 75 years and over age group and adding the result to the 85 years and over group.
- The estimate of 1,204,356 nursing home residents 65 years and over was derived by applying percents in known age distributions within each region to the residents in each region whose ages were unknown. Almost 866,000 residents were actual counts, while the remaining 338,000 were imputed.
- Some States issue a nursing home license and a residential license for the same facility. Whenever this occurred, it created duplicate homes but not duplicate beds. Every effort has been made to eliminate this duplication of homes in such situations.

NATIONAL MASTER FACILITY
INVENTORY SURVEY

RETURN COMPLETED QUESTIONNAIRE TO:

Department of Health and Human Services
Public Health Service
National Center for Health Statistics—Rm. 1-57
Center Building—Prince George Center
3700 East-West Highway
Hyattsville, Maryland 20782

Dear Administrator:

As part of its responsibility to provide information on the Nation's health resources, the National Center for Health Statistics (NCHS) collects information on all hospitals and nursing and related care facilities in the United States; in addition, information is also collected from those facilities which provide some kind of personal or domiciliary care. The survey is conducted under the authority of Section 306 (42 USC 242k) of the Public Health Service Act.

The purpose of this survey is TO OBTAIN CURRENT INFORMATION FROM EACH FACILITY on its ownership, staff size, number of beds and other related facility characteristics. The information will be used to provide statistics on the number and kinds of such facilities in the United States and the CHANGES THAT HAVE OCCURRED since the last National Master Facility Inventory Survey. In addition, the data will be used to determine trends, identify shortage areas, publish directories, and assist in the planning of health services. Your participation in this survey is voluntary, and there are no penalties for your refusal to participate. You may be assured that your participation is greatly appreciated, and your individual contribution to this survey is greatly needed by the health industry.

The information obtained in Sections A and B of the questionnaire will be made available by the NCHS upon request. However, the data from Section C will be held in strict confidence, and will not be released to anyone under any circumstances or used in any way other than in statistical summaries. These summaries will only be presented in a manner which will ensure that no individual facility can be identified.

If you should have any questions about this survey, please feel free to contact Mrs. Evelyn Mathis on (301) 436-8830. Please return your completed form in the postage-free envelope enclosed for your convenience. Your cooperation in this study is greatly appreciated.

Sincerely yours,

Dorothy P. Rice
Dorothy P. Rice, Director
National Center for Health Statistics

INSTRUCTIONS FOR COMPLETING THIS FORM

1. Include in this report information only for the facility named in the mailing label or for its SUCCESSOR if the name or owner has changed.
2. Due to name and address changes, duplicate listings, or other reasons, you may receive more than one questionnaire under different names or addresses. If you receive more than one form for the same facility, complete one only and return all others with the notation "Completed and returned under . . . (give name of facility on completed form and the IDENTIFICATION NUMBER found in the upper left corner of the mailing label)."
3. If this facility is a nursing unit of a retirement center, report only for the nursing unit.
4. Please answer all applicable questions. Definitions and special instructions are given with the questions when needed. If your answer to a question is "None," put a zero in the appropriate space. DO NOT LEAVE THE SPACE BLANK.
5. For question 10, data should be reported for a 12-month period, preferably the calendar year from January 1, 1981

through December 31, 1981. If data is for a different 12-month period than this, indicate the time period used:

Beginning Date:

month	day	year
cc 12,13	14,15	16,17

 Ending date:

month	day	year
cc 18,19	20,21	22,23

 (The months, days, and years are to be 2-digit numbers.)

6. Is this nursing home part of a larger group of homes?
 Yes No
If the answer to the above is YES and information for this home is available only at your home office, please forward this questionnaire to your home office with this instruction to fill it out for your specific facility.
7. If you are the home office and receive a forwarded questionnaire from one or more of your homes, please fill out each questionnaire you receive. (We need separate information for each home.)
8. If you are the home office and receive a questionnaire addressed specifically to you, do not fill it out. However, please provide us with the name and address of all homes for which you are the home office.

For DCB Use Only

SECTION A – IDENTIFICATION OF FACILITY

Please refer to the mailing label, then mark all additions and corrections according to the questions below. Detailed identification information is needed to prevent duplicate listings and to assure that your facility is properly represented in the survey.

1. Is the NAME shown on the mailing label correct for your facility?

1 Yes

cc 24 2 No - Enter correct name _____

2. Is the ADDRESS shown on the mailing label the correct mailing address for your facility?

1 Yes

cc 25 2 No - Enter correct mailing address _____

NUMBER OR BOX	STREET OR ROUTE

CITY OR TOWNSHIP	COUNTY

STATE	ZIP CODE

3a. Is the mailing address for this facility the same as the location address?

1 Yes

cc 26 2 No

b. What is the location address? _____

NUMBER OR BOX	STREET OR ROUTE

CITY OR TOWNSHIP	COUNTY

STATE	ZIP CODE

4. What is the telephone number of your facility?

cc 27-36 _____

AREA CODE	NUMBER
_____	_____

SECTION B – FACILITY INFORMATION

5. Read all the categories, then mark (X) the ONE box that BEST describes the TYPE OF OWNERSHIP which operates this facility.

Dear Administrator:

Thank you for your response to the 1982 National Master Facility Inventory Questionnaire; we appreciate your taking the time from your busy schedule to participate in our survey.

Some necessary information, however, was missing from your questionnaire. Therefore, we are again asking you to take just a few minutes of your time to supply the information for the item(s) circled in red on this form. After entering the necessary information, please return this form in the enclosed postage-free envelope within five (5) days.

Please feel assured that your cooperation in this survey is greatly appreciated. If you should have any questions, please feel free to contact Mrs. Evelyn Mathis on (301) 436-8830.

Sincerely yours,

Dorothy P. Rice
Director
National Center for Health Statistics

Dear Administrator:

Recently you were sent a 1982 National Master Facility Inventory Questionnaire requesting current information on ownership, number of beds, and other related facility characteristics. This information is needed to provide updated statistics on changes that have occurred since the last survey.

If you have not yet returned the questionnaire, please complete and return it as soon as possible. Your cooperation in this survey is greatly needed and appreciated. (We have enclosed another copy should you need it.)

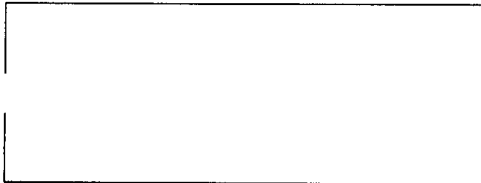

If you have already mailed the questionnaire please indicate this on the one enclosed; thank you for your time and attention.

Sincerely yours,

Dorothy P. Rice

NOTE: DO NOT RETURN THIS
QUESTIONNAIRE BY MAIL

Dear Administrator:

As part of its responsibility to provide information on the Nation's health resources, the National Center for Health Statistics (NCHS) collects information on all hospitals and nursing and related care facilities in the United States; in addition, information is also collected from those facilities which provide some kind of personal or domiciliary care. The survey is conducted under the authority of Section 306(42 USC 242k) of the Public Health Service Act.

The purpose of this survey is TO OBTAIN CURRENT INFORMATION FROM EACH FACILITY on its ownership, staff size, number of beds and other related facility characteristics. The information will be used to provide statistics on the number and kinds of such facilities in the United States and the CHANGES THAT HAVE OCCURRED since the last National Master Facility Inventory Survey. In addition, the data will be used to determine trends, identify shortage areas, publish directories, and assist in the planning of health services. While your participation is voluntary, your individual contribution to this national survey is greatly needed by the health industry.

We have requested that the U.S. Bureau of the Census contact those facilities that have not returned questionnaires previously sent to them. According to our records, we have not received a reply from your facility. The data collected will be forwarded to NCHS for processing and analysis.

The information obtained in Sections A and B of the questionnaire will be made available by the NCHS upon request. However, the data from Section C will be held in strict confidence, and will not be released to anyone under any circumstances or used in any way other than in statistical summaries. These summaries will only be presented in a manner which will ensure that no individual facility can be identified. Your cooperation in this study is greatly appreciated.

Sincerely yours,

Dorothy P. Rice
Director
National Center for Health Statistics

INSTRUCTIONS FOR COMPLETING THIS FORM

1. Include in this report information only for the facility named in the mailing label or for its SUCCESSOR if the name or owner has changed.
2. Due to name and address changes, duplicate listings, or other reasons, you may receive more than one questionnaire under different names or addresses. If you receive more than one form for the same facility, complete one only and return all others with the notation "Completed and returned under . . . (give name of facility on completed form and the IDENTIFICATION NUMBER found in the upper left corner of the mailing label)."
3. If this facility is a nursing unit of a retirement center, report only for the nursing unit.
4. Please answer all applicable questions. Definitions and special instructions are given with the questions when needed. If your answer to a question is "None," put a zero in the appropriate space. DO NOT LEAVE THE SPACE BLANK.
5. If this facility or nursing home is part of a larger group of facilities or nursing homes and the information for this facility or nursing home is available only at your home office, we will contact your home office for it.
6. If you are the home office, report only for the facility or nursing home entered on the mailing label. We need separate information for each facility or nursing home.
7. If you are the home office and receive a questionnaire addressed specifically to you, do not fill it out, unless the home office also provides some kind of health care service. If you do provide some kind of health care service, complete this questionnaire for the home office facility.
8. Please provide us with the name and address of all facilities for which you are the home office.
9. DO NOT RETURN THIS QUESTIONNAIRE BY MAIL. A Bureau of the Census interviewer will contact you concerning your responses.

SECTION A – IDENTIFICATION OF FACILITY

Detailed identification information is needed to prevent duplicate listings and to assure that your facility is properly represented in the survey.

1. Is (read NAME on label) the correct NAME for the facility?

cc24 1 Yes
 2 No – What is the correct name? _____

2. Is (read ADDRESS on label) the correct mailing address for the facility?

cc25 1 Yes
 2 No – What is the correct mailing address? _____

NUMBER OR BOX	STREET OR ROUTE
CITY OR TOWNSHIP	COUNTY
STATE	ZIP CODE

3a. Is the mailing address for this facility the same as the location address?

cc26 1 Yes
 2 No

b. What is the location address? _____

NUMBER OR BOX	STREET OR ROUTE
CITY OR TOWNSHIP	COUNTY
STATE	ZIP CODE

4. What is the telephone number of your facility?

cc27-36
 AREA CODE _____ NUMBER _____

5. Is this facility a nursing unit of a retirement center?

1 Yes → (read) Please report for the nursing unit only.
 2 No

6. Is this facility or nursing home part of a larger group of facilities or nursing homes?

1 Yes (go to 7)
 2 No (go to Section B)

7. Is specific information about your facility or nursing home available here or only at your home office?

1 Here (go to Section B)
 2 Only at home office → (read). What is the name, address, and telephone number of your home office? (Interviewer: contact regional office for instructions.)

SECTION B – FACILITY INFORMATION

8. Which ONE of these categories BEST describes the TYPE OF OWNERSHIP which operates this facility?

Interviewer's Instruction:

If personal visit, have respondent refer to answer categories in question 7, otherwise, read all the categories, then MARK (X) ONE box.

- cc37-38

9. Which ONE of these categories BEST describes the TYPE OF SERVICE this facility offers the MAJORITY of its residents or patients?

If you have any remarks regarding the correct classification of this facility, please tell me so that I may note them. (Note in Comments section)

- 31 Skilled Nursing Facility
- 32 Skilled Nursing Facility unit of a hospital
- 33 Nursing care unit of a retirement center
- 34 Intermediate Care Facility
- 35 Nursing home for Mentally Retarded
- 36 Home for the Aged
- 37 Personal Care Home or Rest Home
- 38 Sheltered or Custodial Care Home
- 39 Nursing Home for Children
- 40 Residential Treatment Center/School
- 41 Boarding Home only
- 42 Other (Specify) _____

cc 39-40

Interviewer's Instruction:

If personal visit, have respondent refer to answer categories in question 9; otherwise, read all the categories, then MARK (X) ONE box.

10. Is this facility certified for:

- | | Yes | No |
|-----------------------------------|----------------------------|----------------------------|
| cc41 (a) Medicare _____ → | 1 <input type="checkbox"/> | 2 <input type="checkbox"/> |
| cc42 (b) Medicaid skilled _____ → | 1 <input type="checkbox"/> | 2 <input type="checkbox"/> |

11. Please give the number of beds for the following categories:

- (a) Licensed bed capacity _____ cc43-46
- (b) Number of skilled beds (Skilled Nursing Facility) _____ cc47-50
- (c) Number of intermediate beds (Intermediate Care Facility) _____ cc51-54
- (d) Number of non-certified beds _____ cc55-58
- (e) Number of beds currently set up and staffed for use; include only accommodations with supporting services, such as food, laundry, and housekeeping, for patients or residents who stay in excess of 24 hours _____ cc59-62

12. How many residents or patients stayed in this facility last night?
How many of these were male? How many of these were female?

	Total	Male	Female
All ages	cc79-82	cc99-102	cc119-122

SECTION C--(Confidential)

13. Which of the following services are ROUTINELY provided to residents in addition to room and board?

- a. Supervision over medications which may be self-administered cc 123 1 Yes 2 No
- b. Medications and treatments administered in accordance with physician's orders cc 124 1 Yes 2 No
- c. Rub and massage cc 125 1 Yes 2 No
- d. Help with tub or shower cc 126 1 Yes 2 No
- e. Help with dressing cc 127 1 Yes 2 No
- f. Help with correspondence or shopping cc 128 1 Yes 2 No
- g. Help with walking or getting about cc 129 1 Yes 2 No
- h. Help with eating cc 130 1 Yes 2 No
- i. Room and board ONLY cc 131 1 Yes 2 No

(If any "Yes" answers to 13a-h, go to 14; otherwise, ask:)

- j. Does this facility provide room and board ONLY? 1 Yes 2 No

14. How many registered nurses, licensed practical nurses (LPN's) or vocational nurses work full-time in this facility?
Full-time means 35 or more hours a week. Include owners, managers, teaching staff, research workers, staff of out-patient facilities or extended care units, temporarily absent employees, trainees if on the payroll, and members of religious orders whether paid or unpaid, if they are also one of these types of nurses.

Registered Nurses	Number Full-Time
	cc 145-148
Licensed Practical Nurses (LPN's) or Vocational Nurses	cc 149-152

COMMENTS:

SECTION D--RESPONDENT INFORMATION	Name and title of respondent	Date completed ¹
--	------------------------------	-----------------------------

¹If respondent pre-filled the form, enter the date that it was filled and enter the date of interview in "Comments" section above.

OFFICIAL USE ONLY

(THIS SECTION TO BE COMPLETED BY INTERVIEWER ONLY)

- I. Interview was: 1 Completed 2 Partially Completed 3 Not Conducted (Go to III)
cc 230
- II. Interview conducted by: 01 Telephone 02 Personal Visit 03 Both
cc 231-232
- III. Non-interview reason:
cc 231-232
 - 23 Refused (explain) _____
 - 24 Facility closed (specify date closed) _____
 - 25 Questionnaire previously completed (specify name of facility on completed form) _____
 - 26 Unable to locate or contact (explain) _____
 - 27 Name and address is for "home office" only -- no services provided here (in Comments section, provide name and address of all facilities covered by this office)
 - 28 Other (explain) _____

Appendix III

Definitions of certain terms used in this report

Types of homes

Nursing homes—Facilities with three or more beds that provide to adults who require it either (a) nursing care or (b) personal care (such as help with bathing, correspondence, walking, eating, using the toilet, or dressing) and/or supervision over such activities as money management, ambulation, and shopping. Facilities providing care solely to the mentally retarded and mentally ill are excluded.

Residential facilities—Facilities with no nursing services that provide only personal care or supervisory care. For purposes of this report, only those residential facilities in Florida, Michigan, Kentucky, and California are included under this heading. (NOTE: Facilities meeting this definition also exist in the other 46 States, but because they cannot be identified precisely as residential, they appear in the counts of nursing homes.)

- *Adult congregate living facilities (Florida)*—These provide housing, food services, and one or more personal services to four or more adults not related to the owner.
- *Adult foster care homes (Michigan)*—Facilities that provide ongoing supervision, but not continuous nursing care, to adults who are aged, emotionally disturbed, developmentally disabled, or physically handicapped.
- *Family care homes (Kentucky)*—Facilities that are licensed but not certified. They generally have either two or three beds. (Those with two beds are out of scope for the National Master Facility Inventory and have been removed.)
- *Residential community care facilities (California)*—Facilities providing nonmedical care and supervision to the elderly, and to children who are either mentally disordered, developmentally disabled, or physically handicapped.

Characteristics of homes

Ownership—Type of organization that controls and operates the nursing home. Proprietary homes are operated under private commercial ownership; nonprofit homes are operated

under voluntary or nonprofit auspices, which may or may not be church related; government ownership refers to homes operated under Federal, State, or local government auspices.

Resident—A person who has been formally admitted to but not discharged from a nursing home. All such persons were included in the survey whether or not they were physically present at the time of the survey.

Admissions—Total number of inpatients admitted during 1981.

Discharges—Total number of inpatients discharged (including deaths) during 1981.

Bed—For this report, a bed that is set up and staffed for use.

Employees—Number of full-time and part-time employees who work in the facility. This will include owners, managers, teaching staffs, research workers, staffs of outpatient facilities or extended care units, temporarily absent employees, trainees (if on the payroll), and members of religious orders whether paid or unpaid. Employees working 35 hours per week or more were classified as full-time; those working less than 35 hours were classified as part-time.

Geographic regions—The U.S. Bureau of the Census groups the 50 States plus the District of Columbia into the following four regions:

1. *Northeast Region*—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania.
2. *North Central Region*—Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas.
3. *South Region*—Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, Texas.
4. *West Region*—Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, California, Alaska, Hawaii.

Appendix IV

Hospital-based and nonresponding homes

Hospital-based and nonresponding homes were not shown in previous tables of this report. The skilled nursing facilities and intermediate care facilities that serve only the mentally ill or mentally retarded are not included in figures shown in table I. The nonresponding homes shown in this table are those homes for which imputations could not be made (152 of these homes were Florida residential homes) because there are no data from the previous years.

Table I. Number of hospital-based and nonresponding homes and their beds, by State: United States, 1982

Vital and Health Statistics series descriptions

- SERIES 1. Programs and Collection Procedures**—Reports describing the general programs of the National Center for Health Statistics and its offices and divisions and the data collection methods used. They also include definitions and other material necessary for understanding the data.
- SERIES 2. Data Evaluation and Methods Research**—Studies of new statistical methodology including experimental tests of new survey methods, studies of vital statistics collection methods, new analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. Studies also include comparison of U.S. methodology with those of other countries.
- SERIES 3. Analytical and Epidemiological Studies**—Reports presenting analytical or interpretive studies based on vital and health statistics, carrying the analysis further than the expository types of reports in the other series.
- SERIES 4. Documents and Committee Reports**—Final reports of major committees concerned with vital and health statistics and documents such as recommended model vital registration laws and revised birth and death certificates.
- SERIES 5. Comparative International Vital and Health Statistics Reports**—Analytical and descriptive reports comparing U.S. vital and health statistics with those of other countries.
- SERIES 10. Data From the National Health Interview Survey**—Statistics on illness, accidental injuries, disability, use of hospital, medical, dental, and other services, and other health-related topics, all based on data collected in the continuing national household interview survey.
- SERIES 11. Data From the National Health Examination Survey and the National Health and Nutrition Examination Survey**—Data from direct examination, testing, and measurement of national samples of the civilian noninstitutionalized population provide the basis for (1) estimates of the medically defined prevalence of specific diseases in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics and (2) analysis of relationships among the various measurements without reference to an explicit finite universe of persons.
- SERIES 12. Data From the Institutionalized Population Surveys**—Discontinued in 1975. Reports from these surveys are included in Series 13.
- SERIES 13. Data on Health Resources Utilization**—Statistics on the utilization of health manpower and facilities providing long-term care, ambulatory care, hospital care, and family planning services.
- SERIES 14. Data on Health Resources: Manpower and Facilities**—Statistics on the numbers, geographic distribution, and characteristics of health resources including physicians, dentists, nurses, other health occupations, hospitals, nursing homes, and outpatient facilities.
- SERIES 15. Data From Special Surveys**—Statistics on health and health-related topics collected in special surveys that are not a part of the continuing data systems of the National Center for Health Statistics.
- SERIES 20. Data on Mortality**—Various statistics on mortality other than as included in regular annual or monthly reports. Special analyses by cause of death, age, and other demographic variables; geographic and time series analyses; and statistics on characteristics of deaths not available from the vital records based on sample surveys of those records.
- SERIES 21. Data on Natality, Marriage, and Divorce**—Various statistics on natality, marriage, and divorce other than as included in regular annual or monthly reports. Special analyses by demographic variables; geographic and time series analyses; studies of fertility; and statistics on characteristics of births not available from the vital records based on sample surveys of those records.
- SERIES 22. Data From the National Mortality and Natality Surveys**—Discontinued in 1975. Reports from these sample surveys based on vital records are included in Series 20 and 21, respectively.
- SERIES 23. Data From the National Survey of Family Growth**—Statistics on fertility, family formation and dissolution, family planning, and related maternal and infant health topics derived from a periodic survey of a nationwide probability sample of women 15–44 years of age.
