## CAB Rescue Tag Line

The CAB Rescue Tag Line is designed to evacuate all members of a mine crew together if an emergency escape is necessary from an underground mine. The Rescue Tag Line is constructed from heavy-duty 7/16" diameter, yellow, hollow braid polypropylene rope. Each man is attached to a tether that is 3' long and securely attached to the main line at 5' intervals with strong heavy-duty splices. Bronze swivel snaps are used to hook up each man and they are spliced to the end of all tethers and both ends of the main line.

The CAB Rescue Tag Line is manufactured with extra heavy-duty splices and no hardware other than the bronze swivel snaps to reduce the possibility of tangling if the line is put into use during an actual emergency. The Tag Line is also coiled on a sturdy plastic carrier with handle that allows the line to be put into action quickly and easily.

CAB Rescue Tag Lines can be used individually to evacuate 1 crew or linked together to evacuate 2 crews. They are packaged in single or double bags made from fluorescent lime-yellow nylon with fluorescent red-orange reflective bands and carry strap.

- CAB #7108** 6-8 man rescue tag line, 6 tethers, 1/bag
- CAB #7109** 6-8 man rescue tag line, 6 tethers, 2 /bag
- CAB #7191** 8-10 man rescue tag line, 8 tethers, 1/bag
