

Table 1-34. Central Birth Rates by Live-Birth Order, Current Age of Mother, According to Race of Child, for Women in Each Cohort from 1950-1985: United States, 1999

(A cohort is identified by the year in which the women were born. Since these women retain this designation throughout their childbearing years, their fertility can be followed over time. Live-birth order refers to number of children born alive to mother. Rates are per 1,000 women and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses.)
