Pre-employment	527	59	0	3381	151	69
Random	1018	106	0	3515	110	38
Post-Accident	7	1	0	64	3	0

**** NOTE:** Prior to Calendar Year 2001, Testing Laboratories were not reporting dilute specimens. Dilute specimens are neither positive or negative results but, rather specimens that fall outside the parameters of a normal urine specimen. Employees that tested dilute were retested with some retests coming back as positives. Dilutions are most commonly due to the donor ingesting certain flushing agents to cleanse the urinary system. These flushing agents work on a short term basis and thus will not work with an immediate retest.
