REPORT

ON

VITAL AND SOCIAL STATISTICS

IN

THE UNITED STATES

AT THE

ELEVENTH CENSUS: 1890.

PART I.—ANALYSIS AND RATE TABLES.

JOHN S. BILLINGS, M. D.,

DEPUTY SURGEON-GENERAL, U. S. ARMY (RETIRED), EXPERT SPECIAL AGENT.

WASHINGTON, D. C.: GOVERNMENT PRINTING OFFICE. 1896.

300

LETTER OF TRANSMITTAL.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
DIVISION OF THE ELEVENTH CENSUS,

Washington, D. C., December 30, 1896.

SIR:

I have the honor to transmit herewith Part I of the Report on Vital and Social Statistics for the Eleventh Census, containing the general summary of conclusions derived from the tables in the volumes, and ratios of deaths to population in different localities, with distinction of age, sex, race, color, conjugal condition, occupations, and causes of death in various relations.

Part II contains similar statistics relating to cities having 100,000 inhabitants and over in 1890, and Parts III

and IV contain tables relating to deaths.

The Report on Vital and Social Statistics was prepared by Dr. John S. Billings, deputy surgeon-general United States army (retired), who, in submitting the report, desires to call attention to the valuable aid in its preparation which has been given by Mr. William A. King, chief of the division of Vital Statistics, from the beginning to the completion of the work, and for many able suggestions as to methods of compilation and modes of presentation of the results.

The proof for this part of the report was read by the Government Printing Office.

I am, very respectfully, your obedient servant,

CARROLL D. WRIGHT,

Commissioner of Labor in charge Eleventh Census.

Hon. DAVID R. FRANCIS,

Secretary of the Interior.

Death rate due to certain diseases and classes of diseases among males engaged in each occupation and class of occupations in the registration area and some of its subdivisions.	1	18	1005-1022
Death rate due to certain diseases and classes of diseases among females engaged in certain occupations in the registration area and some of its subdivisions.	1	19	1023-1028
Deaths at known ages, and proportion in each of 8 age groups, per 1,000 at known ages, among males engaged in each occupation and class of occupations in the United States, the registration states, and the remainder of the United States.	1	20	1029-1034
Deaths at known ages, and proportion in each of 8 age groups, per 1,000 at known ages, among females engaged in certain occupations in the United States, the registration states, and the remainder of the United States.	1	21	1035-1038
Death rates from certain causes in each city of 100,000 population and upward by wards	8	4 1	391–408 3
Death rates per 1,000 of population in the United States and in each state and territory, with distinction of sex and color	3	2	7
Population, deaths, and death rates at certain ages, with the number of births and the deaths from certain causes in the United States, the registration area, each state, and certain state groups, counties, cities, and wards, by color, general nativity, and parental nativity, with distinction of sex.	1	1	513-658
Population, deaths, and death rates at certain ages, with the number of births and the deaths from certain causes in the United States, the registration area, and each state, by birthplaces of mothers.	1	2	659-696
Male population engaged in each occupation and class of occupations in the registration area and some of its subdivisions; deaths among the same, and death rates per 1,000 of population.	1	14	965–970
Male pepulation of certain ages engaged in each occupation and class of occupations in the registration states; deaths among the same, and death rates per 1,000 of population.	1	15	971-974
Proportion of the aggregate population of the United States at each age and under each ago, by sex, color, general nativity, and parental nativity.	1	22	1039-1042
Proportion of the aggregate population, the white population, and the colored population at each age and under each age, by states and territories.	1	23-25	1043-1059
Population of each city of 100,000 inhabitants and upward, by age and sex, with distinction of color, general nativity and parental nativity, and birthplaces of mothers.	2	1	337-360
Population of each city of 100,000 inhabitants and upward, by wards, with distinction of color, general nativity and parental nativity, and of certain ages.	3	2 1	361-378 3
Population, deaths, and death rates in each state and territory at the censuses of 1890, 1880, and 1870, by sex	3	2	7
Population, deaths, and death rates at certain ages, with the number of births and the deaths from certain causes in the United States, the registration area, each state and certain state groups, counties, cities, and wards, by color, general nativity, and parental nativity, with distinction of sex.	1	1	513-658
Population, deaths, and death rates at certain ages, with the number of births and the deaths from certain causes in the United States, the registration area, and each state, by birthplaces of mothers.	1	2	65969 6

VITAL AND SOCIAL STATISTICS.

SECTION I.

INTRODUCTORY AND EXPLANATORY REMARKS.

The data used in this report, and contained in the appended tables, differ in completeness and accuracy for different portions of the United States. The majority of the states had no satisfactory system of registration of deaths during the census year ending May 31, 1890, and in these states the only record of deaths for that period which could be obtained was that furnished by the enumerators as the result of inquiry in each family, supplemented to some extent by reports from physicians, as will be explained hereafter. It is well known that a record thus obtained is imperfect, the deficiency ranging from 20 to 50 per cent in different localities, and being greatest for the earlier months of the year for which such record is made. (See Tenth Census Reports, United States, volume XI, page xl.)

The states of Massachusetts, Connecticut, New Hampshire, Vermont, Rhode Island, New York, New Jersey, and Delaware, and the District of Columbia, had a fairly complete registration of deaths during the census year, and this record was copied and is used in this report, instead of the enumerators' returns. These states are referred to in the report as the "Registration states".

There were also 83 cities in nonregistration states which had a fairly satisfactory system of registration of deaths during the census year, and these records were also copied and used instead of the enumerators' returns for these cities.

A list of these cities is given in the appendix pages, 495 and 496.

The sum of the records of deaths in the registration states, and in the registration cities not in the registration states, is the record which is referred to in this report as that of the "Registration area" or as the "Registration record". The record of the registration area and of its subdivisions is the only part of the records of deaths for the whole country which can be used for the calculation of death rates, or mortality, properly so called. For the rest of the country the only rates which are of any value are those which can be obtained from the record of deaths alone, without reference to its completeness or to population, being such as the number of deaths due to a given cause per 1,000 deaths from all causes, or at a given age per 1,000 deaths at all ages, or combinations of these two ratios, with distinctions of color, sex, etc. Such rates, as is well known to statisticians, have little positive scientific value as compared with the ratios of deaths to population; nevertheless, they furnish some valuable information and suggestions, and are therefore given in this report to a considerable extent.

The methods of obtaining records of population and of deaths were substantially the same in the Eleventh Census as in the Tenth, and the forms of tables used in this report include practically all the forms employed in the Report on the Mortality and Vital Statistics of the Tenth Census, as published in volumes xr and xr of the reports of that census, so that it is easy to compare the figures in that report with those contained in the present one.

There is, however, much given in this report with regard to which no corresponding data can be found in the report of the Tenth Census, because in 1880 the registration area was limited to Massachusetts, New Jersey, the District of Columbia, and 19 cities in other states. For that portion of the United States in which there was no registration of deaths the returns of deaths furnished by the enumerators appear to have been more incomplete and imperfect in 1890 than they were in 1880, as will be seen in Section II of this report.

The attempt made in the Tenth Census to obtain more complete returns of deaths from those parts of the country having no registration by asking the voluntary co-operation of the medical profession was also carried out in the Eleventh Census. Blank forms for registering deaths were sent to each physician in the United States in nonregistration localities, so far as their addresses could be obtained from postmasters and other sources. In 1880, 70,299 small books of such blank forms were sent out to physicians, and 25,809 were returned, from which 61,020 deaths were added to the enumerators' returns. In 1890, 74,854 of these blank books were sent out, and 12,684 were returned from which 39,805 deaths were added to the returns.

Where the enumerators' returns were imperfect, or missing without satisfactory explanation, corrections were made and omissions supplied through correspondence, by which means 67,666 deaths were added to the number originally reported.

Where both enumerators' and registration records were received they were compared with each other and with the returns made by physicians, in order to make the record as complete as possible.

The differences in the laws governing the registration of deaths in different localities, in the enforcement of such laws, and in the manner of obtaining and recording the data are so great, and the effect of these differences upon the work of this office in compiling mortality statistics from such data is likewise so great that it is considered desirable to give an outline of the plan pursued in dealing with these records, specifying certain defects and making certain recommendations.

In order to secure the greatest completeness in the return of deaths, and to limit the field in which it would be necessary to rely upon the inquiries of the enumerators, it was determined, upon commencing the work, to secure copies of registration records in all places where it should appear that local laws governing the subject were enforced in such manner as to make it probable that the deaths were all returned, provided that the facts recorded for each death, as indicated by the form of certificate or record employed, covered the data called for by the regular census schedule used by the enumerators.

For this purpose letters were addressed to the authorities of all cities having an estimated population of 5,000 and upward, as follows:

DEPARTMENT OF THE INTERIOR,

CENSUS OFFICE,

WASHINGTON, ________188

SIR:

It is intended to make the vital statistics of the United States for the census year beginning June 1, 1889, as comprehensive as possible, and to this end it is especially desired to obtain complete and reliable returns of deaths occurring in each city during the year.

In cities where an accurate system of registration of deaths, based upon certificates of attending physicians, is employed, a transcript of the city records, or of the certificates of the physicians, may prove satisfactory and desirable for the use of this office in compiling the returns of deaths. I therefore address you for the purpose of ascertaining if a complete and reliable record of deaths is kept by your city authorities, and, if so, the name of the officer of your city having charge of such record.

I shall esteem it a great favor if you will kindly advise me on this point, or refer this letter to the proper officer to render the information.

An addressed official envelope, which requires no stamp, is inclosed for your reply, and an early response will be highly appreciated. Very respectfully,

Superintendent of Census.

Where the reply indicated the maintenance of a system of registration, considered complete and reliable, the following letter was sent to the proper official:

DEPARTMENT OF THE INTERIOR, CENSUS OFFICE,

Washington, _____1889.

SIR:

I understand that your city has a complete system of registration of deaths, but am not fully advised as to just what information your records may afford.

It may be that a transcript of your records will prove satisfactory and desirable for the use of this office in compiling the returns of deaths occurring in the United States during the census year. To determine this, however, it is essential that I should know how far your returns will afford the information desired for that purpose.

I inclose a sheet containing the headings which show the information called for by the regular schedule of deaths as used in the census enumeration, and will appreciate the favor if you will have the kindness to check thereon the items, point by point, which can be furnished from either the original certificates returned by the physicians or the records kept by your city.

If you will kindly check opposite each item on the accompanying sheet those which can be obtained from your records, and return the same to me in the return envelope, I shall esteem it a great favor.

How many deaths were recorded for the year ending May 31, 1890?

Very respectfully,

Superintendent of Census.

The check list referred to also requested that a blank form of certificate or return used be transmitted with the reply.

The replies to these inquiries indicated, primarily, the data accessible and the probable completeness of the record in each locality, the sufficiency of the data being determined by the form of certificate or return and the list of items required by the census schedule, as checked.

This correspondence developed the fact that there were almost as many differences in the forms employed and the manner of securing and recording the deaths as there were places registering them.

A few of the most comprehensive forms sent to this office have been selected and are reproduced, on a reduced scale, below.

VITAL AND SOCIAL STATISTICS.

The following form seems to have been generally used throughout the state of Connecticut.

BUREAU OF VITAL STATISTICS.	STATE OF CONNECTIGUT.

The following form was used in the smaller cities and towns in Massachusetts, and a separate certificate by the attending physician, as to the disease or cause of death and duration of sickness, is also required. Each of the larger cities in the state appears to have an individual form, amplified from the same, for local use.

	COMMONWEALTH OF MASSACHUSETTS.	•	
No.	RETURN OF A DEATH.		,
2. Name			
5. Age Disease or cause of death Curation of sickness By whom certified Residence Cocupation	Years,	—Months, I	Days.
10. Place of birth 11. Name of father 12. Name of mother 13. Birthplace of father 14. Birthplace of mother 15. Place of interment Signature of undertaker or other person making the return.			
	, on		18 .

The forms given above are samples of the more complete forms sent in, and the data required in different places ranges from these to the following:

	•	REPORT OF DEATH.		
	-			•
Date of death,		, 18	Ward,	
		No., Name,		
Age,	Sex,	Color,		
Cause of death: { Primary,				
		Name of physician,		, M. D.

This is a sample of the data required in many places, and in some cases only the name and cause of death is reported.

Without going into the questions of uniformity in legislation, of the practical enforcement of the same, of the time and manner of collecting information, or of the primary responsibility for making the return, there must be mentioned three features which have greatly complicated the work of compilation in this office and diminished the value of the figures for comparative purposes, and which seem also to be of much importance to local officers for their own uses. These are:

- 1. Omission of certain essential facts from the form of return.
- 2. Failure to state certain facts which are called for by the form of return employed.
- 3. Discrepancy between facts stated in the return and those recorded in the office book or register.

These will be considered in the reverse of the order stated above.

It appears to be the general practice to record death certificates as received in a book or register kept for that purpose for convenient reference or permanency of record, after which the original returns are filed away, sent to some central office, or otherwise disposed of. This record may serve for all local purposes without going back to the original certificates; but, unfortunately for the work of this office, it has been the almost invariable experience that the book record so kept does not contain information which is contained in the original return, and that the local officers, with whom this office generally arranged for a transcript of the returns, would usually only furnish such transcript from the book record and data accepted on the basis of the facts called for by the certificate was thus furnished in a less complete form from the abbreviated record.

It seems singular that if certain facts are required in the return of deaths by the local laws or authorities that the book record should not also show them, but personal examination of such records and the frequent statement that certain details are "returned but not recorded", or "in the certificate but not in our books", etc., show that this is usually the case.

If a book record or register is kept it should specify the exact facts, item by item, contained in the original return, and no less.

The statement was also frequently made that certain items called for by the form of return used were "not generally given" or "frequently omitted", or "seldom stated", and it seems that this is partially due to the fact that when the local compilations do not extend to certain details, there is a natural tendency to overlook the omission of these in the return, and a consequent laxity on the part of physicians, undertakers, or others charged with the responsibility of making the returns, perhaps growing out of the knowledge that the details are not used locally.

The omission of certain essential facts from the form of certificate or return employed, relates to facts called for by the census schedule and essential to a comprehensive compilation of the returns from various sources for comparative purposes. The more important items very generally omitted are place of birth, birthplace of father, birthplace of mother, conjugal condition (in whole or in part), and occupation.

It will be apparent that any areas for which these items, or any of them, are not reported, can not be compared with other areas for which they may be given, so far as the influence of these factors upon death rates are concerned, but must be excluded from tables showing the same. This makes it also necessary that the corresponding items should be excluded from the population figures used, so that the labor and difficulty of making the proper distinctions in the areas represented by tables given, extends not only to the deaths returned, a comparatively small number, but also to the population work, which is enormous.

In this way and for these reasons, the advantage derived from the aggregation of small into large numbers is lost, the amount and difficulty of the work greatly increased, and the scientific value of the results diminished.

Special statements of the necessity for and use made of certain details referred to above, are made below under the form of return recommended.

It should be remembered that such data and tables as are given in this report under the head of "Registration records" or areas, are not wholly compiled from returns supplied from these sources, because in many places the schedule for reporting deaths was not withdrawn from the enumerators, whose returns were compared with those obtained from the registration records and the latter thus made much more full and complete than they would otherwise have been.

There is no national legislation upon the subject of registering deaths, specifying the data to be returned, and controlling, directing, or assisting local laws, and no national or central compilation of such data as is recorded under local laws except that made by the Census Office in its decennial reports.

This office, therefore, furnishes the only present means of aggregating the statistics obtained by local officers, and it is presumed that they are interested to as great an extent as any others in the results presented. This, too, is one of the branches of present census work which could most advantageously be performed from year to year, and the growing tendency to a permanent organization will eventually bring about this result, to the direct local advantage of officers whose statistical work is now limited.

The scientific value and usefulness of the mortality statistics issued by this office, could be very readily and greatly enhanced if the authorities in each locality would see that certain essential features of the census compilations were provided for in the form used by them for the return of deaths.

It is probable that in some localities the forms used in a neighboring place have been adopted without special study; in others prepared to supply only information of the most general kind without thought of their having any wider usefulness, and as in some cases correspondents have indicated a willingness to adopt a specified form, or to make changes in the form used, a form for the return of deaths has been prepared and is given below, which includes details, all of which are necessary for carrying on the work of the Census Office, as shown in the present reports. For each item, where necessary, explanatory notes are given, to make plain the reasons for the same, and its uses.

It will be understood that this does not in any sense limit a form to the exact data specified. Any additional matter required for local purposes can be inserted.

FORM RECOMMENDED.

RETURN OF A DEATH.

1. Name_			_ 2. Color		3	. Sex_	Infen!

14. Place of intern	grn						
Date of ret	grn		Sig	nature			
					(Of phys	ician or	informant.)

- 2. Color.—White, black (Negro and mixed), Chinose, Japanese, and Indian.
- 4. Date of death.—Give year, month, and day. (See also Note 5.)
- 5. Date of birth.—Required particularly in case of children under 1 year of age, as the census report of births is computed by adding to the living population under 1 year of age on the day of the enumeration (June 1) the number of those who were born during the year preceding, but who, as shown only by the return of deaths, died before that date. This is very important. Further, it this data were strictly reported for all of the deaths it would furnish an important factor for computing the amount of error in the age distribution of the population and furnish a check upon the ever prevailing tendency to state ages in "round numbers".
- 7. Conjugal condition.—Single, married, widowed, divorced, and unknown. It is important to distinguish the "divorced" from the single. In a legal sense a divorced person may be single, but for the computation of mortality and the influence of conjugal condition upon the death rates from certain causes, the distinction is important, and should be carefully maintained.
- 9. Place of birth.—If native born, the name of the state is sufficient. If of foreign birth, the name of the country. Some forms sent in call for "nationality", and where this is used the country of birth should also be stated. It does not seem desirable to give the particular state, city, or political subdivision of foreign countries. (See notes on nativity of parents.)
- 10 and 11. The birth places of parents are necessary to classify the deaths according to parent nativity. The proportion of persons of foreign parentage in this country, and particularly in certain localities, is so large and the difference in the death rates so considerable that this becomes an important factor. (See Nete 11.)

11. Birthplace of mother. This is highly important and is extensively used in this report as best showing the influence of race characteristics and inherited tendencies. As in case of the place of birth of the individual referred to above (Note 9), some registration blanks furnished call for "nationality", and if this is construed to mean "race", it is a desirable addition, particularly in case of foreign countries having an heterogeneous population.

13. Place of death. If in a city, the street, house number, and ward should be carefully specified, and the ward designation should be verified by the registrar. In certain large cities the census data concerning deaths are compiled by "sanitary districts", which are subdivisions (generally of wards) according to sanitary conditions and other characteristic features (see special reports of this office), and which might profitably be extended to other cities, but to which the accurate location of the place of death is specially necessary. If the death occurs in a hospital or other institution, the name and location of the same (street, number, and ward) and the further information as to time an immate and previous residence (or place from whence taken) should also be given, in order that the death may be charged or transferred to the locality to which it may be due, as it would be obviously erroneous to charge a healthy locality with all deaths occurring in some large hospital or institution situated therein. The "sanitary district" subdivision initiated by this office in New York city has been adopted by the local board of health in their subsequent compilations. In the same way deaths occurring in villages having known limits, or in rural sections such as towns or townships, should be distinguished, the name of the county being given in either case.

Generally speaking, each inquiry should receive an exact statement, and the smallest possible latitude should be left for persons to construe an inquiry differently. The use of the term "unknown" should be restricted as far as possible, and in this connection it should be remembered that failure to fill any space

with a definite statement is equivalent to reporting the data called for as unknown.

It is hoped that a careful examination of the data indicated above as desirable in returns of deaths will lead to their incorporation in forms now in use, as well as in those which may hereafter be adopted. A comparison with the specimen forms of returns given will show that in most cases very slight additions will serve to make them in every way satisfactory.

One of the most important things to be borne in mind in the use of the data contained in the following tables, is the influence of what is commonly called "the law of large numbers" as affecting the correctness of ratios to be derived from them. The larger the figures, the greater is the probability that the ratio derived from them is correct; the smaller the number of observations, the greater is the possible error in the ratios derived from them, since the greater is the effect of small variations in the numbers upon these ratios. For example, in three groups of 50 persons, taken at random, it is not only possible, but quite probable, that the number of deaths during a year will be, for one group, 2; for another, 1; or, for a third, 0; representing, respectively, a mortality of 4, 2, and 0 per cent, and yet that these great differences in the ratios may really indicate nothing as to the relative healthfulness or liability to death of the members of the several groups. On the other hand, in three groups containing 50,000 persons of like distribution of age, sex, and occupation, a variation of 5 per 1,000 in the annual mortality rate would indicate that the conditions were not equally favorable to health and life in the several groups.

Whenever, therefore, an unusually large or small ratio is deduced from the figures given, the first thing to look at is the size of the numbers from which the ratio is derived, bearing in mind the rules for estimating the limit of probable or possible error, the simplest of which is, so far as regards the number of deaths in a given number of persons, to take the possible error as equal to the square root of the number of deaths.

SECTION II.

GENERAL DEATH RATES.

Table 1, Part III of this report, shows the number of deaths in the United States by states and territories, with distinction of sex, and a statement of the rates of death per 1,000 of population for the censuses of 1890, 1880, and 1870.

The total number of deaths reported as having occurred in the United States during the census year, including those reported in the Indian territory and among Indians on reservations, was 875,521, giving a death rate of 13.98 to the 1,000 of living population. Excluding deaths among Indians, the death rate was 13.94, which is lower than that given by the figures of the census of 1880, namely, 15.09; and higher than that given by the figures of the census of 1870, namely, 12.77.

These changes must not be taken as indicating any actual change in the death rate, but rather that, for a large part of the country, the enumerators' returns of the Eleventh Census are more deficient as regards the deaths than was the case in 1880. Care must also be taken not to accept the different ratios of deaths per 1,000 of population for the several states as shown in Table 1, as indicating the relative healthfulness of the several states at the time of either one of the three censuses noted. The table is merely a convenient summary of the population and the number of deaths recorded in each state, being a continuation of similar tables in preceding census reports. The figures showing the death rates per 1,000 of population for each state are in every case too small, because the calculations are based, not on the mean population of the year, that is to say, the number of persons who actually furnished this number of deaths, but upon the number of survivors at the end of the year, which is greater than that of the mean population and therefore gives a less death rate.

This method of calculation has been used:

First. Because it has been the method used in previous censuses and seemed desirable in order to permit a comparison of results;

Second. Because, on account of the varying migrations of population within the country, it is impracticable to calculate with accuracy the mean population of a single state or territory for any given year; and,

Third. Because the amount of error resulting from taking the surviving, instead of the mean, population, is so small in comparison to that caused by the errors of omission, due to a failure to record all deaths, that it would not be worth while to incur the expense of having the mean population computed; the difference in the ratio amounting in most cases to less than 0.2 of 1 per 1,000. For the great majority of the states, as has been already explained, the failure to return all the deaths which occurred during the census year makes any computation of death rates comparatively useless.

The states which had a satisfactory registration of deaths during the census year, and whose records were copied and used in the tabulations, are Connecticut, Delaware, the District of Columbia, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, and Vermont, and the deaths in these states, inclusive of stillbirths, with the death rates per 1,000 of population, are shown in the following table:

REGISTRATION STATES.	Deaths.	Death rate.
Total	242, 163	20.38
Connecticut	14, 470	19.39
Delaware	3, 107	18.44
District of Columbia	5, 955	25.85
Massachusetts	45, 112	20.15
New Hampshire	7,074	18.79
New Jersey	30, 344	21.00
New York	123, 117	20.53
Rhode Island	7, 559	21.88
Vermont	5, 425	16. 32

A special effort was made to secure a complete record of the deaths occurring in Alabama, but with small success, the resulting death rate being 13.81 as against 14.20 per 1,000 of population in 1880.

Excluding the above named registration states, and the 83 registration cities in other states, the number of deaths actually reported by the enumerators for the rest of the country was 426,591.

The aggregate population of the area covered by registration records is 19,659,440, and that of the area covered by the nonregistration records, or the enumerators' returns plus deaths reported by physicians, is 42,962,810.

The death rates per 1,000 of living population are shown, for each of the above mentioned classes, in the following statement:

CHARACTER OF RETURNS.	Population.	Deaths. (a)	Death rate.
Registration	19, 659, 440 42, 962, 810	409, 125 466, 396	20.81 10.86

a Inclusive of stillbirths.

The death rate of 20.81 per 1,000 of living population for the localities covered by registration records was lower than the rate for the registration area in 1880, namely, 22.21; but the registration record covered a much more extensive area for 1890 than it did for 1880, and in some localities in which the registration system had been but recently established it is known that there were some omissions in the returns of death. The proportion of area of rural districts, including villages and small towns, in which the death rate is always lower than in large cities, was much greater in the registration record of 1890 than it was in 1880, and these facts appear to be quite sufficient to account for the lower death rate in this area in 1890 than in 1880.

In the report on Vital Statistics of the Tenth Census (volume XI) there was given a comparison between the enumerators' returns and the registration returns for the states of Massachusetts and New Jersey, from which it was estimated that the enumerators' returns for the whole country were at that time deficient about 30 per cent in the number of deaths, and upon this basis the true mortality for the whole country was estimated at about 18 per 1,000 of living population.

The death rate for the nonregistration areas in 1880, computed from the results given by the enumerators' returns, was 13.42 per 1,000 of population, while in 1890 the same class of returns gave a death rate of only 10.86, from which it follows that either the healthfulness of the country must have decidedly increased or that the enumerators' returns as regards deaths must have been more incomplete in the Eleventh Census than they were in 1880.

If we take the registration states together for the census year ending May 31, 1890, and compare the mortality in the rural and urban populations, we find that in a population of 7,180,144 in the cities there occurred 168,564 deaths, giving a death rate of 23.48 per 1,000; while in the rural districts of the same states, with a population of 4,701,186, the number of deaths was 73,599, giving a death rate of 15.66 per 1,000. These figures for the cities are probably very nearly accurate; for the rural districts, for reasons given above, they are a little too low. The actual death rate in the rural districts was probably 16 per 1,000.

The death rate in the nonregistration area, including all the western and southern states, was certainly lower than it was in the registration area, partly because, in the western states especially, there was an unusual proportion of adults of the ages having a comparatively low death rate; while in the eastern states, which compose the registration area, there is a greater proportion of old people, who have a comparatively high mortality. Upon the whole it seems probable that the death rate for the whole country in 1890 was about the same that it was in 1880, namely, about 18 per 1,000.

The only form of epidemic disease, which tended to increase in an unusual manner the number of deaths during the census year was the epidemic of influenza which prevailed during the winter of 1889–1890, but, on the other hand, diphtheria was decidedly less prevalent in 1890 than it was in 1880, so that the census year 1889–1890 was probably a fair average year as regards mortality.

The following table gives a comparison of the probable mortality in the United States in 1880 and 1890, namely, 18 per 1,000, with the death rates of some other countries for the same years, as given in the reports of the registrar-general of England for 1882 and 1892, respectively:

	DEATH	RATE.		DEATH BATE	
countries.	1890	1880	COUNTRIES.	1890	1880
United States	18.0	18.0	Hungary	32. 4	87.3
United Kingdom	19.4	20.4	Switzerland	20.9	21. 9
England and Wales	19.5	20.5	German Empiro	24.4	26.0
Scotland	19.7	20.5	Prussia	24.0	25. 5
Ireland	18.2	19.8	The Netherlands	20.5	23.5
Denmark	19.0	20.4	Belgium	20.6	22. 3
Norway	17.8	15, 9	France	22.5	22.8
Sweden	17.1	18.1	Italy	26.4	30.8
Austria	29.4	29.8			

It will be seen from the preceding table that the death rates were less in 1890 than in 1880 in every country named except Norway.

The conclusions to be drawn from this comparison are substantially the same as those given in the report for the Tenth Census, namely, that the death rate of the United States compares favorably with that of all other civilized countries; "but that nevertheless our mortality rate is not as low as it should be, especially if we take into consideration the fact that our population has been largely added to by the immigration of persons of those ages which have the lowest death rates". At present the average annual mortality rate for the whole country should not exceed 16, or, at the utmost, 16.5 per 1,000. In other words, 100,000 deaths occurred during the census year which were in one sense unnecessary and preventable.

SECTION III.

SEX IN RELATION TO DEATHS.

Of the total number of deaths reported, 464,330 were of males and 411,191 were of females, being in the proportion of 886 females to each 1,000 males. In 1880 this proportion was 931 females to each 1,000 males. In England and Wales in 1890 the deaths included 290,488 males and 271,800 females, being 936 females to each 1,000 males.

The following table shows for each of the registration states, and for their sum, the living population at the end of the census year, the number of deaths, and the death rate per 1,000 of population, with distinction of sex; the death rates being calculated from the population found on June 1, 1890, and not from the mean population for the year, for reasons given above:

REGISTRATION ST	Population.	Deaths.	Death rate.	
Total	11,881,330	242, 163	20, 38	
Males		5, 874, 034	126, 507	21.54
Females		6, 007, 296	115, 656	19. 25
Connecticut	Males	369, 538	7, 532	20.38
Ouncomount	Females	376, 720	6, 938	18.42
Delaware	(Males	85; 573	1, 652	19.31
Dola wate	Females.	82, 920	1, 455	17.55
District of Columbia	(Males	109, 584	3, 171	28.91
· ·	Females	120, 808	2, 784	23.04
Massachusetts	(Males	1,087,709	22,739	20.91
1110550011050005	Females.	1, 151, 234	22, 373	19.43-
New Hampshire	(Males	186, 566	3, 560	19.08
Tien Trampante	Females	189, 964	3, 514	18.50
New Jersey	(Males	720, 819	16, 072	22.30
Tron octoby	Females	724, 114	14, 272	19.71
New York	Males	2, 976, 893	65, 303	21.94
710M TATE	Females	3, 020, 960	57, 814	19.14
Rhode Tsland	Males	168, 025	3, 821	22.74
Tomong Truming	Females	177, 481	3, 738	21.06
Vermont	(Males	169, 327	2,657	15.69
t OTHOUGH	Females	163, 095	2, 768	16.97

It will be seen from this table that in the aggregate, and also in each state except Vermont, the death rate was higher for males than for females, the average mortality having been for males 21.54 and for females 19.25 per 1,000 living of the corresponding sex. In England and Wales the corresponding death rates for 1890 were for males 20.8 and for females 18.3.

The only two states in which we can compare these data for 1890 with corresponding data for 1880 are Massachusetts and New Jersey, the figures for which for 1880 are shown in Table XIII, volume XII, pages 176-179.

It will be seen from this that the death rate per 1,000 of male population in 1880 in Massachusetts was 19.10; in 1890 it was 20.91. In New Jersey in 1880 it was 17 per 1,000, and in 1890 it was 22.30.

The death rates per 1,000 of female population were in Massachusetts, in 1880, 18.10; in 1890, 19.43; in New Jersey, in 1880, 15.70; in 1890, 19.71.

The excessive death rate of males occurs chiefly at the earlier ages, as will be seen in the section on age in relation to deaths.

Of 112,599 deaths reported among the colored population in 1890, 57,147 were males and 55,412 were females, being in the proportion of 970 females to each 1,000 males. In 1880 the proportion was 1,017 females to each 1,000 males.

13

In addition to those causes of death which are peculiar to females, such as childbirth, abortion, and diseases of the female organs of generation, an excessive proportion of deaths among females is reported from the following causes, namely: diphtheria, whooping cough, old age, consumption, cancer and tumor, anæmia, dropsy, bronchitis, peritonitis, and burns and scalds.

An excessive proportion of deaths among males as compared with females is reported from the following causes, namely: typhoid fever, venereal diseases, alcoholism, premature birth and stillbirths, diabetes, tetanus, hernia; diseases of the liver; diseases of the kidneys, including Bright's disease; diseases of the urinary system; diseases of the bones and joints; diseases of the skin; and accidents and injuries, including suicides.

The following table shows for the United States and for 271 registration cities the proportion of deaths of males to each 1,000 deaths of females from each of certain specified causes, at all ages, and for those under From Fable:

5 years of age.

•	PROPORTION OF MALE TO 1,000 FEMALE DEATES.							
. CAUSES.	United	States.	271 cities.					
	All ages.	Under 5 years.	All ages.	Under 5 years.

Bronchitis	1,009	1, 132	981	1,104				
Measles	986	1,081	1,006	1,018				
Scarlet fever	968	1,046	951	939				
Diphtheria	945	1,057	967	1,072				
Consumption	t	1,050	1, 135	1, 113				
Whooping cough	829	847	801	820				
Peritonitis	730	1, 208	697	1, 325				
Cancer	601	1, 116	518	1, 333				

It will be seen from this table that for the age group under 5 years the proportion of deaths of males in the United States was greater than that of females for each of the causes named, with the exception of whooping cough, in which, as usual, the proportion of deaths was decidedly greater among the females.

The relations of sex to certain causes of death as shown in the death rates due to these causes, and also its relations to birth rates, will be discussed in a subsequent part of this report.

SECTION IV.

RELATIONS OF AGE TO DEATHS.

The age distribution of the population furnishing the deaths is the most important factor to be considered in studying the gross death rates of different localities, or the mortality from different diseases or of different races; and the proportions of the living population at each age, or in each age group pertaining to the particular locality or subject under consideration, should be constantly kept in view.

In Section XIV, which treats of the ages of the living population, certain deficiencies are indicated in the returns of the population, particularly of children, amounting, approximately, to 25 per cent of those reported as under 1, and 15 per cent of those under 5 years of age.

This deficiency in the population reported causes the death rates given for children, particularly those of the ages specified, to be proportionally too high. This applies to rates given in which those ages constitute factors, in this and in all other parts of the report on Mortality and Vital Statistics, and should be borne in mind.

Tables 4 to 13, inclusive, of Part III of this report, show for the United States, for each state and territory, for each state group in the registration states, for the total registration area and some of its subdivisions, and for the Chinese and Indians, the number of deaths reported as having occurred during the census year at each year of age under 5, and in each quinquennial age group for those of 5 years of age and over, with distinction of causes of death and of sex; and Tables 14 and 15, of Part III, give the same information for the United States and for each grand division with further distinction of color, nativity, and parental nativity, but by decennial instead of quinquennial age groups for ages over 15.

Table 10 gives the death rates per 1,000 of population in each of certain age groups during the census year in the registration states, the cities in the registration states, the rural districts in the registration states, the cities in New Jersey, with distinction of sex, color, nativity, parental nativity, and birthplaces of mothers. In the calculation of these rates the stillbirths have been included among the deaths.

The following table shows for the registration area and some of its subdivisions, the population June 1, 1890, in each of certain age groups, the number of deaths, excluding stillbirths, reported as having occurred during the census year in each of the same age groups, and the corresponding death rates, with distinction of sex and color.

a Sum of St. Louis, Baltimore, New Orleans, Washington, and Louisville.

It will be seen from the preceding table that for children under 5 years of age the average death rate among the whites per 1,000 of population was 64.21, being higher for males (68.55) than for females (59.78). It was highest of all in the metropolitan district (88.48), being for males 94.48 and for females 82.42, and lowest in the rural districts of the registration states (36.72), being for males 39.18 and for females 34.19. In every area it was higher among the males than the females.

For the colored children under 5 years of age the death rates were much higher than among the whites, and in every case higher among males than among females. For the total area the death rate among the colored children of this age group was 124.20, being for males 130.15, and for females 118.35. It was highest in the metropolitan district (151.60), being for males 170.94, for females 132.68; and lowest in the rural districts of the registration states (56.48), being for males 63.88, females, 49.36.

In the age group 5 to 15 years the death rate among the whites was 5.39 and among the colored 10.43, being slightly higher among females (white 5.40, colored 10.64) than among males (white 5.37, colored 10.21). The highest death rate in this age group among the whites occurred in the metropolitan district (6.10), and among the colored in the cities in the registration states (11.97), and the lowest in the rural districts of the registration states (whites 3.97, colored 6.69).

In the age group 15 to 45 years the death rate was lower among the whites than among the colored (white 9.29, colored 17.03), and higher among males (white 9.89, colored 18.27) than among females (white 8.69, colored 15.82). Among the whites in this age group it was highest in the metropolitan district (11.97), and among the colored in the cities in the nonregistration states (18.04). It was lowest in the rural districts of the registration states (white 6.83, colored 9.92).

In the age group 45 to 65 years the death rate was higher among the colored than among the whites, and higher among males (whites 23.94, colored 37.27) than among females (white 19.50, colored 29.20). It was highest in the metropolitan district (whites 31.42, colored 37.36) and lowest in the rural portions of the registration states (whites 15.17, colored 17.37).

Among those 65 years of age and over it was higher among the colored than among the whites, and among males (white 80.62, colored 118.15) than among females (white 75.86, colored 98.08). Among the whites it was highest in the metropolitan district (96.67), and among the colored in the cities of 100,000 inhabitants and upward (121.23). It was lowest in the rural districts of the registration states, in which it was lower among the colored (66.75) than among the whites (67.84).

For the greater part of the United States death rates to population can not be calculated by age groups because of the very incomplete character of the data with regard to deaths. In the nonregistration area, the only means of comparing the relative mortality at certain ages in different localities is by comparing the ratios derived from the number of deaths in a given age group with the number of deaths at all ages.

Gross ratios of this kind are of little scientific interest or value, because the number of deaths in infants under 1 year of age, or in any other age group, depends largely on the proportion of infants, or of persons of the particular age group in question, in the population furnishing the deaths.

If, however, we compare the number of deaths caused by a particular disease in persons of a certain age group with the total number of deaths occurring in that age group, and use the proportion thus derived in comparing either the relative liability of different localities to the action of certain causes of death, or the relative liability of persons of different age groups to the action of such causes we obtain some information of value.

Table 3, Part I, shows for each 1,000 deaths at each of certain ages or groups of ages from known causes, the number of deaths reported as due to each of certain causes or groups of causes, with distinction of sex, for the United States, for the registration area, for the registration cities, for the registration states, for the cities in the registration states.

Table 4, Part I, shows for each 1,000 deaths at known ages due to each of certain specified diseases and classes of diseases the number of deaths at each of certain ages or groups of ages, with distinction of sex, for the United States, the United States rural, the registration area, the registration cities, and the rural portion of the registration states.

The following table shows for the registration states the proportion of deaths reported as due to each of certain specified causes or groups of causes, per 1,000 deaths from all known causes, in each of certain age groups, with distinction of sex:

	110000 000000

It will be seen from this table that in children under 5 years of age the greatest proportion of deaths due to the causes named was caused by diarrheal diseases, diseases of the nervous system, and the specified infectious diseases; that in the age group 20 to 25 years the greatest proportion of deaths from the causes named, was due to consumption, pneumonia, accidents and injuries, and typhoid fever; that in the age group 50 to 55 years the causes producing the greatest proportion of deaths were consumption, pneumonia, diseases of the nervous system, and accidents and injuries; while in the age group 70 to 75 years the most prominent causes of death were diseases of the nervous system, diseases of the urinary system, and pneumonia.

The relations of age to certain particular causes of death are indicated in the discussion of those causes in Section X of this report.

INFANTILE MORTALITY.

The death rates of children under 1 year of age, when accurate, furnish an important means of estimating the healthfulness and sanitary condition of different localities or of different groups of population. Such data as the census furnishes for calculating these death rates are given in Tables 1 and 2 of Part I of this report. Unfortunately, these data are incomplete and inaccurate, not only for the United States as a whole, but for all parts of the registration area. This is due to the fact that the number of children returned as being under 1 year of age is too small in every locality, owing partly to omissions in the enumeration (a), and partly to the tendency of those reporting the age of infants to report those who are between 9 and 12 months of age as being, in round numbers, 1 year old, which last is a defect common to the censuses of all countries.

The number of children reported as being under 1 year of age on June 1, 1890, is also one of the factors in calculating the number of births during the preceding year, the other factor being the number of children reported as born and died during the year, hence the number of births is also too small in every locality, particularly in the nonregistration area, as the deficiencies in both the enumeration of children and the return of deaths are greatest in this area.

We have no fully complete and accurate registration of births in any part of the United States. The most accurate registration is probably in Massachusetts, in which it is estimated that the deficiency is not greater than 2 per cent.

It is usual to reckon infantile mortality as being the number of deaths of infants under 1 year of age per 1,000 births during the census year. The total number of births in the United States during the census year, as found by the method of calculation above referred to, was 1,704,923, and the number of deaths of children under 1 year of age was 197,167, which would give an infantile mortality of 115.65 per 1,000 of births during the year. In these figures, the stillbirths are included in the births and deaths. If the stillbirths be excluded from the deaths and births the infantile mortality thus calculated would be 97.60. In the registration area, including stillbirths both

in the deaths and in the births, the infantile mortality during the census year was 220.49. Excluding stillbirths from both births and deaths the corresponding rate would be 182.85.

The infantile mortality in some foreign countries has been as follows: France (1875–1882), 166.2; Belgium (1867–1883), 148.2; Netherlands (1878–1881), 193.2; Italy (1872–1883), 209.7; Switzerland (1869–1880), 195.2; Prussia (1874–1882), 207.8; Saxony (1865–1870), 270.0; Bavaria (1866–1883), 308.4; England and Wales (1866–1882), 149.2; Sweden (1866–1882), 131.9; Denmark (1870–1882), 137.5; Scotland (1865–1881), 122.0; Ireland (1865–1883), 95.9. (a)

For reasons above given the infantile mortality in the United States, or even in the registration area, as computed from the census figures is too high, and is not strictly comparable with the rates of foreign countries given above; but the rates in different parts of the registration area may be compared with each other as they are subject to nearly the same sources of error.

The following table shows for the United States, for the registration area and its subdivisions, and for the nonregistration area, the number of deaths of those born during the census year per 1,000 total births within the year, stillbirths being included in the deaths but not in the births, with distinction of sex, color, general nativity, and parental nativity:

a Bertillon, J., Article Démographie. J. Rochard, Encyclopédie d'Hygiène. Tome 1. Paris, 1890. Page 254.

It will be seen from the preceding table that in the United States the death rate for this age group per 1,000 of population was about double the death rate per 1,000 of those born within the year, and that in the registration area the death rates of each kind were about twice as high as in the United States taken as a whole.

In the registration area the infantile mortality was decidedly higher among males (122.50) than among females (99.75). It was much higher among the colored (196.98) than among the whites (107.06). Among the whites it was higher among the native born (106.14) than it was among the foreign born (males 92.06, females 83.81), and among the native born it was higher among those having one or both parents foreign born (males 111.54, females 89.05) than it was among those of whom both parents were native (males 88.13, females 71.02).

In the registration states the infantile mortality was much higher in the cities (123.96) than it was in the rural districts (68.66). It was highest of all among the colored in the cities in the registration states (215.86), and lowest among the native whites having both parents native in the rural part of the registration states (males 60.69, females 46.97).

The following table shows for the whites in the United States, in the registration area and its subdivisions, and in the nonregistration area the proportion of deaths of those born during the census year per 1,000 total births within the year, stillbirths being included in the deaths but not in the births, with distinction of birthplaces of mothers.

Other foreign countries	149, 55	250. 92	260. 27	·251. 27	264.35	142,86	249. 93	77.91		

In this table, as in the corresponding table by color and general nativity, it appears that the death rates per 1,000 of the living population under 1 year of age at the end of the year were about double the death rates per 1,000 of those born within the year, and in each class the death rates were about twice as high in the registration area as in the United States taken as a whole.

In the registration area the highest infantile mortality occurred among the children of mothers born in Bohemia (106.43), in Italy (140.34), and in Hungary (134.30); and the lowest among the children of mothers born in Scandinavia (79.84), in the United states (80.62), and in Scotland (96.17). It was a little higher among the children of mothers born in Ireland (105.24) than among the children of mothers born in Germany (104.44).

In the cities in the registration states it was highest among the children of mothers born in Bohemia (162.63), in Italy (154.06), and in France (138.49), and lowest among the children of mothers born in Scandinavia (98.42), in the United States (108.43), and in England and Wales (110.93).

The following table shows for the United States, for each state, and for the sum of the registration states, with distinction of color in the southern states, the number of births and the number of deaths under 1 year of age, each exclusive of stillbirths, for the censuses of 1890 and 1880, with the proportion of deaths under 1 year of age per 1,000 births.

It will be seen from this table that the infantile mortality thus calculated for the whole United States was slightly higher in 1890 (97.60) than it was in 1880 (96.83);, and that it was much higher in 1890 in the sum of the registration states (179.53) than it was in the same states in 1880 (131.23). In the registration states the highest infantile mortality in 1890 occurred in Rhode Island (192.71), in New Jersey (190.89), and in Massachusetts (182.57); and the lowest in Vermont (103.35), Connecticut (147.76), and in New Hampshire (153.66). In the District of Columbia the infantile mortality among the colored was 376.03, and among the whites 186.13.

In the nonregistration states the rates are much too small for both censuses, and it is very doubtful as to how far it would be justifiable to compare the rates of one nonregistration state with those of another. The only thing that they clearly indicate is that the infantile mortality of the colored was in all cases higher than that of the whites.

The following table shows for the registration area and its subdivisions, including the cities in each registration state, the number of deaths of infants under 3 months, from 3 to 6 months, from 6 to 9 months, from 9 to 12 months, and under 1 year of age during the census year per 1,000 births, stillbirths being excluded.

The three following tables furnish, for part of the registration area, some imperfect data with regard to the age distribution of the population and the deaths under 1 year of age, by periods of months, with the proportions in each period per 1,000 of the whole number under 1 year of age, and the death rate for each period per 1,000 population of corresponding age, at the end of the year.

The following table shows, for the sum of Baltimore, Boston, Brooklyn, Chicago, Cincinnati, District of Columbia, New York city, Philadelphia, St. Louis, and the state of New Jersey, the population under 1 year of age on June 1, 1890; the number in each of four periods of months, and the proportion in each period per 1,000 under 1 year of age, with distinction of sex, color, general nativity, and parental nativity:

يز. منظمي

In computing the rates given in the preceding table the population employed as one factor is the living population of the stated ages at the end of the census year, while the deaths which constitute the other factor are those which occurred at the stated ages at any time during the census year; hence the rates given in this table are not true death rates, since they have no relation to the number of infants of corresponding ages, or to any standard of years of life; they merely indicate that the mortality is greatest during the first 3 months of life, and steadily diminishes in each succeeding period of the first year of life, and also show the differences in the rates in different localities.

The population data given in the first of the series of three tables above, being that of a fixed date, namely, June 1, 1890, it follows that the number reported as under 3 months of age represents the survivors out of those born in the last 3 months (or fourth quarter) of the census year; those reported as 3 to 6 months of age the survivors out of the number born in the third quarter of the year; those reported as 6 to 9 months of age the survivors out of the number born in the second quarter; and those reported as 9 to 12 months of age the survivors out of the number born in the first quarter.

Taking the deaths as given in the second of this series of tables, it will be seen that infants dying in any month during the census year at 11 to 12 months of age may have been born in any month in the preceding year; that infants dying at 10 to 11 months may have been born in any month in the preceding year except the first, and so on for each month of death, the overlapping period in which births may have occurred lacking but one day of being equal to the entire census year in which the deaths occurred. For these reasons it is obvious that the deaths among infants from 0 to 3 months of age occurring out of the whole number of children born in any one of 15 months preceding a certain date does not furnish a proper basis for computing an accurate death rate for infants of this age, when divided by the survivors of those born only in the last 3 months preceding the same date. The same is also true of the other age periods, but the census returns do not afford any data for adjusting the results for these classes to get a mathematically correct basis for calculating true death rates of infants under 1 year of age, and the preceding rates for different classes, while not technically correct, are comparable with each other and with those of other countries computed in the same way.

SECTION V.

COLOR AND RACE IN RELATION TO MORTALITY.

The influence of race upon general or gross death rates, on death rates for different age groups, and on the mortality from certain forms of disease is sufficiently well marked to make it desirable to take into account the race distribution in the respective populations in comparing the death rates of different localities in the United States.

Table 2, Part III, shows the number of deaths in the United States by states and territories, with distinction of sex and color, and corresponding death rates for the census year. The death rates of this table are considerably too low except for the registration states.

Taking the whole United States, for a population of 54,983,890 whites there were recorded 758,660 deaths, giving a death rate of 13.80 per 1,000. For a population of 7,638,360 colored there were recorded 116,861 deaths, giving a mortality of 15.30 per 1,000.

Taking the states which have the largest proportion of colored population, namely, Alabama, District of Columbia, Florida, Georgia, Kentucky, Maryland, Mississippi, North and South Carolina, Tennessee, Virginia, and Louisiana, the total white population on the 1st of June, 1890, was 7,995,607, and the number of deaths of the whites in this region during the preceding year was 118,792, giving a death rate of 14.86 per 1,000. The colored population of the same area was 5,619,748, giving a death rate of 15.57 per 1,000.

It is in this section of the country that the deficiencies in the enumerators' reports of deaths were the greatest, and these deficiencies appear to be greater for the colored than for the white population, so that the difference between the mortality rates of the two races in this area is, if anything, greater than that indicated.

The following table shows the population of the registration area, and of some of its subdivisions on June 1, 1890, with distinctions of color, sex, general nativity, and parental nativity:

Cities	22.43	21.73	23.35	20.13	22.53	20.38	25.70	19.90	33.68	36.09	31.37	
States	20.38	20.17	21. 31	19.05	20. 28	18. 13	23.84	19.84	29.50	31. 37	27.74	
Cities	23.48	23.19	24.94	21. 51	24.27	21. 36	27. 22	20.92	34.14	37.80	31. 31	
Rural	15.66	15.60	15. 99	15. 20	15.45	15, 66	14.73	16.42	18.78	18.88	18.68	
Cities in nonregistration states	21.47	20.30	21.85	18.72	20.92	18. 27	22. 22	18.73	33.56	35.78	3139	
Cities of 100,000 population and upward	23.30	22.78	24.58	20.97	24, 06	23.96	26.74	20.17	33.64	35, 55	31.74	
Metropolitan district, 6 years	26. 78	26.74	28.82	24.71	29, 76	29.90	29.66	21.67	28.81	31. 29	26.42	

It will be seen from this table that in the registration area the death rate per 1,000 of population was much higher for the colored (32.40) than it was for the whites (20.22), and that this excess of mortality among the colored existed in every subdivision of the registration area, but that in the metropolitan district the difference in the death rates of the two races for the 6-year period was much less, that for the colored being 28.81 and that for the whites 26.74. This was probably due to the unusually large proportion of adults employed as servants, waiters, etc., among the colored population of this area. The difference in the mortality of the two races in the rural districts of the registration states was not very great, the rate being for the colored 18.78 and for the whites 15.60. Among the whites, the death rate was a little higher among the native born (20.52) than among the foreign born (19.39), which is due to the much larger proportion of young children, having a high mortality, in the former class. Among the native born whites the death rate was decidedly higher among those having one or both parents foreign born (23.45) than it was among those of whom both parents were native born (18.15); but in the metropolitan district for the 6-year period the death rates of these two classes were almost the same, that for those both of whose parents were native born being 29.90, and for those having one or both parents foreign born 29.66. In the rural districts of the registration states the death rate of the native born whites having both parents native born (15.66) was a little higher than that of those having one or both parents foreign born (14.73).

It is much to be regretted that not one of the southern states, where the greatest proportion of the negro race is found, had any complete system of registration of deaths, and it is only in a few of the large cities in this section of the country that we can compare the death rate of the negroes with that of the whites. There are at present no means of determining with accuracy the death rates of the negroes or of the whites in the rural districts of the south.

The excessive death rate among the colored was most marked in the younger ages, as has been shown in the table in the preceding section, page 20, giving for the registration area and some of its subdivisions the death rates of the white and colored, with distinction of certain age groups and of sex.

In the registration area, for infants under 1 year of age, the death rate for the census year was, for the whites 198.41, and for the colored 366.54, per 1,000 of population of that age group. For those under 5 years of age, for the whites, 64.21; and for the colored, 124.20. For those from 5 to 15 years of age, for the whites, 5.39; for the colored, 10.43. For those from 15 to 45 years of age, for the whites, 9.29; for the colored, 17.03. For those from 45 to 65 years of age, for the whites, 21.71; for the colored, 33.24. For those 65 years of age and over, for the whites, 78.11; for the colored, 106.20.

In the 5 large cities containing a considerable proportion of colored population, namely, Louisville, Baltimore, New Orleans, St. Louis, and Washington, the death rate for the census year, for children under 5 years of age, was, for the whites, 88.48; for the colored, 151.60; for those from 5 to 15 years of age, for the whites, 6.10; for the colored, 11.12; for those from 15 to 45 years of age, for the whites, 11.97; for the colored, 16.42; for those from 45 to 65 years of age, for the whites, 31.42; for the colored, 37.36, and for those 65 years of age and over, for the whites, 96.67; for the colored, 93.16.

The following table shows the number of deaths and the proportion reported as due to each of certain causes during the census year, per 1,000 deaths from all known causes, among the whites, the colored, and the Indians, with distinction of sex:

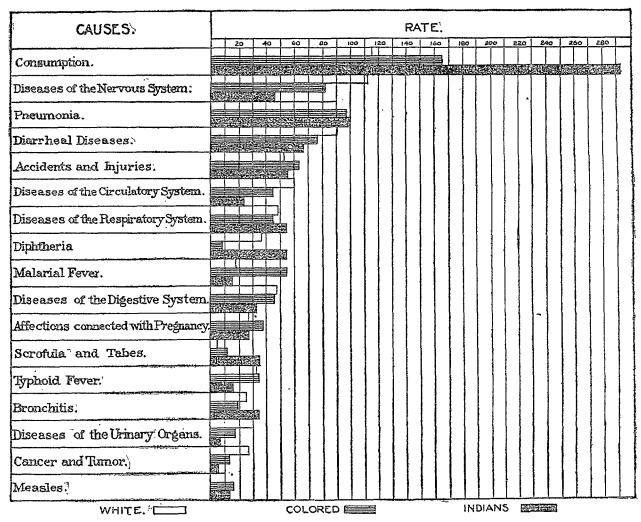

CAUSES.		WHITE.		C	olored. (a)		INDIANS.	-

a Includes 1, 113 Chinese.

The above table may be compared with Table 14, page xxxvi, volume x1, Tenth Census Reports.

This table indicates that among the colored, measles, typhoid fever, malarial fever, diseases of the female organs of generation, affections connected with pregnancy, and accidents and injuries caused a greater proportion of the total number of deaths from known causes than was the case among the whites or the Indians. Among the Indians diphtheria, venereal diseases, scrofula and tabes, consumption, bronchitis, pneumonia, and other diseases of the respiratory system caused a greater proportion of deaths than they did among the whites or the colored. This corresponds substantially to the result shown by the similar table on page xxxvi, volume xx, of the report on the Mortality and Vital Statistics of the Tenth Census.

The relative proportions of deaths due to certain causes among the whites, the colored, and the Indians are shown in the following diagram:

In 1880, out of each 1,000 deaths from known causes among the Indians, 34.87 were due to venereal diseases. In 1890, the corresponding figure is 13.51. In 1880, the proportion of deaths from consumption was, for the Indians, 286.99; for the colored, 186.03; and for the whites, 166.62. In 1890, the corresponding figures were, Indians, 290.54; colored, 166.41; whites, 114.55.

The following table shows the number of deaths reported as having occurred among Indians in the United States during the census year, with distinction of sex, of two age groups, and of certain causes of death:

Wyoming	1,801	76	43	33	42, 20

a Includes only those reservations from which reports of deaths were received.

This table may be compared with Table 15, page xxvi, volume xI, Tenth Census Reports.

It will be seen from this table that the average death rate for these Indians (32,26) was a high one, the rate in 1880 having been 23.6.

CAUSES.	Deaths.	Rate.	CAUSES.	Deaths.	Rate.
Total Scarlet fever. Measles. Whooping cough. Diphtheria Croup. Typhoid fever.	9 28 76 124 12	3, 226, 06 11. 94 37. 16 100. 86 164. 55 15. 92 25. 21	Consumption Pneumonia Heart disease and dropsy Diseases of the liver Diseases of the nervous system Diseases of the urinary system Affections connected with pregnancy	186 45 14 83 11 21	705, 90 246, 83 59, 72 18, 58 110, 15 14, 60 55, 30

These death rates should be compared with those given hereafter for the registration area in the discussion of special causes of disease.

The distinction of race among the whites, both as regards the living and the dead, can best be approximated by taking the birthplace of the mother as an indication of the race, the birthplace of the person being of comparatively little value for this purpose since it only applies to comparatively recent immigrants, and nearly all the children living or dying under 5 years of age would thus be reported as Americans.

The following table shows the white population of the registration area, and of some of its subdivisions on June 1, 1890, with distinction of birthplaces of mothers. Registration cities in which nativity of parents was not recorded, are excluded:

	Registration	Registration	REG	TATE MOITARTS	es.	Cities in
BIRTHPLACES OF MOTHERS.	area. cities.		Total.	Cities.	Rural.	nonregistra tion states.

Bohemia	40, 709	39, 262	15,553	14, 106	1, 447	25, 156
Italy	140, 053	119, 949	121, 933	101,829	20, 104	18, 120
Other foreign countries	432, 405	384, 617	314, 283	266, 495	48, 788	118, 122

It will be seen from this table that in the registration area as a whole the number of whites whose mothers were born in the United States (6,935,411), in Ireland (2,659,877), in Germany (2,125,315), in England and Wales (698,368), and in Canada (672,799) was so large as to make the ratios derivable from them of definite value.

Table 1, Part IV of this report shows the number of deaths reported in the United States, in the registration states, and in the cities in the registration states, for each of certain ages and groups of ages, with distinctions of sex, color, nativity, parental nativity, and birthplaces of mothers, for the census year ending May 31, 1890.

The following table shows the number of deaths among the whites, and the death rates per 1,000 of white population, with distinction of birthplaces of mothers, for the registration area and some of its subdivisions during the census year: Juola

It will be seen from this table that in the total registration area among the whites the death rate was highest among the children of mothers born in Bohemia (29.28), in Italy (28.40), and in Hungary (25.34), and was lowest among the children of mothers born in the United States (14.61), in Scotland (16.84), and in Scandinavia (16.91).

In the cities in the registration states it was highest among the children of mothers born in Bohemia (34.88), in Italy (33.77), and in Hungary (28.24), and was lowest among the children of mothers born in France (19.26), in England and Wales (19.43), and in Scotland (19.46). It was higher among the children of mothers born in Germany (20.49) than among the children of mothers born in the United States (19.77).

In the rural districts it was highest among the children of mothers born in Ireland (14.62), in England and Wales (14.34), and in France (13.90), and lowest among the children of mothers born in Italy (10.17), in Hungary (11.71), and in the United States (11.73).

The following table shows for the whites in the registration states as a whole, and for the cities and the rural portions of these states taken separately, the population, deaths, and death rates for the census year, with distinction of birthplaces of mothers, and of four groups of ages:

a Unknown age distributed proportionally.

b Wilmington, Del., not included.

The total white population of these states on the 1st of June, 1890, was 11,609,222, and of these, 5,740,752, or a little under one-half, were reported as children of mothers born in the United States. It is this population at the end of the year, and not the mean population of the year, that is used in calculating the death rates, for reasons previously given, and all the death rates are therefore from 0.1 to 0.5 per 1,000 too low, but they are fairly comparable with each other.

It will be seen that in these states the death rate of those whose mothers were born in the United States (15.37) was lower than that for those having mothers born in any other country. Had it been possible to separate the Jewish race, its death rate would have been found to be decidedly lower than that of the Americans.

The highest gross death rates occurred among the children of mothers born in Bohemia (32.86), in Italy (29.87), and in Hungary (25.55), and the lowest among those whose mothers were born in the United States (15.37), in Canada (17.62), in France (17.69), and in England and Wales (17.76).

For those under 15 years of age the highest death rate occurred among the children of mothers born in Italy (67.85), in Hungary (55.30), in Bohemia (54.96), and in Scandinavia (35.43), and the lowest among the children of mothers born in the United States (22.23), in Scotland (24.63), in England and Wales (26.54), in France (27.18), and in Ireland (28.32), the mortality of the first group being twice as high as that of the second.

For those between 15 and 45 years of age the death rates were highest among those having mothers born in Bohemia (15.00), in Ireland (13.18), and in Scandinavia (9.05), and the lowest among those having mothers born in the United States (5.84), in France (7.14), in Canada (7.60), in England and Wales (7.65), in Hungary (7.99), and in Scotland (8.30).

For those from 45 to 65 years of age the highest death rate occurred among those having mothers born in Ireland (31.23), in Bohemia (30.42), and in Hungary (29.62), and the lowest among those having mothers born in the United States (12.49), in Canada (16.12), and in England and Wales (19.52).

For those 65 years of age and over the highest death rate occurred among those having mothers born in Hungary (100.00), in Ireland (91.20), in Italy (81.39), and in France (80.28), and the lowest among those having mothers born in the United States (51.24), in Canada (61.46), in Scandinavia (62.77), in Germany (75.11), and in Scotland (75.22).

If we take the registration cities in the registration states which have a total white population of 6,990,183 we find that the highest gross death rates occurred among those whose mothers were born in Bohemia (34.88), in Italy (33.75), in Hungary (28.24), and in Ireland (25.02), and the lowest among those whose mothers were born in France (19.25), in England and Wales (19.42), and in Scotland (19.44).

Taking the children under 15 years of age in these cities the highest death rates occurred among those whose mothers were born in Italy (72.46), in Bohemia (58.39), and in Hungary (57.73), and the lowest among those whose mothers were born in Scotland (27.89), in France (30.77), in England and Wales (31.11), and in the United States (32.38).

For those from 15 to 45 years of age living in these cities the highest death rate occurred among the children of mothers born in Bohemia (15.75), in Ireland (14.71), in Italy (10.30), and in Scandinavia (9.76), and the lowest among those whose mothers were born in the United States (6.73), in France (7.81), in England and Wales (8.36), and in Canada (8.64).

In the age group 45 to 65 years the highest death rate occurred among those whose mothers were born in Ireland (36.17), in Bohemia (33.50), and in Hungary (32.46), and the lowest among those having mothers born in the United States (15.75), in Canada (18.24), in Scandinavia (21.52), and in Italy (21.58).

For the residents of these cities 65 years of age and over the highest death rate occurred among those having mothers born in Ireland (107.68), in Hungary (101.80), in France (89.30), and in Scotland (88.53), and the lowest among those having mothers born in the United States (63.87), in Scandinavia (64.82), and in Canada (67.18).

The following diagram shows the difference in the death rates of the different races in these cities during the census year, for the children under 15 years of age, and for those from 15 to 45 years of age.

<u> </u>		

Taking, now, the rural part of the registration states, which, however, includes a considerable number of comparatively large towns and has a total white population of 4,619,039, we find that the highest gross death rates occurred among those having mothers born in Ireland (14.62), in England and Wales (14.35), in France (13.91), and in Scotland (13.79), and the lowest among those whose mothers were born in Italy (10.20), in the United States (11.72), and in Hungary (11.72).

For white children under 15 years of age in these districts the highest death rate occurred among those having mothers born in Hungary (32.22), in Italy (28.84, in Bohemia (21.82), and in Scandinavia (21.53), and the lowest among those having mothers born in the United States (12.39), in Ireland (12.79), in Scotland (15.43), and in Germany (15.47).

For the white population from 15 to 45 years of age in these districts the highest death rates occurred among those having mothers born in Ireland (8.01), in Scandinavia (7.28), and in Bohemia (7.28), and the lowest among those having mothers born in Italy (3.82), the United States (5.06), and in Germany (5.09).

Of the white population from 45 to 65 years of age in these districts the highest death rates occurred among those having mothers born in Ireland (18.24), in Germany (16.40), and in Scandinavia (16.15), and the lowest among those having mothers born in Bohemia (5.71, the number being very small), in the United States (10.37), and in France (10.49).

For the whites 65 years of age and over in these districts the number of deaths was generally too small to give rates of any significance. Among others, the highest death rates were among those having mothers born in Ireland (70.81), in France (68.33), and in England and Wales (66.02), and the lowest among those having mothers born in the United States (45.57), in Canada (56.46), and in Scandinavia (59.33).

The following diagram shows the difference in the death rates in the rural districts during the census year for the children under 15 years of age, and for those from 15 to 45 years of age.

'UNDI	ER I5 YE	ears.	BIRTHPLACES	15 704	5 Y (EARS
<u> </u>	RATE	٠,	MOTHERS.	F	ATI	Ξ.
30	20	10		5.	10	15
			HUNGARY. ITALY. BOHEMIA. SCANDINAVIA CANADA. FRANCE. ENGLAND-WALES GERMANY. SCOTLAND. IRELAND.			The second secon

It appears, then, that the death rate of adults having Irish mothers was highest both in the cities and the rural districts; that the death rate of the children under 15 years of age of Irish mothers was comparatively low in both localities; that the death rates of the children under 15 years of age having Italian, Hungarian, and Bohemian mothers were highest throughout, but that the death rate of adults having Italian mothers was comparatively low.

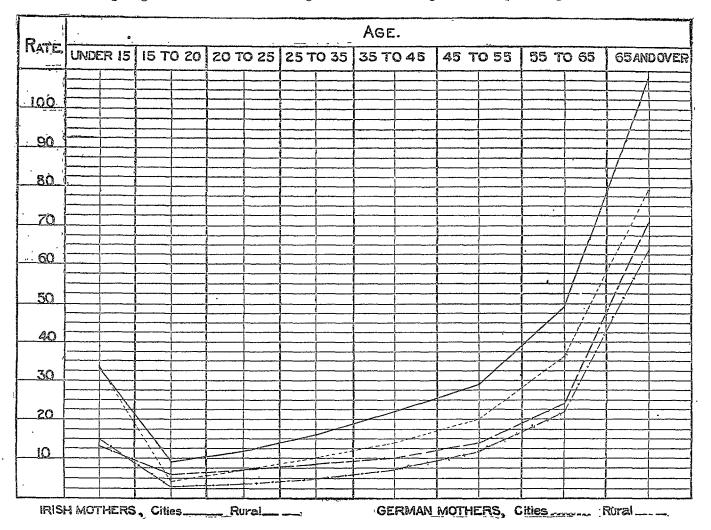

For all races and all ages, the death rates were higher in the cities than in the rural districts, but the evil effects of city life are manifested plainly in the children under 15 years of age, and especially among the children of mothers born in the United States, in Canada, and in Germany.

The relatively large number of the Irish and German population make their death rates of special interest, and therefore a more detailed comparison is given in the following table, which shows for the registration states the death rates of those having mothers of these two races, with a finer distinction of ages and with the distinction of cities and rural districts:

 $\{ f_{\mathcal{M}} \}_{i=1}^{n}$

The following diagram shows the relative magnitude of the rates given in the preceding table:

It will be seen from the preceding table and diagram that for children under 15 years of age the death rate of those having Irish mothers was lower than of those having German mothers, both in the cities and in the rural districts, but above 15 years of age the death rate of those having Irish mothers was higher than that of those having German mothers in every age group, and that the excess was greater in the cities than it was in the rural districts.

The following table shows the population on the 1st of June, 1890, for the sum of New Jersey, New York city, Brooklyn, Boston, Cincinnati, and the District of Columbia, in the aggregate, and for each of certain age groups, with distinctions of color, and, for the whites, of birthplaces of mothers.

It will be seen from this table that in every age group the death rate of the colored was higher than that of the whites, and that the difference was much greater for those under 15 years of age than for those above that age.

Among the whites, for infants under 1 year of age, the death rate was highest among the children of mothers born in Bohemia (468.27), in Italy (393.13), and in France (387.01), and lowest among the children of mothers born in Scotland (269.63), in the United States (279.76), and in England and Wales (285.32).

For children under 5 years of age, among the whites, the death rate was highest among the children of mothers born in Italy (150.25), in Bohemia (147.28), and in Hungary (113.50), and was lowest among the children of mothers born in Scotland (82.05), in the United States (85.12), and in England and Wales (86.78). In this age group it was higher among the children of mothers born in Ireland (108.61) than among the children of mothers born in Germany (97.64).

In the age group 5 to 15 years, among the whites, the death rate was highest among the children of mothers born in Scandinavia (7.91), in Canada (7.45), and in Ireland (6.89), and was lowest among the children of mothers born in Bohemia (4.06), in France (5.02), and in England and Wales (5.39).

In the age group 15 to 45 years, among the whites, the death rate was highest among the children of mothers born in Ireland (16.66), in Bohemia (15.50), and in Canada (12.07), and was lowest among the children of mothers born in the United States (7.01), in Hungary (8.18), and in France (8.52).

In the age group 45 to 65 years, among the whites, the death rate was highest among the children of mothers born in Ireland (40.68), in Bohemia (34.04), and in Hungary (30.44), and was lowest among the children of mothers born in the United States (16.63), in Canada (21.74), and in Italy (22.50).

In the age group 65 years and over the death rate, among the whites, was highest among the children of mothers born in Ireland (116.34), in Hungary (97.56), and in England and Wales (92.45), and was lowest among the children of mothers born in the United States (69.15), in Canada (70.31), and in Scandinavia (76.12).

The following table shows for the registration states the average age at death of those reported as having died during the census year, at all ages and for those 15 years of age and over, with distinction of sex, color, general nativity, parental nativity, and for the whites of birthplaces of mothers:

SEX, COLOR, NATIVITY, PARENTAL NATIVITY, AND		I AGE AT
BIRTHPLACES OF MOTHERS.	All ages.	15 years and over.
Total	32. 27	52. 76

Females.	9.77	40.18
Other foreign countries	24. 52	46. 45
Females	21.68	47.95

It will be seen that in the aggregate the average age at death was greatest among the children of mothers born in France and least among the children of mothers born in Italy. Excluding those under 15 years of age, the average age at death was higher among the whites (52.12 years) than among the colored (45.25 years). Among the whites it was greatest among the children of mothers born in the United States (males 56.30 years, females 56.99 years) and least among the children of mothers born in Hungary (males 39.70 years, females 39.80 years).

The relations of race to the mortality from certain forms of disease are indicated in Section X.

SECTION VI.

CONJUGAL CONDITION, IN RELATION TO DEATHS.

Tables 2, 3, and 4, Part IV, of this report, furnish data as to deaths in the United States and in registration areas, with distinction of the conjugal condition of the decedents, and with further distinctions of sex, color, general nativity, parental nativity, birthplaces of mothers, of certain age groups, and of certain causes of death for the census year ending May 31, 1890.

Of the total 875,521 deaths reported in the United States during the census year, 367,187 were of persons under 15 years of age, and 9,404 of unknown age. Of those 15 years of age and over, whose ages are known, there were reported as single, males, 68,232; females, 45,531; as married, males, 135,939; females, 116,931; as widowed, males, 29,214; females, 55,745; as divorced, males, 592; females, 522; as unknown, males, 29,027; females, 19,909.

In the registration area, of the 409,125 deaths reported, 177,714 were of persons under 15 years of age, and 2,127 of unknown age. Of those 15 years of age and over, whose ages were known, there were single, males, 31,761; females, 20,989; married, males, 61,142; females, 48,973; widowed, males, 15,728; females, 31,879; divorced, males, 76; females, 88; unknown, males, 13,280; females, 9,104.

The following table shows for the registration area, and also for the registration states, with distinction of cities and rural districts, the death rates for certain age groups per 1,000 of population of corresponding ages, with distinction of conjugal condition, sex, color, and general nativity:

It will be seen from this table that in the registration area, for single persons 15 years of age and over, the death rate was higher among males (10.94) than among females (8.61), and this difference exists in each of the four age groups for which the data are given. The same is true for the total of the registration states and for the cities in the registration states; but in the rural districts of these states among single persons 15 years of age and over the death rate of the females (8.65) was very slightly higher than that of the males (8.58).

For the married in the registration area the death rate for those 15 years of age and over, taken as a whole, was higher than for the single in the same age group, and was higher among males (16.66) than among females (13.42). If, however, we take the age group 15 to 45 years, the death rate of the single males (9.29) was higher than that of the married males (8.95), while the death rate of the married females (9.63) exceeded that of the married males and also that of the single females (6.79).

In the age group 45 to 65 years the death rate of the single males (31.29) was decidedly higher than that of the married males (19.83), and the death rate of the single females (22.00) was also decidedly higher than that of the married females (16.80).

In each group the death rate of the widowed was higher than that of the married or of the single of both

In the age group 15 to 45 years the death rate of the widowed males was 21.91, or more than twice as high as that of either single or married males for this age group. The death rate of widowed females was 12.22, or nearly twice as high as that of single females of the same age.

In the age group 45 to 65 years the death rate of the widowed males was 36.56 as against 31.29 for the single and 19.83 for the married males of this age group. For the widowed females between 45 and 65 years it was 21.84, being about the same as for single females of the same age group (22.00) and higher than that of the married females of the same age group (16.80).

The same relative differences occur in the figures for the total of the registration states in the cities and in the rural districts.

The following diagram shows the relative magnitude of the death rates per 1,000 of population in the registration area of males 15 to 45 years of age, with distinction of single and married, and of color and general nativity:

Italy	10.46	2.81	28. 62	10.42	119.05		

This table indicates that for single white males from 15 to 45 years of age the death rate was highest in the children of mothers born in Ireland, both in the cities and in the rural districts, and that the death rate in adult males of all ages of this class was high as compared with the corresponding rates for the children of mothers born in the United States or in Germany.

The following table shows for single white females in cities and in the rural districts in the registration states the death rates in each of three age groups, with distinction of birthplaces of mothers:

	15 TO 4	5 years.	45 TO 68	5 YEARS.	65 years and over

In considering the figures of the preceding table, it must be borne in mind that the widowed and the married include a group of population of more advanced ages than the single, and that therefore the death rates from those diseases to which persons 45 years of age and over are specially liable, will be less among the single than among

the married or the widowed. For example, the death rate from cancer and tumor in single females, per 100,000 of population (17.34), was much lower than it was among the married (100.17), and very much lower than it was among the widowed (265.53).

The relations of conjugal condition to each of the causes or groups of causes of death indicated in this table are discussed in Section IX on the causes of death.

The following table shows for the registration area and its subdivisions the proportion of deaths of single, married, and widowed, in each of certain age groups, per 1,000 of the total deaths in those age groups, with distinction of sex, color, and general nativity:

			•	ΔG	ES.		•	
AREA, COLOR, SEX, NATIVITY, AND CONJUGAL CONDITION.	15 years	and over.	15 to 45	5 years.	45 to 65	j years.	65 years	and over.
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.

Widowed		10.71		10.48		10.12		19, 90
Suicides:	74.70		10.10	F 01	E1 50	10.40	36,92	3.07
Single	14.12	5. 29	12.12	5.04	51.78	10.40	11	6.32
Married	21. 83	5. 73	14.27	.5.26	32.43	6.94	37. 29	1
Widowed	57.44	7.15	40.97	6.99	63.80	6.07	60.47	8.82

It will be seen from this table that consumption caused a higher death rate among the single than among the married in each sex in the total of those 15 years of age and over, but that in the age group 15 to 45 years it caused a higher death rate among the married females (301.12) than among single females (277.50). Above the age of 45 it caused a higher death rate among the single females than among those that were married.

Cancer and tumor, diseases of the nervous system, diseases of the circulatory system, diseases of the digestive system, and diseases of the urinary organs caused higher death rates among the married than among the single in each sex, and the highest death rates of all among the widowed.

Diseases of the female organs of generation caused a higher death rate among the married than among the single or widowed females 15 years of age and over, but among females 45 years of age and over the death rate from these causes was lower among the married than among the single, and lowest of all among the widows.

1:1.1

The following table shows for the United States and for the registration area the number of deaths in each of three age groups per 1,000 of the total deaths occurring in those 15 years of age and over, unknown age being excluded, with distinction of conjugal condition, of sex, and of certain causes and groups of causes of death:

The preceding table is to be read as follows: In each 1,000 deaths from all causes, in single males from 15 to 45 years of age in the United States during the census year, 275.15 were due to consumption. In the registration area the corresponding figure was 338.87. In married males of the same age group the corresponding proportion of deaths from consumption was less, being 256.86 in the United States and 291.12 in the registration area. In widowed males of the same age group the proportion of deaths from consumption was 347.79 in the United States and 366.91 in the registration area, being somewhat greater than the proportion for both the married and the single males in this age group.

Considering the males from 15 to 45 years of age, the proportion of deaths from diseases of the nervous system in the United States was about the same for the single (58.82), the married (58.15), and the widowed (57.08); but in the registration area the proportion of deaths from this group of causes was greater among the married (67.38)

than among the single (60.40) or among the widowed (58.27), the difference being probably due to the greater proportion of urban population in the registration area and to the greater tendency to diseases of the nervous system in the urban population as compared with that of the rural districts.

Diseases of the circulatory system in this class in the United States caused a greater proportion of deaths among the widowed (60.62) than among the married (50.13) or the single (40.53). In the registration area, the same difference is observable, the proportions being, for the widowed 72.66, for the married 64.91, and for the single 54.29.

Diseases of the digestive system in this class of population in the United States caused a greater proportion of deaths among the married (48.33) than among the widowed (41.15) or among the single (33.56); and the same relative proportions are seen in the registration area, the figures being, for the married 51.65, for the widowed 38.85, and for the single 37.53.

Diseases of the urinary system and male organs of generation in this class of population in the United States caused a greater proportion of deaths among the widowed (53.98) than among the married (35.14) or among the single (23.42). In the registration area the corresponding figures are, for the widowed 67.63, for the married 48.42, and for the single 34.08.

Suicides in this class of population in the United States caused a greater proportion of deaths among the widowed (16.37) than among the married (14.07) or the single (11.96). In the registration area the corresponding figures are, widowed 18.71, married 15.94, single 13.04.

Taking the males 65 years of age and over, the proportion of deaths from consumption was greater among the single (70.89) than among the married (58.37) or among the widowed (44.29) in the United States. In the registration area the same relative proportions are observed, the figures being, for the single 75.87, for the married 51.74, and for the widowed 41.50.

Cancer and tumor in the United States in this class caused a greater proportion of deaths among the married (44.62) than among the single (31.57) or the widowed (32.90). The same difference exists in the registration area, the figures being, for the married 44.81, for the single 31.57, and for the widowed 31.00.

Diseases of the nervous system in the United States in this class caused a greater proportion of deaths among the married (157.19) than among the single (144.02) or the widowed (146.12).

Diseases of the circulatory system in this class in the United States caused a greater proportion of deaths among the married (135.80) than among the single (116.11) or the widowed (119.94). The same proportionate differences exist in the registration area, the figures being, for the married 151.48, for the single 126.77, and for the widowed 136.38.

Diseases of the digestive system in this class in the United States caused a greater proportion of deaths among the married (53.58) than among the single (40.74) or the widowed (41.51).

Diseases of the urinary system in the United States in this class caused a greater proportion of deaths among the married (89.20) than among the single (78.22) or the widowed (74.11).

Suicides caused a greater proportion of deaths in the United States in this class among the single (6.93) and the widowed (5.28) than among the married (4.58).

Taking the females from 15 to 45 years of age in the United States, the table indicates that the proportion of deaths from consumption was decidedly greater among the single (373.80) than among the married (293.45), the proportion for the widowed being intermediate (346.79).

Among females of this age group cancer and tumor caused a much greater proportion of deaths among the widowed (50.45) than among the married (32.76) or the single (13.31).

Diseases of the nervous system caused a greater proportion of deaths in this class among the widowed (59.36) than among the married (45.23) or among the single (58.60).

Diseases of the female organs of generation in this age group caused a greater proportion of deaths among the married (18.11) than among the widowed (14.78) or the single (9.98).

Among females 65 years of age and over the proportion of deaths from consumption in the United States was greater among the married (68.89) than among the single (60.50) or the widowed (47.18). In the registration area the proportion of deaths from this cause was greatest among the single, 57.29, that for the married being 51.64 and for the widowed 38.46.

In the United States, among females of this age group, cancer and tumor caused a greater proportion of deaths among the married (63.44) than among the single (54.18) or the widowed (47.92). In the registration area the corresponding figures are: married 64.70, single 55.84, widowed 49.81.

In the United States diseases of the female organs of generation caused a decidedly greater proportion of deaths in this age group among the married (5.60) than among the single (2.39) or the widowed (2.51). The difference in these proportions is somewhat less in the registration area, the figures being, for the married 3.96, the single 2.90, for the widowed 1.83.

SECTION VII.

OCCUPATIONS IN RELATION TO DEATHS.

The data furnished by the census returns for the calculation of death rates of persons engaged in different occupations are not sufficient in quantity or accuracy to give reliable results for more than a few occupations embracing large numbers of people, or for classes of occupations including several distinct occupations of generally similar character or influence upon the health of the people employed therein.

It is unfortunate in this connection that the returns of deaths for the registration areas, which are by far the most complete in point of numbers, do not permit the same detail in classification of occupations as the enumerators' returns, which are less complete. The enumerators had specific instructions concerning distinctions to be maintained in reporting occupations, but the physicians' certificates used in the registration areas did not require the same distinctions to be made, and in fact in many registration localities the item of occupation was very indifferently supplied in the records of deaths. (See Section I, introductory and explanatory remarks concerning registration returns.) This was particularly the case in the registration cities in the nonregistration states, in which the forms of certificates used varied so greatly, and in some of which the occupations of decedents were not called for at all. This fact will largely account for the differences between the death rates in these cities and those in the registration states.

In the registration states also the data as to the deaths by occupations contained in Tables 5 to 9, inclusive, Part IV, are not commensurate with the corresponding data as to the occupations of the population, on account of the difference in the source of the returns, and because the physicians had no such instructions as the enumerators. For example, a physician would, in many cases, report a retail dealer in dry goods dying under his charge as a "merchant" or "storekeeper", and the same would necessarily be classified with "dealers not specified". The result of this is that the death rate of dealers "not specified" is too high (16.84 per 1,000), while that of retail dry goods dealers is too low (3.70 per 1,000). In the same way a physician might state the occupation of a decedent as "mill operative", where the enumerator would distinguish the same as "cotton mill operative".

For these reasons the tables given in this analysis in relation to occupation are somewhat condensed, certain occupations specified in detail in the general tables being combined to secure greater uniformity in classification and larger numbers.

The lack of completeness in the return of deaths for the greater part of the United States precludes any calculation of the death rate of persons engaged in occupations for the country as a whole, either in the aggregate or for any specific occupation or class of occupations. This can only be done for the registration areas.

Of 277,738 males 10 years of age and over dying in the United States during the census year, 188,315, or 69 per cent, were reported as having a designated occupation. In females 10 years of age and over there were 252,962 deaths, of which number 42,914, or 17 per cent, were reported as having a designated occupation.

Taking the whole registration area, there were 124,591 deaths reported among males 10 years of age and over, 71,346 of whom were engaged in designated occupations. For the females 10 years of age and over the total number of deaths in this area was 113,843, and of those having designated occupations, 13,654.

Table 6, Part IV, gives the number of deaths in the United States, each registration state, and the remainder of the United States among males engaged in certain occupations and classes of occupations, during the census year, with distinctions of color, birthplaces of mothers, and certain age periods.

Table 8, Part IV, gives the same information for females.

Table 7, Part IV, gives the deaths in the United States, reported from registration and nonregistration sources, in registration states, in cities in the registration states, and in the rural parts of the same states, among the males engaged in certain occupations and classes of occupations, with distinctions of color, general nativity, and parental nativity, and with specifications of certain causes of death.

Table 9, Part IV, gives the same information for females.

Table 16, Part I, shows for the United States, for the registration area and its subdivisions, and for the nonregistration area, the proportion of deaths from each of certain causes and classes of causes per 1,000 deaths from all causes among males engaged in each occupation and class of occupations.

Table 17, Part I, gives the same information for the females.

Table 18, Part I, gives for the registration area and its subdivisions the death rate from each of certain causes and classes of causes among males engaged in each specified occupation or class of occupations per 100,000 of corresponding population.

Table 19, Part I, gives the death rates of females, with the same distinctions.

Table 20, Part I, gives for the United States, the registration states, and the remainder of the United States the number of deaths at known ages and the proportion in each of 8 age groups per 1,000 at known ages among males engaged in each specified occupation or class of occupations.

Table 21, Part I, gives the same information for females.

OCCUPATIONS OF MALES.

The list of occupations included in the general tables for the males embraces 102 titles, grouped into eight classes. This list does not include every distinct occupation reported, but covers all in which either the number of the population employed or of the deaths is sufficient to give results of any value. The general occupation tables compiled for the population cover 218 titles, giving the occupation of 18,821,090 males, of which number some 17,765,270 are included in the 102 titles embraced in the tables showing the deaths. The difference, which is 1,055,820, is but 5.94 per cent of the whole number, and is distributed among 116 occupations.

It is probable that so far as results showing the influence of occupation upon the death rates are concerned the list of 102 titles should be considerably reduced, and in fact it has been thought best to reduce this number to 89 in the tables given in this analysis, owing principally to the fact that the return of deaths was largely secured from registration sources, as explained above.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the aggregate number of the population and of the deaths, with the number in each class of occupations and the proportions in each class per 1,000 of the total:

The preceding table shows the proportion and distribution of the occupations included in the various classes throughout the different areas. The most important point shown by it is the difference between the prevailing occupations, or the numbers in certain occupations, in the cities and the rural districts.

It will be seen from this table that in the cities in the registration states the professional class embraced 3.94 per cent of the population returned as engaged in the specified occupations, the corresponding percentage in the rural districts being 2.51. In the clerical and official class the percentage of population in the cities was 12.81 and in the rural districts it was 4.31. The percentage in the mercantile and trading class in the cities was 10.92 and in the rural districts 4.68. In the class engaged in manufacturing and mechanical industries, the percentage of the population in the cities was 40.51 and in the rural districts 23.48, while the percentage of the class engaged in agriculture, transportation, and other outdoor pursuits was 52.18 in the rural districts against 11.48 for the same class in the cities.

It should be borne in mind, however, that the areas designated as the rural districts in the registration states, and the remainder of the United States (or nonregistration area), although largely rural, both include many smaller cities and towns; also, that while the class engaged in agriculture, transportation, and other outdoor occupations includes farmers and others in agricultural pursuits essentially rural in character, it also includes a large proportion of draymen, hackmen, teamsters, etc., and steam railroad employés engaged in transportation, which is more peculiar to the cities.

The following table shows, for the registration area and some of its subdivisions, the death rates of males engaged in each class of occupations, per 1,000 of corresponding population:

	Regis-	REGIS	ration s	PATES.	Regis- tration
CLASSES OF OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.
All classes	12. 28	13.84	15. 69	11.21	9.94
Professional	13.50	15.70	16.04	14.95	10.66
Clerical and official	7.69	9.80	10.26	7.91	5.41
Mercantile and trading	10.54	12. 25	12.87	10.22	8.43
Entertainment	13.08	14.53	15.86	10.67	11.41
Personal service, police, and military	12.49	15.39	16. 52	10.40	9.32
Laboring and servant	18. 24	22, 58	25.15	17. 52	13.99
Manufacturing and mechanical industries	11.38	12.96	14.03	10.36	9.10
Agriculture, transportation, and other outdoor	11.92	12.13	17.39	10.49	11.20

This table indicates that the highest death rate in the registration area occurred in the laboring and servant class (18.24) and the lowest in the clerical and official class (7.69). For reasons given above, the figures for the registration states are more accurate than those for registration cities in other states, and, therefore, are more reliable than those for the total registration area. In the registration states the death rates for each class are higher in the cities than in the rural districts, the highest death rate (25.15) being in the laboring and servant class in the cities.

The age distribution of the population furnishing the deaths is an important factor to be considered in connection with the death rates of persons engaged in different occupations.

The following table shows the number and percentage of the population and of decedents, in each of four age groups, engaged in the specified occupations in the registration states:

			AGE.		
POPULATION AND DEATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	3, 491, 407	853, 690 24. 45	1, 587, 177 45. 45	800, 280 22. 92	197, 284 5. 65
Deaths Per cent at each age	48, 306	4, 762 9. 86	14, 748 30.51	14, 728 30, 49	13, 827 28. 62

The registration states form the only area for which corresponding population data have been made up by age groups, but the figures given above will serve as an index of the relative proportions of each class in the several age groups given.

It will be seen from the preceding table that 28.57 per cent of the males engaged in the occupations reported were 45 years of age or over, and that these furnished 59.11 per cent of the deaths. Of females, 12.11 per cent were 45 years of age or over, and more than one-half of the deaths occurred among these. Nearly one-third of the whole number of deaths among males occurred at 65 years or over and in less than 6 per cent of the population, and nearly one-quarter of the deaths among females occurred in the same age group, which embraced less than 2 per cent of the population.

Table 14, Part I, shows, for those engaged in each selected occupation and class of occupations in the registration states, the population and the deaths, in each of four age groups, with the corresponding death rates per 1,000 of population.

The following table shows, for the registration states, the number of males reported as engaged in each class of occupations, in the aggregate, and in each of four age groups; the number of deaths reported among the same classes during the census year, and the percentage of the population and of the deaths in each age group.

POPULATION AND DEATHS: CLASSES OF			NUMBER.				PER	CENT.

This table shows the importance of taking into consideration the age distribution of the population contributing the deaths in comparing the death rates in one class of occupations with the average rates for all classes, with each other, or with those in occupations in the same class.

It will be seen that in the age group 15 to 25 years, the greatest proportions of population occurred in the clerical and official class (34.36 per cent) and the class engaged in manufacturing and mechanical industries (26.54 per cent), while in the age period 65 years and over the greatest proportions of population occurred in the professional class (6.92 per cent) and the class engaged in agriculture, transportation, and other outdoor pursuits (9.66 per cent). The greatest proportions of population in the age group 45 to 65 years also occurred in these classes, being for the professional class 26.19 per cent and for the class engaged in agriculture, transportation, and other outdoor pursuits 25.77 per cent.

The age distribution of those in each individual occupation included in the several classes will be compared with the total of the class to which it belongs in the following discussion upon occupations in detail.

The following table shows, for the registration States, the death rate of all males and of males engaged in each class of occupations, in the aggregate, and in each of four age groups, per 1,000 of corresponding population:

ALL MALES, AND MALES IN SPECIFIED OCCUPATIONS AND CLASSES OF OCCUPATIONS.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
All males	21.54	7.16	11. 59	23.04	78. 30
Males in specified occupations	13.84	5.58	9. 29	18.43	70.09
Professional	15.70	5.05	8.47	19.11	79.28
Clerical and official	9.80	6.16	9.15	13.65	38.54
Mercantile and trading	12. 25	3.52	7.43	17.11	73.59
Entertainment	14.53	8.56	12.79	18. 20	50.66
Personal service, police, and military	15.39	6.49	11. 21	22, 99	68.10
Laboring and servant.	22.58	9.73	16.96	33. 20	114.87
Manufacturing and mechanical industries	12.96	5.02	9.18	20.13	77.67
Agriculture, transportation, and other outdoor	12.13	4.13	. 5. 88	11.54	59.31

It will be seen from this table that the highest death rate in each age group occurred in the laboring and servant class, and that the lowest death rate occurred in those engaged in agriculture, transportation, and other outdoor pursuits and in the clerical and official class.

This table shows the difference in the death rates of all males, including those unoccupied or engaged in other than the occupations specified in the general tables under this head and those engaged in the selected occupations. The gross death rate for all males (21.54 per 1,000) and for males engaged in the specified occupations (13.84 per 1,000) are not strictly comparable, as the former is based upon deaths occurring at any age and includes a large proportion of children not found in the latter. Above the age of 15 years it will be seen that the death rates of males in designated occupations are uniformly lower than those of all males.

The following table shows the death rate of all males, of occupied males, and of males in each of certain occupations in each of two age groups in the registration states, with the mortality of those in each class, or occupation, in comparison with the corresponding results in England, as shown by the report of the registrargeneral:

		DEATH	RATES.		COMPARATIVE MORTALIT AT 25 TO 65 YEARS, BASED ON AN EQUAL NUMBE MALES IN EACH OCCUPATIO DIVIDED EQUALLY AS TO AC					
occupations.	England,	England, 1880-1882.		ion states, 90.	England,	Registration states

Blacksmiths	9.29	25.67	9.02	18.56	973	792	989			

It will be seen from the preceding table that the death rate of all males (without regard to occupation) in the age group 25 to 45 years in the registration states (11.59) was somewhat higher than the English rate at this age (10.16), but that the rate of males in the age group 45 to 65 years in the registration states (23.04) was less than the English rate at this age (25.27).

The death rates of occupied males in each age group were lower than those of all males in both England and the registration states, and were lower in the registration states than in England.

In the age group 25 to 45 years the death rates in the registration states were higher than in England among clergymen (registration states, 5.88; England, 4.64), lawyers (registration states, 8.50; England, 7.54), apothecaries, pharmacists, etc. (registration states, 11.47; England, 10.58), bakers and confectioners (registration states, 11.19; England, 8.70), bookbinders (registration states, 16.67; England, 11.73), and plasterers and whitewashers (registration states, 13.20; England, 7.79), and were lower among males in all other occupations specified.

In the age group 45 to 65 years the death rates were higher in the registration states than in England among apothecaries, pharmacists, etc. (registration states, 27.79; England, 25.16), bakers and confectioners (registration states, 28.45; England, 26.12), tailors (registration states, 28.17; England, 26.47), and plasterers and whitewashers (registration states, 25.56; England, 25.07), and were lower for males in all other occupations specified.

The three last columns, showing the comparative mortality at 25 to 65 years, require some explanation, the purpose being to show the number of deaths which would occur in each occupation if the number engaged was the same in each, and of similar proportions as to the age groups 25 to 45 and 45 to 65 years.

In making the computations given in columns 5 and 6, the average death rate of all males at 25 to 65 years is used to determine the number of males between these ages necessary to produce 1,000 deaths at the given rate, and the number thus ascertained is subdivided into the two age groups upon the basis of the proportion existing in the population furnishing the original rate.

In the registration states there were 2,711,129 males between 25 and 65 years of age, 1,788,854 being between 25 and 45 and 922,275 between 45 and 65 years. At the average death rate (15.49) there were 1,000 deaths to each 64,558 males between 25 and 65 years of age, and of this 64,558 males, 42,597 were under and 21,961 were ever 45 years of age. These numbers correspond very closely with those in the English report, namely, 64,641 between 45 and 65 years, with 41,920 under and 22,721 over 45 years.

The figures in column 6 indicate the number of deaths that would have occurred in the several occupations out of 64,558 males of whom 42,597 were under and 21,961 were over 45 years of age at the death rates in each age group obtained from the numbers actually reported. For instance, 42,597 elergymen at 25 to 45 years, with a death rate of 5.88 per 1,000, would give 251 deaths; and 21,961 at 45 to 65 years, with a death rate of 14.72, would give 323 deaths, making a total of 574, which represents the average mortality of elergymen between 25 and 65 years as compared with the standard, or average, mortality of all males, which is stated as 1,000.

It will be seen from the preceding table that the comparative mortality figures for males in the registration states were higher than in England among clergymen (registration states, 574; England, 556), apothecaries, pharmacists, etc. (registration states, 1,099; England, 1,015), and bakers and confectioners (registration states, 1,101; England, 958), and were lower in all other occupations specified.

It will also be seen that in the registration states the comparative mortality figures were higher than the standard figure for all males (1,000) for musicians and teachers of music (1,014), apothecaries, pharmacists, etc. (1,099), butchers (1,080), bakers and confectioners (1,101), barbers and hairdressers (1,049), bookbinders (1,012), and plasterers and whitewashers (1,124), and lower than the standard or average figures for all other occupations.

While these figures show the relative mortality of males in each occupation in comparison with the average mortality of all males, and indicate the relative mortality of males in each occupation in comparison with others, the latter is best shown by taking the total occupied males as the standard of comparison, and this is done in column 7, from which it will be seen that the mortality figure for all males is 1,249, that for occupied males heing stated as 1,000. It will also be seen that the relative mortality figure for males in nearly all the occupations specified was higher than the average figure for occupied males.

The preceding table gives all the occupations which are fairly comparable with those given in the English report, as there are differences in the classification or grouping of the occupations.

The following table shows, for the full list of occupations, in the registration states the comparative mortality in each occupation and class of occupations, computed, as in the preceding table, upon the bases of 1,000 deaths among all males between 25 and 65 years, and per 1,000 males of the same ages in the selected occupations:

It will be seen from this table that the relative mortality of occupied males in comparison with all males between 25 and 65 years of age was higher in the laboring and servant class (1,452) but lower in all other classes, being 780 for the professional class, 690 for the clerical and official class, 945 for the entertainment class, 982 for the personal service, police, and military class, 833 for the class engaged in manufacturing and mechanical industries, and 504 for the class engaged in agriculture, transportation, and other outdoor occupations.

Upon the basis of 1,000 deaths among occupied males between 25 and 65 years, it will be seen that the comparative mortality of all males was much higher, being 1,249, and that the mortality was above the average (1,000) in the entertainment class (1,182), the personal service, police, and military class (1,227), the laboring and servant class (1,814), and the class engaged in manufacturing and mechanical industries (1,040), and was below the average in the professional class (974), the clerical and official class (863), the mercantile and trading class (864), and the class engaged in agriculture, transportation, and other outdoor pursuits (630).

The following table shows, for the registration area and some of its subdivisions, the death rate from each of certain specified causes per 100,000 males engaged in all occupations reported:

CAUSE OF DEATH.	Regis- tration	REGIS	fration st	'ATES.	Regis- tration cities
	area.	Total.	Cities.	Rural.	in other states.
Typhoid fever	44. 30	40.33	47.68	31. 22	50. 29
Malarial fever	12.31	11.74	13. 55	9.19	13.16
Rhoumatism	7. 92	9.11	10.32	7.39	6, 12
Dropsy	7.85	7.82	4.01	13. 19	7.89
Heart disease	112.55	131.87	138. 13	123.02	83.46
Consumption	249.65	279.66	363, 60	161.15	204.45
Diabetos	5.71	6. 99	6. 26	8.01	3.80
Diseases of the nervous system	132, 72	158.96	164.90	150.59	93. 21
Diseases of the respiratory system	203.09	237. 27	287.51	166.33	151.61
Diseases of the liver.	25. 11	25, 35	31.56	16.58	24. 76
Ascites	0.76	0.66	0.49	0.90	0.91
Other diseases of the digestive system	36.13	40.44	45.95	32.67	29, 63
Bright's disease	41.46	51.18	60. 33	38. 27	26.83
Other diseases of the urinary system	40.79	49. 49	55. 29	41. 31	27.69
Diseases of the bones and joints	2.72	2.81	3. 28	2.14	2, 59
Burns and scalds	1.93	1.63	2.10	0.97	2.37
Injuries by machinery	0,59	0.60	0.83	0.28	0.56
Suicide		15.61	17.66	12.71	18.89
Other accidents and injuries	97.54	100.59	112.74	83. 44	92, 95

It will be seen from the above table that the death rates from the causes specified per 100,000 males engaged in all selected occupations in the registration area, as a whole, and in the registration cities in the nonregistration states, were generally lower than the corresponding rates in the registration states, which is probably due, to a large extent, to the deficient return of occupation of decedents in many of the cities in the nonregistration states. For this reason the general comparison of death rates from the specified causes will be upon the basis of the rates in the registration states, as affording more reliable results.

The preceding table shows that in the registration states the heaviest death rates among males in all specified occupations were from consumption (279.66), diseases of the respiratory system (237.27), diseases of the nervous system (158.96), heart disease (131.87), accidents and injuries, exclusive of suicide, injuries by machinery and burns and scalds (100.59), Bright's disease (51.18), and other diseases of the urinary system (49.49). The death rate from typhoid fever was 40.33, malarial fever 11.74, rheumatism 9.11, diseases of the liver 25.35, and from diseases of the bones and joints 2.81.

The death rate from each cause was higher in the cities of the registration states than in the rural districts, except in case of dropsy (rural, 13.19; cities, 4.01), diabetes (rural, 8.01; cities, 6.26), and ascites (rural, 0.90; cities, 0.49). The death rate from consumption was higher than that from any other cause in every area except the rural part of the registration states, in which the rate from diseases of the respiratory system (166.33) was higher than that for consumption (161.15). The death rates from typhoid fever, malarial fever, and suicide were higher in the registration eities of the nonregistration states than in the registration states.

A special analysis of the death rates from typhoid fever, heart disease, consumption, cancer, diseases of the respiratory system, diseases of the nervous system, Bright's disease, and suicide is given under these causes in Section X relating to causes of deaths.

The following table shows, for the United States, the registration area and some of its subdivisions, and the remainder of the United States, the proportion of deaths due to each of certain specified causes, per 1,000 deaths from all causes among males engaged in all selected occupations reported:

CAUSE OF DEATH,	United	Regis-	REGIS	TRATION S	FATES.	Regis- tration	Remain- der of the
CAUSE OF BEATH,	States.	tration area.	Total.	Cities.	Rural.	eities in other states.	United States.
Typhoid fever	47.75	36.08	29, 15	29.81	27.84	50.61	54.87
Malarial fever	23.46	10.02	8.49	8.64	8.19	13.24	31,66
Rheumatism	8, 42	6.45	6.58	6.58	6.59	6.16 -	9.62
Dropsy	16.34	6.39	5, 65	2, 56	11.76	7.94	22.41
Heart disease	79.49	91.65	95. 31	88.02	109.70	83.98	72.08
Consumption	171.60	203. 29	202.13	231.70	143.70	205. 73	152.27
Diabetes	5. 27	4.65	5.05	3.99	7.15	3.82	5.65
Diseases of the nervous system	94.50	108.08	114.89	105.08	134. 28	93. 79	86.22
Diseases of the respiratory system	167.36	165.38	171.49	183. 22	148.32	152.56	168.57
Diseases of the liver	17.33	20.45	18.32	20.11	14.78	24. 91	15.43
Ascites	1.36	0.62	0.48	0.31	0.80	0.91	1.82
Other diseases of the digestive system	31.48	29.42	29, 23	29. 28	29.13	29. 82	32.74
Bright's disease	26.92	33.77	36.99	38.45	34.12	27.00	22.75
Other diseases of the urinary system	27.86	83. 22	35.77	35. 23	36.83	27.86	24.60
Diseases of the boncs and joints	2.86	2, 21	2.03	2.09	1.91	2.60	3.25
Burns and scalds	1.66	1.57	1.18	1.34	0.86	2.39	1.72
Injuries by machinery	0.99	0.48	0.43	0.53	0.25	0.56	1.30
Suicide	11, 92	13.78	11.28	11. 26	11.33	19.01	10.81
Other accidents and injuries	92.02	79.43	72.70	71.84	74.41	93.53	99.69

This table shows that the greatest proportions of deaths in the United States, as a whole, per 1,000 deaths from all causes, were due to consumption (171.60), diseases of the respiratory system (167.36), diseases of the nervous system (94.50), accidents and injuries, other than suicide, injuries by machinery and burns and scalds (92.02), heart disease (79.49), and typhoid fever (47.75).

The proportions of deaths in the nonregistration area (remainder of the United States) due to the specified causes were generally greater than those in the registration area, the exceptions being heart disease, consumption, diseases of the nervous system, diseases of the liver, Bright's disease and other diseases of the urinary system, and suicide. In the nonregistration area and in the rural part of the registration states the proportion of deaths due to diseases of the respiratory system was greater than that due to consumption.

CLASS A-PROFESSIONAL.

The total number of males engaged in occupations included in this class in the United States was 525,464, being 2.96 per cent of the whole number reported in the selected occupations. The number of deaths in this class was 7,121, or 3.78 per cent of the total deaths among males in the selected occupations.

In the registration area the number of males reported in this class was 207,268, being 3.56 per cent of the whole number in the selected occupations. The number of deaths among these was 2,799, or 3.92 per cent of the total deaths of males in the same occupations in this area, and the death rate was 13.50 per 1,000.

The following table shows, for the registration states, the death rate at all ages and in each of four age groups, of males engaged in all professional occupations, and in each specified occupation of this class, per 1,000 of corresponding population.

			AGE.		
OCCUPATIONS.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Class A	15. 70	5.05	8. 47	19.11	79, 28
Actors	15.38	1.84	17.00	26.58	83. 33
Architects, artists, and teachers of art, designers, etc	12.38	6. 32	9.48	18. 29	53. 85
Clergymen	18. 24	5. 97	5.88	14.72	75, 45
Dentists	12.69	2,76	8.35	20.58	44.94
Engineers and surveyors	5, 62	1. 23	3.14	9.39	53.65
Journalists	16.83	9.49	11.98	26. 17	71.79
Lawyers	17, 71	8. 27	8.50	21.68	70. 13
Musicians and teachers of music	15.96	8.68	10.59	25, 65	77.13
Physicians and surgeons	21.55		9. 52	21.15	103.71
Professors, authors, and literary and scientific persons(a)	33.10	36. 29	20.59	27. 33	109.76
Teachers (a)	10.85	2.90	6. 18	14. 35	94. 25

a See remarks under professors, authors, and literary and scientific persons.

Excluding professors, authors, literary and scientific persons, and teachers from the comparison of results shown by the preceding table, it will be seen that in the age group 15 to 25 years the average death rate for males in occupations of this class was 5.05 per 1,000, being above this average for journalists (9.49), musicians and teachers of music (8.68), lawyers (8.27), architects, artists and teachers of art, designers, etc. (6.32), and elergymen (5.97).

In the age group 25 to 45 years the average death rate was 8.47 per 1,000, being highest among actors (17.00), journalists (11.98), musicians and teachers of music (10.59), and physicians (9.52). The death rate of lawyers in this age group (8.50) was about the same as the average rate for the professional class.

In the age group 45 to 65 years the average death rate was 19.11 per 1,000, being below this rate only for architects, artists and teachers of art, designers, etc. (18.29), clergymen (14.72), teachers (14.35), and engineers and surveyors (9.39). The highest death rates in this age group occurred among actors (26.58), journalists (26.17), and musicians and teachers of music (25.65).

In the age group 65 years and over the average death rate of males in professional occupations was 79.28 per 1.000, the highest rate occurring among physicians and surgeons (103.71), and the lowest among dentists (44.94).

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in all professional occupations and in each specified occupation of this class per 1,000 males engaged in each occupation:

OCCUPATION.	Regis- tration	REGIS	Regis- tration cities		
	area.	Total.	Cities.	Rural.	in other states.
Class A	13.50	15.70	16.04	14. 95	10.66
Actors	13. 52	15.38	16.14	8.37	11.09
Architects, artists and teachers of art, designers, etc	9.40	12. 38	11.82	15.42	- 5.61
Clergymen	17.79	18. 24	19. 89	16.78	17.01
Dentists	10.46	12. 69	13.14	11.73	7.51
Engineers and surveyors	4.46	5, 62	5.48	6. 16	3. 15
Journalists	14.68	16.83	17. 23	15.28	12.01
Lawyers	14.97	17. 71	18. 91	14.66	11.89
Musicians and teachers of music.	13.01	15. 96	16.61	11.86	9.61
Physicians and surgeons	19.00	21. 55	20.96	22. 59	15.74
Professors, authors, literary, and scientific persons (a)	27, 21	33. 10	35.34	25. 21	18. 20
Teachers (a)	9. 28	10.35	12.80	8.12	7.49

 α See remarks under professors, authors, and literary and scientific persons.

It will be seen from this table that the average death rate among males engaged in occupations included in the professional class in the registration states was 15.70 per 1,000. The highest death rate (excluding that of professors, authors, and literary and scientific persons, in regard to which see remarks under this head below) occurred among physicians and surgeons, namely, 21.55 per 1,000, being greater in the rural districts (22.59) than in the cities (20.96). The other death rates above the average for males in occupations of this class were clergymen (18.24), lawyers (17.71), journalists (16.83), and musicians and teachers of music (15.96).

The death rates in the registration cities in the nonregistration states were lower in every ease than the corresponding rates in the cities of the nonregistration states, but this is probably due, to a large extent, to a deficient return of occupation of decedents in these cities.

The following table shows, for the registration states, the number of males engaged in professional occupations living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

		AGE.						
POPULATION, DEATHS, AND DEATH RATES.	Allages:	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population	116, 873	16, 049 13. 73	61, 623 52, 73	30, 613 26, 19	8, 085 6, 92			
Deaths Per cent at each age	1,835	81 4.41	522 28, 45	585 31. 88	641 34.93			
Death rate per 1,000 population Average rate in all classes		5. 05 5. 58	8. 47 9. 29	19.11 18.43	79. 28 70. 09			

The preceding table shows the decreasing proportion of the population in occupations of this class as the age advances, the increasing proportion of deaths and the corresponding increase in the death rates, and represents the average age distribution and death rates in the professional class with which the individual occupations are compared.

The age distribution of males engaged in the several occupations has a great bearing upon the comparative death rates, and this distribution is shown for both the population and the deaths in the tables given for each occupation in detail in the analysis following.

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in professional occupations from each of certain specified causes per 100,000 living:

CAUSE OF DEATH.	Regis- tration	REGIS	TRATION S	TION STATES.	
ORGER OF PHATE.	area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	39.08	42.78	42. 21	44.05	34.29
Malarial fever	17.37	17.97	21.10	11.01	16.59
Rhematism	9.17	11.98	9.93	16.52	5.53
Dropsy	6.27	6.85	3.72	13.77	5.53
Heart disease	156.32	117.97	172.56	189. 97	128.33
Consumption	197.81	219.04	244. 56	162.44	170.36
Diabetes	13.03	17.97	14.90	24.78	6.64
Diseases of the nervous system		250.70	247.05	258.80	140.49
Diseases of the respiratory system		254.12	260.70	239.53	157.09
Diseases of the liver		31.66	37. 24	19.27	38.72
Ascites	0.48	0.86		2.75	
Other diseases of the digestive system	42.46	48.77	54.62	35.79	34. 29
Bright's disease		78.72	81.93	71.58	44.25
Other diseases of the urinary system	-55.00	73.58	75.73	68.83	30.98
Diseases of the bones and joints	2.89	1.71	1.24	2.75	4.43
Burns and scalds	0.95	0.86		2.75	1.11
Injuries by machinery					
Suicide	21.71	24.81	27.31	19.27	17.70
Other accidents and injuries	55. 97	55.62	54.62	57.82	56.42

This table shows that among males in the professional class of occupations in the registration states the highest death rates per 100,000 occurred from diseases of the respiratory system (254.12), diseases of the nervous system (250.70), consumption (219.04), and heart disease (117.97). The death rate from diseases of the nervous system was much higher in this class (250.70) than the average rate from these diseases in all selected occupations (158.96), and the rate from diseases of the respiratory system was slightly higher (professional class, 254.12; all classes, 237.27), but from consumption it was considerably below the average (professional class, 219.04; all classes, 279.66). It was also considerably above the average for diabetes, Bright's disease and other diseases of the urinary system, and suicide. The death rate from diseases of the nervous system in the registration cities in the nonregistration states (140.49) was much lower than the corresponding rate in the cities in the registration cities of the registration states were nearly twice as high as the corresponding rates in the cities in the nonregistration states.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among males engaged in professional occupations:

			REGIS	TRATION ST	ATES.	Regis-	Remain-	
CAUSE OF DEATH.	United States.	Regis- tration area.	Total.	Cities.	Rural.	tration cities in other states.	der of the United States.	
Typhoid fever	39. 46	28. 94	27. 25	26. 32	29.47	32, 16	46. 27	
Malarial fever	20.78	12.86	11.44	13.16	7.37	15, 56	25.91

Diseases of the respiratory system	149.00	156.84	161.85	162.54	160.22	147.30	143.91	
Diseases of the liver	21.91	25.72	20.16	23.22	12.89	36. 31	19.44	
Ascites	0.70	0.36	0.54		1.84		0.93	
Other diseases of the digestive system	36.37	31.44	31.06	34.06	23.94	32. 16	39.57	
Bright's disease	37.64	47.16	50.14	51.08	47.88	41. 49	31.47	
Other diseases of the urinary system	35.11	40.73	46.87	47.21	46.0 4	29. 05	31.47	
Diseases of the bones and joints	2.39	2.14	1.00	0.77	1.84	4, 15	2.55	
Burns and scalds		0.71	0.54		1.84	1.04	0.46	
Injuries by machinery	0.28						0.46	
Suicide		16.08	15.80	17.03	12.89	16.60	12. 26	
Other accidents and injuries	46.34	41.44	35.42	34.06	38. 67	52.90	49.51	

This table shows that the greatest proportions of deaths of males in the professional class in the United States, as a whole, per 1,000 deaths from all causes, were due to consumption (157.84), diseases of the respiratory system (149.00), diseases of the nervous system (139.59), and heart disease (95.63). In the nonregistration area (remainder of the United States) the proportion of deaths due to consumption (165.20) was greater than in the registration area (146.48), but the proportions due to diseases of the nervous system and diseases of the respiratory system were less than in the nonregistration area.

CLERGYMEN.

The total number of clergymen reported in the United States was 87,060, being 16.57 per cent of the whole number engaged in professional occupations. The number of deaths of clergymen was 1,402, or 19.69 per cent of the deaths among males in the professional class.

In the registration area the number of clergymen reported was 24,852, being 11.99 per cent of the whole number in this class of occupations. The number of deaths of clergymen in this area was 442, or 15.79 per cent of the total deaths in the professional class, and the death rate was 17.79 per 1,000.

The following table shows, for the registration states, the number of clergymen living at the end of the census year and the number of deaths among clergymen during the census year at all ages and in each of four age groups, with the percentages in each age group and the death rates per 1,000 living:

-		AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population	15, 624	335	7,478	5,707	2,041			
Per cent at each age	285	2.14 2	47. 86 44	36. 53 84	13.06 154			
Per cent at each age	l ŧ	0.70 5.97	15. 44 5. 88	29, 47 14, 72	54. 04 75. 45			
Average rate in this class		5. 05	8.47	19. 11	79. 28			

It will be seen from this table that nearly 50 per cent of the clergymen in the registration states were over 45 years of age, and that the greatest number of deaths of clergymen occurred in the age group 65 years and over, or out of 13.06 per cent of the number living, the death rate at this age being 75.45 per 1,000.

There were but 2 deaths among clergymen under 25 years of age in the registration states and the death rate (5.97) at this age is of no significance. The death rate in each of the other age groups was lower than the average rate for males in occupations of the professional class.

The following table shows, for the registration area and some of its subdivisions, the death rate of clergymen from each of certain specified causes per 100,000 living:

	Regis-	Regis-		TRATION STATES.		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.	
Typhoid fever	32. 19	25. 60	27. 24	, 24.15	43. 35	
Malarial fever	8.05				21.67	
Rheumatism		32.00	27.24	36. 22	10.84	
Dropsy	4.02	6.40		12.07		
Heart disease	229.36	256.02	245. 20	265.60	184. 22	
Consumption	185.10	153.61	204. 33	108.66	238.40	
Diabetes	16.10	12.80	13.62	12.07	21.67	
Diseases of the nervous system	293.74	332.82	313.31	350.11	227.57	
Diseases of the respiratory system	313.86	358.42	395.04	325. 97	238.40	
Diseases of the liver	48. 29	44.80	68.11	24.15	54.18	
Ascites						
Other diseases of the digestive system	60.36	44.80	68.11	24.15	86.69	
Bright's disease	44. 26	64.00	27.24	96.58	10.84	
Other diseases of the urinary system	76.45	76.80	95.35	60.36	75.86	
Diseases of the bones and joints	8.05				21.67	
Burns and scalds		6.40		12.07		
Injuries by machinery						
Suicide					10.84	
Other accidents and injuries	1 .	44, 80	27. 24	60.36	75.86	

It will be seen from this table that the highest death rates among clergymen in the registration states occurred from diseases of the respiratory system (358.42), diseases of the nervous system (332.82), heart disease (256.02), and consumption (153.61).

In comparison with the average death rates of males in the professional class, the death rates of clergymen from all these causes were very high, excepting that from consumption, which was below the average (clergymen, 153.61; professional class, 219.04). The death rate of clergymen from typhoid fever was below the average for the professional class and that from diseases of the liver was above it, while the rates for diseases of the digestive system and of the urinary system were about the same as the average. The death rate from rheumatism (32.00) was very high, the average rate from this cause among males in the professional class being 11.98.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among clergymen:

	United	Regis-	REGIS	TRATION ST	PATES.	Regis- tration	Remain- der of the
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	United States.
Typhoid fover	28.53	18.10	14.04	13.70	14.39	25.48	33. 33
Malarial fever	24. 25	4, 52				12.74	33.33
Rheumatism	13.55	13.57	17.54	13.70	21.58	6.37	13.54
Dropsy	19.97	2. 26	3.51		7.19		28.13
Heart disease	93.86	128, 96	140.35	123.29	158.27	108.28	86,46
Consumption	119.12	104.07	81.21	102.74	64.75	140.13	126.04
Diabetes	7.85	9.05	7.02	6.85	7.19	12.74	7.29
Diseases of the nervous system	156.92	165.16	182.46	157.53	208.63	133.76	153.13
Diseases of the respiratory system	168.33	176.47	196.49	198.63	194. 24	140.13	164.58
Diseases of the liver	26.39	27.15	24.56	34. 25	14.39	31.85	26.04
Ascites	2.14						3.13
Other diseases of the digestive system	37.09	33.94	24.56	34.25	14. 39	50.96	38. 54
Bright's disease	21.40	24.89	35.09	13.70	57.55	6.37	19.79
Other diseases of the urinary system	42.08	42.99	42.11	47.95	35. 97	44. 59	41,67
Diseases of the bones and joints	2,85	4.52				12.74	2.08
Burns and scalds	0.71	2. 26	3.51		7.19		
Injuries by machinery							
Suicide	3.57	2, 26				6.37	41.67
Other accidents and injuries	82.10	31. 67	24.56	13.70	35. 97	44. 59	32. 29

This table shows that the greatest proportions of deaths among clergymen in the United States as a whole per 1,000 deaths from all causes were due to diseases of the respiratory system (168.33), diseases of the nervous system (156.92), consumption (119.12), and heart disease (99.86).

In the nonregistration area (remainder of the United States) the proportion of deaths due to typhoid fever (33.33 per 1,000) was greater than in the registration area (18.10), as was the case with malarial fever (nonregistration area, 33.33; registration area, 4.52), and consumption (nonregistration area, 126.04; registration area, 104.07).

The proportion of deaths of clergymen due to suicide in the registration area (2.26) was very small, but in the nonregistration area it was extremely large, being 41.67 per 1,000 deaths from all causes among clergymen.

LAWYERS.

The total number of lawyers reported in the United States was 89,422, being 17.02 per cent of the whole number engaged in professional pursuits. The number of deaths of lawyers was 1,235, or 17.34 per cent of the deaths among males in professional occupations.

In the registration area the number of lawyers reported was 36,817, being 17.76 per cent of the total number in the professional class. The number of deaths of lawyers in this area was 551, or 19.69 per cent of the deaths of those in the professional class, and the death rate was 14.97 per 1,000.

The following table shows, for the registration states, the number of lawyers living at the end of the census year and the number of deaths among lawyers during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.							
POPULATION, DEATHS, AND DEATH RATES	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population	19, 486	1, 209	10, 583	5, 950	1,654			
Per cent at each age		6, 20	54.31	30.58	8.49			
Deaths	345	10	90	129	116			
Per cent at each age	. 	2. 90	26, 09	37. 39	33, 62			
Death rate per 1,000 population		8. 27	8.50	21.68	70.13			
Average rate in this class		5, 05	8. 47	19.11	79.28			

It will be seen from this table that over 60 per cent of the lawyers reported in the registration states were under 45 years of age, 54.31 per cent being in the age group 25 to 45 years.

The death rate of lawyers from 15 to 25 years (8.27 per 1,000) was somewhat higher than the average rate for the professional class at this age (5.05 per 1,000). In the age group 25 to 45 years the rate was about the same as the average rate in the professional class (lawyers, 8.50; professional class, 8.47). At 45 to 65 years the rate for lawyers (21.68) was above the average rate at this age of the professional class (19.11), but at 65 years of age and over the rate for lawyers (70.13) was less than the average rate of the professional class (79.28).

The following table shows, for the registration area and some of its subdivisions, the death rate of lawyers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	TRATION 8	Regis- tration	
CAUSE OF DEATH,	38.03 35.92 28.66 54.2 10.30 20.53 28.66	Rural.	cities in other states.		
Typhoid fever	38. 03	35. 92	28.66	54.28	40.39
Malarial fever	16.30	20. 53	28.66		11.54
Rheumatism	8. 15	10. 26	<i>-</i>	36.19	5.77
Dropsy	10.86	10.26	7.16	18.09	11.54
Heart disease	154.82	159.09	186. 26	90.46	150.02
Consumption	173.83	200.14	214. 92	162, 84	144. 25
Diabetes	13.58	15.40	21.49		11.54
Diseases of the nervous system	255. 32	328.44	336.70	307.58	173.10
Diseases of the respiratory system	220.01	266. 86	272. 23	253, 30	167.33
Diseases of the liver	48.89	56.45	57.31	54. 28	40.39
Ascites					
Other diseases of the digestive system	57.04	71.85	93. 13	18.00	40.39
Bright's disease	89. 63	107.77	121. 79	72. 37	69. 24
Other diseases of the urinary system	43.46	56.45	71.64	18.09	28. 85
Diseases of the bones and joints	2.72				5.77
Burns and scalds					<i></i>
Injuries by machinery					
Suicide	27.16	25.66	35. 82		28. 85
Other accidents and injuries	84 20	102.64	100. 29	108.56	63.47

The preceding table shows that in the registration states the death rate of lawyers from diseases of the nervous system (328.44) was higher than that from any other cause, and was also much higher than the average rate from this cause among males in the professional class (250.70). The death rate from heart disease (159.09) was above the average for the professional class (117.97), as was also the rate from Bright's disease (lawyers, 107.77; professional class, 78.72), while the rate from consumption was below the average (lawyers, 200.14; professional class, 219.04).

The death rate of lawyers from suicide (25.66) was about the same as the average rate from this cause in the professional class (24.81).

The death rates from the specified causes among lawyers in the registration cities in the nonregistration states were generally much below the corresponding rates in the cities in the registration states, the only important exception being the rate from typhoid fever, which was 40.39 in the registration cities of the nonregistration states and 28.66 in the cities in the registration states.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among lawyers:

	United	Regis-	REGIS	REGISTRATION STATES.			Remain-
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	36, 44	25.41	20.29	15.15	37.04	33. 98	45.32
Malarial fever	15.38	10.89	11.59	15.15		9.71	19.01
Rheumatism	8.10	5.44	5.80		24.69	4.85	10.23
Dropsy	8.10	7.26	5.80	3.79	12.35	9.71	8.77
Heart disease	93.93	103.45	89.86	98.48	61.73	126.21	86. 26
Consumption	123.08	116.15	113.04	113.64	111.11	121.36	128.65
Diabetes	10.53	9.07	8.70	11.36		9.71	11.70
Diseases of the nervous system		170.60	185. 51	178.03	209.88	145. 63	149.12
Diseases of the respiratory system	136.03	147.01	150.72	143.94	172.84	140.78	127, 19
Diseases of the liver	27.53	32.67	31.88	30.30	37.04	33.98	23.39
Ascites							
Other diseases of the digestive system	38.06	38.11	40.58	49.24	12.35	33.98	38.01
Bright's disease	55.06	59.89	60.87	64.39	49.38	58.25	51.17
Other diseases of the urinary system	29.96	29.04	31.88	37.88	12.35	24. 27	30.70
Diseases of the bones and joints	2.43	1,81				4.85	2.92
Burns and scalds							
Injuries by machinery	0.81				. 		1.46
Suicide	17.00	"18.15	14.49	18.94		24.27	16.08
Other accidents and injuries	54.25	56.26	57.97	53.03	74.07	53.40	52, 63

It will be seen from this table that the greatest proportions of deaths of lawyers in the United States as a whole were due to diseases of the nervous system (158.70), diseases of the respiratory system (136.03), consumption (123.08), and heart disease (93.93), these proportions not varying greatly from the corresponding proportions in the registration area.

The proportion of deaths of lawyers due to Bright's disease in the United States (55.06) was considerably greater than the average proportion due to this cause in the professional class (37.64).

In the nonregistration area the proportion of deaths of lawyers due to typhoid fever (45.32) was greater than the proportion due to this cause in the United States as a whole, but the proportions from other causes in the two areas were very uniform.

PHYSICIANS AND SURGEONS.

The number of physicians and surgeons reported in the United States was 100,248, being 19.07 per cent of the whole number in the professional class. The number of deaths of physicians and surgeons was 1,965, or 27.60 per cent of the total deaths in this class of occupations.

In the registration area the number of physicians and surgeons reported was 34,737, being 16.76 per cent of the total number in the professional class. The number of deaths of physicians and surgeons was 660, or 23.58 per cent of the deaths of those in occupations of this class, and the death rate was 19.00 per 1,000.

The following table shows, for the registration states, the number of physicians and surgeons living at the end of the census year, and the number of deaths during the census year, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.					
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.	
Population		1,067	10,718	5, 768	1,861	
Per cent at each age Deaths	420	5.48	55. 00 102	29.60 122	9. 55 193	
Per cent at each age Death rate per 1,000 population			28, 51 9, 52	29.05 21.15	45.95 103.71	
Average rate in this class.			8. 47	19.11	79.28	

It will be seen from this table that there were no deaths among physicians and surgeons under 25 years of age, in the registration states. The death rate from 25 to 45 years of age (9.52) was slightly above the average rate of the professional class at this age (8.47), as was also the rate at 45 to 65 years (physicians and surgeons, 21.15; professional class, 19.11), and the death rate of physicians and surgeons 65 years of age and over (103.71) was much higher than the average rate in the professional class at this age.

The following table shows, for the registration area and some of its subdivisions, the death rate of physicians and surgeons from each of certain specified causes per 100,000 living:

	Regis-	REGIS	TATES.	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	28. 79	20.53	24. 19	14.12	39.34
Malarial fever	25.91	25. 66	32. 25	14, 12	26. 23
Rheumatism	14.40	15.40	24.19		13.11
Dropsy	20.15	25. 66	16. 13	42.35	13.11
Heart diseaso	221.67	241. 20	201.58	310.56	196.71
Consumption	181. 36	189.88	217.71	141.16	170.48
Diabetes	23.03	35. 92	24. 19	56.47	6.56
Diseases of the nervous system	328.18	400.29	419. 29	367.02	236.05
Diseases of the respiratory system		379.76	395.10	352. 91	295.06
Diseases of the liver	43.18	20.53	32, 25		72.13
Ascites	2.88	5.13		14.12	
Other diseases of the digestive system	57.58	61.58	64.51	56.47	52.46
Bright's disease.	95.00	92. 37	96.76	84.70	98.35
Other diseases of the urinary system	118.03	159.09	153. 20	169.40	65.57
Diseases of the bones and joints	5.76	5. 13	8.06		6.56
Burns and scalds					
Injuries by machinery					
Suicide	14. 40	15.40	8.06	28. 23	13.11
Other accidents and injuries	63. 33	61. 58	32. 25	. 112.93	65. 57

It will be seen from this table that the death rate of physicians and surgeons from diseases of the nervous system in the registration states (400.29 per 100,000) was excessively high, being much greater than the average rate from these causes in the professional class (250.70). The death rate of physicians and surgeons from diseases of the respiratory system in this area (379.76) was much above the average rate for the professional class (254.12), as was the rate from heart disease (physicians and surgeons, 241.20; professional class, 117.97), while the death rate from consumption was below the average (physicians and surgeons, 189.88; professional class, 219.04). The rate from Bright's disease (92.37) was high, and that from other diseases of the urinary system (159.09) was more than twice the average rate from these causes in the professional class (73.58). The rate from typhoid fever (20.53) was low, being less than half the rate for the professional class (42.78), while the rate from dropsy (25.66) was nearly four times the average rate in the professional class (6.85), and that from diabetes (35.92) was about double the average rate for the professional class (17.97). The death rate of physicians and surgeons from suicide (15.40) was much below the average rate from this cause in the professional class (24.81).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among physicians and surgeons:

	United	Regis-	REGIS	TRATION ST	ATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	25, 95	15.15	9.52	11.54	6. 25	25.00	31.42
Malarial fever	18.32	13.64	11,90	15.38	6.25	16.67	20.69
Rheumatism	9.16	7.58	7.14	11.54		8.33	9, 96
Dropsy	13.74	10.61	11.90	7.69	18.75	8. 33	15. 33
Heart disease	109.92	116.67	111.90	96.15	137. 50	125.00	106.51
Consumption	112, 47	95.45	88.10	103.85	62.50	108.33	121.07
Diabetes	7.63	12.12	16, 67	11.54	25.00	4.17	5.36
Diseases of the nervous system	152.67	172.73	185.71	200.00	162.50	150.00	142.53
Diseases of the respiratory system		180.30	176.19	188.46	156. 25	187.50	150.19
Diseases of the liver	21.37	22.73	9.52	15.38		45.83	20.69
Ascites	1.02	1.52	2.38		6. 25		0.77
Other diseases of the digestive system	38.17	30.30	28. 57	30.77	25.00	33.33	42.15
Bright's disease	42.75	50.00	42.86	46.16	37.50	62.50	39,08
Other diseases of the urinary system	40.71	62.12	73.81	73.08	75.00	41.67	29.89
Diseases of the bones and joints	3.05	3.63	2.38	3.85		4.17	3.07
Burns and scalds							
Injuries by machinery]		
Suicide	12. 21	7.58	7.14	3.85	12.50	8.33	14, 56
Other accidents and injuries	43, 26	33. 33	28.57	15.38	50,00	41.67	48.28

This table shows that the greatest proportions of deaths of physicians and surgeons in the United States, as a whole, per 1,000 deaths from all causes, were due to the diseases of the respiratory system (160.31), diseases of the nervous system (152.67), consumption (112.47), and heart disease (109.92), and the proportion due to each of these causes excepting consumption was less in the United States, as a whole, than in the registration area.

The proportions of deaths of physicians and surgeons in the United States due to typhoid fever (25.95), malarial fever (18.32), diseases of the liver (21.37), and suicide (12.21) were somewhat less than the proportions due to these causes in the professional class.

There seems to be no marked difference in the proportions of deaths of physicians and surgeons in the United States, as a whole, and in the nonregistration area.

TEACHERS.

The number of male teachers reported in the United States was 96,581, being 18.38 per cent of the whole number in the professional class. The number of deaths of teachers was 950, or 13.34 per cent of the total deaths in occupations of this class.

In the registration area the number of male teachers reported was 18,106, being 8.74 per cent of those engaged in professional pursuits. The number of deaths of teachers in this area was 168, or 6 per cent of the total deaths of those in the professional class, and the death rate was 9.28 per 1,000.

The following table shows, for the registration states, the number of teachers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population Per cent at each age	11, 290	2, 755 24. 38	5, 828 51, 58	2, 230 19. 74	435 3, 85
Deaths Per cent at each age	117	8 6.84	36 30, 77	32 27.35	35.04
Death rate per 1,000 population		2. 90 5. 05	6.18 8.47	14.35 19.11	91. 25 79. 28

The preceding table shows that the death rate of male teachers, in the registration states in each age period, under 65 years was less than the average rate at these ages in the professional class, but the death rate of teachers 65 years of age and over (94.25 per 1,000) was somewhat higher than the average rate of the professional class at this age (79.28).

The figures given for teachers and for professors, authors, and literary and scientific persons, indicate some error in classification, due probably to failure to distinguish between teachers and professors in schools and colleges in returning occupation, and they should probably be considered together. (See remarks under the head of "Professors, authors, and literary and scientific persons" following.)

The following table shows, for the registration area and some of its subdivisions, the death rate of teachers from each of certain specified causes, per 100,000 living:

	Regis-	REGIS	Regis- tration		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	38, 66	44. 25	18. 56	67. 68	29.38
Malarial fever	22.09	26, 55	18.56	33.84	14.69
Rheumatism	5.52	8, 85	18.56		
Dropsy					
Heart disease	88.37	106. 20	91.11	118.44	58, 76
Consumption	160.17	159.31	185.56	13536	161.60
Diabetes	11.05	17.70	18.56	16.92	
Diseases of the nervous system	132, 55	159.31	222.68	101.52	88.14
Diseases of the respiratory system	115.98	141.61	167. 01	118.44	78.45
Diseases of the liver	5.52				14.69
Ascites					
Other diseases of the digestive system	27.62	35.40	37.11	33.84	14.69

Other diseases of the uninary system	.38, 66	.53.10	74.23	33.84	1469
Diseases of the bones and joints	5.52	8, 85		16.92	
Burns and scalds					-
Injuries by machinery					
Suicide		17.70		-33.84	29.38
Other accidents and injuries.	44.18	35.40	74. 23		58.76

It appears from this table that the highest death rates among male teachers in the registration states occurred from consumption and diseases of the nervous system, being 159.31 per 100,000 from each of these causes. The rate from each of these causes was higher in the cities than in the rural districts of the registration states.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among teachers:

	United	Regis-	REGIS	TRATION ST	CATES.	Regis- tration	Remain-
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	77. 89	41.67	42.74	14.49	83, 33	39. 22	85.68
Malarial fever	32, 63	23.81	25.64	14.49	41, 67	19.61	34.53
Rhoumatism	5.26	5. 95	8. 55	14.49			5.12
Dropsy	7.37						8.95
Heart diseaso	55. 79	95. 24	102.56	72.46	145, 83	78.43	47.31
Consumption	266.32	172.62	153.85	144.93	166, 67	215.69	286. 45
Diabetes	10.53	11.90	17.09	14.49	20, 83		10.23
Diseases of the nervous system	92.63	142.86	153.85	273.91	125.00	117.65	81.84
Diseases of the respiratory system	136.84	125.00	136. 75	130.43	145, 83	98.04	139.39
Diseases of the liver	11.58	5, 95				19.61	12.79
Ascites							
Other diseases of the digestive system	35. 79	29.76	34.19	28. 99	41.67	19.61	37.08
Bright's diseaso	17.89	23.81	25.64	28.99	20.83	19.61	16.62
Other diseases of the urinary system	28, 42	41.67	51.28	57. 97	41.67	19.61	25.58
Diseases of the bones and joints	3, 16	5.95	8.55		20.83		2.'56
Burns and scalds	1.05						1.28
Injuries by machinery.	1.05						1.28
Suicide	12.63	23.81	17.09		41.67	39. 22	10. 23
Other accidents and injuries	56, 84	47.62	34.19	57.97		78.43	53.82

The preceding table shows that the greatest proportion of deaths of male teachers in the United States as a whole per 1,000 deaths from all causes was due to consumption (266.32), and that this proportion was excessively large in comparison with the corresponding proportion for all males in professional occupations (157.84), and was much greater than the proportion due to this cause among teachers in the registration area (172.62).

The proportion of deaths of teachers due to diseases of the nervous system in the United States (92.63) was much less than the proportion due to this cause in the registration area (142.86). The proportions due to typhoid fever (77.89) and malarial fever (32.63) were much greater than the proportions due to these causes among all males in the professional class, and the proportion due to Bright's disease (17.89) was much less than the proportion due to this cause in the professional class (37.64).

The proportion of deaths in the nonregistration area due to typhoid fever (85.68), malarial fever (34.53), and consumption (286.45) was greater than the proportions in the United States as a whole.

OTHER OCCUPATIONS IN THE PROFESSIONAL CLASS-MALES.

ARCHITECTS, ARTISTS AND TEACHERS OF ART, DESIGNERS, AND DRAFTSMEN.

There were 11,952 architects, artists and teachers of art, designers, and draftsmen reported as living in the registration states. The number of deaths among these during the census year was 148, giving a death rate of 12.38 per 1,000. The death rates per 1,000 in each of four age groups were as follows: age 15 to 25 years, 6.32; age 25 to 45 years, 9.48; age 45 to 65 years, 18.29; age 65 years and over, 53.85.

JOURNALISTS.

The number of journalists reported in the registration states was 6,001, the number of deaths of journalists in the same area being 101, and the death rate 16.83 per 1,000. By age groups the death rates per 1,000 of population were as follows: age 15 to 25 years, 9.49; age 25 to 45 years, 11.98; age 45 to 65 years, 26.17; age 65 years and over, 71.79.

MUSICIANS AND TEACHERS OF MUSIC.

In 9,960 musicians and teachers of music reported in the registration states there were 159 deaths during the year, giving a death rate of 15.96 per 1,000. The death rates by age groups were as follows: age 15 to 25 years, 8.68; age 25 to 45 years, 10.59; age 45 to 65 years, 25.65; age 65 years and over, 77.13.

PROFESSORS, AUTHORS, AND LITERARY AND SCIENTIFIC PERSONS.

Of these there were reported as living in the registration states 2,689, the number of deaths among them during the census year being 89, and the death rate 33.10 per 1,000. By age groups the death rates per 1,000 of population were as follows: age 15 to 25 years, 36.29; age 25 to 45 years, 20.59; age 45 to 65 years, 27.33; age 65 years and over, 109.76. These figures indicate some error in the classification of professors, authors, and literary and scientific persons, and it is probable that in returning the occupation the distinction has not been properly maintained between professors and teachers in schools and colleges, or in the designation of scientific persons. If the number under this head in the registration states be combined with that of those reported as teachers, the death rate would be 14.73 per 1,000 instead of 33.10, as given above for professors, etc., and instead of 10.35, as given for teachers.

CLASS B—CLERICAL AND OFFICIAL.

The number of males engaged in occupations included in this class in the United States was 991,436, being 5.58 per cent of the whole number in the selected occupations. The number of deaths among these was 6,957, being 3.69 per cent of the total deaths of males engaged in the selected occupations.

In the registration area the number of males engaged in clerical and official occupations was 624,126, being 10.74 per cent of the whole number in the selected occupations. The number of deaths among these was 4,802, or 6.73 per cent of the total deaths among males in the selected occupations, and the death rate was 7.69 per 1,000.

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in all clerical and official occupations, and in each specified occupation of this class, per 1,000 males engaged in each occupation:

	Regis-	REGIST	Regis- tration		
OCOUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.
Class B	7. 69	9.80	10. 26	7. 91	5.41
Stenographers and typewriters	3. 82	5. 22	4. 34	9. 27	2.74
Accountants, bookkeepers, clerks, and copyists	8. 63	11.15	11. 47	9.51	5.94
Bankers, brokers, and officials of companies	3.68	4.65	4.65	4.65	2.31
Collectors, auctioneers, and agents	8. 37	10.70	11.43	7.99	6.29
Newspaper carriers and newsboys	8.35	13.61	16. 14	3.70	5.58

It will be seen from this table that the average death rate of males in the clerical and official class in the registration area was 7.69 per 1,000, being greatest in the registration states (9.80) and least in the registration cities of the nonregistration states (5.41). The death rate in the cities in the registration states (10.26) was higher than in the rural districts in the same states (7.91). In the registration states the death rate was above the average for newspaper carriers and newsboys (13.61), accountants, bookkeepers, clerks, and copyists (11.15), and collectors, auctioneers, and agents (10.70), and below the average for stenographers and typewriters (5.22) and bankers, brokers, and officials of companies (4.65).

The following table shows, for the registration states, the death rate at all ages, and in each of four age groups, of males engaged in all clerical and official occupations, and in each specified occupation of this class, per 1,000 of corresponding population:

	AGE.						
occupations.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Class B	9. 80	6, 16	9. 15	13. 65	38. 54		
Stenographers and typewriters	5. 22	2.54	7.72	10.64	71. 43		
Accountants, bookkeepers, clerks, and copyists	11. 15	6.59	12.21	21.62	66.37		
Bankers, brokers, and officials of companies	4.65	1.88	2, 59	5.08	18.60		
Collectors, auctioneers, and agents	10.70	2.84	6.26	14.07	43.26		
Newspaper carriers and newsboys	13.61	8. 71	23.62	70.18	105.26		

It will be seen from this table that the death rate of newspaper carriers and newsboys in the registration states, at all ages, and in each age group, was higher than that of those in any other occupation in this class. The number of newspaper carriers and newsboys, however, was comparatively small, and the rates are not important.

In the age group 25 to 45 years the average death rate of males in the clerical and official class was 9.15 per 1,000, being above the average for accountants, bookkeepers, clerks, and copyists (12.21) and below the average in all other occupations, being lowest for bankers, brokers, and officials of companies (2.59).

In the age group 45 to 65 years, the average death rate of males in occupations in this class was 13.65 per 1,000. The death rate of stenographers and typewriters in this age group (10.64) and that of bankers, brokers, and officials of companies (5.08) was below the average, and that of males in other occupations was above the average.

In the age group 65 years and over, the average death rate of males in all occupations in this class was 38.54, and was below the average only for bankers, brokers, and officials of companies (18.60).

The following table shows, for the registration states, the number of males in clerical and official occupations living at the end of the census year, and the number of deaths in this class during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.	Western	
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	324, 032	111, 162 34, 31	138, 947 42, 88	59, 327 18, 31	10,197
Deaths. Per cent at each age.	3, 177	685 21, 56	1, 271 40, 01	810 25.50	393 12, 37
Death rate per 1,000 population. Average rate in all classes.		6. 16 5. 58	9.15 9.29	13. 65 18. 43	· 38.54 70.09

It will be seen from this table that the death rates of males engaged in occupations included in the cherical and official class in the registration states at ages under 45 years were higher than the corresponding rates of males in all classes of occupations, but that above 45 years of age the death rates were much below the average for all classes.

The following table shows, for the registration area and some of its subdivisions, the death rates of males engaged in all clerical and official occupations, from each of certain specified causes, per 100,000 living:

CAUSE OF DEATH.	Regis-	REGIS	Regis- tration		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	32. 21	33.02	32.48	35. 30	31.32
Malarial fever		9. 26	9. 93	6.42	9.66
Rheumatism	4.81	7. 10	7.64	4.81	2.33
Dropsy	2.24	1.23	0.76	3.21	3. 33
Heart disease	62.81	83. 94	89.03	62.57	39.99
Consumption	211.66	279.91	296.13	211.79	137.96
Diabetes	5.93	8.02	6.11	16.04	3.66
Diseases of the nervous system		107.09	106. 23	110.71	57. 32
Diseases of the respiratory system	125.62	171.59	189.53	96.27	75. 98
Diseases of the liver	12.66	16.05	17.58	19.63	9.00
Ascites	. 0.48	0.31	0.38		0.67
Other diseases of the digestive system	26.12	32.40	35.15	20.86	19. 33
Bright's disease	31.08	40.43	42.80	30.48	20.99
Other diseases of the urinary system	21.15	28.70	30.95	19. 25	13.00
Diseases of the bones and joints	1.44	1.23	1.15	1.60	1.67
Burns and scalds	0.80	.0.93	1.15		0.67
Injuries by machinery					
Suicide	18.11	19.13	21.02	11.23	16.99
Other accidents and injuries	35. 41	43.82	39.36	62.57	26.33

It will be seen from this table that the highest death rates of males in the clerical and official class in the registration states occurred from consumption (279.91 per 100,000), diseases of the respiratory system (171.59), diseases of the nervous system (107.09), and heart disease (83.94). The death rates in this class in the registration states from each specified cause, excepting consumption, were lower than the average rates for the same causes among males in all classes of occupations, and the rate from consumption (279.91) was almost the same as the average rate from this cause among all classes of occupations (279.66).

The death rate from diseases of the respiratory system was nearly twice as high in the cities (189.53) as in the rural districts in the registration states (96.27), while the rate from diseases of the nervous system was slightly higher in the rural districts (110.71) than in the cities (106.23). The death rate from suicide among males in the registration states (19.13) was higher than the average rate from this cause among males in all classes of occupations (15.61).

MOR-PT I-6

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among males engaged in clerical and official occupations:

	United	Regis-	REGIST	TRATION ST	rates.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	52, 32	41.86	33.68	31.67	44. 62	57.85	75. 64
Malarial fever	16.24	12, 29	9.44	9.69	8.11	7.85	25, 06
Rheumatism	7. 33	6. 25	7.24	7.45	6.09	4.31	9.74
Dropsy	4.31	2.92	1.26	0.75	4.00	6. 15.	7.42
Heart disease	78.19	81.63	85.62	86.81	79.11	73.85	70, 53
Consumption	260.60	275.09	285.49	288.75	267.75	254.77	228.31
Diabetes	7.19	7.71	8.18	5.96	20.28	6.77	6.03

Diseases of the respiratory system	154. 95	163.27	175.01	184.80	121.70	140.31	136. 43
Diseases of the liver	16.67	16.45	16. 37	17.14	12.17	16.62	17. 17
Ascites	0.57	0.62	0.31	0. 37		1. 23	0.46
Other diseases of the digestive system	33.49	33.94	33.05	34. 28	26.37	35. 69	32.48
Bright's disease	36.08	40.40	41. 23	41. 73	38. 54	38.77	26.45
Other diseases of the urinary system	25, 87	27.49	20. 27	30.18	24.34	24.00	22.27
Diseases of the bones and joints	2.73	1.87	1. 26	1.12	2.03	3.08	4.64
Burns and scalds	1. 15	1.04	0.94	1.12		1. 23	1.39
Injuries by machinery							
Suicide	21.85	23. 53	19.52	20.49	14.20	31. 38	18.10
Other accidents and injuries	53.76	46.02	44.70	38. 38	79. 11	48, 62	71.00

This table shows that in the United States as a whole, the greatest proportion of deaths of males in the clerical and official class was due to consumption (260.60), being much greater than the proportion due to this cause among males in all classes of occupations (171.60).

The proportions of deaths of males in this class due to typhoid fever (52.32) and diseases of the nervous system (110.25) were above the corresponding proportions in all classes of occupations, and that due to suicide (21.85) was nearly twice the proportion due to this cause in all classes (11.93).

The proportions of deaths of males in clerical and official occupations in the nonregistration area due to typhoid fever (75.64), malarial fever (25.06), and diseases of the nervous system (115.08) were greater than the corresponding proportions in the United States as a whole, while the proportion from consumption in the nonregistration area (228.31) was less than the proportion in the United States (260.60) or in the registration area (275.09).

ACCOUNTANTS, BOOKKEEPERS, CLERKS, AND COPYISTS.

The number of male accountants, bookkeepers, clerks, and copyists reported in the United States was 624,741, being 63.01 per cent of the whole number of males in the clerical and official class. The number of deaths among these was 4,909, or 70.56 per cent of the total deaths in this class.

In the registration area the number of male accountants, bookkeepers, clerks, and copyists reported was 412,190, being 66.04 per cent of the whole number in this class of occupations. The number of deaths among these was 3.558, or 74.09 per cent of the total deaths in this class in this area, and the death rate was 8.63 per 1,000.

The following table shows, for the registration states, the number of male accountants, bookkeepers, clerks, and copyists living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population	213, 052	98, 501	85, 274	22, 898	2,667		
Per cent at each age		46. 23	40.02	10.75	1.25		
Deaths	2,376	649	1,041	495	177		
Per cent at each age		27.31	43. 81	20.83	7. 45		
Death rate per 1,000 population.		6, 59	12. 21	21.62	66.37		
Average rate in this class		6. 16	9.15	13.65	38.54		

It will be seen from the preceding table that over 86 per cent of the accountants, bookkeepers, clerks, and copyists in the registration states were under 45 years of age, and that the death rates were higher than the average rates in the clerical and official class in every age group.

The following table shows, for the registration area and some of its subdivisions, the death rate of accountants, bookkeepers, clerks, and copyists, from each of certain specified causes, per 100,000 living:

	Reg:	REGIS	TRATION S	PATES.	Regis- tration
CAUSE OF DEATH.	istration area.	Total.	Cities.	Rural.	cities in other states.

Injuries by machinery					
Suicide	18.44	18.77	20.19	11.52	18.08
Other accidents and injuries	36, 15	43.65	39.81	63.38	28. 12

It will be seen from this table that the highest death rates of accountants, bookkeepers, clerks, and copyists occurred from consumption (371.74), diseases of the respiratory system (196.20), and diseases of the nervous system (108.89), being higher for each of these causes than the average rate for males in all clerical and official occupations. The death rate from typhoid fever in the registration states (42.24) was also higher than the average rate from this cause among males in occupations of this class, and was higher in the rural districts (57.62) than in the cities in the same states (39.25).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportions of deaths due to each of certain specified causes per 1,000 deaths from all causes among accountants, bookkeepers, clerks, and copyists:

	United	Regis-	REGIS	eration s	PATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	62, 33	48. 34	37.88	34. 21.	60.61	69. 37	99. 19
Malarial fever	16.30	13.77	10.10	10.26	9.09	21.15	22, 95
Rheumatism	7.54	7.31	8.00	7.82	9.09	5. 92	8.14
Dropsy	4.07	2.81	1.26	0.98	3.03	5.92	7.40
Heart disease	67.43	71.39	77.86	80.16	63.64	58.38	56 1.99
Consumption	308.01	319.56	333.33	332.36	339.39	291.88	277.57
Diabetes	5.30	5.90	5.05	2.93	18.18	7.61	3.70
Diseases of the nervous system		97. 25	97.64	95.31	112.12	96.45	92. 52
Diseases of the respiratory system	155. 23	164.98	175.93	184.75	121. 21	142.98	129, 53
Diseases of the liver	12.83	12.93	14.31	14.66	12.12	10.15	12, 58
Ascites	0.41	0.56	0.42	0.49		0.85	
Other diseases of the digestive system	31.57	31.48	31.57	32.75	24.24	31. 30	31.80
Bright's disease	32.39	35.41	33.67	33.72	33.33	38.92	24.43
Other diseases of the urinary system	21.19	22.77	24.41	25. 90	15.15	19.46	17.02
Diseases of the bones and joints	3.06	2. 25	1.68	1.47	3.03	3.38	5.18
Burns and scalds	1.43	1.41	1.26	L 47		1.69	1.48
Injuries by machinery							
Suícide	20.57	21.36	16.84	17.60	12.12	30.46	18.50
Other accidents and injuries	49.30	41.88	39.14	34.70	66.67	47.38	68.84

It will be seen from this table that in the United States as a whole the greatest proportion of deaths of accountants, bookkeepers, clerks, and copyists was due to consumption (308.01), and that this proportion was less

than the corresponding proportion in the registration area (319.56) and was greater than the average proportion due to this cause among males in the clerical and official class.

The proportion of deaths due to typhoid fever (62.33) was greater than the average proportion due to this cause in occupations of this class (52.32).

In the nonregistration area the proportions of deaths due to typhoid fever (99.19) and malarial fever (22.95) were greater than in the United States as a whole, and much greater than in the registration area.

BANKERS, BROKERS, AND OFFICIALS OF COMPANIES.

The number of bankers, brokers, and officials of companies reported in the United States was 176,421, being 17.79 per cent of the whole number in the clerical and official class. The number of deaths of bankers, brokers, and officials of companies was 652, or 9.37 per cent of the total deaths in this class of occupations.

In the registration area the number of bankers, brokers, and officials of companies reported was 104,885, being 16.81 per cent of the whole number in this class. The number of deaths was 386, or 8.04 per cent of the total deaths in this class, and the death rate was 3.68 per 1,000.

The following table shows, for the registration states, the number of bankers, brokers, and officials of companies living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.					
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over	
Population	61, 252	4, 264	30,071	22, 253	4, 515	
Per cent at each age		6.96	49.09	36. 33	7.37	
Deaths	. 285	8	78	113	84	
Per cent at oach age	. <i></i>	2.81	27.37	39.65	29.47	
Death rate per 1,000 population	.	1.88	2, 59	5.08	18.60	
Average rate in this class		6. 16	9. 15	13.65	38. 54	

It will be seen from this table that the death rate of bankers, brokers, and officials of companies in the registration states, at each age, was much lower than the average rate for males in the clerical and official class, the rate at 15 to 25 years of age being 1.88 for bankers, brokers, and officials of companies, and 6.16 for all males in clerical and official occupations. At 25 to 45 years the death rate of bankers, brokers, and officials of companies was 2.59, and the average rate in all clerical and official occupations was 9.15. At 45 to 65 years the rates were: bankers, brokers, and officials of companies, 5.08; clerical and official class, 13.65; and at 65 years of age and over, bankers, brokers, and officials of companies, 18.60; clerical and official class, 38.54.

The following table shows, for the registration area and some of its subdivisions, the death rate of bankers, brokers, and officials of companies from each of certain specified causes per 100,000 living:

	Regis-	REGIS	REGISTRATION STATES.		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	1	11.43	13. 62	5. 82	6. 88
Rheumatism	1.91	3. 27	4.54		
Dropsy	0.95	1.63		5.82	
Heart disease	50.53	58.77	54.47	69.81	38.96
Consumption	40.04	50.61	49.93	52.36	25. 21
Diabetes	7.63	11.43	11.35	11.63	2, 29
Diseases of the nervous system	50. 53	68.57	61.28	87, 26	25. 21
Diseases of the respiratory system	62. 93	84.90	97.59	52. 36	32.09
Diseases of the liver	10.49	11.43	11. 35	11.63	9.17
Ascites					
Other diseases of the digestive system	13. 35	14.69	18.16	5.82	11.46
Bright's disease	18. 12	21. 22	18.16	29. 09	13.75
Other diseases of the urinary system	18.12	22.86	24.96	17.45	11.46
Diseases of the bones and joints					
Burns and scalds					
Injuries by machinery	ŧ				
Suicide		14.69	15.89	11.63	- 2.29
Other accidents and injuries	22.88	29.39	24.96	40.72	13, 75

The preceding table shows that the death rates of bankers, brokers, and officials of companies in the registration states were very low in comparison with the average rates for males in this class of occupations, the highest rate; that from diseases of the respiratory system (84.90), being less than half the corresponding rate for males in occupations of this class (171.59). The death rate from dropsy (1.63) was slightly above the average rate in the clerical and official class, from this cause (1.23), as was also the rate from diabetes (bankers, brokers, and officials of companies, 11.43; clerical and official class, 8.02), but the rates from all other causes were remarkably low.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among bankers, brokers, and officials of companies:

	United	Regis-	REGIS	TRATION S	TATES.	Regis- tration	Remain-
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural	cities in other states.	of the United States.
Typhoid fever		25. 91	24. 56	29, 27	12.50	29.70	33.83
Malarial fever							41.35
Rheumatism	12, 27	5.18	7.02	9.76			22.56
Dropsy	1.53	2.59	3.51		12.50		
Heart disease	131.90	137. 31	126.32	117.07	150.00	168.32	124.06
Consumption	99.69	108.81	108.77	107.32	112.50	108.91	86.47
Diabetes	15.34	20.73	24.56	24.39	25.00	9.90	7.52
Diseases of the nervous system	144.17	137.31	147.37	131.71	187.50	108.91	154.14
Diseases of the respiratory system	168.71	170.98	182.46	209.76	112.50	138.61	165.41
Diseases of the liver	27.61	28.50	24. 56	24.39	25.00	39.60	26.32
Ascites	1.53	.:]		3.76
Other diseases of the digestive system	·38. 34	36. 27	31.58	39.02	12.50	49.50	41.35
Bright's disease	36.81	49.22	45.61	39, 02	62.50	59.41	18.80
Other diseases of the urinary system	44.48	49.22	49.12	53.66	37.50	49.50	87.59
Diseases of the bones and joints	3.07				 	 	7.52.
Burns and scalds							
Injuries by machinery							
Suicide	19.94	25, 91	31.58	34.15	25.00	9.90	11.28
Other accidents and injuries	52.15	62. 18	63.16	53.66	87.50	59.41	87. 59

It will be seen from this table that the proportions of deaths of bankers, brokers, and officials of companies in the United States as a whole, in comparison with the deaths of all males in clerical and official occupations, were excessively large from rheumatism (bankers, brokers, and officials of companies, 12.27; clerical and official class, 7.33), heart disease (bankers, brokers, and officials of companies, 131.90; clerical and official class, 78.19), diabetes (bankers, brokers, and officials of companies, 15.34; clerical and official class, 7.19), and diseases of the urinary system, other than Bright's disease (bankers, brokers, and officials of companies, 44.48; clerical and official class, 25.87). The proportion of deaths of bankers, brokers, and officials of companies due to consumption (99.69) was very much less than the average proportion due to this cause in the clerical and official class (260.60).

In the nonregistration area the proportions of deaths of bankers, brokers, and officials of companies due to malarial fever (41.35), rheumatism (22.56), and diseases of the bones and joints (7.52) were much greater than the proportions in the United States as a whole.

The proportion of deaths of bankers, brokers, and officials of companies in the United States due to suicide (19.94) was less than the proportion in the registration area (25.91) and much less than the proportion in the cities in the registration states (34.15).

COLLECTORS, AUCTIONEERS, AND AGENTS.

The number of collectors, auctioneers, and agents reported in the United States was 172,910, being 17.44 per cent of the whole number in the clerical and official class. The number of deaths among these was 1,301, or 18.70 per cent of the total deaths of those in occupations of this class.

In the registration area the number of collectors, auctioneers, and agents reported was 94,839, being 15.20 per cent of the whole number in the clerical and official class in this area. The corresponding number of deaths was 794, or 16.53 per cent of the total deaths in this class, and the death rate was 8.37 per 1,000.

The following table shows, for the registration states, the number of collectors, auctioneers, and agents living at the end of the census year and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	-44, 765	5, 624	22, 050	13, 931	2, 982
Per cent at each age		12.56	49, 26	31.12	6.66
Deaths	479	16	138	196	129
Per cent at each age		3.34	28. 81	44.32	26.93
Death rate per 1,000 population		2.84	6. 26	14.07	43.26
Average rate in this class		6.16	9. 15	13.65	88.54

It will be seen from this table that more than 50 per cent of the collectors, auctioneers, and agents in the registration states were under 45 years of age, and that the death rates under 45 years were less than the corresponding rates among males in all occupations in the clerical and official class. Above the age of 45 years the death rates of collectors, auctioneers, and agents were slightly higher than the average rates in the clerical and official class.

The following table shows, for the registration area and some of its subdivisions, the death rate of collectors, auctioneers, and agents from each of certain specified causes per 100,000 living:

	Regis-	REGIS'	TATES.	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	¡Cities.	Rural.	cities in other states.
Typhoid fever	17.93	20.10	22, 69	10.52	15.98
Malarial fever	1	13.40	14. 18	10.52	7.99
Rheumatism	2.11	4.47	5. 67		
Dropsy	2.11				3.99
Heart disease	87.52	109.46	121. 95	63. 12	67.90
Consumption	125.48	151.90	173.01	73.64	101.85

Bright's disease	50.61	82.65	96.43	31.56	21.97
Other diseases of the urinary system	33.74	46.91	48. 21	42.08	21.97
Diseases of the bones and joints	1.05				2.00
Burns and scalds					[
Injuries by machinery		[
Suicide		24.57	28. 36	10.52	21.97
Other accidents and injuries	41.12	58.08	51.05	84, 16	25,98

It will be seen from this table that the death rates of collectors, auctioneers, and agents from the specified causes, in the registration states, were generally higher than the average rates for the clerical and official class. The rate from Bright's disease (82.65) was about twice as great as the average rate from this cause in the clerical and official class (40.43), while the rate from consumption (151.90) was much less than the average class rate cause (279.91). In the rural districts in the registration states the death rate from consumption (73.64) was remarkably low, being less than half the rate from the same cause in the cities, but the rate from diseases of the nervous system was higher in the rural districts (178.83) than in the cities (144.64). The rates from diseases of the digestive system and diseases of the urinary system were above the average rates from these causes in the clerical and official class, and were higher in the cities than in the rural districts.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes, per 1,000 deaths from all causes among collectors, auctioneers, and agents:

	United	Regis-	REGIS	TRATION S	rates.	Regis- tration	Remain- der	
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.

Injuries by machinery								i
Suicide	25. 37	27.71	22.96	24.81	13.16	34.92	21.40	
Other accidents and injuries	63,80	49.12	54. 28	41.67	105.26	41.27	86.79	

It will be seen from this table that the greatest proportion of deaths of collectors, auctioneers, and agents in the United States was due to consumption (157.57), but that this proportion was much less than the proportion among all males in the clerical and official class due to this cause (260.60). The proportions of deaths of collectors, auctioneers, and agents due to diseases of the nervous system, diseases of the digestive system, and of the urinary system were all greater than the proportions due to these causes among males in the clerical and official class.

There were no marked differences between the proportions in the United States as a whole and in the nonregistration area.

CLASS C-MERCANTILE AND TRADING.

The total number of males engaged in occupations included in the mercantile and trading class in the United States was 986,621, being 5.55 per cent of the whole number engaged in the selected occupations. The number of deaths in this class was 9,460, or 5.02 per cent of the total deaths among males engaged in the selected occupations.

In the registration area the number of males engaged in mercantile and trading occupations was 528,225, being 9.09 per cent of those in all selected occupations. The number of deaths among these was 5,566, or 7.80 per cent of the total deaths of males in the selected occupations, and the death rate was 10.54 per 1,000.

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in all mercantile and trading occupations, and in each specified occupation of this class, per 1,000 males engaged in each occupation:

Commercial travelers and salesmen	Regis-	RECTS	Regis- tration		
OCCUPATIONS.	tration area.	Total.	Cities.	Rural. 10.22 12.47 4.59 12.25 8.33 8.05	cities in other states.
Class C	10.54	12. 25	12.87	10.22	8. 43
Apothecaries, pharmacists, and dealers in chemicals and drugs	12.43	16.19	17.65	12.47	8.76
Commercial travelers and salesmen	5.12	5.80	6.08	4.59	4.39
Merchants and dealers	12.93	14.66	15.51	12. 25	10.68
Hucksters and peddlers	11.49	14, 11	15.52	8.33	8.14
Wine and liquor dealers	15.82	17.26	17. 93	8, 05	12.86

The preceding table shows that the average death rate of males in mercantile and trading occupations in the registration area was 10.54 per 1,000. In the registration states the rate was 12.25, being 12.87 in the cities and 10.22 in the rural districts. The highest rate among males engaged in occupations included in this class in the registration states occurred among wine and liquor dealers (17.26), and the lowest among commercial travelers and salesmen (5.80). The death rates of males in these occupations were also highest and lowest, respectively, in the cities in the registration states. In the rural districts in the registration states the highest death rate occurred among apothecaries, pharmacists, etc. (12.47).

The following table shows, for the registration states, the number of males engaged in occupations in the mercantile and trading class living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.		
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	290, 951	53, 428	149, 454	73, 652	12, 393
Per cent at each age Deaths	3, 565	18.36 188	51. 37 1, 110	25.81 1,850	4. 26 912
Per cent at each age	1 1	5. 27 3. 52	31. 14 7. 43	37. 87 17. 11	25.58 73.59
Average rate in all classes.		5.58	9. 29	18.43	70.09

This table shows that in the registration states nearly 70 per cent of the males in mercantile and trading occupations were under 45 years of age, and that the death rates in this class were lower than the average rates in all classes up to 65 years.

In the age group 65 years and over, the death rate in the mercantile and trading class was somewhat higher than the average rate for this age group in all classes.

The following table shows, for the registration states, the death rate at all ages and in each of four age groups of males engaged in all mercantile and trading occupations and in each specified occupation of this class per 1,000 of corresponding population:

			AGE.							
OCCUPATIONS.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over					
Class C	12. 25	3.52	7. 43	17.11	73. 59					
Apothecaries, pharmacists, and dealers in chemicals and drags Commercial travelers and salesmen Merchants and dealers Hucksters and peddlers	16. 19 5. 80 14. 66 14. 11	10. 71 2. 17 4. 56 4. 53	11. 47 5. 78 7. 19 10. 61	27. 79 12. 97 18. 42 22. 94	57. 82 31. 28 80. 13 61. 89					
Wine and liquor dealers	17. 26	4.80	13.71	25. 45	48. 13					

It will be seen from this table that the death rate of males in the mercantile and trading occupations in the registration states at 15 to 25 years of age was 3.52 per 1,000, being highest in this age group among apothecaries, pharmacists, etc. (10.71), and lowest among commercial travelers and salesmen (2.17).

In the age group 25 to 45 years the average death rate in this class of occupations was 7.43 per 1,000, the highest rate being that of wine and liquor dealers (13.71), and the lowest that of commercial travelers and salesmen (5.78).

In the age group 45 to 65 years the average death rate of males in these occupations was 17.11, being highest for apothecaries, pharmacists, etc. (27.79), and lowest for commercial travelers and salesmen (12.97).

In the age group 65 years and over the average death rate in mercantile and trading occupations was 73.59 per 1,000, the highest rate occurring among merchants and dealers (80.13), and the lowest among commercial travelers and salesmen (31.28).

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in mercantile and trading occupations from each of certain specified causes per 100,000 living:

	Regis-	regis	TRATION ST	TATES.	Regis- tration
, CAUSE OF DEATH.	tration area.	Total.	Çities.	Rural.	cities in other states.
Typhoid fever	35.97	36. 43	38. 98	28.05	35. 40
Malarial fever	9.8‡	11.00	9.86	14.76	8.43

Diseases of the bones and joints.	2.65	2.75	1.79	5.91	2.53
Burns and scalds	1	0.34	0.45		0.42
Injuries by machinery					
Suicido	16.47	15.47	14.34	19.19	17. 70
Other accidents and injuries.	41.46	38. 84	84.94	51.67	44. 67

It will be seen from this table that the highest death rate of males engaged in all occupations in the mercantile and trading class in the registration states was from diseases of the respiratory system, being 216.88 per 100,000. The death rate of males in this class of occupations from each specified cause closely approximated the average rate for males in all classes of occupations, excepting in the case of dropsy (mercantile and trading class, 1.72; all classes, 7.82), diabetes (mercantile and trading class, 12.72; all classes, 6.99), and accidents, injuries other than suicide, injuries by machinery, and burns and scalds (mercantile and trading class, 38.84; all classes, 100.59).

In the rural districts in the registration states the rates from malarial fever, dropsy, diabetes, diseases of the digestive system, diseases of the bones and joints, suicide, and other accidents and injuries were higher than in the cities, and the rates from all other causes specified were higher in the cities than in the rural districts.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes, per 1,000 deaths from all causes among males engaged in mercantile and trading occupations:

Total Cities Rural Cities Rural Cities Rural Cities States Cities States Cities Citie		United	Regis-	REGIS	TRATION S	PATES.	Regis- tration	Remain- der

The preceding table shows that the greatest proportion of deaths of males engaged in mercantile and trading occupations in the United States was due to consumption (167.76), which was slightly below the average proportion from this cause among males in all classes of occupations. The proportion of deaths due to heart disease (100.42) was above the average proportion due to this cause among males in all occupations (79.49), and the proportion due to diseases of the nervous system (129.39) was also greater than the proportion due to this cause for males in all classes of occupations, but the proportions were otherwise generally very uniform with the proportions among males in all classes of occupations.

In the nonregistration area the proportions of deaths of males in occupations in this class due to typhoid fever (63.69) and malarial fever (28.51) were greater than the corresponding proportions in the United States as a whole, and were very much greater than the proportions due to these causes in the registration area.

COMMERCIAL TRAVELERS AND SALESMEN.

The total number of commercial travelers and salesmen reported in the United States was 264,023, being 26.76 per cent of the whole number in the mercantile and trading class. The number of deaths of commercial travelers and salesmen was 1,363, or 14.41 per cent of the total deaths in this class of occupations.

In the registration area the number of commercial travelers and salesmen reported was 157,164, being 29.75 per cent of the whole number in this class. The number of deaths of commercial travelers and salesmen in this area was 805, or 14.46 per cent of the total deaths in occupations of this class, and the death rate was 5.12 per 1,000.

The following table shows, for the registration states, the number of commercial travelers and salesmen living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

POPULATION, DEATHS, AND DEATH RATES.	AGE.						
	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population.	1 ' 1	28, 075	39, 982	11, 414	1,023		
Per cent at each age	1 1	34, 50 61	49.13 231	14.02	1. 25		
Per cent at each age	1 1	12.92	48.94	148 31, 36	32 6.78

Average rate in this class	•••••	3. 52	7.43	17.11	73.59		

'This table shows that in the registration states over 80 per cent of the commercial travelers and salesmen were under 45 years of age, and that the death rate of commercial travelers and salesmen was less than the average rates in the mercantile and trading class in every age group.

The following table shows, for the registration area and some of its subdivisions, the death rate of commercial travelers and salesmen from each of certain specified causes per 100,000 living:

	Regis-	REGIS	Regis- tration

The preceding table shows that the highest death rate of commercial travelers and salesmen in the registration states was from consumption (144.99), which was, nevertheless, much below the average rate for the mercantile and trading class from this cause (205.53). The death rates of commercial travelers and salesmen from the causes specified were generally much below the average rates for males in occupations of this class. The rate from diseases of the nervous system (58.98) was about one-third the average rate from this cause in the mercantile and trading class* (168.41), from heart disease less than one-third (commercial travelers and salesmen, 44.23; the mercantile and trading class, 137.82), from Bright's disease (commercial travelers and salesmen, 19.66; mercantile and trading class, 58.77), from other diseases of the urinary system (commercial travelers and salesmen, 9.83; mercantile and trading class, 51.21), and from diseases of the respiratory system (commercial travelers and salesmen, 99.53; mercantile and trading class, 216.88).

The death rates of commercial travelers and salesmen in the registration cities in the nonregistration states from heart disease (30.35), consumption (109.53), diseases of the nervous system (46.19), diseases of the respiratory system (54.10), and Bright's disease (10.56) were all lower than the corresponding rates in the cities in the registration states, but this is probably due more to a deficient return of occupation of decedents in many of these cities than to any great difference in the actual rates.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among commercial travelers and salesmen:

	United	United States. Registration area.	REGIS	tration st	Regis- tration	Remain- der	
			Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever		63.35	52, 97	52.37	56.34	.78.08	103.94
Malarial fever	20.54	12.42	14.83	14.96	14.09	9.01	32, 26
Rheumatism	6.60	7.45	6.36	7.48		9.01	5.38
Dropsy	2.93	4.97	2, 12		14.09	9.01	
Heart disease	60.16	73.29	76. 27	82, 29	42.25	69.07	41.22
Consumption	245.78	249.69	250.00	254.36	225.35	249.25	240.14
Diabetes	5.87	3.73	6.36	4. 99	14.09		8.96
Diseases of the nervous system	107.85	103.11	101.69	102.24	98. 59	105.11	114.70
Diseases of the respiratory system	137.93	151.55	171.61	179.55	126.76	123.12	118.28
Diseases of the liver	21.28	26.09	23, 31	24.94	14.09	30.03	14.34
Ascites							
Other diseases of the digestive system	35.95	44.72	57. 20	57.36 ~	56.34	27.03	23.30
Bright's disease	24.94	29.81	33.90	32.42	42. 25	24.02	17.92
Other diseases of the urinary system	13.94	21.12	16.95	19.95		27.03	3,58
Diseases of the bones and joints	2.93	2.48	2.12	2.49		3.00	3.58
Burns and scalds	1.47	1.24	2.12	2.49			1.79
Injuries by machinery							
Suicide	23.48	21.12	14.83	9.98	42.25	30.03	26.88
Other accidents and injuries	66. 76	55, 90	50.84	42.39	98. 59	63.06	82.44

This table shows that in the United States as a whole the greatest proportion of deaths of commercial travelers and salesmen was due to consumption (245.78), being greater than the average proportion for the mercantile and trading class (167.76).

The proportion of deaths of commercial travelers and salesmen due to typhoid fever (79.97) was much greater than the average proportion due to this cause in this class (46.30), and the proportion due to suicide (23.48) was also greater than the average proportion due to this cause in the mercantile and trading class.

The proportions of deaths of commercial travelers and salesmen in the nonregistration area due to typhoid fever (103.94) and malarial fever (32.26) were greater than the proportions due to these causes in the United States, and were much greater than the average proportions in occupations of this class.

MERCHANTS AND DEALERS.

The total number of merchants and dealers reported in the United States was 606,586, being 61.48 per cent of the whole number in the mercantile and trading class. The number of deaths of merchants and dealers was 6,764, or 71.50 per cent of the total deaths in this class of occupations.

In the registration area the number of merchants and dealers reported was 300,195, being 56.83 per cent of the whole number in the mercantile and trading class in this area. The number of deaths among these was 3,881, or 69.73 per cent of the total deaths in this class, and the death rate was 12.93 per 1,000.

The following table shows, for the registration states, the number of merchants and dealers living at the end of the census year and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group and the death rates per 1,000 living:

POPULATION, DEATHS, AND DEATH RATES.	AGE.						
	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over		
Population		17,770	88, 397	53, 206	9, 871		
Per cent at each age	-	10.46	52.03	31.32	5. 81		
Deaths	. 2,490	81	636	980	791		
Per cent at each age	.[3.25	25.54	39. 36	31.77		
Death rate per 1,000 population		4.56	7.19	18.42	80.13		
Average rate in this class	.	3.52	7.43	17.11	73.59		

This table shows that in the registration states over 50 per cent of the merchants and dealers were between 25 and 45 years of age, and that the death rate of merchants and dealers in this age group (7.19) was slightly less than the average rate in the mercantile and trading class (7.43). In each of the other age groups the death rate of merchants and dealers was higher than the average rate in the mercantile and trading class.

The following table shows, for the registration area and some of its subdivisions, the death rate of merchants and dealers from each of certain specified causes per 100,000 living:

CAUSE OF DEATH.	Registration area.	REGIS	Regis- tration		
		Total.	Cities.	Rural.	cities in other states.
Typhoid fever	33. 98	34.73	36. 71	29. 16	33.00
Malarial fever	11.33	11.77	9.58	17.94	10.75
Rheumatism	9.99	13.54	15.16	8.97	5. 37
Dropsy	5.00	1.77	1.60	2.24	9. 21
Heart disease	160. 23	187.76	199.50	154.75	124. 84
Consumption	187. 54	208.36	237.01	127, 83	160.41
Diabetes	13.66	17.66	17.56	17.94	8.44
Diseases of the nervous system	194.87	216, 01	221. 84	199.60	167.32
Diseases of the respiratory system	203. 20	253.09	289. 67	150.26	138. 15
Diseases of the liver	40.97	41.79	45. 49	31.40	39.91
Ascites	1.33	1.18		4.49	1.54
Other diseases of the digestive system	48.64	57.68	57.46	58.31	36, 84
Bright's disease		74.75	76, 61	69.52	40, 68
Other diseases of the urinary system	57.96	70.63	72.61	65.04	41. 45
Diseases of the bones and joints		3, 53	1.60	8.97	3. 07
Burns and scalds	0.33				0.77
Injuries by machinery					
Suicide		17.66	17. 56	17.94	18. 42
Other accidents and injuries	45.30	41.79	36.71	56.07	49.89

It will be seen from this table that the highest death rates of merchants and dealers occurred from diseases of the respiratory system (253.09), diseases of the nervous system (216.01), consumption (208.36), and heart disease (187.76).

The death rates of merchants and dealers from every cause specified in this table, excepting typhoid fever, were higher than the average rates of the mercantile and trading class. In the rural districts in the registration states the death rate of merchants and dealers from malarial fever (17.94) was higher than in the cities (9.58), as was also the rate from diseases of the bones and joints (rural, 8.97; cities, 1.60).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among merchants and dealers:

		Regis-	REGIS	TRATION ST	CATES.	Regis- tration	Remain- der	
' CAUSE OF DEATH.	United States.	tration area.	Total.	Cities.	Rural.	citics in other states.	of the United States.	
Typhoid fever	39.62	26. 28	23. G9	23.66	23.81	30.91	57.58

Heart disease	110.73	123.94	128.11	128.60	126.37	116.46	92.96	
Consumption	146.66	145.07	142.17	152.78	104.40	150. 25	148. 80	
Diabetes	9.62	10, 56	12.05	11.32	14.65	7.91	6.94	
Diseases of the nervous system	136.31	150.73	147.39	143.00	163.00	156. 72	116.89	
Diseases of the respiratory system	154.35	157.18	172.69	186.73	122.71	129.40	150, 54	
Diseases of the liver	29.86	31.69	28.51	29.32	25.64	37.38	27.40	
Ascites	0.59	1.03	0.80		3, 66	1.44		
Other diseases of the digestive system	38. 29	37.62	39.36	37.04	47.62	34.51	39. 20	
Bright's disease	40. 21	46.38	51.00	49.38	56.78	38.10	31.91	
Other diseases of the urinary system	36.81	44.83	48.19	46.81	53.11	38.82	26.01	
Diseases of the bones and joints	3.25	2.58	2.41	1.03	7.33	2.88	4.16	
Burns and scalds	0.89	0, 26				0.72	1.73	
Injuries by machinery								
Suicide	13.96	13.91	12.05	11.32	14. 65	17.25	13.87	
Other accidents and injuries	48. 20	35.04	28.51	22.66	45.79	46.73	65.90	

It will be seen from this table that in the United States as a whole the greatest proportion of deaths of merchants and dealers was due to diseases of the respiratory system (154.35).

The proportion of deaths of merchants and dealers from the causes specified in the preceding table generally did not vary greatly from the corresponding proportions of deaths in the mercantile and trading class.

HUCKSTERS AND PEDDLERS.

The total number of hucksters and peddlers reported in the United States was 56,824, being 5.76 per cent of the whole number in the mercantile and trading class. The number of deaths of hucksters and peddlers was 608, or 6.43 per cent of the total deaths among those in occupations of this class.

In the registration area the number of hucksters and peddlers reported was 40,305, being 7.63 per cent of the whole number in the mercantile and trading class. The number of deaths was 463, or 8.32 per cent of the total deaths in this class, and the death rate was 11.49 per 1,000.

The following table shows for the registration states the number of hucksters and peddlers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

AGE.						
All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
22, 611	5, 298	10,841	5, 013 22, 17	1, 018 4, 50		
319	24	115	115	63 19.75		
	4. 53	10.61	22. 94	61. 89 73. 59		
		22, 611 5, 298	All ages. 15 to 25 years. 25 to 45 years.	All ages. 15 to 25 years. 25 to 45 years. 22,611 5,298 10,841 5,013 23.43 47.95 22.17 319 24 115 115 7.52 36.05 36.05 4.53 10.61 22.94		

This table shows that in the registration states over 70 per cent of the hucksters and peddlers were under 45 years of age. The death rate of hucksters and peddlers was higher than the average rate in the mercantile and trading class in each age group up to 65 years, and at 65 years of age and over the death rate of hucksters and peddlers was less than the average rate of the mercantile and trading class at this age.

The following table shows, for the registration area and some of its subdivisions, the death rate of hucksters and peddlers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	Regis- tration		
CAUSE OF DEATH.	tration area. Total. Cities. Rural. 47.14 53.07 55.04 45.02 9.92 8.85 5.50 22.51 9.92 8.85 11.01 2.48 4.42 5.50 124.05 128.26 148.60 45.02 215.85 287.47 346.74 45.02 129.02 207.86 209.15 202.61 203.41 260.93 286.20 157.59 24.81 22.11 22.02 22.51 37.22 57.49 55.04 67.54 34.74 48.65 55.04 22.51 2.48	cities in other states.

Other diseases of the digestive system	37. 22	57.49	55.04	67.54	11.30
Bright's disease	34.74	53.07	66.05		11. 30
Other diseases of the urinary system	42.18	48, 65	55.04	22, 51	33. 91
Diseases of the bones and joints	2.48				5. 65
Burns and scalds					
Injuries by machinery					
Suicide	22. 33	22.11	22.02	22. 51	22.61
Other accidents and injuries	59.55	48.65	49.53	45. 02	73.47

It will be seen from this table that in the registration states the highest death rates of hucksters and peddlers occurred from consumption (287.47), diseases of the respiratory system (260.93), and diseases of the nervous system (207.86), and that the rates from these causes were higher than the average rates for males in the mercantile and trading class. The death rate from heart disease (128.26) was slightly below the average rate in this class (137.82), and the death rate from typhoid fever (53.07) was much above the average rate of the mercantile and trading class from this cause (36.43).

The number of deaths among hucksters and peddlers in the rural districts in the registration states from the causes specified were too small to afford reliable comparisons of the relative death rates in this area with those in the cities.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among hucksters and peddlers.

	United	Regis-	REGIST	TRATION ST	TATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.

Diseases of the nervous system	118.42	112.31	147.34	134. 75	243. 24	34.72	137.93
Diseases of the respiratory system	172.70	181.43	184.95	184.40	189.19	173.61	144.83
Diseases of the liver	23.03	21.60	15.67	14.18	27. 03	34.72	27.59
Ascites							
Other diseases of the digestive system	29.61	32.40	40.75	35.46	81.08	13, 89	20.69
Bright's disease	31. 25	30.24	37.62	42, 55		13.89	34. 48
Other diseases of the urinary system	31. 25	36. 72	34.48	35.46	27. 03	41.67	13.79
Diseases of the bones and joints	4.93	2.16				6.94	13.79
Burns and scalds							
Injuries by machinery							
Suicide	21.38	19.44	15.67	14. 18	27.08	27.78	27.59
Other accidents and injuries	65.79	51.24	34.48	31.91	54.05	90.28	110.34

The preceding table shows that in the United States as a whole the greatest proportion of deaths of hucksters and peddlers was due to consumption (182.57), followed closely by diseases of the respiratory system, the proportion due to the latter being 172.70.

The proportion of deaths due to typhoid fever, malarial fever, diseases of the digestive system, and diseases of the urinary system were all less than the average proportions due to these causes in the mercantile and trading class.

In the nonregistration area the proportion of deaths of hucksters and peddlers due to dropsy (34.48) was much greater than the proportion in the United States (9.87), and the proportion due to diseases of the bones and joints (13.79) was very much greater than the proportion due to these causes in the United States as a whole (4.93).

CLASS D-ENTERTAINMENT.

The total number of males engaged in occupations included in this class in the United States was 192,193, being 1.08 per cent of the whole number reported as having designated occupations. The number of deaths in this class in the United States was 2,413, or 1.28 per cent of the deaths among males having designated occupations.

In the registration area the number of males reported in this class was 102,623, being 1.77 per cent of the whole number of males occupied. The number of deaths among these was 1,342, or 1.88 per cent of the whole number of deaths among males having designated occupations, and the death rate was 13.08 per 1,000.

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in hotels, saloons, and houses of entertainment per 1,000 males engaged in these occupations:

	Regis-	REGIS	eration si	vates.	Regis- tration
OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	eities in other states.
Class D	13.08	14.53	15.86	10.67	11.41
Hotel and boarding house keepers	13. 91 12. 87	14. 93 14. 40	18.73 15.35	11.86 9.25	11.78 11.35

It will be seen from this table that in the registration states there was very little difference between the death rates of hotel and boarding house keepers and those of saloon keepers, restaurant keepers, bartenders, etc., but that in the cities the death rate of the former (18.73) was higher than that of the latter (15.35).

The following table shows, for the registration states, the death rate of males engaged in hotels, saloons, and houses of entertainment, at all ages, and in each of four age groups, per 1,000 of corresponding population:

			AGE.		
occupations.	All ages.	15 to 25 years.	25 to 45 · years.	45 to 65 years.	65 years and over.
Class D	14. 53	8.56	12.79	18. 20	50.66.
Hotel and boarding house keepers	14. 93 ⁻ 14. 40	2. 48 8. 85	9.16 13.77	15. 48 20: 26	55. 22° 43. 81

It will be seen from this table that in the registration states the death rate of saloon keepers was higher than that of hotel and boarding house keepers in each age group under 65 years. In the age group 65 years and over the death rate of hotel and boarding house keepers was considerably higher than that of saloon keepers.

The following table shows, for the registration states, the number living at the end of the census year and the number of deaths during the census year of males reported as hotel and boarding house keepers, saloon keepers, restaurant keepers, bartenders, etc., at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

AGE.						
All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over		
54, 771	8, 879	30, 655	13, 403	1,658		
	16.21	55.97	24.47	3.03		
796	76	392	. 244	84		
	9.55	49.25	30.65	10.55		
	8.56	12, 79	18. 20	50, 66		
	5.58	9. 29	18, 43	70.09		
	54, 771	54,771 8,879 16.21 796 76 9.55 8.56	All ages. 15 to 25 years. 25 to 45 years. 54,771 8,879 30,655 16.21 55.97 796 76 392 9.55 49.25 8.56 12.79	All ages. 15 to 25 years. 25 to 45 years. 45 to 65 years. 54,771 8,879 30,655 13,403 16.21 55.97 24.47 796 76 392 .244 9.55 49.25 30.65 8.56 12.79 18.20		

This table shows that in the registration states the death rate of males in this class was below the average rate in all classes in the age group 15 to 25 years, above the average rate in all classes in the age group 25 to 45 years, about the same as the average rate in all classes in the age group 45 to 65 years, and considerably less than the average rate in all classes in the age group 65 years and over.

Over 50 per cent of the population in this class was between 25 to 45 years of age, and in this age group the death rate of this class was comparatively the highest.

The following table shows, for the registration area and some of its subdivisions, the death rate of male hotel and boarding house keepers, saloon keepers, restaurant keepers, bartenders, etc., from each of certain specified causes per 100,000 living:

	Regis-	REGIS	Regis- tration		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural. 35.79 7.16 7.16 114.54 164.65 200.44 136.02 50.11 35.79 64.43 57.27	cities in other states.

Other diseases of the urinary system	39. 95	49.30	46. 57	57. 27	29. 26
Diseases of the bones and joints		1.83	2.45		4.18
Burns and scalds					
Injuries by machinery				.	
Suicide	24. 36	18. 26	22.06	7.16	31. 35
Other accidents and injuries	72.11	76. 68	88. 23	42.95	66.87

It will be seen from this table that in the registration states the highest death rates among hotel and boarding house keepers and saloon keepers, etc., occurred from consumption, and that this rate (357.85) was much higher than the average rate from this cause among males in all classes of occupations (279.66). The death rate from diseases of the respiratory system (283.00) was above the average rate for all classes (237.27), and the rate from diseases of the liver was more than three times the average rate (hotel and boarding house keepers and saloon keepers, etc., 80.33; all classes, 25.35), while the rate from typhoid fever (20.08) was less than half the average rate in all classes (40.33). The excessive death rate from consumption in this class (357.85) occurred wholly among saloon and restaurant keepers, bartenders, etc.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among male hotel and boarding house keepers, saloon keepers, restaurant keepers, bartenders, etc.:

-	United	Regis-	REGIST	TRATION ST	'ATES.	Regis- tration	Remain-
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.

Other accidents and injuries	62, 99-	55.14	52.76	56.64	40.27	58.61	72.83

This table shows that in the United States the proportion of deaths of hotel and boarding house keepers, saloon keepers, etc., due to consumption (205.55) was greater than that due to any other cause, and was also greater than the average proportion due to this cause in all occupations (171.60). The proportion due to diseases of the liver (46.42) was very much greater in this class than the average proportion due to this cause in all classes (17.33), and the proportion due to suicide (18.23) was somewhat greater than the average proportion due to this cause in all classes (11.93).

The proportions due to typhoid fever (23.62) and malarial fever (8.29) were much less than the average proportions due to these causes in all classes.

HOTEL AND BOARDING HOUSE KEEPERS.

The total number of male hotel and boarding house keepers reported in the United States was 50,556, being 26.30 per cent of the whole number of males reported in this class. The number of deaths was 645, or 26.73 per cent of the whole number of males in this class.

In the registration area the number of male hotel and boarding house keepers reported was 20,266, or 19.75 per cent of the whole number of males in this class. The number of deaths among these was 282, or 21.01 per cent of the deaths of males in this class, and the death rate was 13.91 per 1,000.

The following table shows, for the registration states, the number of male hotel and boarding house keepers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.							
. POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over			
Population	13, 729	404	6, 550	5, 751	996			
Per cent at each age		2.94	47.71	41.89	7.25			
Deaths	205	1	60	89	55			
Per cent at each age		0.49	29.27	43.41	26.83			
Death rate per 1,000 population	1	2.48	9,16	15.48	55.22			
Average rate in this class		8.56	_12.79	13. 20	50.66			

This table shows that in the registration states the percentage of hotel and boarding house keepers in the age group 45 to 65 years was much higher than the average percentage in this class, and that the death rate of hotel

MOR—PT I——7

and boarding house keepers in this age group was lower than the average rate in this class. There was but 1 death among hotel and boarding house keepers between 15 and 25 years, and the rate for this age group has no significance. At 25 to 45 years, the death rate of hotel and boarding house keepers was also less than the average in this class, but in the age group 65 years and over it was greater than the average in this class at this age.

The following table shows, for the registration area and some of its subdivisions, the death rate of hotel and boarding house keepers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	Regis- tration

Other accidents and injuries	59. 21	65. 56	114.03	26.35	45.89

This table shows that in the registration states the highest death rate among hotel and boarding house keepers occurred from diseases of the nervous system and diseases of the respiratory system, being 240.37 in each case. The rate from diseases of the respiratory system in the cities (407.23) was very much higher than the rate from these causes in the rural districts in the registration states (105.40), while the rate from diseases of the nervous system in the rural districts (250.33) was somewhat higher than in the corresponding rate in the cities (228.05).

The death rate from diseases of the liver (101.97) was considerably higher than the average death rate of males in this class, and was excessively high in the cities in the registration states (130.31).

The following table shows, for the United States, for the registration area and some of its subdivisions and for the remainder of the United States, the proportion of deaths due to each of certain specified causes, per 1,000 deaths from all causes among hotel and boarding house keepers:

	United.	Regis-	REGIST	ration st	ATES,	Regis- tration	Romain-
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.

Other diseases of the urinary system	38.76	39. 01	43.90	26.09	66, 67	25. 97	38.57
Diseases of the bones and joints	1.55		[2.75
Burns and scalds							ļ
Injuries by machinery							
Suicides	12.40	14. 18	14.63	17.39	11.11	12.99	11.02
Other accidents and injuries	68. 22	42. 55	43.90	60.87	22. 22	38.96	88.15

The preceding table shows that the greatest proportions of deaths of hotel and boarding house keepers in the United States as a whole were due to diseases of the respiratory system (155.04), diseases of the nervous system (134.88), consumption (120.93), and heart disease (116.28), the proportions due to these causes, however, being less in the United States as a whole than in the registration area.

The proportion of deaths due to consumption was less than the average proportion of deaths due to this cause in occupations of this class.

SALOON KEEPERS, RESTAURANT KEEPERS, BARTENDERS, ETC.

The total number of saloon keepers, restaurant keepers, bartenders, etc., reported in the United States was 141,637, being 73.70 per cent of the whole number engaged in occupations of this class. The number of deaths among these was 1,768, or 73.27 per cent of the whole number of deaths among males in this class.

In the registration area the number of saloon keepers, restaurant keepers, bartenders, etc., reported was 82,357, being 80.25 per cent of the whole number of males in this class, the corresponding number of deaths was 1.060, or 78.98 per cent of the deaths among males in this class, and the death rate was 12.87 per 1,000.

The following table shows, for the registration states, the number of saloon keepers, restaurant keepers, bartenders, etc., living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

•					
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population Per cent at each age	41, 042	8, 475 20, 65	24, 105 58, 73	7, 652 18, 64	662 1.61
Deaths Per cent at each age.	591	75 12.69	332 56.18	155 26, 23	29
Death rate per 1,000 population. Average rate in this class		8.85 8.56	13.77 12.79	20. 26 18. 20	43.81 50.66

This table shows that in the registration states the death rate of saloon keepers, restaurant keepers, bartenders, etc., was higher in each age group under 65 years than the average rate in this class of occupations. At 65 years and over the death rate of saloon keepers, restaurant keepers, bartenders, etc., was lower than the average rate in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of saloon keepers, restaurant keepers, bartenders, etc., from each of certain specified causes per 100,000 living:

	Regis-	REGIST	Regis- tration		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	20.64	19.49	11.54	62.71	21.78
Malarial fever	12.14	14.62	17.31]	9.68
Rheumatism	8.50	7.31	8.65		9.68

Suicide	25.50	17.06	20.19		33.89
Other accidents and injuries	75.28	80.41	83.66	62.71	70.19

It will be seen from the preceding table that the highest death rates of saloon keepers, restaurant keepers, bartenders, etc., in the registration states, occurred from consumption (399.59), diseases of the respiratory system (297.26), diseases of the nervous system (109.64), and heart disease (75.53). The death rates of saloon keepers, restaurant keepers, bartenders, etc., in the registration cities in the nonregistration states, were higher from typhoid

fever (21.78), heart disease (94.40), and from suicide (33.89) than the corresponding rates in the cities in the registration states.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes, per 1,000 deaths from all causes among saloon keepers, restaurant keepers, bartenders, etc.:

. CAUSE OF DEATH.	United States.	Regis- tration	REGIS	TRATION S	Pates.	Registra- tion cities	Remain- der of the
	Duties.	area.	Total.	Cities.	Rural.	in other states.	United States.

Injuries by machinery							
Suicide	20.36	19.81	11.84	13, 16		29.85	21. 19
Other accidents and injuries	61.09	58.49	55.84	54. 51	67.80	61.83	64.97

This table shows that in the United States as a whole the proportion of deaths of saloon keepers, restaurant keepers, bartenders, etc., due to consumption (236.43) was greater than the proportion due to any other cause, and was also greater than the average proportion due to this cause in occupations of this class.

The proportion of deaths of saloon keepers, restaurant keepers, bartenders, etc., due to Bright's disease and other diseases of the urinary system was less than the average proportion due to these causes in this class, and the proportion of deaths due to suicide was somewhat greater than the average proportion due to this cause in this class.

The proportion of deaths of saloon keepers, restaurant keepers, bartenders, etc., in the nonregistration area due to typhoid fever (42.37), rheumatism (19.77), and dropsy (19.77) was considerably greater than the corresponding proportions due to these causes in the United States.

CLASS E-PERSONAL SERVICE, POLICE, AND MILITARY.

The number of males reported as engaged in occupations included in this class in the United States was 258,911, being 1.46 per cent of the whole number of males in the selected occupations. The number of deaths in this class was 3,008, or 1.60 per cent of the total deaths of males in the selected occupations.

In the registration area the number of males reported in this class was 149,834, being 2.58 per cent of the whole number of males in the selected occupations in this area. The number of deaths among these was 1,871, or 2.62 per cent of the total deaths of males in the selected occupations, and the death rate was 12.49 per 1,000.

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in personal service, police, and military occupations, and in each specified occupation of this class per 1,000 males engaged in each occupation:

	Regis-	REGIST	REGISTRATION STATES.

Nurses	14.56	13.96	14.61	12.36	15.82	
Policemen, watchmen, and detectives	13.06	16.22	17.90	7.58	9. 67	
Soldiers, sailors, and marines (United States)	18.07	22.66	27. 26	9.56	11.18	
Undertakers	16.15	24.99	19.00	22.74	8, 85	

It will be seen from the preceding table that in the registration states the average death rate of males in this class of occupations was 15.39 per 1,000, being below the average for barbers and hairdressers (12.54), launderers (11.22), and nurses (13.96), and above the average for those in all other occupations in this class.

The average death rate in this class in the cities was higher, being 16.52 per 1,000, and in the rural part of the registration states it was lower, being 10.40 per 1,000, but the proportion of the population in this class in the rural districts was comparatively small.

The following table shows, for the registration states, the death rate, at all ages, and in each of four age groups, of males engaged in all personal service, police, and military occupations, and in each specified occupation of this class, per 1,000 of corresponding population:

·	. AGE.						
OCCUPATIONS.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Class E	15.39	6.49	11.21	22.99	68.10		
Barbers and hairdressers	12.54	7.38	11.80	24, 89	86, 54		
Janitors and sextons	17.15	3.89	11.81	20.55	39. 11		
Launderers	11.22	5.02	11.10	29.41	27.40		
Nurses	13.96	6.61	10.22	21.65	107.69		
Policemen, watchmen, and detectives	16.22	8.31	10.74	18. 52	58.74		
Soldiers, sailors, and marines (United States)	22.66	4.68	- 11.82	64.29	428.57		
Undertakers	24.99	6.00	9.17	23.88	108.61		

It will be seen from this table that in the age group 15 to 25 years, in the registration states, the average death rate of males in this class of occupations was 6.49 per 1,000, being highest among policemen, watchmen, and detectives (8.31), and barbers (7.38), and lowest among janitors (3.89) and soldiers, sailors, and marines (4.68).

In the age group 25 to 45 years the average death rate in this class was 11.21 per 1,000, being highest among soldiers, sailors, and marines (11.82), and janitors (11.81), and lowest among undertakers (9.17) and nurses (10.22).

In the age group 45 to 65 years the average death rate in this class was 22.99 per 1,000, which was below the average rate for policemen, watchmen, and detectives (18.52), janitors (20.55), and nurses (21.65), and above the average in all other occupations, the death rate of soldiers, sailors, and marines (64.29) being excessively high.

In the age group 65 years and over the average death rate in this class was 68.10 per 1,000, which was below the average for launderers (27.40), janitors (39.11), policemen, watchmen, and detectives (58.74), and above the average in all other occupations. The excessive death rate of soldiers, sailors, and marines in this age group (428.57) is due to the small number of persons reported in this class of occupations, and the rate has no significance.

The following table shows, for the registration states, the number of males in the personal service, police, and military class living at the end of the census year, and the number of deaths in this class during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rate per 1,000 living:

		AGE.			
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	78, 243	13, 555	42, 000	19, 094	3,.025
Per cent at each age	.	17.32	53.68	24.40	3.87
Deaths	1,204	88	471	439	206
Per cent at each age		7. 31	39.12	36.46	17.11
Death rate per 1,000 population.		6.49	11. 21	22.99	68. 10
Average rate in all classes.	1 !	5, 58.	9.29	18, 43	70.09

This table shows that in the registration states the death rate of males in the personal service, police, and military class was higher in each age group under 65 years than the average rate in all classes of occupations, but that in the age group 65 years and over the rate in this class was somewhat lower than the average rate in all classes.

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in personal service, police, and military occupations, from each of certain specified causes, per 100,000 living:

	Regis-	REGIS	TRATION S	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	38.71	42.18	45.44	27.72,	34.92

Injuries by machinery					
Suicide	29.37	28. 12	29.77	20.79	30. 7 3
Other accidents and injuries	82.09	88. 19	86, 19	97.03	75.43

It will be seen from this table that the death rates of males in the personal service, police, and military class were generally higher than the corresponding rates for all classes of occupations, being highest from consumption (343.80), diseases of the respiratory system (293.96), and diseases of the nervous system (161.04). The death rate of males in this class from suicide (28.12) was much higher than the average rate from this cause in all classes (15.61), and was higher in the registration cities in the nonregistration states (30.73) than in the cities in the registration states (29.77). Excepting the death rate from diseases of the respiratory system, and also the death rate from suicide, the death rates in this class from other specified causes in the cities in the registration states, quoted above, the rates correspond closely with the death rates of males in all classes of occupations in the same area.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes, per 1,000 deaths from all causes among males engaged in personal service, police, and military occupations:

	United	Regis-	REGIS	rration s	rates.	Regis- tration	Remain-
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	82.91	31.00	27.41	27.51	26.61	37.48	36.06

Suicide	23. 27	23.52	18.27	18. 03	20.00	32.98.	22.87
Other accidents and injuries	∂ 5.13•	65.74	57.31	52.18	93. 33	80.96	90.59

This table shows that in the United States as a whole the greatest proportion of deaths of males in the personal service, police, and military class was due to consumption (209.44), and that this proportion was greater than the average proportions due to the same eause in all occupations. The proportion of deaths due to diseases of the nervous system (103.39) was above the average proportion due to this cause in all occupations (94.50), and the proportion due to heart disease (96.08) was also greater than the average proportion due to this cause in all occupations (79.49).

The proportion of deaths due to typhoid fever (32.91) was less than the average proportion due to this cause in all occupations (47.75), and the proportion due to malarial fever (11.97) was about half the average proportion due to this cause in all classes.

The proportion of deaths due to suicide (23.27) was nearly twice the average proportion due to this cause in all classes (11.93).

BARBERS AND HAIRDRESSERS.

The total number of barbers and hairdressers reported in the United States was 82,157, being 31.73 per cent of the whole number of males in this class of occupations. The number of deaths among these was 841, or 27.96 per cent of the whole number of deaths among males in this class.

In the registration area the number of barbers and hairdressers reported was 44,802, being 29.90 per cent of the total males in this class. The number of deaths among these was 508, or 27.15 per cent of the total deaths among males in this class, and the death rate was 11.34 per 1,000.

The following table shows, for the registration states, the number of barbers and hairdressers living at the end of the census year, and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

		AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population	22, 972	6, 773 24. 98	13, 051 56. 81	2, 652	208			
Deaths	288	50 17.36	154 53, 47	11.54 66 22.92	0.91			
Per cent at each age Death rate per 1,000 population Average rate in this class.		7.38 6.49	11.80 11.21	24. 89 22. 99	6: 25 86: 54 68: 10			

This table shows that in the registration states the death rate of barbers and hairdressers was higher in each age group than the average rate in occupations of this class. Nearly 25 per cent of the barbers and

hairdressers reported were under 25 years of age, and the death rate at this age (7.38) was but little higher than the average rate in this class (6.49).

The following table shows, for the registration area and some of its subdivisions, the death rates of barbers and hairdressers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	TRATION ST	PATES.	Regis- tration
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	53.57	60. 94	70. 37	22. 23	45.81
Malarial fever	11.16	13.06	16. 24		9.16
Rheumatism	6.70	4.35	5.41		9. 16
Dropsy	8. 93	13.06	16. 24		4.58
Heart disease	107.14	108.83	119.09	66.70	105.36

Other diseases of the urinary system	24.55	26, 12	27.07	22, 23	22.90
Diseases of the bones and joints	4.46	8. 71	10.83		
Burns and scalds					
Injuries by machinery					
Suicide	40.18	39. 18	48.72		41.23
Other accidents and injuries	55.80	56. 59	48.72	88.93	54.97

It will be seen from this table that the highest death rate of barbers and hairdressers in the registration area occurred from consumption (409.19), and that this rate was much higher than the average rate from this cause in this class, and was also higher in the cities in the registration states than in any other area. The death rate from typhoid fever (60.94) was considerably above the average from this cause in this class (42.18), and the death rate from dropsy (13.06) was more than twice as great as the average rate from this cause in this class (5.11). The death rate from suicide (39.18) was very much higher than the average rate from this cause in the personal service, police, and military class (28.12), and was excessively high in the cities in the registration states (48.72). The death rates from Bright's disease and other diseases of the urinary system were considerably lower than the average rates from these causes.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes, per 1,000 deaths from all causes among barbers and hairdressers:

	****	Regis-	REGIS	TRATION 5	Regis- tration	Remain- der	
CAUSE OF DEATH.	United States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	41.62	47. 24	48.61	51. 79	27.03	45. 45	33. 03
Malarial fever	14. 27	9.84	10.42	11. 95		9.09	21.02
Rheumatism	7.13	5.91	3.47	3.98		9, 09	9. 01
Dropsy	13.08	7. 87	10.42	11. 95		4.55	21.02
Heart disease	82.05	94.49	86.81	87.65	81.08	104.55	63.06
Consumption	317.48	307.09	326.39	818. 73	378.38	281. 82	333. 33
Diabetes	3.57	3.94				9.09	3.00
Diseases of the nervous system	77. 29	82.68	83.33	83, 67	81.08	81.82	69.07
Diseases of the respiratory system	129.61	141.73	170.14	171. 31	162.16	104.55	111.11
Diseases of the liver	26.16	35. 43	31.25	31. 87	27.03	40.91	12.01
Ascites	1.19	1.97]			4, 55	
Other diseases of the digestive system	34.48	25. 59	17.36	19. 92		36.36	48.05
Bright's disease	17.84	17.72	24.31	27.89		9.09	18.02
Other diseases of the urinary system	19.02	21.65	20, 83	19. 92	27.03	22.73	15.02
Diseases of the bones and joints	5.95	3.94	6.94	7.97		í	. 9. 01
Burns and scalds							
Injuries by machinery							
Suicide		35.43	31. 25	35.86		40.91	9. 01
Other accidents and injuries	54.70	49. 21	45.14	85. 86	108.11	54. 55	63.06

It will be seen from the preceding table that the greatest proportion of deaths for barbers and hairdressers in the United States was due to consumption (317.48), and that this proportion was very much greater than the average proportion due to this cause in this class (209.44). The proportion of deaths due to diseases of the respiratory system (129.61) was less than the average proportion in this class (157.25), and the proportion due to diseases of the nervous system (77.29) was also less than the average proportion in this class (103.39).

The proportions of deaths due to malarial fever (21.02), dropsy (21.02), and Bright's disease (18.02) were greater in the nonregistration area than in the United States.

POLICEMEN, WATCHMEN, AND DETECTIVES.

The total number of policemen, watchmen, and detectives reported in the United States was 74,350, being 28.72 per cent of the whole number of males in this class of occupations. The number of deaths among these was 820, or 27.26 per cent of the whole number of deaths among males in this class.

In the registration area the number of policemen, watchmen, and detectives reported was 49,985, being 33.36 per cent of the total males in this class. The number of deaths among these was 653, or 34.90 per cent of the total deaths among males in this class, and the death rate was 13.06 per 1,000.

The following table shows, for the registration states, the number of policemen, watchmen, and detectives living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group and the death rates per 1,000 living:

		AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population	25, 897	1,203	13, 413	9, 774	1, 447			
Per cent at each ege		4.64	51.79 144	37. 74 181	5.59 85			
Deaths	*20	2.38	34.29	43.10	20, 24			
Death rate por 1,000 population		8.31	10.74	18.52	58.74			
Average rate in this class	·	6.49	11.21	22.99	68.10			

This table shows that in the registration states there were but 10 deaths of policemen, watchmen, and detectives under 25 years of age, and the death rate in this age group has no significance. Above the age of 25 years the death rate of policemen, watchmen, and detectives was less in each age group than the average rate in occupations of this class.

The following table shows for the registration area and some of its subdivisions, the death rate of policemen, watchmen, and detectives from each of certain specified causes per 100,000 living:

•	Regis-	REGIS	ration st	ATES.	tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.	
Typhoid fever		34.75	41.52		16.61

Diseases of the bones and joints	2.00	3.86	4.61]		
Burns and scalds						
Injuries by machinery						
Suicide	18.01	23.17	27.68		12.45	
Other accidents and injuries	124.04	123.57	129.18	94.74	124.54	

It will be seen from the preceding table that the highest death rates of policemen, watchmen, and detectives in the registration states occurred from diseases of the respiratory system (343.67), consumption (262.58), diseases of the nervous system (189.21), and heart disease (162.18), the rates from all of these causes, excepting consumption, being higher than the corresponding rates for males in occupations of this class.

The death rate from consumption (262.58) was much below the average rate in this class from this cause (343.80), and the death rates from Bright's disease and other diseases of the urinary system were considerably higher than the average rates from these causes. The death rate from accidents and injuries other than burns and scalds, injuries by machinery, and suicide (123.57), was excessively high in comparison with the average rate from these causes in the personal service, police, and military class (88.19), and was higher in the cities in the registration states (129.18) than in any other area.

The following table shows for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among policemen, watchmen, and detectives:

	United	Regis-	REGIST	FRATION ST	CATES.	Regis- tration	Remain-

Diabetes	6, 10	7.60	7.14	7.73		8.58	
Diseases of the nervous system	117.07	113.32	116.67	121. 13	62.50	107. 30	131.74
Diseases of the respiratory system	200.00	212.86	211. 90	216.49	156. 25	214.59	149.70
Diseases of the liver.	20.73	24.50	26.19	25.77	31. 25	21.46	5.90
Ascites	1. 22						5.99
Other diseases of the digestive system	26.83	26, 03	28.57	28: 35	31: 25	21.46	29.94
Bright's disease	36. 59	38, 28	42.86	38.66	93.75	30.04	29.94
Other diseases of the urinary system	32.93	38.28	40.48	38, 66	62.50	34. 33	11.98
Diseases of the bones and joints	2.44	1.53	2.38	2.58			5, 99
Burns and scalds	1.22						5.99
Injuries by machinery	1. 22						5.99
Suicide	15.85	13: 78	14. 29	15.46		12.88	23:95
Other accidents and injuries	118. 29	94.95	76. 19	72. 16	125.00	128.76	209.58

It will be seen from this table that in the United States as a whole the greatest proportions of deaths of policemen, watchmen, and detectives were due to diseases of the respiratory system (200.00), consumption (146.34), and accidents and injuries other than burns and scalds, injuries by machinery, and suicide (118.29).

The proportion of deaths due to consumption (146.34) was less than the average proportion in this class (209.44), and the proportion due to diseases of the respiratory system (200.00) was greater than the average proportion in this class (157.25). The proportion of deaths due to suicide (15.85) was less than the average proportion in this class (23.27).

In the nonregistration area the proportion of deaths due to malarial fever (23.95) was greater than the proportion in the United States (13.41), and the proportion due to dropsy (29.94) was three times the proportion in the United States (9.76). The proportions of deaths due to suicide (23.95), and to other accidents and injuries (209.58) in the nonregistration area, were much greater than the corresponding proportions in the United States.

SOLDIERS, SAILORS, AND MARINES (UNITED STATES).

The total number of soldiers, sailors, and marines reported in the service of the United States was 30,845, being 11.91 per cent of the whole number of males in this class of occupations. The number of deaths among these was 665, or 22.11 per cent of the whole number of deaths among males in this class.

In the registration area the number of soldiers, sailors, and marines reported was 10,735, being 7.16 per cent of the total males in this class. The number of deaths among these was 194, or 10.37 per cent of the total deaths among males in this class, and the death rate was 18.07 per 1,000.

The following table shows, for the registration states, the number of soldiers, sailors, and marines living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

PODITIANTON DEATHS AND DEATH PATE.	AGE.						
POPULATION, DEATHS, AND DEATH RATE.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population	6,442	1,,709.	3, 637.	1,.011	70		
Per cent at each; age		26, 53	56, 46,	15.69	1.08		
Deaths	146	8	43,	65	30		
Per cent at each age		5.48	. 29.45	44. 52.	20,55		
Death rate per 1,000 population.		4, 68	11.82.	64.29	428.57		
Average rate in this class	1 1	6.49	11, 21	22.99	68, 10:		

This table shows that in the registration states 26 per cent of the soldiers, sailors, and marines in the service of the United States were under 25 years of age, and that the death rate at this age (4.68) was considerably lower than the average rate in the personal service, police, and military class (6.49). At 25 to 45 years of age, which includes 56 per cent of the soldiers, sailors, and marines reported, the death rate (11.82) was slightly higher than the average at this age in the personal service, police, and military class. Above the age of 45 years the death rates of soldiers, sailors, and marines were excessively high, being 64.29 per 1,000; at 45 to 65, while the average rate in this class at this age was but 22.99, and 428.57 at 65 years of age and over; in which group the average rate was but 68.10.

The following table shows, for the registration area and some of its subdivisions, the death rate of soldiers, sailors, and marines, from each specified cause, per 100,000 living.

:	Regia-	REGIS	tration s	Regis- tration cities	
CAUSE OF DEATH.	tration area.	Total;	Cities.	Rural.	in other states.
Typhoid fever Malarial fever		62.09 15.52	62. 91 20. 97	59.77	69.88 23.29
Rhoumatism	9.32.	15,52		59.77	
Heart disease	167. 68	232.85-	272,59	119.55	69.88
f Consumption		481, 22	608.09	119: 55	209, 64
Diseases of the nervous system		341.51 294.94	419.38 335.50	119.55 179.32	139.76 139.76
Diseases of the liver	65. 21	93.14	125.81		23. 29
Assoites	65. 21	77.62	104.84		46, 59
Bright's disease Other diseases of the urinary system	1	46.57 62.09	62.91 83.88		69, 88
Diseases of the bones and joints	i				23. 29
Injuries by machinery		15.50		59, 77	46, 59
Suicide		15. 52 93. 14	83.88	119.55	163,08

It will be seen from this table that the death rates of soldiers, sailors, and marines in the service of the United States, in the registration states, from the causes specified, were all higher than the average rates among males in the personal service, police, and military class, excepting Bright's disease, from which the rate (46.57) was somewhat below the average (48.57), and suicide, in which the death rate (15.52) was very much below the average rate in this class (28.12). The highest death rate occurred from consumption (481.22), being excessively high in the cities (608.09). The death rate from diseases of the nervous system (341.51) was more than twice the average rate from this cause in this class (161.04), and was also excessively high in the cities (419.38). The death rate of soldiers, sailors, and marines from suicide in the registration cities in the nonregistration states (46.59) was nearly three times the corresponding rate from this cause among males in all occupations of this class in the same area.

The following table shows, for the United States, for the registration area and some of its subdivisions and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among soldiers, sailors, and marines (United States).

	United	Regis-	REGIS	TRATION S	TATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	86. 09	86.08	27.40	23.08	62, 50	62. 50	36. 09
Malarial fever	9.02	10.31	6.85	7.69		20.83	8.49
Rheumatism	3.01	5. 15	6.85		62.50		2.12
Dropsy	3.01						4.25
Heart disease	138.35	92.78	102.74	100.00	125.00	62.50	157.11
Consumption	144.36	206.19	212.33	223.08	125.00	187.50	118.90
Diabetes	7.52						10.62
Diseases of the nervous system	132, 33	144. 33	150.68	153.85	125.00	125.00	127.39
Discases of the respiratory system	100.75	128.87	130.14	123.08	187.50 -	125.00	89.17
Diseases of the liver	12.03	36.08	41.10	46.15		20.83	2.12
Ascites							
Other diseases of the digestive system	39.10	36.08	34.25	38.46		41.67	40.34
Bright's disease	36.09	30.93	20.55	23.08		62.50	38. 22
Other diseases of the urinary system	22.56	20.62	27.40	30.77			23.35
Diseases of the bones and joints	1.50	5. 15				20.83	
Burns and scalds							
Injuries by machinery							
Suicide	25.56	15.46	6.85		62.50	41.67	29.72
Other accidents and injuries		67.01	41.10	30.77	125.00	145. 83	76.43

This table shows that in the United States the proportion of deaths of soldiers, sailors, and marines due to consumption (144.36) was less than the average proportion in this class (209.44), as was the proportion due to diseases of the respiratory system (soldiers, sailors, and marines, 100.75; class total, 157.25). The proportions of deaths due to heart disease (138.35) and to diseases of the nervous system (132.33) were greater than the average proportions in this class.

NURSES.

The number of male nurses reported as living in the registration states was 2,507, and the number of deaths of nurses during the year was 35, the death rate being 13.96 per 1,000. By age groups, the death rates per 1,000 of population were as follows: age 15 to 25 years, 6.61; age 25 to 45 years, 10.22; age 45 to 65 years, 21.65; age 65 years and over, 107.69.

CLASS F-LABORERS AND SERVANTS.

The total number of males engaged in occupations included in this class in the United States was 2,151,103, being 12.11 per cent of the whole number of males in all of the selected occupations. The number of deaths of males in occupations of this class was 32,070, or 17.03 per cent of the total deaths of males in all of the selected occupations.

In the registration area the number of males reported in occupations included in this class was 947,088, being 16.30 per cent of the whole number in the selected occupations. The number of deaths among these was 17,278, or 24.22 per cent of the total deaths of males in all selected occupations in this area, and the death rate was 18.24 per 1,000.

The following table shows, for the registration states, the number of males in the laboring and servant class living at the end of the census year and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living.

		AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population	468, 721	121, 874	210, 222	101, 623	20, 710 4, 42			
Per cent at each age Deaths	10, 586	26.00 1,186	44. 85 3, 566	21.68	2, 379			
Per cent at each age Death rate per 1,000 population		11. 20 9. 73	33.69 16.96	31. 87 33. 20	22.47 114.87			
· Average rate in all classes		5.58	9.29	18.43	70.09			

This table shows that in the registration states the death rate of males in the laboring and servant class was nearly twice the average rate in each age group of males in all classes of occupations.

In the age group 15 to 25 years, including 26 per cent of the population in this class, the death rate of laborers and servants was 9.73, and the average rate in all classes was 5.58. In the age group 25 to 45, including nearly 45 per cent of the laborers and servants reported, the death rate was 16.96, and the average rate at this age in all classes was 9.29. In the age group 45 to 65 years, including 22 per cent of the laborers and servants reported, the death rate was 33.20, and the average rate at this age in all classes was 18.43.

At 65 years of age and over, the percentage of males was 4.42, and the death rate at this age (114.87) was considerably higher than the average rate in all classes (70.09).

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in all laboring and servant occupations, and in each specified occupation of this class, per 1,000 males engaged in each occupation:

OCCUPATIONS.	Regis-	REGIST	Regis- tration		
OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.
Class F	18. 24	22.58	25. 15	17. 52	13.99
Laborers	20.66	25. 26	29.02	18.83	16.09
Messenger boys	1.69	2.44	2, 35	3,86	0.88
Servants	9. 35	12.92	15.06	5.44	6, 23

It will be seen from this table that the high death rate of the laboring and servant class in each area was due to the excessive death rate of laborers, which, in the registration states, was about double the death rate of servants.

The following table shows, for the registration states, the death rate, at all ages, and in each of four age groups of males engaged in all laboring and servant occupations, and in each specified occupation of this class, per 1,000 of corresponding population:

•					
OCCUPATIONS.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over
Class F	22, 58	9. 73	16.96	33. 20	114.87
Laborers	25. 26 2. 44 12. 92	11.76 2.17 5.55	17.77 11.03 12.64	33. 86 11. 39 27. 05	116. 61 93. 75 79. 87

It will be seen from this table that in the registration states the death rate of laborers in each age group was much higher than the death rate of servants, and that the higher rates in this class were due to the rate among laborers, which constituted the greater part of the population in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of males in the laboring and servant class, from each of certain specified causes, per 100,000 living:

	Regis-	REGIS	rates.	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	78.45	74.67	77.47	69.15	82. 15

Other diseases of the digestive system	49.10	61. 23	68.14	47.58	37. 21
Bright's disease	56.07	74. 46	88.72	46.31	38. 05
Other diseases of the urinary system	51.32	66, 56	75.86	48.21	36. 37
Diseases of the bones and joints	5.07	5.12	5, 46	4.44	5.02
Rurns and scalds	4.22	5.33	5.79	4.44	3.14
Injuries by machinery	1.58	1.28	1.61	0.63	1.88
Suicide	17.00	16.84	17.04	15.86	17.35
Other accidents and injuries	181.93	227. 64	239.48	204.28	137.13

It will be seen from this table that the death rates of males in the laboring and servant class in the registration states, from the specified causes, were excessively high, being very much higher than the average rates for males in all classes of occupations, from every cause except diabetes, in which the death rate of males in this class was slightly below the average.

The death rate of males in this class was much higher than the average rate in all classes from consumption (laboring and servant class, 484.94; all classes, 279.66), diseases of the respiratory system (laboring and servant class, 427.76; all classes, 237.27), heart disease (laboring and servant class, 181.56; all classes, 131.87), typhoid fever (laboring and servant class, 74.67; all classes, 40.33), Bright's disease (laboring and servant class, 74.46; all classes, 51.18), other diseases of the urinary system (laboring and servant class, 66.56; all classes, 49.49), and accidents and injuries other than suicides, injuries by machinery, and burns and scalds (laboring and servant class, 227.64; all classes, 100.59). The death rate of males in this class from diseases of the bones and joints (5.12) was nearly twice the average rate from this cause among males in all classes of occupations (2.81), and the death rate from rheumatism (13.23) was also considerably higher than the average rate from this cause in all classes (9.11).

The death rate from consumption was higher in the cities in the registration states (565.43) than in the rural districts (326.08), as was also the rate from diseases of the respiratory system (cities, 520.75; rural districts, 244.24). The death rates from dropsy, diabetes, and ascites in the rural districts of the registration states were higher than the corresponding rates in the cities, but the rates from all other causes specified were higher in the cities than in the rural districts.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes, per 1,000 deaths from all causes, among males in the laboring and servant class:

	United	Regis-	rģķis	TRATION ST	ŗates.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.

Other diseases of the digestive system	25.85	26.91	27.11	27.10	27.15	26.60	24.61
Bright's disease		30.73	32.97	35. 28	26.43	27.20	13.39
Other diseases of the urinary system	21.95	28.13	29.47	30.16	27. 52	26.00	14.47
Diseases of the bones and joints	2, 65	2.78	2.27	2, 17	2.53	3,59	2.50
Burns and scalds	2.81	2.32	2.36	2.30	2.53	2.24	3.38
Injuries by machinery	1.50	0.87	0.57	0.64	0.36	1.34	2.23
Spicide		9.32	7.37	6.77	9.05	12.40	10.21
Other accidents and injuries	117.43	99.72	100.79	95. 22	116.58	98.03	138.12

This table shows that in the United States, as a whole, the greatest proportion of deaths in the laboring and servant class was due to consumption (201.84), this proportion being higher than the average proportion in all classes (171.60).

The proportion of deaths in the laboring and servant class due to diseases of the respiratory system (169.84) was slightly greater than the corresponding proportion in all classes (167.36), and the proportion due to accidents and injuries, other than burns and sealds, injuries by machinery, and suicide (117.43) was considerably greater than the average proportion in all classes (92.02).

The proportions of deaths due to malarial fever (20.42), rheumatism (7.05), diseases of the liver (14.50), Bright's disease (22.73), and other diseases of the urinary system (21.95), diseases of the bones and joints (2.65), and suicide (9.73) were less than the corresponding proportions in all classes of occupations.

LABORERS.

The number of laborers reported in the United States was 1,858,558, being 86.40 per cent of the whole number in the laboring and servant class. The number of deaths of laborers was 29,868, or 93.15 per cent of the total deaths of males in occupations of this class.

In the registration area the number of laborers reported was 772,012, being 81.51 per cent of the whole number of males in occupations of this class. The number of deaths among these was 15,949, or 92.31 per cent of the total deaths of males in this class, and the death rate was 20.66 per 1,000.

The following table shows, for the registration states, the number of laborers living at the end of the census year and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

NODEL WOOD DISTRICT AND DATE OF THE	AGE.						
POPULATION, DEATHS, AND DEATH BATES.	All ages:	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population	384, 984	89, 141 23, 15	177, 453 46, 09	92, 963 24, 15	19,707		
Deaths	9,723	1, 048 10. 78	3, 153 32, 43	3, 148 32, 38	5. 12 2, 298 23. 63		
Death rate per 1,000 population		11.76 9.73	17.77 16.96	33. 86 33. 20	116. 61 114. 87		

This table shows that in the registration cities the death rate of laborers was higher in each age group than the average rate in this class of occupations, and as the number of laborers reported constituted a great majority

of the males in this class of occupations the excessive rates in this class are entirely due to the heavy death rates among laborers.

The following table shows, for the registration area and some of its subdivisions, the death rate of laborers from each of certain specified causes per 100,000 living:

.;	Regis-	REGIS	TRATION ST	PATES.	Regis- tration
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	90.80	85. 20	90.67	75. 87	96.38
Malarial fever	23.83	24.42	26.79	20.37	23. 25
Rheumatism	11. 53	14. 29	17.72	8.43	8.78
Dropsy	15.41	13.77	9.89	20.37	17.05

It will be seen from this table that the excessive death rates among males in the laboring and servant class occurred wholly among laborers, the rates from each cause specified in the table above being higher than the corresponding rates for this class, and consequently higher than the corresponding death rates of male servants.

The death rates of laborers from dropsy (20.37), diabetes (6.32), and ascites (2.81) were higher in the rural districts in the registration states than in the cities, but the rates from all other causes specified were higher in the cities than in the rural districts, the death rates from diseases of the respiratory system being nearly three times as great in the cities (612.88) as in the rural districts (262.72), and the death rate from consumption nearly twice as great in the cities (621.53) as it was in the rural districts (344.91).

The death rate of laborers from typhoid fever in the registration cities in the nonregistration states (96.38) was higher than the corresponding rate in the cities in the registration states (90.67).

The following table shows for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among laborers:

	United	Regis-	REGIS	TRATION S	fates.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	52.50	43.95	83.73	31.24	40.28	59. 91	62. 29
Malarial fever	20.42	11.54	9. 67	9.23	10.82	14.46	30 61
Rheumatism	7.03	5. 58	5. 66	6.11	4.48	5, 46	8, 69
Dropsy	14.36	7.46	5.45	3.41	10,82	10.60	22, 27

Consumption	195, 86	205.28	205. 59	214, 14	183.14	204. 79	185, 07
Diabetes	2.48	2.07	2.16	1.70	3.36	1.93	2, 95
Diseases of the nervous system	79. 28	86.09	91.64	88.04	101.08	77.42	71, 49
Diseases of the respiratory system	170.65	184.46	131.40	211.16	139.50	173. 63	154.82
Diseases of the liver	14.46	17. 12	14.30	16.19	9, 32	21.52	11, 42
Ascites	1.47	1.00	0.72	0.43	1.49	1.45	2,01
Other diseases of the digestive system	25, 85	27. 21	26.84	27.12	26.11	27. 79	24, 28
Bright's disease	22.30	29.97	32, 09	34, 37	26.11	26.66	13, 51
Other diseases of the urinary system	21.76	27. 78	29.00	29.68	27. 23	25.86	14.87
Diseases of the bones and joints	2.61	2.76	2.37	2.27	2.61	3.37	2.44
Burns and scalds	2.81	2, 19	2.26	2.13	2.61	2.09	3, 52
Injuries by machinery	1.57	0,88	0.51	0.57	0. 37	1.45	2, 37
Suicide	9.61	9. 22	7.30	6.67	8. 95	12.21	10,06
Other accidents and injuries	119. 79	101.95	104.49	99.40	117. 87	97.98	140, 24

It will be seen from the preceding table that in each area the greatest proportion of deaths of laborers was due to consumption. In the United States the greatest proportions were due to consumption (195.86), diseases of the respiratory system (170.65), and accidents and injuries other than burns and scalds, and injuries by machinery, and suicide (119.79).

In the nonregistration area the proportions of deaths due to typhoid fever (62.29) and to malarial fever (30.61) were greater than the proportions in the United States, and the proportions due to accidents and injuries other than burns and scalds, injuries by machinery, and suicide (140.24), were also greater than the proportions in the United States (119.79).

SERVANTS.

The number of male servants reported in the United States was 244,099, being 11.35 per cent of the whole number in the laboring and servant class. The number of deaths of male servants was 2,109, or 6.58 per cent of the total deaths of males in this class.

In the registration area the number of male servants reported was 134,927, being 14.24 per cent of the whole number of males in this class of occupations. The number of deaths of male servants in this area was 1,261, or 7.30 per cent of the total deaths of males in this class, and the death rate was 9.35 per 1,000.

The following table shows, for the registration states, the number of male servants living at the end of the census year, and the number of deaths of male servants during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

PODITIATION DEATHS AND DEATH BATES	AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population Per cent at each age	62, 840	19, 823 31. 55	31, 953 50, 85	8, 133 12, 94	939 1.49		
Deaths	812	110 13.55	404 49.75	220 22.09	75 9.24		
Death rate per 1,000 population	l t	5.55 9.73	12.64 16.96	27.05 33.20	79.87 114.87		

This table shows that in the registration states the death rate of male servants in each age group was much less than the average rate in this class of-occupations, and also less than the corresponding rates among laborers.

The following table shows, for the registration area and some of its subdivisions, the death rate of servants from each of certain specified causes per 100,000 living:

CAUSE OF DEATH.		REGIST	ration s	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	26.68	28.64	34. 79	7.16	24.97
Malarial fever	9.63	4.77	6.14		13.87
Rheumatism	6.67	11.14	14.33		2.77
Dropsy	4.45	6.37	4.69	14.31	2.77
Heart disease	81.53	111.39	126.88	57.24	55.49

Diabetes	2.96	4.77	6.14		1.39
Diseases of the nervous system	70.41	97.07	110.51	50.09	47.17
Diseases of the respiratory system	154.16	221.20	261.95	78.71	95.72
Diseases of the liver	16.31	25.46	32.74		8. 32
Ascites :	0.74				1, 39
Other diseases of the digestive system	22, 23	39.78	40.93	35.78	6.94
Bright's disease	37.06	54.11	65.49	14.31	22.20
Other diseases of the urinary system	31.87	47.74	55. 26	21.47	18.03
Diseases of the bones and joints	2.96	1.59	2.05	[4.16
Burns and scalds	2.96	3.18	4.09		2,77
Injuries by machinery	0.74	1.59	2,05		
Suicide	8.89	11.14	12.28	7.16	6.94
Other accidents and injuries	62.26	73.20	81.86	42, 93	52.71

It will be seen from the preceding table that the highest death rate of male servants in the registration states occurred from consumption (408.98), being higher in the cities (485.02) than in the rural districts (143.10). The death rate from each cause, excepting dropsy, was higher in the cities than in the rural districts in the registration states, and the death rates were in general much higher in the same cities than in the registration cities in the nonregistration states, due probably to the fact that the return of occupations of decedents in the latter area was incomplete.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among servants:

			Proces	m i mronz on	14 mmg	Regis-	Remain-
CAUSE OF DEATH.	United	Regis- tration	REGIST	REGISTRATION STATES.			der of the
CAUSE OF DEATH.	States.	area.	Total.	Cities.	Rural.	cities in other states.	United States.
Typhoid fever	35. 09	28.55	22.17	23.10	13.16	40.09	44.81

Diseases of the nervous system	71.12	75.34	75.12	73.37 ,	92.11	75.72	64.86
Diseases of the respiratory system	160.74	164.95	171.18	173. 9 1	144.74	153, 67	154.48
Diseases of the liver	14. 22	17.45	19.70	21.74		13.36	9.43
Ascites	2.37	0.79				2, 23	4.72
Other diseases of the digestive system	26.55	23.79	30.79	27.17	65.79	11.14	30.66
Bright's disease	28.45	39.65	41.87	43.48	26. 32	35. 63	11.79
Other diseases of the urinary system	25.60	34.10	36.95	36.68	39.47	28.95	12.97
Diseases of the bones and joints	3.32	3.17	1. 23	1.36		6.68	3.54
Burns and scalds	2.37	3.17	2.46	2.72		4.45	1.18
Injuries by machinery	0.47	0.79	1.23	1.36			
Suicide	10.91	9.62	8.62	8.15	13.16	11.14	12.97
Other accidents and injuries	80. 61	66.61	56. 65	54.35	78. 95	84.63	101.42

This table shows that in the United States the greatest proportion of deaths of male servants was due to consumption (285.92), and that this proportion was greater than the average proportion in this class (201.84) or the corresponding proportion among laborers (195.86), but was less than the proportion due to this cause in the registration area.

The proportions of deaths of male servants in the United States due to typhoid fever (35.09) and to accidents and injuries other than burns and scalds, injuries by machinery, and suicide (80.61) were much greater than the average proportions in this class, but the proportions from all other causes specified varied but little from the average proportions in this class.

In the nonregistration area the proportions of deaths of servants due to typhoid fever (44.81) and malarial fever (34.20) were greater than in the United States as a whole.

CLASS G-MANUFACTURES AND MECHANICAL INDUSTRIES.

The total number of males engaged in occupations included in this class in the United States was 3,353,825, being 18.88 per cent of the whole number reported as having designated occupations. The number of deaths in this class was 36,430, being 31.53 per cent of the whole number of deaths among males having occupations reported.

In the registration area the number of males reported as engaged in occupations included in this class was 1,975,937, or 37.01 per cent of the whole number of males having occupations reported. The number of deaths of males in this class was 22,493, or 31.53 per cent of the whole number of deaths among males having designated occupations.

The following table shows, for the registration states, the number of males engaged in manufacturing and mechanical industries living at the end of the census year, and the number of deaths in this class during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.						
. POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population		309, 904 26, 54	546, 934 46, 83	247, 479 21, 19	45, 554 3. 91		
Per cent at each age Deaths	15, 138	1, 555	5, 021	4, 982	3, 538		
Per cent at each age Death rate per 1,000 population	1	10. 27 5. 02	33. 17 9. 18	32. 91 20. 13	23.37 77.67		
Average rate in all classes		5.58	9. 29	18.43	70.09		

The preceding table shows that, in the registration states, the death rates of males engaged in the manufacturing and mechanical industries under 45 years of age were lower than the average rates in all classes of occupations. At 45 to 65 years the death rate in this class (20.13) was higher than the average rate in all classes (18.43), and the death rate of this class at 65 years of age and over (77.67) was still higher than the average rate in all classes at this age (70.09).

The following table shows, for the registration states, the death rates at all ages, and in each of four age groups, of males engaged in the manufacturing and mechanical industries and in each specified occupation of this class per 1,000 of corresponding population:

			AGE.		
OCCUPATIONS.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over
Class G	12.96	5.02	9. 18	20.13	77. 67

Photographers	11.46	7.76	6.96	23.86	46. 30
Plasterers and whitewashers	17.34	9.77	13.20	25.56	59.44
Plumbers, and gas and steam fitters	9.74	4.58	11.53	24.12	91.40
Potters	9, 83	6,03	8.73	17.01	79.37
Rubber factory operatives.	6.32	3.48	5.75	11.82	48.39
Tailors	16.45	4.18	8, 57	23.10	90.30
Tinners and tinware makers	12.16	5. 47	11. 35	21.72	50. 23
Wheelwrights	22.17	14.52	7.53	16,70	94.14

It will be seen from the preceding table that in the registration states the average death rate of males in this class between 15 and 25 years was 5.02. Taking the principal occupations, the death rates in this age group were highest among plasterers and whitewashers (9.77), engineers and firemen, not locomotive (8.86), eigar makers and tobacco workers (7.31), millers (6.95), and hat and cap makers (6.28), and lowest among leather curriers, dressers, finishers, and tanners (4.07), painters, glaziers, and varnishers (4.11), tailors (4.18), iron and steel workers (4.20), and carpenters and joiners (4.26).

In the age group 25 to 45 years the average death rate in this class was 9.18 per 1,000. Taking the principal occupations the death rates were above the average among hat and cap makers (19.27), eigar makers and tobacco workers (13.82), plasterers and whitewashers (13.20), butchers (11.83), and marble and stone cutters (11.37), and were below the average among millers (4.84), carpenters and joiners (7.11), mill and factory operatives (7.30), machinists (8.25), and blacksmiths (9.02).

In the age group 45 to 65 years the average death rate was 20.13 per 1,000. In the principal occupations the death rates were above the average among eigar makers and tobacco workers (32.42), hat and cap makers (30.47), bakers and confectioners (28.45), tailors (28.10), and butchers (26.24), and were below the average among mill and factory operatives (13.82), carpenters and joiners (16.60), blacksmiths (18.56), machinists (18.64), and millers (18.78).

In the age group 65 years and over the average death rate in this class was 77.67 per 1,000. Of the principal occupations the death rates were above the average among butchers (110.19), hat and cap makers (101.12), cigar makers and tobacco workers (96.69), tailors (90.30), and bakers and confectioners (87.19), and were below the average among plasterers and whitewashers (59.44), painters, glaziers, and varnishers (65.89), cabinet makers and upholsterers (68.81), carpenters and joiners (70.55), and marble and stone cutters (71.71).

The following table shows, for the registration area and some of its subdivisions, the death rates of males engaged in the manufacturing and mechanical industries, and in each specified occupation of this class, per 1,000 males engaged in each occupation:

	Regis-	REGIS	TRATION S	TRATION STATES.

The preceding table shows that the average death rate in the registration states of males in the occupations included in this class was 12.96 per 1,000, being higher in the cities (14.03) than in the rural districts (10.36).

Taking the principal occupations in the cities in the registration states the highest death rates occurred among hat and cap makers (22.81), millers (20.63), blacksmiths (16.81), butchers (16.63), marble and stone cutters (18.04), and plasterers and whitewashers (18.06), and the lowest rates among plumbers and gas and steam fitters (10.18), iron and steel workers (10.55), leather curriers, dressers, finishers, and tanners (11.38), machinists (12.61), and mill and factory operatives (9.46).

The lower death rates in the registration area and the registration cities in the nonregistration states are probably due to a deficient return of occupations of decedents in the latter area.

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in manufacturing and mechanical industries, from each of certain specified causes, per 100,000 living:

CAUSE OF DEATH.		REGIS	Regis- tration		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever		40.07	42.27	34.72	47.89

Injuries by machinery	0.81	1.03	1.45		0.50
Suicide	17.97	16.01	17.15	13.24	20.79
Other accidents and injuries	73.79	77.49	82. 85	64. 43	68.44

It will be seen from this table that the death rates of males engaged in manufacturing and mechanical industries in the registration states, from nearly all of the causes specified, were lower than the corresponding rates for males in all classes of occupations, that from consumption being the only important exception, the rate from this cause (313.64) being higher than the corresponding rate for males in all classes in the registration states as a whole (279.66), but being lower in the cities (361.47) than the corresponding rate for males in all classes of occupations (363.60).

The death rate from typhoid fever in the registration cities in the nonregistration states (47.89) was somewhat higher than the corresponding rate in the cities in the registration states (42.27). The death rates from dropsy (9.41) and diabetes (5.59) were higher in the rural districts than in the cities in the registration states, but the rates from all other causes specified were higher in the cities than in the rural districts.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specific causes, per 1,000 deaths from all causes among males engaged in manufacturing and mechanical industries:

	United Regis-		PATES.	Regis- tration	Remain- der		
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other States.	of the United States.

Suicide	14. 38	15.78	12.35	12. 22	12.78	22.84	12.13
Other accidents and injuries	73.37	64.82	59.78	59.05	62. 22	75. 19	87.18

This table shows that in the United States the proportions of deaths of males in the class engaged in manufacturing and mechanical industries were above the average from consumption (manufacturing and mechanical industries, 211.25; all classes, 171.60), diseases of the nervous system (manufacturing and mechanical industries, 104.23; all classes, 94.50), heart disease (manufacturing and mechanical industries, 87.02; all classes, 79.49), Bright's disease (manufacturing and mechanical industries, 31.27; all classes, 26.92), and other diseases of the urinary system (manufacturing and mechanical industries, 29.54; all classes, 27.86).

The proportion of deaths due to suicide in this class (14.38) was above the average proportion due to this cause in all classes (11.93), and the proportion due to typhoid fever (42.36) and malarial fever (13.45) were below the average proportions due to these causes in all classes.

In the nonregistration area the proportions of deaths due to typhoid fever (49.36), malarial fever (21.17), rheumatism (9.54), dropsy (19.88), and diabetes (5.45) were greater than the corresponding proportions in the United States or in the registration area.

BAKERS AND CONFECTIONERS.

The total number of bakers and confectioners reported in the United States was 75,487, being 2.22 per cent of the whole number of males in manufactures and mechanical industries. The number of deaths among these was 815, or 2.24 per cent of the whole number of deaths among males in this class of occupations.

In the registration area the number of bakers and confectioners reported was 54,569, or 2.76 per cent of the whole number of males in this class of occupations. The number of deaths was 639, or 2.84 per cent of the number of deaths among males in this class, and the death rate was 11.71 per 1,000.

The following table shows, for the registration states, the number of bakers and confectioners living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.				
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over		
Population	. 28, 156	7, 548	14, 394	5, 237	734		
Per cent at each age	i I	26. 81	51.12	18.60	2.61		
Deaths	. 410	36	161	149	64		
Per cent at each age	.	8. 78	39. 27	36.34	15. 61		
Death rate per 1,000 population		4.77	11.19	28.45	87.19		
Average rate in this class	- - 	5.02	9.18	20.13	77.67		

The preceding table shows that in the registration states the death rate of bakers and confectioners above the age of 25 years was higher in each age group than the average rate in occupations of this class. In the age group 15 to 25 years the death rate of bakers and confectioners (4.77) was somewhat less than the average rate in this class (5.02).

The following table shows, for the registration area and some of its subdivisions, the death rate of bakers and confectioners from each of certain specified causes per 100,000 living:

	Regis-	REGIS	TRATION ST	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	54.98	63.93	68.97	28.51	45.43

Other accidents and injuries	42.15	39.07	40.57	28, 51	45, 43
L		11	1	1	

It will be seen from this table that the highest death rate of bakers and confectioners in the registration states occurred from consumption (369.37), the rate from this cause being higher than the average rate among males in occupations in this class. The death rate from Bright's disease (92.34) was excessively high, being nearly twice the average rate among males in this class (49.06), and the rate from other diseases of the urinary system (60.38) was considerably higher than the average rate of males in this class from these diseases (45.21). The death rate from suicide (21.31) was higher than the average rate from this cause among males in this class, and the death rate from other accidents and injuries (39.07) was much less than the corresponding rate in this class (77.49). The death rate of bakers and confectioners from suicide in the registration cities in the nonregistration states (30.29) was higher than the rate from this cause in the cities in the registration states (20.28).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among bakers and confectioners:

	United	Regis-	REGIST	TRATION SI	TATES.	Regis- tration	Remain- der

Injuries by machinery	2.45	1.56	2.44	2.65			5.68
Suicide	22.09	21.91	14.63	13.26	30.30	34.93	22.73
Other accidents and injuries	39.26	35. 99	26.83	26, 53	30.30	52.40	51.14

It will be seen from the preceding table that in the United States the greatest proportion of deaths of bakers and confectioners was due to consumption (229.45), being higher than the average proportion due to this cause in this class (211.25).

The proportion of deaths of bakers due to diseases of the nervous system (116.56) was above the average proportion in this class (104.23), and the proportion due to diseases of the respiratory system (158.28) was also somewhat greater than the average proportion in this class (154.30). The proportion of deaths of bakers and confectioners due to Bright's disease (46.63) was considerably greater than the average proportion in this class (31.27), and the proportion due to other diseases of the urinary system (31.90) was slightly greater than the average proportion in this class (29.54).

The proportion of deaths of bakers and confectioners due to suicide (22.09) was much greater than the average proportion in this class (14.38).

In the nonregistration area the proportions of deaths of bakers and confectioners from the specified causes were generally greater than in the United States, excepting those due to consumption, diseases of the respiratory system, and Bright's disease.

BLACKSMITHS.

The total number of blacksmiths reported in the United States was 209,521, being 6.24 per cent of the total males engaged in this class of occupations. The number of deaths among these was 2,540, or 6.97 per cent of the total deaths of males in this class of occupations.

In the registration area the number of blacksmiths reported was 82,805, being 4.19 per cent of the whole number of males in this class of occupations. The number of deaths was 1,059, or 4.71 per cent of the whole number of deaths among males in this class, and the death rate was 12.79 per 1,000.

The following table shows, for the registration states, the number of blacksmiths living at the end of the census year and the number of deaths of blacksmiths during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.	_							
POPULATION, DEATHS, AND DEATH RATES.		15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.						
Population	47, 058	8, 348 17, 74	22, 617 48, 06	12, 934 27, 49	2, 944 6, 26						
Deaths	733	38	204	240	248						
Per cent at each age		5.18 4.55	27.83 9.02	32, 74 18, 56	33. 83 84. 24						
Average rate in this class		5.02	9.18	20. 13	77.67						

This table shows that in the registration states the death rate of blacksmiths was less than the average rate in this class of occupations in each age group under 65 years of age. At 65 years of age and over the death rate of blacksmiths was higher than the average rate in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of blacksmiths from each of certain specified causes per 100,000 living:

_	Regis-	REGIS	TRATION ST	Regis- tration

Other accidents and injuries	64. 01	91.38	109.90	65.79	27.97	

This table shows that the highest death rate of blacksmiths in the registration states occurred from consumption (284.75), although this rate was less than the average rate from this cause among males in all manufacturing and mechanical industries.

The death rate from diseases of the respiratory system (274.13) was higher than the average rate in this class (214.75), and was much higher in the cities in the registration states (348.01) than in the rural districts (172.06).

The death rate of blacksmiths from suicide in the registration cities in the nonregistration states (30.77) was higher than the corresponding rate in the cities in the registration states (18.32), and was considerably higher than the rate from this cause of males in all occupations in this class in the cities in the nonregistration states (20.79). The death rate from malarial fever (21.25) was more than twice the average rate of males in this class from the same cause (9.93).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes, per 1,000 deaths from all causes among blacksmiths:

CAUSE OF DEATH.	United	Regis-	REGIS	TRATION ST	ATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	States. tration area.	Total.	Cities.	Rural.	citics in other states.	of the United States.

Burns and scalds	1.18						2.03
Injuries by machinery	0.79						1.35
Suicide	14.17	1794	10.91	10.89	10.95	33.74	11.48
Other accidents and injuries	68.50	50.05	58.66	65.36	47.45	30.67	81.70

It will be seen from the preceding table that the greatest proportion of deaths of blacksmiths in the United States was due to diseases of the respiratory system (166.14), being somewhat greater than the average proportion in this class (154.30). The proportion of deaths of blacksmiths due to consumption (158.66) was less than the average proportion in this class (211.25), and the proportion due to heart disease (92.13) was slightly above the average proportion in this class (87.02).

In the nonregistration area the proportions of deaths of blacksmiths due to typhoid fever (43.21), malarial fever (24.31), rheumatism (8.10), dropsy (24.31), and Bright's disease (35.11) were greater than the proportions in the United States as a whole, but the proportions due to heart disease (84.40), consumption (143.15), diseases of the nervous system (99.93), and diseases of the respiratory system (160.70), were less than the proportions in the United States, and also less than the proportions due to this cause in the registration area.

BOOT AND SHOE MAKERS.

The total number of boot and shoe makers reported in the United States was 180,871, being 5.39 per cent of the whole number of males engaged in manufactures and mechanical industries. The number of deaths among these was 2,915, or 8.00 per cent of the whole number of deaths of males in this class.

In the registration area the number of boot and shoe makers reported was 130,623, being 6.61 per cent of the total males in this class of occupations. The number of deaths among these was 1,982, or 8.81 per cent of the total deaths among males in this class, and the death rate was 15.17 per 1,000.

The following table shows, for the registration states, the number of boot and shoe makers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

		AGE.							
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.				
Population	96, 190	24, 052	41, 179	23,797	5, 997				
Per cent at each age		25.00	42.81	24.74	6, 23				
Deaths	1,469	121	356	506	479				
Per cent at each age		8. 24	24. 37	34. 45	32.61				
Death rate per 1,000 population		5.03	8, 65	21. 26	79.87				
Average rate in this class	1 1	5.02	9.18	20.13	77.67				

This table shows that in the registration states the death rates of boot and shoe makers corresponded very closely with the average rates in this class of occupations in each age group, being slightly above the average at 15 to 25 years, less than the average at 25 to 45 years, and slightly above the average in each age group above 45 years.

The following table shows, for the registration area and some of its subdivisions, the death rate of boot and shoe makers from each of certain specified causes, per 100,000 living:

	Regis-	REGIST	ration s	RATION STATES.				
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.			
Typhoid fever	20.67	18.71	19.55	16.84	26.14			
Malarial fever	L .	6.24	6.02	6, 73	8.71

Bright's disease	55.12	56.14	63.16	40.41	52. 28			
Other diseases of the urinary system	55. 89	48.86	52.64	40.41	75.51			
Diseases of the bones and joints	3.06	4.16	6.02					
Burns and scalds								
Injuries by machinery				[
Suicide	19.14	14.55	10.53	23. 57	31.95			
Other accidents and injuries	65.84	67.57	75. 19	50.51	60.99			

It will be seen from the preceding table that the highest death rates of boot and shoe makers occurred from consumption (348.27), diseases of the respiratory system (253.66), diseases of the nervous system (206.88), and heart disease (163.22).

The death rates from dropsy (10.40) and diabetes (7.28) were nearly twice as great as the average rates from these causes among males in all occupations in this class, and the death rate of boot and shoe makers from typhoid fever (18.71) was less than half the average rate from this cause of males in all occupations in this class.

The death rate of boot and shoe makers from suicide in the cities in the registration states (10.53) was below the average rate from this cause in all occupations of this class (17.15), but in the registration cities in the nonregistration states it was considerably higher (31.95) than the corresponding rate of all males in occupations of this class (20.79).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among boot and shoe makers:

	United	Regis-	· REGIST	TRATION ST	ATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	16.47	13.62	12. 25	12.81	11.01	17.54	Ž2. 51
Malarial fever	6.86	4.54	4.708	3.94	4.41	5.85	11.79
Rheumatism	5.83	5.05	4.77	3.94	6.61	5.85	7.50
Dropsy	15.09	8.07	6.81	3.94	13.22	11.70	30.01

Ascites	0.34	0.50	0,68	0.99			
Other diseases of the digestive system	26.76	21.70	23.14	19.70	30.84	17.54	37. 51
Bright's disease	37.05	36.33	36.76	41.38	26.43	35.0\$	38. 59
Other diseases of the urinary system	33. 28	36.83	31.99	34.48	26.43	50.68	25.72
Diseases of the bones and joints	3.43	2.02	2.72	3.94			6.43
Burns and scalds	0.69						2.14
Injuries by machinery							
Suicide	12.01	12.61	9.53	6.90-	15.42	21.44	10.72
Other accidents and injuries	42.54	43.39	44.25	49.26	. 33. 04	40.94	40.73

It will be seen from this table that in the United States the diseases causing the greatest proportion of deaths of boot and shoe makers were diseases of the respiratory system (156.43), diseases of the nervous system (132.42), heart disease (104.97), and consumption (190.05), the proportion from these causes, excepting consumption, being greater than the average proportion in this class.

The proportion of deaths due to typhoid fever (16.47) was much less than the proportion due to this cause in this class (42.36), and the proportion due to malarial fever (6.86) was also less than the proportion due to this cause in this class (13.45).

In the nonregistration area the proportions of deaths of boot and shoe makers due to diseases of the respiratory system (138.26), consumption (147.91), and heart disease (100.75) were less than the proportions in the United States, and the proportion due to diseases of the nervous system (140.41) was somewhat greater than the proportion in the United States.

BUTCHERS.

The total number of butchers reported in the United States was 105,339, being 3.14 per cent of the total number of males in this class of occupations. The number of deaths among these was 1,206, or 3.31 per cent of the whole number of deaths in this class.

In the registration area the number of butchers reported was 58,260, being 2.95 per cent of the total number of males in this class. The corresponding number of deaths was 763, or 3.39 per cent of the total deaths of males in this class, and the death rate was 13.10 per 1,000.

The following table shows, for the registration states, the number of butchers living at the end of the census year, and the number of deaths of butchers during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

		AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population		7, 986 26, 25	15, 972 52, 50	5, 487 18, 04	726 2, 39			
Deaths. Per cent at each age	454	41 9.03	189 41. 63	144 31, 72	80 17.62			
Death rate per 1,000 population			11. 83 9. 18	26. 24 20. 13	110. 19 77. 67			
Average rate in this class		5.02	9.18	20.13	77.67			

This table shows that in the registration states the death rate of butchers was higher in each age group than the average rate in occupations of this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of butchers from each of certain specified causes per 100,000 living:

-	Regis-	REGIS	REGISTRATION STATES.			
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.	
Typhoid fever	65. 23	49. 31	61. 43	13. 10	82. 62	
Malarial fever	20.60	19. 72	17.55	26. 21	21.55	
Rheumatism	5. 15	3. 29	4. 39		7.18	
Dropsy	8.58	8.29	4. 39		14. 37	
Heart disease	89, 26	108.47	109.69	104.84	68. 25	
Consumption	259.18	318.85	872.95	.157.25	193.98	
Diabetes	1,72				3.59	
Diseases of the nervous system	173.36	203, 80	223.77	144. 15	140. 10	
Diseases of the respiratory system	178. 51	193, 94	236. 94	65. 52	161.65	
Diseases of the liver	37.76	36, 16	48. 26		39.51	
Ascites						
Other diseases of the digestive system	48.06	59.17	65. 82	39.31	35.92	
Bright's disease	53. 21	75.60	83.37	52, 42	28.74	
Other diseases of the urinary system		29. 58	35.10	13.10	25.15	
Diseases of the bones and joints	l .					
Burns and scalds	l .				10,77	
Injuries by machinery	1,72				3.59	
Suicide		26.30	21. 94	39.31	14.37	
Other accidents and injuries		75. 60	70. 20	91.73	89.81	

It will be seen from this table that the highest death rate of butchers in the registration states occurred from consumption (318.85), being higher in the cities (372.95) than in the rural districts (157.25) or in the cities in the nonregistration states (193.98). The death rates from heart disease (108.47) and diseases of the respiratory system (193.94) were lower than the average rates from these causes of males in all occupations in this class.

The death rate of butchers from malarial fever (19.72) was nearly twice the average rate from this cause in this class, and the death rate from Bright's disease (75.60) was also excessively high, the average rate from this cause among all males in this class being 49.06. The death rate of butchers from suicide (26.30) was very much higher than the average rate from this cause in this class (16.01), and was higher in the rural districts in the registration states (39.31) than in the cities in the same states (21.94).

The death rate from typhoid fever in the registration cities in the nonregistration states (82.62) was much higher than the average rate from this cause of males in this class (47.89), and was also higher than the corresponding rate in the cities in the registration states (61.43).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among butchers:

CAUSE OF DEATH.	United	Regis-	REGIS	TRATION S	rates.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	49.75	49.80	33.04	36, 94	13.33	- 74.43	49.66
Malarial fever		15.73	13.22	10.55	26.67	19.42	18.06
Rheumatism	4.98	3.93	2, 20	2.64		6.47	6.77
Dropsy	8. 29	6, 55	2.20	2.64		12.94	11. 29
Heart disease	78.77	68.15	72.60	65.96	106.67	61.49	97.07
Consumption	184.08	197.90	213.66	224.27	160.00	174.76	160.27
Diabetes	3, 32	1.31				3.24	6.77
Diseases of the nervous system	116.09	132.37	136.56	134.56	146.67	126.21	88.04
Diseases of the respiratory system	135.99	136.30	129.96	142.48	66.67	145.63	135.44
Diseases of the liver	24.05	28.83	24, 23	29.03		85.60	15.80
Ascites							
Other diseases of the digestive system	38. 97	36.70	39.65	39.58	40.00	32, 36	42.89
Bright's disease	33.17	40.63	50,66	50.13	53. 33	25.89	20.32
Other diseases of the urinary system	22.39	20.97	19.82	21, 11	13.33	22.65	24.83
Diseases of the bones and joints	0.83						2.26
Burns and scalds	2. 49	3.93				9.71	
Injuries by machinery	0.83	1.31			·	3.24	
Suicide	19.90	15.73	17.62	13.19	40.00	12.94	27.09
Other accidents and injuries	82,92	62.91	50.66	42.22	93.33	80.91	117.38

It will be seen from this table that in the United States the greatest proportion of deaths of butchers occurred from consumption (184.08), and that this proportion was less than the average proportion of this class (211.25). The proportion of deaths of diseases of the respiratory system (135.99) was considerably less than the average proportion in this class (154.30), and the proportion due to heart disease (78.77) was also less than the average proportion in this class (87.02).

The proportions of deaths of butchers due to typhoid fever (49.75), malarial fever (16.58), Bright's disease (33.17), and suicide (19.90) were greater than the average proportions due to these causes in this class.

In the nonregistration area the proportions of deaths due to diseases of the nervous system (88.04), diseases of the respiratory system (135.44), and consumption (160.27) were less than the proportions in the United States, and that due to heart disease (97.07) was greater than the proportion in the United States as a whole. In this area the proportion of deaths due to suicide (27.09) was considerably greater than the proportion in the United States (19.90) or in the registration area (15.73).

CABINET MAKERS AND UPHOLSTERERS.

The total number of cabinet makers and upholsterers reported in the United States was 59,809, being 1.78 per cent of the total number of males engaged in manufactures and mechanical industries. The number of deaths was 766, or 2.10 per cent of the whole number of deaths in this class.

In the registration area the number of cabinet makers and upholsterers reported was 44,182, being 2.24 per cent of the whole number of males engaged in manufactures and mechanical industries in this area. The number of deaths was 536, or 2.38 per cent of the total deaths among males in this class, and the death rate was 12.13 per 1,000.

The following table shows, for the registration states, the number of cabinet makers and upholsterers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

PORTLATION DEATES AND DEATH RATES		AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population	20,783	4,061	10,097	5, 160	1, 337			
Per cent at each age		19.54	48.58	24.83	6.43			
Deaths	318	18	94	113	92			
Per cent at each age		5.66	29.56	35.53	28. 93			
Death rate per 1,000 population		4.43	9.31	21.90	68.81			
Average rate in this class	1	5.02	9, 18	20.13	77.67			

This table shows that in the registration states the death rate of cabinet makers and upholsterers was less than the average rate in this class of occupations in the age group under 25 years, and also in the age group 65 years and over, and that in the age groups between 25 and 65 years the death rates of cabinet makers and upholsterers were somewhat higher than the average rates in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of cabinet makers and upholsterers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	TRATION ST	TRATION STATES.				
CAUSE OF DEATH.	tration area.	Total.	Total. Cities. R		cities in other states.			
Typhoid fever	27.16	19. 25	16.95	32.37	34.19			
Malarial fever	11.32	4.81	5. 65		17.09

Other diseases of the digestive system	47.53	48.12	45. 21	64.75	47.01			
Bright's disease	36.21	52. 93	50.86	64.75	21. 37			
Other diseases of the urinary system	36. 21	43.30	45. 21	32. 37	29. 92			
Diseases of the bones and joints	2. 26	4.81	5. 65					
Burns and scalds	2, 26				4.27			
Injuries by machinery								
Suicide	27.16	9. 62	5, 65	32.37	42.74			
Other accidents and injuries	38. 4 8	33. 68	33. 91	32, 37	42.74			

It will be seen from this table that the death rate of cabinet makers and upholsterers from consumption in the registration states (457.10) was excessively high, being higher than the average rate of males in this class (313.64), and was highest in the registration cities in these states (497.34). The death rate from diseases of the respiratory system (303.13) was also high, the average rate of males in this class from this cause being 214.75.

Other diseases causing an excessive death rate among cabinet makers and upholsterers were diseases of the liver (43.30), ascites (4.81), and other diseases of the digestive system (48.12), while the death rates from typhoid fever (19.25), malarial fever (4.81), and rheumatism (4.81) were about half the average rates from these causes of males in occupations of this class.

The death rate of cabinet makers and upholsterers from suicide in the registration states was low, being 9.62, while the average rate of males in occupations of this class from suicide was 16.01, but the death rate of cabinet makers and upholsterers from this cause in the registration cities in the nonregistration states (42.74) was excessively high.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among cabinet makers and upholsterers.

		Regis-	REGIST	TRATION ST	ATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	United States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	23.50	22. 39	12.58	10.64	27.78	36.70	26.09

Heart disease	88.77	83.96	97.48	78.01	250.00	64. 22	100:00
Consumption	248.04	274.25	298.74	312.06	194.44	238.53	186.96
Diabetes	2, 61	3.73	6.29	3, 55	27.78		
Diseases of the nervous system	103.13	91.42	94.34	88.65	138.89	87.16	130.43
Diseases of the respiratory system	174.93	186.57	198.11	216.31	55.56	169.72	147.83
Diseases of the liver	23.50	24.25	28.30	31.91		18.35	21.74
Aseites	1.31	1.87	3.14	3, 55			
Other diseases of the digestive system	40.47	39.18	31.45	28.37	4 55.56	50.46	43.48~
Bright's disease	27.42	29.85	34.59	31.91	55.56	22.94	21.74
Other diseases of the urinary system	31.33	29.85	28.30	28.37	27.78	32.11	34.78
Diseases of the bones and joints	2.61	1.87	3.14	3.55			4,35
Burns and scalds	2.61	1.87				4.59	4.85
Injured by machinery			<i></i>				
Suicide	18.28	22.39	6.29	3.55	27.78	45.87	8.70
Other accidents and injuries	33.94	31.72	22.01	21. 28	27.78	45.87	39. 13

This table shows that the greatest proportion of deaths of cabinet makers and upholsterers in the United States was due to consumption (248.04), being greater than the average proportion in this class (211.25). The proportion of deaths of cabinet makers and upholsterers due to diseases of the respiratory system (174.93) was also greater than the average proportion in this class (154.30). The proportions of deaths of cabinet makers and upholsterers due to typhoid fever (23.50) and malarial fever (10.44) were less than the average proportions due to these causes in this class.

In the nonregistration area the proportions of deaths of cabinet makers and upholsterers due to consumption (186.96) and diseases of the respiratory system (147.83) were less than the proportions in the United States, and the proportions due to typhoid fever (26.09), malarial fever (13.04), and rheumatism (17.39) were greater than the average proportions in the United States.

CARPENTERS AND JOINERS.

The total number of carpenters and joiners reported in the United States was 618,044, being 18.43 per cent of the whole number of males in this class of occupations. The number of deaths of carpenters and joiners was 7,012, being 19.25 per cent of the total deaths among males in this class.

In the registration area the number of carpenters and joiners reported was 279,579, being 14.15 per cent of the whole number of males in occupations in this class. The corresponding number of deaths was 3,294, or 14.64 per cent of the total deaths among males in this class, and the death rate was 11.78 per 1,000.

The following table shows, for the registration states, the number of carpenters and joiners living at the end of the census year, and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

POPULATION, DEATHS, AND DEATH RATES.	AGE.					
	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.	
Population Per cent at each age		24, 650 15, 66	74, 792 47, 51	46, 755 29, 70	10, 617 6, 74	
Deaths	2, 169	105	533	776	749	
Per cent at each age		4. 84 4. 26	24.53 7.11	35. 78 16. 60	34.53 70.55	
Average rate in this class.		5.02	9.18	20.13	77. 67	

This table shows that in the registration states the death rate of carpenters and joiners was less in each age group than the average rate in occupations of this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of carpenters and joiners from each of certain specified causes per 100,000 living:

CAUSE OF DEATH.	Regis- tration area.	REGIS	Regis- tration		
		Total.	Cities.	Rural.	cities in other states.
Typhoid fever	51. 51	50.82	56. 54	41.11	52. 39
Malarial fever	12. 52	10.16	13, 13	5.14	15. 55
Rheumatism	7.87	10.80	12.12	8.57	4.09
Dropsy	9.30	9.53	6.06	15.42	9.00
Heart disease	107.30	130.86	125. 20	140.47	76.95
Consumption	205.67	238. 85	267.56	190.14	162.91
Diabetes	5.72	6. 35	8.08	3.43	4.91

Diseases of the respiratory system	175.98	214.07	219.09	205. 56	126.89
Diseases of the liver	26.83	27. 35	27. 26	27.41	26. 20
Ascites				. .	
Other diseases of the digestive system	38.27	44.47	42.40	47.96	30.29
Bright's disease	31. 48	45.10	45.43	44.54	13.92
Other diseases of the urinary system	41.85	52.72	56. 54	46. 25	27.83
Diseases of the bones and joints	4.29	5.72	6.06	5.14	2.46
Burns and scalds	1.07	0.64		1.71	1.64
Injuries by machinery	0.72	0.64	1.01		0.82
Suicide		9. 53	12.12	5.14	16. 37
Other accidents and injuries	98,00	108.63	116. 11	95.93	84, 32

It will be seen from this table that the highest death rate of carpenters and joiners in the registration states occurred from consumption (238.85), being higher in the cities (267.56) than in the rural districts (190.14), but lower in each case than the corresponding rates for males in occupations of this class.

The death rate from heart disease (130.86) was somewhat higher than the corresponding rates for all males in this class (119.87), and was higher in the rural districts in the registration states (140.47) than in the cities in the same states (125.20). The death rate from diseases of the respiratory system (214.07) was just about the average rate from this cause of males in all occupations in this class (214.75), but was lower than the average rate in the cities (219.09) and higher than the average rates in the rural districts (205.56).

The death rate of carpenters and joiners in the registration states, from typhoid fever (50.82), was highest in the cities (56.54). The death rates from dropsy (9.53) and diabetes (6.35) were higher than the average rates in this class from these causes, and the death rate from suicide (9.53) was much less than the average rate in this class from this cause (16.01), being below the average rate in each area. The death rate from accidents, injuries other than burns and scalds, injuries by machinery, and suicides (108.63) was much above the average rate from this cause in this class (77.49).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1000 deaths from all causes among carpenters and joiners:

·	United	Regia-	REGIS	fration st	ATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	7 30.69 56.89 7 3.84 16.89 5 6.39 4.44 3 11.51 9.78 0 104.86 83.56 6 141.94 176.89 7 2.56 5.33 7 157.29 108.44 5 153.45 137.78 7 20.46 28.44	of the United States.

Other accidents and injuries	82.57	83.18	78.84	82.91	71.61	91.56	82, 03

This table shows that the proportions of deaths of carpenters and joiners in the United States due to consumption (165.43) and diseases of the respiratory system (147.18) were greater than the proportions from any other cause, but were less than the average proportions due to these causes in this class of occupations. The proportion of deaths of carpenters and joiners due to typhoid fever (51.63) was greater than the average proportion in this class.

In the nonregistration area the proportions of deaths of carpenters and joiners due to consumption (157.34), diseases of the respiratory system (145.24), and diseases of the nervous system (100.32) were less than the proportions due to these causes in the United States as a whole, and the proportions due to typhoid fever (58.63) and malarial fever (28.24) were greater than the proportions in the United States or in the registration area.

MOR-PT I-9

CIGAR MAKERS AND TOBACCO WORKERS.

The total number of cigar makers and tobacco workers reported in the United States was 83,634, being 2.49 per cent of the whole number of males engaged in manufactures and mechanical industries. The number of deaths of cigar makers and tobacco workers was 877, or 2.41 per cent of the total deaths of males in this class.

In the registration area the number of cigar makers and tobacco workers reported was 50,819, being 2.57 per cent of the total number of males in this class of occupations. The corresponding number of deaths was 630, or 2.80 per cent of the total deaths of males in this class of occupations, and the death rate was 12.40 per 1,000.

The following table shows, for the registration states, the number of cigar makers and tobacco workers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living.

pulation			AGE.		
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	24, 152	8, 563	12, 666	4, 164	362
Per cent at each age Deaths	393	27.17 48	52. 44 175	17. 24 135	1.50 35

Burns and scalds				l	
Injuries by machinery					
Suicide		24, 84	27, 48		33, 75
Other accidents and injuries.		41.40	45. 80		37.50
		<u> </u>	1	<u> </u>	<u> </u>

It will be seen from this table that the highest death rate of cigar makers and tobacco workers in the registration states occurred from consumption (612.79), and that this rate was excessively high, the average rate from this cause among males in occupations of this class being 313.64. The death rate from diseases of the respiratory system (269.13) was somewhat above the average rate in this class (214.75).

Other diseases causing an excessive death rate among cigar makers and tobacco workers in comparison with the average rates of males in occupations in this class were Bright's disease (cigar makers and tobacco workers, 78.67; manufacturing and mechanical industries, 49.06), other diseases of the urinary system (cigar makers and tobacco workers, 66.25; manufacturing and mechanical industries, 45.21), and suicide (cigar makers and tobacco workers, 24.84; manufacturing and mechanical industries, 16.01).

The death rate from typhoid fever (24.84) was much less than the average rate from this cause in this class (40.07), while the death rate from malarial fever (12.42) was somewhat above the average rate in this class from this cause (9.93).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among eigar makers and tobacco workers:

	United	Regis-	. REGIS	tration .s	FATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	27.37	23.81	15.27	1397	28.57	.3797	36.44
Malarial fever	5.70	4.76	7.63	8.38			8, 10
Rheumatism	10.26	6.35	5.09	559		8.44	20.24
Dropsy	9.12	4.76	2,54	2.79		8.44	20.24

Burns and scalds							
Injuries by machinery				*********			
Suicide	21,66	23.81	15.27	16.76		37.98	16.19
Other accidents and injuries	44.77	31.75	25.45	. 27.93		42.19	76.92

It will be seen from this table that the greatest proportion of deaths among cigar makers and tobacco workers was due to consumption (356.90), and that this proportion was excessively large, the average proportion due to this cause in occupations of this class being 211.25. The proportion of deaths of cigar makers and tobacco workers due to suicide (21.66) was much greater than the average proportion in this class (14.38), but the proportions due to other diseases specified were generally less than the average proportions in this class.

COMPOSITORS, PRINTERS, AND PRESSMEN.

The total number of compositors, printers, and pressmen reported in the United States was 109,382, being 3.26 per cent of the whole number of males engaged in this class of occupations. The number of deaths among these was 941, or 2.58 per cent of the total deaths of males in this class.

In the registration area the number of compositors, printers, and pressmen reported was 74,819, being 3.79 per cent of the total number of males in this class of occupations. The corresponding number of deaths was 670, or 2.98 per cent of the whole number of deaths of males in this class, and the death rate was 8.95 per 1,000.

The following table shows, for the registration states, the number of compositors, printers, and pressmen living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rate per 1,000 living:

,			AGE.		
FOPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Pepulation	38, 899	16,474	16,608	4, 596	567
Per cent at each age		42, 35	42.70	11.82	1.46
Deaths	431	81.	193	.98	58
Per cent at each age		18.79	44.78	22.74	13.46
Death rate per 1,000 population		4.92	11.62	21, 32	102.29
Average rate in this class		5.02	9.18	20.13	77.67

This table shows that in the registration states the death rate of compositors, printers, and pressmen was higher than the average rate in this class of occupations in each age group above 25 years of age. In the age group 15 to 25 years the death rate of compositors, printers, and pressmen (4.92) was slightly less than the average rate in this class (5.02).

The following table shows, for the registration area and some of its subdivisions, the death rate of compositors, printers, and pressmen from each of certain specific causes per 100,000 living:

	Regis-	REGIS	TRATION ST	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.

Suicide	12.03	12.85	11.61	22.49	11.14
Other accidents and injuries	37.42	43.70	43.54	44.97	30.62

This table shows that the highest death rate of compositors, printers, and pressmen in the registration states occurred from consumption (401.04), being highest in the registration cities in these states (412.17).

The death rates from all other causes specified were lower than the average rates from these causes in the manufacturing and mechanical industry class, the rate from diseases of the nervous system (82.26) being remarkably low.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each specified cause per 1,000 deaths from all causes among compositors, printers, and pressmen:

	United	Regis-	REGIST	TRATION ST	PATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	40.38	31. 34	25. 52	28. 13		41.84	62, 73
Malarial fever	10.63	7.46	9.28	7.67	25.00	4.18	18.45
Rheumatism	2. 13	1.49	2.32	2, 56			3.69
Dropsy	2.13	1.49				4.18	3, 69
Heart disease	73, 33	82.09	81. 21	84.40	50.00	83.68	51.66
Consumption	362.38	383.58	361.95	363. 17	350.00	422.59	309.96
Diabetes	5. 31	4.48	2.32	2.56		8. 37	7.38
Diseases of the nervous system	89.27	82.09	74. 25	63.94	175.00	96. 23	107.01
Diseases of the respiratory system	134.96	146. 27	153.13	156.01	125.00	133. 89	107.01
Diseases of the liver	17.00	14.93	18.56	17.90	25.00	8.37	22.14

Other diseases of the digestive system	30, 82	28.36	37.12	35.81	50.00	12. 55	36, 90
Bright's disease	30.82	37. 91	44.08	46.04	25.00	25.10	14.76
Other diseases of the urinary system	26. 57	31.34	44.08	43.48	50.00	8. 37	14.76
Diseases of the bones and joints	3.19	1.49				4.18	7.38
Burns and scalds	1.06						3, 69
Injuries by machinery							
Suicide	11. 69	13.43	11.60	10.23	25.00	16.74	7.38
Other accidents and injuries	57. 39	41.79	39. 44	38, 36	50.00	46.03	95. 94

It will be seen from this table that in the United States the greatest proportion of deaths of compositors, printers, and pressmen was due to consumption (362.38), and that this proportion was excessively high, the average proportion due to this cause in all occupations in this class being 211.25. The proportion due to this cause was higher in the registration area (383.58), and highest of all in the registration cities in the nonregistration states (422.59).

The proportions of deaths of compositors, printers, and pressmen due to diseases of the respiratory system (134.96), diseases of the nervous system (89.27), heart disease (73.33), and the other principal causes were lower than the average proportions from the same causes in this class of occupations.

In the nonregistration area the proportions of deaths due to typhoid fever (62.73) and malarial fever (18.45) were higher than in the United States as a whole, but the proportion of deaths due to suicide (7.38) was less than the proportion in the United States as a whole (11.69).

The proportion of deaths of compositors, printers, and pressmen due to Bright's disease and other diseases of the urinary system (14.76 for each) were much lower than the proportions due to these causes in the United States or in the registration area.

COOPERS.

The total number of coopers reported in the United States was 47,438, being 1.41 per cent of the whole number of males in this class of occupations. The number of deaths was 732, or 2.01 per cent of the deaths among males in this class of occupations.

In the registration area the number of coopers reported was 24,763, being 1.25 per cent of the total males in this class of occupations. The corresponding number of deaths was 419, or 1.86 per cent of the deaths among males in this class, and the death rate was 16.92 per 1,000.

The following table shows, for the registration states, the number of coopers living at the end of the census year, and the number of deaths of coopers during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living.

			AGE.		
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	11,544	1, 982 17, 17	5, 230 45, 30	3, 367 29, 17	888 7, 69
Deaths. Per cent at each age.	248	10 4.03	58 23.38	86 34. 67	9 <u>4</u> 37.90
Death rate per 1,000 population		5. 05 5. 02	11. 09 9. 18	25. 54 20. 13	105.86 77.67

This table shows that in the registration states the death rate of coopers was higher in each age group than the average rate in occupations of this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of coopers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	fration st	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever		8.66	12.40		45.39
Malarial fever	16.15	17.33	. 24.80		15, 13
Rheumatism	4.04	8.66	12.40 -		
Dropsy	12.11	17. 33	12.40	28.74	7.56
Heart disease	161.53	242.55	297.62	114.94	90.78
Consumption	310.95	881.15	446.43	229.89	249.64

Bright's disease	72.69	86.63	86.81	86.21	60.52
Other diseases of the urinary system	60, 57	69. 29	74.40	57.47	52. 95
Diseases of the bones and joints	4.04				7.56
Burns and scalds	4.04	8.60		28.74	
Injuries by machinery					
Suicide	20.19	17.33	12.40	28.74	22.69
Other accidents and injuries	84.80	86, 63	99.21	57.47	83. 21

It will be seen from the preceding table that the death rate of coopers in the registration states from typhoid fever (8.66) was very low, the average rate from this cause of males in this class of occupations being 40.07. The death rates from every other cause specified were higher, and generally much higher, than the corresponding rates for males in all occupations in this class in the registration states, the rate from heart disease being more than twice the average rate from this cause in this class (119.87). The death rates from diseases of the digestive system, Bright's disease, and other diseases of the urinary system were remarkably high in comparison with the average rates from these causes of males in occupations of this class.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder, of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among coopers:

	United	Rogis-	REGIS	ration s	fates.	Regis- tration	Remain- der
OAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	13.66	16.71	4.03	5. 29		35.09	9.58
Malarial fever	13.66	9.55	8.0 6	10.58		11.70	19.17
Rhoumatism	4.10	2.39	4.03	5.29			6.39

Heart disease	91.53	95.47	112.90	126. 98	67.80	70.18	86, 26
Consumption	165.30	183, 77	177.42	190.48	135.59	192.98	140.57
Diabetes	1.37						3.19
Diseases of the nervous system	101.09	114.56	141.13	137. 57	152. 54	76.02	83.07
Diseases of the respiratory system	170.77	167.06	169.35	185. 19	118.64	163.74	175. 72
Diseases of the liver	32.79	28. 64	16.13	21. 16		46.78	38.34
Ascites	1.37						3.19
Other diseases of the digestive system	32.79	31.03	24.19	15.87	50.85	40.94	35.14
Bright's disease	31.42	42.96	40.32	37.04	50.85	46.78	15. 97
Other diseases of the urinary system	36.89	85.80	32. 26	31.75	33.90	40.94	38.34
Diseases of the bones and joints	4.10	2.39				5.85	6, 89
Burns and scalds	1.87	2.89	4.03		16.95		
Injuries by machinery							
Suicide	15.03	11.98	8.06	5. 29	16.95	17.54	19.17
Other accidents and injuries	54.64	50.12	40.82	42.88	33.90	64.33	60.70

It will be seen from this table that in the United States the greatest proportion of deaths of coopers was due to diseases of the respiratory system (170.77), this proportion being higher than the average proportion in this class of occupations (154.30).

The proportions of deaths due to consumption (165.30), diseases of the nervous system (101.09), and typhoid fever (13.66) were lower than the average proportions in this class, while the proportions due to diseases of the digestive system and diseases of the urinary system were higher than the average proportions in this class.

In the nonregistration area the proportion of deaths of coopers due to consumption (140.57) and diseases of the nervous system (83.07) were lower than the proportion in the United States, and the proportions due to other causes were generally higher in this area than in the registration area.

OCCUPATIONS IN RELATION TO DEATHS.

ENGINEERS AND FIREMEN (NOT LOCOMOTIVE).

The total number of engineers and firemen, excepting those of railroad engines, reported in the United States was 139,718, being 4.17 per cent of the whole number of males in occupations of this class. The number of deaths was 1,425, or 3.91 per cent of the total deaths among males in occupations of this class.

In the registration area the number of engineers and firemen reported was 69,307, being 3.51 per cent of the whole number of males in occupations of this class. The corresponding number of deaths was 878, or 3.91 per cent of the total deaths of males in occupations of this class, and the death rate was 12,67 per 1,000.

The following table shows, for the registration states, the number of engineers and firemen (not locomotive) living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			·AGE.		
POPULATION, DEATHS, AND DEATH RATES	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	36, 853	4,626	21, 728 58, 96	9, 533 25, 87	-861 2,34
Deaths	500	41 .9.20	218 -43, 60	187 27.40	54 10.80
Death rate per 1,000 population		8,86 5.102	10.03	19.62	62.72 77.67

This table shows that in the registration states the death rate of engineers and firemen (not locomotive) was higher than the average rate in occupations of this class in each age group under 45 years of age, and that above the age of 45 years the death rates of engineers and firemen were less than the average rates in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of engineers and firemen (not locomotive) from each of certain specified causes per 100,000 living:

	Regis-	REGIS	TRATION'S	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural. 85.19 10.65 74.54 106.48 10.65 117.13 106.48 21.30 10.65 10.65	cities in other states.

Other accidents and injuries	187.57	184,52	178.43	202.32	191.04

It will be seen from this table that the death rates of engineers and firemen (not locomotive) in the registration states were very high, from typhoid fever (62.41), diseases of the urinary system, other than Bright's disease, (56.98), diseases of the bones and joints (8.14), and accidents and injuries, such as burns and scalds (13.57), injuries by machinery (8.14), and other injuries of this class (184.52).

The death rates of engineers and firemen (not locomotive) from the other causes specified in this table were generally lower than the average rates for males in occupations of this class.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes, per 1,000 deaths from all causes among engineers and firemen (not locomotive):

	United	Regis-	REGIS	TRATION 87	TATES.	Regis- tration	Remainder of the United States.

Other diseases of the urinary system	23.86	35.31	42.00	47.96	12.05	26, 46	5.48
Diseases of the bones and joints	2.11	3.42	6.00	7. 19			[
Burns and scalds	12.63	14.81	10.00	9. 59	12.05	21. 16	9.14
Injuries by machinery	10.53	3.42	6.00	7.19			21.94
Suicido	7.72	10. 25	6.00	4.80	12.05	15.87	3.66
Other accidents and injuries	188.07	148.06	136.00	117.51	228. 92	164.02	252. 29

It will be seen from this table that in the United States the proportions of deaths of engineers and firemen (not locomotive) due to typhoid fever (55.44) and malarial fever (16.84) were higher than the average proportions in this class of occupations, but that the proportions due to other diseases excepting accidents and injuries were generally lower than the average proportions in this class.

The proportions of deaths of engineers and firemen due to accidents and injuries were excessively high, being for burns and scalds (engineers and firemen, 12.63; class total, 1.92), injuries by machinery (engineers and firemen, 10.53; class total, 1.62), and other accidents and injuries, excluding suicides (engineers and firemen, 188.07; class total, 73.37).

The proportion of deaths of engineers and firemen due to suicide (7.72) was low, the average proportion due to this cause in this class being 14.38.

HARNESS AND SADDLE MAKERS AND REPAIRERS, TRUNK MAKERS, ETC.

The total number of harness and saddle makers and repairers, trunk makers, etc., reported in the United States was 48,105, being 1.43 per cent of the whole number of males engaged in manufactures and mechanical industries. The number of deaths was 522, or 1.43 per cent of the total deaths among males in occupations of this class.

In the registration area the number of harness and saddle makers and repairers, trunk makers, etc., reported was 23,137, being 1.17 per cent of the whole number of males in occupations of this class. The corresponding number of deaths was 249, being 1.11 per cent of the deaths among males in this class, and the death rate was 10.76 per 1,000.

The following table shows, for the registration states, the number of harness and saddle makers, trunk makers, etc., living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population Per cent at cach age.	12, 246	2, 707 22, 11	5, 309 43, 35	3, 228 26, 36	806 6, 58		
Deaths	163	15	51	60	37		
Per cont at each age		9.20 5.54	31. 29 9. 61	36. 81 18. 59	22. 70 45. 91		
Average rate in this class.		5.02	9. 18	20.13	77, 67		

The preceding table shows that in the registration states the death rates of harness and saddle makers were higher than the average rates in occupations of this class in the age groups under 45 years, and that in the age groups above 45 years the death rates of harness and saddle makers were less than the average rates in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of harness and saddle makers, trunk makers, etc., from each of certain specified causes, per 100,000 living:

•	Regis-	REGIS	Regis- tration		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	51.86 8.64	81.66 16.33-	103. 87 23. 08	27. 93	18.36
Rheumatism	1				9. 18
Dropsy	i .	114.32	103. 87	139, 63	55.09
Consumption:	285. 26	326.64	392, 38	167.55	238.73
Diabetes	4.32]		9.18
Diseases of the nervous system	108.05	179.65	207. 73	111.70	27. 55
Diseases of the respiratory system	198.82	204.15	242.35	111,70	192.82
Diseases of the liver.					
Ascites		[
Other diseases of the digestive system		24.50	23.08	27, 93	45.91
Bright's disease	l l	65.33	69. 24	55.85	36.72
Other diseases of the urinary system	25. 93	40.83	46.16	27. 93	9.18
Diseases of the bones and joints	1				
Burns and scalds	1				
Injuries by machinery		8.17	11.54		
Suicide		40.83	46.16	27. 93	9.18
Other accidents and injuries	43. 22	40.83	46.16	27.93	45.91

It will be seen from this table that the highest death rate of harness and saddle makers, trunk makers, etc., in the registration states occurred from consumption (326.64), being somewhat above the average rate from this cause among males in this class (313.64). The death rate from typhoid fever (81.66) was very high, being more than twice the average rate from this cause in this class (40.07), and was especially high in the cities in the registration states (103.87). The death rate from malarial fever (16.33) was also above the average, as was the death rate from Bright's disease (65.33), and the death rate from suicide (40.83) was excessively high, the average rate from this cause of males in this class being 16.01.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes, per 1,000 deaths from all causes among harness and saddle makers, trunk makers, etc.:

	United	REGISTRATION STATES.			rates.	Regis- tration	Remain- der

Other diseases of the urinary system	21.07	24.10	30.67	30.77	30.30	11.63	18.32
Diseases of the bones and joints							
Burns and scalds	,						
Injuries by machinery	1.92	4.02	6.13	7.69			
Suicide	28.73	24.10	30.67	30.77	30.30	11.63	32.97
Other accidents and injuries	49.81	40.16	30.67	30.77	30.30	58. 14	58, 61

It will be seen from the preceding table that the proportion of deaths of harness and saddle makers, trunk makers, etc., in the United States due to consumption (250.96) was higher than the proportion due to any other cause, and higher than the average proportion in this class (211.25). The proportion of deaths due to heart disease (80.46), diseases of the respiratory system (147.51), typhoid fever (32.57), and malarial fever (11.49) were lower than the average proportions in this class of occupations, and the proportion of deaths due to suicide (28.73) was nearly twice the average proportion in this class (14.38).

HAT AND CAP MAKERS.

The total number of hat and cap makers reported in the United States was 17,319, being 0.51 per cent of the whole number of males in occupations of this class. The number of deaths was 334, or 0.92 per cent of the total deaths among males in occupations of this class.

In the registration area the number of hat and cap makers reported was 16,639, being 0.84 per cent of the whole number of males engaged in manufactures and mechanical industries in this area. The corresponding number of deaths was 313, or 1.39 per cent of the total deaths of males in occupations of this class, and the death rate was 18.81 per 1,000.

The following table shows, for the registration states, the number of hat and cap makers living at the end of the census year, and the number of deaths during the census year, at each age, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65	65 years and over.		
Population	14, 222	4, 143 29, 13	7, 059 49, 63	2, 527 17, 77	256 2,50		
Deaths. Per cont at each ago	277	26 9,39	136 49.00	77 27. 80	36 13.00		
Death rate per 1,000 population		6. 28 5. 02	19. 27 9. 18	30.47 20.13	101.12 77.67 .		

This table shows that in the registration states the death rate of hat and cap makers was considerably higher in each age group than the average rate in this class of occupations.

In the age group 25 to 45 years, which includes nearly 50 per cent of the hat and cap makers reported, the death rate of persons in this occupation (19.29) was more than twice the average rate in occupations of this class (9.18).

The following table shows, for the registration area and some of its subdivisions, the death rate of hat and cap makers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	REGISTRATION STATES.		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	102.17	T19.53	135.78	62,'99	
Malarial fever	30.05	28.13	27.16	31.50	41.37
Rheumatism	24.04	28.13 '	27.16	81.50	
Dropsy	6.01				41.'37
Heart disease	120.20	119.53	144.84	31.50	124.12
Consumption	643.07	660. 95	787.54	220.47	537.:86
Diabetes					
Diseases of the nervous system	156. 26	168.75	181.04	125.98	82.'75
Diseases of the respiratory system	270.45	295. 32	353.04	94.49	124.12

Ascites					
Other diseases of the digestive system	48.08	42.19	45. 26	31.50	82.75
Bright's disease	54, 09	63. 28	81.47		
Other diseases of the urinary system	42.07	49. 22	63.37		
Diseases of the bones and joints	12.02	7.03	9.05	.,	41.37
Burns and scalds					
Injuries by machinery	6.01	7.03	9.05		
Suicide	6.01	7.03	9.05		
Other accidents and injuries	78.13	91.41	117.68		

It will be seen from the preceding table that the death rates of hat and cap makers in the registration states were excessively high from every cause excepting heart disease and suicide. The death rate from consumption (660.95) was more than twice the average rate from this cause in this class (313.64), and was above this rate in the cities in the registration states (787.54). The death rates from malarial fever and rheumatism (28.13 in each case) were much higher than the average rates from these causes in the manufacturing and mechanical industry class.

The death rate of hat and cap makers from suicide, in the registration states (7.03) was low, the average rate from this cause in this class being 16.01.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among hat and cap makers:

	United	Regis-	REGIS	TRATION S	fates.	Regis- tration	Remain- der
OAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
'Typhoid fever	50.89	54.31	61.37	59.52	80.00		
Malarial fever	14.97	15.97	14.44	11.90	40.00	27.78	
Rheumatism	11.98	12.78	14.44	11.90	40.00

Suicide		3.19	3.61	3.97			
Other accidents and injuries	41.92	41, 53	46.93	51.59			47.62

This table shows that in the United States the greatest proportion of deaths of hat and cap makers was due to consumption (335.33), being much greater than the average proportion in this class (211.25). The proportions of deaths due to typhoid fever (50.89), malarial fever (14.97), rheumatism (11.98), and diseases of the bones and joints (5.99) were greater than the average proportions in this class, but the proportions due to all other causes were less than the average proportions in this class, the proportion from suicide (2.99) being very small in comparison with the average proportion due to this cause in this class (14.38).

IRON AND STEEL WORKERS.

The total number of iron and steel workers reported in the United States was 142,585, being 4.25 per cent of the whole number of males engaged in manufactures and mechanical industries. The number of deaths was 1,084, or 2.97 per cent of the total deaths of males in occupations of this class.

In the registration area the number of iron and steel workers reported was 77,464, being 3.92 per cent of the whole number of males engaged in manufactures and mechanical industries in this area. The corresponding number of deaths was 657, or 2.92 per cent of the total deaths of males in occupations of this class, and the death rate was 8.48 per 1,000.

The following table shows, for the registration states, the number of iron and steel workers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population	35, 115	10,702	16, 402	6, 584	916		
Per cent at each age		30. 48	46.71	18.75	2.61		
Deaths	344	45	112	125	62		
Per cent at each age	.	13.08	32.56	36.34	18.02		
Death rate per 1,000 population	.	4. 20	6. 83	18.99	67. 69		
Average rate in this class	, ,	5.02	9.18	20.13	77.67		

This table shows that in the registration states the death rate of iron and steel workers was less in each age group than the average rate in occupations of this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of iron and steel workers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	TRATION S	ATION STATES.		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.	
Typhoid fever	60.67	28.48	23.72	40.75	87.37	
Malarial fever	3.87	2.85	3. 95		4.72	
Rheumatism						
Dropsy	5.16	5.70	3. 95	10.19	4.72	
Heart disease	63. 26	91.13	102.77	61.12	40.14	
Consumption	188.47	230.67	256.93	163.00	153.49	
Diahetes	2.58	5.70	7.91			
Diseases of the nervous system	78.75	96.82	98. 82	91.69	63.76	
Diseases of the respiratory system	157.49	196.50	217.40	142.62	125.15	
Diseases of the liver	18.07	8.54	11.86		25.97	
Ascites						
Other diseases of the digestive system	20.65	19.93	27.67		21. 25	
Bright's disease	23.24	39.87	43.48	30.56	9.45	
Other diseases of the urinary system	27.11	34.17	35.57	30.56	21. 25	
Diseases of the bones and joints	2.58	2.85	3.95		2.36	
Burns and scalds	6.45	8.54	11.86		4.72	
Injuries by machinery	2.58	2.85	3.95		2.36	
Suicide	11.62	8.54	7. 91	10.19	14.17	
Other accidents and injuries	71.00	76. 89	94.87	30. 56	66.12	

It will be seen from this table that the death rates of iron and steel workers in the registration states from burns and scalds (8.54) and injuries by machinery (2.85) were much above the average rates from these causes in this class of occupations, but the rates from other causes specified were generally much below the average rates from the same causes of males in this class of occupations.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among iron and steel workers:

•	United	Regis-	REGIS	REGISTRATION STATES.			Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever		71.54	29. 07	. 22,47	51.95	118. 21	86.65
Malarial fever		4.57	2.91	3.75		6.39	21.08
Rheumatism	 ::.						
Dropsy	6.46	6.09	5.81	3.75	12.99	6.39	7. 03

Ascites							
Other diseases of the digestive system	26.75	24.35	20.35	26. 22		28.75	30.44
Bright's disease	26.75	27.40	40.70	41.20	38.96	12.78	25.76
Other diseases of the urinary system	25.83	31.96	34.88	33.71	38.96	28.75	16.39
Diseases of the bones and joints	~3.69	3.04	2, 91	3.75		3.19	4.68
Burns and scalds	7.38	7.61	8.72	11.24		6.39	7.03
Injuries by machinery	3, 69	3.04	2.91	3.75		3.19	4.68
Suicide	10.15	13.70	8.72	7.49	12.99	19.17	4.68
Other accidents and injuries	104. 24	83.71	78, 49	89, 89	88.96	89.46	135.83

It will be seen from this table that among iron and steel workers in the United States the greatest proportions of deaths were due to consumption (219.56), diseases of the respiratory system (173.43), accidents and injuries other than burns and scalds, injuries by machinery, and suicide (104.24), and typhoid fever (77.49), the proportions from each of these causes being higher than the average proportions in this class of occupations.

MACHINISTS.

The total number of machinists reported in the United States was 186,677, being 5.56 per cent of the whole number of males in this class of occupations. The number of deaths of machinists was 1,618, or 4.44 per cent of the total deaths of males engaged in occupations of this class.

In the registration area the number of machinists reported was 129,934, being 6.58 per cent of the whole number of males engaged in manufactures and mechanical industries in this area. The corresponding number of deaths was 1,197, or 5.32 per cent of the total deaths of males in occupations of this class, and the death rate was 9.29 per 1,000.

The following table shows, for the registration states, the number of machinists living at the end of the census year, and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group and the death rates per 1,000 living:

	AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population Per cent at each age	73, 762	21, 134 28, 65	35, 404 48. 00	14, 803 20, 07	2, 018 2, 74		
Deaths. Per cent at each age.	839	109 12, 99	292 34.80	276 32, 90	161 19.19		
Death rate per 1,000 population		5.16 5.02	8. 25 9. 18	18. 64 20. 13	79.78 77.67		

This table shows that in the registration states the death rates of machinists under the age of 25 years and above the age of 65 years were higher than the average rates in this class of occupations. In the age groups between 25 and 65 years the death rates of machinists were less than the average death rates in this class of occupations.

The following table shows, for the registration area and some of its subdivisions, the death rate of machinists from each of certain specified causes per 100,000 living:

	Regis-	negis	rration si	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cíties in other states.
Typhoid fever	48.49	48.81	51. 26	42.67	48.07

Rheumatism	1.54	1.36	1.90		1.78
Dropsy	2. 31	2.71	3.80		1.78
Heart disease	96. 20	127.44	136.70	104.30	55. 19
Consumption	225.50	287.41	330.37	180.15	144. 20
Diabetes	6.16	8, 13	5.70	14. 22	3.56
Diseases of the nervous system	93.89	127.44	136.70	104.30	49.85
Diseases of the respiratory system	150.08	183.02	206.95	123. 26	106.81
Diseases of the liver	20.01	28.47	30.38	23.70	8.90
Ascites					
Other diseases of the digestive system	36.94	43.38	49.36	28.45	28.48
Bright's disease	23.86	33.89	24. 18	33.19	10.68
Other diseases of the urinary system	26.17	31.18	34.18	23.70	19.58
Diseases of the bones and joints	3.08	4.07	1.90	9.48	1.78
Burns and scalds	8.08	1.36	1.90		5.34
Injuries by machinery	0.77	1.36	1.90	[
Suicide	14.62	17.62	22. 78	4.74	10.68
Other accidents and injuries	53.10	59. 65	68. 35	37.93	44.51

This table shows that the highest death rate of machinists in the registration states (287.41) occurred from consumption, being highest in the cities in these states (330.37), but somewhat less than the average rate from this cause in all occupations in this class. The death rates from typhoid fever (48.81) and from malarial fever (16.27) were higher than the average rates from these causes in this class of occupations. The death rate of machinists from suicide (17.62) was slightly above the average rate, and that from other accidents and injuries (59.65) was somewhat below the average rate from these causes in occupations of this class.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 from all causes among machinists:

<u>-</u>	United	Regis-	REGIS:	TRATION ST	PATES.	Regis- tration	Remain- der

Other accidents and injuries	. 69.84	57.64	52.44	54. 22	45.71	69.83	104.51

This table shows that among machinists in the United States the greatest proportions of deaths were due to consumption (235.48) and diseases of the respiratory system (161.93), being greater in each case than the average proportions in this class of occupations.

The proportion of deaths of machinists due to Bright's disease, and other diseases of the urinary system (26.58 in each case), was less than the average proportions due to these causes in this class, and the proportions due to typhoid fever (56.86), and malarial fever (15.45), were greater than the average proportions in this class.

The proportion of deaths of machinists due to suicide (14.83) in the United States as a whole was about the same as the average proportion in this class (14.38).

MARBLE AND STONE CUTTERS.

The total number of marble and stone cutters reported in the United States was 61,012, being 1.82 per cent of the whole number of males engaged in occupations of this class. The number of deaths of marble and stone cutters was 686, or 1.88 per cent of the total deaths of males in this class of occupations.

In the registration area the number of marble and stone cutters reported was 38,623, being 1.95 per cent of the whole number of males in this class of occupations. The corresponding number of deaths was 470, or 2.09 per cent of the total deaths among males in occupations of this class, and the death rate was 12.17 per 1,000.

The following table shows, for the registration states, the number of marble and stone cutters living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population	25,499	5,412 21.22	14, 074 - 55, 19	5, 108 20, 03	753 2, 95		
Per cent at each age	353	24 6. 80	160 45, 33	114 32, 29	54 15.30		
Por centat each age		4.43 5.02	11.87 9.18	22.32 20.13	71.71 77.67		
Transo in our ciass		0.02	3.10	20, 13	11.01		

This table shows that in the registration states the death rates of marble and stone cutters under the age of 25 years and above the age of 65 years were lower than the average rates in this class of occupations. In the age groups between 25 and 65 years the death rates were higher than the average rates in this class of occupations.

The following table shows, for the registration area and some of its subdivisions, the death rate of marble and stone cutters, from each of certain specified causes, per 100,000 living:

	Regis-	REGIS	stration s	RATION STATES.		
CAUSE OF DEATH.	tration area.	Total.	Cities.	9.80 9.80 107.83 156.85 39.21 117.64	cities in other states.	
Typhoid fever	41.43	39. 22	52. 29	19.61	45.72	
Malarial fever	20.71	27.45	45.76		7, 62	
Rheumatism	10.36	7.84	6.54	9.80	15.24	
Dropsy	5.18	7.84	6.54	9.80		
Heart disease		105.89	104.59	.107.83	7.62	
Consumption	398.73	435.81	621.00	156.85	327.64	
Diabetes				*********		
Diseases of the nervous system	77. 67	82.36	111. 13	39.21	68.58	
Diseases of the respiratory system	233.02	278.44	385. 67	117.64	144.77	
Diseases of the liver	41.43	39. 22	65. 37		45.72	
Ascites						
Other diseases of the digestive system	14.02	54.90	78.44	19.61	22.86	
Bright's disease	31.07	47.06	58. 83	29.41		
Other diseases of the urinary system	41.43	43.14	39. 22	49.01	38.10	
Diseases of the bones and joints	2. 59	3.92	6.54			
Burns and scalds						
Injuries by machinery						
Suicides	7.77				22.86	
Other accidents and injuries	64.73	78.43	78.44	78.42	38.10	

It will be seen from this table that the highest death rate of marble and stone cutters in the registration states occurred from consumption (435.81), being much higher than the average rate from this cause among males in this class of occupations (313.64), and being excessively high in the cities (621.00).

The death rate from malarial fever (27.45) was nearly three times the average rate from this cause in this class of occupations (9.93), and the death rates from diseases of the digestive system were much higher than the average rates from these causes in this class, the rate from diseases of the liver being 39.22 for marble and stone cutters, and 23.03 for the average in this class, and the rate from other diseases of the digestive system being 54.90 for marble and stone cutters, and 37.50 for the average in this class. The rates from both of these last mentioned causes were also higher in the cities in the registration states, and much above the average rates in this class from these causes in the same locality.

There were no deaths reported from suicide among marble and stone cutters in the registration states, but the death rate from this cause in the registration cities in the nonregistration states (22.86) was slightly above the average rate of this class from suicide in the same area (20.79).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among marble and stone cutters:

	United	nited Regis- REGISTRATION STATES.		TATES.	Regis- tration	Remain- der	
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	37. 90	34. 04	28.33	28.99	25. 97	51. 28	46.30
Malarial fever	11.66	17.02	19.83	25. 36		8. 55	
Rheumatism	8.75	8.51	5.67	3. 62	12.99	17.09	9.26
Dropsy	4.37	4. 26	5.67	3. 62	12.99		4.63
Heart disease	68. 51	59.57	76.49	57.97	142, 86	8, 55	87.96

Other diseases of the urinary system	32.70	34.04	31.16	21.74	64.94	42.74	27.78
Diseases of the bones and joints	1.46	2.13	2.83	3.62			
Burns and scalds							
Injuries by machinery							 [
Suicide	7. 29	6.38				25.64	9. 26
Other accidents and injuries	67.06	53. 19	56.66	43.48	103.90	42.74	97. 22

It will be seen from this table that among marble and stone cutters in the United States the greatest proportion of deaths was due to consumption (314.86), being much greater than the average proportion due to this cause in this class (211.25). The proportion due to this cause in the registration area (327.66) was somewhat greater, and was greatest of all in the registration cities in the nonregistration states (367.52). The proportion of deaths of marble and stone cutters in the United States due to diseases of the respiratory system (190.96) was greater than the average proportion in this class (154.30), and the proportions due to heart disease (68.51) and diseases of the nervous system (62.68) were much less than the average proportions in this class.

The proportion of deaths of marble and stone cutters due to suicide (7.29) was about half the average proportion in this class (14.38).

MASONS (BRICK AND STONE).

The total number of masons (brick and stone) reported in the United States was 160,804, being 4.79 per cent of the whole number of males engaged in occupations of this class. The number of deaths was 2,105, being 5.78 per cent of the total deaths among males in occupations of this class.

In the registration area the number of masons (brick and stone) reported was 85,006, being 4.30 per cent of the whole number of males in this class of occupations in the registration area. The corresponding number of deaths was 1,170, or 5.20 per cent of the total deaths of males engaged in occupations of this class, and the death rate was 13.76 per 1,000.

The following table shows, for the registration states, the number of masons (brick and stone) living at the end of the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

•	AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over		
Population	50, 129	8, 775 17. 50	23, 925 47, 73	14, 050 28, 03	3, 164 6. 31		
Deaths. Per cent at each age.	781	44 5.63	217 27.78	269 33, 29	250 32.01		
Death rate per 1,000 population. Average rate in this class.		5. 01 5. 02	9.07	19. 15 20. 13	79. 01 77. 67		
		3.02	3.10	40.10	71.07		

This table shows that in the registration states the death rate of brick and stone masons was lower in each age group under 65 years than the average rate in this class of occupations. In the age group 65 years and over, the death rate of brick and stone masons was slightly higher than the average in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of masons (brick and stone) from each of certain specified causes, per 100,000 living:

	Regis-	REGIS	TRATION 5	TATES.	Regis- tration cities in other states.
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.

Other diseases of the urinary system	40.00	43.89	87.54	58.08	34.41
Diseases of the bones and joints	2.35	3.99	5.78		
Burns and scalds	1.18	1.99	2.89		
Injuries by machinery					
Suicide	24.70	21.94	20.21	25. 81	28.66
Other accidents and injuries	125.87	131.66	138.60	116.15	117.56
					<u> </u>

It will be seen from this table that the death rate of brick and stone masons from consumption in the registration states (307.21) was higher than the rate from any other cause, but it was somewhat lower than the rate from this cause in occupations of this class. The death rate from diseases of the respiratory system (281.27) was higher than the average rate from this cause (214.75), and the death rate of brick and stone masons from rheumatism (19.95) was more than twice the average rate from this cause in this class of occupations (8.13).

The death rate of brick and stone masons from suicide in the registration states (21.94) was above the average in this class of occupations (16.01), and the death rate from accidents and injuries other than burns and scalds, injuries by machinery, and suicide (131.66), was very much higher than the average rate in this class (77.49).

In the registration cities in the nonregistration states, the death rate of brick and stone masons from typhoid fever (54.48) was higher than the average rate in this class from the same cause (47.89), but the rates from other causes were generally lower in this area than the average rates of this class.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among masons (brick and stone):

	United	Regis-	REGIST	ration st	ATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	37. 53	32. 48	24. 33	24.18	24.75	48.84	43.85
Malarial fever	14. 73	8.55	7.68	8.64	4. 95	10. 28	22.46
Rheumatism	10.93	11.97	12.80	15.54	4.95	10.28	9. 63

Diabetes	1.90	0.85				2.57	3.21
Diseases of the nervous system	110. 21	94.87	99.87	79.45	158.42	84.83	129.41
Diseases of the respiratory system	155. 34	174.36	180.54	196.89	133.60	161.95	131.55
Diseases of the liver	20.43	25.64	24, 33	31.09	4.95	28. 28	13.90
Ascites							
Other diseases of the digestive system	31.83	24.79	21. 77	25:91	9.90	30.85	40.64
Bright's disease	26. 60	26. 50	28. 17	32. 82	14.85	23. 14	26.74
Other diseases of the urinary system	27.08	29.06	28.17	22.45	44.55	30.85	24,60
Diseases of the bones and joints	4.75	1.71	2.56	3.45			8.56
Burns and scalds	0.48	0.85	1.28	1.73			
Injuries by machinery							
Suicide		17. 95	14.08	12.09	19.80	25. 71	7. 49
Other accidents and injuries	85. 99	91.45	84.51	82.90	89.11	105.40	79.14

It will be seen from this table that among brick and stone masons in the United States, the greatest proportion of deaths was due to consumption (172.92), but this proportion was less than the average proportion from this cause in this class (211.25). The proportion of deaths of brick and stone masons due to diseases of the respiratory system (155.34) was slightly greater than the average proportion in this class (154.30). The proportions of deaths of brick and stone masons due to Bright's disease (26.60) and other diseases of the urinary system (27.08) were less than the average proportions in this class.

MILL AND FACTORY OPERATIVES (TEXTILES).

The total number of mill and factory operatives (textiles) reported in the United States was 213,901, being 6.38 per cent of the whole number of males engaged in manufactures and mechanical industries. The number of deaths was 1,598, or 4.39 per cent of the total deaths of males engaged in occupations of this class.

In the registration area the number of mill and factory operatives (textiles) reported was 165,980, being 8.40 per cent of the whole number of males engaged in manufactures and mechanical industries. The corresponding number of deaths was 1,353, or 6.02 per cent of the total deaths of males in occupations of this class, and the death rate was 8.15 per 1,000.

The following table shows, for the registration states, the number of mill and factory operatives (textile) living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population	133, 212	56, 081	49, 473	17, 581	2, 118		
Per cent at each age		42.10	37.14	13. 20	1.59		
Deaths	1,080	297	361	243	166		
Per cent at each age		27.50	33. 43	22.50	15.37		
Death rate per 1,000 population		5. 30	7.30	13.82	78.38		
Average rate in this class		5. 02	9.18	20, 13	77.67		

This table shows that in the registration states the death rates of mill and factory operatives were lower than the average rates in the age groups between 25 and 65 years, and that under 25 years and over 65 years the death rates of mill and factory operatives were higher than the average rates in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of mill and factory operatives (textile) from each of certain specified causes per 100,000 living:

·	Regis-	REGIS	ERATION ST	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	53.62	55, 55	64.80	40.84	45.78
Malarial fover	8.43	6.76	8.56	3,89	15.26

Other diseases of the urinary system	22. 29	24.02	25.68	25.39	15.28
Diseases of the bones and joints					
Burns and scalds	2.41	2. 25	3.67		3.05
Injuries by machinery	1.20	1.50	2.45		}i
Suicide	13. 25	13, 51	18.34	5.83	12. 21
Other accidents and injuries	52.42	47. 29	55.02	35.01	73, 24

It will be seen from this table that the death rates of mill and factory operatives (textile) in the registration states were above the average rates in this class only for typhoid fever (mill and factory operatives, 55.55; class total, 40.07), and burns and scalds (mill and factory operatives, 2.25; class total, 1.71).

The death rates from all other causes specified were generally much below the average rates from these causes, which is probably due to the fact that nearly 50 per cent of the males engaged in mills and factories (textile) were under 25 years of age.

The death rates of mill and factory operatives in the cities in the registration states were generally higher than the rates in the rural districts of the registration states or in the registration cities in other states, but there appears to be no marked difference in the proportions in the different areas.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among mill and factory operatives (textile).

	United	Regis-	REGIS	FRATION S	rates.	Regis- tration	Remain- der

Other diseases of the urinary system	25.66·	27, 35	29, 63	27.13	35.95	18.32	16.33
Diseases of the bones and joints	[-						
Burns and scalds	3.13	2.96	2.78	3.88		3.66	408
Injuries by machinery		1.48	1.85	2, 58	[12.24
Suicide		16.26	16.67	19.38	9.80	14.65	4.08
Other accidents and injuries	65.71	64,30	58.33	58.14	58.82	87.91	73.47

It will be seen from the preceding table that among mill and factory operatives (textile) in the United States the greatest proportion of deaths was due to consumption (259.70), being greater than the average proportion in occupations of this class (211.25). In the registration area the proportion of deaths due to consumption was greater (274.20), and was greatest of all in the rural districts in the registration states (284.31).

The proportion of deaths of mill and factory operatives due to typhoid fever (70.09) was much greater than the average proportion in this class (42.36), but the proportions due to other causes were generally less than the average proportions in this class.

MILLERS (FLOUR AND GRIST).

The total number of millers (flour and grist) reported in the United States was 52,747, being 1.57 per cent of the whole number of males engaged in occupations of this class. The number of deaths of millers was 656, or 1.80 per cent of the total deaths of males engaged in this class of occupations.

In the registration area the number of millers (flour and grist) reported was 11,793, being 0.60 per cent of the whole number of males engaged in manufactures and mechanical industries in this area. The corresponding number of deaths was 173, or 0.72 per cent of the total deaths among males in occupations of this class, and the death rate was 14.67 per 1,000.

The following table shows, for the registration states, the number of millers (flour and grist) living at the end of the census year, and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living.

Per cent at each age.	AGE.							
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over			
Population	7, 093	863	3, 306	2, 236	662			
Per cent at each age		12.17	46.61	31, 52	9.33			
Deaths	123	6	16	42	59			
Per cent at each age		3.87	13.01	84.15	47.97			
Death rate per 1,000 population		6.95	4.84	18.78	89. 12			
Average rate in this class		5.02	9. 18	20.13	77. 67			

This table shows that in the registration states there were but 6 deaths reported among millers under 25 years of age, and the death rate at this age has no significance. In the age groups 25 to 45 years and 45 to 65 years the death rates of millers were less than the average rates in this class of occupations, and in the age group 65 years and over the death rate of millers was considerably higher than the average rate in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of millers (flour and grist) from each of certain specified causes, per 100,000 living.

	Regis-	REGIS	TRATION 87	Regis- tration

It will be seen from the preceding table that the death rates of flour and grist millers in the registration states were higher than the average rates of males in occupations of this class in the same area from malarial fever (millers, 28.20; class total, 9.93), rheumatism (millers, 14.10; class total, 8.13), heart disease (millers, 225.57; class total, 119.87), diabetes (millers 14.10; class total, 4.62), diseases of the liver (millers, 42.30; class total, 23.03), other diseases of the digestive system (millers, 70.49; class total, 37.50), and accidents and injuries other than burns and scalds, injuries by machinery, and suicide (millers, 126.89; class total, 77.49).

The death rate of millers in the registration states from consumption (267.87) was considerably lower than the average rate from this cause in this class (313.64), but was higher in the cities in the registration states (421.94) than the average rate from this cause in the same area (361.47). The death rate from diseases of the respiratory system (211.48) was also lower than the average rate from this cause (214.75) in occupations in this class.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among millers (flour and grist):

	United	Regis-	REGIS	TRATION ST	tration		Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	32.01	11.56	8. 13		12.66	20.00	39. 34
Malarial fever	21.34	11.56	16.26	45. 45			24.84
Rheumatism	4.57	5.78	8.13	22.73			4.14
Dropsy	13.72						18.63
Heart disease	102.13	115.61	130.08	113.64	139. 24	80.00	97.31
Consumption	123.48	167.63	154.47	204.55	126.58	200.00	107.66
Diabetes	7.62	5.78	8.13		12,66		8. 28
Diseases of the nervous system	121. 95	144.51	154.47	90.91	189.87	120.00	113.87
Diseases of the respiratory system	178.35	144.51	121.95	113.64	126.58	200.00	. 190.48
Diseases of the liver	21.34	28.90	24.39	22.73	25.32	40.00	18.63

Other diseases of the digestive system	45.73	46.24	40.65	68.18	25.32	60.00	45.55
Bright's disease	30.49	28.90	16.26	22.73	12.66	60.00	31.06
Other diseases of the urinary system	19.82	23.12	16.26		25.32	40.00	18.63
Diseases of the bones and joints	4.57						6.21
Burns and scalds	1.52						2.07
Injuries by machinery	9.15 .				· · · · · · · · · · · · · · · · · · ·		12.42
Suicide	6.10	5.78	8.13	22.73			6. 21
Other accidents and injuries	53, 35	69.36	73.17	68.18	75.95	60,00	47.62

It will be seen from this table that the greatest proportion of deaths among millers in the United States was due to diseases of the respiratory system (178.35), being greater than the average proportion in this class (154.30).

The proportion of deaths of millers due to consumption (123.48) was very small, the average proportion in this class being 211.25. The proportions of deaths of millers due to heart disease (102.13), to diseases of the nervous system (121.95), and to malarial fever (21.34) were greater than the average proportions in this class, and the proportion due to suicide (6.10) was much less than the average proportion in this class (14.38).

PAINTERS, GLAZIERS, AND VARNISHERS.

The total number of painters, glaziers, and varnishers reported in the United States was 220,960, being 6.59 per cent of the whole number of males engaged in occupations of this class. The number of deaths among these was 2,122, or 5.82 per cent of the total deaths of males in this class of occupations.

In the registration area the number of painters, glaziers, and varnishers reported was 135,767, being 6.87 per cent of the whole number of males engaged in occupations of this class. The corresponding number of deaths was 1,476, or 6.52 per cent of the total deaths among males in this class of occupations, and the death rate was 10.87 per 1,000.

The following table shows, for the registration states, the number of painters, glaziers, and varnishers living at the end of the census year, and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

		AGE.					
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population	79, 214	18, 016	41, 668	16, 769	2, 231		
Per cent at each age		22. 74	52, 60	21.17	2.82		
Deaths	1,033	74	440	870	147		
Per cent at each age		7.16	42.59	35, 82	14. 23		
Death rate per 1,000 population		4.11	10.56	22.06	65.89		
Average rate in this class.		5. 02	9.18	20.13	77.:67		

This table shows that the death rates of painters, glaziers, and varnishers were less than the average rates under 25 years and at 65 years and over, and that in the age groups between 25 and 65 years the death rates of painters, glaziers, and varnishers were higher than the average rates in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of painters, glaziers, and varnishers from each of certain specified causes per 100,000 living:

	Regis-	REGIST	REGISTRATION STATES.			
CAUSE OF DEATH.	tration area. Total. Cities. Rural.		Rural.	cities in other states.		
Typhoid fever	30. 20	27.77	2756	28. 35	33. 60

Rheumatism	8.84	12.62	12.06	14.17	3.54	
Dropsy	5.16	6.31	6.89	4.72	3.54	
Heart disease	101.64	126.24	122.31	137. 01	67.19	
Consumption	266.63	326.96	379.00	184.26	182. 13	
Diabetes	2. 95				7.07	
Diseases of the nervous system	119.32	146.44	148.15	141.74	81. 34	
Diseases of the respiratory system	167. 20	212.08	241.18	132.29	104.33	
Diseases of the liver	19.89	18.94	22.40	9.45	21. 22	
Ascites						
Other diseases of the digestive system	25.04	20.20	18.95	23.62	31.82	
Bright's disease	52.30	78. 27	91.30	42.52	15.91	
Other diseases of the urinary system	33.88	44.18	55. 13	14.17	19.45	
Diseases of the bones and joints	1.47	2.52	3.45			
Burns and scalds	1.47	1.26	1.72		1.77	
Injuries by machinery	0.74				1.77	
Suicide	22.10	27.77	29. 29	23. 62	14.15	
Other accidents and injuries	92.07	95. 94	99. 92	85.04	86.64	

It will be seen from this table that the death rates of painters, glaziers, and varnishers in the registration states were higher than the average rates in this class of occupations from rheumatism (painters, glaziers, and varnishers, 12.62; class total, 8.13), Bright's disease (painters, glaziers, and varnishers, 78.27; class total, 49.06), and suicide (painters, glaziers, and varnishers, 27.77; class total, 16.01).

In all other causes in this area the death rates were either below the average rates from the same causes or approximated the average rates very closely.

There were 37 deaths from lead poison among painters, glaziers, and varnishers in the United States, of which 24 were in the registration area, the death rate from this cause in this area being 17.68 per 100,000, and being slightly above this for the registration cities in the registration states (18.95).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among painters, glaziers and varnishers:

Typhoid-fever		United	Regis-	REGIS			Regis- tration	Remain- der

Other accidents and injuries	Other accidents and injuries	91.89	84.69	73, 57	71.34	81.82	110.61	108.36

It will be seen from this table that in the United States the greatest proportion of deaths among painters, glaziers, and varnishers was due to consumption (243.64), being greater than the average proportion in this class (211.25). The proportions of deaths of painters, glaziers, and varnishers due to diseases of the respiratory system (140.43), diseases of the nervous system (102.26), heart disease (83.41), and typhoid fever (30.16) were less than the average proportions in this class, and the proportion due to suicide (18.85) was somewhat greater than the average proportion in this class (14.38).

PLASTERERS AND WHITEWASHERS.

The total number of plasterers and whitewashers reported in the United States was 42,974, being 1.28 per cent of the whole number of males engaged in occupations of this class. The number of deaths of plasterers and whitewashers was 486, or 1.33 per cent of the total deaths of males in occupations of this class.

In the registration area the number of plasterers and whitewashers reported was 19,931, being 1.01 per cent of the whole number of males engaged in occupations of this class in this area. The corresponding number of deaths was 243, or 1.08 per cent of the total deaths among males in this class of occupations, and the death rate was 12.19 per 1,000.

The following table shows, for the registration states, the number of plasterers and whitewashers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	ı		AGE.		
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over
Population	. 7, 151	1,433	3, 711	1, 682	286
Per cent at each age		20.04	51.89	23, 52	4.00
Deaths	- 124	14	49	43	17
Per cent at each age		11.29	39.52	34.68	13.71
Death rate per 1,000 population	.	9.77	13.20	25.56	59.44
Average rate in this class		5.02	9.18	20, 13	77.67

This table shows that in the registration states the death rate of plasterers and whitewashers was considerably higher than the average rate in each age group under 65 years. At 65 years and over the death rate of plasterers and whitewashers was considerably less than the average rate in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of plasterers and whitewashers from each of certain specified causes per 100,000 living:

CAUSE OF DEATH.	Regis.	REGIS	Regis- tration

Suicide	10.03	13.98	15.44		7.82
Other accidents and injuries	75. 26	167.81	169.81	148. 59	23.47

This table shows that the death rates of plasterers and whitewashers in the registration states were much below the average rates in this class of occupations from diseases of the respiratory system (plasterers and whitewashers, 167.81; class total, 214.75), diseases of the urinary system other than Bright's disease (plasterers and whitewashers, 13.98; class total, 45.21).

The death rates of plasterers and whitewashers from other specified causes in this area were generally much higher than the average rates in this class, including malarial fever (plasterers and whitewashers, 27.97; class total, 9.93), rheumatism (plasterers and whitewashers, 27.97; class total, 8.13), consumption (plasterers and whitewashers, 531.39; class total, 313.64), diseases of the digestive system other than ascites, and diseases of the liver (plasterers and whitewashers, 69.92; class total, 37.50), Bright's disease (plasterers and whitewashers, 83.90; class total, 49.06), diseases of the bones and joints (plasterers and whitewashers, 13.98; class total, 2.91), and accidents and injuries other than burns and scalds, injuries by machinery, and suicide (plasterers and whitewashers, 167.81; class total, 77.49).

There were no deaths of plasterers and whitewashers from typhoid fever in the registration states, but the death rate from this cause in the registration cities in the nonregistration states (46.95) was about the same as the average rate in this class in the same area (47.89).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among plasterers and whitewashers:

	United	Regis-	regis	TRATION S	tration		Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	26.75	24. 69				50.42	28.81
Malarial fever	16.46	12.35	16.13	17.09		8.40	20.58
Rheumatism	20.58	12.35	16.13	17.09		8.40	28.81
Dropsy	10.29	8, 23				16.81	12.35
Heart disease	84.36	102.88	96.77	94.02	142.86	109.24	65.84
Consumption	240.74	259, 26	306.45	299.15	428.57	210.08	222, 22
Diabetes							
Diseases of the nervous system	84. 36	78.19	88.71	94.02]	67. 23	90.53
Diseases of the respiratory system	152. 26	144.03	96.77	94.02	142.86	193.28	160.49
Diseases of the liver	22, 63	24.69	16.13	17.09		33.61	20.58
Ascites							
Other diseases of the digestive system	47.33	53.50	40.32	42.74		67.23	41, 15
Bright's disease		49.38	48.39	51. 28		50.42	24.69
Other diseases of the urinary system	22.63	16.46	8.06	8.55		25.21	28.81
Diseases of the bones and joints	i l	4.12	8.06	· 8.55			4.12
Burns and scalds							
Injuries by machinery							
Suicides	14.40	8. 23	8.06	8. 55		8.40	20.58
Other accidents and injuries	78.19	61.73	96.77	94. 02	142.86	25, 21	94.65

It will be seen from this table that in the United States the greatest proportion of deaths among plasterers and whitewashers was due to consumption (240.74), being greater than the average proportion in this class (211.25). The proportions of deaths of plasterers and whitewashers from diseases of the respiratory system (152.26), diseases of the nervous system (84.36), heart disease (84.36), and typhoid fever (26.75) were less than the average proportions due to these causes in this class. The proportion of deaths of plasterers and whitewashers due to rheumatism (20.58) was nearly three times the average proportion in this class (7.69), and this proportion was still greater in the nonregistration area (28.81).

PLUMBERS AND GAS AND STEAM FITTERS.

The total number of plumbers and gas and steam fitters reported in the United States was 61,185, being 1.82 per cent of the whole number of males engaged in occupations of this class. The number of deaths was 442, or 1.21 per cent of the total deaths of males engaged in this class of occupations.

In the registration area the number of plumbers and gas and steam fitters reported was 50,280, being 2.54 per cent of the whole number of males in occupations of this class in the registration area. The corresponding number of deaths was 395, or 1.75 per cent of the total deaths among males in occupations of this class, and the death rate was 7.86 per 1,000.

The following table shows, for the registration states, the number of plumbers and gas and steam fitters living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

		AGE						
POPULATION, DEATHS, AND DEATH RATES.	Allages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over			
Population	28, 656	13, 987 48. 81	11, 540 40, 27	2, 695 9, 40	186 0,65			
Deaths	279	64	133 47.67	65 23, 30	17 6,09			
Death rate per 1,000 population		4. 58 5. 02	11. 53 9. 18	24. 12 20. 13	91.40 77.67			

The preceding table shows that in the registration states the death rate of plumbers and gas and steam fitters under 25 years of age (4.58) was less than the average rate in this class of occupations (5.02). Nearly 50 per cent of the plumbers and gas and steam fitters reported were in this age group. Above the age of 25 years the death rates of plumbers and gas and steam fitters were higher than the average rates in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of plumbers and gas and steam fitters from each of certain specified causes per 100,000 living:

	Regis-	REGIS	REGISTRATION STATES.			
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.	
Typhoid fever	37.79	27.92	19.43	102.85	50.87	
Malarial fever	7.96	10.47	11.66		4.62	
Rheumatism	9.94	10.47	11.66		9,25	
Dropsy	1.99	3.49	3, 89			
Heart disease	69.61	69.79	69.93	68.56	69.37	
Consumption	232, 70	328.03	349.66	137.13	106.36	
Diabetes	1.99				4.62	
Diseases of the nervous system	65.63	66.30	73.82		64.74	
Diseases of the respiratory system	141.21	188.44	198.14	102.85	78.62	
Diseases of the liver	5.97	6.98	7.77		4. 62	
Ascites						
Other diseases of the digestive system	19.89	24, 43	27.:20		13.87	
Bright's disease	27.84	41.88	42.74	34.28	9.25	
Other diseases of the urinary system	19.89	34.90	38.85			
Diseases of the bones and joints						
Burns and soalds	3.98				9. 25	
Injuries by machinery						
Suicide	5.97	10.47	7.77	34. 28		
Other accidents and injuries	47.73	34.90	38.85		64.74	

This table shows that the death rate of plumbers and gas and steam fitters, in the registration states, from consumption (328.03) was the only rate which was much above the average rates in occupations in this class.

The death rates of plumbers and gas and steam fitters from malarial fever and from rheumatism (10.47 in each case) were slightly above the average rates from these causes in this class, and the death rates from diseases of the digestive system and of the urinary system were considerably below the average rates from these causes in this class of occupations.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among plumbers and gas and steam fitters:

	United	Regis-	REGIST	tration si	ATION STATES. Registration		Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	52.04	48. 10	28.67	19.08	178.47	94.83	85.11
Malarial fever	15.84	10.13	10.75	11.45		8.62	63.83
Rheumatism	11.31	12.66	10.75	11.45		17.24	
Dropsy	2. 26	2.53	3.58	3.82			
Heart disease	88.24	88.61	71.68	68. 70	117.65	129.31	85. 11
Consumption	282.81	296, 21	336.92	343.51	235. 29	198. 28	170.21
Diabetes	2.26	2.53	<i></i>			8. 62	
Diseases of the nervous system	83.71	83. 54	68.10	72.52		120.69	85. 11
Diseases of the respiratory system	174. 21	179.75	193.55	194.66	176.47	146. 55	127.66
Diseases of the liver	9.05	7.59	7.17	7.63		8.62	21. 28
Ascites							
Other diseases of the digestive system	22, 62	25. 32	25.09	26.72		25. 86	
Bright's disease	36. 20	35.44	43.01	41.98	58. 82	17. 24	42.55
Other diseases of the urinary system	22.62	25.32	35.84	38.17			
Diseases of the bones and joints							
Burns and scalds	4.52	5.06				17.24	
Injuries by machinery							
Suicide	6. 79	7.59	10.75	7.63	58.82		
Other accidents and injuries	67.87	60.76	35.84	38. 17		120.64	127.66

It will be seen from the preceding table that in the United States the greatest proportions of deaths among plumbers and gas and steam fitters were due to consumption (282.81), diseases of the respiratory system (174.21), and heart disease (88.24), being greater in each case than the average proportion in this class.

The proportion of deaths of plumbers and gas and steam fitters due to diseases of the nervous system (83.71) was less than the average proportion in this class (104.23).

The proportions of deaths due to typhoid fever (52.04), malarial fever (15.84), and rheumatism (11.31), were greater than the corresponding proportions in this class, and the proportion due to suicide (6.79) was less than half the average proportion in this class (14.38).

TAILORS.

The total number of tailors reported in the United States was 123,516, being 3.68 per cent of the whole number of males engaged in manufactures and mechanical industries. The number of deaths of tailors was 1,801, or 4.92 per cent of the total deaths among males engaged in occupations of this class.

In the registration area the number of tailors reported was 94,638, being 4.79 per cent of the whole number of males engaged in occupations of this class. The corresponding number of deaths was 1,343, or 5.97 per cent of the total deaths of males in occupations of this class, and the death rate was 14.19 per 1,000.

The following table shows, for the registration states, the number of tailors living at the end of the census year, and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.		i
Population	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	53, 017	12, 688	24,730	11, 959	3,001
Per cent at each age		23, 93	46.65	22.56	5.366
Deaths	872	- 153	212	336	271
Per cent at each age		6.08	*24.31	38.53	31.708
Death rate per 1,000 population		4.18	8.57	28.17	90.30
Average rate in this class		. 5.02	9.18	20.13	77.67

This table shows that in the registration states the death rate of tailors was less than the average rates in this class in each age group under 45 years, but that in the age groups above 45 years the death rates of tailors were considerably higher than the average rates in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of tailors from each of certain specified causes per 100,000 living:

	Regis-	RIGIS	rration st	ATES.	Regis- tration
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever		22. 63	24.39		48.05

Injuries by machinery	1				
Suicide		24.52	24, 39	26, 25	48.05
Other accidents and injuries.	l i	60.36	63.00	26.25	48.05
	1				

It will be seen from this table that the highest death rate of tailors in the registration states was from consumption, being 333.85 per 100,000, which was slightly higher than the average rate from this cause in this class. The death rates from all other specified causes excepting typhoid fever, accidents and injuries other than

burns and scalds, injuries by machinery, and suicide were all above the average rates in this class, the greatest excess occurring in diseases of the digestive system and diseases of the urinary system.

The death rate of tailors from typhoid fever in the registration states (22.63) was below the average rate in this class from this cause (40.07), but was above the average rate (47.89) in the registration cities in the nonregistration states (48.05).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among tailors:

CAUSE OF DEATH.	United	Regis-	REGIS	REGISTRATION STATES.			Remain- der
CAUSE OF DEATH,	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fover	26. 10	23. 83	13.76	15. 29		42.46	32.75
Malarial fover		5.96	6.88	7.64		4. 25	4. 37
Rheumatism	6.66	7.45	5. 73	6.37		10.62	4.37
Dropsy	13.88	6.70	3.44	3.82		12.74	34.93
Heart disease	87.17	89.35	91.74	89.17	114.94	84.93	80. 79
Consumption	189. 89	199.55	202.98	211.46	126.44	193. 21	161.57
Diabetes	5.00	4.47	4. 59	3. 82	11.49	4. 25	6, 55
Diseases of the nervous system	105.50	109.46	107.80	101.91	160.92	112.53	93.89
Diseases of the respiratory system	154, 91	161.58	177.75	178.34	172.41	131.64	135. 37
Diseases of the liver	26, 65	26.06	22.94	25.48		31.85	28.38
Ascites	1.67	1.49	1.15		11, 49	2.12	2.18
Other diseases of the digestive system	39.98	42.44	43.58	44. 59	34, 48	40.34	32.75
Bright's disease	36.09	39.46	41.28	36.94	80.46	36.09	26.20
Other diseases of the urinary system	47.75	52.12	57.34	59.87	34.48	42.46	34.93
Diseases of the bones and joints	3.33	2.98	4.59	5.10			4.37
Burns and scalds	1.67	1.49	1. 15	1.27		2.12	2.18
Injuries by machinery							
Suicide	23.32	24.57	14.91	15. 29	11.49	42.46	19. 65
Other accidents and injuries	37.76	38.72 .	36.70	89.49	11. 49	42.46	34.93

It will be seen from this table that the greatest proportion of deaths of tailors in the United States was due to consumption (189.89), but this was less than the average proportion in this class (211.25). The proportions of deaths of tailors due to diseases of the respiratory system (154.91), diseases of the nervous system (105.50), and heart disease (87.17), and also the proportions due to diseases of the digestive system and diseases of the urinary system were greater than the average proportions from these causes in this class of occupations.

The proportion of deaths of tailors in the United States due to suicide (23.32) was much greater than the average proportion in this class (14.38).

TINNERS AND TINWARE MAKERS.

The total number of tinners and tinware makers reported in the United States was 56,623, being 1.69 per cent of the whole number of males engaged in manufacturing and mechanical industries. The number of deaths was 533, or 1.46 per cent of the total deaths among males in this class of occupations.

In the registration area the number of tinners and tinware makers reported was 34,419, being 1.74 per cent of the whole number of males in this class of occupations in the registration area. The number of deaths among these was 349, or 1.55 per cent of the total deaths of males in this class of occupations, and the death rate was 10.14 per 1,000.

The following table shows, for the registration states, the number of tinners and tinware makers living at the end of the census year, and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

		AGE.							
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over				
Population	17, 112	5, 306	8, 107	2, 992	438				
Per cent at each age Deaths	208	31. 01 29	47. 38 92	17.48 - 65	2, 56 22				
Per cent at each age Death rate per 1,000 population		13. 94 5. 47	44.23	31. 25	10.58				
Average rate in this class.		5. 02	11.35 9.18	21. 72 20. 13	50. 23 77. 67				

The preceding table shows that in the registration states the death rates of tinners and tinware makers were higher than the average rates in this class in each age group under 65 years, and that in the age group 65 years and over the death rate of tinners and tinware makers was much less than the average rate in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of tinners and tinware makers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	REGISTRATION STATES.		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	26. 15	29. 22	24.14	42.69	23. 11
Malarial fever	11.62	11.69	8.05	21.34	11.56
Rheumatism	11.62				23.11
Dropsy	5, 81	5.84		21.34	5.78
Heart disease	58.11	64.28	80.47	21.34	52.00
Consumption	302.16	374.01	410.40	277. 48	231.12
Diabetes	2.91	5.84	8.05		
Diseases of the nervous system	78.45	116.88	96.56	170.76	40.45
Diseases of the respiratory system	188.85	239, 60	273.60	149, 41	138.67
Diseases of the liver	23. 24	29. 22	24.14	42.69	17. 33
Ascites					
Other diseases of the digestive system	23.24	29. 22	24.14	42. G9	17.33
Bright's disease	52.30	70.13	96.56		34.67
Other diseases of the urinary system	26. 15	40.91	48.28	21.34	11.56
Diseases of the bones and joints					
Burns and scalds	2.91				5.78
Injuries by machinery					
Suicide	29.05	29.22	24.14	42.69	28.89
Other accidents and injuries	95.88	81.81	96.56	42.69	109.78

This table shows that the highest death rates of tinners and tinware makers in the registration states occurred from consumption (374.01), diseases of the respiratory system (239.60), and diseases of the nervous system (116.88), the latter being less than the average rate from this cause in this class, and the two former slightly above the average rates from those causes. The death rate of tinners and tinware makers from Bright's disease in the registration states (70.13) was much higher than the average rate from this cause in occupations of this class (49.06), and the death rate from suicide (29.22) was also much above the average rate from this cause in the same area (16.01).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among tinners and tinware makers:

	United	Regis-	REGIS	TRATION ST	TATES.	Regis- tration	Remain- der

Diabetes	3.75	2.87	4.81	6.17			5.43
Diseases of the nervous system		77.36	96, 15	74.07	- 173.91	49.65	76.09
Diseases of the respiratory system	189.49	186. 25	197.12	209.88	152.17	170.21	195.65
Diseases of the liver	16.89	22, 92	24.04	18.52	43.48	21.28	5.43
Ascites							
Other diseases of the digestive system	30.02	22.92	24.04	18.52	43.48	21.28	43.48
Bright's disease	39.40	51.58	57.69	74.07		42.55	16.30
Other diseases of the urinary system	20,64	25.79	33.65	37.04	21.74	14.18	10.87
Diseases of the bones and joints							
Burns and scalds	1.88	2.87				7.09	
Injuries by machinery	1.88						5.43
Suicide	26. 27	28.65	24.04	18.52	43.48	35.46	21.74
Other accidents and injuries	99.44	94. 56	67. 31	74.07	43.48	134.75	108.70

It will be seen from the preceding table that the greatest proportion of deaths among tinners and tinware makers in the United States was due to consumption (260.79), being higher than the average proportion in this class (211.25). The proportion of deaths of tinners and tinware makers due to diseases of the respiratory system (189.49) was also above the average in this class (154.30).

The proportion of deaths of tinners and tinware makers due to suicide (26.27) was much greater than the average proportion in this class (14.38) and was greatest of all in the registration cities in the nonregistration states (35.46).

OTHER OCCUPATIONS IN THE MANUFACTURING AND MECHANICAL INDUSTRY CLASS.

ARTIFICIAL FLOWER AND PAPER BOX MAKERS.

The number of male artificial flower and paper box makers reported as living in the registration states was 4,079, the number of deaths among the same during the year being 44, and the death rate 10.79 per 1,000. By age periods the death rates per 1,000 of population were as follows: age 15 to 25, 2.83; age 25 to 45, 14.52; age 45 to 65, 29.08; age 65 years and over, 52.63.

BOOKBINDERS.

The number of bookbinders reported as living in the registration states was 5,999. The number of deaths of bookbinders in this area during the census year was 87, the death rate being 14.50 per 1,000. By age periods the death rates per 1,000 of population were as follows: age 15 to 25 years, 4.91; age 25 to 45 years, 16.67; age 45 to 65 years, 13.76; age 65 years and over, 101.06.

BRASS FOUNDERS AND COPPERSMITHS.

The number of brass founders and coppersmiths reported as living in the registration states was 12,005; the number of deaths among these during the year was 111, the death rates being 9.25 per 1,000. By age periods the death rates per 1,000 of population were as follows: age 15 to 25 years, 6.56; age 25 to 45 years, 7.83; age 45 to 65 years, 15.61; age 65 years and over, 52.88.

BRICK AND TILE MAKERS AND TERRA COTTA WORKERS.

The number of brick and tile makers and terra cotta workers reported as living in the registration states was 19,379. The number of deaths among these during the year was 37, the death rate per 1,000 being 1.91. Of the 19,379 reported 6,890 were between 15 and 25 years of age, the corresponding number of deaths being 2, and the death rate 0.29 per 1,000. In the age group from 25 to 45 there were reported 9,365 as living, with 16 deaths, and a death rate of 1.71 per 1,000. At 45 to 65 years the number living was 2,170, with 12 deaths, and a death rate of 5.53 per 1,000, and at 65 years and over the number living was 226, the deaths at this age being 7, and the death rate 30.97 per 1,000. It is evident that these numbers do not give correct death rates for persons engaged in these occupations, and it is probable that the physicians in reporting deaths of such people have classed them as common laborers.

CLOCK AND WATCH MAKERS AND REPAIRERS, JEWELERS, AND OPTICIANS.

The number of males reported as engaged in these pursuits in the registration states was 8,603, and the number of deaths in the same area was 307, giving a death rate of 35.69 per 1,000. By age groups the death rates per 1,000 of population were as follows: age 15 to 25 years, 17.55; age 25 to 45 years, 31.56; age 45 to 65 years, 48.65; age 65 years and over, 148.88. These rates indicate some error in the classification of occupations, as they are all too high for persons engaged in occupations of this character.

GLASS BLOWERS AND GLASS WORKERS.

The number of glass blowers and glass workers reported in the registration states was 9,499, and the number of deaths among the same as 90, giving a death rate of 9.47 per 1,000. By age groups the death rates per 1,000 of population were as follows: age 15 to 25 years, 5.27; age 25 to 45 years, 10.35; age 45 to 65 years, 17.61; age 65 years and over, 94.12.

LEATHER CURRIERS, DRESSERS, FINISHERS, AND TANNERS.

The number of leather curriers, dressers, finishers, and tanners reported as living in the registration states was 20,178. The number of deaths among these during the year was 207, giving a death rate of 10.26 per 1,000. By age groups the death rates per 1,000 of population were as follows: age 15 to 25 years, 4.07; age 25 to 45 years. 6.70; age 45 to 65 years, 17.25; age 65 years and over, 69.63.

PAPER MILL OPERATIVES.

The number of paper mill operatives reported as living in the registration states was 11,209, and the number of deaths among the same during the year was 79, giving a death rate of 7.05 per 1,000. By age groups the death rates per 1,000 of population were as follows: age 15 to 25 years, 4.95; age 25 to 45 years, 4.32; age 45 to 65 years, 12.20; age 65 years and over, 96.97.

PHOTOGRAPHERS.

The number of photographers reported as living in the registration states was 4,536, and the number of deaths of photographers in the same area during the year was 52, giving a death rate of 11.46 per 1,000. By age groups the death rates per 1,000 of population were as follows: age 15 to 25 years, 7.76; age 25 to 45 years, 6.96; age 45 to 65 years, 23.86; age 65 years and over, 46.30.

POTTERS.

The number of potters reported as living in the registration states was 4,169. The number of deaths of potters in the same area during the year was 41, the death rate per 1,000 of population being 9.83. By age groups the death rates per 1,000 of population were as follows: age 15 to 25 years, 6.03; age 25 to 45 years, 8.73; age 45 to 65 years, 17.01; age 65 years and over, 79.37.

RUBBER FACTORY OPERATIVES.

The number of rubber factory operatives reported as living in the registration states was 8,858, and the number of deaths among the same during the year was 56, giving a death rate of 6.32 per 1,000. By age groups the death rates per 1,000 of population were as follows: age 15 to 25 years, 3.48; age 25 to 45 years, 5.75; age 45 to 65 years, 11.82; age 65 years and over, 48.39.

CLASS H-AGRICULTURE, TRANSPORTATION, AND OTHER OUTDOOR OCCUPATIONS.

The number of males engaged in occupations included in this class in the United States was 9,305,717, being 52.38 per cent of the whole number in all of the selected occupations. The number of deaths of males in this class of occupations was 90,856, or 48.25 per cent of the total deaths of males in all selected occupations.

In the registration area the number of males reported as engaged in this class of occupations was 1,274,702, being 21.94 per cent of the whole number in all selected occupations. The number of deaths among these was 15,195, or 21.30 per cent of the total deaths in all selected occupations, and the death rate was 11.92 per 1,000.

The following table shows, for the registration states, the number of males engaged in agriculture, transportation, and other outdoor occupations, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

-		. AGE.							
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.				
Population	989, 930	218, 839	407, 342	255, 089	95, 662				
Per cent at each age	12, 005	22,10 903	41.15 2,395	25.77 2,944	9, 66 5, 674				
Per cent at each age		7. 52	19.95	24.52	47.26				
Death rate per 1,000 population		4.13 5.58	5.88 9.29	11.54 18.43	59.31 70.09				
		1	3		1				

This table shows that in the registration states 22 per cent of the males engaged in agriculture, transportation, and other outdoor occupations were between 15 and 25 years. The death rate of this class in this age group (4.13) was less than the average rate of all classes (5.58).

In the age group 25 to 45 years the percentage of population reported was 41.15. The death rate in this class at this age (5.88) was much less than the average rate at this age in all classes (9.29).

In the age group 45 to 65 years the percentage of the population in this class was 25.77. The death rate of this class in this age group (11.54) was much lower than the average rate of all classes in this age group (18.43).

In the age group 65 years and over the percentage of the population reported was 9.66, and the death rate at this age (59.31) was less than the average rate in all classes (70.09).

The following table shows, for the registration states, the death rate at all ages and in each of four age groups, of males engaged in agriculture, transportation, and other outdoor occupations, and in each specified occupation of this class per 1,000 of corresponding population:

			AGE.		
occupations.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Class H.	12.13	4. 13	5. 88	11.54	59.31
Boatmen and canalmen	20. 11	8.46	15. 31	30, 59	95. 10
Draymen, hackmen, teamsters, drivers, etc	12, 12	6.46	11.07	19. 39	63. 23
Farmers, planters, overseers, and farm laborers	11.93	2.32	3.33	9. 35	57. 89
Fishermen and oystermen	7.43	3.18	5.14	9.80	38. 87
Gardeners, florists, nurscrymen, and vine growers	14.75	4.98	5.87	16. 65	53. 69
Livery stable keepers and hostlers	12.00	6. 20	9. 20	20. 91	59. 87
Lumbermen and raftsmen	13.11	3.04	7.96	17.39	81. 25
Miners	13, 08	4.52	10.07	21.56	101.56
Pilots	15.00		5.78	11.74	119.27
Quarrymen	5. 25	3, 18	3.14	11.05	33.83
Sailors	39, 71	25. 91	22. 29	39.64	200.89
Steam railroad employés	8.99	9, 01	7. 34	11. 22	37.91
Stock raisers, herders, and drovers	19.44	11.05	8. 68	23.49	122. 81
Telegraph and telephone operators	9, 32	7. 50	11. 30	7. 63	34.48
Telegraph and telephone linemen and electric light men	Б. 33	1. 88	7. 27	10. 10	

It will be seen from this table that in the registration states the average death rate of males in this class of occupations at 15 to 25 years was 4.13 per 1,000. Of the principal occupations the death rates in this age group were above the average among sailors (25.91), steam railroad employés (9.01), and draymen, hackmen, teamsters, etc. (6.46), and were below the average among farmers and farm laborers (2.32), fishermen and oystermen (3.18), and quarrymen (3.18).

In the age group 25 to 45 years the average death rate in this class was 5.88 per 1,000. Of the principal occupations the death rate was above the average among sailors (22.29), draymen, teamsters, etc. (11.07), and livery stable keepers and hostlers (9.20), and below the average among quarrymen (3.14), farmers and farm laborers (3.33), and fishermen and oystermen (5.14).

In the age group 45 to 65 years the average death rate in this class was 11.54 per 1,000. Of the principal occupations the death rate in this age group was above the average among sailors (39.64), livery stable keepers and hostlers (20.91), and draymen, hackmen, teamsters, etc. (19.39), and was below the average among farmers (9.35), fishermen and oystermen (9.80), and quarrymen (11.05).

In the age group 65 years and over the average death rate in this class was 59.31 per 1,000, and of the principal occupations the death rate was above the average among sailors (200.89)—the number of these being small—draymen, hackmen, teamsters, etc. (63.23), and livery stable keepers and hostlers (59.87), and were below the average among quarrymen (33.83), steam railroad employés (37.91), fishermen and oystermen (38.87), and farmers (57.89).

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in agriculture, transportation, and other outdoor occupations, and in each specified occupation of this class, per 1,000 males in each occupation:

,		REGIS	fration si	Regis- tration	
OCCUPATIONS.	Regis- tration area.	Total.	Cities.	Rural.	cities in other states.
Class H	11.92	12.13	17. 39	10.49	11.20
Boatmen and canalmen	20.93	20.11	29.73	11.69	24.76
Draymen, hackmen, teamsters, drivers, etc	10.04	12.12	14.02	5.74	7.69
Farmers planters, overseers, and farm laborers	1	11.93	35. 29	10.83	29.29
Fishermen and oystermen	8.30	7.43	10.51	5.19	14.61
Gardeners, florists, nurserymen, and vine growers		14.75	19. 79	9.18	12.61
Livery stable keepers and hostlers		12.00	14.14	7.54	7.26
Lumbermen and raftsmen	11.53	13.11	19.31	11. 35	10.09
Miners	17.59	13.08	45.28	9. 95	20.68
Pilots	14.92	15.00	19.18	4.27	14.78
Quarrymen	5.28	5. 25	13.32	3.10	5.48
Sailors		39. 71	38.69	41.28	26.34
Steam railroad employés	8. 26	8.99	10.44	6.62	7.54
Stock raisers, herders, and drovers		19.44	23.55	16.01	9.03
Telegraph and telephone operators	7. 15	9. 32	10.13	7.94	4.80
Telegraph and telephone linemen and electric light men	5. 22	5.33	5.87	1.75	5.07

It will be seen from this table that in the registration states the death rate of males in all occupations in this class was 12.13 per 1,000. In the cities it was higher, being 17.39 per 1,000, and in the rural districts it was lower, being 10.49 per 1,000.

In the cities in the registration states the death rates of draymen, hackmen, teamsters, etc. (14.02), livery stable keepers and hostlers (14.14), steam railroad employés (10.44), and telegraph and telephone operators (10.13), were all less than the average rates for this class, and in the rural districts the death rates of farmers (10.83), lumbermen (11.35), and stock raisers (16.01) were above the average in this class, while the death rates of gardeners, florists, nurserymen, and vine growers (9.18), miners (9.95), and quarrymen (3.10) were below the average rate for this class in the rural districts.

The following table shows, for the registration area and some of its subdivisions, the death rate of males engaged in agriculture, transportation, and other outdoor occupations, from each of certain specified causes, per 100,000 living:

	Regis-	REGIST	ATES.	Regis- tration	
CAUSE OF DEATH.	tration area.	tration		Rural.	cities in other states.
Typhoid fever	33.42	28. 59	52.87	21.05	50.22
Malarial fever	11.45	9.50	13. 22	8.34	18. 26
Rhenmatism	8.00	8.18	8.10	8. 21	7.38
Dropsy	11.30	12.83	4. 26	15. 49	5.97
Heart disease	121.52	131.12	156.90	123.12	88.14
Consumption	168.04	161.83	329, 15	109.88	189.63
Diabetes	6.35	7.27	5.54	7.81	3.16
Diseases of the nervous system	142.94	157.89	192.72	147.08	90.95
Diseases of the respiratory system	181.38	192.13	277.56	165.61	143.97
Diseases of the liver	19.38	19.09	26.43	16.81	20.37
Ascites	0.55	0.61	0.43	0.66	0.35
Other diseases of the digestive system	31.46	32.02	39, 23	29.79	29.50
Bright's disease	36.32	39.90	52.87	35.88	23.88
Other diseases of the urinary system	45.42	40.98	68. 22	43.95	30, 55
Diseases of the bones and joints	2.12	2.02	3.41	1.59	2,46
Burns and scalds		0.61	1.71	0. 26	2.81
Injuries by machinery	0.24	0.30		0.40	
Suicide		11.31	12.36	10.99	14.40
Other accidents and injuries		112.03	237.49	73.07	219.12

It will be seen from the preceding table that the death rates of males engaged in agriculture, transportation, and other outdoor occupations in the registration states were above the average death rates of all classes from dropsy (class total, 12.83; all classes, 7.82), diabetes (class total, 7.27; all classes, 6.99), and accidents and injuries other than burns and scalds, injuries by machinery, and suicide (class total, 112.03; all classes, 100.59). The death rates of males in this class from all other causes specified were lower than the corresponding rates for males in all classes of occupations, being much lower in case of consumption (class total, 161.83; all classes, 279.66), and diseases of the respiratory system (class total, 192.13; all classes, 237.27). The death rates of males in this class from suicide were lower in every area than the corresponding rates for males in all classes of occupations.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among males engaged in agriculture, transportation, and other outdoor occupations:

CAUSE OF DEARH.	United	Regis-	REGIS	TRATION ST	ATES.	Regis- tration	Remain- der
CAUSE OF DEARH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.

Malarial fover	30.74	9.61	7, 83	7.460	7.95	16.30	34.198
Rheumatism	9.43	6.71	6.75	4.66	7.82	6, 58	9,:98
Dropsy	21.88	9.48	10.58	2.45	14.76	5.38	24. 37
Heart disease	76.14	101.94	108.12	90.22	117. 84	78.:68	7.0.198
Consumption	137.54	140.97	133.44	189.26	104.72	169.28	136.85
Diabetes	5.92	5.33	6.00	3.19	7.44	2.482	°6∴04
Diseases of the nervous system	87.51	119.91	130.20	110.81	140.17	81. 19	81.01
Diseases of the respiratory system	175. 65	152, 16	158. 4 3	159.60	157.83	128.53	180.37
Diseases of the liver	15. 20	16. 26	15.74	15. 20	16.02	18.18	14.99
Ascites	1.82	0.46	0.50	·0.·25	0.63	0.31	2.09
Other diseases of the digestive system	32.09	26.39	26, 41	22, 55	28.39	26.33	33.,24
Bright's disease	23.72	30.47	32.90	30.40	84.19	21.32	.22.36
Other diseases of the urinary system	.28. 45	38. 10	40.98	39. 23	4189	27.27	26.51
Diseases of the bones and joints	2. 97	1.78	1.67	196	1.51	2.19	3. 21
Burns and scalds	1.40	0.92	0.50	0.'98	0.25	2.51	1.40
Injuries by machinery	0.84	0.20	°0. 25		0.38		0.96
Suicide	9, 91	1007	9.33	7.11	10.47	12.85	9.87
Other accidents and injuries	102.51	114.05	92.38	136.55	69, 64	195. 61	100.20

It will be seen from this table that in the United States as a whole the greatest proportion of deaths among males engaged in agriculture, transportation, and other outdoor occupations was due to diseases of the respiratory system (175.65), being greater than the average proportion due to this cause in all classes of occupations (167.36). The proportions of deaths of males in this class of occupations due to consumption (137.54), diseases of the nervous system (87.51), and heart disease (76.14) were all less than the corresponding proportions among males in all classes of occupations. The proportions of deaths due to typhoid fever (50.19), malarial fever (30.74), rheumatism (9.43), dropsy (21.88), diseases of the digestive system other than diseases of the liver, and ascites (32.09), and diseases of the urinary system, excluding Bright's disease (28.45), were above the average proportions in all classes of occupations.

In the nonregistration area, which includes the greatest proportion of males in occupations of an agricultural character in this class, the proportions of deaths due to heart disease (70.96), consumption (136.85), and diseases of the nervous system (81.01) were less than in the United States as a whole, but the proportions from other causes were generally somewhat greater than in the United States as a whole.

DRAYMEN, HACKMEN, TEAMSTERS, DRIVERS, ETC.

The total number of draymen, hackmen, teamsters, drivers, etc., reported in the United States was 368,265, being 3.95 per cent of the whole number of males engaged in occupations of this class. The number of deaths was 3,059, or 3.37 per cent of the total deaths of males in occupations of this class.

In the registration area the number of draymen, hackmen, teamsters, drivers, etc., was 211,950, being 16.62 per cent of the whole number of males in occupations of this class. The number of deaths among these was 2,129, or 14.01 per cent of the total deaths of males in this class of occupations in the registration area, and the death rate was 10.04 per 1,000.

The following table shows, for the registration states, the number of draymen, hackmen, teamsters, etc., living at the end of the census year, and the number of deaths during the census year, at all ages and in each age group, with the percentages in each age group, and the death rates per 1,000 living:

		AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population	112, 525	20,782	59, 325	19, 238	2,056			
Per cent at each ago	1, 364	27.36 199	52.72 657	17.10 373	1.83			
Per cent at each age		14.59 6.47	48.17 11.07	27.35 19.39	9. 53 63. 23			
Average rate in this class		4.13	5.88	11.54	59.31			

This table shows that in the registration states the death rate of draymen, hackmen, teamsters, etc., was higher in each age group than the average rate in occupations of this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of draymen, hackmen, teamsters, etc., from each of certain specified causes, per 100,000 living:

CONTINUE OF THE ATT		REGIST	Regis- tration		
CAUSE OF DEATH.	Regis- tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	47.18	51, 54	58.80	27.14	42. 24
Malarial fever	11.32	13.93	11.53	19:39	9.05
Rheumatism	8.02	8.00	9, 22	3.88	8.05
Dropsy	3.77	2.67	1.15	7.75	5.03
Heart disease	76.43	85.31	98, 00	42.65	66.38
Consumption	236.38	303.93	363.18	104.69	159.92
Diabetes	2,36	2.67	3.46		2.01
Diseases of the nervous system	78.32	94.20	107.22	50.41	60.35
Discases of the respiratory system		237.28	281, 32	89.18	115.67
Diseases of the liver		21.33	24.21	11.63	16.09
Ascites					
Other diseases of the digestive system	29, 25	34.66	36.89	27.14	23, 13

Diseases of the bones and joints	2.83	3.55	4.61		2.01
Burns and scalds		0.89	1.15		3.02
Injuries by machinery]			
Suicide	8.49	8.89	8.07	11.63	8.05
Other accidents and injuries	117.01	122.64	139.51	65.91	10.64

It will be seen from this table that the most prominent causes producing death rates above the average for this class among draymen, hackmen, teamsters, etc., were consumption (draymen, hackmen, teamsters, etc., 303.93; class total, 161.83), and diseases of the respiratory system (draymen, hackmen, teamsters, etc., 237.28; class total, 192.13).

The death rate of draymen, hackmen, teamsters, etc., from diseases of the nervous system in the registration states (94.20) was below the average rate from this cause in this class (157.89), as was also the case with the rate from heart disease (draymen, hackmen, teamsters, etc., 85.31; class total, 131.12).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes, per 1,000 deaths from all causes among draymen, hackmen, teamsters, etc.

	United	Regis-	REGIS	TRATION S	TATES.	Regis- tration	Remain- der	
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.

Other diseases of the digestive system	27.46	29. 12	28.59	28, 32	47.30	30.07	23.66	
Bright's disease	25.17	30, 53	37.39	36.18	47.30	18.30	12.90	
Other diseases of the urinary system	28. 11	33.82	89. 59	41.94	20. 27	23, 53	15.05	
Discases of the bones and joints	1.96	2, 82	2.93	3.29		2, 61		
Burns and scalds	1.63	1.88	0.73	0.82		3.92	1.08	
Injuries by machinery	0.98						3, 23	
Suicide	9. 15	8.45	7.83	5.76	20. 27	10.46	10.75	
Other accidents and injuries	135. 01	116.49	101.17	99.51	114.86	143.79	177.42	

This table shows that in the United States the greatest proportion of deaths of draymen, hackmen, teamsters, etc., was due to consumption (211.83), being greater than the average proportion in this class (137.54). In the registration area the proportion due to consumption was greater (235.32), and was greatest of all in the cities in the registration states (259.05).

The proportions of deaths of draymen, hackmen, teamsters, etc., due to diseases of the respiratory system (174.89) and heart disease (75.19) were slightly below the average proportions in this class in the United States, but in the registration area the proportion of deaths due to diseases of the respiratory system was greater than the average in this class, while the proportion due to heart disease was considerably less than the proportion in this class. The proportion of deaths due to accidents and injuries other than suicide was greater than the average proportion in this class.

FARMERS, PLANTERS, OVERSEERS, AND FARM LABORERS.

The number of farmers, planters, overseers, and farm laborers reported in the United States was 7,612,717, being 81.80 per cent of the whole number of males in occupations of this class. The number of deaths was 75,278, or 82.85 per cent of the total deaths of males in this class of occupations.

In the registration area the number of farmers, planters, overseers, and farm laborers reported was 689,753, being 54.11 per cent of the whole number of males engaged in this class of occupations in the registration area. The corresponding number of deaths was 8,672, or 57.07 per cent of the total deaths of males in occupations of this class, and the death rate was 12.57 per 1,000.

The following table shows, for the registration states, the number of farmers, planters, overseers, and farm laborers, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

POPULATION, DEATHS, AND DEATH RATES.	AGE.				
	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population.	664, 354	140, 386	237, 497	191, 452	85, 717
Per cent at-each age. Deaths	7, 928	21.13 325	35.75 790	28.82 1,791	12.90 4,962
Per cent at each age.		4. 10	9.96	22. 59	62. 59
Death rate per 1,000 population.		2.32	3. 33	9, 35	57.89
Average rate in this class		4. 13	5.88	11.54	59. 31

The preceding table shows that the age distribution of farmers, planters, overseers, and farm laborers in the registration states was more uniform than that in any other occupation.

The number of farmers, planters, overseers, and farm laborers reported between 15 and 25 years of age was 140,386, being 21.13 per cent of the number at all ages. The death rate of all farmers, planters, overseers, and farm laborers in this age group (2.32) was much less than the average rate in this class of occupations (14.13).

In the age group 25 to 45 years there were reported 237,497 farmers, planters, overseers, and farm laborers, the percentage in this age group being 35.75. The death rate in this age group was 3.33 per 1,000, which was much less than the average rate in this class at the same age (5.88 per 1,000).

In the age group 45 to 65 years there were reported 191,452 farmers, planters, overseers, and farm laborers, being 28.82 per cent of the number at all ages, and the death rate of these was 9.35 per 1,000, which was lower than the average rate in this age group of persons in this class of occupations (11.54).

At 65 years of age and over there were reported 85,717 farmers, planters, overseers, and farm laborers, the percentage in this age group of the total number reported being 12.90. The death rate of farmers, planters, overseers, and farm laborers in this age group was 57.89, which was somewhat less than the average in this class (59.31).

The following table shows, for the registration area and some of its subdivisions, the death rate of farmers, planters, overseers, and farm laborers, from each of certain specified causes, per 100,000 living:

·	Regis-	REGIS	TRATION ST	RATION STATES.			
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states		
Typhoid fever	24. 65	21.07	46. 56	19. 86	118.11		
Malarial fever	10.87	9.03	36.58	7.73	59.06		
Rheumatism	8.99	8.88	16.63	8. 51	11.81		
Dropsy	17.69	17.16	16.63	17.18	31.50		
Heart disease	150.49	146.16	452.31	131.64	263.79		
Consumption	128.02	117.71	359.19	106, 26	397.65		
Diabetes	8.99	8.88	19.95	8.36	11.81		
Diseases of the nervous system	183.98	178.07	645. 20	155.92	338.60		
Diseases of the respiratory system	192.68	187. 10	452.31	174.53	338.60		
Diseases of the liver	20.44	18.82	49.89	17. 34	62, 99		
Ascites	0.58	0.60		0.63			
Other diseases of the digestive system	37.11	35. 22	103.10	32.00	86.62		
Bright's disease	41.90	40.04	86.47	37.84	90.55		
Other diseases of the urinary system	57.12	54.19	149.66	49.66	133.86		
Diseases of the bones and joints	2.17	1.65		1.73	15.75		
Burns and scalds	0.72	0.60	6. G5	0.32	3.94		
Injuries by machinery	0.43	0.45		0.47			
Suicide	12.76	12.04	29.93	11.19	81.50		
Other accidents and injuries	66. 69	59.00	196. 22	52.50	267, 73		

This table shows that the death rate of farmers, planters, overseers, and farm laborers in the registration states from consumption (117.71) was below the average rate from this cause (161.83), and that the rate from diseases of the respiratory system (187.10) was also slightly lower than the average rate from this cause in this class (192.13). The death rate of farmers, planters, overseers, and farm laborers from heart disease (146.16) was somewhat higher than the average rate from this cause in this class of occupations (131.12). The death rate of farmers, planters, and overseers from accidents and injuries other than burns and scalds, injuries by machinery, and suicide (59.00) was much less than the average rate from this cause in this class (112.03), and the death rate from suicide (12.04) was about the same as the average rate from this cause in this class (11.31).

The apparently excessive death rate from all causes in the registration cities in other states is probably due to the fact that the number of farmers, planters, overseers, and farm laborers in these cities was small, and consisted mainly of those who were of more advanced age and who had retired either permanently or temporarily from active work in this line but still report their occupation as such.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among farmers, planters, overseers, and farm laborers:

	United	Regis-	REGIS	TRATION ST	ATES.	Regis- tration	Remain-
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	50.09	19.60	17.66	13. 20	18. 35	40.32	54.06
Malarial fever	33.37	8.65	7.57	10.37	7.14	20, 16	36.59
Rheumatism	10.14	7.15	7.44	4.71	7, 86	4.03	10.52
Dropsy	24.27	14.07	1438	4.71	15. 87	10.75	25.60
Heart disease	78.62	119.70	122.48	128.18	121.60	90, 05	73.27
Consumption	135. 21	101.82	98. 64	101.79	98.15	135.75	139.55
Diabetes	6.56	7. 15	7.44	5.66	7.72	4.03	6.49
Diseases of the nervous system	91.31	146.33	149. 22	182, 85	144.02	115.59	84. 15
Diseases of the respiratory system	180.60	153. 25	156.79	128.18	161. 21	115. 59	184. 16
Diseases of the liver	15.79	16.26	15.77	14.14	16.02	21.51	15.73
Ascites	2, 03	0.46	0.50		0.58		2.24
Other diseases of the digestive system	34. 25	29.52	29. 52	29, 22	29.56	29. 57	34.86
Bright's disease	24.67	33. 33	33. 55	24.51	34. 95	30.91	23.54
Other diseases of the urinary system	30.30	45.43	45. 41	42.41	45.87	45.70	28. 33
Diseases of the bones and joints	3.24	1.73	1.39		1.60	5.38	3.44
Burns and scalds	1. 21	0.58	0.50	1.89	0, 29	1.34	1. 29
Injuries by machinery	0. 93	0.35	0.38		0,44		1.01
Suicide	9, 99	10. 15	10.09	8.48	10.34	10.75	9. 97
Other accidents and injuries	69.16	53. 0 4	49.45	55. 61	48.49	91.40	71. 25

It will be seen from this table that in the United States the proportion of deaths of farmers, planters, overseers, and farm laborers due to diseases of the respiratory system (180.60) was greater than the proportion due to any other cause and was slightly greater than the average proportion in this class of occupations (175.65). The proportion of deaths of farmers, planters, overseers, and farm laborers due to consumption (135.21) was less than the average proportion in this class (137.54), and the proportion due to diseases of the nervous system (91.31) was somewhat greater than the average proportion in this class (87.51).

The proportions due to typhoid fever (50.09), and accidents and injuries other than injuries by machinery, and suicide (69.16) were less than the average proportions in this class, but in all other causes the proportions were slightly greater than the average proportions in this class in this area.

In the nonregistration area, which includes the greater number of farmers, planters, overseers, and farm laborers the proportions of deaths due to heart disease (73.27), diabetes (6.49), diseases of the nervous system (84.15), diseases of the liver (15.73), Bright's disease (23.54), and other diseases of the urinary system (28.33), and suicide (9.97) were all slightly less than the proportions due to these causes in the United States as a whole.

In the rural part of the registration states the proportions of deaths of farmers, planters, overseers, and farm laborers due to typhoid fever (18.35) and malarial fever (7.14) were very small. The proportion of deaths due to consumption in this area was much less than in the United States as a whole or in the nonregistration area, and the proportion due to diseases of the respiratory system was also less than in the United States or in the nonregistration area.

The proportion of deaths of farmers, planters, overseers, and farm laborers due to suicide was slightly greater than the average proportion due to this cause in each area.

FISHERMEN AND OYSTERMEN.

The total number of fishermen and oystermen reported in the United States was 59,899, being 0.64 per cent of the whole number of males in occupations of this class. The number of deaths was 538, or 0.59 per cent of the total deaths among males in this class of occupations.

In the registration area the number of fishermen and oystermen reported was 23,137, being 1.82 per cent of the whole number of males in occupations of this class in the registration area. The corresponding number of deaths was 192, or 1.26 per cent of the total deaths of males in this class of occupations, and the death rate was 8.30 per 1,000.

The following table shows, for the registration states, the number of fishermen and oystermen living at the end of the census year, and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.	-	
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population Per cent at each age	20, 330	3, 775 18. 57	10, 310 50, 71	4, 695 23, 09	1, 020 5, 06
Deaths Per cent at each age	151	12 7.95	53 35.10	46 30, 46	40 26, 49
Death rate per 1,000 population	.,	3.18 4.13	5.14 5.88	9,80 11.54	38, 87 59, 31

This table shows that in the registration states the death rate of fishermen and oystermen was lower in each age group than the average rate in this class of occupations.

The following table shows, for the registration area and some of its subdivisions, the death rate of fishermen and oystermen from each of certain specified causes per 100,000 living:

·	Regis-	REGIS	TRATION ST	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.

Amor acoudence with infurion	U±. Où	0±.11	30.00	20.00	142. 50

It will be seen from this table that with the single exception of diabetes the death rates of fishermen and oystermen in the registration states from all of the causes specified were lower than the average rates in this class of occupations, the degree being such as to indicate some possible error in the classification of occupations.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among fishermen and oystermen:

	United	Regis-	regis	TRATION ST	TATES.	Regis- tration	Remain- der

Suicide	3.72	5. 21				24, 39	2.89
Other accidents and injuries	150. 13	78. 13	72.85	88.89	49. 18	97,56	199.42

It will be seen from this table that in the United States the causes producing proportions of deaths of fishermen and oystermen in excess of the average proportions in this class were dropsy (fishermen and oystermen, 31.59; class total, 21.88), consumption (fishermen and oystermen, 184.01; class total, 137.54), Bright's disease (fishermen and oystermen, 24.16; class total, 23.72), other diseases of the urinary system (fishermen and oystermen, 31.60; class total, 28.45), and accidents and injuries other than burns and scalds, injuries by machinery, and suicide (fishermen and oystermen, 156.13; class total, 102.51).

The proportions of deaths of fishermen and oystermen due to typhoid fever (39.03), malarial fever (18.59), diseases of the nervous system (72.49), and diseases of the respiratory system (148.70), were all considerably less than the average proportions due to these causes in this class.

GARDENERS, FLORISTS, NURSERYMEN, AND VINE GROWERS.

The total number of gardeners, florists, nurserymen, and vine growers reported in the United States was 70,186, being 0.75 per cent of the whole number of males engaged in occupations of this class. The number of deaths was 843, or 0.93 per cent of the total deaths of males in this class of occupations.

In the registration area the number of gardeners, florists, nurserymen, and vine growers reported was 33,267, being 2.61 per cent of the whole number of males in occupations of this class in the registration area. The corresponding number of deaths was 466, or 3.07 per cent of the total deaths of males in occupations of this class, and the death rate was 14.01 per 1,000.

The following table shows, for the registration states, the number of male gardeners, florists, nurserymen, and vine growers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

POPULATION, DEATHS, AND DEATH RATES.			AGE.	, , , , , , , , , , , , , , , , , , ,						
		15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.					
Population	1,029	181	461	298	57					
Per cent at each age		17.59	44.80	28, 96	5.54					
Deaths	20	2	4	7	7					
Per cent at each age.		10.00	20.00	35.00	35. 00					
Death rate per 1,000 population		11.05	8.68	23.49	122. 81					
Average rate in this class		4. 13	5.88	11.54	59.31					

The preceding table shows that in the registration states the death rate of gardeners, florists, nurserymen, and vine growers was very much higher than the average rate in each age period, but the number of deaths was small, and the death rates have no particular significance.

The following table shows, for the registration area and some of its subdivisions, the death rate of gardeners, florists, nurserymen, and vine growers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	rration s	TATES.	Regis- tration
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	45.09	32.16	35.02	29.01	69.55
Malarial fever	15.03	13.78	8.76	19.34	17.39
Rheumatism	9.02	9.19	17.51		8, 69
Dropsy	9.02	9.19		19.34	8.69
Heart disease	156.31	174.60	210.14	135.36	121.71
Consumption	231.46	234.33	367.74	87.02	226.03
Diabetes	3.01				8.69
Diseases of the nervous system	156.31	206.76	253.92	154.69	60.85
Diseases of the respiratory system	210.42	234.33	350.23	106.35	165.17
Diseases of the liver	27.05	18.38	35.02		43.47
Ascites	6.01	9.19	8.76	9. 67	
Other diseases of the digestive system.	27.05	27.57	35.02	19.34	26.08
Bright's disease	51.,10	50.54	70.05	29.01	52.16
Other diseases of the urinary system	33.07	36.76	61, 29	9.67	26.08
Diseases of the bones and joints			 	[
Burns and scalds			- <i></i>		
Injuries by machinery					
Suicide	15.03	22.97	8.76	38. 67	
Other accidents and injuries	57.11	59.73	87.56	29.01	52.16

This table shows that the highest death rates of gardeners, florists, nurserymen, and vine growers in the registration states occurred from consumption and from diseases of the respiratory system, being 234.33 for each, and being higher than the average rates from these causes in all occupations in this class.

The death rate of gardeners, florists, nurserymen, and vine growers from suicide (22.97) was about twice as great as the average rate from this cause in this class of occupations (11.31).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among gardeners, florists, nurserymen, and vine growers:

		Regis-	REGIST	TRATION SI	ATES.	Regis- tration	Remain-
CAUSE OF DEATH.	United States.	tration area.	Total.	Cities.	in ot	cities in other states.	of the United States.
Typhoid fever	37.95	· 32. 19	21. 81	17.70	31.58	55. 17	45.09
Malarial fever	15.42	10.73	9.35	4.42	21.05	13, 79	21.22
Rheumatism	8.30	6.44	6.23	8.85		6.90	10, 61
Dropsy	20.17	6.44	6.23		21.05	6, 90	37.14
Heart disease	116.25	111.59	118.38	106.19	147.37	96. 55	122.02
Consumption	137.60	165. 24	158.88	185.84	94,74	179.31	103.45
Diabetes	2.37	2.15				6.90	2.65
Diseases of the nervous system	90.15	111.59	140, 19	128.32	168.42	48, 28	63.66
Diseases of the respiratory system	158.96	150.21	158.88	176.99	115.79	131.03	169.76
Diseases of the liver	21.35	19.31	12.46	17.70		34, 48	23.87
Ascites	2.37	4.29	6.23	4.42	10.53		
Other diseases of the digestive system	33. 21	19.31	18.69	17.70	21.05	20,69	50.40
Bright's disease	28.47	36.48	84.27	35.40	31.58	41.38	18.57
Other diseases of the urinary system	27. 28	23.61	24.92	80.97	10.53	20.69	31.83
Diseases of the bones and joints	2.37						5.31
Burns and scalds							
Injuries by machinery							
Suicide	13.05	10.73	15.58	4.42	42.11		15, 92
Other accidents and injuries	45.08	40,77	40.50	44. 25	31.58	41.38	50.40

It will be seen from this table that in the United States the causes producing proportions of deaths among gardeners, florists, nurserymen, and vine growers in excess of the average proportions in this class of occupations were heart disease (gardeners, florists, nurserymen, and vine growers, 116.25; class total, 76.14), consumption

(gardeners, florists, nurserymen, and vine growers, 137.60; class total, 137.54), and diseases of the nervous system (gardeners, florists, nurserymen, and vine growers, 90.15; class total, 87.51).

The proportion of deaths of gardeners, florists, nurserymen, and vine growers due to diseases of the respiratory system (158.96) was less than the average proportion in this class (175.65), and the proportion due to Bright's disease (28.47) was greater than the average proportion in this class (23.72).

In the nonregistration area the proportions of deaths of gardeners, florists, nurserymen, and vine growers due to consumption (103.45) and diseases of the nervous system (63.66) were considerably less than the proportions due to these causes in the United States as a whole, but the proportions due to other causes specified were generally greater than in the United States or in the registration area.

LIVERY STABLE KEEPERS AND HOSTLERS.

The total number of livery stable keepers and hostlers reported in the United States was 80,724, being 0.87 per cent of the whole number of males in this class of occupations. The number of deaths was 654, or 0.72 per cent of the total deaths of males in occupations of this class.

In the registration area the number of livery stable keepers and hostlers reported was 39,445, being 3.09 per cent of the whole number of males in occupations of this class in this area. The corresponding number of deaths was 399, or 2.63 per cent of the total deaths of males in occupations of this class, and the death rate was 10.12 per 1,000.

The following table shows, for the registration states, the number of livery stable keepers and hostlers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.								
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.						
Population	23, 744	6, 293	11, 844	4, 735	618						
Per cent at each age		26, 50	49.88	19.94	2.60						
Deaths	285	89	109	99	37						
Per cent at each age		13.68	38. 25	34. 74	12.98						
Death rate per 1,000 population		6. 20	9, 20	20.91	59.87						
Average rate in this class		4. 13	5.88	11.54	59.31						

This table shows that in the registration states the death rate of livery stable keepers and hostlers was higher in each age group than the average rate in this class of occupations.

The following table shows, for the registration area and some of its subdivisions, the death rate of livery stable keepers and hostlers from each of certain specified causes per 100,000 living:

	Regis-	REGIS	TRATION 67	Regis- tration		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.	
Typhoid fever		46.33	56.07	26. 00	31. 85	
Malarial fever					6.37	
Rheumatism		8.42	6. 23	13.00	6.37	
Dropsy		4. 21	6. 28			
Heart disease	1	84. 23	80.99	91.00	38.21	
Consumption		857. 99	417.39	234.01	159. 23	
Diabetes		4. 21		13.00	6.37	
Diseases of the nervous system	81. 13	92. 65	119. 37	39.00	63, 69	
Diseases of the respiratory system	180.00	223. 21	286.57	91.00	114.64	
Diseases of the liver	27.89	37.90	37. 38	39.400	12.74	
Ascites				. 		
Other diseases of the digestive system	38. 03	29. 48	31.15	26,00	50.95	
Bright's disease	27.89	42.12	56.07	13.00	6.37	
Other diseases of the urinary system	22.82	33. 69	37.38	26,00	6.37	
Diseases of the bones and joints	5. 67	8.42	12.46			
Burns and scalds.	1		 	l		
Injuries by machinery	1					
Suicide		21,06	24,92	13,00	25, 48	
Other accidents and injuries.	70.98	75.81	87. 22	52.00	63.69	

It will be seen from the preceding table that the highest death rate of livery stable keepers and hostlers in the registration states occurred from consumption (357.99), being much higher than the average rate in occupations of this class in the same area (161.83). The rate from this cause was also much higher in the cities (417.39) than in the rural districts of the same states (234.01) or in the registration cities in the nonregistration states (159.23). The death rate of livery stable keepers and hostlers from heart disease (84.23) and from diseases of the nervous system (92.65) were much below the average rates from these causes in this class of occupations, and the death rate from typhoid fever (46.33) was much higher than the average rate from this cause in occupations of this class (28.59).

The death rate of livery stable keepers and hostlers from suicide (21.06) was much higher than the average rate from this cause in this class (11.31), and was higher in the registration cities in the nonregistration states (25.48) than in the cities in the registration states (24.92).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among livery stable keepers and hostlers:

	United	Regis-	regisi	tration st	ATES.	Regis- tration	Remain-
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	56.57	40.10	38.60	39.65	34. 48	43.86	82. 35
Malarial fever	9.17	2.51	<i>-</i>			8.77	19.61
Rheumatism	7, 65	7.52	7.02	4.41	17.24	8.77	7.84
Dropsy	3.06	2, 51	3.51	4.41			3.92
Heart disease		65.16	70.18	57.27	120.69	52, 63	66, 67
Consumption	241.59	275.69	298.25	.295.15	310.34	219.30	188. 24
Diabetes	6.12	5.01	3.51		17. 24	8.77	7.84
Diseases of the nervous system	82.57	80.20	77.19	83.70	51.72	87.72	86, 23
Diseases of the respiratory system	152.91	177.94	185.96	202.64	120.69	157.89	113.73
Diseases of the liver	25.79	27. 57	31.58	26, 43	51.72	17.54	23. 53
Ascites							
Other diseases of the digestive system	39. 76	37.59	24.56	22.03	34.48	70.18	43. 14
Bright's disease	30.58	27. 57	35.09	39, 65	17. 24	8.77	35.29
Other diseases of the urinary system	22.94	22.56	28.07	26.43	34.48	8.77	23.53
Diseases of the bones and joints	3.06	5.01	7.02	8.81			
Burns and scalds	1.53						. 3, 92
Injuries by machinery							
Suicide	22.94	22.56	17.54	17.62	17.24	35.09	23.53
Other accidents and injuries	9,6, 33	70.18	63.16	61.67	68. 97	87.72	13725

It will be seen from this table that the proportion of deaths of livery stable keepers and hostlers in the United States due to consumption (241.59) was much greater than the average proportion in this class (137.54), and that it was still greater in the registration states (298.25). The proportions due to diseases of the respiratory system (152.91), diseases of the nervous system (82.57), and heart disease (65.75) were less than the average proportions in this class of occupations.

The proportion of deaths of livery stable keepers and hostlers due to suicide (22.94) was more than twice the average proportion in this class (9.91).

MINERS.

The total number of miners reported in the United States was 349,244, being 3.75 per cent of the whole number of males engaged in occupations of this class. The number of deaths of miners was 3,192, or 3.51 per cent of the total deaths of males in occupations of this class.

In the registration area the number of miners reported was 14,099, being 1.11 per cent of the whole number of males in occupations of this class in this area. The corresponding number of deaths was 248, or 1.63 per cent of the total deaths of males in occupations of this class, and the death rate was 17.59 per 1,000.

The following table shows, for the registration states, the number of miners living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.		
POPULATION, DEATHS, AND DEATH RATES.		15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	5, 734	1, 547	2, 881	1, 113	128
Per cent at each age		26.98	50. 24	19. 41	2.23
Deaths	75	7	29	24	13
Per cent at each age		9. 33	88. 67	32.00	17.33
Death rate per 1,000 population		4.52	10.07	21.56	101.56
Average rate in this class		4.13	5.88	11.54	59.31

This table shows that in the registration states the death rate of miners in the age group 15 to 25 years was slightly higher than the average rate in this class of occupations, and that in each age group above 25 years the death rate of miners was nearly twice the average rate in this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of miners from each of certain specified causes per 100,000 living:

	Regis-	REGIS	registration states.			
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.	
Typhoid fover		52. 32	39370	19.14	23.91	
Malarial fever	1				11.95	
Rheumatism		17.44	196.85		11.95	
Dropsy				•••••	11.95	
Heart disease		87.20	196.85	76.54	179.32	
Consumption		104.64	393, 70	76. 54	215. 18	
Diabetes		17,44		19.14	11.95	
Diseases of the nervous system	184.41	244.16	1, 377. 95	133. 95	143.45	
Diseases of the respiratory system	333. 36	313.92	984. 25	248.76	346.68	
Diseases of the liver	21. 28	17.44		19.14	23.91	
Ascites						
Other diseases of the digestive system	49.65	34.88		38. 27	59.77	
Bright's disease	85.46	52.32	196.85	38. 27	23. 91	
Other diseases of the urinary system	49.65	17.44		19, 14	71.73	
Diseases of the bones and joints	7.09	17.44	196.85			
Burns and scalds						
Injuries by machinery						
Suicide	14.19				23. 91	
Other accidents and injuries	411.38	261.60	393.70	248.76	514.05	

It will be seen from this table that the causes producing death rates among miners in the registration states which were largely in excess of the average rates among males in this class of occupations in the same area were typhoid fever (miners, 52.32; class total, 28.59), rheumatism (miners, 17.44; class total, 8.18), diseases of the respiratory system (miners, 313.92; class total, 192.13), Bright's disease (miners, 52.32; class total, 39.90), diseases of the bones and joints (miners, 17.44; class total, 2.02), and accidents and injuries other than burns and scalds, injuries by machinery, and suicide (miners, 261.60; class total, 112.03).

The death rate of miners in the registration states from heart disease (87.20) was much less than the average rate in this class (131.12), as was also the rate from consumption (104.64), the average rate in this class being 161.83.

The death rates specified for miners in the cities in the registration states and the registration cities in the nonregistration states were based upon a very small number of population, and the rates in these areas are of no significance.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among miners:

	United	Regis-	REGIS	TRATION ST	ATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.		Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	60.46	20.16	40.00	86.96	19. 23	11.56	63.86
Malarial fever	14.41	4.03				5.78	15.29
Rheumatism	4.39	8.06	13.33	43.48		5.78	4.08
Dropsy	14.72	4.03				5.78	15.63
Heart disease	47.93	80.65	66.67	43.48	76, 92	86.71	45.18
Consumption	92.11	96.77	80.00	86.96	76. 92	104.05	91.71
Diabetes	1.88	8.06	13.33		19. 23	5.78	1.36
Diseases of the nervous system	53. 26	104.84	186.67	304.35	134.62	69.36	48. 91
Diseases of the respiratory system	199. 25	189.52	240.00	217.39	250.00	167.63	200.07
Diseases of the liver	7.83	12.10	13.33		19.23	11.56	7.47
Ascites	0.94						1.02
Other diseases of the digestive system	20.99	28.23	26, 67		38.46	28.90	20.38
Bright's disease	10.96	20.16	40.00	43.48	38.46	11.56	10.19
Other diseases of the urinary system	12,84	28. 23	13.33		19. 23	34.68	11. 55
Diseases of the bones and joints	2,82	4.03	13.33	43.48			2. 72
Burns and scalds	3,45						3.74
Injuries by machinery	0.31						0.34
Suicide	8. 15	8.06				11.56	8.15
Other accidents and injuries	833.02	233.87	200.00	86, 96	250.00	248, 55	341.37

The proportions of deaths of miners in the United States due to typhoid fever, diseases of the respiratory system, and accidents and injuries were greater than the proportions due to these causes in all occupations in this class, and the proportions due to other causes specified were generally much less than the average proportions in this class.

The proportion of deaths of miners due to accidents and injuries other than burns and scalds, injuries by machinery, and suicide (333.02) was more than three times the average proportion in this class (102.51), and was still greater in the nonregistration area (341.37).

The proportions of deaths of miners due to rheumatism, diseases of the digestive system, and diseases of the urinary system were very small.

SAILORS.

The total number of sailors reported in the United States was 55,882, being 0.60 per cent of the whole number of males engaged in occupations of this class. The number of deaths of sailors was 1,523, or 1.68 per cent of the total deaths of males in this class of occupations.

In the registration area the number of sailors reported was 31,953, being 2.51 per cent of the whole number of males in occupations of this class in this area. The corresponding number of deaths was 1,075, or 7.07 per cent of the total deaths of males in occupations of this class, and the death rate was 33.64 per 1,000.

The following table shows, for the registration states, the number of sailors living at the end of the census year, and the number of deaths during the census year, at all ages and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.							
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over			
Population.	17, 453	2, 856	8, 256	5, 146	1,120			
Per cent at each age		16.36 74	47.30 184	29. 48 204	6.41 225			
Per cent at each age	1 .	10.68	26, 55	29.43	32.47			
Death rate per 1,000 population.)	25. 91	22, 29	39. 64	200. 89			
Average rate in this class		4. 13	5. 88	11.54	59. 31			

This table shows that in the registration states the death rate of sailors was many times greater in each age group than the average rate in occupations of this class.

The following table shows, for the registration area and some of its subdivisions, the death rate of sailors from each of certain specified causes per 100,000 living:

	Regis-	REGIS	fates.	Regis- tration	
. CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	131.44	131.78	150.99	102.10	131.03
Midarial fover	46.94	45.84	28.31	72. 93	48. 28

Diseases of the respiratory system	460.05	572. 97	594.51	539.67	324.14
Diseases of the liver	46.94	63.03	56. 62	72.93	27. 59
Ascites	i			· • • • • • • • • • • • • • • • • • • •	
Other diseases of the digestive system	40.68	31.38	47.18	14.59	48. 28
Bright's disease		148. 97	141. 55	160.44	62. 07
Other diseases of the urinary system	118.92	143. 24	169.86	102.10	89.68
Diseases of the bones and joints		5.74		14. 59	6.90
Burns and scalds		,			
Injuries by machinery					
Suicide	28.17	28.65	37.75	14. 59	27. 59
Other accidents and injuries	475.70	481. 29	575.63	335.47	468.97

It will be seen from this table that the death rate of sailors in the registration states from dropsy (11.48) was less than the average rate among persons in occupations of this class (12.83), but that the rates from all other causes were higher, and generally very much higher, than the average rates in occupations of this class. The death rate of sailors from typhoid fever (131.78) was nearly five times the average rate in occupations in this class (28.59). The death rate of sailors from malarial fever (45.84) was excessively high, the average rate in this class from this cause being 9.50. The death rate of sailors from rheumatism (17.19) was more than double the average rate from this cause (8.18), and the death rate from heart disease (446.91) was more than three times the average rate from this cause (131.12).

The death rate of sailors from consumption (653.18) was excessively high, the average rate in this class being 161.83. The death rates from diseases of the nervous system (492.75) and from diseases of the respiratory system

(572.97) were excessively high in comparison with the average rates from these causes. The death rates of sailors from Bright's disease (148.97) and from other diseases of the urinary system (143.24) were more than three times the average rates from these causes in this class, and the death rate from accidents and injuries other than burns and scalds, injuries by machinery, and suicide (481.29) was more than four times the average rate from these causes in this class (112.03).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among sailors:

CAUSE OF DEATH.	United	Regis-	REGIS	reation si	ATES.	Regis- tration	Remain- der	
. CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.	
Typhoid fever	45.31	39.07	33.19	39. 02	24.73	49.74	60. 27

Diseases of the nervous system	105.71	110.70	124. 10	100.00	159.01	86.39	93,75	
Diseases of the respiratory system	123.44	136.74	144. 30	153.66	130.71	123.04	91, 52	
Diseases of the liver	15.76	13.95	15.87	14.63	17.67	10.47	20,09	
Ascites								
Other diseases of the digestive system	11.16	12.09	8.60	12.20	3.53	18.32	8. 93	
Bright's disease	30.20	32.56	37.52	36.59	38.87	23.56	24, 55	
Other diseases of the urinary system	30.86	35.35	36.08	43.90	24.73	34.03	20.09	
Diseases of the bones and joints	1.31	1.86	1.44		3, 53	2.62		
Burns and scalds	0.66						2.23	
Injuries by machinery	0.66						2, 23	
Suicide	8, 54	8.37	7.22	9.76	3. 53	10.47	8, 93	
Other accidents and injuries	153, 64	141.40	121.21	148.78	81. 27	178.01	183.04	

It will be seen from this table that in the United States the greatest proportions of deaths of sailors were due to consumption (174.00), and accidents and injuries other than burns and scalds, injuries by machinery, and suicide (153.64), being considerably greater than the average proportions due to these causes in this class. The proportion of deaths of sailors due to diseases of the respiratory system (123.44) was less than the average proportion in this class (175.65).

STEAM RAILROAD EMPLOYÉS (INCLUDES CONDUCTORS, BRAKEMEN, ENGINEERS, AND FIREMEN).

The total number of steam railroad employés reported in the United States was 460,771, being 4.95 per cent of the whole number of males in this class of occupations. The number of deaths was 3,809, or 4.19 per cent of the total deaths of males in this class of occupations.

In the registration area the number of steam railroad employés reported was 169,819, being 13.32 per cent of the whole number of males in occupations of this class in this area. The corresponding number of deaths was 1,403, or 9.23 per cent of the total deaths of males in occupations of this class in the registration area, and the death rate was 8.26 per 1,000.

The following table shows, for the registration states, the number of steam railroad employés living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.						
POPULATION, DEATHS, AND DEATH RATES.		15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population.	84, 679	18,313	49, 055	14,887	1,530		
Per cent at each age Deaths	. 761	21.63 165	57. 93 360	17.58 167	1. 81 58		
Per cent at each ago		21.68 9.01	47.31 7.34	21, 90 11, 22	7.62 37.91		
Average rate in this class	·	4.13	5.88	11.54	59.31		

The preceding table shows that in the registration states the death rate of steam railroad employés under 45 years of age was higher in each age group than the average rates in this class of occupations, but that above the age of 45 years the death rate of steam railroad employés was less in each age group than the average rate in this class of occupations.

The following table shows, for the registration area and some of its subdivisions, the death rate of steam railroad employés from each of certain specified causes per 100,000 living:

	Regis-	REGIS	TRATION S	TATES.	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.	
Typhoid fever	28. 27	20.08	26. 66	9.33	36.41	
Malarial fever	10.60	5. 90	7.62	3.11	15. 27	
Rheumatism	2.36	2.36		6. 22	2. 35	
Dropsy	1. 18	2, 36	1.90	3.11		
Heart discase	42.40	53.14	60.94	40.42	31.71	
Consumption	110.12	125.18	161.86	65. 29	95. 14	
Diabetes	0.59	1.18	1.90			
Diseases of the nervous system	48.88	51.96	66. 65	27. 98	45.81	
Diseases of the respiratory system	85.97	96.84	119, 97	59.07	75.17	
Diseases of the liver.	7.66	4.72	3.81	6.22	10.57,	
Ascites	0.59				1.17	
Other diseases of the digestive system	12.95	12.99	15. 23	9.33	12.92	
Bright's disease	9.42	14.17	20.95	3.11	4.70	
Other diseases of the urinary system	12.37	18.89	28. 56	8.11	5.87	
Diseases of the bones and joints	0.59	1.18	1.90			
Burns and scalds	2.36	1.18	1.90		8.52	
Injuries by machinery						
Suicide	9.42	5.90	5.71	6, 22	12.92	
Other accidents and injuries	375.69	414.51	439.88	373.08	837.07	

This table shows that the death rates of steam railroad employés in the registration states from all of the causes specified, excepting accidents and injuries, were very much below the average rates from the same causes in this class of occupations.

The death rates from heart disease, consumption, diseases of the nervous system, and the respiratory system were very low.

The death rate of steam railroad employés, in the registration states, from accidents and injuries (414.51) was excessively high, the average rate in this class from this cause being 112.03. The death rate from suicide (5.90) was less than half the average rate from this cause in this class (11.31).

The low rates from all of these causes, excepting accidents and injuries, is largely accounted for by the fact that persons in this line of labor are generally of superior physical strength, and nearly 60 per cent of the whole number is found in the age group 25 to 45 years, which has the lowest death rate, as a rule.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among steam railroad employés:

,	United	Regis- tration	REGIS	TRATION S	TATES.	Regis- tration	Remain- der	
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.	
Typhoid fever	48.83	34, 21	22.34	25.55	14.08	48. 29	57.36	
Malarial fever	20.74	12.83	6.57	7.30	4.69	20. 25	25. 35	
Rheumatism	4.20	2.85	2.63		9.39	3.12	4.99	
Dropsy	4.73	1.43	2.63	1.82	4.69		6.65	
Heart disease	44.89	51.32	59.13	58.39	61.03	42.06	41. 15	
Consumption	108.16	133. 29	139.29	155.11	98, 59	126.17	93. 52	
Diabetes	1.31	.71	1.31	1.82			1.66	
Diseases of the nervous system	50.67	59.16	57.82	63.87	42.25	60.75	45.72	
Diseases of the respiratory system	109.48	104.06	107.75	114.96	89. 20	99.69	112.64	
Diseases of the liver	7.35	9.27	5.26	3.65	9.39	14.02	6.23	
Ascites	0.26	0.71	ļ			1.56		
Other diseases of the digestive system	14.44	15.68	14.45	14.60	14.08	17.13	13.72	
Bright's disease	10.24	11.40	15.77	20.07	4.69	6.23	9.56	
Other diseases of the urinary system	9.98	14.97	21.02	27.37	4.69	7.79	7.07	
Diseases of the bones and joints	0. 53	0.71	1.31	1.82			0.42	
Burns and scalds	2.89	2.85	1.31	1.82		4. 67	2.91	
Injuries by machinery							0.42	
Suicide		11.40	6.57	5. 47	9.39	17.13	5.82	
Other accidents and injuries	465. 21	454.74	461.24	421.53	563.38	447.04	471.32	

It will be seen from this table that in the United States the proportions of deaths of steam railroad employés due to all of the causes specified excepting burns and scalds, and accidents and injuries other than injuries by machinery, and suicide, were all less and generally very much less than the average proportions due to the same causes in this class of occupations.

Of the principal causes of death the proportions were as follows: heart disease (steam railroad employés, 44.89; class total, 76.14), consumption (steam railroad employés, 108.16; class total, 137.54), diseases of the nervous system (steam railroad employés, 50.67; class total, 87.51), diseases of the respiratory system (steam railroad employés, 109.48; class total, 175.65), diseases of the liver (steam railroad employés, 7.35; class total, 15.20), Bright's disease (steam railroad employés, 10.24; class total, 23.75), and other diseases of the urinary system (steam railroad employés, 9.98; class total, 28.45).

The proportion of deaths of steam railroad employés due to burns and scalds (2.89) was twice the average proportion in this class (1.40) and the proportion due to other accidents and injuries, excluding injuries by machinery, and suicide (465.21), was excessively large, the average proportion in this class being 102.51.

The proportion of deaths of steam railroad employés due to suicide (7.88) was less than the average proportion in this class (9.91).

TELEGRAPH AND TELEPHONE OPERATORS.

The number of telegraph and telephone operators reported in the registration states was 8,581. The number of deaths among these during the year was 80, giving a death rate of 9.32 per 1,000. By age groups, the death rates per 1,000 of population were as follows: age 15 to 25 years, 7.50; age 25 to 45 years, 11.30; age 45 to 65 years, 7.63; age 65 years and over, 34.48.

MOR—PT I——12

OCCUPATIONS OF FEMALES.

The whole number of females reported as engaged in the 218 occupations, or combinations of occupations compiled for the population, was 3,914,571, of which number 2,773,508, or 70.85 per cent, are included in the 19 titles given in the tables in this report, showing the relations of occupations to deaths.

As in case of the males it was found necessary to combine certain occupations given in detail in the general tables, to secure greater accuracy in computing the death rates, and in this analysis, milliners, dressmakers, seamstresses, and sewing machine operators have been combined under one title, and cotton mill, silk mill, woolen mill, and mill and factory operatives (textiles not specified) have also been combined as mill and factory operatives (textile).

The following table shows, for the registration area and some of its subdivisions, the gross death rate of females engaged in each specified occupation per 1,000 of corresponding population:

	Regis-	REGIS	TRATION ST	ates.	Regis- tration
OCCUPATIONS.	tration area.	Total.	Cities.	Rural	cities in other states.
Total selected occupations.	8.44	10.50	9.84	12.08	5. 33
Musicians and teachers of music	2.19	2.38	2.86	1.32	1.91
Teachers (in schools)	4.32	4.34	4.86	3.81	4, 27
Stenographers and typewriters.	1.18	1.81	1.76	2.10	0, 07
Accountants, bookkeepers, clerks, and copyists	2. 63	3.16	3.18	3.03	1.97
Hotel and boarding house keepers	2 40	3.45	3.33	3. 90	1.37
Laundresses	5. 70	6.70	7. 23	3.42	5. 13
Nurses and midwives	11.53	11.16	10.34	13.43	12.07
Servants	14.12	18.18	17.17	20.24	8.42
Artificial flower and paper box makers.	2.65	3, 49	3.76	£51	0.49
Cigar makers and tobacco workers	2, 65	3.38	3.14	10.64	1.96
Mill and factory operatives (textile)	4.67	5. 29	5. 64	4.50	2. 21
Milliners, dressmakers, seamstresses, etc	3. 55	4.41	4, 22	5.08	2, 49
Telegraph and telephone operators	2.88	4.05	4. 29	3. 05	1. 23

It will be seen from this table that the average death rate of females in the selected occupations in cities in the nonregistration states (5.33 per 1,000) was but little more than half the average death rate in the registration states (10.50 per 1,000). This low rate was probably due more to a deficient return of occupations of decedents in many of these cities than to any actual difference in the death rate, and the effect of this deficiency is to render the average death rate given for the whole registration area also too low.

In the registration states the average death rate in the rural districts (12.08) was higher than in the cities (9.84). The average death rate of females in all selected occupations is greatly increased by the high death rate of servants, which class includes nearly one half of the whole number of females reported as engaged in the selected occupations in this area. In each area the death rates of servants and nurses and midwives are the only rates above the average.

The following table shows, for the registration states, the number of females engaged in all selected occupations and in each specified occupation, in the aggregate and in each of four age groups, the deaths among the same during the census year, and the percentage of the population and of the deaths in each age group:

			NUMBER.				PER	CENT.	
OCCUPATIONS.	All ages.	15 to 25 years.	25 to 45 Years.	45 to 65 years.	65 years and over.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.

From this table, which shows the comparative age distribution of the female population engaged in the selected occupations in the registration states, it will be seen that about 85 per cent of the females in these occupations were under 45 years of age, and that the relative proportion of deaths under 45 years of age was about 48 per cent of the whole number of deaths.

The relative proportions of population and deaths in each age group with the death rates at each age are given for the principal occupations in the discussion following.

The following table shows, for the registration area and some of its subdivisions, the death rate from each! of certain specified causes per 100,000 females engaged in the selected occupations:

	Regis-	REGIS	TRATION ST	TATES.	Regis- tration
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	31. 42	35. 69	87.59	31, 08	25. 26
Malarial fever	9.34	9.30	8.75	10.62	9.41
Rhoumatism	6. 23	6.54	6.16	7.48	5.78
Dropsy	7.04	8. 26	4.05	18.49	5.28
Heart disease	79. 29	99.74	93.98	113.70	49 87
Consumption	203.33	251, 24	260, 08	229, 77	134.41
Diabetes	2.51	3.90	3.08	5.90	0.50
Diseases of the nervous system	88. 43	114.89	95.77	161.31	50.36
Diseases of the respiratory system	118.36	152, 88	138. 71	187. 27	68.69
Diseases of the liver	11.31	15.38	15. 39	15.34	5. 45
Ascites	0.81	0.92	0.65	1.57	0.66
Other diseases of the digestive system	32, 91	41.66	39.70	46.43	20.31
Bright's disease	21.06	27.20	29.49	21.64	12. 22
Other diseases of the urinary system	17. 33	24. 22	27.55	16.13	7.43
Diseases of the bones and joints	1.69	2.41	1.94	3.54	0.66
Burns and scalds	3.72	3.79	3.73	3.93	3. 63
Suicido	3, 99	4. 13	3.89	4.72	3.80
Other accidents and injuries	17.33	20.43	18.80	24.39	12.88
Diseases of the female organs of generation	9.48	9.87	10.05	9.44	8. 92
Affections connected with pregnancy		17.79	17. 34	18.88	14. 37

It will be seen from this table that in the registration states the highest death rate of females in all selected occupations occurred from consumption (251.24), being higher in the cities (260.08) than in the rural districts (229.77).

Of the other causes specified the death rates were higher, in the cities than in the rural districts, from typhoid fever (cities, 37.59; rural districts, 31.08); diseases of the liver (cities, 15.39; rural districts, 15.34); Bright's disease (cities, 29.49; rural districts, 21.64); other diseases of the urinary system (cities, 27.55; rural districts, 16.13), and diseases of the organs of generation (cities, 10.05; rural districts, 9.44), and for the remaining causes the death rates were higher in the rural districts than in the cities.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among females engaged in the selected occupations:

	United	Regis-	REGIS	TRATION S	TATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.

Other accidents and injuries	20.58	21.61	20.31	19.68	21.57	25.07	20.10
Diseases of the female organs of generation	12. 33	11.28	9.55	10.44	7.79	15.91	12.82
Affections connected with pregnancy	34. 04	18.90	16.59	17. 10	15.58	25. 07	41.11

The preceding table is useful as indicating the relative proportions of deaths from certain causes in the registration areas, in which the returns are sufficiently complete to give fairly accurate death rates, in comparison with those areas in which the data are based wholly or partially upon the returns made by the enumerators. The causes for which the proportion of deaths in the United States as a whole exceeded the proportion in the registration states were, typhoid fever (United States, 51.48; registration states, 33.79), malarial fever (United States, 29.59; registration states, 8.85), rheumatism (United States, 8.20; registration states, 6.03), dropsy (United States, 23.42; registration states, 7.54), ascites (United States, 1.77; registration states, 0.80), diseases of the bones and joints (United States, 2.56; registration states, 2.51), burns and scalds (United States, 4.40; registration states, 3.42), other accidents and injuries (United States, 20.58; registration states, 20.31), diseases of the organs of generation (United States, 12.33; registration states, 9.55), and affections connected with pregnancy (United States, 34.04; registration states, 16.59). For the other causes specified the proportions were higher in the registration states than in the United States as a whole.

The following table shows, for the registration states, the death rates at all ages and in each of four age groups, among females engaged in each specified occupation, per 1,000 of corresponding population:

	AGE.						
OCCUPATIONS.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Total selected occupations	10.50	3. 63	9. 28	26. 51	156.36		
Musicians and teachers of music		0.98	2.33	10.38			
Teachers (in schools)	4.34	2.64	4.00	9. 23	121.86		
Stenographers and typewriters	1.81	1.79	1.47	14.71			
Accountants, bookkeepers, clerks, and copyists	3.16	2.31	3.94	8. 52	36.59		
Hotel and boarding house keepers			2.21	4.09	5.03		
Laundresses	6.70	3.20	5.22	8, 59	28. 49		
Nurses and midwives	11.16	3.86	5.80	13.48	53.33		
Servants	18.18	4.57	15.48	48.87	258.81		
Artificial flower and paper box makers	3, 49	2.08	8.44	5.59			
Cigar makers and tobacco workers	3.38	1.65	6.70	5. 11	47.62		
Mill and factory operatives (textile)	5. 29	4.11	6.63	16. 26	36.85		
Milliners, dressmakers, seamstresses, etc	4.41	2.00	4.77	8, 88	37. 21		
Telegraph and telephone operators	4. 05	2. 59	6.92	12.50			

Considering the principal occupations included in the preceding table, it will be seen that in the age group 15 to 25 years the highest death rates occurred among servants (4.57), mill and factory operatives (4.11), and laundresses (3.20), and the lowest rates among teachers (2.64), accountants, bookkeepers, clerks, and copyists (2.31), and milliners, dressmakers, seamstresses, and sewing machine operators (2.00).

In the age group 25 to 45 years the highest death rates occurred among servants (15.48), mill and factory operatives (6.63), and laundresses (5.22), and the lowest among stenographers and typewriters (1.47), musicians and music teachers (2.33), teachers (4.00), and accountants, bookkeepers, clerks, and copyists (3.94).

In the age group 45 to 65 years the highest rates occurred among servants (48.87), mill and factory operatives (16.26), and nurses and midwives (13.48), and the lowest among teachers (9.23), milliners, dressmakers, seamstresses, and sewing machine operators (8.88), laundresses (8.59), and cigar makers (5.11).

In the age group 65 years and over the highest rates occurred among servants (258.81), teachers (121.86), and nurses and midwives (53.33), and the lowest among milliners, dressmakers, seamstresses, and sewing machine operators (37.21), mill and factory operatives (36.85), and laundresses (28.49).

The number of deaths reported of those engaged in other occupations specified in each age period are not sufficient to furnish reliable indications of the comparative mortality at different ages.

MUSICIANS AND TEACHERS OF MUSIC.

The total number of female musicians and teachers of music reported in the United States was 34,519, being 1.24 per cent of the whole number of females in the selected occupations. The number of deaths was 146, or 0.41 per cent of the total deaths of females in the specified occupations.

In the registration area the number of female musicians and teachers of music reported was 16,474, being 1.12 per cent of the whole number of females in the specified occupations in this area. The corresponding number of deaths was 36, or 0.29 per cent of the total deaths of females in the specified occupations, and the death rate was 2.19 per 1,000.

The following table shows, for the registration states, the number of female musicians and teachers of music reported as living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

	AGE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.		
Population	9, 651	4,067	4,728	771	40		
Per cent at each age		42.14	48.99	7.99	0.41		
Deaths	23	4	11	8			
Per cent at each age		17. 39	47.83	34.78			
Death rate per 1,000 population	2.38	0.98	2.33	10.38			
Average death rate		3.63	9. 28	26. 51	156.36		

This table shows that in each age group the death rate of female musicians and teachers of music was much less than the average rate of females in all selected occupations.

The following table shows, for the registration area and some of its subdivisions, the death rate of female musicians and teachers of music, from each of certain specified causes, per 100,000 living:

	Regis-	REGIST	CATES.	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	1	10.36	15. 08		29. 31
Rheumatism					
Dropsy	6.07				14. 66
Heart disease	6.07				14.66
Consumption	54. 63	62.17	90.47		43.97
Diabetes					
Diseases of the nervous system	18. 21	31.08	45. 24		
Diseases of the respiratory system	18. 21	20.72		66. 25	14.66
Diseases of the liver					
Ascites					
Other diseases of the digestive system	6.07		,		14.66
Bright's disease	12.14	20.72	30. 16		
Other diseases of the urinary system	6.07	10.36	15.08		
Diseases of the bones and joints					
Burns and scalds					
Suicide	1]	14.66
Other accidents and injuries	18.21	10.36	15.08		29. 31
Diseases of the female organs of generation	12.14	10.36		33.12	14, 66
Affections connected with pregnancy	6.07	10.36		33.12	

It will be seen from this table that in the registration states the death rate of female musicians and teachers of music from diseases of the organs of generation (10.36) was slightly higher than the average rate in all occupations, but that the death rates from all other causes specified were below the average, especially those from consumption and diseases of the nervous system.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among female musicians and teachers of music:

Typhoid fever	89: 04: 13: 70 6: 85 13: 70 20: 55 69: 86	tration area	Total.	Cities. 52. 63	Rural.	cities in other states.	of the United: States. 90.91 18:18

Diseases of the female organs of generation 2	20.55	, 55, 56:	43.48.		259,00	76,92	9: 09-
Affections connected with pregnancy 1	13270.	27.78	43.48		250.00		9, 09

It will be seen from this table that in the United States as a whole the proportions of deaths due to typhoid fever (89.04), consumption (369.86), diseases of the nervous system (123.29), Bright's disease (34.25), burns and sealds (13.70), suicide (13.70), other accidents and injuries (41.10), and diseases of the organs of generation (20.55) were greater than the corresponding proportions in the registration states, and that for most of these causes the proportions were still greater in the remainder of the United States, or nonregistration area.

TEACHERS.

The total number of female teachers reported in the United States was 245,371, being 8.84 per cent of the whole number of females engaged in the specified occupations. The number of deaths of teachers was 1,317, or 3.74 per cent of the total deaths among females in the specified occupations.

In the registration area the number of female teachers reported was 88,253, being 5:98 per cent of the whole number of females in the specified occupations in this area. The number of deaths among these was 381, or 3.06 per cent of the total deaths, and the death rate was 4.32 per 1,000.

The following table shows, for the registration states, the number of female teachers living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.		
POPULATION, DEATES, AND DEATH BATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	57, 841.	26, 915	25,743	4,-548	279
Per cent at each age		46.53:	44.51	7.86	0.48
Deaths	251.	71	1.03	42	34
Per cent at each age		28.29.	41.04	16.73	13.55

Other accidents and injuries		3.46	6.84		16.44
Diseases of the female organs of generation	14.73	10. 37	10.26	10.49	23.02
Affections connected with pregnancy					

It will be seen from this table that in the registration states the highest death rate occurred from consumption (131.39), but that this rate was much lower than the average rate from this cause in all occupations (251.24).

Of the other principal causes of death the rates were much below the average, in all occupations, from heart disease (teachers, 32.85; average, 99.74), diseases of the nervous system (teachers, 39.76; average, 114.89), and diseases of the respiratory system (teachers, 55.32; average, 15.88). The death rates from diabetes (5.19) and diseases of the organs of generation (10.37) were the only rates above the average.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among female teachers:

,	United	Regis-	REGIS	TRATION ST	TATES.	Regis- tration	Remain-
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	72.89	65. 62	55.78	56.34	55.05	84. 62	75, 85
Malarial fover	30.37	18.37	19.92	28.17	9.17	15.38	35. 26

Heart disease	50.11	76.12	75.70	63. 38	91.74	76.92	39. 53
Consumption	350,04	301.84	302.79	345.07	247. 71	300.00	369, 66
Diabetes	7.59	7.87	11.95	7.04	18.35		7.48
Diseases of the nervous system	62, 26	89.24	91.63	77.46	110.09	84. 62	51.28
Diseases of the respiratory system	144. 27	128, 61	127.49	112.68	146.79	130.77	150.64
Diseases of the liver	6.83	13.12	15.94		36.70	7.69	4.27
Ascites	1. 52						2.14
Other diseases of the digestive system	27.33	23.62	27.89	35. 21	18.35	15.38	28, 85
Bright's disease	16.70	23.62	27.89	35. 21	18. 35	15.38	13.89
Other diseases of the urinary system	10.63	26. 25	31.87	35. 21	27. 52	15.38	4.27
Diseases of the bones and joints	1.52						2.14
Burns and scalds	1.52	2, 62				7.69	1.07
Suicide	3.80	5. 25	3.98	7.04		7.69	3.21
Other accidents and injuries	22.02	18.37	7.97	14.08		38.46	23.50
Diseases of the female organs of generation	15.19	34.12	23.90	21.13	27. 52	53.85	7.48
Affections connected with pregnancy	14.43						20.30

It will be seen from the preceding table that in the United States as a whole the proportions of deaths were greater than in the registration states from typhoid fever (72.89), malarial fever (30.37), rheumatism (4.56), dropsy (6.83), consumption (350.04), diseases of the respiratory system (144.27), ascites (1.52), diseases of the bones and joints (1.52), burns and scalds (1.52), other accidents and injuries (22.02), and affections connected with pregnancy (14.43), and were still greater in the remainder of the United States, or nonregistration area.

The proportions due to the other causes specified were greater in the registration states than in the United States as a whole.

ACCOUNTANTS, BOOKKEEPERS, CLERKS, AND COPYISTS.

The total number of femalé accountants, bookkeepers, clerks, and copyists reported in the United States was 91,991, being 3.32 per cent of the whole number of females engaged in the specified occupations. The number of deaths among them was 278, or 0.79 per cent of the total deaths of females in the specified occupations.

In the registration area the number of female accountants, bookkeepers, clerks, and copyists reported was 65,028, being 4.40 per cent of the whole number of females in the specified occupations in this area. The corresponding number of deaths was 171, or 1.37 per cent of the total deaths of females in the specified occupations, and the death rate was 2.63 per 1,000.

The following table shows, for the registration states, the number of female accountants, bookkeepers, clerks, and copyists living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.		
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.
Population	36, 043	22, 092	11, 663	1,525	82
Per cent at each age		61. 29	32.36	4.23	0.23
Deaths	114	51	46	13	3
Per cont at each age		44.74	40.35	11.40	2.63
Death rate per 1,000 population.	3.16	2.31	3.94	8.52	36. 59
Average death rate		3.63	9.28	26.51	156.36

This table shows that over 60 per cent of the female accountants, bookkeepers, clerks, and copyists in this area were under 25 years of age, and that nearly 95 per cent were under 45 years of age; also, that the death rate in each age group was much less than the average rate of females in all selected occupations.

The following table shows, for the registration area and some of its subdivisions, the death rate of female accountants, bookkeepers, clerks, and copyists from each of certain specified causes per 100,000 living:

	Regis-	REGIS	ration s	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	19.99	24.97	25. 46	21, 62	13.80
Malarial fever	3.08	5. 55	6.37		
Rheumatism	1,54	2.77	3.18		
Dropsy					
Heart disease	13.84	16.65	19.10		10.35
Consumption	103.03	130.40	127. 32	151.35	69.00
Diabetes					
Diseases of the nervous system	13.84	16.65	19.10		10.35
Diseases of the respiratory system	29. 22	30.52	28.65	43.24	27.60
Diseases of the liver	3.08	5.55	6. 37		
Ascites					
Other diseases of the digestive system	9.23	11.10	12.73		6.90
Bright's disease		8.32	9.55		3.45
Other diseases of the urinary system		8.32	9, 55		
Diseases of the bones and joints	1	2.77	3.18		
Burns and scalds	1	•••••			
Suicide			·		3.45
Other accidents and injuries		11.10	12.73		20.70
Diseases of the female organs of generation	4.61	5.55		43. 24	3.45
Affections connected with pregnancy					

It will be seen from the preceding table that in the registration states the death rates of females in these occupations were highest from consumption (130.40), diseases of the respiratory system (30.52), and typhoid fever (24.97), but that in general the rates from the specified causes were much below the average rates in all occupations.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among female accountants, bookkeepers, clerks, and copyists:

	United	Regis-		rration s	rates.	Regis- tration	Remain- der of the
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	79.14	76.02	78.95	80.00	71.43	70.18	84.11
Malarial fever	10.79	11.70	17.54	20.00			9.85
Rheumatism	7. 19	5. 85	8.77	10.00			9.35
Dropsy	3.60						9.35
Heart disease	71.94	52, 63	52, 63	60.00		52, 63	102.80
Consumption	366, 91	391.81	412. 28	400,00	500.00	350.88	327.10
Diabetes	3.60						9.35
Diseases of the nervous system	46. 76	52.63	52, 63	60.00		52, 63	37.38
Diseases of the respiratory system	122.30	111.11	96.49	90,00	142.86	140.35	140.19
Diseases of the liver	7.19	11.70	17.54	20.00			
Ascites							
Other diseases of the digestive system	28.78	35.09	35.09	40.00		35.09	18.69
Bright's diseaso	21.58	23. 39	26.32	30.00		17.54	18.69
Other diseases of the urinary system	10.79	17.54	26.32	30.00			
Discases of the bones and joints	3. GO	5.85	8.77	10.00			
Burns and scalds							
Suicide	7.19	5.85				17.54	9. 35
Other accidents and injuries	50.36	58.48	35 09	40.00		105, 26	37.38
Discases of the female organs of generation	14.39	17.54	17. 54		142.86	17. 54	9.35
Affections connected with pregnancy	3. 60						9. 35

It will be seen from this table that in the United States as a whole the proportions of deaths due to typhoid fever (79.14), dropsy (3.60), heart disease (71.94), diabetes (3.60), diseases of the respiratory system (122.30), suicide (7.19), other accidents and injuries (50.36), and affections connected with pregnancy (3.60) were greater than the corresponding proportions in the registration states, and that the proportions due to each of these causes, excepting accidents and injuries, were still greater in the remainder of the United States, or nonregistration area

LAUNDRESSES.

The total number of laundresses reported in the United States was 216,631, being 7.81 per cent of the whole number of females engaged in the specified occupations. The number of deaths of laundresses was 1,305, or 3.71 per cent of the total deaths of females in the specified occupations.

In the registration area the number of laundresses reported was 98,013, being 6.64 per cent of the whole number of females in the specified occupations in this area. The corresponding number of deaths was 559, or 4.48 per cent of the total deaths of females in the specified occupations, and the death rate was 5.70 per 1,000.

The following table shows, for the registration states, the number of laundresses living at the end of the census year, and the deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

			AGE.		
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over
Population	35, 801	6, 871	17, 036	10, 133	1, 439
Per cent at each age		19, 19	47.59	28. 30	4.02
Deaths	240	22	89	87	41
Per cent at each age		9.17	37.08	36. 25	17.08
Death rate per 1,000 population	6.70	3. 20	5. 22	8.59	28.49
Average death rate		3, 63	9, 28	26.51	156, 36

This table shows that comparatively few of the females in this occupation were under 25 years of age, and that in the age group 15 to 25 years the death rate (3.20) was nearly as high as the average rate in all selected occupations. In the other age groups the death rates of laundresses were much less than the average.

The following table shows, for the registration area and some of its subdivisions, the death rate of laundresses from each of certain specified causes per 100,000 living:

•	Regis-	REGIS	tration st	ates.	Regis- tration	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.	
Typhoid fever	9.18	11.17	12.98		8.04	
Malarial fever	9.18	5, 59	6.49		11.25	
Rheumalism	9.18	5.59	6.49		11.25	
Dropsy	8.16	8.38	6.49	20.10	8.04	
Heart disease	82.64	111.73	120.03	60.29	65, 90	
Consumption	123.45	142.45	162.21	20.10 -	112. 52	
Diabetes	1.02	2.79	3.24			
Diseases of the nervous system	48.97	67.04	71. 37	40.19	38,58	
Diseases of the respiratory system	89.78	103.35	110.30	60.29	81,98	
Diseases of the liver		11.17	9, 73	20.10	1.61	
Ascites	1,02			 	1.61	
Other diseases of the digestive system	16.32	11.17	12.98		19.29	
Bright's disease	14.28	22.35	25.95		9.64	
Other diseases of the urinary system	15.30	30.73	35.69		6.43	
Diseases of the bones and joints	1.02				1.61	
Burns and scalds	6. 12	5.59	6. 49		6.43	
Suicides	1.02				1.61	
Other accidents and injuries.	9.18	11.17	6.49	40.19	8.04	
Diseases of the female organs of generation	5.10	8.38	9.73]	3.21	
Affections connected with pregnancy	13, 26	11.17	12.98		14.47	

It will be seen from this table that in the registration states the highest death rates of laundresses occurred from consumption (142.45), heart disease-(111.73), and diseases of the respiratory system (103.35). The death rates were above the average from dropsy (laundresses, 8.38; average, 8.26), heart disease (laundresses, 111.73; average, 99.74), diseases of the urinary system other than Bright's disease (laundresses, 30.73; average, 24.22), and burns and scalds (laundresses, 5.59; average, 3.79), but were below the average from all other causes, particularly from consumption, diseases of the respiratory system, diseases of the nervous system, typhoid fever, and malarial fever. The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to each of certain specified causes per 1,000 deaths from all causes among laundresses:

	United	Regis-	REGIS	TRATION S	FATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	32.18	16.10	16.67	17.94		15.67	44. 24
Malarial fover	24,52	16.10	8.33	8.97		21.94	30.83
Rheumatism	9. 96	16.10 .	8.33 .	8.97		21.94	5. 36

Heart disease.	110.34	144.90	166.67	165. 92	176.47	128, 53	84.45
Consumption	249.81	216.46	212.50	224. 22	58.82	219.41	274.80
Diabetes	1.53	1.79	4.17.	4.48			1.34
Diseases of the nervous system	79.69	85.87	100.00	98.65	117.65	75.24	75.07
Diseases of the respiratory system	138.70	157.42	154.17	152.47	176.47	159.87	124.66
Diseases of the liver	9.20	8.94	16.67	13.45	58.82	3.13	9.38
Ascites	1.53	1.79 '				3.13	1.34
Other diseases of the digestive system	23.75	28.62	16.67	17.94		37.62	20.11
Bright's disease	15.33	25.04	33.33	35.87		18.81	8.01
Other diseases of the urinary system	15.33	26, 83	45.83	49.33		12.54	6.70
Diseases of the bones and joints	2.30	1.79				3.13	2.68
Burns and scalds	6, 90	10.73	8.33	8.97		12.54	4.02
Suicide	1.53	1.79				3.13	1.34
Other accidents and injuries	13.03	16.10	16.67	8.97	117.65	15.67	10.72
Diseases of the female organs of generation	16.86	8.94	12.50	13.45		6. 27	22.79
Affections connected with pregnancy	84.48	23, 26	16. 67	17.94		28.21	42.90

It will be seen from the preceding table that in the United States as a whole the proportions of deaths of laundresses due to typhoid fever (32.18), malarial fever (24.52), rheumatism (9.96), dropsy (23.75), consumption (249.81), ascites (1.53), other diseases of the digestive system (23.75), diseases of the bones and joints (2.30), suicide (1.53), diseases of the organs of generation (16.86), and affections connected with pregnancy (34.48), were greater than the corresponding proportions in the registration states, and that for most of these causes the proportions were still greater in the remainder of the United States, or nonregistration area.

NURSES AND MIDWIVES.

The total number of nurses and midwives reported in the United States was 41,396, being 1.49 per cent of the whole number of females engaged in the specified occupations. The number of deaths was 718, or 2.04 per cent of the total deaths of females in the specified occupations.

In the registration area the number of nurses and midwives reported was 28,010, being 1.90 per cent of the whole number of females in the specified occupations in this area. The corresponding number of deaths was 323, or 2.59 per cent of the total deaths of females in the specified occupations, and the death rate was 11.53 per 1,000.

The following table shows, for the registration states, the number of nurses and midwives living at the end of the census year, and the deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

DODGE ARROY DELANTS AND DEANE DATES		AGE PERIODS.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population	16,574	3, 364	6, 721	5, 268	1, 125			
Per cent at each ago		20, 30	40.55	31, 78	6.79			
Deaths	185	13	39	71	60			
Per cent at each age		7.03	21.08	38.38	32.63			
Death rate per 1,000 population	1 /	3.86	5.80	13.48	53.33			
Average death rate		3. 63	9. 28	26. 51	156.36			
Average death rate		3.63	9.28	26. 51	156.3			

This table shows that in each age group above 25 years the death rate of nurses and midwives was much less than the average rate in all selected occupations. In the age group 15 to 25 years the death rate (3.86) was slightly above the average (3.63).

The following table shows, for the registration area and some of its subdivisions, the death rate of nurses and midwives from each of certain specified causes per 100,000 living:

CAUSE OF DEATH.	Regis-	REGIST	Regis- tration		
CAUSE OF DEATH.	tration area.	Total.	23 41. 04 45. 54 13 16. 42 45. 54 13 22. 77 103 22. 77 106. 71 159. 38 67 139. 55 68. 31 14 164. 18 182. 15 11 180. 59 250. 46 10 16. 42 22. 77 10 16. 42 22. 77 17 24. 63 45. 54	Rural.	cities in other states.
Typhoid fever	64. 26	42. 23	41.04	45. 54	96. 19
Malarial fever	17.85	24. 13	16.42	45.54	8.74

Diseases of the nervous system	171.37	168.94	164.18	182.15	174.89
Diseases of the respiratory system	171.37	199.11	180. 59	250.46	131.16
Diseases of the liver	14.28	18.10	16.42	22.77	8.74
Ascites					
Other diseases of the digestive system	28, 56	18.10	16.42	22.77	43.72
Bright's disease	24. 99	30.17	24.63	45.54	17.49
Other diseases of the urinary system	14. 28	18.10	24.63		8.74
Diseases of the bones and joints					
Burns and scalds	7.14				17.49
Snicide	10.71	6.03	8. 21		17.49
Other accidents and injuries	46.41	54.30	24. 63	136.61	34.98
Diseases of the female organs of generation	24.99	30.17	32.84	22.77	17.49
Affections connected with pregnancy	7.14				17.49

It will be seen from the preceding table that in the registration states the highest death rates of nurses and midwives occurred from diseases of the respiratory system (199.11), diseases of the nervous system (168.94), and heart disease and consumption (120.67) each. The death rates were above the average from typhoid fever (nurses and midwives, 42.23; average, 35.69), malarial fever (nurses and midwives, 24.13; average, 9.30), heart disease (nurses and midwives, 120.67; average, 99.74), diseases of the nervous system (nurses and midwives, 168.94; average, 114.89), diseases of the respiratory system (nurses and midwives, 199.11; average, 152.88), diseases of the liver (nurses and midwives, 18.10; average, 15.38), Bright's disease (nurses and midwives, 30.17; average, 27.20), suicide (nurses and midwives, 6.03; average, 4.13), other accidents and injuries (nurses and midwives, 54.30; average, 20.43), and diseases of the organs of generation (nurses and midwives, 30.17; average, 9.87). The rates from all other causes were below the average, that for consumption being less than half the average rate from this cause (251.24).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among nurses and midwives:

	United	Regis-	REGIS	TRATION S	TATES.	Regis- tration	Remain- der of the United States.
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	
Typhoid fever	44.57	55.73	37. 84	39.68	3390	79.71	35.44
Malarial fever	40.39	15.48	21.62	15.87	33.90	7. 25	60.76

Dropsy	26.46	7 6. 19	5.41		16.95	7.25	43.04
Heart disease	91.92	105.26	108.11	103.17	118.64	101.45	81.01
Consumption	144.85	133.13	108.11	134.92	50.85	166.67	154.43
Diabetes							
Diseases of the nervous system	114.21	148.61	151.35	158.73	135.59	144. 93	86.08
Diseases of the respiratory system	147.63	148.61	178.38	174.60	186.44	108.70	146.84
Diseases of the liver	18.11	12.38	16. 22	15.87	16. 95	7. 25	22.78
Ascitos	2.79						5.0 6
Other diseases of the digestive system	23. 68	24.77	16.22	15.87	16.95	36. 23	22: 78
Bright's disease	15.32	21.67	27.03	23. 81	33.90	14.49	10.13
Other diseases of the urinary system	11.14	12.38	16.22	23.81		7. 25	10.13
Diseases of the bones and joints							
Burns and scalds	6.96	6.19				14.49	7.59
Suicide	4.18	9.29	5.41	7.94		14.49	
Other accidents and injuries	27.86	40.25	48.65	23. 81	101.69	28.99	17.72
Diseases of the female organs of generation	15.32	21.67	27.03	31.75	16.95	14.49	10.13
Affections connected with pregnancy	6.96	6.19				14.49	7.59

It will be seen from this table that in the United States as a whole the proportions of deaths of nurses and midwives due to typhoid fever (44.57), malarial fever (40.39), rheumatism (15.32), dropsy (26.46), consumption (144.85), diseases of the liver (18.11), ascites (2.79), other diseases of the digestive system (23.68), burns and scalds (6.96), and affections connected with pregnancy (6.96) were greater than the corresponding proportions in the registration states, and that for most of these causes the proportions were still greater in the remainder of the United States, or in the nonregistration area.

SERVANTS.

The total number of female servants reported in the United States was 1,302,728, being 46.10 per cent of the whole number of females in the specified occupations. The number of deaths of servants was 27,834, or 79 per cent of the total deaths of females in the specified occupations.

In the registration area the number of servants reported was 633,836, being 42.92 per cent of the whole number of females in the specified occupations. The corresponding number of deaths was 8,952, or 71.78 per cent of the total deaths of females in the specified occupations in this area, and the death rate was 14.12 per 1,000.

The following table shows, for the registration states, the number of female servants living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

POPILLATION DEATHS AND DEATH DATES		A GIR:

Deaths	6,731	843	1, 958	1, 917	1,983			
Per cent at each age		12.52	29.09	28.48	29.46			
Death rate per 1,000 population	18.18	4.57	15.48	48.87	258. 80			
Average death rate		3. 63.	9.28	26,51	156.36			

This table shows that nearly 50 per cent of the female servants reported in the registration states were between 15 and 25 years of age, and that the death rate of servants in this age period (4.57) was less excessive in comparison with the average rate of females in all selected occupations (3.63) than in the age periods above 25 years, in each of which the death rate of servants was nearly double the average rate in all occupations. As nearly 45 per cent of all females included in the selected occupations in the registration states are classified as servants, it will be seen that the excessive death rate of these has the effect of raising the average rate for all the occupations considerably, particularly for those over 25 years of age.

The following table shows, for the registration area and some of its subdivisions, the death rate of female servants from each of certain specified causes per 100,000 living:

-	Regis-	REGIS	TRATION ST	Regis-	
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states
Typhoid fever	43. 12	48.89	54: 71	37.00	32. 62
Malarial fever	13. 41	12.70	12.87	12, 33	14.41
Rhenmatism	9.62	11.35	10.86	12, 33	7. 21
Dropsy	12.78	15.94	0:84	34.53	8: 35.
Heart disease	138.99	182.33	172.98	201.43	78: 14:
Consumption	302, 76	383.02	408.72	320, 50	1:00:04:
Diabetes	4.58	7, 20	5, 637	10.69	0.76
Diseases of the nervous system	162, 50	218, 52	181.83	293.51	83: 85
Diseases of the respiratory system	199.89	267.14	241.37	319:81	105.45
Diseases of the liver.	20.67	28.36	30.98	23. 02	9. 88
Ascites	1.26	1.35	1.21	1.64	1.14
Other diseases of the digestive system	57.11	74.82	72. 81	78, 93	32. 24
Bright's disease	35, 50	46 40	50. 29	39. 64	20.10
Other diseases of the urinary system	30.45	43, 49	50. 29°	29. 60	12.14
Diseases of the bones and joints	3.16	4.59	3, 62	6.58	1.14
Burns and scalds	6.78	7.56	7. 24	8.22	5. 69
Suicide	6. 15	7.02	6.84	7. 40	4. 93'
Other accidents and injuries	27. 29:	33.76	31.38	38.64	18: 21:
Diseases of the female organs of generation	14.51	15. 67	10.90	13. 15	12.90
Affections connected with pregnancy	32.50	37.82	38. 22	37.00	25.04

It will be seen from this table that in the registration states the death rate of female servants was higher from each specified cause than the average rate of females in all selected occupations, and as in this area the deaths of servants constitute nearly three-fourths of the whole number, it will also be seen that the average rate is considerably raised by the excessive rate among servants.

The highest rate occurred from consumption (383.02), being higher in the cities (408.72) than in the rural districts (330.50). The death rate from diseases of the respiratory system (267.14) was very high, and was higher in the rural districts (319.81) than in the cities (241.37). The death rate from diseases of the nervous system (218.52) was nearly twice the average rate from these causes (114.89), and was also much higher in the rural districts (293.51) than in the cities (181.83).

In the registration cities in other states the death rates from malarial fever and dropsy were higher than the rates from these causes in the registration cities in the registration states, but for all other causes the rates were lower in this area, which is probably due to the more deficient return of occupations in these cities.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among female servants:

	United	Regis-	REGIS	tration s	CATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.

Other accidents and injuries	18.18	19. 33	18:57	13. 27	19.09	21.61	17. 64
Diseases of the female organs of generation	11.14	10.28	8.62	9.81	6: 50	15.31	11.55
Affections connected with pregnancy	3 I. 36	23. 01	20.80	22, 25	18.28	29.72	35, 32

It will be seen from this table that in the United States as a whole the proportions of deaths of servants due to typhoid fever (48.50), malarial fever (24.72), rheumatism (8.48), dropsy (22.96), consumption (220.92), ascites (1.47), diseases of the bones and joints (2.77), burns and scalds (4.45), suicide (4.17), diseases of the female organs of generation (11.14), and affections connected with pregnancy (31.36) were greater than the corresponding proportions in the registration states, and that for most of these causes the proportions were still greater in the remainder of the United States, or nonregistration area.

MILL AND FACTORY OPERATIVES (TEXTILE).

The total number of mill and factory operatives reported in the United States was 223,658, being 8.06 per cent of the whole number of females in the specified occupations. The number of deaths was 1,024, or 2.91 per cent of the total deaths of females in the specified occupations.

In the registration area the number of female mill and factory operatives reported was 180,942, being 12.25 per cent of the whole number of females in the specified occupations in this area. The corresponding number of deaths was 845, or 6.77 per cent of the total deaths of females in the specified occupations, and the death rate was 4.67 per 1,000.

The following table shows, for the registration states, the number of female mill and factory operatives living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

·		∆GE.						
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.			
Population	144, 356	91, 478	38, 490	5 ₉ 657.	597			
Per cent at each age	764	63.37	26.66 . 255	3.92. 92.	0.41			
Per cent at each age	5.,29	49.21 4.11	33.38 6.63	12: 04 16: 26	2: 88			
Average death rate		3.63	9.28	26.51.	156, 36			

This table shows that nearly 65 per cent of the female mill and factory operatives reported in the registration states were between 15 and 25 years of age, and that the death rate in this age period (4.11) was higher than the average rate in all selected occupations (3.63). In each of the age periods above 25 years the death rate of mill, and factory operatives was less than the average.

The following table shows, for the registration area and some of its subdivisions, the death rate of female mill and factory operatives from each of certain specified causes per 100,000 living:

	Regis-	REGIST	Regis- tration		
CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	36.48	41.56	44.96	33.89	16, 40
Malarial fever	7.74	8.31	4.00	18.07	5.47
Rheumatism	4.42	4.16	5.00	2. 26	5.47
Dropsy	1.11	1.39	2.00		
Heart disease	27.08	31.17	33. 97	24.85	10.93
Consumption	189.01	211. 28	224.80	180.72	101. 13
Diabetes	2. 21	2.08	3.00		2.73
Diseases of the nervous system	28. 19	32,56	82.97	31.63	10.93
Diseases of the respiratory system	64.11	71.35	82.92	45. 18	85. 53
Diseases of the liver	3.32	4.16	4.00	4.52	
Ascites	1.66	2.08	1.00	4. 52	
Other diseases of the digestive system	17.13	20.78	22.98	15.81	2.73
Bright's disease	9.40	11.08	14.99	2.26	2.73
Other diseases of the urinary system	4.97	5.54	7.99		2.73
Diseases of the bones and joints			 		
Burns and scalds	1.11	1.39	2.00		<u> </u>
Suicide	2.21	2.08	3.00		2.73
Other accidents and injuries	7.74	9. 01	9.99	6.78	2.73
Diseases of the female organs of generation		2.08	8.00		2.73
Affections connected with pregnancy	3.32	3.46	4.00	2. 26	2.73

It will be seen from this table that in the registration states the death rates of female mill and factory operatives were all much below the average death rates of females in all selected occupations except those from typhoid fever (mill and factory operatives, 41.56; average, 35.69), and ascites (mill and factory operatives, 2.08; average, 0.92). The fact that nearly 65 per cent of the total number of female mill and factory operatives in this area were under 25 years of age is largely explanatory of the small death rates from certain causes.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among female mill and factory operatives:

	United Regis-		REGIS	TRATION S	TATES.	Regis- tration	Remain-
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
Typhoid fever	87.89	78.11	78.54	79. 65	75. 38	74. 07	134. 08
Malarial fever	22.46	16.57	15.71	7.08	40. 20	24.69	50.28

Other diseases of the digestive system	37.11	36.69	39. 27	40.71	35.18	12.40	39.11
Bright's disease	16.60	20.12	20.94	26. 55	5.03	12.40	
Other diseases of the urinary system	9.77	10.65	10.47	14.16		12.40	5. 59
Diseases of the bones and joints							
Burns and scalds	2.93	2. 37	2.62	3.54			5. 59
Suicide	4.88	4.73	3.93	5.31		12.40	5.59
Other accidents and injuries	20.51	16. 57	17.02	17.70	15.08	12.40	39. 11
Diseases of the female organs of generation	8. 91	4.73	3.93	5.31		12.40	
Affections connected with pregnancy	9. 77	7.10	6, 54	7.08	5.03	12.40	22. 35

It will be seen from this table that in the United States as a whole the proportions of deaths of female mill and factory operatives due to typhoid fever (87.89), malarial fever (22.46), dropsy (3.91), diabetes (4.88), burns

and scalds (2.93), suicide (4.88), other accidents and injuries (20.51), and affections connected with pregnancy (9.77) were greater than the corresponding proportions in the registration states, and that for each of these causes the proportions were still greater in the remainder of the United States, or nonregistration area.

MILLINERS, DRESSMAKERS, SEAMSTRESSES, AND SEWING MACHINE OPERATORS.

The total number of milliners, dressmakers, seamstresses, and sewing machine operators reported in the United States was 506,024, being 18.25 per cent of the whole number of females in the specified occupations. The number of deaths among these was 2,290, or 6.50 per cent of the total deaths of females in the specified occupations.

In the registration area the number of milliners, dressmakers, seamstresses, and sewing machine operators reported was 289,893, being 19.64 per cent of the whole number of females in the specified occupations in this area. The corresponding number of deaths was 1,029, or 8.25 per cent of the total deaths of females in the specified occupations, and the death rate was 3.55 per 1,000.

The following table shows, for the registration states, the number of milliners, dressmakers, seamstresses, and sewing machine operators living at the end of the census year, and the number of deaths during the census year, at all ages, and in each of four age groups, with the percentages in each age group, and the death rates per 1,000 living:

PODITATION DEATHS AND DEATH DATES		AGE.				
POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 25 years.	25 to 45 years.	45 to 65 years.	65 years and over.	
Population	159, 962	70, 429	66, 441	18, 241	2, 204	
Per cent at each age		44.03	41.54	11.40	1.38	
Deaths	706	141	317	162	82	
Per cent at each age		19.97	44.90	22, 95	11.61	
Death rate per 1,000 population	4.41	2.00	4.77	8.88	37.21	
Average death rate		3, 63	9. 28	26. 51	156.36	

This table shows that in each age period the death rate of milliners, dressmakers, seamstresses, and sewing machine operators was less than the average rate in all selected occupations.

The following table shows, for the registration area and some of its subdivisions, the death rate of milliners, dressmakers, seamstresses, and sewing machine operators from each of certain specified causes per 100,000 living:

	Regis-	REGIS	TRATION S	rates.	Regis- tration
. CAUSE OF DEATH.	tration area.	Total.	Cities.	Rural.	cities in other states.
Typhoid fever	18.63	19.38	17.91	24. 22	17.70
Malarial fever	4.14	3.75	4.89		4.62
Rhoumatism	2.41	2.50	2.44	2.69	2.31
Dropsy	2.41	3. 13	2.44	5.38	1.54
Heart disease	25. 53	34.38	85.01	32, 30	14.62
Consumption	115. 21	140.03	134. 36	158.79	84.66
Diabetes					
Diseases of the nervous system	26.50	35.01	31.76	45.75	16.12
Diseases of the respiratory system	46.57	66.27	60. 26	86.12	22.32
Diseases of the liver	4.14	5.63	5.70	5.38	2.31
Ascites					
Other diseases of the digestive system	14.14	18.13	17. 10	21.53	9.23
Bright's disease	10.69	13.75	15. 47	8.07	6.93
Other diseases of the urinary system	5.52	7.50	8.14	5.38	3.08
Diseases of the bones and joints	1.03	1.88	1.62	2.69	
Burns and scalds	0.34	0.62	0.81		
Suicide	1.72	1.88	0.81	5.38	1.54
Other accidents and injuries	8.62	11.25	11.40	10.77	5.39
Diseases of the female organs of generation	4.14	4.38	4.89	2.69	3.85
Affections connected with pregnancy	3.79 -	2.50	2, 44	2, 69	5. 39

It will be seen from this table that in the registration states the death rates of milliners, dressmakers, seamstresses, and sewing machine operators were much below the average rates from each specified cause, and that in most cases the rates were higher in the rural districts than in the cities.

VITAL AND SOCIAL STATISTICS.

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths from each of certain specified causes per 1,000 deaths from all causes among milliners, dressmakers, seamstresses, and sewing machine operators:

	United	Regis-	REGIST	ration s	PATES.	Regis- tration	Remain- der
CAUSE OF DEATH.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.

Diseases of the respiratory system	121.40	131. 20	150.14	142.86	170.21	89.78	113.40
Diseases of the liver	11.35	11.66	12.75	13. 51	10.64	9. 29	11.10
Ascites	0.87						1.59
Other discases of the digestive system	35.37	39.84	41.08	40.54	42. 55	37. 15	31.72
Bright's disease	20.52	30.13	31.16	36. 68	15.96	27, 86	12.69
Other diseases of the urinary system	11.35	15.55	17.00	19. 31	10.64	12.38	7. 93
Diseases of the bones and joints	3.06	2, 92	4. 25	3, 86	5. 32		3.17
Burns and scalds	2.62	0.97	1.42	1.93			3.97
Saioido	5.24	4.86	4.25	1.93	10.64	6.19	5.55
Other accidents and injuries	22. 27	24.30	25.50	27.03	21. 28	21.67	20.69
Diseases of the female organs of generation	12.66	11.66	9.92	11.58	5. 32	15.48	13.48
Affections connected with pregnancy	18.34	10.69	5. 67	5. 79	5. 32	21. 67	24. 58

It will be seen from this table that in the United States as a whole the proportions of deaths of milliners dressmakers, seamstresses, and sewing machine operators due to typhoid fever (69.43), malarial fever (20.96), rheumatism (8.73), dropsy (17.03), consumption (321.83), diabetes (1.31), ascites (0.87), burns and scalds (2.62), diseases of the organs of generation (12.66), and affections connected with pregnancy (18.34) were greater than the corresponding proportions in the registration states, and that for each of these causes the proportions were still greater in the remainder of the United States, or nonregistration area.

SECTION VIII.

MONTH OR SEASON IN RELATION TO DEATHS.

For the United States as a whole and for the nonregistration areas we have no means of ascertaining with accuracy the influence of differences of temperature, humidity, movements of the atmosphere, etc., in different months or seasons upon either general or special death rates, not only because we have no true death rates based on the ratio of the number of deaths to population for these localities, but also because the method of comparing the number of deaths occurring in any given month or season with the total number of deaths for the year is liable to give misleading results, for the reason that when the records of deaths are collected only by the enumerators at the end of the year the deficiency in the record increases in proportion to the distance in time from the date of the enumeration, with exception of the month most distant from that date. The nature and amount of this error was discussed in the Report on Mortality and Vital Statistics of the Tenth Census, Part I, page xl.

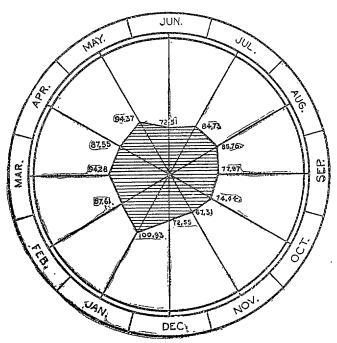

Tables 16 and 17 of Part III of this report give the number of deaths reported in the United States, in each grand group, and in the registration cities, during each month of the census year, with distinction of sex of certain age groups, and of certain causes of death.

The following table shows, for the United States, for the registration cities as a whole, for the white population in the registration cities, and for the colored population in the registration cities the number of deaths reported for each month of the census year and the corresponding proportion in each month per 1,000 of the total of those of whom the month of decease was known, at all ages, and for three age groups, with distinction of sex:

The following diagram indicates the relative proportion of deaths at all ages in the United States in each month of the census year:

The following diagram indicates the relative proportion of deaths under 5 years of age in the United States in each month of the census year:

The following diagram indicates the relative proportion of deaths at 60 years of age and over, excluding those of unknown age, in each month of the census year:

It will be seen from these diagrams that the greatest proportion of deaths in the total occurred in the months of January (100.93), May (94.37), and March (94.28), and that the least proportion occurred in November (67.31), June (72.51), and December (72.55).

In children under 5 years of age the greatest proportion of deaths occurred in July (113.29) and August (105.78), this excess being due to the great prevalence of diarrheal diseases in those months, while the least proportion of deaths in this age group occurred in November (59.69) and December (63.68).

In those 60 years of age and over the greatest proportion of deaths occurred in January (112.19) and in March (102.76), this excess being mainly due to diseases of the respiratory organs, while the lowest proportion occurred in the months of June (65.15) and July (66.85).

The following table shows, for the United States and for each grand group, the number of deaths reported for each month of the census year and also in each of the four seasons, with the proportion of deaths in each month per 1,000 of those of whom the month of decease is known:

In the above table the irregularity of the rates for the colored shows that the numbers are too small to give any definite results.

For the white males under 5 years of age it will be seen that the highest death rate occurred in July, from which time there was a regular fall until the month of November, when it again began to increase, but irregularly, a sharp increase occurring in the months of May and June.

Among those 60 years of age and over, on the other hand, by far the highest death rate occurred in January, and the lowest in June and December.

SECTION IX.

LOCALITY IN RELATION TO DEATHS.

The agencies to which great differences in the mortality of different localities are chiefly due are (1) sex, age, and racial characteristics of the population; (2) density of population in connection with poverty; (3) occupations of the population; (4) meteorological conditions; (5) altitude and soil drainage; (6) epidemics; (7) migration.

These agencies overlap and complicate each other to a considerable extent, and it is usually very difficult, and often impossible, to distinguish the influence each has had in producing the final result.

The factor of migration exerts a very considerable influence on the mortality of certain localities in the United States, but it is an influence of which it is practically impossible to accurately estimate the degree or amount. In certain parts of the country great changes may take place in the population within the limits of a single year. Persons who have contracted a disease, such as consumption, or typhoid fever, or malarial fever, in one locality, die in another, and perhaps quite a remote, locality, and it is especially necessary to bear this in mind in considering the number of deaths from consumption which occur in certain regions to which persons suffering from this disease so to secure the benefits of climate.

Special attention is given in this report to the mortality statistics of the registration cities of the United States, and to comparison of the data obtained from them with corresponding data derived from what is called the "rural portion" of the registration states, by which is meant that portion of these states not included in cities of 5,000 inhabitants and upward.

Part II of this report is devoted to a discussion of the mortality statistics of the 28 cities of the United States having a population of 100,000 and upward on June 1, 1890, and for each of these cities the number of deaths in each ward during the census year is given, with distinction of certain causes (Table 3) and with corresponding death rates (Table 4).

In addition to the record of deaths for the census year, the record of deaths for the 5 preceding years was obtained for the state of New Jersey, for what is called "The metropolitan district", including New York city, Brooklyn, and Kings, Queens, Richmond, and Westchester counties in the state of New York, and Hudson and Essex counties and the cities therein, and Passaic city and Paterson in New Jersey; for the District of Columbia; and for the cities of Baltimore, Boston, and Philadelphia. This record was added to the census year record for these localities, giving what is referred to in this report as the "6-year record", being for the 6 years ending May 31, 1890, the tables relating to it being Tables 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, and 25 in Part IV.

In discussing the ratios of deaths to population for different causes, or in relation to color, sex, etc., these ratios are usually given in this report, for the following groups of localities, for the census year, namely: the registration area as a whole; the registration cities; the registration states; the cities in the registration states; the rural districts of the registration states; the registration cities in the nonregistration states; the metropolitan district.

A description of these areas, and others for which data are given in this report, will be found in the Appendix. The data for calculating similar death rates for the individual registration states and cities are given in the tables, and some of these rates for the smaller areas are also given, especially in Part II, for each city of 100,000 inhabitants and upward.

With the exception of the registration cities, and of wards in the larger cities, the smallest unit of area employed in the tables of deaths is either the county, or what is called a "state group", being a group of counties having certain common characteristics of altitude, climate, etc. For each county and for each "state group" a table has been given in the Compendium of the Eleventh Census, Part II, Table 3, showing the total number of deaths reported as having occurred during the census year with distinction of color, nativity, of those occurring in children under 5 years of age, and of those due to certain causes, including scarlet fever, measles, whooping cough, diphtheria and croup, typhoid fever, malarial fever, diarrheal diseases, cancer and tumor, consumption, pneumonia, and childbirth and puerperal diseases.

For the registration cities and for each ward in certain cities, for each county and for each state group in the registration states, for each state, and for the United States, the data as to population, number of births during the census year, and the number of deaths in persons under 1 and under 5 years of age, and at all ages, with the corresponding death rates, are given in Table 1, Part I of this report.

For the counties in the nonregistration states, which include the greater part of the area of the United States, the figures given in the Compendium table above referred to are too incomplete and too small to permit of the calculation of useful ratios from them, the "state group" being the smallest unit of area for which even the ratio of number of deaths from a particular cause to the number of deaths from all causes is of any value.

The grouping of the counties into "state groups", and of the state groups into "grand groups" is shown in map No. 1.

The compilations for the state groups have been consolidated by states to permit of comparison with state statistics of deaths, past or future, and they have also been consolidated by what are called "grand groups" whose boundaries are determined by topographical peculiarities and not by state lines.

These state and grand groups correspond to those used in the reports on the mortality and vital statistics of the Tenth Census, the divisions having been made by Mr. Henry Gannett, geographer for both censuses, whose description of the characteristics of each group was given in volume XI of the Tenth Census Reports, and is also given as an appendix to this report.

The following table shows, for each grand group, the population, with distinction of sex, and for certain grand groups, of color, with the state groups composing each grand group, and the registration cities therein. The counties forming the several state groups are given in the Appendix above referred to:

Table 1 in Part I of this report gives for each registration city and for each ward in certain cities; for each county and each state group in the registration states; for each state, and for the United States, the number of deaths reported during the census year as caused by scarlet fever, typhoid fever, malarial fever, diphtheria, diarrheal diseases, consumption, pneumonia, measles, whooping cough, cancer and tumor, heart disease and dropsy, affections connected with pregnancy, diseases of the liver, diseases of the nervous system, diseases of the urinary organs, old age, stillborn, all other causes, and unknown causes, with distinctions of sex, color, general nativity, and parent nativity.

Table 2 in Part I of this report gives the same information for each state, for the total registration area, for the registration cities, for the sum of the registration states, for the cities in the registration states, for the rural districts of the registration states, for the registration cities in the nonregistration states, and for the nonregistration area, with distinction of birthplaces of mothers.

The influence upon the health of the inhabitants of considerable areas of the country exerted by peculiarities of topography, drainage, climate, etc., is indicated to some extent by Table 3, Part I, of this report, which shows for each state group, each grand group, and for the United States the number of deaths reported from each of certain causes or groups of causes during the census year, and the number of deaths from each cause or group of causes per 1,000 of the total deaths from known causes for the same period.

The division of the country into grand groups is shown in map No. 1. Each grand group is made up of a number of state groups, and a list of the counties comprising each state group, arranged by states in alphabetical order, is given in the Appendix, pages 497 to 511.

In the subsequent remarks on each grand group are included the descriptions by Mr. Henry Gannett, geographer of the census, together with notes on the peculiarities of climate, density of population, etc., and reference is made to some of the causes of death which were either more than usually prevalent or the reverse for each locality.

The first four of these grand groups, which comprise the whole Atlantic and Gulf coasts, possess primarily a sea climate. In this region, to a greater or less extent, the extremes of heat and cold are lessened and mitigated by the presence of that great balance wheel of temperature, the ocean.

The atmosphere is moister and, as a rule, the rainfall is greater than that of the country farther inland. This region, however, varies in its different parts very greatly in respect to temperature and surface in such a manner as to produce very decided differences in its relations to certain causes of death.

The general characteristics of the several grand groups, with the comment upon particular causes of death therein, are given below.

GRAND GROUP-NORTH ATLANTIC COAST REGION.

This comprises a strip of land from 50 to 75 miles wide along the coast of Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut. The surface is mainly undulating and hilly, becoming less varied toward the south. The coast is bold and rocky in Maine, but mostly sandy and low in Massachusetts, Rhode Island, and Connecticut. There is comparatively little swamp or undrained land. The mean annual temperature is 40° to 50° F. The mean annual rainfall is from 40 to 50 inches. The mean elevation is from 100 to 500 feet, sloping toward the shore.

The average density of population was 165.84 persons to the square mile, being highest in Massachusetts (451.18) and lowest in Maine (49.83). The colored population formed less than 2 per cent of the whole. The foreign population was 26.27 per cent of the whole, being highest in Rhode Island (30.77 per cent) and lowest in Maine (12.16 per cent).

The principal causes to which were attributed more than the average number of deaths out of the whole number reported during the census year for this group are diphtheria, cholera infantum, old age, consumption, hydrocephalus, cancer, diabetes; diseases of the nervous system, especially apoplexy and paralysis; diseases of the circulatory system, especially diseases of the heart; bronchitis, Bright's disease, and drowning, especially on the coasts of Maine and Connecticut. Whooping cough caused more than the average proportion of deaths in Rhode Island and in the coast regions of Maine and Connecticut.

The causes of death for which the proportion was decidedly lower for this grand group than for the United States are measles, scarlet fever, enteric fever; diarrheal diseases, except cholera infantum; malarial fever, childbirth and puerperal diseases, diseases of the spleen, homicides, and burns and scalds. The proportion of stillbirths was slightly above the average in this region, being greatest in Massachusetts and Connecticut and so low in Maine as to make it probable that the reports on this point from this state are very incomplete.

In general the relative prevalence of different diseases in this grand group in 1890 corresponded very nearly to that shown for 1880, and the remark then made that a partial explanation of the unusual prevalence of certain causes of death in this region was the greater proportion of death of persons of advanced age in the population applies also to the figures derived from the present census. (a)

GRAND GROUP 2.-MIDDLE ATLANTIC COAST REGION.

This includes a strip of land comprising the coast counties of New York, New Jersey, Delaware, Maryland, and Virginia. The climate is somewhat milder than that of Grand Group 1. The surface is low and sandy, and along the New Jersey coast we find characteristic sandy reefs, shoreward from which are lagoons, succeeded by extensive areas of swamp. Farther inland the country is low, nowhere rising more than 100 feet above the level of the sea. The mean annual temperature is from 45° to 50° F. in the northern portion, and 55° to 60° in the southern portion. The mean annual rainfall is from 45 to 55 inches.

The average density of population was 236.14 to the square mile, being highest in the District of Columbia (3,839.87) and lowest in Virginia (49.45). In New York it was 1,568.62. In the northern part the colored population was below 3 per cent of the whole, while in the southern part it formed nearly 37 per cent of the population. The foreign population was 25.39 per cent, being highest in New York (36.67) and lowest in Virginia (1.62).

The following are the causes to which were attributed a decidedly greater proportion of deaths per 1,000 ef deaths from known causes during the census year than was the case for the whole United States: cholera infantum; alcoholism, chiefly due to excessive prevalence in New York city; inanition, especially in Delaware, the District of Columbia, and in Maryland, and there occurring chiefly among the colored infants; stillbirths, especially in the District of Columbia, New York city, and on the coast of New Jersey; debility and atrophy, especially in Delaware and the District of Columbia; consumption, especially in Delaware, the District of Columbia, and on the coast of Virginia among the colored population; hydrocephalus, especially in the cities of New York and New Jersey; apoplexy, bronchitis, and pneumonia, especially in New York city; and Bright's disease, especially in New York city.

The proportion of deaths from the following causes was below the average: measles, enteric fever, malarial fever, old age, cancer, dropsy, diseases of the heart, diseases of the female organs of generation, childbirth, diseases of the bones and joints, and accidents and injuries.

The proportion of deaths due to different causes in this region is influenced to a great extent by the presence in it of large cities, such as New York and Brooklyn, and in the southern part by the presence of a large proportion of colored population.

GRAND GROUP 3.—SOUTH ATLANTIC COAST REGION.

This includes the coast counties of North Carolina, South Carolina, and Georgia, with extensive reefs inclosing large bays and sounds. A large proportion of the area is low and swampy. It includes those portions of the states above mentioned which lie below what is ealled the "fall line"—that is, the line which forms the boundary of the metamorphic region. The mean annual temperature is from 60° to 65° F. The mean annual rainfall is from 50 to 60 inches.

The average elevation above the sea is less than 100 feet. The average density of population in this group was 25.08, being highest in South Carolina (32.70) and lowest in Georgia (16.09). The foreign population formed less than 1 per cent of the whole, being highest in Georgia (2.28 per cent) and lowest in North Carolina (0.25 per cent). The colored population was over 50 per cent of the total.

The large proportion of the colored population explains many of the peculiarities of this region as regards the proportions of deaths due to various causes. The following causes gave a greater proportion of the whole number of deaths reported than the average for the United States: diarrheal diseases, malarial fever, venereal diseases, parasitic diseases, scrofula and tabes, consumption, dropsy, tetanus and trismus nascentium, pleurisy, dentition, childbirth, burns and scalds, exposure and neglect, gunshot wounds, and homicides.

The following are the causes from which the proportions of deaths reported were less than the average: measles, scarlet fever, diphtheria, whooping cough, alcoholism, inanition, cancers and tumors, diabetes, diseases of the circulatory system, croup, bronchitis, pneumonia, Bright's disease and other diseases of the kidneys, and diseases of the bones and joints.

Diphtheria was more prevalent in Georgia than in North Carolina, and much more so than in South Carolina. The proportion of deaths due to enteric fever was much above the average in North Carolina and below it in South Carolina. The proportion of deaths due to malarial fever was very high in Georgia and also high in the coast region of North Carolina. The proportion of deaths due to consumption was greatest in the coast region of South Carolina and least in Georgia. The proportion of deaths due to caneer was greatest in North Carolina and least in South Carolina. The proportion of deaths due to tetanus and trismus nascentium was much greater in South Carolina. The proportion of deaths due to pulmonia in the coast region of North Carolina was decidedly greater than in Georgia or South Carolina. The proportion of deaths due to heart disease was high in North Carolina, but below the average in the coast regions of Georgia and South Carolina.

GRAND GROUP 4.—GULF COAST REGION.

This region includes the entire state of Florida and the coast counties of Alabama, Mississippi, Louisiana, and Texas. In Florida and Louisiana a large portion is uninhabited swamp land. The mean annual temperature is from 70° to 75° F.; the mean annual rainfall is over 55 inches. The elevation above the sea is less than 100 feet, with the exception of a small part of interior northern Florida, where it is from 100 to 500 feet.

The average density of population was 12.31 to the square mile, being highest in Louisiana (29.97) and lowest in Texas (7.21). The colored population in this group formed 40.18 per cent of the whole. The foreign population was 7.49 per cent of the whole, being highest in Texas (13.66) and lowest in Mississippi (3.85).

In this region the presence of a large proportion of colored population accounts for many of the pecularities in the proportions of death due to various causes. The causes of death in this region to which were attributed more than the average proportion of deaths are chiefly diarrheal diseases, malarial fever, venereal diseases, alcoholism, debility, dropsy, tetanus and trismus nascentium, dentition, Bright's disease, gunshot wounds, and homicides.

The following are the causes from which the proportion of deaths was reported as being less than the average for this region, namely, scarlet fever, diphtheria, whooping cough, enteric fever, consumption, cancer, diabetes, apoplexy and paralysis, bronchitis, pneumonia, and diseases of the bones and joints.

The proportion of deaths due to diphtheria was much greater in the southern portions of Louisiana and Mississippi than it was in the coast regions of Alabama, Florida, or Texas. Enteric fever caused a greater proportion of deaths in Florida and the coast regions of Mississippi than in the southern parts of Alabama, Louisiana, or Texas. The proportion of deaths due to malarial fever was greatest in Mississippi and least in Florida. The proportion of deaths due to childbirth was very large in Florida and on the Gulf coast of Texas, but below the average on the coast of Alabama.

GRAND GROUP 5.—NORTHEASTERN HILLS AND PLATEAUS.

Grand Groups 5, 6, and 9, include the area of highlands stretching from northeast to southwest, which has generally received the name of the Appalachian region. It comprises the broken, hilly country of Maine, the White mountains of New Hampshire, and the Green mountains of Vermont, the hills of central Massachusetts and

of northern Connecticut, the Adirondacks and Catskills of New York, the multitudinous ridges and ranges of Pennsylvania, Virginia, West Virginia, the Carolinas, Tennessee, Kentucky, Georgia, and Alabama.

The northeastern Appalachian region, or Grand Group 5, includes all that portion of Maine, New Hampshire, Massachusetts, and Connecticut not comprised in the coast strip, with all of Vermont and the northern portion, including the Adirondacks, of New York. The area is by no means all strictly mountainous country, but includes also a large amount of hilly, broken country. It was originally covered with dense forests, which have in the settled portions been largely cut away. The climate is severe, being affected comparatively little by the sea, and the mean annual temperature over most of this area is less than 45° F. In some parts, although not the most thickly settled ones, it falls below 40° F. The annual rainfall is from 35 to 45 inches. The elevation is mostly above 500 feet and in considerable parts rises to mountains from 3,000 to 5,000 and even 6,000 feet in height.

The average density of population was 33.36 to the square mile, being highest in Massachusetts (134.23) and lowest in Maine (10.41). The colored population formed only 0.59 per cent of the whole. The foreign population was 19.37 per cent of the whole, being greatest in Massachusetts (27.06) and least in Maine (11.51 per cent).

The large proportion of persons of advanced age in the living population in this region exercise a decided influence on the proportion of deaths due to certain forms of diseases of advanced life. The causes of death in this region to which were attributed more than the average proportion of the deaths reported are as follows: diphtheria, cholera infantum, old age, consumption, cancer, tumors, diabetes, apoplexy and paralysis, diseases of the heart, pneumonia, and Bright's disease.

The proportion of deaths due to diphtheria was greatest in Connecticut and Vermont and least in the northern part of Maine, which is the reverse of the conditions which prevailed in 1880. The proportion of deaths due to consumption was greatest in Maine and least in New Hampshire. The proportion of deaths reported as due to old age was very large throughout this group, and especially so in New Hampshire and Vermont.

The causes of death in this grand group to which were attributed less than the average proportion of the deaths reported are mainly as follows: measles, scarlet fever, whooping cough, enteric fever, diarrheal diseases, malarial fever, tetanus and trismus nascentium, convulsions, affections connected with pregnancy, diseases of the bones and joints, and gunshot wounds and homicides. The proportion of deaths due to malarial fever was very small in this entire region.

GRAND GROUP 6.—THE CENTRAL APPALACHIAN REGION.

This comprises the Catskill region of southeastern New York, the central portion of Pennsylvania, and the western part of Maryland, and chiefly consists of narrow parallel ridges, with singularly uniform crests, broken by few gaps, and rising from 1,000 to 2,000 feet above the narrow valleys separating them, which, in their turn, are from 500 to 1,000 feet above the sea. The mean annual temperature is from 40° to 45° F. The mean annual rainfall is from 35 to 40 inches.

The density of population was 77.31 persons to the square mile. The proportion of colored population was 1.68 per cent of the whole. The proportion of the foreign population was 13.84 per cent, being greatest in New Jersey (20.75) and lowest in Maryland (5.35).

The causes of death in this region to which were attributed more than the average proportion of deaths reported during the census year are as follows: scarlet fever, diphtheria, cholera infantum, cancer; diseases of the nervous system, especially apoplexy, paralysis, and convulsions; diseases of the heart, diseases of the respiratory system. Bright's disease, and accidents and injuries.

The proportion of deaths due to scarlet fever was large in Pennsylvania and small in New Jersey. The proportion of deaths due to diphtheria was very large in the central portion of Pennsylvania and comparatively small in New Jersey. The proportion of deaths due to enteric fever was below the average in the Maryland and Pennsylvania portions of this region, and much below it in New Jersey and New York. The proportion of stillbirths was very large in New Jersey, and so small in New York as to make it certain that the reports as to this cause of death in this region are very incomplete. The proportion of deaths due to apoplexy and paralysis was very large in New Jersey and New York, and the same was the case for diseases of the heart. The proportion of deaths due to pneumonia was greatest in New York and in the central region of Pennsylvania, and least in New Jersey. The proportion of deaths due to Bright's disease was large in Maryland, where also the proportion of deaths due to childbirth was above the average. The proportion of deaths attributed to railroad accidents was remarkably large throughout this region, being greatest in the central region of Pennsylvania and next to this in Maryland. The proportion of deaths due to gunshot wounds and homicide was small.

The causes of death in this region to which were attributed less than the average proportion of deaths reported are as follows: measles, enteric fever, diarrheal diseases, malarial fever, consumption, tetanus and trismus nascentium, and childbirth.

GRAND GROUP 7.—REGION OF THE GREAT NORTHERN LAKES.

This comprises those parts of New York, Ohio, Indiana, Illinois, Michigan, and Wisconsin which border on the Great Lakes, and it partakes to a certain extent of the characteristics of the Atlantic Coast region. These large bodies of fresh water undoubtedly exert a very considerable influence upon the climate in moderating its extremes. The mean annual temperature in the southern part of this region is from 45° to 50° F., and in the northern portion from 40° to 45° F. The mean annual rainfall is from 30 to 40 inches, except in northern Michigan, where it is only from 20 to 25 inches. The elevation is nowhere above 500 feet.

The density of population was 87.01 persons per square mile, being highest in Illinois (838.73) and lowest in Michigan (34.09). The colored population formed less than 1 per cent of the whole. The foreign population was 32.71 per cent of the whole, being highest in Illinois (40.18 per cent) and lowest in Indiana (24.05 per cent).

The causes of death in this region to which are attributed more than the average proportion of the deaths reported are as follows: scarlet fever, diphtheria, cholera infantum, inanition, convulsions, bronchitis, and railroad accidents.

The proportion of deaths due to diphtheria was very large in the lake region of Indiana, and was above the average in Michigan, Wisconsin, Ohio, and Illinois, and was decidedly below the average in the lake region of New York. The proportion of deaths due to scarlet fever was greatest in the lake region of Indiana. The proportion of deaths due to diarrheal diseases was large in the lake region of Illinois, owing to the prevalence of these affections in the city of Chicago. The proportion of deaths due to cancer and tumor was very large in the lake region of Indiana. The large proportion of deaths due to convulsions occurred chiefly in Wisconsin, Ohio, and Illinois. The proportion of deaths due to diseases of the heart was above the average in the lake region of New York, and below it throughout the rest of this region. The proportion of deaths due to pneumonia was greatest in the lake region of New York, where it was about the average of the United States, and was least in Wisconsin and in Michigan. The proportion of deaths due to childbirth was above the average in Michigan and in Indiana. The proportion of deaths due to suicide was above the average in Illinois, i. e., in the city of Chicago. The proportion of deaths reported as due to old age was large in New York and small in Illinois and Indiana.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: measles, whooping cough, enteric fever, malarial fever, scrofula and tabes, consumption, dropsy, diseases of the circulatory system, pneumonia, Bright's disease, and diseases of the bones and joints.

The proportion of deaths reported as due to consumption was least in Chicago, and greatest in Michigan and Wisconsin. The proportion of deaths due to typhoid fever was above the average in Chicago, and decidedly below it in Wisconsin.

GRAND GROUP 8.—THE INTERIOR PLATEAU.

This comprises that portion of the plain stretching from the base of the Appalachians eastward which includes parts of Pennsylvania, Virginia, and North Carolina, and also, on the west side of the Appalachians, the plateau country of central New York and western Pennsylvania. It consists of three regions, which are not contiguous, namely, (1) the western parts of New York and Pennsylvania, (2) the southeastern corner of Pennsylvania, and (3) the central portions of Virginia and North Carolina. The characteristics of the second of these regions, so far as returns of deaths are concerned, are largely due to the fact that it contains the cities of Philadelphia and Reading. These regions have little that is characteristic in climate or surface; lying, as they do, between the Appalachians and the Atlantic Coast region on one hand and the lake region on the other, they partake to a certain extent of the climate of both. The surface is broken and hilly, but nowhere rises into mountains. The group is an upland country originally covered with forests, which have been in great part cut away. It contains comparatively little water surface or swamp land. The mean annual temperature is from 45° to 50° F. The annual rainfall is from 40 to 45 inches in that part east of the Appalachians; from 30 to 35 in the northern portion.

The density of population was 85.88 persons to the square mile, being highest in Pennsylvania (174.76) and lowest in North Carolina (40.81). The colored population formed 2 per cent of the whole in New York and Pennsylvania, and over 40 per cent in Virginia and North Carolina.

The foreign population formed 12.84 per cent of the whole, being highest in Pennsylvania (17.63 per cent), and lowest in North Carolina (0.22 per cent).

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are scarlet fever, enteric fever, debility, old age, cancer; diseases of the nervous system, especially apoplexy, paralysis, and convulsions; diseases of the heart, and railroad accidents.

The causes of death to which were attributed less than the average proportion of the deaths reported are as follows: measles, diphtheria, whooping cough, malarial fever, diseases of the respiratory system, childbirth, diseases of the bones and joints, and gunshot wounds and homicides.

The proportion of deaths due to diphtheria was small in the interior of North Carolina and Virginia. The proportion of deaths due to enteric fever was very large in North Carolina and in Pennsylvania, and was below the average in New York and Virginia. The proportion of deaths due to diarrheal diseases was extremely large in North Carolina. The proportion of deaths due to malarial fever was above the average in Virginia and North Carolina, but much below it in the other parts of this region. The proportion of deaths due to old age was large in New York and Virginia, and small in North Carolina. The proportion of deaths attributed to consumption was large in Virginia and North Carolina, and below the average in the other portions of this region. The proportion of deaths attributed to cancer was large in New York and small in Virginia. The proportion of deaths due to apoplexy and paralysis was much greater in New York than in North Carolina, and the same was the case with regard to diseases of the heart. Bronchitis caused more than an average proportion of deaths in New York, and a comparatively small proportion in Virginia and North Carolina. The proportion of deaths due to Bright's disease was above the average in New York and Pennsylvania, and much below the average in North Carolina. The proportion of deaths due to burns and scalds was much above the average in Virginia and North Carolina.

GRAND GROUP 9.—SOUTHERN CENTRAL APPALACHIAN REGION.

This region is a continuation of Grand Groups 5 and 6, passing to the southwest. It includes portions of Virginia, West Virginia, the Carolinas, Kentucky, Tennessee, Georgia, and Alabama. In Virginia and West Virginia the character of the country is very similar to that of Grand Group 6, but as we proceed southward there is a gradual rise in the ridges, and a tendency to break up into peaks, which in North Carolina develops to the highest degree, presenting in the western part of that state a complex of mountains, rising without much apparent system to heights of from 6,000 to 6,700 feet. In Virginia and farther southward the feature which was outlined in Pennsylvania becomes very characteristic, namely, the great valley occupied in northern Virginia by the Shenandoah, farther south by the branches of the New river and the heads of the Tennessee, and in Tennessee by the river of that name. This forms a great depression which, throughout the whole region, is traversed by numberless minor ranges and ridges, while it is limited on either side by higher ranges, represented in North Carolina by the mountains of the western part of that state, while the western boundary of the belt is the Cumberland range or plateau. In Georgia and Alabama these ranges gradually fade out and disappear. The mountains of this region rise from 1,000 to 6,700 feet above the sea, and the valleys are at elevations varying from 500 to 2,000 feet.

The temperature of the habitable portions of this region varies with the altitude and the latitude, but nowhere is the mean annual temperature much higher than 55° F., and it falls below 40° in the higher country. This region is covered with heavy forests of pine and hard wood. The mean annual rainfall is from 35 to 45 inches in the northern half, and from 50 to 60 inches in the southern half.

The density of population was 32.31 persons to the square mile, being highest in Georgia (42.69), and lowest in West Virginia (23.35). The colored population was over 15 per cent of the whole. The foreign population was less than 1 per cent of the whole, except in Alabama and Georgia, in neither of which did it exceed 2 per cent.

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are as follows: measles, whooping cough, cerebro-spinal fever, enteric fever, diarrheal diseases, scrofula and tabes, consumption, dropsy, croup, diseases of the spine, and gunshot wounds and homicides.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: scarlet fever, diphtheria, debility and atrophy, old age, cancer, apoplexy, tetanus and trismus nascentium, convulsions, diseases of the heart, bronchitis, pneumonia, Bright's disease and other diseases of the kidneys, and childbirth.

The proportion of deaths due to diphtheria was above the average in North Carolina, Virginia, and West Virginia, and was very small in Georgia and Alabama. The proportion of deaths due to whooping cough was very large in Kentucky and West Virginia. The proportion of deaths from enteric fever was above the average throughout the whole of this region, being greatest in North Carolina and South Carolina. The proportion of deaths due to malarial fever was much above the average in Alabama and South Carolina, and much below it in North Carolina and West Virginia. The proportion of deaths attributed to consumption was greatest in Tennessee and West Virginia, and was below the average in North Carolina. The proportion of deaths due to pneumonia was slightly above the average in Alabama, and below it in the other parts of this section, being least in Kentucky. The proportion of deaths due to urinary calculus was above the average in this region, being especially large in North and South Carolina. The proportion of deaths due to childbirth was above the average in Kentucky, North Carolina, and Virginia. The proportion of deaths due to gunshot wounds was very large in Kentucky, and that from homicide was greatest in Alabama.

GRAND GROUP 10.—THE OHIO RIVER BELT.

This group includes those parts of Ohio, Indiana, Kentucky, and West Virginia which border on the Ohio river. It is an area of broken country, becoming more and more diversified in the upper part of the river. For the most part the rivers flow in deep, narrow valleys bordered by high bluffs and broken hills. The area of bottom land is limited. The mean annual temperature is from 45° to 55° F. The annual rainfall is from 45 to 50 inches. The elevation is less than 500 feet from the mouth of the Ohio river to Cincinnati, and above this point it is from 500 to 1,000 feet.

The density of population was 77.28 persons to the square mile, being highest in Ohio (94.68) and lowest in Indiana (61.94). The colored population was below 4 per cent of the total north of the Ohio river, and above 9 per cent south of that stream. The foreign population was 8.71 per cent of the total, being highest in Ohio (10.64 per cent) and lowest in West Virginia (3.51 per cent).

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are: measles, diphtheria, whooping cough, enteric fever, scrofula and tabes, consumption, diseases of the stomach, and diseases of the spine.

The causes of death to which were attributed less than the average proportion of the deaths reported are as follows: scarlet fever, diarrheal diseases, malarial fever, bronchitis, pleurisy, Bright's disease, and childbirth.

The proportion of deaths due to measles was greatest in Kentucky and West Virginia. The proportion of deaths due to diphtheria was greatest in Ohio. The proportion of deaths due to whooping cough was unusually great in West Virginia. The proportion of deaths due to enteric fever was also very great in West Virginia, and was above the average in Indiana and Kentucky, but below it in Ohio. The proportion of deaths due to malarial fever was somewhat above the average in Indiana, but below it in the rest of this region. The proportion of stillbirths was above the average in Kentucky and in Ohio. The proportion of deaths attributed to consumption was greatest in West Virginia, and was decidedly above the average in all parts of this group. The proportion of deaths attributed to diseases of the heart was above the average in Ohio, and below it in the remaining portions of this group. The proportions of deaths attributed to pneumonia was greatest in Indiana. Diseases of the digestive organs caused more than an average proportion of deaths in Indiana and Ohio. Urinary calculus caused more than the average proportion of deaths in Indiana and Ohio. The greatest proportion of deaths from childbirth occurred in West Virginia, where also diseases of the spine caused the greatest proportion of deaths. Burns and scalds caused more than the average proportion of deaths in West Virginia and in Indiana, the proportion being below the average in the remaining portions of this group.

GRAND GROUP 11 .- SOUTHERN INTERIOR PLATEAU.

This includes the section of the Atlantic plain which extends across South Carolina and Georgia, with the region in central Alabama and Mississippi lying between the Appalachian region and the Gulf Coast belt. It is for the most part level and heavily timbered, principally with pine, a large extent of the surface being what is popularly known as "pine barrens". It has a warm climate, and during the summer the temperature rises much higher than on the coast. The mean annual temperature is from 60° to 70° F. The annual rainfall is heavy, being from 50 to 60 inches. The elevation is for the most part below 1,000 feet.

The density of population was 31.81 persons per square mile, being highest in South Carolina (41.77) and lowest in Mississippi (27.26). The colored population formed about 50 per cent of the whole. The foreign population was less than one-half of 1 per cent in each state in this group.

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are as follows: measles, whooping cough, enteric fever, diarrheal diseases, malarial fever, scrofula and tabes, dropsy, croup, pneumonia and pleurisy, diseases of the digestive system, urinary calculus, childbirth; and accidents and injuries, especially burns and scalds, gunshot wounds, and homicides.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: scarlet fever, diphtheria, cholera infantum, inanition, debility, old age, consumption, hydrocephalus, cancer, diseases of the nervous system, diseases of the heart, bronchitis, and Bright's disease and other diseases of the kidneys.

The proportion of deaths due to measles was large in Mississippi, Alabama, and Georgia, and but slightly above the average in South Carolina and Tennessee. The proportion due to diphtheria was much below the average throughout this group, being highest in South Carolina. The proportion of deaths due to enteric fever was large throughout this region, being highest in Georgia and Tennessee. The proportion of deaths due to malarial fever was also large, especially in Mississippi, Tennessee, and Alabama. The proportion of deaths due to consumption was above the average in Tennessee and South Carolina, and below it in the remaining portion of this group. The proportion of deaths due to pneumonia was below the average in Alabama, and much above the average in Tennessee and Mississippi. The proportion of deaths due to childbirth and puerperal septicæmia was large throughout this region, being greatest in Georgia. The proportion of deaths due to gunshot wounds and homicide was greatest in South Carolina and in Georgia.

GRAND GROUP 12.—SOUTH MISSISSIPPI RIVER BELT.

Along the Mississippi and Missouri rivers lie narrow belts characterized by a considerable extent of low bottom land with rich, deep, moist soil. All this region that borders the lower Mississippi from the neighborhood of the coast to the mouth of the Ohio is included in this group, and has very characteristic features. It includes the river counties of Kentucky, Tennessee, Missouri, Arkansas, Mississippi, and Louisiana. It is an alluvial bottom land, lying very low with relation to the river, and subject to overflow. The drainage is poor, and there are large areas of swamp land and stagnant water. Vegetation is very rank, being almost tropical in its luxuriance. The mean annual temperature is from 60° to 70° F. The annual rainfall is from 50 to 55 inches. The elevation is between 100 and 500 feet.

The density of population was 33.56 persons to the square mile, being highest in Tennessee (73.65) and lowest in Arkansas (21.94). The colored population was about 65 per cent of the whole. The foreign population was 1.43 per cent of the whole, being less than 1 per cent in all of the states excepting Tennessee, where it was 3.03 per cent.

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are as follows: measles, whooping cough, diarrheal diseases, malarial fever, scrofula, dropsy, tetanus and trismus nascentium, pneumonia, childbirth; and accidents and injuries, especially drowning, gunshot wounds, and homicide.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: scarlet fever, diphtheria, enteric fever, inanition, stillbirths, debility, old age, consumption, cancer, diabetes, diseases of the nervous system, diseases of the kidneys, and diseases of the bones and joints.

The proportion of deaths reported as due to enteric fever was above the average in Kentucky and below it in the rest of the group. Diarrheal diseases appear to have been most fatal in Louisiana and Tennessee. The proportion of deaths reported as due to malaria was very large throughout the group, except in Kentucky, where it was about the average; it was greatest in Arkansas and Mississippi. The proportion of deaths due to consumption was above the average in Kentucky and Tennessee, and below it in the rest of the group. The proportion of deaths due to tetanus and trismus nascentium was very high in Louisiana. The proportion of deaths due to pneumonia was greatest in Kentucky. The proportion of deaths due to urinary calculus was greatest in Arkansas. The proportion of deaths due to childbirth was large throughout this group, especially so in Louisiana and Mississippi.

GRAND GROUP 13.—NORTH MISSISSIPPI RIVER BELT.

This extends from the mouth of the Ohio to the head of the Mississippi river, including portions of Missouri, Iowa, and Minnesota on the western, and of Illinois and Wisconsin on the eastern bank. The mean annual temperature is from 40° to 45° F. in the northern portion, and 50° to 55° F. in the southern portion. The annual rainfall is from 30 to 40 inches in the northern part, and from 40 to 50 inches in the southern part. The elevation in the southern portion is less than 500 feet, and rises toward the north to points from 500 to 1,000 feet.

The density of population was 58.51 persons to the square mile, being highest in Missouri (76.04), and lowest in Wisconsin (34.53). The proportion of the colored population was below 4 per cent of the whole. The foreign population was 22.14 per cent of the whole, being highest in Minnesota (35.34 per cent), and lowest in Illinois (13.04 per cent).

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are as follows: diphtheria, malarial fever, inanition, stillbirths, debility, cancer, tetanus and trismus nascentium, convulsions, bronchitis, pneumonia, diseases of the digestive system, and suicide.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: measles, whooping cough, enteric fever, consumption, dropsy, apoplexy and paralysis, diseases of the heart, Bright's disease, childbirth, and gunshot wounds and homicide.

The proportion of deaths due to diphtheria was below the average in Missouri, and it increased toward the north, becoming very large in Iowa and Minnesota. The proportion of deaths due to typhoid fever was above the average in Illinois and Minnesota, and below it in the rest of this region. The proportion of deaths due to malarial fever was large in Illinois and Missouri, and very small in Minnesota and Wisconsin. The proportion of deaths due to consumption was below the average throughout this region, being least in Minnesota. The proportion of deaths due to cancer was decidedly above the average in Wisconsin and Iowa. The proportion of deaths due to tetanus and trismus nascentium was very large in Missouri. The proportion of deaths due to diseases of the heart was above the average in Iowa and in Wisconsin, and below it throughout the rest of this group. The proportion of deaths due to diseases of the respiratory organs was above the average in Illinois, Wisconsin, and Iowa. The proportion of deaths due to childbirth was large in Wisconsin, and slightly above the average in Illinois.

GRAND GROUP 14.—SOUTHWEST CENTRAL REGION.

This includes the northwestern part of Louisiana, the southern part of Missouri, all of Arkansas (except such portions of these states as belong to the south Mississippi river belt), and central Texas. It is mainly upland, and, with the exception of parts of Texas, is heavily timbered. In Louisiana it is traversed by a narrow strip of bottom land along the Red river. A considerable part of this region in Missouri and Arkansas is occupied by the Ozark hills, which rise 2,500 feet or more above the sea level, or 2,000 feet above the surrounding country. The mean annual temperature is from 60° to 70° F. The annual rainfall is from 35 to 50 inches. The elevation is from 100 to 500 feet, with some peaks rising above 2,500 feet.

The average density of population in this group was 16.15 persons per square mile, being highest in Missouri (24.69), and lowest in Oklahoma (1.59). The colored population formed about 20 per cent of the whole. The foreign population was 3.80, being highest in Texas (5.87) per cent, and lowest in Louisiana (0.67 per cent).

The causes of death in this region to which more than the average proportion of the deaths reported were attributed are as follows: smallpox, measles, enteric fever, diarrheal diseases, malarial fever, erysipelas, tetanus and trismus nascentium, croup, pneumonia, diseases of the digestive system, especially diseases of the liver; childbirth and puerperal septicæmia; and accidents and injuries, especially gunshot wounds and homicides.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: scarlet fever, diphtheria, inanition, stillbirths, debility, old age, consumption, cancer, diabetes, apoplexy and paralysis, diseases of the heart, bronchitis, and Bright's disease, and other diseases of the kidneys.

The proportion of deaths due to diphtheria was very small in this region. The proportion of deaths due to enteric fever was greatest in Arkansas; and it was above the average in this region, except in Louisiana, where it was decidedly below it. The proportion of deaths due to malarial fever was greatest in Louisiana and Arkansas. The proportion of deaths due to consumption was above the average in Indian territory, but below it throughout the rest of this region. The proportion of deaths due to diseases of the circulatory system was small throughout the whole of this group. The proportion of deaths due to pneumonia was especially large in the Indian territory, but was above the average throughout the whole of this region. The proportion of deaths due to childbirth was greatest in Illinois, in Texas, and in Arkansas. The proportion of deaths due to old age was small throughout this region, being greatest in Louisiana, where it was but little below the average.

GRAND GROUP 15.—CENTRAL REGION, PLAINS AND PRAIRIES.

This includes the plateau running across the northern part of Ohio and Indiana, and the central portions of Kentucky and Tennessee, and is essentially what is left of the eastern portion of the Mississippi valley after taking from it other characteristic regions. The surface is for the most part undulating, presenting neither the dead level of the prairies on the one hand, nor the broken character marking the western foot hills of the Appalachians on the other. The timber which originally covered it has been largely cut away. The mean annual temperature is from 50° to 60° F. The mean annual rainfall is from 40 to 45 inches. The elevation is from 500 to 1,000 feet.

The density of population was 57.89 persons per square mile. The colored population formed less than 9 per cent of the whole. The foreign population was 5.23 per cent, being highest in Ohio (8.63 per cent) and lowest in Kentucky (0.97 per cent).

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are as follows: measles, scarlet fever, whooping cough, enteric fever, scrofula, consumption, diabetes, diseases of the nervous system, and diseases of the spine.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: diphtheria, diarrheal diseases, malarial fever, stillbirths, debility, convulsions, bronchitis, pneumonia, and childbirth.

The proportion of deaths due to measles was large in Kentucky, and below the average in Indiana and Ohio. The proportion of deaths due to malarial fever was above the average in Tennessee and Kentucky, and below it in Indiana and Ohio. The proportion of deaths due to consumption was greatest in Tennessee and Kentucky; and least in Ohio, but still above the average. The proportion of deaths due to cancer was above the average in Ohio, and below it in Kentucky and Tennessee. The proportion of deaths due to heart disease and dropsy was above the average in Ohio, and below it in the rest of this region. The proportion of deaths due to pneumonia was slightly above the average in Kentucky, and below it in the other states in this group. The proportion of deaths due to Bright's disease was above the average in Ohio, and decidedly below it in Tennessee. The proportion of deaths due to urinary calculus was above the average in all parts of this region, especially so in Tennessee. The proportions of deaths due to diseases of the spine and gunshot wounds was greatest in Kentucky, and that from homicide was greatest in Tennessee.

GRAND GROUP 16.—THE PRAIRIE REGION.

This comprises most of the state of Illinois, the southern part of Wisconsin, nearly all of Iowa, southern Minnesota, the northern part of Missouri, the eastern half of Kansas, and a considerable portion of Nebraska, with that part of the Dakotas lying east of the Missouri belt. Though not entirely treeless, forests cover but a small portion of the area, and these are distributed along the water courses, on the faces of bluffs, and the tops of knolls. The surface is nearly level, except where cut or scored by streams. The soil is deep, extremely fertile, and generally very retentive of moisture. Originally there were larger areas of swamp land and standing water than at present. The mean annual temperature is from 50° to 55° F. in the southern part, and 40° to 45° in the northern part. The mean annual rainfall is from 35 to 40 inches in the eastern part, and from 20 to 25 inches in the western part. The elevation is from 500 to 1,000 feet in the castern portion, gradually rising from 2,000 to 3,000 feet in the west.

The density of population was 26.46 persons per square mile, being highest in Illinois (46.91) and lowest in North Dakota (4.30). The colored population was below 2 per cent of the whole. The foreign population was 16.88, being highest in North Dakota (45.34 per cent) and lowest in Missouri (3.43 per cent).

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are as follows: scarlet fever, diphtheria; croup, pneumonia, and other diseases of the respiratory system; diseases of the digestive organs, childbirth, diseases of the spine, and accidents and injuries.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: diarrheal diseases, malarial fever, stillbirths, debility, diseases of the nervous system, and diseases of the heart.

The proportion of deaths due to enteric fever was above the average in Missouri, Nebraska, and North and South Dakota, and below it in the rest of this region. The proportion of deaths due to diarrheal diseases was above the average in Minnesota and North Dakota. The proportion of deaths due to malarial fever was above the average in Kansas, and much below it in Minnesota, South Dakota, and Wisconsin. The proportion of stillbirths reported was small throughout this region, except in Missouri, where it was above the average. The proportion of deaths due to consumption was above the average in Missouri, Illinois, and Wisconsin, and below it in the rest of this region, being least in Nebraska. The proportion of deaths due to diseases of the heart was above the average in Wisconsin and Iowa, and below it in the rest of this region. The proportion of deaths due to pneumonia was above the average in South Dakota, Wisconsin, Missouri, Illinois, and Minnesota, and below it in the rest of the states in this region. The proportion of deaths due to childbirth was large in South Dakota, Nebraska, Missouri, and Wisconsin. The proportion of deaths due to gunshot wounds and homicide was highest in Missouri.

GRAND GROUP 17.—THE MISSOURI RIVER BELT.

This comprises a narrow strip across Missouri, with portions of eastern Nebraska, western Iowa, and the central part of the Dakotas, including in the main a broad area of bottom land of deep, rich soil, subject to overflow in the southern portion. Higher up the river, in the Dakotas, we enter the subhumid section of the country, the atmosphere being drier and the rainfall less. The mean annual temperature is from 40° to 45° F. in the northern part, and from 50° to 55° in the southern part. The mean annual rainfall is from 10 to 20 inches in the northern part, and from 30 to 40 in the southern part. The elevation is from 500 to 1,000 feet in the southern and central portions, 1,500 feet in South Dakota, and 2,000 feet in North Dakota.

The density of population was 18.18 persons to the square mile. The colored population formed 5.76 per cent of the whole. The foreign population was 15.16 per cent of the whole, being highest in North Dakota (37.07 per cent) and lowest in Missouri (8.79 per cent).

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are as follows: measles, diphtheria, whooping cough, enteric fever, scrofula, diabetes; croup, pneumonia, and other diseases of the respiratory organs, childbirth, and gunshot wounds.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: diarrheal diseases, malarial fever, debility, old age, consumption, cancer, diseases of the nervous system, diseases of the heart, and Bright's disease and other diseases of the kidneys.

The proportion of deaths due to diphtheria was very large in Iowa, Nebraska, and North Dakota, but was below the average in Missouri. The proportion of deaths due to cerebro-spinal fever was much above the average in Iowa, North Dakota, and Nebraska. The proportion of deaths due to enteric fever was greatest in Nebraska, and it was decidedly below the average in North Dakota. The proportion of deaths due to malarial fever was above the average in Missouri, and below it throughout the rest of this region. The proportion of stillbirths was high in Missouri. The proportion of deaths due to consumption was very large in North Dakota and in South Dakota, but was below the average in the rest of this region. The proportion of deaths reported as due to croup was very high in Iowa. The greatest proportion of deaths due to pneumonia occurred in Missouri. The proportion of deaths due to childbirth was large in North and South Dakota. The proportion of deaths due to gunshot wounds and homicides was greatest in North Dakota, and was also above the average in Nebraska.

GRAND GROUP 18.—REGION OF THE WESTERN PLAINS.

This extends westward from the border of the prairie region, including parts of Texas, Kansas, Nebraska, Colorado, Wyoming, the Dakotas, Montana, and New Mexico. The characteristics of the prairie region are here intensified in every particular. The timber is scarce, being found only along the water courses. The surface is a monotonous rolling expanse, covered only with sparse clumps of bunch grass, cactus, yucca, and other plants characteristic of a dry climate. The mean annual temperature varies from 65° to 70° F. in the southern part, and from 40° to 45° in the northern portion. The mean annual rainfall is from 10 to 20 inches. (The rainfall is in general below 20 inches. Indeed, this isohyetal line may be taken in general terms as the boundary line between this and the prairie region, although in the north the cooler climate and small evaporation tend to throw the boundary westward, while the reverse condition in the south tends to throw it eastward.) The extremes of temperature in this region are great, being exceeded only in the still more arid region farther west. The elevation is 1,500 feet in the eastern portions, rising to 4,000, 5,000, and 6,000 feet in the west.

The density of population was 2.12 persons to the square mile, being highest in Kansas (5.64) and lowest in Montana (0.26). New Mexico, North Dakota, and Texas had also less than 1 person per square mile. The colored population was less than 2 per cent of the whole. The foreign population was 14.64 per cent, being highest in North Dakota (38.46 per cent) and lowest in New Mexico (5.26 per cent).

The causes of death in this region to which are attributed more than the average proportion of the deaths reported are as follows: smallpox, measles, scarlet fever, diphtheria, whooping cough, enteric fever, cholera infantum, pneumonia, childbirth; and accidents and injuries, especially gunshot wounds and homicide.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: malarial fever, inanition, debility, old age, consumption, cancer, hydrocephalus, dropsy; diseases of the nervous system, especially apoplexy, paralysis, and tetanus and trismus nascentium; diseases of the heart, and Bright's disease and other diseases of the kidneys.

The proportion of deaths due to specific contagious and infectious diseases was very high in this region, especially in New Mexico. The proportion of deaths due to diphtheria was very large in New Mexico, South Dakota, and Wyoming, being below the average only in Oklahoma. The proportion of deaths due to enteric fever was very large in Colorado and comparatively small in Montana. The proportion of deaths due to malarial fever was above the average in Kansas and Texas and very much above it in Oklahoma. The proportion of deaths due to consumption was much above the average in Montana and slightly above it in South Dakota, and for the rest of this region it was below the average. The proportion of deaths due to pneumonia was much above the average in Oklahoma, Texas, and Colorado, and it was low in North Dakota. The proportion of deaths due to diseases of the heart was small throughout the whole of this region. The proportion of deaths from childbirth was very high in North Dakota, Oklahoma, and New Mexico. The proportion of deaths due to gunshot wounds was greatest in North Dakota, Oklahoma, and Montana. The proportion of deaths attributed to homicide was greatest in Texas, Oklahoma, and New Mexico.

GRAND GROUP 19.—HEAVILY TIMBERED REGION OF THE NORTHWEST.

This comprises parts of Minnesota, Wisconsin, and Michigan. It is heavily timbered and well watered, containing large numbers of small lakes and considerable areas of swamp, especially in Wisconsin and Minnesota. This large water surface, together with the dense forests, tends to give to this region a moist atmosphere, although the rainfall is not great. The mean annual temperature is from 40° to 50° F., and below 40° in northern Wisconsin and Minnesota. The mean annual rainfall is from 30 to 40 inches. The elevation is from 1,000 to 1,500 feet.

The density of population was 15.98 persons per square mile, being highest in Michigan (39.78) and lowest in Minnesota (4.58). The colored population was below 1 per cent of the whole. The foreign population was 24.95 per cent of the whole, being highest in Minnesota (45.77 per cent) and lowest in Michigan (16.06 per cent).

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are as follows: measles, scarlet fever, diphtheria, cerebro-spinal fever, cholera infantum, old age, cancer, diseases of the heart, diseases of the digestive system, Bright's disease, childbirth, diseases of the spine, and accidents and injuries.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: malarial fever, inanition, stillbirths, debility, convulsions, and diseases of the respiratory system.

The proportion of deaths due to diphtheria was greatest in Wisconsin and Minnesota. The proportion of deaths due to enteric fever was decidedly above the average in Minnesota, and was about the average for the rest of this group. The proportion of deaths due to diarrheal diseases was decidedly above the average in Minnesota and Wisconsin. The proportion of deaths due to malarial fever was small throughout this group, being lowest in Minnesota. The proportion of deaths due to old age was above the average in Michigan and Wisconsin, and below it in Minnesota. The proportion of deaths due to consumption was above the average in Minnesota, and below it in Wisconsin. The proportion of deaths due to cancer was greatest in Michigan. The proportion of deaths due to tetanus and trismus nascentium was small throughout this group.

GRAND GROUP 20.—THE CORDILLERAN REGION.

This includes the region westward from the east base of the Rocky mountains to the Cascades and Sierra Nevada, consisting mainly of a high plateau crowned by a succession of mountain ranges forming systems of a greater or less degree of complexity. It comprises Arizona, Utah, Nevada, and portions of Colorado, Montana, Wyoming, New Mexico, California, Oregon, and Washington. The climate is arid, the rainfall is small, and the extremes of temperature are great between summer and winter and day and night. As a general thing, the mountains only are timbered, the valleys and level country being covered with herbaceous plants characteristic of an arid climate. The slopes are everywhere amply sufficient to insure good drainage, and therefore swamps and stagnant water are rare. The mean annual temperature is from 40° to 50° F. in the northern and central portions, and from 60° to 65° in the southern portion. The mean annual rainfall is below 10 inches in the central and southwestern portions, and somewhat greater in the eastern and northern portions. The elevation is from 4,000 to 10,000 feet and over.

The density of population was 1.56 persons to the square mile, being highest in California (3.71) and lowest in Nevada (0.42). In Arizona and Wyoming it was also below 1 to the square mile. The colored population formed 5.29 per cent of the whole. The foreign population was 23.07 per cent of the whole, being highest in Montana (33.66 per cent) and lowest in New Mexico (8.33 per cent).

The causes of death in this region to which were attributed more than the average proportion of the deaths reported are as follows: smallpox, scarlet fever, diphtheria, cerebro-spinal fever, typhoid fever, alcoholism, childbirth; and accidents and injuries, especially gunshot wounds, homicide, and suicide.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: measles, whooping cough, stillbirths, debility, old age, consumption, cancer, diseases of the nervous system, diseases of the heart; diseases of the respiratory system, especially bronchitis and pneumonia; and Bright's disease and other diseases of the kidneys.

The proportion of deaths due to diphtheria was very large in New Mexico and Utah, and was below the average in California and Oregon. The proportion of deaths due to enteric fever was large in Colorado, Idaho, Montana, Oregon, and Wyoming, being greatest of all in Washington; it was below the average in Arizona, New Mexico, and California. The proportion of deaths due to malarial fever was above the average in Arizona, New Mexico, and Washington, and below it throughout the rest of this region. The greatest proportion of deaths due to alcoholism was reported in Nevada, California, and Arizona. The proportion of deaths attributed to consumption was above the average in California, and decidedly below the average in Idaho, New Mexico, and Utah. The proportion of deaths due to diseases of the heart was above the average in California and Nevada. The proportion of deaths due to pneumonia was greatest in Nevada, Colorado, Montana, and Arizona, in all of which it was much above the average. The proportion of deaths due to Bright's disease was slightly above the average in California and in Oregon, and throughout the rest of this group it was below it. The proportion of deaths due to childbirth was much above the average in Utah, New Mexico, Arizona, California, and Oregon. The proportion of deaths due to bomicide was very high in Arizona, Montana, and Wyoming.

GRAND GROUP 21.—PACIFIC COAST REGION.

This comprises the coast portions of Washington, Oregon, and California lying between the ranges of the Cascades and Sierra Nevada and the Pacific Coast. It has a well defined wet and dry season, the former corresponding to the winter in the eastern portion of the country, and the latter to the summer. The northern part receives much more rain than the southern part. The surface consists of a complex range of mountains known as the Coast range, running parallel to the coast, east of which is a great valley extending from Puget

Sound to the southern part of California. This is occupied in Oregon by the Willamette and other rivers, in California by the Sacramento and the San Joaquin. East of this valley is a great uplift, represented in Washington and Oregon by the Cascade range, and in California by the Sierra Nevada. The mean annual temperature is from 55° to 65° F. in the southern portion, and from 45° to 55° in the northern portion. The mean annual rainfall is above 60 inches in the north, and below 20 inches in the south. The elevation varies from the coast line to 5,000 feet.

The density of population was 12.44 persons to the square mile, being highest in California (16.33) and lowest in Oregon (8.44). The colored population formed 5.81 per cent of the whole population. The foreign population was 30.03 per cent of the whole, being highest in California (32.92 per cent) and lowest in Oregon (20.31 per cent).

The causes of death in this region to which were attributed more than the average proportion of the deaths reported, are as follows: enteric fever, alcoholism, inanition, consumption, cancer, diabetes, diseases of the heart; diseases of the digestive system, especially diseases of the liver; Bright's disease; and accidents and injuries, especially drowning, gunshot wounds, and suicide.

The causes of death in this region to which were attributed less than the average proportion of the deaths reported are as follows: measles, scarlet fever, diptheria, whooping cough, diarrheal diseases, malarial fever, stillbirths, tetanus and trismus nascentium, diseases of the respiratory organs, childbirth and affections connected with pregnancy, and diseases of the bones and joints.

The proportion of deaths due to measles and scarlet fever was large in Washington. The proportion of deaths due to diphtheria was large in Washington and Oregon, and below the average in California. The proportion of deaths due to enteric fever was large in Washington and Oregon, and small in California. The proportion of deaths due to alcoholism was large throughout this group, being greatest in California. The proportion of deaths due to consumption was greatest in California, and slightly above the average in Washington. The proportion of deaths due to diseases of the heart was greatest in California. The proportion of deaths due to diseases of the respiratory system was greatest in Oregon. The proportion of deaths due to childbirth was large in Washington, and below the average in California and Oregon. The proportion of deaths due to gunshot wounds and to suicide by shooting was large throughout this group.

In concluding the subject of the relative prevalence of certain causes of death in different parts of the country, it will be seen that the differences in the distribution of age, sex, and race in the population, the amount of low-lying and swampy land, and the conditions of temperature appear to be the chief causes of the differences noted. Many of these differences are similiar in direction and amount to those noted in the study of this subject made for the Tenth Census (a), but in some instances there are marked differences. It must be borne in mind that these comparisons are not based on true death rates, but on the relative proportion of different causes of death, and that if this proportion is unusually high or low for any given cause or group of causes it makes the corresponding ratios for the other causes more or less inaccurate and unreliable.

URBAN AND RURAL MORTALITY.

The records of deaths in the Eleventh Census have been so tabulated as to permit of certain comparisons with the deaths occurring in the principal cities and in the rest of the country, and especially as regards the registration area, for which, in the discussion of the several causes of death, death rates are given with distinction of rural districts and cities.

Table 19, Part IV, of this report gives the number of deaths in each county and city in New Jersey from each specified disease and class of diseases, with distinction of sex, during the 6 years ending May 31, 1890, and the data contained in it are of special importance taken in connection with the mortality statistics of other localities obtained for the 6-year period, because they furnish the means of obtaining death rates for rural districts for this length of time.

Part II of this report contains the mortality statistics of the 28 cities of the United States having a population of 100,000 and upward, with details as to the death rates in each city due to each of certain causes of disease.

The following table shows the number of deaths and the death rates per 1,000 of population, with distinction of sex, for each of the 271 cities having a fairly satisfactory registration of deaths during the census year, the cities being arranged in alphabetical order. Distinction of color is also given in the cities in the southern states. Stillbirths are included in this table:

-		DEATHS.			RATE.				DEATHS.			RATE.

a Includes the cities in which the color distinction is made above.

It will be seen from the summary of this table that the death rates increased with the size of the city, being for cities under 10,000 inhabitants, 18.04; for those from 10,000 to 15,000 inhabitants, 18.27; for those having from 15,000 to 25,000 inhabitants, 19.95; for those having from 25,000 to 50,000 inhabitants, 21.78; for those having from 50,000 to 100,000 inhabitants, 22.27; and for those having 100,000 of population and upward, 23.30.

In the southern cities it will be seen that in each group of cities the death rate of the colored was higher than that of the whites, but that neither for the white nor the colored did the death rates increase with any regularity with the increasing size of the cities.

The following table shows for each of the registration states and for their sum the aggregate death rates per 100,000 of population, with distinction of sex and of cities and rural districts:

-		AGGREGATE.			MALES.			FEMALES.

SECTION X.

CAUSES OF DEATH.

Tables 4 and 5, Part III of this report, show the number of deaths reported in the United States, and iz each state and territory, during the census year, due to each of certain specified diseases and classes of diseases, with distinction of age and sex.

Table 6 gives the same data for each state group, in certain of the registration states.

Table 7 gives the same information for Alabama, with the additional distinction of color.

Table 8 gives the same information for the registration area.

Table 9 gives the same information for the rural districts of the registration states.

Table 10 gives the same information for the 271 registration cities.

Table 11 gives the same information for the registration cities, by grand divisions.

Table 12, Part III, shows the number of deaths reported in the Chinese population of the United States, as due to each of certain diseases and classes of diseases, with distinction of sex and age, for the census year.

Table 13 gives the same information for the Indian population.

Table 16, Part III, gives the deaths from certain specified diseases and classes of diseases, for the United States and for each grand group, with distinction of month of death, sex, and of two age groups.

Table 17 gives the same information for the registration cities, with distinction of white and colored.

Table 48, Part III, shows the number of deaths from each reported cause by states, state groups, and registration cities, during the census year, the causes of death being arranged in alphabetical order and given more fully than in any other table.

Table 14, Part IV, shows the number of deaths from each reported cause for 6 years ending May 31, 1890, in the sum of the state of New Jersey, the Metropolitan district, Baltimore, Boston, Philadelphia, and the District of Columbia, in the aggregate, for the white, the colored, and each birthplace of mother, by age and sex.

Of 875,521 deaths reported as having occurred in the United States during the census year, 34,286, or 39.17 per 1,000, were reported as due to unknown causes. In the Tenth Census the corresponding proportion was 49 per 1,000. In the registration area the proportion of deaths from unknown causes was 11.79, in the rest of the country 63.16 per 1,000 of all cases reported.

In addition to the deaths for which no cause was reported, a large proportion of those reported as due to inanition, debility, old age, dropsy, convulsions, diseases of the heart, and asthma should really be set down as due to unknown causes, so that, even where there is a fairly good registration system, the causes of from 10 to 15 per cent of the deaths recorded are practically unknown, a very large proportion of this class being of infants under 1 year of age.

The nomenclature and classification of diseases used in the tables are the same as those employed in the Tenth Census.

The following table shows the principal reported causes of death in the order of their frequency in the United States for the years ending May 30, 1880 and 1890, and the proportion from each cause per 1,000 from known causes:

	CAUSES.	NUMBER O	F DEATHS.	PROPORTI EACH CAUS FROM KNOV	E PER 1,000

	<u> </u>		!	ij <u> </u>	1

It will be seen from this table that consumption, pneumonia, and diarrheal diseases head the list as causing the greatest number of deaths in 1890, as in 1880; that the proportion of deaths from diphtheria, malarial fever. croup, dropsy, whooping cough, and scarlet fever was decidedly less in 1890 than in 1880, while the proportion of deaths reported as due to diseases of the heart, debility and atrophy, to bronchitis, to apoplexy, to Bright's disease, and to diseases of the kidneys was greater in 1890 than in 1880.

a Diarrhea, dysentery, enteritis, and cholera morbus. the ball of inflammation of the brain and meningitis.
c Diseases of the brain and ear.
d Jaundice, inflammation and abscess of the liver, and other diseases of the liver.
e Diseases of stomach and gastritis.

The following table shows for each principal cause of death and group of causes the number of deaths reported in the four last censuses, with the proportion from each cause per 100,000 deaths from all causes reported:

To illustrate some of the uses which may be made of the data contained in the tables, the following remarks are submitted with regard to certain causes of death, including all of the causes for which data are given in the table above:

GENERAL DISEASES-A.

The group of specific diseases included under this heading in the tables includes smallpox, measles, scarlet fever, diphtheria, whooping cough, acute fevers, diarrheal diseases, erysipelas, septicæmia, and venereal diseases, corresponding to the grouping used in the vital statistics of the Tenth Census. This grouping does not include all of the specific infectious diseases, and is by no means in accordance with the present state of knowledge with regard to the causes of disease, but it is used for purposes of comparison. The total number of deaths reported as occurring from this group of diseases in the United States during the census year was 188,790, of which 98,062 were of males and 90,728 of females, giving a ratio of 224.42 per 1,000 of all deaths from known causes. In the registration area the number of deaths reported as due to this group of diseases was—males, 39,692; females, 37,390; total, 77,082; being 190.70 per 1,000 of all deaths from known causes, and 392.09 per 100,000 of population living at the end of the year.

The following table shows the death rates from this group of diseases during the census year per 100,000 of population for the registration area and some of its subdivisions, with distinction of sex and color:

AREAS.		AGGREGATE	1.		WHITE.	1		COLORED.	
AABAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	392.09	404.95	379. 29	385. 22	-397.67	372, 83	526.53	549.52	504. 26
Cities	437. 57	453.64	421.71	430.55	445.99	415.28	550.88	578.95	523.95
States	368.97	381.17	357.03	366, 42	378.85	354. 24	477.75	481.64	474.07
Cities	448.58	468.35	429.76	445.32	465.16	426.40	568.54	589.64	549.65
Rural	247.36	252.36	242.28	247.00	252.33	241.58	267.81	253.87	282.79
Cities in nonregistration states	427.40	440.52	414.03	415.99	427.77	403.94	545.97	576.11	516.49

It will be seen from this table that in the registration area the death rate from this group of diseases was higher among males (404.95) than among females (379.29); that it was much higher among the colored (526.53) than among the whites (385.22); and that in the registration states it was higher in the cities (448.58) than it was in the rural districts (247.36). In the rural districts the death rate from this group of diseases among the colored (267.81) was not much higher than among the whites (247.00).

The following table shows, for each of the registration states, the death rates per 100,000 of population from the group of general diseases—A, during the census year, with distinction of sex, and of cities and rural districts:

0	,	GGREGATI	s.		MALES.			FEMALES.	
*REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Connecticut	362.07	435. 33	309.92	376. 69	464. 28	315. 29	347.74	407.45	304. 58
Delaware	351.94	345. 10	355.87	372. 78	373. 21	372.54	330.44	316.82	338.41
District of Columbia	510.43	510.43		525.62	525. 62		496, 66	496.66	
Massachusetts	343.47	370.19	256.04	356.90	381.27	278.98	330.78	359, 83	233.60
New Hampshire	313.65	406.32	275. 16	336.61	466.20	286, 37	291.11	352. 85	263.71
New Jersey	391.37	497.30	252. 83	393.86	502.39	254.47	388. 89	492.31	251.17
New York	375.32	473.19	217.11	389. 20	495. 17	223.63	361.64	452.09	210.42
Rhode Island	427.78	437.36	414.60	439.82	462.06	410.26	416.38	414.63	418.88
Vermont	256, 30	325.13	249.90	253. 36	295. 27	249.71	259.36	352. 57	250.09

It will be seen from this table that the death rates from this group of diseases were higher among males than among females, and much higher in the cities than in the rural districts, being highest of all in the District of Columbia (510.43, owing mainly to the high proportion of colored in the population) and lowest in the rural districts of New York (217.11).

The following table shows the proportion of deaths reported as due to this group of diseases per 1,000 deaths from known causes, excluding stillbirths, in the registration area and some of its subdivisions, during the census year, with distinctions of sex, color, general nativity, and parental nativity:

					WHITE.	•				COLORED.	
AREAS.	Λggre-				1	Tative borr	1.		-		
	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.

Cities in nonregistration states	217.91	222, 87	214.07	233. 27	264.92	269.72	335.98	118.17	185. 25	185.77	184. 69

It will be seen from this table that the proportion of deaths due to this group of diseases to known causes was slightly greater among females (white 209.31, colored 184.56) than among males (white 198.61, colored 181.21); that it was slightly greater among the whites (203.66) than among the colored (182.82); that it was much greater among the native born whites (242.97) than among the foreign born whites (101.57), which is due to the age distribution of the two classes; and that among the native born it was greater among those having one or both parents foreign born (301.70) than among those of whom both parents were native (209.31).

The following table shows for the registration area and some of its subdivisions the death rates due to this group of diseases during the census year at all ages and in each of six age groups, per 100,000 of population of those age groups, with distinction of sex:

It will be seen from this table that the death rates from this group of diseases were highest of all in infants and young children; that they were lowest in the age group 15 to 45 years, and increased after the age of 65 years. In infants under 1 year of age in the registration states, the death rates from this group of diseases were about twice as high in the cities (8,286.95) as they were in the rural districts (4,026.15), and were highest of all among male infants in the metropolitan district (9,295.01), and lowest among female infants in the rural district (3,742.41).

In those 65 years of age and over the highest death rate from these diseases occurred among females in the metropolitan district (697.32), and the lowest among females in the rural districts of the registration states (390.04).

SMALLPOX.

The total number of deaths reported as due to smallpox in the United States during the census year was 398, of which 223 were of males and 175 of females. In 1880 the number of deaths reported as due to this disease was, males, 453; females, 418; total 871.

In the registration area the number of deaths reported as due to smallpox during the census year was, males, 24; females, 14; total 38; giving a death rate of 0.19 per 100,000 of population.

Of the 398 deaths from this disease, 231 occurred in New Mexico and 88 in Texas.

SCARLET FEVER.

The total number of deaths reported as due to scarlet fever in the United States during the census year was 5,969, of which 2,936 were of males and 3,033 were of females.

In the registration area the number of deaths reported as due to this disease was, males, 1,284; females, 1,398; total, 2,682; giving a death rate per 100,000 of population of 13.64, or about the same as for measles, which was 13.54.

In 1890 the death rate from scarlet fever per 100,000 of population was, in England and Wales, 24.2; in Scotland, 18.4; in Ireland, 6.8; in Belgium, 19.4; in Prussia, 29.0; in Austria, 51.0; in Italy, 24.3. The death rate from this disease was, therefore, less in that part of the United States having registration records than in any of the above named countries except Ireland.

During the 10 years, 1880 to 1889, the death rates from scarlet fever, per 100,000 population, were, in England and Wales, 37.7; in Ireland, 25.0; in Scotland, 32.5; in Sweden, 51.7; in Norway, 36.7; in Prussia, 45.5; in Austria, 61.5; in Saxony, 38.4; in Massachusetts, 23.3; in Connecticut, 26.5; in Rhode Island, 47.7; and in New Jersey, 46.6.

The following table shows, for the registration area and some of its subdivisions, the death rate from scarlet fever during the census year per 1,060,000 of population, with distinction of color, sex, general nativity, and parental nativity.

a.					WHITE.					COLORED.		
J	Aggre-				Ŋ	Native born	١.					•
Arias.	Aggregate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.	
Registration area	13. 64	14. 20	13. 63	14.77	18.36	14.17	22. 27	2.75	2.72	2. 55	2.89	,
Cities	15. 25 13. 05	16.03 13.24	15. 74 12. 71	16.32 13.74	21.70 16.85	19.30 13.17	24. 10 22. 86 25. 71	2. 98 2. 78 3. 22	2. 64 5. 15 5. 79	2. 34 4. 54 4. 46	2, 92 5, 72 6, 98	
Cities	16.00 8,53 14.55	16. 28 8. 62 15. 79	16.41 7.30 15.10	16. 16 9. 95 16. 49	22.54 9.95 20.93	19.36 8.44 19.17	15. 16 20. 39	1.39 2.70	3. 65 1. 76	4.70 1.78	2.52 1.74	
Cities of 100,000 population and upward Metropolitan district, 6 years	17. 14 45. 62	17.81 46.24	46. 10	46. 37	24. 84 68. 89	24. 66 62. 25	26. 24 73. 21	3.55 8.23	3.84 11.09	9, 05	13.06	

It will be seen from this table that the death rate from this disease was much higher among the whites (14.20) than it was among the colored (2.72); that it was slightly higher among females (white, 14.77; colored, 2.89) than among males (white, 13.63; colored, 2.55), and that it was especially high among the native born whites (18.36) as compared with the foreign born whites (2.75), which is due to the much greater proportion of young children among the native born. Among those having one or both parents foreign born the death rate from this disease was 22.27. In the registration states the number of deaths reported as due to this disease was, males, 736; females, 814; total, 1,550, giving a death rate of 13.05 per 100,000 of population. In these states the rate was higher in the cities (16.00) than it was in the rural districts (8.53). It was especially high in cities of 100,000 population and upward (17.14), and highest of all in the metropolitan district for the 6-year period (45.62), being for the whites 46.24, and for the colored 11.09.

The following table shows, for each of the registration states, and for their sum, the death rates from scarlet fever during the census year, per 100,000 of population, with distinction of sex, and of cities and rural districts:

Ø) .	Į.	AGGREGATE			MALES.			FEMALES.		
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total	13. 05	16.00	8. 53	12. 53	16. 10	7. 25	13.55	15. 91	9. 83	
Connecticut	10.85	11. 28	10, 55	8. 93	11. 16	7.36	12.74	11.39	13.72	
Delawaro	10.68	13.02	9.34	10.52	16. 23	7.80	10.85	• 9.80	11.47	. 4
District of Columbia	7.81	7.81		4.56	4.56		10.76	10.76		
Massachusetts	8, 66	9. 27	6, 68	8.64	9.66	5.40	8. 69	8.91	7. 93	
New Hampshire	5. 31	8:14	4.13	4.82	7.67	3.72	5.79	8. 5 6	4, 56	
New Jersey	14. 33	19.05	8.15	14.43	19.74	7.61	14. 22	18.38	8.69	
New York	15. 94	20.11	9.20	15. 28	20.05	7.83	16.58	20, 16	10.61	
Rhode Island	10.13	9.00	11.69	12.50	9.39	16.63	7.89	8.64	6.82	
Vermont	6. 32	3. 53	6.58	3.54		3. 85	9. 20	6.78	9.44	

It will be seen from this table that in the cities the death rate from scarlet fever was highest in New York (20.11) and in New Jersey (19.05), and lowest in Vermont (3.53) and in the District of Columbia (7.81). In the rural districts it was highest in Rhode Island (11.69), and lowest in New Hampshire (4.13). It was much higher among the whites than among the colored, both in the cities and the rural districts. In the rural districts it was decidedly higher among females than among males in each state except Rhode Island.

Of 1,970 deaths from scarlet fever among whites in the registration area during the census year, 958 were children of mothers born in the United States, 270 children of mothers born in Ireland, 244 children of mothers

born in Germany, 81 children of mothers born in Canada, 68 children of mothers born in Scandinavia, 18 children of mothers born in Italy, 17 children of mothers born in Scotland, 9 children of mothers born in Hungary, 5 children of mothers born in France, and 3 children of mothers born in Bohemia.

The following table shows, for the registration area and some of its subdivisions, the death rates from scarlet fever among the whites during the census year, per 100,000 of white population, with distinction of birthplaces of mothers:

C AREAS.	United States.	England and Wales.	, . Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.
Registration area	13.81	9.74	10. 26	8.34	6.10	11.48	12.04	19.69	28. 12	7.37	12.85	12. 26
Cities	18. 98	11.84	11.14	6. 43	6.14	12.14	12.68	23.16	28. 66	7.64	15.01	12.48
States	13.27	10.34	10.36	9.04	6.95	12.41	12.19	14.64	31, 74	19.29	11.48	14.32
Cities	20.16	13.50	11.44	6.81	7.36	13.74	13.04	20.83	33.17	21. 27	13.75	15.01
Rural	7.58	3.82	6.98	14.47	5.95	6.64	10, 82		24.41			10.46
Cities in nonregistration states	16.41	7.28	9.63	5. 27	4.10	9.83	10.85	24.83	14.70		22.08	6.77
Cities of 100,000 population and upward	24.36	16.17	13.16	10.67	4.48	13.01	17. 28	28.14	32.71	8.17	14. 95	15. 21

The number of deaths among those having mothers born in Bohemia, France, Hungary, Scotland, and Italy was so small that the ratios derivable therefrom have little scientific value; for the others it will be seen that the death rate from scarlet fever in the registration area was highest among those whose mothers were born in Scandinavia (19.69) and in the United States (13.81), and was lowest among those whose mothers were born in Germany (11.48) and in Ireland (10.26.)

The following table shows, for the registration area and some of its subdivisions, the death rates from scarlet fever during the census year in each of four age groups, per 100,000 population, of corresponding ages, with distinction of sex:

AREAS.	σ	NDER 1 Y	EAR.	0.	NDER 5 YE	ARS.	5	TO 15 YE	ARS	15 Y	ears and	O OVER.
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	42, 21	40. 24	44.22	88.43	84.49	92.46	20.77	19.53	22.01	0.92	0.89	0.96
Cities	42.69	39. 82	45.64	98.45	94.50	102.48	21.98	21.67	22, 28	0.92	0.96	0, 87
States	50.45	44.89	56.16	87.42	82.39	92.53	20.42	19.30	21.56	1.00	0.96	1.04
Cities	55.92	46.48	65.58	108.44	102.84	114.11	22.79	23. 73	21.84	1.04	1.18	0.91
Rural	4026	41.93	38.53	51.36	47.64	55. 20	16.90	12.82	21.14	0, 95	0.65	1. 25
Cities in nonregistration states	31.12	34.01	28.17	89.82	87.35	92.36	21.27	19.88	22, 66	0.80	0.77	0.83
Cities of 100,000 population and upward	40.02	37.36	42.75	105.70	98. 94	112.58	25.54	24.86	26.21	0.99	0.83	1.15
Metropolitan district	54. 44	39.96	69, 33	128.41	116.66	140.26	29. 35	30.06	28. 62	1.43	1.06	1.79

It will be seen from this table that the greatest mortality from scarlet fever occurred in children under 5 years of age in the cities (98.45), and especially in the cities in the registration states (108.44). In each age group the death rate from this disease was higher among females than among males, except in the metropolitan district, where in those 5 to 15 years of age it was, for males, 30.06; for females, 28.62, per 100,000 of population of this age group.

The combined relations of age and race to the death rates from scarlet fever are indicated in the following table, showing the number of deaths in each of two age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey, for the census year:

E:	UNDER 5	YEARS.	5 to 15 years.		
dolor and birthplaces of mothers.	Deaths.	Rate.	Deaths.	Rate.	
White	531	109.49	216	25.03	
Colored	6	38. 26	5	15.43	
Birthplaces of mothers (white):					
United States	244	98.78	103	25. 20	
England and Wales	19	111.33	12	34.61	
Ireland	97	146.91	38	25, 22	
Germany	87	108.45	40	24.85	
Canada	8	107.69	3	22. 34	
Scandinavia	13	195.84	2	25. 94	

This table indicates that for children under 5 years of age the death rate per 100,000 due to scarlet fever was much higher among the whites (109.49) than among the colored (38.26), and that among the whites it was higher among the children of Irish mothers (146.91) than it was among those whose mothers were born in the United States (98.78) or those whose mothers were born in Germany (108.45).

For further details with regard to death rates from scarlet fever in large cities, see Part II of this report, page 75.

Out of each 100,000 deaths from all causes, excluding stillbirths, in the United States during the census year, 740 were reported as due to scarlet fever, the corresponding figures in 1880 having been 2,165, and in 1870, 4,128; in England and Wales the corresponding proportion in 1890 was 1,240, and in 1880, 3,300; in Austria, in 1890, it was 1,746; in Prussia, 1,208; in Sweden, 2,911; in Scotland, 935; in Italy, 922; in Belgium, 840; in Switzerland, 647; and in Ireland, 321.

The number of deaths due to scarlet fever in children under 15 years of age per 1,000 of all deaths from known causes occurring under 15 years of age in the United States was, for the whites, 14.91; for the colored, 2.59; for the Chinese, 15.38; and for Indians, 6.10; in the registration area the corresponding figure was 14.51.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths from scarlet fever, during the census year, per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

X					WHITE.					COLORED.	
April 4	Aggre-			.	נ	Native born	n.

This table indicates that the proportion of deaths from scarlet fever was nearly the same in the United States as a whole (7.40) as it was in the registration area (7.03), and that in both areas it was much greater among the white than among the colored, and somewhat greater among children having one or both parents foreign born than among those whose parents were native born.

The following table shows, for the United States, and for the registration area and some of its subdivisions, the proportion of deaths from scarlet fever among the whites during the census year, per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger-	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign countries.
The United States	10.11	7.44	5.05	6. 62	5.18	8. 35	8. 98	15. 21	10.15	5.04	5. 10	8. 00

This table indicates that in the United States as a whole, as well as in the registration area, the greatest proportion of deaths from scarlet fever among the whites occurred in the children of mothers born in Scandinavia and of mothers born in Hungary, and that the least proportion occurred in children of mothers born in Ireland and Bohemia.

The following table shows the proportion of deaths from scarlet fever, at certain ages and groups of ages, per 1,000 deaths at all ages from this cause, in 1880 and in 1890, with distinction of sex:

1	18	380	18	890 .		18	880	18	390
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females

Under 1 year	100, 83	73, 36	100.31	83.42	40 to 45 years	1.10	1.46	2, 05	2.32
1 year	137. 71	123.78	157.14	145.32	45 to 50 years	0.49	0.49	2.40	0.66
2 years	161, 36	145.51	152.69	148.30	50 to 55 years	0.74	0.49	1.37	1.66
3 years	141.14	130.74	144.47	137.04	55 to 60 years	0, 25	0.49	2.05	1.32
1 years	109.78	116.21	116.74	106.59	60 to 65 years	0.49	0.12	0.34	1.32
-			-		65 to 70 years	0.12	0.73	1.03	1.32
5 to 10 years	255. 33	278.81	228. 35	257.20	70 to 75 years	0.37	0.61	0.34	0.99
10 to 15 years	61. 99	80.57	50.67	58.92	75 to 80 years	0.37	0.12	1.03	1.66
15 to 20 years	14.58	21.48	19.17	23.83	80 to 85 years	0.12	0.24	0.34	0.33
20 to 25 years	5.76	11.84	7.19	8.61	85 to 90 years				0.33
25 to 30 years	4.29	6.84	5.14	7.94	90 to 95 years			0.34	0, 33
30 to 35 years	2, 33	3.17	4.79	6. 29	95 years and over				0.83

It will be seen from this table that in each census and in both sexes more than half of the deaths from scarlet fever occurred in children under 5 years of age, and that 90 per cent occurred in children under 15 years of age.

The average age of those dying from scarlet fever in the United States in 1890 was 5.90 years; in the registration states it was 5.77 years; in 1880 in the United States it was 5 years.

The following table shows for each grand group the proportion of deaths from scarlet fever, during the census year, per 1,000 deaths from known causes, with distinction of sex and color, of rural districts and cities, and of children of mothers born in Ireland and in Germany:

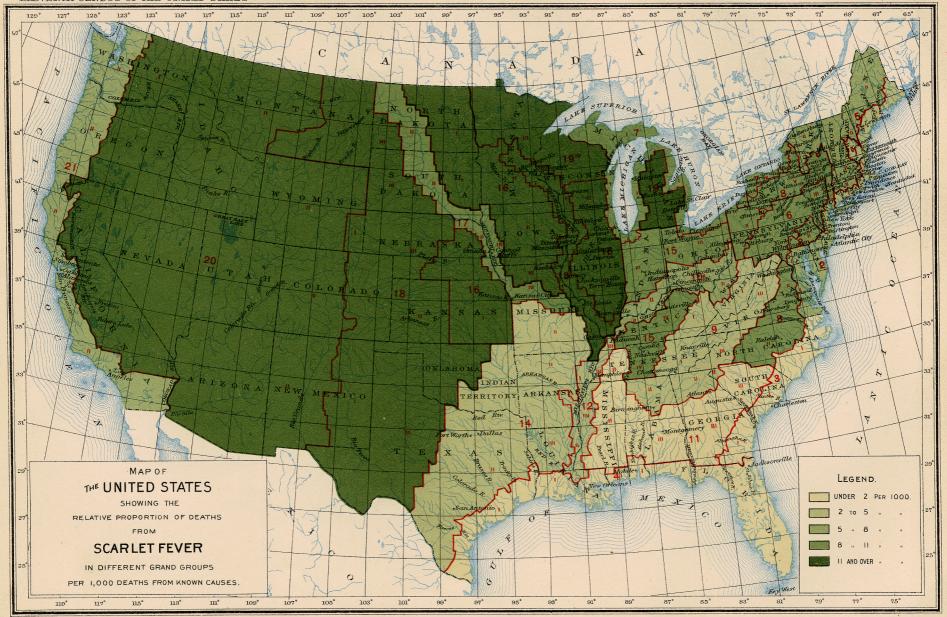

GRAND GROUPS.	Total.	RU	RAL.	CIT	TES.	White.	Colored.	MOTHERS	BORN IN-
a diameter discours.	Lotai.	Males.	Females.	Males.	Females.	44 H106*	Colored.	Ireland.	Germany.
1. North Atlantic Coast region	3.90	3. 56	4. 31	3.86	3. 93	3.94	1.83	3, 06	2.97
2. Middle Atlantic Coast region	7.09	4.01	5.98	6.95	8.33	7.63	2, 13	5.73	6.98
3. South Atlantic Coast region	0.53	0.42	1.08			0.39	0.62		
4. Gulf Coast region	1.32	1.91	2.74		0.51	1.38	1.23		
5. Northeastern hills and plateaus	5.14	3.73	5. 27	6.13	6.72	5.17		4.82	7.33
6. Central Appalachian region	9. 99	9.91	12. 25	5. 18	7.01	10.13	3.97	5.83	4.99
7. Region of the Great Northern Lakes	8.99	11. 29	12.01	6, 90	8.73	9.09	1.13	4. 27	9.59
8. Interior plateau	8. 22	5.96	8.57	8.67	9. 69	9.19	1.18	6.61	9. 62

12. South Mississippi River belt	2. 26	1.90	2.81	1.11	3. 18	3. 26	1.63		
13. North Mississippi River belt	11. 76	10.09	11.44	10.79	15. 64	12. 29	2.86	5.02	8.44
14. Southwest Central region	2. 11	1.82	2.11	2. 88	7.60	2. 25	1.48		0.90
15. Central region, plains and prairies	8.42	8.60	8.43	7. 23	8.19	9.30	1.63	3, 66	5. 89
16. Prairie region	13. 21	13.32	13.49	7. 97	7. 25	13.47	0.76	6.98	13.98
17. Missouri River belt	8.87	8.33	12.03	4.95	8.03	9.69	2.71		3.03
18. Region of the Western plains	11.59	13. 14	13.70	5.98	7.55	12.12	1.99	10.93	6. 29
19. Heavily timbered region of the Northwest	11.05	9. 20	13. 16			11.31		2.68	13.01
20. Cordilleran region	17.74	13. 66	26, 26	2.62		18.60	7.42	15, 36	14.78
21. Pacific Coast region	5. 16	5. 73	11.44	2.54	3.77	5.48	0.85	2. 76	5, 63

The geographical distribution of deaths from scarlet fever in the several grand groups is shown by map No. 2. It will be seen from this table and map that the proportion of deaths due to scarlet fever to deaths from known causes was greatest in the Cordilleran region (17.74), the Prairie region (13.21), and the North Mississippi River belt (11.76), and least in the southern portions of the United States.

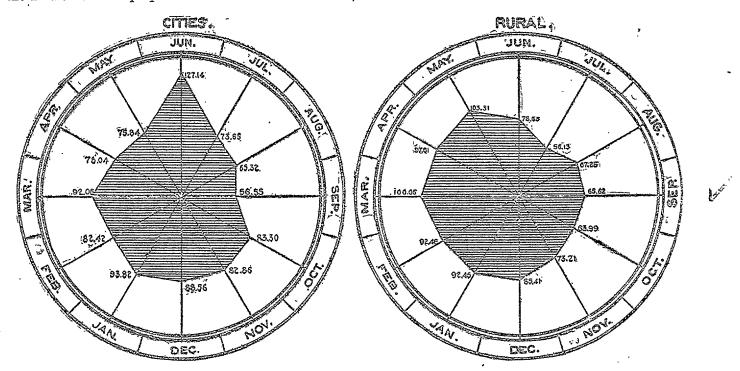

The geographical distribution of deaths from scarlet fever by state groups, per 1,000 deaths from known causes in each group is shown by map No. 3.

The following table shows, for the United States, the number of deaths from scarlet fever in each month of the census year, and the proportion in each month per 1,000 deaths from this disease, with distinction of cities and of rural districts:

MONTHS.		DEATHS.		PROPORTI PER 1,0	ON IN EAC 00 TOTAL I	HI MONTH DEATHS.	
	United States.	Cities.	Rural.	United States.	Cities.	Rural.	
Total	5, 969	2, 281	3, 688				
June	580	290	290	97.17	127.14	78, 63

May	554	173	381	92. 81	75.84	103.31	
Unknown	89	1	88	14. 91	0.44	23.86	

The relative proportion of deaths from scarlet fever in each month in the cities and in the rural districts, and the difference in the proportion of deaths in the two areas, is shown in the following diagram:

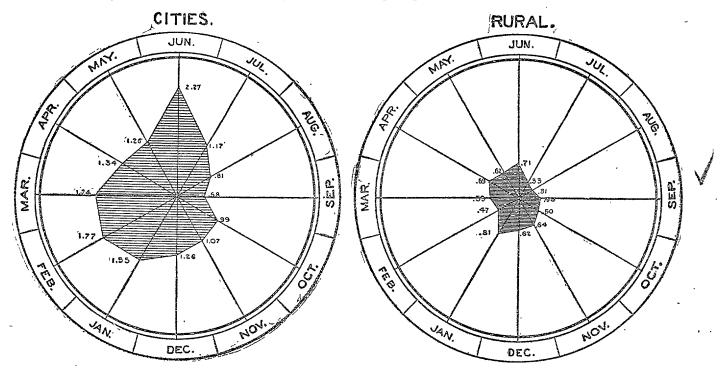

It will be seen from this table and diagram that the greatest proportion of deaths from searlet fever occurred in the months of March and of June, but the distribution as between cities and rural districts was such as to indicate that seasons had apparently little effect upon the mortality. The greatest proportion occurred in the cities in June, and in the rural districts in May and March.

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from scarlet fever in each month during the census year, and the death rates per 100,000 of population, with distinction of cities and of rural districts:

leng,		DEATHS.		RATE.					
MONTES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.			
June	172	142	30	1.64	2. 27	0.71			
July	87	73	14	0.83	1.17	0.33			
August	64	51	13	0.61	0.81	0.31	١		
September	55	36	19	0.52	0.58	0.48			
October	83	62	21	0.79	0.99	0.50

December	105	79	26	1.60	1.26	0.62			
January	131	97	34	1.25	1.55	0.81	ļ		
February	131	111	20	1.25	1.77	0.47			
March	134	109	25	1.28	1.74	0.59	l		
April	113	84:	29	1.08	1.34	0.69			
May	105	79	26	1.00	1.26	0.62			

The death rates in each month, as given in the preceding table, and the relative magnitude of the rates in the cities and rural districts are shown graphically in the following diagram:

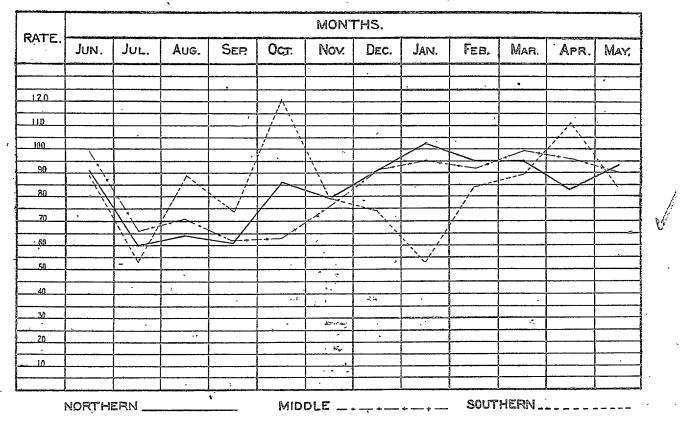

It will be seen from this table and the diagram that the highest death rates from scarlet fever occurred in June, both in the cities and in the rural districts, and that the lowest death rates occurred in August, September, and October.

The following table shows for three divisions of grand groups, namely, northern, middle, and southern, the number of deaths reported as due to scarlet fever in children under 5 years of age in each month during the census year, and the proportion in each month per 1,000 of all deaths from this disease in children under 5 years of age:

Months.	GRAND	n REGION. GROUPS 17, AND 19.	GRAND 2, 6, 8, 10,	REGION. GROUPS 15, 16, 18, ND 21.	GRAND	n region. Groups 12, and 14.
	Deaths.	Proportion.	Deaths.	Proportion.	Deaths.	Proportion.
June	96	91.08	250	98.70	17	89. 47
July	63	59.77	167	65.93	10	52, 63
August	67	63. 57	179	70.67	17	89.47
September	64	60.72	158	62.38	14	73.68
October	91	86. 34	159	62.77	23	121. 05
November	83	78, 75	192	75.80	15	78.95
December	96	91.08	230	90.80	14	73.68
January	108	102. 47	241	95. 14	10	52.63
February	100	94.88	234	92, 38	16	84.21
March	100	94.88	252	99.49	17	89. 47
April	1 1		244	96, 33	21	110.53
Мау			227	89.62	16	84.21

The variations in the proportions of deaths in the several divisions, month by month, are shown in the following diagram:

It will be seen from this table and diagram that the differences in the proportion of deaths in different months of the year from scarlet fever were much less than from measles or whooping cough. The proportion of deaths in the northern region from this cause was greatest in January; in the southern region it was greatest in October; and in the middle region it was greatest in March. In the northern region it was least in July; in the southern region in July and January; and in the middle region in September and October.

MEASLES.

The total number of deaths reported as due to measles in the United States during the census year was 9,256, of which 4,595 were of males and 4,661 were of females. In the registration area the number of deaths reported as due to this disease was, males, 1,325; females, 1,337; total, 2,662; giving a death rate of 13.54 per 100,000 of population.

In 1890 the death rate from measles per 100,000 of population was, in England and Wales, 43.8; in Scotland, 62.6; in Ireland, 15.4; in Belgium, 68.9; in Prussia, 40.6; in Austria, 64.00; in Italy, 47.7. The death rate from this disease was therefore less in that part of the United States having registration records than in any of the above named countries.

During the 10 years, 1880 to 1889, the death rate from measles per 100,000 of population was, in England and Wales, 44.6; in Ireland, 19.5; in Scotland, 36.5; in Sweden, 18.8; in Norway, 10.6; in Prussia, 41.4; in Austria, 50.4; in Saxony, 26.1; in Massachusetts, 11.2; in Connecticut, 9.2; in Rhode Island, 10.2; and in New Jersey, 10.8.

The following table shows, for the registration area and some of its subdivisions, the death rates from measles, during the census year, per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.				COLORED.			
AREAS.	Aggre-				1	Tative born	1.					
Alleas.	gato.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.	
Registration area	13. 54	13. 23	13. 19	13. 27	17.08	11. 23	24. 63	2. 65	19.58	20. 01	19. 17	
Cities	15. 60 10. 71 13. 13 7. 00 17. 87 17. 81 29. 11	15. 32 10. 71 13. 25 6. 86 17. 36 17. 93 29. 41	15. 45 10. 75 13. 71 6. 40 17. 10	15. 19 10. 67 12. 81 7. 33 17. 63	20. 85 13. 37 18. 13 7. 59 23. 36 25. 31 44. 30	15.87 8.67 12.08, 6.06 24.03 21.86 31.70	27. 66 20. 89 23. 86 12. 88 36. 41 34. 41 52. 50	2. 60 3. 02 3. 05 2. 92 2. 10 2. 95 4. 43	20. 05 10. 66 8. 95 14. 61 23. 14 15. 38 12. 36	20. 59 11. 34 10. 03 14. 10 23. 40	19. 53 10. 01 7. 98 15. 15 22. 88	

It will be seen from this table that the death rate from measles was higher among the colored (19.58) than among the whites (13.23); that it was nearly the same among the males (white, 13.19; colored, 20.01) as it was among the females (white, 13.27; colored, 19.17); and that it was much higher among the native born whites (17.08) than among the foreign born whites (2.65), owing largely to the much greater proportion of young children in the former class. Among the native born whites having one or both parents foreign born, the death rate from this cause (24.63) was more than twice as high as it was among those both parents of whom were native born (11.23). In the registration states the number of deaths reported as due to this disease was, males, 632; females, 640; total, 1,272; giving a death rate of 10.71 per 100,000 of population. In these states the death rate from measles was much higher in the cities (13.13) than in the rural districts (7.00), and it was highest of all in the metropolitan district for the 6-year period (29.11), being for this locality much higher among the whites (29.41) than among the colored (12.36), owing to the much smaller proportion of children in the latter group.

The following table shows, for each of the registration states, and for their sum, the death rates from measles during the census year, per 100,000 of population, with distinction of sex, and of cities and rural districts:

	Δ	GGREGATE	.		MALES.		FEMALES.				
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.		
Total	10.71	13. 13	7.00	10, 76	13. 62	6. 54	10.65	12. 67	7.47		
Connecticut	5.76	7.73	4.36	6.49	10.51	3. 68	5.04	5. 06	5. 03		
Delawaro	18.40	27.67	13.08	21.03	29. 21	16.44	15.68	26.13	9. 56		
District of Columbia	2 60	2.60		2.74	2.74		2.48	2.48			
Massachusetts	4.33	4. 26	4.58	3. 77	3. 26	5.40	4.86	5. 19	3.77		
New Hampshire	4.25	9.05	2, 26	5.36	13.43	2, 23	3.16	5.14	2. 28		
New Jersey	12,66	16.36	7.83	12.21	14.56	9.19	13.12	18.14	6.44		
New York	12 62	16. CO	6. 19	12.66	17.57	4.99	12.58	15.66	7.43		
Rhode Tsland	34.44	29, 99	40.57	35.11	35.46	34.65	33.81	24.95	46.39		
Vermont	6,02	11.14	5 26	7.09	22.15	5,78	4.91	ძ. 78	4.72		

It will be seen from the preceding table that the death rate from measles, in the aggregate, was highest in Rhode Island (34.44), and lowest in the District of Columbia (2.60). It was highest of all among the colored males in Rhode Island (84.22). There was little difference in the aggregate death rates of the whites (10.71) and the colored (10.66). In Massachusetts, New Hampshire, and Vermont there were no deaths from this disease among the colored, but where it did occur in epidemic form among the colored it was more fatal than among the whites, as for instance, in Delaware (42.21) and in Rhode Island (65.39).

Of 1,889 deaths from measles in whites in the registration area during the census year, 700 were children of mothers born in the United States, 249 children of mothers born in Germany, 190 children of mothers born in Ireland, 133 children of mothers born in Italy, 87 children of mothers born in Canada, 64 children of mothers born in England and Wales, 21 each children of mothers born in Scandinavia and in Bohemia, 14 children of mothers born in Scotland, 10 children of mothers born in Hungary, and 5 children of mothers born in France.

The following table shows, for the registration area and some of its subdivisions, the death rates from measles among the whites during the census year, per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.
Registration area	10.09	9. 16	7.14	6. 87	6.10	11.72	12, 93	8.61	31. 25	51.59	94.96	24. 28
Cities	13.76 •	10.09	8.04	7.72	1.53	12.68	11.77	. 9.65	35.83	53.49	105.88	25.7±
States	826	8.38	5.81	5.43	8.68	8.37	13. 35	7.32	31.74	19.29	109.08	19.41.
Cities	11.39	9.26	6.46	5.96	2.45	9.22	12, 23	9, 26	37. 91	21. 27	124.72	20.64
Rural	5.67	6, 55	3.76	4.13	23.78	4.69	15.14	2.74			29.84	12.56
Cities in nonregistration states	18.92	12.38	15.86	13.18		17.69	9. 50	9, 93	29.39	71.55		37. 25
Cities of 100,000 population and upward	19.52	13.76	11.01	9.49	2.24	13, 99	12.09	13.33	36. 80	57. 22	125. 55	29.38

The number of deaths from measles among those having mothers born in Scotland, in Hungary, and in France was so small that the ratios derivable therefrom have little scientific value. For the others, it will be seen that the death rate from this disease in the registration area was highest among those whose mothers were born in Italy (94.96) and in Bohemia (51.59), and that it was lowest among the children of mothers born in Ireland (7.14) and in Scandinavia (8.61). It was lower among the children of mothers born in the United States (10.09) than among the children of mothers born in Germany (11.72). In the cities of 100,000 population and upward, the death rate from this disease among the children of Italian mothers was more than twice as high as it was among those of mothers born in any other country, being 125.55.

The following table shows, for the registration area and some of its subdivisions, the death rates from measles during the census year in each of four age groups, per 100,000 population of corresponding ages, with distinction of sex:

	UNDER 1 YEAR.			UNDER 5 YEARS.			5	го 15 ув	ARS.	15 YEARS AND OVER.		
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	168.11	172,68	163.42	112.49	112, 95	112.02	6.48	6.46	6.50	1.17	0.83	1.50
Cities	186.18	186.80	185.55	128.57	128.56	128.58	7.20	7.46	6.94	0.92	0.71	1.11
States	147. 21	155.06	139.15	91.83	92.33	91.31	4.52	4.85	4.19	1.27	0.91	1,62
Cities	174.74	175.86	173.59	114.46	113.99	114.93	4.75	5.90	3, 62	0.82	0.73	0.91
Rural	95.92	116.48	74.66	53.01	55, 50	50.44	4.17	3.31	5.06	1.96	1.18	2.74
Cities in nonregistration states	196, 20	196.35	196.04	140.76	141.06	140.45	9.32	8.82	9.82	1.00	0.70	1.32
Cities of 100,000 population and upward	208.45	200.69	216.40	147.69	148.88	146.49	7.10	6.95	7.26	0.43	0.27	0.59
Metropolitan district	235.48	217.27	254. 20	158.11	160, 47	155. 73	4.49	5.12	3.86	0.43	0.44	0.43

It will be seen from this table for the children under 1 year of age the death rate from measles, per 100,000, was 168.11 for the entire registration area, being a little higher for males (172.68) than for females (163.42), and decidedly higher in the cities of the registration states (174.74) than in the rural districts of the same states (95.92).

The highest death rate occurred in the metropolitan district, being 235.48 per 100,000 of those under 1 year of age and 158.11 per 100,000 of those under 5 years of age.

The combined relations of age and race to the death rates from measles are indicated in the following table showing the number of deaths in each of two age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey, for the census year:

govern laws are the second sec	UNDER	1 YEAR.	UNDER !	TEARS.
COLOR AND BIRTHPLACES OF MOTHERS.	Deaths.	Rate.	Deaths.	Rate.
White	217	207. 23 83. 68	710 13	146. 41 82. 90
Birthplaces of mothers (white): United States England and Wales	63 7	119.68	239	96.76
Ireland	18	192.41 126.02 161.39	27 69 101	158.20 104.51 125.90
Italy		946, 97	123	818.09

This table indicates that for the children under 5 years of age the death rate per 100,000 due to measles was much higher among the whites (146.41) than among the colored (82.90); that among the whites it was excessively high among the children of mothers born in Italy (818.09), and comparatively low among the children of mothers born in the United States (96.76). For further details with regard to death rates from measles in large cities, see Part II of this report, page 104.

Out of 100,000 deaths from all causes, excluding stillbirths, in the United States during the year ending May 31, 1890, 1,057 were reported as due to measles; the corresponding figures in 1880 having been 1,066 and in 1870 1,876.

In England and Wales the corresponding proportion was 2,243 in 1890 and 2,338 in 1880. In 1890 it was, in Scotland, 3,170; in Ireland, 840; in Prussia, 1,690; in Austria, 2,180; in Belgium, 3,300; and in Italy, 1,800.

The number of deaths due to measles in children under 15 years of age per 1,000 of all deaths from known causes occurring under 15 years of age in the United States was, for the whites, 20.44; for the colored, 26.56; and for Indians, 27.02. In the registration area the corresponding figure was 14.21.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths from measles, during the census year, per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					colored.	
AREAS.	Aggre-				2	Native born	1.				
	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.
The United States	11.47	10.89	10.13	11.74	13.16	13.68	13. 16	1. 84	15. 48	15. 43	15. 53
Registration area	G. 98	6. 99	6. 59	7.44	9.07	6. 59	11.58	1.38	6.80	6, 60	7.02
Cities	7.51	7.58	7.16	8.06	10. 21	8, 43	11.93	1.32	6, 71	6, 52	6.92
States	5.56	5. 61	5.36	5.88	7.08	5.05	9.64	1.53	3.93	3.97	3.89
Cities	5.97	6, 09	5.90	6. 29	8. 16	6.08	9.70	1.47	2.86	2.97	2.74
Rural	4.65	4,57	4.18	4.99	5.13	4.02	9, 32	1.81	8.39	8.00	8.82
Cities in nonregistration states	9, 11	9.30	8.50	10.18	12.47	14.54	18. 23	1.13	7.85	7.55	8.18
Cities of 100,000 population and upward	8. 27	8.52			11.75	10.07	14.38	1.47	5.01		
Metropolitan district, 6 years	11.68	11.81	11.49	12. 17	16. 51	11.64	19.76	2.05	4. 58	5.10	4.00

This table indicates that the proportion of deaths from measles was decidedly greater in the United States as a whole (11.47) than it was in the registration area (6.98), and that in the United States it was decidedly greater among the colored (15.48) than among the whites (10.89).

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths from measles among the whites during the census year, per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia:	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.
The United States	15. 17	6.68	3, 81	5.75	4.39	7.64	9, 69	9.77	12.40	15.63	85. 78	13.02
Registration area	7.40	5.57	3.39	4. 25	3.75	6.88	8.03	5, 52	13, 99	19.18	37. 41	12.45
Cities	8. 82	5.82	3.52	4, 54	0.90	7.18	6.45	5, 98	14.93	19.46	37.74	12.50
States	5.72	A.97	2.68	3, 18	5.14	4. 67	8.14	4.28	14. 21	6.42	41.04	11. 25
Cities	6.24	5.07	2.68	3. 21	1.34	. 4.81	6.39	4.85	15.44	6, 65	41.63	11.21
Rural	5.02	4.70	2, 65	3.08	17.62	3.78	12.58	2, 20			31.58	11.65
Cities in nonregistration states	19. 23	8.37	9.45	10.75		11.44	6.89	7.06	13.16	28.66		14.60
Cities of 100,000 population and upward.	10.36	7. 67	4.28	5.01	1.23	7. 52	5.77	7.64	16.04	19.92	42.81	13.53

This table indicates that in the United States as a whole, as well as in the registration area, the greatest proportion of deaths from measles among the whites occurred in the children of mothers born in Italy, and the least in the children of mothers born in Ireland.

The following table shows the proportion of deaths from measles, at certain ages and groups of ages, per 1,000 deaths at all ages from this disease, in 1880 and in 1890, with distinction of sex:

	18	380	18	390	. :	18	880	1890		
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females.

10 to 15 years	41. 80	43.38	44.37	47.64	75 to 80 years	1.26	0.74	2, 62	1.51	
15 to 20 years	38.28	50.98	50. 27	56.26	80 to 85 years	0. 25	0.25	1,75	1, 29	
20 to 25 years	41.80	40.69	41.97	37.94	85 to 90 years	0.25	0.25	0.66	0.22	
25 to 30 years	22, 66	28.43	20.55	23.71	90 to 95 years	0.25		0.22	0.22	
30 to 35 years	12.84	24, 26	12, 02	23.93	95 years and over		0. 25		•••••	

It will be seen from this table that in each census and in both sexes over 60 per cent of the deaths from measles occurred in children under 5 years of age, and that over 80 per cent occurred in children under 15 years of age.

The average age of those dying from measles in the United States in 1890 was 8.66 years. In the registration states it was 4.70 years. In 1880, in the United States, it was 7 years.

MOR-PT I-16

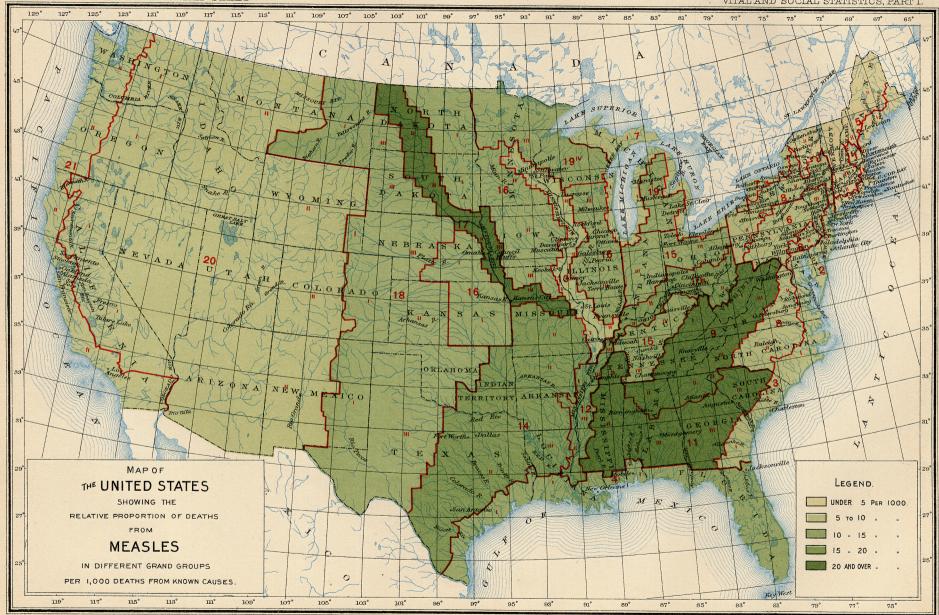

The following table shows, for each grand group, the proportion of death from measles, during the census year, per 1,000 deaths from known causes, with distinction of sex and color, of rural and cities, and of children of mothers born in Ireland and in Germany:

GRAND GROUPS.	Total.	RU	RAL.	CIT	ies.	White.	Colored.	MOTHERS	born in-
	Total.	Males.	Females.	Males.	Females.	W MICO.	Colored.	Ireland.	Germany.

19. Heavily timbered region of the Northwest	14. 69	12.97	16.65			14. 91	5.35	6, 69	14.71
20. Cordilleran region	5.61	4.84	7. 34		3.86	5. 69	4.64	3.84	4.93
21. Pacific Coast region	6.88	8. 93	11. 79	2.88	7. 01	7. 33	0.85	1.66	4.02

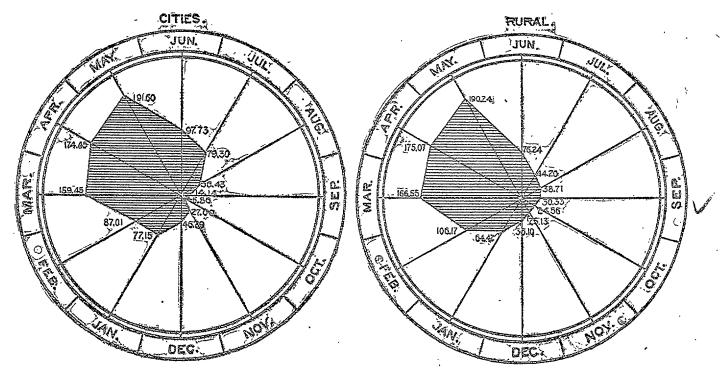

The geographical distribution of deaths from measles in the several grand groups is shown in map No. 4. The preceding table and map indicate that the greatest proportion of deaths from measles in the rural districts occurred in the southern regions, and the least in the North Atlantic Coast, the Northeastern hills and plateaus, and the Cordilleran regions. This table should be compared with the corresponding one for 1880 given in the Tenth Census Reports, volume XII, page lv.

The following table shows for the United States the number of deaths from measles in each month during the census year, and the proportion in each month per 1,000 deaths from this cause, with distinction of cities and of rural districts:

		DEATHS.			ON IN EAC 00 TOTAL 1	
MONTHS.	United States.	Cities.	Rural.	United States.	Cities.	Rural.
Total	9, 256	2, 333	6, 923			
June	765	228	528	81.68	97.73	76. 27
July	491	185	306	53.05	79. 30	44.20
August	353	85	268	38.14	36.43	38. 71
September	243	33	210	26. 25	14.14	30.33
October	186	16	170	20.10	6.86	24. 56
November	237	63	174	25.61	27.00	25, 13
December	351	108	243	37. 92	46. 29	35. 10

March	1, 525	372	1, 153	164.76	159. 45	166. 55
April	1,619	407	1, 212	174. 91	174.45	175.07
May	1,764	447	1, 317	190,58	191.60	190, 24
Unknown	167	6	161	18.04	2.57	23, 26

The relative proportion of deaths from this cause in each month in the cities and in the rural districts, and the difference in the proportion of deaths in the two areas, is shown in the following diagram:

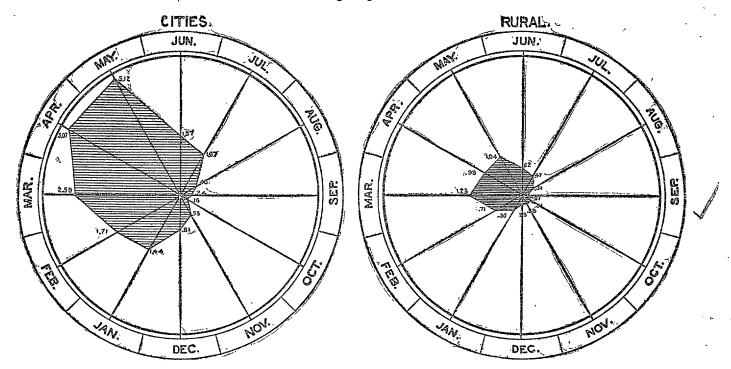

This table and diagram indicate that the greatest proportion of deaths from measles occurred in the months of February, March, April, and May, but it must be remembered that the data for the earlier months in the census year are much more incomplete than those for the later months.

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from measles in each month during the census year, and the death rates per 100,000 of population, with distinction of cities and of rural districts:

		DEATHS.			RATE.		
months.	Total.	Cities.	Rural.	Total:	Cities.	Rural.	
June:	112	86	26	1.07	1.87	0.62	
July	87	67	20	0.83	1.07	0:47	1
August	40	27	13	0.88	0.43.	0:31	l
September	18	15	3	0.17	0.24.	0.07	١,
October	23	10	. 13	0. 22.	. 0.16	0: 31	'
November	45	33	. 12	0, 43	0.53	0.28	1
December	63	51	12	0.60	. 0.81.	0: 28	
January	105	90	15	1.00.	1.44	0.36	1
February	137	107.	80.	1.81.	1.71	0.71	
March	214	162	52	2.04	2.59	1.23	l
April	234	192	42	2.23	3.07	0.99	
May	239	195	44	2.28	8.12	1.04	

The death rates in each month, as given in the preceding table, and the relative magnitude of the rates in the cities and the rural districts, are shown in the following diagram:

It will be seen from this table and diagram that the highest death rates from measles in this area occurred in the months from January to June, and that during these months the death rate from this disease was much higher in the cities than in the rural districts.

The following table shows, for three divisions of grand groups, namely, Northern, Middle, and Southern, the number of deaths reported as due to measles in children under 5 years of age in each month during the census year, and the proportion in each month per 1,000 of all deaths from this disease in children under 5 years of age:

montes.	GRAND	n region. groups 17, and 19.	GRAND 2, 6, 8, 10,	REGION. GROUPS 15, 16, 18, ND 21.		n region. groups 12, and 14.
	Deaths.	Propor- tion.	Deaths.	Proportion.	Deaths.	Proportion.
June	131	114.81	269	85.86	135	77. 99

It will be seen from this table and diagram that the greatest proportion of deaths from measles in all the divisions occurred in May, and the least from August to December. In the middle and southern regions the lowest proportion occurred in October.

DIPHTHERIA AND CROUP.

The majority of cases of death attributed to croup are due to diphtheria of the upper air passages, and in the statement of death rates for purposes of comparison it is not desirable to separate the one from the other. The tables appended to this report, however, contain the data with regard to each separately, as reported by enumerators and by physicians (registration records), so that either or both can be used as the student may prefer.

The total number of deaths reported as due to diphtheria in the United States during the census year was 27,815, of which 13,514 were of males and 14,301 of females. In the registration area the number of deaths reported as due to this disease was, males, 6,781; females, 7,005; total, 13,886; giving a death rate of 70.12 per 100,000 of population.

The total number of deaths reported as due to croup in the United States during the census year was 13,862, of which 7,519 were of males and 6,343 were of females. In the registration area the number of deaths reported as due to this disease was, males, 2,926; females, 2,506; total, 5,432; giving a death rate of 27.63, or for the two causes combined a death rate of 97.75 per 100,000 of population.

In 1890 the corresponding death rate from diphtheria and croup was, in England and Wales, 28.8; in Ireland, 21.3; in Scotland, 44.0; in Belgium, 56.5; in Prussia, 145.4; in Austria, 120.0, and in Italy, 50.0.

During the 10 years, 1880 to 1889, the death rates from diphtheria and croup, per 100,000 of population, were, in England and Wales, 29.5; in Ireland, 22.6; in Scotland, 42.5; in Sweden, 72.6; in Prussia, 163.2; in Austria, 165.1; in Saxony, 153.1; in Massachusetts, 92.2; in Connecticut, 79.4; in Rhode Island, 81.0, and in New Jersey, 97.6.

The following table shows, for the registration area and for some of its subdivisions, the death rates from diphtheria, from croup, and from diphtheria and croup combined, during the census year, per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					COLORED.	· · · · · · · · · · · · · · · · · · ·

It will be seen from this table that the death rate from diphtheria and croup was more than twice as high among the whites (100.35) as among the colored (46.91), the difference being greater for the cases reported under the head of diphtheria (white, 72.16; colored, 30.26) than for those reported under the head of croup (white, 28.19; colored, 16.65). The death rate from diphtheria and croup in the whites was slightly higher among males (101.73) than among females (98.98), but for diphtheria alone there was a slight excess of death rate for females (73.02; males, 71.29). Among the colored the death rate from diphtheria and croup was slightly higher among the females (48.24) than among the males (45.54), this excess occurring entirely in the cases reported as due to diphtheria (females, 33.19; males, 27.24).

The death rate among the native born whites (130.07) was much higher than among the foreign born whites (18.57), owing mainly to the much larger proportion of young children in the former class. Among the native born whites having one or both parents foreign born the death rate from these causes (193.04) was much higher than among those of whom both parents were native (89.37).

In the registration states the death rates from diphtheria and croup were more than twice as high in the cities (121.95) as in the rural districts (54.94), and this applies also to the diseases taken separately (diphtheria in the cities, 89.12; in the rural districts, 41.14; eroup in the cities, 32.83; in the rural districts, 13.81); and for each of these diseases the death rate was highest of all in the metropolitan district for the 6-year period, being for diphtheria and croup taken together 165.58; and for these diseases among the native children having one or both parents foreign born, 271.40.

The following table shows, for each of the registration states and for their sum, the death rates from diphtheria and croup during the census year, per 100,000 of population, with distinction of sex, and the cities and rural districts:

,	J	AGGREGATI	E.		males.			FEMALES.	
registration states.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	95.44	121.95	54.94	98. 52	128.31	54.50	92. 42	115.88	55. 40
Connecticut	96.08	127.60	73.64	96.07	131.34	71.34	96.09	124.01	75. 92
Delaware	96.74	66.74	113.95	100.50	77.89	113.22	92.86	55.52	114.72
District of Columbia	83.34	83. 34		83.95	83.95		82.78	82.78	
Massachusetts	98. 80	110.97	58.95	102, 23	114.90	61.74	95, 55	107.31	56. 23
New Hampshire	86.58	142, 98	63.15	88.44	143.89	66.94	84.75	142.17	59.28
New Jersey	104.92	144.84	52.71	101.83	141.39	51.02	107.99	148. 22	54.42
New York	94, 25	126.68	41.83	99.84	136.63	42.35	88.75	117.12	41.30
Rhode Island	81. 91	85.97	76.32	80.94	93.87	63.78	82.83	78.70	88.69
Vermont	83.33	49.48	86.48	79.73	66.44	80.88	87.07	33.90	92.35

It will be seen from this table that the death rate from these diseases was highest in New Jersey (104.92) and in Massachusetts (98.80), and was lowest in Rhode Island (81.91). In the rural districts it was highest in Delaware (113.95), and lowest in New York (41.83). It was generally higher among males than among females, but in the rural districts it was slightly higher among females than among males. It was higher among the white than among the colored in the aggregate, but was much higher among the colored than the white in certain limited localities, the very small number of deaths among the colored making the death rates derived therefrom of little scientific value.

The following table shows for each of the registration states, and for their sum, the death rates from croup during the census year, per 100,000 of population, with distinctions of sex, and of cities and rural districts:

		GGREGATE	•		MALES.			FEMALES.

The comparative death rates due to diphtheria and croup combined, in the different counties of the registration states, per 100,000 of population, are shown in map No. 5.

Of 14,723 deaths from diphtheria and croup among whites in the registration area during the census year, 6,241 were of children of mothers born in the United States, 2,325 of children of mothers born in Germany, 1,940 of children of mothers born in Ireland, 753 of children of mothers born in Canada, 564 of children of mothers born in Scandinavia, 208 of children of mothers born in Italy, 135 of children of mothers born in Scotland, 90 of children of mothers born in Bohemia, 50 of children of mothers born in France, and 45 of children of mothers born in Hungary.

The following table shows, for the registration area and some of its subdivisions, the death rates of the whites from diphtheria, from croup, and from diphtheria and croup combined, during the census year, per 100,000 of population, with distinction of birthplaces of mothers:

- AREAS.	United States.	England and Wales.	Ireland.	Scot- land.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.

It will be seen from this table that in the registration area, among the whites, the death rate from diphtheria and croup combined was highest among the children of mothers born in Bohemia (221.08), in Italy (148.51), and in Hungary (140.61), and was lowest among the children of mothers born in France (60.99), in Scotland (66.23), and in Ireland (72.93). It was above the average among the children of mothers born in Canada (111.92) and in Germany (109.39), and below it among the children of mothers born in England and Wales (80.76), and in the United States (89.99). Among the children of mothers born in the United States it was more than three times as high in the cities of the registration states (141.83) as in the rural districts of the same states (43.70), and was highest of all in the cities of 100,000 population and upward (166.72).

The following table shows, for the registration area and some of its subdivisions, the death rates from diphtheria and croup during the census year, in each of the four age groups, per 100,000 population of corresponding ages, with distinction of sex:

AREAS.	UNDER 1 YEAR.			U:	nder 5 ve.	ARS.	5	то 15 чел	RS.	15 YEARS AND OVER.			
	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	
Registration area	337.40	384.19	389. 35	€07. 26	632, 83	581.17	166.48	156.44	176. 59	5. 79	5. 18	6.40

Cities of 100,000 population and upward.	357. 09	412.68	300.12	731.57	767.02	695.47	175.01	163. 19	186.79	4.66	4.12	5. 19	
Metropolitan district	440.57	509.45	369.74	915, 66	986.39	844. 35	180.73	169. 19	192.33	4.73	3.88	5.53	

It will be seen from the preceding table that the greatest mortality from these diseases occurred in children under 5 years of age (607.26); that for the age group from 5 to 15 being 166.48; and that for the age group 15 years of age and over only 5.79.

In the age group under 5 years in the registration states the death rate from these diseases was much higher in the cities (893.68) than in the rural districts (287.78), and was highest of all among males in the metropolitan district (986.39). In the age group from 5 to 15 years of age the death rate from these diseases was higher among females (176.59) than among males (156.44), and this excess is found both in the cities and in the rural districts, and also occurs in the age group 15 years of age and over.

The following table shows, for the registration area and some of its subdivisions, the death rates from diphtheria and from croup separately, during the census year, in each of two age groups, per 100,000 population of corresponding ages, with distinction of sex:

			UNDER 5	YEARS.			5 to 15 years.						
AREAS.	:	Diphtheria			Croup.		:	Diphtheria	b.		Croup.

It will be seen from this table that in children under 5 years of age the death rates from both diphtheria and croup were higher in males than in females, while in the age group from 5 to 15 the death rate from diphtheria was higher in females (150.55) than in males (128.31), and for croup the death rate was slightly higher for males (28.13) than for females (26.04).

In the registration states the death rate from diphtheria in the cities (539.34) was more than three times as high as it was in the rural districts (175.67), while for croup the proportion of difference was less (cities, 264.34; rural districts, 112.11).

The combined relations of age and race to the death rates from diphtheria and croup are indicated in the following table, showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey, for the census year:

	UNDER	1 YEAR.	UNDER	5 YEARS.	5 TO 15	YEARS.
COLOR AND BIRTHPLACES OF MOTHERS.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	409	390.58	4, 188	863.59	1, 591	184. 34
Colored	13	362, 62	62	395. 38	6 ₹	197.48
Birthplaces of mothers (white):						
United States	160	303.94	1,869	756. 64	782	191.33
England and Wales	13	357.34	142	832.01	64	184.57
Ireland	63	441.08	710	1,075.35	294	195.12
Scotland	3	261.78	39	717.44	16	150.11
France			11	550.83	9	205.29
Germany	69	412. 43	784	977. 26	303	188.21
Canada	6	364.30	77	1,036.48	38	282.97
Scandinavia	7	447. 57	57	. 858.69	22	285.34
Hungary	6	721. 15	33	1,015.07	2	52.37
Bohemia	. 3	656. 46	21	1,066.53	3	101.39
Italy	22	595.24	143	951.11	13	77.33

The preceding table indicates that for children under 5 years of age the death rate due to diphtheria and eroup per 100,000 of population was much higher among the whites (863.59) than among the colored (395.38), but that in the age group from 5 to 15 the death rate for the colored from these diseases (197.48) was slightly in excess of that for the whites (184.34). Among white children under 5 years of age the death rate from these diseases was highest among the children of mothers born in Ireland (1,075.35), in Bohemia (1,066.53), and in Canada (1,036.48), and was lowest among the children of mothers born in France (550.83), in Scotland (717.44), and in the United States (756.64). For further details with regard to death rates from these diseases in large cities, see Part II of this report, page 87.

Out of each 100,000 deaths from all causes, excluding stillbirths, in the United States during the census year, 3,446 were reported as due to diphtheria and 1,717 as due to croup, giving a total of 5,164, the corresponding figure in 1880 having been 7,413, and in 1870, 3,452.

In England and Wales the corresponding proportion in 1890 was 1,475, and in 1880, 532. In 1890, it was, in Prussia, 6,060; in Austria, 4,080; in Belgium, 2,710; in Scotland, 2,230; in Italy, 1,880; and in Ireland, 1,140.

The number of deaths due to diphtheria and croup in children under 15 years of age per 1,000 of all deaths from known causes occurring under 15 years of age in the United States was, for the whites, 124.44; for the colored, 43.42 for the Chinese, 30.77; and for the Indians, 122.93. In the registration area the corresponding figure was 104.94.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths from diphtheria and croup, during the census year, per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

	•				WHITE.					COLORED.	
AREAS.	Aggre-]	Native born	1.

This table indicates that the proportion of deaths from diphtheria and croup to the total deaths from known causes was nearly the same in the United States as a whole (51.64) as it was in the registration area (50.39), and that in both areas it was much greater among the whites than among the colored; greater among females than among males, and greater among native born white children having one or both parents foreign born than among native born white children of whom both parents were native born.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths from diphtheria and croup among the whites, during the census year, per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign countries.

Cities of 100,000 population and upward	88. 45	47. 20	34.70	44.49	33.13	62.88	80.41	76.79	62. 39	82.54	56, 74	69.72

The preceding table indicates that in the United States as a whole, as well as in the registration area, the greatest proportion of deaths from diphtheria and croup among the whites occurred in the children of mothers born in Bohemia, and the least in the children of mothers born in France and in Ireland. It should be borne in mind, however, that, as is shown above, the highest death rate from these causes in children under 5 years of age occurred in the children of mothers born in Ireland.

The following table shows the proportion of deaths from diphtheria and croup, at certain ages and groups of ages, per 1,000 deaths at all ages from these causes, in 1880 and in 1890, with distinction of sex:

	18	380	18	39 0		18	880	18	90

30 to 35 years	2.36	2. 79	2.44	3.99	95 years and over		0.07		0.05

It appears from this table that in the census of 1890 about 60 per cent of the deaths from diphtheria and croup occurred in children under 5 years of age, and that about 95 per cent occurred in children under 15 years of age.

The following table indicates the differences in the proportions of deaths at each of certain ages or groups of ages per 1,000 of all deaths reported as due to diphtheria and to croup, during the census years 1880 and 1890, with distinction of sex:

		18	80			18	90

The preceding tables and diagrams indicate that about one-half of the deaths reported as due to diphtheria occurred in children under 5 years of age, and that over one-half of the remaining deaths occurred in those from 5 to 10 years of age. A greater proportion of males than of females died under 5 years of age from this disease.

Of those reported as dying from croup, a much greater proportion were reported as being under 5 years of age, the average being about 87 per cent in 1880, and 83 per cent in 1890.

This indicates that fatal cases of this disease were more frequently called croup when they occurred in infants, and diphtheria when they occurred in children 5 years of age and over. Now that the diagnosis of diphtheria is made mainly on the presence of the specific bacillus, it is probable that fatal cases of croup will be much more rarely reported in future.

The average age at death of those dying in the United States in 1890 from diphtheria was 6.87 years; from croup, 3.34 years; from both diseases taken together, 5.81 years. In 1880, the average age at death of those reported as dying from diphtheria was 6 years; and from croup, 2 years.

The following table shows, for each grand group, the proportion of deaths from diphtheria during the census year, per 1,000 deaths from known causes, with distinction of sex and color, of rural districts and cities, and of children of mothers born in Ireland and in Germany:

The geographical distribution of deaths from diphtheria and croup combined, in the several grand groups, is shown is map No. 8.

The following table shows, for each grand group, the aggregate proportion of deaths from diphtheria, from croup, and from diphtheria and croup combined, during the census year, per 1,000 deaths from known causes, in each grand group:

GRAND GROUPS.	Diphthe- ria.	Croup.	Diphthe- ria and croup.
1. North Atlantic Coast region	86.00	10.05	46.05
2. Middle Atlantic Coast region	83.06	13. 72	46.78
3. South Atlantic Coast region	7.96	5.99	13. 95
4. Gulf Coast region	10.27	10.98	21. 25
5. Northeastern hills and plateaus.	35.39	12.43	47.82
6. Central Appalachian region	48.08	19.57	67. 65
7. Region of the Great Northern Lakes	46.05	17.87	63.92
8. Interior plateau	29.51	14.46	43.97
9. Southern Central Appalachian region	20.34	36. 35	56, 69
10. Ohio River belt	35.79	14.48	50.27
11. Southern Interior plateau	8.49	18. 26	26.75
12. South Mississippi River belt	7.14	13.02	20. 16
13. North Mississippi River belt	45.98	15. 28	61. 26
14. Southwest Central region	7.04	25.13	32.17
15. Central region, plains and prairies	19.55	14.80	84. 35
16. Prairie region	52.78	18.38	71. 16
17. Missouri River belt	52.51	24.31	76.82
18. Region of the Western plains	81. 62	18. 16	99.78
19. Heavily timbered region of the Northwest	44.07	9.92	53.99
20. Cordilleran region	69. 26	17.30	86. 56
21. Pacific Coast region	27. 56	15,00	42.56

It will be seen from these tables and maps that diphtheria caused the greatest proportion of all deaths from known causes in the region of the Western plains (81.62), in the Cordilleran region (69.26), and in the Prairie region (52.78).

The greatest proportion of deaths from croup occurred in the Southern Central Appalachian region (36.35), in the Southwest Central region (25.13), and in the Missouri River belt (24.31).

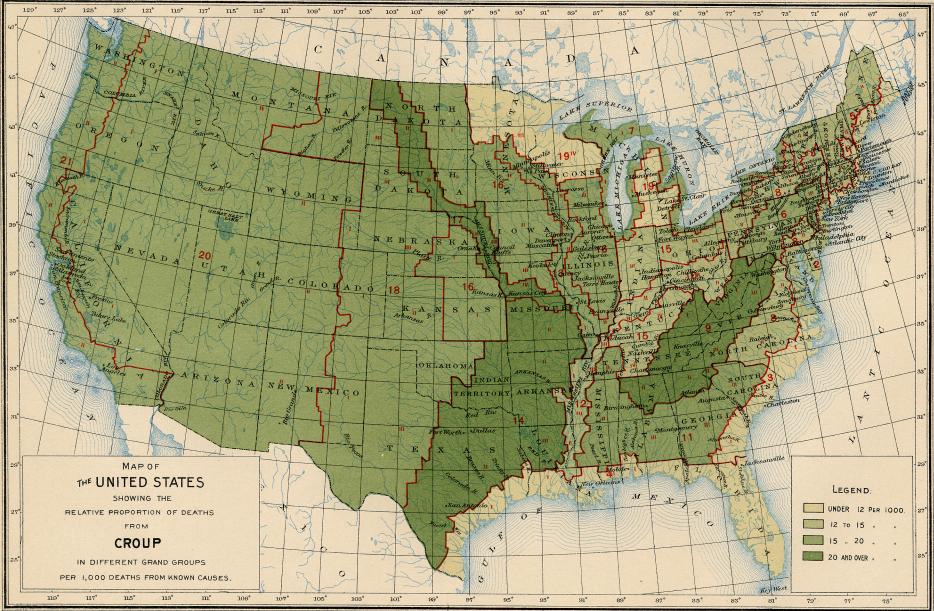

Taking the two together, the greatest proportion of deaths from diphtheria and croup occurred in the region of the Western plains (99.78), the Cordilleran region (86.56), and the Missouri River belt (76.82).

The geographical distribution of deaths from diphtheria and croup by state groups, per 1,000 deaths from known causes in each group, is shown in map No. 9.

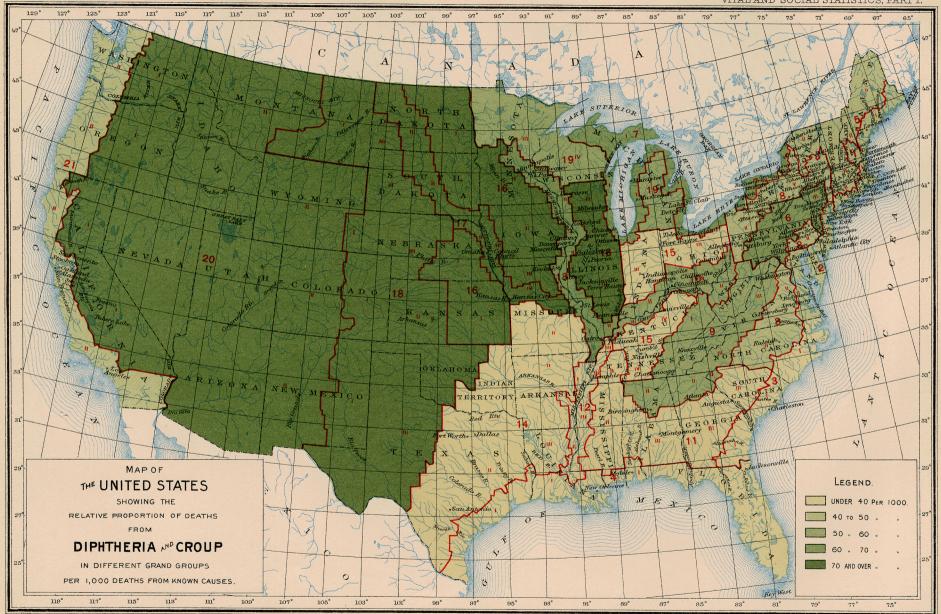

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from diphtheria in each month during the census year, and the death rates per 100,000 of population, with distinction of cities and of rural districts:

		DEATHS.		Ï	RATE.		
MONTHS.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
June	618	502	116	5. 90	8. 02	2. 75	
July	460	868	92	4.39	5.88	2.18	
August	504	412	92	4.81	6.58	2.18

Мау	578	421	152	5.47	6.73	8. 60	

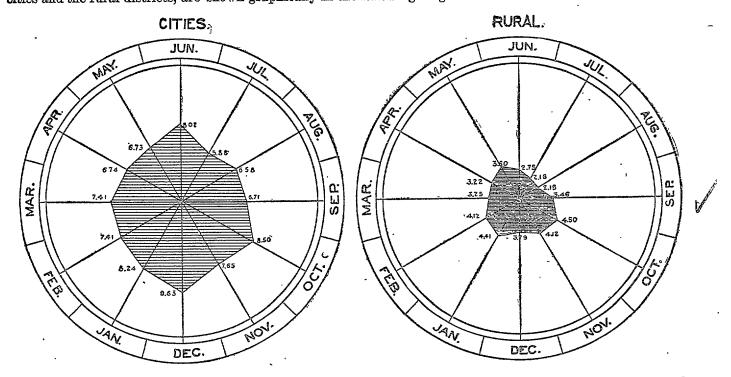

WERNER - AKRON, O

It will be seen from the preceding table that the highest death rate from diphtheria occurred in December (7.28), in October (6.89), and in January (6.70), and the lowest in July (4.39), in August (4.81), and in April (5.32). The death rates in each month, as given in the preceding table, and the relative magnitude of the rates in the cities and the rural districts, are shown graphically in the following diagram:

The following table shows, for three divisions of grand groups, namely: Northern, Middle, and Southern, the number of deaths from diphtheria, under 5 years of age, in each month of the census year, and the proportion in each month per 1,000 deaths from this disease in children under 5 years of age.

MOR-PT I-17

The relative proportion of deaths in each month in the several divisions, indicated in the preceding table, is shown in the following diagram:

						IOM,	VTHS.,		*****	•	-	,

20												

The preceding table and diagram indicate that in the Middle and Southern regions the greatest proportion of deaths of children under 5 years of age from diphtheria occurred during the month of October, and that in this month it was decidedly greater in the Southern region than it was in the Middle or Northern. In the Northern region it was highest in November. The least proportion of deaths from these causes occurred in July in the Northern and Middle regions, and in June in the southern belt.

While this table and diagram relate only to children who, as a rule, were not attending school, it must be remembered that they would be subjected to the influence of the contagion developed in aggregations of children in schools through their older brothers and sisters who were attending them. The rapid decrease in the proportion of deaths from October to January in the Southern region is in marked contrast to the gradual decrease in the proportions in the Northern and Middle regions.

WHOOPING COUGH.

The total number of deaths reported as due to whooping cough in the United States, during the census year, was 8,432, of which 3,821 were males and 4,611 were females. In the registration area the number of deaths reported as due to this cause was, males, 1,381; females, 1,717; total, 3,098; giving a death rate of 15.76 per 100,000 of population. In 1890 the corresponding death rates from this cause were, in England and Wales, 47.8; in Ireland, 31.8; in Scotland, 75.9; in Italy, 43.4; in Belgium, 68.6; in Austria, 102.3; in Prussia, 57.8; being higher in all these countries than it was in the United States.

During the 10 years, 1880 to 1889, the death rates from whooping cough per 100,000 population were, in England and Wales, 45.6; in Ireland, 30.6; in Scotland, 60.0; in Sweden, 18.0; in Norway, 17.6; in Prussia, 51.7; in Austria, 110.0; in Saxony, 27.5; in Massachusetts, 12.4; in Connecticut, 11.7; in Rhode Island, 14.2; and in New Jersey, 14.6.

The following table shows, for the registration area and some of its subdivisions, the death rates from whooping cough, during the census year, per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

	•				WHITE.					COLORED.	
•	Aggre-				1	Native bori	1.				
ARWAS.	Aggre- gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.
Registration area:	15. 76	15:37	13.74	17.00	20.45	15.78	32.11	1.38	23. 35	21, 07	25. 5 6
Cities	17. 34 18. 16 23. 04	17.00 17.80 22.69	15, 22 16, 08 20, 71	18.77 19.48 24.58	23.78 23.42 32.78	21. 05 15. 87 23. 69	35. 33 35. 97 42. 03	1.41 1.54 1.63	22.80 33.81 35.80	20. 59 29: 49 31. 21	24. 92 37. 90 39. 90
Rural	10. 72 12. 09 12. 23	10.39 11.40 16.85	9, 28 10, 00	11.52 12.84	12.08 15.43 24.57	9.90 15.33 26.30	19.60 19.91 35.86	1.25 1.15 1.18	29. 22 19. 18 24. 77	25.86 17.77	32. 82 20. 57
Cities of 100,000 population and upward Metropolitan district, 6 years	12. 23 2717	26.98	24, 60	2927	42.25	38.35	44.79	1.32	38.66	32. 97	44.14

It will be seen from this table that the death rate from whooping cough per 100,000 of population was decidedly higher among the colored (23.35) than it was among the whites (15.37); that it was higher among the females (whites, 17.00; colored, 25.56) than it was among males (whites, 13.74; colored, 21.07), and that it was higher among the native born whites (20.45) than among the foreign born whites (1.38), which is mainly due to the difference of age distribution of the two classes of the population. Among the native born whites having one or both parents foreign born the death rate from this cause (32.11) was a little more than double that among those both of whose parents were native born (15.78). In the registration states the death rate from this disease was more than twice as high in the cities (23.04) as it was in the rural districts (10.72), and it was highest of all in the metropolitan district for the 6-year period (27.17).

The following table shows, for each of the registration states and for their sum, the death rates from whooping cough during the census year, per 100,000 of population, with distinction of sex, of color, and of cities and rural districts:

	A	GGREGATE	.	•	MALES.		FEMALES.				
registration states:	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.		
Total	18:16	23.04	10.72	16.38	20. 98	9. 57	19.91	24. 99	11.89		
Connecticut	18.76	27.07	12.85	15, 15	20.36	11.51	22, 30	33. 53	14.18		
Delaware	5. 93	9.77	. 3.74	3.51	6.49	1.83	8.44	13.06	5.74		
District of Columbia	13.02	13.02		12.78	12.78		13. 24	13.24			
Massachusetts	16.30	18.54	8.97	14.99	16.66	9.65	17.55	20.31	8.30		
New Hampshire	9.83	9.95	9.77	10.18	9.59	10.41	9.48	10.28	9.12		
New Jersey	28.02	30.53	20.12	22.89	26.90	17.75	29.14	34.09	22.54		
New York	18.04	23, 96	8.46	16.49	22.42	7.23	19:56	25.45	9.73		
Rhode Island	29, 52	81.99	26.13	27.38	29, 20	24.95	3155	34_55	27, 29		
Vermont	4.81	10.60	4.27	2, 95	7.38	2.57	6.74	13.56	6.07		

It will be seen from the preceding table that the death rate from whooping cough was highest in Rhode Island (29.52) and New Jersey (26.02), and lowest in Vermont (4.81) and in Delaware (5.93). In the rural districts it was highest in Rhode Island (26.13), and lowest in Delaware (3.74). It was higher among the females than among the males in every state except New Hampshire and New York, and was more than twice as high in the aggregate in the cities (23.04) as it was in the rural districts (10.72), but in New Hampshire the difference was small (cities, 9.95; rural, 9.77). In the aggregate it was much higher among the colored (33.81) than it was among the whites (17.80), but in Connecticut it was highest among the whites. In New Hampshire there were no deaths from this cause among the colored, and in Vermont there was but 1, so that these ratios for this state have no scientific value.

Of 2,443 deaths from whooping cough in whites in the registration area, during the census year, 1,114 were in children of mothers born in the United States, 388 were in children of mothers born in Ireland, 258 were in children of mothers born in Germany, 161 were in children of mothers born in Canada, 89 were in children of mothers born in England and Wales, 48 were in children of mothers born in Scandinavia, 28 were in children of mothers born in Scotland, 23 were in children of mothers born in Bohemia, 9 were in children of mothers born in Hungary, and 4 were in children of mothers born in France.

The following table shows, for the registration area and some of its subdivisions, the death rates from whooping cough among the whites, during the census year, per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.
Registration area	16.08	12.74	14. 59	13.74	4.88	12. 14	23. 93	13. 95	28. 12	56. 50	34. 27	17.58
Cities	21.46	14.75	16. 18	14. 15	6. 14	13. 11	28. 53	11.10	32. 25	58.58	38. 35	19. 24
States	16 98	14.44	15. 65	14.47	6.95	13.87	25.37	23.58	85. 71	96.44	39. 37	16.55
Cities	25.97	18.00	17.90	15.32	9.81	15.91	31.80	20.83	42.64	106.34	45.17	18.76
Rural	9.55	7.10	8. 59	12.40		5.08	15. 14	30.09			9.95	4. 19
Cities in nonregistration states	11.64	5, 83	7.64	10.55		9.04	12. 21	4.14		31.80		20. 32
Cities of 100,000 population and upward	27. 53	12, 39	17.14	16.60	4.48	13.92	36. 28	9, 63	32. 71	62.67	38.86	17.98

It will be seen from this table that the death rate from whooping cough was highest among those whose mothers were born in Bohemia (56.50), in Italy (34.27), and in Hungary (28.12), and, excluding the figures for those whose mothers were born in France, as the total number of deaths was too small to give a reliable ratio, the lowest death rates from this cause occurred in children of mothers born in Germany (12.14), in England and Wales (12.74), and in Scotland (13.74). The death rate was comparatively high in children of mothers born in Canada (23.93), and it was slightly above the average in children of mothers born in the United States (16.06).

The following table shows, for the registration area and some of its subdivisions, the death rates from whooping cough, during the census year, in each of four age groups, per 100,000 population of corresponding ages, with distinction of sex:

	Ü	vder 1 ye.	AR.	UN	DER 5 YEA	Ars.	5	5 to 15 years.			15 YEARS AND OVER.			
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.		
Registration area	411.86	393.55	430. 66	147. 12	131.63	162. 94	3. 35	2, 30	4. 40	0.12	0.07	0.17		
Cities	428. 10	407.56	449.17	157. 22	140.37	174.38	3.44	2.32	4. 55	0. 10	0.06	0. 15		
States	500.77	491.30	510.50	177.69	158.96	196. 74	3.75	2.69	4.82	0.17	0.07	0.25		
, Cities	583.30	574.06	592, 77	217. 30	193.97	240.87	4.23	3.02	5.42	0.16	0.04	0.27		
Rural	346.96	337.81	356. 42	109.76	99.44	120.38	3.04	2. 21	3.91	0.18	0.12	0.24		
Cities in nonregistration states	292, 35	262.17	323. 35	105.30	94. 35	116.52	2.76	1.71	3.80	0.06	0.07	0.04		
Cities of 100,000 population and upward	394.91	375.32	415.00	151.00	137.09	165.15	3.31	1.95	4.66	0.12	0.06	0.18		
Metropolitan district	583, 63	599. 36	567. 45	227. 95	209. 22	246, 84	3. 69	2.88	4. 50	0.39	0.18	0.60		

It will be seen from this table that the highest death rate from whooping cough occurred in children under 1 year of age, being 411.86 per 100,000 of that age group. For each 100,000 of population under 5 years of age the death rate from whooping cough was, females, 162.94; males, 131.63. In the cities in the registration states the death rate from this disease was, females, 240.87; males, 193.97; and in the metropolitan district it was, females, 246.84; males, 209.22.

The combined relations of age and race to the death rates from whooping cough are indicated in the following table, showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

	UNDER	1 YEAR.	UNDER	5 YEARS.	5 TO 15 YEARS.		
COLOR AND BIRTHPLACES OF MOTHERS.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	596	569.16	1,080	222.70	83	3.82	
Colored	37	1, 032. 08	75	478.29	3	9.26	
Birthplaces of mothers (white):							
United States	304	577.49	534	216.18	15	3.67	
England and Wales	29	797.14	41	240.23	2	5. 77	
Ireland	94	658. 13	195	295, 34	11	7.30	
Scotland	5	436.30	10	183.96	1	9.38	
Germany	71	4 24. 39	146	181.99	1	0.62	
Canada	12	728.60	24	323.06			
Scandinavia	10	639.39	14	210.91			
Bohemia	10	2, 188. 18	15	761. 81			
· Italy	23	622. 29	- 38	252.74	1	5.95	

It will be seen from this table that in children under 5 years of age the death rate from whooping cough was more than twice as high among the colored (478.29) as it was among the whites (222.70), that among the whites it was highest among the children of mothers born in Bohemia (761.81), in Canada (323.06), and in Ireland (295.34), and that it was below the average in children of mothers born in Germany (181.99), in Scotland (183.96), and in the United States (216.18).

For further details with regard to death rates from whooping cough in large cities see Part II of this report, page 107.

Out of 100,000 deaths from all causes, in the United States during the census year, 963 were reported as due to whooping cough, the corresponding figures in 1880 having been 1,460, and in 1870, 1,830. In England and Wales the corresponding proportion in 1890 was 2,446, and in 1880, 2,590. In Austria in 1890 it was 3,480; in Prussia, 2,410; in Belgium, 3,290; in Scotland, 3,840; in Italy, 1,650; and in Ireland, 1,730. The number of deaths due to whooping cough in children under 15 years of age per 1,000 of all deaths from known causes, in persons under 15 years of age in the United States, during the census year was, for whites, 23.06; for colored, 28.87; and for Indians, 68.87. In the registration area it was 17.50.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths from whooping cough during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, nativity, and parental nativity:

			,	,	WHITE.		,			COLORED.	
ARTAS.	Aggre-	1		:		Native born	1.				
The United States	gate.		Males.	mates.	Total.	Both parents native.	One or both parents foreign.	Foreign born,	Total.	Males.	Fe- males.
The United States	10.45	10.00	8. 52	11. 68	12.31	12.41	14.09	0.81	13. 52	12.18	14.91
Registration area	8. 12	8.12	6.86	9. 53	10.87	9. 25	15.09	0.72	8.11	6. 95	9.36
Cities	8. 35	8.42	7.06	9.96	11.65	11.18	15. 23	0.71	7. 63	6.52	8.83
States	9.43	9.33	8.02	10.74	12.41	9. 25	16.59	, 0.78	12.47	10.32	14.73

Cities of 100,000 population and upward	8.01	8.00			11.40	12.11	14.99	0.59	8.07		
Metropolitan district, 6 years	10.90	10.83	9. 22	12.64	15.74	14.08	16.85	0.61	14.33	11.30	17.75

The preceding table indicates that the proportion of deaths from whooping cough was somewhat greater in the United States as a whole, per 1,000 deaths from known causes (10.45), than it was in the registration area (8.12), and in the United States as a whole it was greater among the colored (13.52) than it was among the whites (10.00); that it was greater among females than among males, and among the native born white children with one or both parents foreign born than among those having both parents native born, thus corresponding with the death rates per 100,000 of population for the registration area given in the preceding table.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths from whooping cough among the whites during the census year, per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Gor- many.	Canada.	Scandi- navia.	Hun-	Bohemia.	Italy.	Other foreign coun- tries.
The United States	14.35	7. 58	6. 19	7. 32	2.39	6.46	14.18	8, 85	12.40	13.11	12.76	8. 82

A comparison of this table with the preceding table showing the death rates from whooping cough per 100,000 of population, with distinction of birthplaces of mothers, indicates some of the erroneous conclusions which are likely to be drawn from a comparison of the proportion of deaths from a given cause in 1,000 deaths from known causes with the death rate from the same cause in different groups of population. The proportion in the above table would indicate that the highest death rate from whooping cough occurred in the children of mothers born in the United States and Canada, whereas, as a matter of fact, the highest death rates from this cause, in proportion to the population, occurred in children of mothers born in Bohemia and Hungary.

The following table shows the proportion of deaths from whooping cough, at certain ages and groups of ages per 1,000 deaths at all ages from this cause, in 1880 and in 1890, with distinction of sex:

	18	880	18	390_		18	380	18	90 -
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females.

It will be seen from this table that at each census period over one-half of all the deaths caused by whooping cough occurred in children under 1 year of age, and that over 90 per cent occurred in children under 5 years of age. The proportion of deaths in children under 1 year of age was slightly less in females than in males in both censuses.

The average age at death from whooping cough in the United States in 1890 was 2.10 years; in the registration area it was 1.77 years. In 1880, in the United States it was 2 years.

WERNER : AKRON, O

The following table shows for each grand group the propertien of deaths from whooping cough during the census year, per 1,000 deaths from known causes, with distinction of sex and color, of rural districts and cities, and of children of mothers born in Ireland and in Germany:

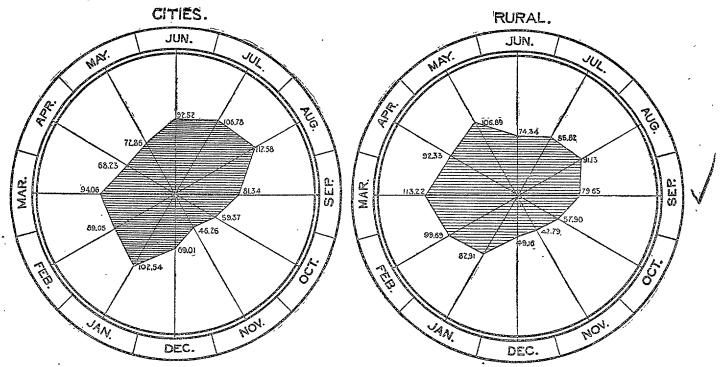

•		RUI	ZAL.	CIT	IES.	White.	Colored.	MOTHERS	born in—

The distribution of deaths from whooping cough in the several grand groups indicated in the table above is shown in map No. 10.

The following table shows, for the United States, the number of deaths from whooping cough in each month during the census year, and the proportion in each month per 1,000 deaths from this cause, with distinction of cities and of rural districts:

MONTES.	·DEATES.			PROPORTION IN EACH MONTH PER 1,000 TOTAL DEATHS.			
	United States.	Cities.	Rural.	United States.	Cities.	Rural.	
Total	8,432	2, 594	-5,-838				
June	674	240	434	79, 93	92. 52	74.34	
July	778	277	501	92.27	106.78	85.82	
August	837	305	532	99.26	117.58	91.13	١.

The relative proportion of deaths from whooping cough in each month in the cities and in the rural districts, as indicated in the preceding table, and the difference in the proportion of deaths in the two areas, is shown in the following diagram:

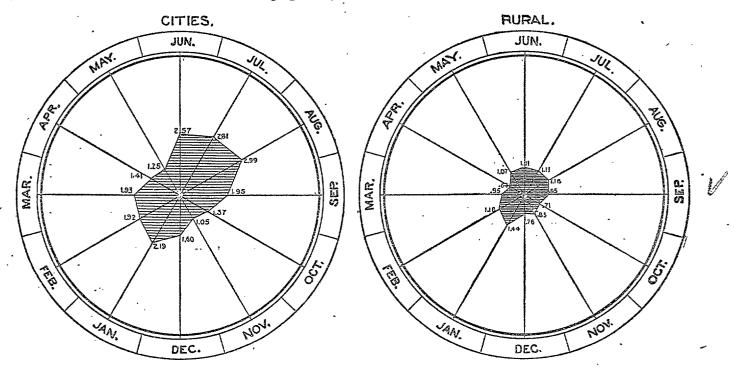

It will be seen from this table and diagram that the greatest proportion of deaths from this cause in the cities occurred in the months of July, August, and January, and the least in October and November, while in the rural districts the greatest proportion of deaths occurred in the months of March and May, and the least in November and December.

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from whooping cough in each month during the census year, and the death rates per 100,000 of population, with distinction of cities and of rural districts:

		DEATHS.			RATE.		
Months.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
June	208	161	47	1.98	2. 57	1.11	
July	223	176	47	2.13	2.81	1.11	
August	236	187	49	2, 25	2, 99	1.16	
September	162	122	40	1.55	1.95	0.95	
October	116	86	80	1.11	1. 37	0.71	\
November	101	66	35	0.96	1.05	0.83	
December	132	100	32	1.26	1.60	0.76	
January	198	137	61	1.89	2.19	1.44	
February	170	120	50	1.62	1.92	1.18	
March	161	121	40	1.54	1.93	0.95	
April	115	88	27	1.10	1.41	0.64	
May	123	78	45	1, 17	1.25	1.07	

The death rates in each month, as given in the preceding table, and the relative magnitude of the rates in the cities and the rural districts are shown graphically in the following diagram:

It will be seen from the preceding table and diagram that the highest death rates from whooping cough occurred in the cities in the months of June, July, and August, and the lowest in the months of May, October, and November, while in the rural districts the highest death rates from this cause occurred in January, February, and August, and the lowest in April, October, and December.

The following table shows, for three divisions of grand groups, namely, Northern, Middle, and Southern, the number of deaths from whooping cough under 5 years of age in each month during the census year, and the proportion in each month per 1,000 deaths under 5 years from this disease, of which the month is known:

months.		n region. Groups 17, and 19.	GRAND 2, 6, 8, 10,	REGION. GROUPS 15, 16, 18, ND 21.	GRAND	n region. groups 12, and 14.	
	Deaths.	Proportion.	Deaths.	Propor- tion.	Deaths.	Proportion.	
June	144	80. 45	367	87.74	123	71.97	-
July	167	93.30	413	98.73	152	88.94	
August	220	. 122.91	429	102.56	146	85.43	3/
September	181	101.12	327	78.17	135	78.99	W
October	114	63.69	204	48.77	131	76.65	
November	· 86	48.04	177	42.31	101	59. 10	
December	98	54.75	233	55.70	93	54.42	1
January	201	112.29	388	92.76	97	56.76	
February	171	95.53	414	98, 97	156	91. 28	
March	171	95, 53	467	111.64	189	110.59	
April	106	59. 22	359	8582	186	108.84	
May	131	73.18	405	96.82	200	117.03	

The relative proportion of deaths in each month in the several divisions, as given in the preceding table, is shown graphically in the following diagram:

						MON	THS.					
RATE.	Jun.	Jul.	Aug.	SER	Ост.	Nov.	DEC.	JAN.	FEB.	Mar.	APR.	May.

100			-4									
90		1	* *					1			<u></u>	*
80				- 1				//-	/			
70	- /			*,	7			/	/			
60				×				-/				
_50	***************************************				1,			1				
40					*	*					-	
30												
70												
10												

It will be seen from the preceding table and diagram that the greatest proportion of deaths from whooping cough in the Northern region occurred in the months of August and January, in the Southern region in May, and in the Middle region in March and August; while the least proportion of deaths in the Northern and Middle regions occurred in November, and in the Southern region in December.

In considering these figures, it must be borne in mind that death from whooping cough usually results from complications and sequelæ occurring at a late period in the disease, so that it will probably be safe to attribute the deaths reported as due to this disease in any given period to causes contracted about two months prior to this period.

CEREBRO-SPINAL FEVER.

The total number of deaths reported as due to cerebro spinal fever in the United States during the census year was 3,333, of which 1,753 were of males and 1,580 of females. In the registration area the number of deaths reported as due to this cause was, males, 664; females, 577; total, 1,241; giving a death rate of 6.31 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from cerebro-spinal fever during the census year in each of four age groups, per 100,000 population of corresponding ages, with distinction of sex:

	מטר	DER 1 YE	AR.	UN	der 5 ye.	Ars.	5 :	ro 15 ye.	ARS.	15 YE	ARS AND	OVER.
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	79.67	94.06	64.89	37.43	41.70	-33. 07	6.08	5, 98	6.17	1.88	1.86	1.91
Cities	83.01	94.28	71.46	39.56	44.86	34.16	6.57	6.26	6.87	1.85	1.81	1.89
States	72.37	89.77	51.49	35.16	39. 23	31.02	5.11	5.39	4.82	1.95	1.80	2.08
Cities	75.61	87. 9 3	63.01	38.43	44.62	32.17	5.51	5.59	5.42	1.92	1.66	2.16
Rural	66.31	93. 19	38.53	29.55	30.06	29.03	4.51	5.08	3.91	1.98	2.01	1.96
Cities in nonregistration states	89.48	99.82	78.87	40.54	45.08	35, 89	7.49	6.85	8.12	1.78	1.95	1.62
Cities of 100,000 population and upward	87.51	92.96	81.93	42.18	46.76	37.53	6.61	6.30	6.93	1.80	1.87	1.74
Metropolitan district	63.30	67.43	59.06	36. 85	42.17	31.48	4.17	3. 20	5. 15	1.43	1.76	1.11

It will be seen from this table that the highest death rate from this disease occurred in children under 1 year of age, and that the death rate was very low for those over 5 years of age. It is probable that some of the cases in infants reported under this head were really cases of tubercular meningitis. In infants under 1 year of age the death rate from this disease was higher among males (94.06) than among females (64.89). In the registration states it was higher in the cities (75.61) than it was in the rural districts (66.31). This low death rate in the rural districts was mainly due to the very low death rate among the females (38.53), since the death rate among the males (93.19) exceeded that among the males in the cities (87.93). For the total of children under 5 years of age the death rate in the rural districts was lower than in the cities, both for males and females. In persons from 5 to 15 years of age the death rate from this cause was a little higher in the females (6.17) than in the males (5.98).

The following table shows, for each of the registration states, and for their sum, the death rates from cerebro-spinal fever during the census year, per 100,000 of population, with distinction of sex, and of cities and rural districts:

	4	lggregate.			MALES.			FEMALES.	
REGISTRATION STATES.	Total.	Cities.	·RuraL	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	5.77	6.30	4.98	6.21	6.91	5.19	5.34	5.71	4.76
Connecticut	6.97	-5.48	8.03	4.87	3.94	5, 52	9.03	6.96	10, 52
Delaware	7.12	11.39	4.67	12.85	22.72	7.30	1.21		1.91
District of Columbia	9.11	9.11		9.13	9.13		9.11	9.11	
Massachusetts	4.87	3.91	8.01	5.33	4.34	8.49	4.43	3,50	7.55
New Hampshire	8,23	6.33	9.02	6.97	1.92	8.93	9.48	10.28	9.12
New Jersey	6.51	7.94	4.63	8.88	10.36	6.97	4.14	5.56	2.25
New York	5.77	6.96	3,58	5.93	7.38	3.79	5.36	6.56	3, 36
Rhode Island	4.05	3.50	4.81	4.76	4.17	5.54	3.38	2.88	4.09
Vermont	3.91	10.60	3.20	2.95	14.76	1.93	4.91	6.78	4.72

It will be seen from this table that the death rate from cerebro-spinal fever was highest in the District of Columbia (9.11) and lowest in Vermont (3.91).

The combined relations of age and race to the death rates from cerebro-spinal fever are indicated in the following table, showing the number of deaths in each of four age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIETHPLACES OF MOTHERS.	UNDER :	1 YEAR.	UNDER 5	YEARS.	5 TO 15	YEARS.	15 YEAR OVI	
COMOR AND BRAIN MICHOLOGY OF MICHAELS.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	74	70.67	187	38. 56	44	5. 10	44	1. 37
Colored	3	83, 68	7	44.64	3	9.26	5	3.80
United States	42	79.78	97	39.27	22	5.38	13	1.23
Ireland	15	105.02	34	51.50	7	4.65	12	1.46
Germany	8	47.82	33	41.13	11	6. 83	8	1.10

It will be seen from the preceding table that the death rate from cerebro-spinal fever in infants under 1 year of age was higher among the colored (83.68) than among the whites (70.67); that among the whites it was highest in the children of mothers born in Ireland (105.02), and lowest in the children of mothers born in Germany (47.82).

The following table shows the proportion of deaths from cerebro-spinal fever at certain ages and groups of ages, per 1,000 deaths at all ages from this cause in 1880 and 1890, with distinction of sex:

	19	880	1:	890		18	880	18	390	İ

The following table shows, for each grand group, the proportion of deaths from cerebro-spinal fever during the census year, per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

					•	
GRAND GROUPS.	Total.	RO.	RAL.	orı	TES.	
GEERLO GEOOFS.	10041.	Males.	Females.	Males.	Females.	
1. North Atlantic Coast region	2.23	3.28	3.11	1.42	2.04	
2. Middle Atlantic Coast region		3. 20	2.30	2.26	2:25	
3. South Atlantic Coast region	2.88	3.74	2.75	2,16	1.69	
4. Gulf Coast region	2.53	2,30	2.51	3. <u>2</u> 2	2.03	ŀ
5. Northeastern hills and plateaus	3.73	3.12	4.67	3.96	2.85	
6. Central Appalachian region	3.45	3.80	3.76	3.00	1.22	
7. Region of the Great Northern Lakes	4.31	3.17	3.59	4.94	4.52	
8. Interior plateau	2.67	2.76	2. 57	2.83	2.49	4
9. Southern Central Appalachian region	6.01	6.19	6.24	4.91	3.67	1 40
10. Ohio River belt	5.96	6.57	6.02	3.90	6.94	
11. Southern Interior plateau	2, 52	3.24	1.87		2.73	
12. South Mississippi River belt	2, 98	3.80	3.05			
13. North Mississippi River belt	4.53	4.50	4.79	5.33	3.31	
14. Southwest Central region	7.76	8.21	7.55	4.32	6.51	
15. Central region, plains and prairies	6.32	6.24	6.91	5. 12	3.75	
16. Prairie region	4.54	4.44	4.50	7.09	6.22	
17. Missouri River belt	5.39	4.16	6.54	4.05	7.50	i
18. Region of the Western plains	5.01	5.41	4.78	2.66	7.55	
19. Heavily timbered region of the Northwest		2.95	5.91			
20. Cordilleran region	5.39	4.11	7.72	5.25		
21. Pacific Coast region		3.67	9.01	1.35	3.50	
L	1	5]	l i	1	i	l

It will be seen from this table that the proportion of deaths from this disease to the deaths from known causes was greatest in the Southwest Central region, the Central region of plains and prairies, and the Southern Central Appalachian region, and was least in the Interior plateaus and the Coast regions.

ENTERIC OR TYPHOID FEVER.

The total number of deaths reported as due to typhoid fever in the United States during the census year was 27,058, of which 15,078 were males and 11,980 were females. In the registration area the number of deaths reported as due to this disease was, males, 5,229; females, 3,868; total, 9,097; giving a death rate per 100,000 of population of 46.27.

In 1890 the death rate from typhoid fever per 100,000 of population was, in England and Wales, 17.9; in Ireland, 18.2; in Scotland, 19.4; in Italy, 65.8; in Belgium, 41.4; in Austria, 47.0; and in Prussia, 20.4.

During the 10 years, 1880 to 1889, the death rates from typhoid fever per 100,000 population were, in England and Wales, 20.5; in Ireland, 16.5; in Scotland, 24.7; in Sweden, 25.9; in Norway, 10.7; in Prussia, 38.3; in Austria, 72.2; in Saxony, 21.4; in Massachusetts, 45.2; in Connecticut, 38.4; in Rhode Island, 49.5; and in New Jersey, 47.2.

The following table shows, for the registration area and some of its subdivisions, the death rates from typhoid fever during the census year, per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					COLORED.	
Aneas.	A.ggre-				1	Tative born	l.,				
	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.
Registration area	46. 27	45. 20	52, 38	38. 06	40.40	35. 16	36.76	58. 43	67. 23	72.57	62. 08
Cities	50.96	49.78	58.11	41.54	44. 30	40, 02	87.59	62.40	70.01	75. 59	64, 65

lities of 100,000 population and upward	53. 25	52.66			46.09	42.83	33.51	65.98	64. 93		
Ietropolitan district, 6 years	29. 11	29. 14	34. 03	24.37	26. 15	31. 24	22.84	34.16	26. 94	29.74	24. 2

It will be seen from this table that the death rate from typhoid fever was higher among the colored (67.23) than among the whites (45.20); that it was higher among males (whites, 52.38; colored, 72.57) than among females (whites, 38.06; colored, 62.05), and that for the whites it was higher among the foreign born (58.43) than among the native (40.40), which is probably owing mainly to the difference of age distribution of the two groups of population. Among the native born whites having one or both parents foreign born the death rate from this cause (36.76) was slightly higher than it was among those having both parents native born (35.16). In the registration states the death rate from this disease was higher in the cities (38.97) than it was in the rural districts (31.35), and it was decidedly higher in the cities of nonregistration states (62.03).

The following table shows, for each of the registration states, and for their sum, the death rates from typhoid fever during the census year, per 100,000 of population, with distinction of sex, of color, and of cities of rural districts:

		ggregate	٠ . ا		MALES.	,		FEMALES.	
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

New York	28. 59	30. 20	26.00	33.16	35. 09	30.13	24. 10	25, 50	21.76
Rhode Island	43.41	37.49	51.57	49.99	54. 24	44. 35	37. 19	22.08	58. 67
Vermont	37. 30	6 0. 08	35. 18	34.84	29. 53	35. 31	39.85	88.14	35. 05

The comparative death rates due to typhoid fever in the different counties of the registration states, per 100,000 of population, are shown in map No. 11.

It will be seen from the preceding table that the death rate from typhoid fever was highest in the District of Columbia (86.81), and lowest in New York (28.59). In the rural districts it was highest in Delaware (55.11), and lowest in New Jersey (25.87). It was higher in the cities (38.97) than in the rural districts (31.35) in the aggregate, but in Connecticut, New Hampshire, and Rhode Island it was higher in the rural districts than in the cities. It was higher, for the aggregate, among males (41.10) than among females (30.93); but in Vermont it was higher among females (39.85) than it was among males (34.84). In the aggregate it was much higher among the colored (67.25) than it was among the whites (35.22), the highest death rate among the colored being in the District of Columbia (112.29), and the lowest in New York (27.06). No deaths were reported among the colored from this disease in New Hampshire and Vermont during the census year.

Of 5,716 deaths from typhoid fever in whites in the registration area during the census year, 1,858 were children of mothers born in the United States, 1,050 children of mothers born in Ireland, 752 children of mothers born in Germany, 302 children of mothers born in England and Wales, 301 children of mothers born in Canada, 178 children of mothers born in Scandinavia, 56 children of mothers born in Scotland, 46 children of mothers born in Italy, 23 children of mothers born in Bohemia, 19 children of mothers born in France, and 15 children of mothers born in Hungary.

The following table shows, for the registration area and some of its subdivisions, the death rates from typhoid fever among the whites during the census year, per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Ćanada.	Scandi- navia.	Hun- gary.	Bohemia.	İtaly.	Other foreign coun- tries,
Registration area	26, 79	43. 24	39.48	27.47	23, 18	35, 38	44.74	73.02	46.87	56. 50	32.84	30.78
Cities	29.71	45.62	41.92	31.52	21.48	36.86	47.77	75.28	46.58	58.58	38.35	31.46
States	26.11	39.03	37.50	27.13	24.31	29.29	45.90	65, 87	35.71	6.43	26.24	23.55
Cities	29.55	40.23	39.81	32, 33	22.07	30.37	- 50.28	68.28	33.17	7.09	31. <u>4</u> 3	23.26
Rural	23. 27	36.57	30.26	14.47	29.73	24.60	38.94	60. 18	48.83			25.11
Cities in nonregistration states	30.05	60.45	52.39	29.00	20.50	46.26	35. 28	80. 29	88:18	87.45	77.26	49.95
Cities of 100,000 population and upward	31. 44	44.59	44.37	37.95	17.92	37.47	48.38	88.87	40.89	62,67	85.87	29, 38

It will be seen from this table that the death rate from typhoid fever in the registration area was highest among those whose mothers were born in Scandinavia, Bohemia, Hungary, and Canada, but the absolute numbers of deaths from this disease in these groups was not sufficiently great to warrant any definite conclusions from this fact. It was higher among children of mothers born in Ireland (39.48) than in children of mothers born in Germany (35.38), or in children of mothers born in the United States (26.79).

The following table shows, for the registration area and some of its subdivisions, the death rates from typhoid fever during the census year in each of 5 age groups, per 100,000 population of corresponding ages, with distinction of sex:

,	UND	UNDER 15 YEARS.			15 to 25 years.			25 to 35 years.			0 45 YE	urs.	45 YEARS AND OVER.		
AREAS.	Total.	Males.	Fe- males.	Total.	Males.	Fe- males.	Total.	Males.	Fe- males.	Total.	Males.	Fo- males.	Total.	Males.	Fe- malės.
Registration area	26.78	26.37	27. 19	78.69	94.26	64, 39	60.44	74. 85	45.48	39. 08	46.92	30, 80	32.11	35.73	28.60

Cities in nonregistration states	37.10	37.63	36, 57	102.64	123.52	83.72	79.66	97.57	59.85	52,06	62.41	40.31	41.59	46.39	36.76
Cities of 100,000 population and upward.	28, 68	28. 85	28, 51	91,77	111.28	74.39	69.77	85.46	52.94	45.68	55, 63	34.74	34.61	38.80	30.53
Metropolitan district	15.40	15.14	15.65	50.17	63.91	38.24	38. 58	44.73	32.31	29.02	35.57	22.11	25.44	27.74	23. 22

It will be seen from this table that the death rate from typhoid fever was highest among persons from 15 to 25 years of age (78.69), and that in this age group it was higher among males (94.26) than among females (64.39). In the registration states it was higher in the cities (66.64) than it was in the rural districts (54.44).

The combined relations of age and race to the death rates from typhoid fever are indicated in the following table showing the number of deaths in each of five age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey, for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	under 1	5 YEARS.	15 TO 25	YEARS.	25 то 35	YEARS.	35 TO 45	YEARS.	45 YEAT OVI	
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	257	19.06	564	59.41	387	45. 14	191	32.50	212	26. 22
Colored	32	66, 54	52	127.86	30	84. 52	9	33, 31	17	59.86
Birthplaces of mothers (white):										
United States	134	20.44	193	58.90	97	38. 77	51	27.00	64	21.82
England and Wales	13	25.12	22	55. 83	24	56.02	15	44.90	12	25. 59
Ireland	34	15. 69	142	57.94	106	46.62	55	37.15	54	26. 67
Scotland	4	24.85	7	58. 38	6	40.78	2	18. 23	4	27.84
Germany	46	19.07	107	50.80	72	35. 24	42	31, 45	50	27. 62
Canada			10	61.46	14	93. 22	2	23.59	3	37.80
Scandinavia	2	13.94	14	130.00	9	62.83	4	52. 21	2	35, 10
Italy	5	15. 70	13	84.82	6	28. 74				

This table indicates that in the age group 15 to 25 years the death rate from typhoid fever was more than twice as high among the colored (127.86) as it was among the whites (59.41); and that among the whites it was highest among the children of mothers born in Scandinavia (130.00) and in Italy (84.82), and lowest among the children of mothers born in Germany (50.80) and in England and Wales (55.83).

In the age group from 25 to 35 years it was higher among the colored (84.52) than it was among the whites (45.14). Among the whites it was highest among the children of mothers born in Canada (93.22) and in Scandinavia (62.83), and lowest among the children of mothers born in Italy (28.74) and in Germany (35.24).

In the age group from 35 to 45 years it was but little higher among the colored (33.31) than among the whites (32.50). Among the whites it was highest among the children of mothers born in Scandinavia (52.21) and in England and Wales (44.90), and, excluding Italy, in which there was only 1 death from this disease in this age group, it was lowest among the children of mothers born in Scotland (18.23) and in Canada (23.59).

In the age group 45 years of age and over the death rate from this disease was more than twice as high among the colored (59.86) as among the whites (26.22), and among the whites it was higher among the children of mothers born in Germany (27.62) and in Ireland (26.67) than it was among the children of mothers born in the United States (21.82).

For further details with regard to death rates from typhoid fever in large cities see Part II of this report, page 78.

Out of 100,000 deaths from all causes in the United States during the census year 3,090 are reported as due to typhoid fever, the corresponding figures in 1880 having been 3,019, and in 1870, 4,507; in England and Wales the corresponding proportion for 1890 was 915.3, and in 1880, 1,272.

In each 1,000 deaths from known causes of persons between 15 and 45 years of age the number of deaths in the United States during the census year was, for whites, 80.46; for colored, 52.36; for Chinese, 23.02; and for Indians, 17.85. In the registration area the corresponding figure was 65.00.

The following table shows, for the United States, and for the registration area and some of its subdivisions, the proportion of deaths from typhoid fever during the census year, per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					COLORED.

This table indicates that the proportion of deaths from typhoid-fever was greater in the United States as a whole (33.52) than it was in the registration area (23.85), and that in the registration states it was greater in the rural districts (20.84) than it was in the cities (17.70).

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths from typhoid fever among the whites during the census year, per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Treland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign countries.

This table indicates that in the United States as a whole, as well as in the registration area, the greatest proportion of deaths from typhoid fever among the whites occurred in children of mothers born in Scandinavia (50.32), and that it was greater in children of mothers born in Germany (28.61) than in children of mothers born in Ireland (20.18), while the true death rate, as shown in a preceding table, was greater in the children of mothers born in Ireland than in those of mothers born in Germany.

MOR—PT I——18

The following table shows the proportion of deaths from typhoid fever at certain ages and groups of ages per 1,000 deaths at all ages from this disease in 1880 and in 1890, with distinction of sex:

	18	80	18	390		18	380	18	890

It will be seen from the preceding table and diagram that the greatest proportion of deaths from typhoid fever occurred in males between the ages of 20 and 25, and in females between the ages of 15 and 20. Fifty-four and twenty-seven hundredths per cent of all the deaths in males and 49.36 per cent of females in 1890 were of persons from 15 to 35 years of age. In each of the five first years of life the proportion of deaths from this cause was nearly the same. Above the age of 45 it rapidly diminished.

The average age of those dying from typhoid fever in the United States in 1890 was 27.31 years. In the registration states it was 29.06 years. In 1880, in the United States, it was 27 years.

The geographical distribution of deaths from typhoid fever in the several grand groups is shown by map No. 12.

It will be seen from this table and map that in the rural districts the proportion of deaths caused by typhoid fever was greatest in the Southern Central Appalachian region, the Western plains, the Central region of plains and prairies, and the Pacific Coast region, and was least in the North Atlantic Coast region, in the North Mississippi River belt, and in the region of the Great Northern Lakes.

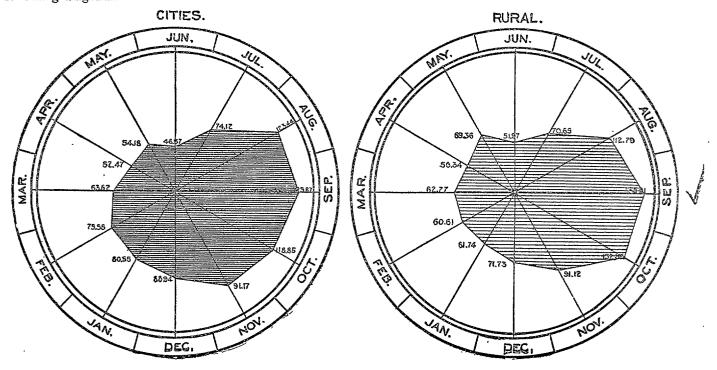

Taking rural districts and cities and both sexes together for the whites, the proportion of deaths from typhoid fever per 1,000 deaths from known causes was greatest in the region of the Western plains (58.60), in the Southern Central Appalachian region (57.19), and the Southern Interior plateau (54.80), and was least in the Middle Atlantic Coast region (15.96), the North Atlantic Coast region (19.27), and the Gulf Coast region (24.88). Among the colored it was greatest in the Southern Central Appalachian region (48.48), the Southern Interior plateau (41.69), the Central region of plains and prairies (37.16), and was least in the region of the Great Lakes (14.67), in the Heavily timbered region of the Northwest (13.37), and in the Pacific Coast region (11.10).

The geographical distribution of deaths from typhoid fever by state groups, per 1,000 deaths from known causes in each group, is shown in map No. 13.

The following table shows, for the United States, the number of deaths from typhoid fever in each month during the census year, and the proportion in each month per 1,000 deaths from this cause, with distinction of cities and of rural districts:

		DEATHS.			ión in eac 00 total i

The relative proportion of deaths from typhoid fever in each month in the cities and in the rural districts, and the variation in the proportion of deaths in the two areas, as indicated in the table above, are shown in the following diagram:

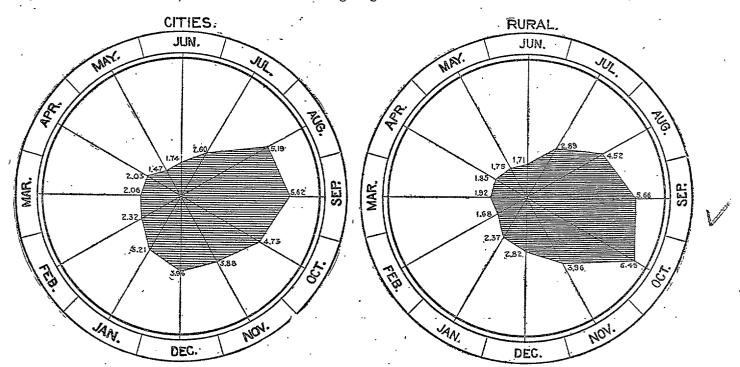

It will be seen from the preceding table and diagram that the greatest proportion of deaths from typhoid fever occurred in the months of August, September, and October.

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from typhoid fever in each month during the census year and the death rates per 100,000 of population, with distinction of cities and of rural districts:

		DEATHS.			RATE.	
montes.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
June	181	109	72	1.73	1.74	1.71
July	285	163	122	2.72	2.60	2.89
August	516	325	191	4.92	5.19	4.52
September	591	352	239	5,64	5.62	5.66
October	570	296	274	5.44	4.73	6.49

March	210	129	81	2.00	2,06	1.92
April	205	127	78	1.96	2.03	1.85
May	166	92	7,4	1.58	1.47	1. 75

The death rates in each month, as given in the table above, and the relative magnitude of the rates in the cities and the rural districts, are shown in the following diagram:

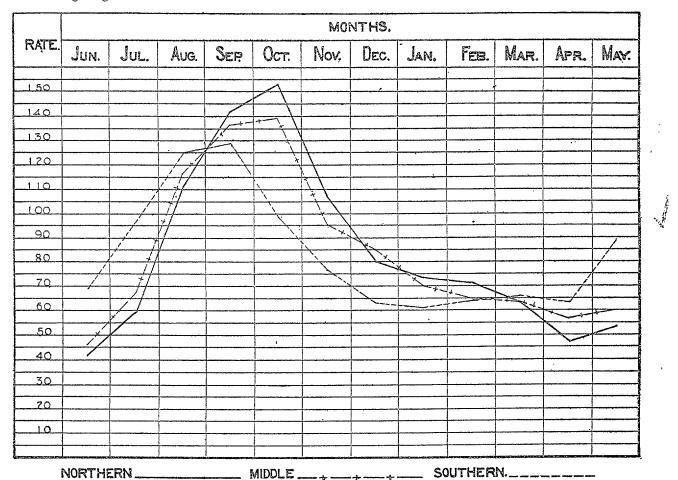

It will be seen from the preceding table and diagram that the highest death rate from typhoid fever occurred in the cities in September and in the rural districts in October; and that it was higher in the rural districts than in the cities in the months of May, July, September, October, and November.

The following table shows, for three divisions of grand groups, namely, Northern, Middle, and Southern, the number of deaths from typhoid fever in each month during the census year, and the proportion in each month per 1,000 deaths from this disease of which the month is known:

MONTHS.	NORTHER! GRAND 1, 5, 7, 13, 1	GROUPS	MIDDLE GRAND 2, 6, 8, 10, 20, AN	GROUPS 15, 16, 18,	SOUTHERI GRAND 3, 4, 9, 11, 1	GROUPS

Мау	300	52.94	831	60. 01	630	88.84

The relative proportion of deaths in each month in the several divisions, as given in the table above, is shown in the following diagram:

It will be seen from the preceding table and diagram that in the Northern and Middle regions the greatest proportion of deaths from typhoid fever occurred in September and October, in which months from 18 to 20 per cent of all the deaths during the year occurred in the Lake region, the Heavily timbered region of the Northwest, the Prairie region, and the Western plains, while the least proportion of deaths in these regions occurred in the month of April, the average being a little over 5 per cent.

In the Southern regions there was less variation in the proportion of deaths from this disease in the different months of the year, the greatest proportion occurring in the months of August and September, averaging about 13 per cent of the total number of deaths from this disease, and the least proportion in the month of January, averaging about 6 per cent.

The following table shows, for the registration area and some of its subdivisions, the death rate from typhoid ever per 100,000 males engaged in each specified occupation and class of occupations:

It will be seen from this table that the average death rate from typhoid fever per 100,000 males in all occupations in the registration area was 44.30, being highest in the registration cities in the nonregistration states (50.29). In the registration states the average rate from this cause was 40.33, being 46.78 in the cities and 31.22 in the rural districts.

Taking the registration states, for which the rates are most accurate, and considering only those occupations in which the number of deaths from typhoid fever was great enough to afford reliable results, it appears that the highest death rates of males from this cause occurred among laborers (85.20); mill and factory operatives (55.55); carpenters and joiners (50.82); draymen, hackmen, teamsters, etc. (51.54); and machinists (48.81). The death rate of accountants, bookkeepers, clerks, and copyists (42.24) was slightly above the average rate from this cause, and those of merchants and dealers (34.73) and farmers and farm laborers (21.07) were considerably below the average rate, that of farmers and farm laborers being but little more than one-half the average.

The following table shows, for the registration area and some of its subdivisions, the death rate from typhoid fever per 100,000 females engaged in each specified occupation:

	Regis-	REGIST	TRATION S	TATES.	Regis- tration
OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.
All occupations	31. 42	35, 69	37.59	31.08	25. 26
Teachers	28.33	24. 20	27. 37	20.97	36. 17
Laundresses	9.18	11.17	12.98		8.04
Nurses	64, 26	42.23	41.04	45.54	96. 19
Servants	42.12	48.89	54.71	37.00	32.62
Mill and factory operatives	36.48	41.56	44.96	33. 89	16.40
Milliners, dressmakers, etc	18.63	19.38	17.91	24.22	17.70

It will be seen from this table that the average death rate from typhoid fever of females engaged in all selected occupations in the registration area was 31.42 per 100,000, which was less than the corresponding rate for the males (44.30). The average death rate of females from this cause was highest in the cities of the registration states (37.59), and lowest in the registration cities in the nonregistration states (25.26).

In the registration states the average death rate of females in the selected occupations from typhoid fever was 35.69 per 100,000, being highest among servants (48.89), which was also higher than the rate for male servants in this area (28.64). The death rate from this cause among mill and factory operatives (41.56) was above the average rate for females, and was less than the corresponding rate for males (55.55). The death rate of milliners, dressmakers, seamstresses, etc., from this cause (19.38) was low.

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to typhoid fever per 1,000 deaths from all causes, among males engaged in each specified occupation and class of occupations:

The accuracy of the proportion of death rates due to any specified cause in comparison with other causes in a given area is not so dependent upon completeness in the return of deaths as the death rate per 100,000 of population, and the relative frequency of fatal cases of typhoid fever among males in the occupations and classes of occupations stated above for the United States as a whole is probably fairly indicated.

The failure to return the occupation of decedents in so many cases in the nonregistration area causes all the proportions to be higher than they should be, as will be seen by comparison of the proportions of deaths due to typhoid fever per 1,000 deaths from all causes in the different areas, as follows: United States, 47.75; nonregistration area, 54.87; registration area, 36.08; registration states, 29.15; cities in registration states, 29.81; rural part of registration states, 27.84; and registration cities in other states, 50.61. The proportion of deaths in the total registration area (36.08) is raised by the deficiency in the return of occupations in the registration cities in nonregistration states (50.61).

In the registration states the principal occupations in which the proportions of deaths of males due to typhoid fever exceeded the average (29.15) were mill and factory operatives (textile, 68.52), machinists (42.91), draymen, hackmen, teamsters, etc. (42.52), carpenters and joiners (36.88), and accountants, bookkeepers, clerks, and copyists (37.88). The proportion was below the average among farmers and farm laborers (17.66), and merchants and dealers (23.69).

The following table shows for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to typhoid fever per 1,000 deaths from all causes among females engaged in each specified occupation:

	United	Regis-	REGIS:	TRATION S	CATES.	Regis- tration	Remain- der
OCCUPATIONS.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
All occupations	51.48	37.35	33. 79	37. 54	26. 36	46.91	58.07
Teachers	72. 89	65. 62	55. 78	56.34	55.05	84, 62	75. 85
Laundresses	32.18	16.10	16.67	17.94		15. 67	44. 24
Nurses	44. 57	55. 73	37.84	39.68	33.90	79.71	35.44
Servants	48.50	29.83	26. 89	31.86	18.28	38.72	:57, 36
Mill and factory operatives	87. 89	78.11	78.54	79.65	75.88	74.07	134.08
Milliners, dressmakers, etc	69, 43	52.48	43. 91	42, 47	47.87	71.21	83. 27

It will be seen from this table that the average proportion of deaths due to typhoid fever per 1,000 deaths from all causes among females in the selected occupations in the United States was 51.48. The proportion of deaths due to this cause was greater in the nonregistration area (58.07) than in the registration cities of the nonregistration states (46.91) or in the cities in the registration states (37.54).

In the nonregistration area the greatest proportion of deaths of females due to typhoid fever occurred among mill and factory operatives (134.08), and milliners, dressmakers, seamstresses, etc. (83.27).

DIARRHEAL DISEASES.

Under the term "Diarrheal diseases" are included all cases of death reported as due to diarrhea, dysentery, cholera infantum, cholera morbus, and enteritis.

The total number of deaths reported as due to these diseases in the United States during the census year was 74,711, of which 39,573 were of males and 35,138 of females. In the registration area the number of deaths reported as due to these diseases was, males, 18,731; females, 17,385; total, 36,116; giving a death rate of 183.71 per 100,000 of population.

In 1890 the death rate in England and Wales from these causes was 62 per 100,000 of population.

During the 10 years 1880 to 1889 the death rates from diarrheal diseases per 100,000 population were, in England and Wales, 76.1; in Ireland, 32.9; in Scotland, 49.3; in Sweden, 43.3; in Prussia, 103.8; in Massachusetts, 142.3; in Connecticut, 135; in Rhode Island, 154.6; and in New Jersey, 212.8.

The following table shows, for the registration area and some of its subdivisions, the death rates from diarrheal diseases during the census year, per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					COLORED.	D.	
areas.	Aggre-				ı	Vative born						
	gate.	Total.	Males.	Females.	Total.	Both purents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.	
Registration area	183.71	180.13	187. 15	173.14	219. 39	145.94	313.63	72.10	253.84	269. 65	238. 52	
Cities	206. 43	202.60	211.05	194. 24	258.76	181.80	850. 73	73, 38	.268, 34	286, 90	250, 53	
States	178.73	177.64	184.56	170.88	213.53	144.41	327. 35	73.92	235. 28	234. 39	216.66	
Cities	222. 82	221.28	231.85	211.20	290.51	194.90	385.62	76.80	279.53	299. 84	261.36	
Rural	LI1. 40	111.60	115.23	107.91	120.23	105.83	109.82	64.87	99.82	96.38	103.52	
Cities in nonregistration states	191.31	184. 19	191. 28	176.93	229.30	153. 53	270.34	69.39	265. 22	283.46	247.38	
Cities of 100,000 population and upward	215. 25	213.73			283.85	227.40	365.74	71.43	245.18			
Metropolitan district, 6 years	278.33	279.11	292.45	266.07	394. 57	326.78	438.67	85.44	234. 20	255.34	213.87	

It will be seen from the preceding table that the death rate from diarrheal diseases was much higher among the colored (253.84) than among the whites (180.13); that it was higher among males (white, 187.15; colored, 269.65) than among females (white, 173.14; colored, 238.52), and that in the registration states it was about twice as high in the cities (222.82) as it was in the rural districts (111.40). It was highest of all in the metropolitan district for the 6-year period (278.33). Among the whites it was much higher among the native born (219.39) than among the foreign born (72.10), owing mainly to the much greater proportion of young children in the former group. Among the native born whites it was more than twice as high among those having one or both parents foreign born (313.63) as it was among those both of whose parents were native born (145.94).

The following table shows, for each of the registration states, and for their sum, the death rates from diarrheal diseases during the census year, per 100,000 of population, with distinction of sex and of cities and rural districts:

	1	GGREGATE			MALES.		FENALES				
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	.Cities.	Rural.		
Total	178.73	222./82	111.40	185.68	233. 59	114.90	171. 94	212.'57	107.84		
Connecticut	153.83	181. 74	13397	173.73	207. 51	150.05	134.32	156.91	117.99		
Delaware	168.55	169.30	168.13	165.94	162.26	168.01	171.25	176.37	168.25		
District of Columbia	256:95	256. 95		268.29	268.29		246.67	246.67			
Massachusetts	166.64	186.73	100.93	169.62	191.78	98.78	163.82	182.00	103.03

New Jersey	174.54	216.90	119.15	175.36	225. 29	111.23	173, 73	208.67	127.19		
New York	189.18	244.34	100.03	197. 25	256. 34	.10493	181.23	232.82	94.99		
Rhode Island	206, 65	212.43	198.71	216.04	216.95	214.83	197.77	20827	182.83		
Vermont	99.57	169.64	.93. 05	109, 26	162.40	104.63	89. 52	176.28	.80.89		

It will be seen from this table that the death rate from diarrheal diseases during the census year was highest in the District of Columbia (256.95) and in Rhode Island (206.65), and was lowest in Vermont (99.57). In the rural districts it was highest in Rhode Island (198.71) and in Delaware (168.13), and lowest in Vermont (93.05) and in New York (100.03). It was about twice as high in the cities (222.82) as it was in the rural districts (111.40). It was higher among males (185.68) than among females (171.94) for the aggregate, but was higher among females than among males in Delaware, the excess occurring entirely in the city of Wilmington. It was much higher among the colored (225.28) than among the whites (177.64) in the aggregate, but this was largely due to the excessive death rate among the colored from this cause in the District of Columbia (360.65). In the rural districts it was higher among the whites (111.60) than among the colored (99.82).

Of 25,423 deaths from diarrheal diseases of whites in the registration area during the census year 9,285 were children of mothers born in the United States, 3,716 children of mothers born in Ireland, 3,693 children of mothers born in Germany, 1,649 children of mothers born in Canada, 919 children of mothers born in England and Wales, 507 children of mothers born in Scandinavia, 451 children of mothers born in Italy, 214 children of mothers born in Scotland, 151 children of mothers born in Bohemia, 114 children of mothers born in Hungary, and 92 children of mothers born in France.

The following table shows, for the registration area and some of its subdivisions, the death rates from diarrheal diseases among the whites during the census year, per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.
Registration area	,133.88 -	.131.59	139. 71	104.99	112.22	173.76	245.10	207.97	356. 19	370.93	322. 02	270.81

It will be seen from the preceding table that the death rate from diarrheal diseases among the whites in the registration area was highest among those whose mothers were born in Bohemia (370.93), in Hungary (356.19), and in Italy (322.02), and was lowest among the children of mothers born in Scotland (104.99), in France (112.22), and in England and Wales (131.59). The death rate from these diseases was comparatively low in the children of mothers born in the United States (133.88) and in Ireland (139.71), and was a little below the average (180.13)

for the children of mothers born in Germany (173.76). The highest death rate of all from these diseases was in the children of mothers born in Bohemia in the cities of the registration states (531.69), and the lowest in the children of mothers born in Scotland in the rural districts of the registration states (70.29).

The following table shows, for the registration area and some of its subdivisions, the death rates from diarrheal diseases during the census year in each of six age groups, per 100,000 population of corresponding ages, with distinction of sex:

AREAS.	Under 1 year.	Under 5 years.	5 to 15 years.	15 to 45 years.	45 to 65 years.	65 years and over
Registration area	5, 279. 91	i, 428. 42	20. 13	20.88	70.77	294. 29

Males	7, 679. 24	2, 062. 05	20.47	22. 23	73.44	347.64
Females	7, 163.77	1, 909. 58	19.62	21.23	102. 27	459.86

It will be seen from this table that the greatest mortality from diarrheal diseases occurred in infants under 1 year of age, or a little over 5 per cent of the living; that in this age group it was higher among males (5,560.70) than among females (4,991.49), and more than twice as high in the cities of the registration states (6,866.18) as in the rural districts of the same states (3,210.26). Substantially the same differences in the death rates existed among children under 5 years of age. In persons from 15 to 45 years of age the death rate from these diseases was a little higher among females (22.03) than among males (19.71), and the same was the case in those 45 years of age and over. The death rate from these diseases in those 65 years of age and over (294.29) was over four times as high as that in those from 45 to 65 years of age.

The combined relations of age and race to the death rates from diarrheal diseases are indicated in the following table showing the number of deaths in each of six age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey, for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	UNDE	R 1 YEAR.	UNDER 5 YEARS.		5 TO 15 YEARS.		15 TO 45 YEARS.		45 TO 65 YEARS.		65 YEARS AND OVER.

Italy	258	6, 980. 52	857	2, 374, 46	5	29. 74	9	17.97	8	36. 10 [']		

It will be seen from the preceding table that the death rate from diarrheal diseases for children under 5 years of age was much higher among the colored (2,799.57) than among the whites (1,782.64), and that among the whites it was highest among the children of mothers born in Bohemia (3,656.68), in Scandinavia (2,666.47), and in Hungary (2,430.02), and was lowest among the children of mothers born in the United States (1,386.16), in England and Wales (1,417.94), and in Scotland (1,526.86). The death rate from these diseases was about the average in children of mothers born in Italy (2,374.46), and in Germany (2,151.48). In persons from 45 to 65 years of age it was highest in the children of mothers born in Ireland (149.84) and in England and Wales (71.74), and lowest in the children of mothers born in Italy (36.10) and in the United States (39.67). In persons 65 years of age and over the death rate from these diseases was higher among the colored (425.78) than among the whites (373.34). Among the whites it was highest among the children of mothers born in Ireland (644.60) and in England and Wales (410.41), and lowest among the children of mothers born in the United States (253.71) and in Germany (273.28).

For further details with regard to death rates from diarrheal diseases in large cities see Part II of this report, page 94.

Out of each 100,000 deaths in the United States from all causes during the census year 9,256 were reported as due to diarrheal diseases, which is somewhat less than the corresponding proportion for 1880 (8,454), and greater than that for 1870 (10,296). In each 1,000 of all deaths from known causes in children under 5 years of age, these diseases caused in the United States as a whole, for the whites, 197.41; for the colored, 148.79; for the Chinese, 246.46; and for the Indians, 111.42. In the registration area the corresponding figure was 184.93.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to diarrheal diseases during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, nativity, and parental nativity:

				•	WHITE.				COLORED.		
AREAS.	Aggre- gate.					Native bor	n.	-		_	
	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.

Cities of 100,000 population and upward	100.02	101.50			131.77	104.72	152.89	35.58	79.90		
Metropolitan district, 6 years	111.63	112.11	109. 63	114.9I	147.03	119.97	165.07	39.48	86. 81	87.52	86.00

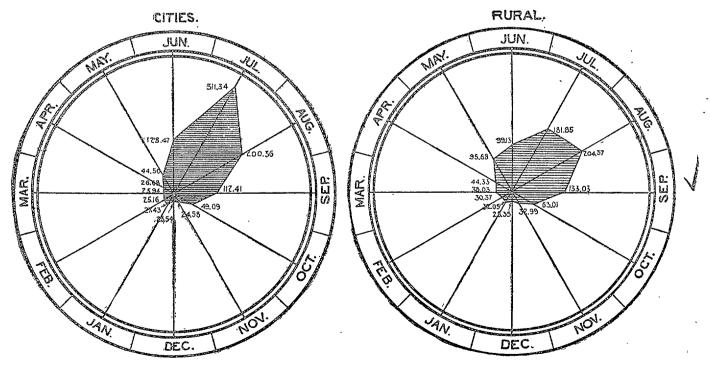

It will be seen from the preceding table that the proportion of deaths due to diarrheal diseases per 1,000 deaths from known causes during the census year was slightly less in the United States as a whole (92.56) than it was in the registration area (94.70). The great difference in the proportion of deaths due to these diseases among the native born and the foreign born is mainly due to the much greater proportion of infants among the native born.

The following table shows, for the United States, the number of deaths from diarrheal diseases in each month during the census year, and the proportion due to these diseases in each month per 1,000 deaths from these diseases, with distinction of cities and of rural districts:

		deatus.			ON IN EAC 00 TOTAL I

The relative proportion of deaths due to diarrheal diseases in each month in the cities and in the rural districts, as indicated in the table above, and the difference in the proportion of deaths in the two areas, are shown in the following diagram:

It will be seen from the preceding table and diagram that the greatest proportion of deaths due to diarrheal diseases in the United States as a whole occurred in the month of July, and the smallest proportion in the month of December. In the rural districts, however, the greatest proportion occurred in the month of August.

The following table shows, for the United States, and for the registration area and some of its subdivisions, the proportion of deaths due to diarrheal diseases among the whites during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

- AREAS.	United States.	England and Wales.	Treland.	Scotland.	France.	Ger- many,	Canada.	Scandi- navia.	Hun- gary,	Bohemia.	Italy.	Other foreign countries.

It will be seen from the preceding table and diagrams that in each census and in both sexes more than half of the deaths from diarrheal diseases occurred in children under 5 years of age, but that the proportion in this age group was much greater in 1880 (males, 754.27; females, 746.25) than it was in 1890 (males, 612.86; females, 578.90).

The average age at death of those dying from diarrheal diseases in the United States in 1890 was 19.36 years. Excluding cholera infantum it was 45.48 years. In the registration states it was, for diarrheal diseases, total, 11.47 years; and excluding cholera infantum, 20.76 years.

WERNER - AKRON,

The following table shows, for each grand group, the proportion of deaths due to diarrheal diseases during the , census year per 1,000 deaths from known causes, with distinction of sex and color, of rural and cities, and of children of mothers born in Ireland and in Germany:

	Total.	RU	raț.	СІТ	TES.	White.	Colored.	MOTHERS	boen in—

The geographical distribution of deaths in the several grand groups from diarrheal diseases is shown in map No. 14.

It will be seen from the preceding table and the accompanying map that the proportion of deaths due to diarrheal diseases in the rural districts was greatest in the South Atlantic Coast region and the Southern Central Appalachian region, and was least on the Pacific Coast and in the Cordilleran region.

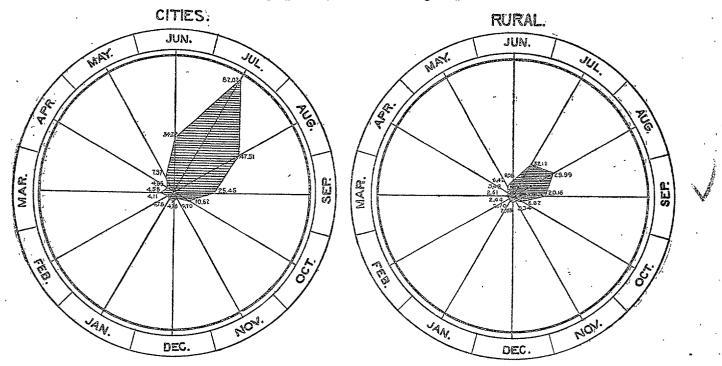

The geographical distribution of deaths from diarrheal diseases, by state groups, per 1,000 deaths from known causes in each group, is shown in map No. 15.

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from diarrheal diseases in each month during the census year, and the death rates per 100,000 of population, with distinction of cities and of rural districts:

		DEATHS.	-		RATE.

мов__рт r____19

The death rates in each month, as given in the preceding table, and the relative magnitude of the rates in the cities and the rural districts, are shown graphically in the following diagram:

The following table shows, for three divisions of grand groups, namely, Northern, Middle, and Southern, the number of deaths from diarrheal diseases under 5 years of age in each month during the census year, and the proportion in each month per 1,000 deaths under 5 years from these diseases of which the month is known.

It will be seen from the preceding table and diagram that in the Northern and Middle regions the greatest proportion of deaths due to diarrheal diseases in children under 5 years of age occurred in the months of July and August, and the least in December; that the difference in the proportion of deaths occurring in the summer and winter was much greater in the Northern and Middle regions than in the Southern; and that the proportion of deaths due to these causes in May and June was much greater in the Southern belt than in the more Northern groups. The greatest variation is seen in the North Atlantic grand groups of the Northern division, in which 34.2 per cent of all the deaths from these causes occurred in the month of July and 1.1 per cent in February, while in Grand Group 4 of the Southern division, comprising the Gulf coast, the range was from 14.9 in June to 5.1 per cent in March.

MALARIAL FEVER.

Under the term "malarial fever" are included those deaths reported as due to intermittent, remittent, congestive, and bilious fevers. A certain number of these were no doubt due to enteric or typhoid fever, but it is impossible to determine the proportion. Cases of death reported as due to typhomalarial fever are included under enteric fever.

The total number of deaths reported as due to malarial fever in the United States during the census year was 18,594, of which 9,631 were of males and 8,963 were of females. In the registration area the number of deaths reported as due to this disease was, males, 1,913; females, 1,860; total, 3,773; giving a death rate of 19.19 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from malarial fever during the census year per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

,		,			· WHITE.					COLORED.	
AREAS.	Aggre- gate.]	Native borr	ı .				
:	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born	Total.	Males.	Females.
Registration area	19, 19	16, 49	16.82	16. 16	15.96	14.30	13.74	17. 97	72. 05	73.00	71.12
Cities States. Cities Rural Cities in nonregistration states Cities of 100,000 population and upward Metropolitan district, 6 years	21. 41 14. 75 16. 46 12. 12 25. 98 18. 80 27. 49	18. 00 14. 16 15. 65 11. 91 20. 31 16. 84 27. 39	18. 46 14. 05 15. 53 11. 90 · 21. 25	17. 54 14. 27 15. 77 11. 92 19. 34	17. 64 13. 60 15. 15 11. 72 19. 95 16. 50 28. 27	16. 52 13. 28 15. 20 11. 81 19. 36 15. 16 32. 02	14. 34 14. 12 15. 13 11. 40 12. 53 13. 89 25. 83	13. 82 .15. 78 16. 69 12. 92 21. 23 17. 53 25. 91	76. 54 39. 69 46. 33 24. 35 84. 94 57. 45 32. 96	77. 93 88. 56 45. 70 23. 51 86. 49	75. 20 40. 76 46. 88 25. 25 83. 43

It will be seen from this table that the death rate from this disease was more than four times as high among the colored (72.05) as it was among the whites (16.49); that it was nearly the same among males (whites, 16.82; colored, 73.00) as it was among females (white, 16.16; colored, 71.12); and that among the whites it was higher among the foreign born (17.97) than it was among the natives (15.96). In the registration states it was higher in the cities (16.46) than it was in the rural districts (12.12), and was highest of all in the metropolitan district for the 6-year period (27.49).

The following table shows, for each of the registration states and for their sum, the death rates from malarial fever during the census year per 100,000 of population, with distinction of sex, and of cities and rural districts:

		AGGREGATE			MALES.			FEMALES.	
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	14. 75	16.46	12. 12	14. 61	16.30	12.11	14. 88	16.62	12. 14
Connecticut	25. 59	32. 22	20.88	23. 81	33.49	17. 03	27.34	31.00	24.70
Delaware	16.62	17.91	15, 88	17.53	16. 23	18. 26	15.68	19.60	13.38
District of Columbia	42.54	42.54		38. 33	38. 33		46.35	46. 35	
Massachusetts	5. 14	4.67	6.68	5.88	5. 31	7.72	4, 43	4.06	5.66
New Hampshire	5. 31	8.14	4.13	8.04	11.51	6.69	2.63	5.14	1.52
New Jersey	18.96	21.74	15, 33	19.98	21.47	18.06	17.95	2 2. 00	12.56
New York	15.89	17.87	12. 69	15. 59	17. 68	12. 31	16. 19	18.04	13.09
Rhode Island	17.08	21.99	10.31	11.90	15, 65	6.93	21.97	27.83	13.64
Vermont	4. 21		4.60	3. 54		3.85	4.91		5. 39

It will be seen from this table that in the rural districts the death rate from malarial fever was lowest in New Hampshire (4.13) and in Vermont (4.60), and was highest in Connecticut (20.88). In the cities it was highest in the District of Columbia (42.54) and in Connecticut (32.22), and lowest in Massachusetts (4.67) and in New Hampshire (8.14). In the states of Massachusetts, New Hampshire, and Vermont it is probable that most of the cases of death reported as due to malarial fever were really due to typhoid fever, or else that the disease had been contracted elsewhere.

The following table shows, for the registration area and some of its subdivisions, the death rates from malarial fever among the whites during the census year, per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign countries.

Cities of 100,000 population and upward	13.99	13.76	. 20,28	16.60	6.72	10.33	12.96	8.89	8.18	19.07	. 13. 95	10.37

Of 2,116 deaths from malarial fever in whites in the registration area during the census year, 770 were children of mothers born in the United States, 464 children of mothers born in Ireland, 243 children of mothers born in Germany, 87 children of mothers born in England and Wales, 54 children of mothers born in Canada, 35 children of mothers born in Scotland, 22 children of mothers born in Italy, 8 children of mothers born in Bohemia, 6 children of mothers born in France, and 3 children of mothers born in Hungary. Omitting the death rates from this cause for the children of mothers born in Hungary, Bohemia, and France, in whom the number of deaths was too small to afford reliable ratios, it will be seen from the above table that the highest death rate from malarial fever occurred in the children of mothers born in Ireland (17.44), and in Italy (15.71), and the lowest in the children of mothers born in the United States (11.10), and in Canada (8.03).

The following table shows, for the registration area and some of its subdivisions, the death rates from malarial fever during the census year in each of six age groups per 100,000 population of corresponding ages, with distinction of sex:

AREAS.	Under 5 years.	Under 15 years.	15 to 25 years.	25 to 35 years.	35 to 45 years.	45 years and over
Registration area	35. 33	20.30	15. 25	13.91	15.71	28.81
Males	35. 87	20. 24	15.99	14.65	16.55	28. 92

Cities of 100,000 population and upward	33.60	20.14	14. 39	13.45	16.54	32.38
Males	37.59	21.57	15.07	12.94	15.32	31.69
Females	29.53	18.71	13.79	13.99	17.87	33.05
Metropolitan district	37.40	21.27	12.54	1 6.15	14.98	36.71
Males		22, 61	14. 27	16.46	12.31	34.40
Females	35. 89	19.92	11.04	15.84	17. 79	38.94

It will be seen from this table that the highest death rate from malarial fever occurred in children under **b** years of age; that in this age group it was a trifle higher among males (35.87) than among females (34.79); and in the registration states it was higher in the cities (26.94) than it was in the rural districts (19.94), in which last it was higher for females (21.89) than for males (18.04). It was highest of all in the cities of the nonregistration states (50.35).

In the age group 45 years of age and over the death rate from this disease was about the same in males (28.92) as it was in females (28.71). In the registration states it was higher in the cities (29.09) than it was in the rural districts (18.86).

The combined relations of age and race to the death rates from malarial fever are indicated in the following table showing the number of deaths in each of six age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey, for the census year:

COLOR AND BIETHPLACES OF MOTHERS.	UNDER	5 YEARS.	UNDER 1	5 YEARS.	15 TO 25	YEARS.	25 то 35	YEARS.	35 TO 45	YEARS.	45 YEA.	
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White Colored	144	29. 69	235	17. 43	101	10. 64	116	13. 53	80	13.61	240	29, 68
	24	153. 05	36	74. 86	19	46. 72	11	30. 99	6	22.21	16	56, 84
Birthplaces of mothers (white): United States Ireland Germany	68	27. 53	110	16. 78	37	11. 29	37	14.79	25	13. 23	66	22, 50
	24	36. 35	49	22. 61	35	14. 28	47	20.67	21	14. 19	88	43, 47
	26	32. 41	36	14. 92	13	6. 17	15	7.34	16	11. 98	39	21, 55

This table indicates that for children under 5 years of age the death rate per 100,000 due to malarial fever was about five times as high among the colored (153.05) as it was among the whites (29.69), and that among the whites it was highest in the children of mothers born in Ireland (36.35), and lowest among the children of mothers born in the United States (27.53); that in all the age groups it was higher among the colored than among the whites, and among the whites it was higher among the children of mothers born in Ireland than in the children of mothers born in the United States or in Germany.

In the age group 45 years of age and over the death rate from this disease was, for the colored, 56.34; for the whites, 29.68; and among the whites, for the children of mothers born in Ireland, it was 43.47; for the children of mothers born in Germany, 21.55; and for the children of mothers born in the United States, 22.50.

For further details with regard to the rates from malarial fever in large cities, see Part II of this report page 85.

Out of 100,000 deaths from all causes in the United States during the census year, 2,123.76 were reported as due to malarial fever, the corresponding figures in 1880 having been 2,673, and in 1870, 2,374.

The number of deaths due to malarial fever in children under 15 years of age per 1,000 of all deaths from known causes occurring under 15 years of age in the United States was, for the whites, 16.72; for the colored, 58.28; and for the Indians, 15.69. In the registration area the corresponding proportion was 6.63 per 1,000.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to malarial fever during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					COLORED.		
	Aggre-				1	Native born	ı.

The preceding table indicates that the proportion of deaths due to malarial fever to deaths from known causes was much greater in the United States as a whole (23:04) than it was in the registration area (9:89), and that in both areas it was much greater among the colored than among the whites.

In the United States as a whole the proportion was greater among the native born whites (20.24) than it was among the foreign born whites (11.42), and was much greater among the native born whites having both parents native (25.38) than among those of whom one or both parents were foreign born (19.64).

The following table shows, for the United States and for the registration area and some of its subdivisions the proportion of deaths due to malarial fever among the whites during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

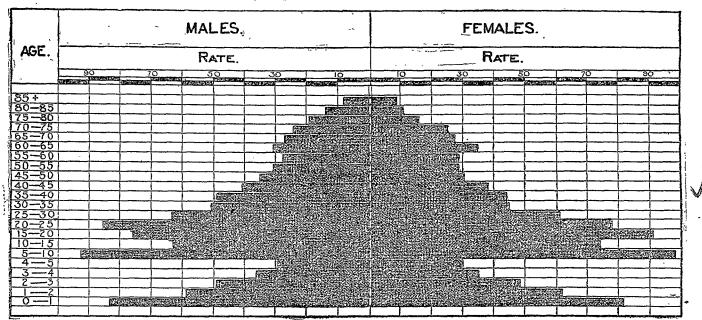

· · ARRAS. · ;	United States	England and Wales.	Freland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign countries.

This table indicates that in the United States, as a whole, the greatest proportion of deaths due to malarial fever to deaths from known causes among the whites occurred in the children of mothers born in the United States (23.02), and the least in the children of mothers born in Hungary (4.51).

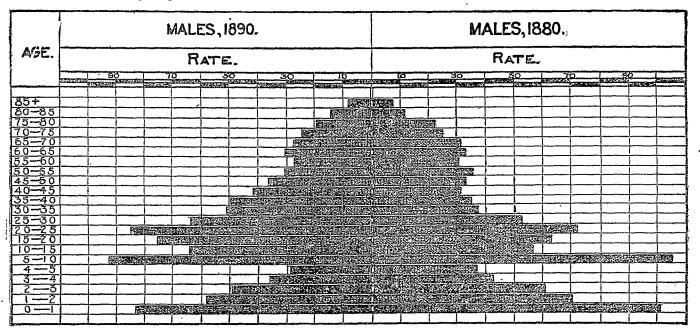

The following table shows the proportion of deaths due to malarial fever, at certain ages and groups of ages per 1,000 deaths at all ages from these causes, in 1880 and in 1890, with distinction of sex:

The comparative proportions of deaths of males and females in each age group from malarial fever during the census year are shown in the following diagram:

The comparative proportions of deaths of males in each age group from malarial fever in 1880 and in 1890 are shown in the following diagram:

It will be seen from the preceding table and diagrams that in 1890 a little over 25 per cent of all the deaths from malarial fever occurred in children under 5 years of age.

The average age at death of those dying from malarial fever in the United States in 1890 was 25.83 years. In the registration states it was 34.55. In 1880 in the United States it was 24 years.

The geographical distribution of deaths from malarial fever in the several grand groups is shown in map No. 16.

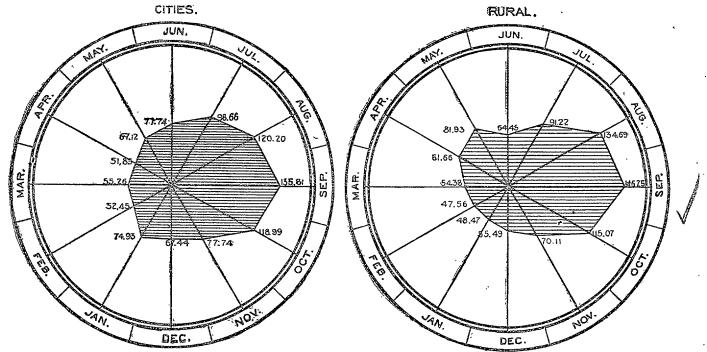

It will be seen from the preceding table and the accompanying map that the proportion of deaths due to malarial fever to deaths from known causes in the rural districts was greatest in the South Mississippi River belt, the Southwest Central region, and on the Gulf coast, and was least in the Northeastern hills and plateaus.

The geographical distribution of deaths from malarial fever by state groups, per 1,000 deaths from known causes in each group, is shown in map No. 17.

The following table shows, for the United States, the number of deaths from malarial fever in each month during the census year, and the proportion in each month per 1,000 deaths from this cause, with distinction of cities and of rural districts:

MONTHS. DEATHS. PROPORTION IN E. PEE 1,000 TOTAL United States. Cities. Rural. United States.	ACH MONTH DEATHS.

The relative proportion of deaths from malarial fever in each month in the cities and in the rural districts, as indicated in the table above, and the difference in the proportion of deaths in the two areas are shown by the following diagram:

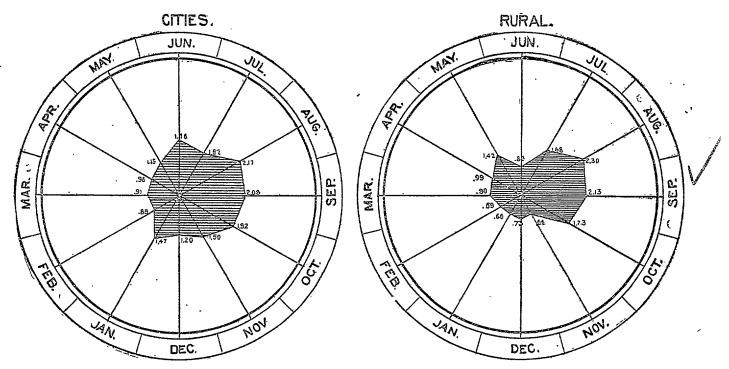

The preceding table and diagram indicate that the greatest proportion of deaths from this cause in the United States occurred in the months of August, September, and October; and the least proportion in January, February, and March.

The following table shows for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from malarial fever in each month during the census year, and the death rates per 100,000 of population, with distinction of cities and of rural districts:

Мау	132	72	60	1.26	1.15	1.42	

It will be seen from the preceding table that in the aggregate the highest death rates from malarial fever occurred in August and September and the lowest in February and March. All of the death rates were low, owing to the fact that the portion of the country to which they relate is that least affected by malarial fever.

The death rates in each month, as given in the table above, and the relative magnitude of the rates in the cities and the rural districts are shown in the following diagram:

The following table shows for three divisions of grand groups, namely, Northern, Middle, and Southern, the number of deaths from malarial fever in each month during the census year, and the proportion in each month per 1,000 deaths from this cause of which the month is known:

Montiis.	GRAND	region. Groups 17, and 19.	GRAND 2, 6, 8, 10,	REGION. GROUPS 15, 16, 18, ID 21.	GRAND	n region. Groups 12, and 14.

The preceding table and diagram indicate that in each division the greatest proportion of deaths in any single month from malarial fever occurred in the month of September, in which it ranged from 14 to 15 per cent, and the least in the month of February, in which it ranged from 4.4 to 5.2 per cent in the different grand groups.

Considering the supposed influence of high temperature on the development and production of the malarial poison, it is curious that the relative proportion of deaths from this disease in different months should be so nearly alike in the Northern, Middle, and Southern regions, as is indicated by the diagram.

ERYSIPELAS.

The total number of deaths reported as due to erysipelas in the United States during the census year was 2,663, of which 1,402 were of males and 1,261 were of females. In the registration area the number of deaths reported as due to this disease was, males, 558; females, 507; total, 1,065; giving a death rate of 5.42 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from erysipelas during the census year in each of five age groups per 100,000 population of corresponding ages, with distinction of sex:

	UND	er 5 ye <i>i</i>	es.	. 5 T	0 15 YE	ARS.	15 7	ro 45 ye.	ARS.	45 T	O 65 YE	ARS.	65 YEA	rs and	OVER.
Areaş.	Total.	Males.	Fe- males.	Total.	Males.	Fe- males.	Total.	Males.	Fe- males.	Total.	Males.	Fe- males.	Total.	Males.	Fe- males.
Registration area	18.47	17.10	19.86	0.46	0.64	0.27	2. 33	2.74	1.93	7.17	8. 64	5. 73	26, 97	27. 22	26.74
Cities	20.67	18.72	22.65	0.46	0.70	0.21	2.49	3.07	1.92	8.51	10.40	6.62	29. 97	32, 19	28.15
States	18.75	18.16	19.34	0.54	0.63	0.45	2.00	2.35	1.84	6.38	8.02	4.80	26.58	25.74	27.34
Cities	23.66	22.31	25.02	0.60	0.76	0.45	2.29	- 2.82	1.79	8.36	11.07	5.80	31.66	32, 93	30.64
Rural	10.32	11.10	9.52	0.45	0.44	0.46	1.74	1.55	1.95	3.93	4.32	3.54	22.87	21, 12	24.62
Cities in nonregistration states	18.08	15.63	20.58	0.33	0.66		2.68	3.28	2.05	8,66	9.74	7.53	28.02	31.35	25. 17
Cities of 100,000 population and upward.	24. 16	20.95	27.43	0.49	0.87	0.11	2.54	3.26	1.81	9. 21	11.63	6.76	81. 19	32.67	29. 97
Metropolitan district	36, 30	33.96	38.66	0.64	0.96	0.32	2.90	3.47	2, 35	9.27	10, 62	7.93	40.06	33.86	45. 23

It will be seen from this table that the death rate from this disease per 100,000 of population was highest in those under 5 years of age (18.47) and in those 65 years of age and over (26.97). In those under 5 years of age the death rate was slightly higher in females (19.86) than in males (17.10). In the registration states it was much higher in the cities (23.66) than in the rural districts (10.32), and it was highest of all in the metropolitan district (36.30). In persons from 15 to 45 years of age the death rate was higher among males (2.74) than in females (1.93), and the same was the case for those between 45 and 65 years of age (males, 8.64; females, 5.73). For those 65 years of age and over the death rate from this disease in the registration states was higher in the cities (31.66) than it was in the rural districts (22.87), but this difference is not proportionally so great as it is for those under 5 years of age.

The following table shows, for each of the registration states and for their sum, the death rates from erysipelas during the census year, per 100,000 of population, with distinction of sex and of cities and rural districts:

	A	GGREGATE	3.	,	MALES.			FEMALES.	
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	5.40	6. 11	4.30	5. 65	6. 65	4, 18	5. 14	5. 60	4. 42
Connecticut	4.56	7.09	2.75	4.87	8.54	2.30	4. 25	5.69	3. 20
Delaware	2.97.	1.63	3.74	3.51	3.25	3.65	2.41		3.82
District of Columbia	8.04	3.04		4.56	4.56		1.66	1.66	
Massachusetts	4.24	3.97	5.15	4.50	4.83	3.47	4.00	3.16	6.79
New Hampshire	4. 25	2.71	4.89	5.90	.3.84	6.69	2.63	1.71	3.04
New Jersey	5.54	5.98	4.95	6.10	6. 17	6.02	4.97	5.80	3.86
New York	6.12	7.58	3.75	6.28	7.82	3.87	5.96	7.35	3.63
Rhode Island	5.21	4.00	6.88	4.76	5. 22	4.16	5. 63	2, 88	9. 55
Vermont	5.72 -	3, 53	5.92	4. 13	7.88	3. 85	7.36		8.09

It will be seen from this table that the death rate from erysipelas was highest in New York (6.12), and lowest in Delaware (2.97).

The combined relations of age and race to the death rates from erysipelas are indicated in the following table showing the number of deaths among the whites in each of five age groups, and the death rates per 100,000 population of corresponding ages, with distinction of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	UNDER 5	S YEARS.	5 TO 15	YEARS.	15 TO 45	YEARS.	45 TO 65	YEARS.	65 YEA OV	
`	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	152	31. 34	7	0.81	67	2. 80	58.	8.88	60	38.55
United States	55	22. 27	4	0.98	8	1.04	9	4.01	20	29.00
Ireland	23	34.84	1	0.66	20	3.22	21.	12.34	13	40.29
Germany	20	24. 93	1	0.62	23	4.19	17	11.40	9	28. 27
Italy	16	106.42			2	3.99				

The number of deaths from erysipelas which occurred among the colored was so small that the death rates derived from them have no scientific value, and the same is the case for the majority of the subdivisions by birthplaces of mothers. Of the 152 deaths under 5 years of age in this group 55 were children of mothers born in the United States, 23 children of mothers born in Ireland, 20 children of mothers born in Germany, and 16 children of mothers born in Italy. It will be seen that in this age group the death rate from this disease was highest of all among the children of mothers born in Italy (106.42), and next to those among the children of mothers born in Ireland (34.84), being lowest of all among the children of mothers born in the United States (22.27). For those 65 years of age and over the death rate was highest among the children of mothers born in Ireland (40.29), and lowest among the children of mothers born in Germany (28.27).

The following table shows the proportion of deaths due to erysipelas, at certain ages and groups of ages, per 1,000 deaths at all ages from this cause, in 1880 and in 1890, with distinction of sex:

AGES.	18	80	18	90	l agra	18	880	18	B90

It will be seen from the preceding table and diagrams that about one-third of the deaths from crysipelas occurred among children under 5 years of age.

The following table shows, for each grand group, the proportion of deaths due to erysipelas, during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

GRAND GROUPS.	Total.	RU	RAL.	CIT	TIES.
GRAND GROUPS.	Total.	Males.	Females.	Males.	Females.
1. North Atlantic Coast region	2.31	2, 10	3. 41	2.49	1. 69
2. Middle Atlantic Coast region	2.77	2.64	1.47	2.80	3.07
3. South Atlantic Coast region	2. 28	2.08	2.96	1.62	1.69
4. Gulf Coast region	2, 53	3. 25	2,74	1.93	2.03
5. Northeastern hills and plateaus	2.42	2.42	2.94	2.18	1.63
6. Central Appalachian region	3.07	2,76	3.36	2.45	3.96
7. Region of the Great Northern Lakes	2.49	2.92	3. 22	2.18	2. 26
8. Interior plateau	2.64	2.84	3.06	2. 19	2.53
9. Southern Central Appalachian region	3.88	4.64	3.57	0.89	3.14
10. Ohio River belt	3.88	4.65	3.99	2.74	3, 39
11. Southern Interior plateau	3.08	3.39	2.87	1.55	1.36
12. South Mississippi River belt	2. 26	2.47	1.88	3.34	1,59
13. North Mississippi River belt	3.55	3.84	3.19	4.00	3.01
14. Southwest Central region	5.63	5, 20	6, 28	3.60	5.43
15. Central region, plains and prairies	4.30	4.09	4.73	8.31	3.75
16. Prairie region	3.80	3.84	3.86	3.54	1.04
17. Missouri River belt	3, 41	4.16	2.77	3. 15	3.21
18. Region of the Western plains	3.97	3.61	8.19	6. 65	3.78
19. Heavily timbered region of the Northwest	3.33	2.95	3.76		
20. Cordilleran region	2.84	2, 30	2, 90	10.50	7.72
21. Pacific Coast region	2. 07	3. 21	1.73	1.86	1. 35

This table indicates that the proportion of deaths due to erysipelas was greater in the Western part of the United States, and particularly in the Southwest Central region and on the Western plains, than in the Eastern part of the country.

VENEREAL DISEASES.

The total number of deaths reported as due to venereal diseases in the United States during the census year was 1,619, of which 949 were of males and 670 of females. In 1880 the number thus reported was 1,217.

In the registration area in 1890 the number of deaths reported as due to these diseases was, males, 437; females, 345; total, 782, giving a death rate of 3.98-per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from venereal diseases during the census year in each of two age groups per 100,000 population of corresponding ages, with distinction of sex:

Areas.	15	то 45 чел	.RS.	45 YEARS AND OVER.				
anaro.	Total.	Males.	Females.	Total.	Males.	Females.		
Registration area	2. 40	2. 52	2. 28	2. 41	3.38	1.47		
Cities	2.84	3.00	. 2,60	8. 15	4.52	1. 85		
States	1.62	1.56	1.68	1.80	2.46	1.17		
Cities	2.10	2. 23	1.99	2.69	3.86	1.61		
Rural	0.78	0.46	1.11	0.83	1.01	0.66		
Cities in nonregistration states	8.52	3.86	8.18	3.65	5. 17	2.11		
Cities of 100,000 population and upward	8.08	8.49	2, 66	3.58	4.79	2.40		
Metropolitan district	3.35	3.71	8. 02	3, 27	4.81	1. 78		

It will be seen from this table that in the age group 15 to 45 the death rate from venereal diseases was slightly higher among males (2.52) than it was among females (2.28); that it was decidedly higher in the cities than in the rural districts, and that it was highest of all in the cities of the nonregistration states. In the rural districts of the registration states it was higher among females (1.11) than it was among males (0.46).

In the age group 45 years of age and over, it was more than twice as high among males (3.38) as among females (1.47); and among males it was much higher in the cities of the registration states (3.86) than in the rural districts of the same states (1.01).

The combined relations of age and race to the death rates from venereal diseases are indicated in the following table showing the number of deaths in each of two age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	15 TO 45	YEARS.	45 YEAR OVE		
•	Deaths.	Rate.	Deaths.	Rate.	
White	61	2.55	23	2.84	
Colored	12	11.63	4	14.09	
Birthplaces of mothers (white):			1		
United States	13	1.70	1	0.34	Ì
Treland	26	· 4.19	8	3.95	
Germany	6	1.09	7	3.87	l

It will be seen from this table that the death rate from these diseases was much higher among the colored than among the whites in each age group, and that among the whites it was highest in the children of mothers born in Ireland. In the age group 15 to 45 years, it was higher in the children of mothers born in the United States (1.70) than in the children of mothers born in Germany (1.09); while in the age group 45 years of age and over, it was very much higher in the children of mothers born in Germany (3.87) than in the children of mothers born in the United States (0.34).

The remarks made in connection with death rates from alcoholism apply with even greater force to death rates from venereal diseases, the majority of reports of deaths due to these causes coming from hospitals.

The following table shows the proportion of deaths due to venereal diseases, at certain ages and groups of ages, per 1,000 deaths at all ages from these causes, in 1880 and in 1890, with distinction of sex:

	18	880	18	390		18	80	1890	
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Kemales.	Males.	Females.

• It will be seen from this table that about one-third of all the deaths reported as due to these diseases occur in infants under 1 year of age, being cases of congenital syphilis: that in 1890; for those above 5 years of age, the greatest proportion of deaths due to these diseases occurred among males in the age group 30 to 35 years, and among females in the age group 20 to 30 years.

MOR-PT I-20

ALCOHOLISM.

The total number of deaths reported as due to alcoholism in the United States during the year ending May 31, 1890, was 2,657, of which 2,254 were of males, and 403 of females. In 1880 the number thus reported was 1,592. In the registration area the number of deaths reported as due to this cause was, males, 1,245; females, 342; total, 1,578, giving a death rate of 8.07 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from alcoholism during the census year in each of two age groups per 100,000 population of corresponding ages, with distinction of sex:

•	15	то 45 чел	RS.	45 YEARS AND OVER.				
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.		
Registration area	9. 10	13.78	4. 45	17. 22	28. 92	5, 90		
Cities	10. 68	16. 10	5. 34	21. 72	36. 13	7.94		
States	9.80	14.89	4.87	14.35	24.39	4.83		
Cities	13. 52	20. 51	6.94	20.49	34. 45	7.77		
Rural	3.31	5. 46	1.11	7.68	13.92	1.50		
Cities in nonregistration states	8.08	12. 23	3.82	23. 03	37.82	8. 13		
Cities of 100,000 population and upward	12.91	19.20	6.43	26.37	43.33	9.84		
Metropolitan district	16.77	26. 40	7.49	26, 90	46. 61	7.86		

It will be seen from this table that the death rate from alcoholism was much higher among those 45 years of age and over (17.22) than it was among those from 15 to 45 years of age (9.10); that in the age group from 15 to 45, it was a little over three times as high among males (13.78) as among females (4.45); that among males it was much higher in the cities of the registration states (20.51) than it was in the rural districts of the same states (5.46); and that it was highest of all among males in the metropolitan district (26.40), and was lowest of all among females in the rural districts of the registration states (1.11).

The same general relations exist between the death rates in different areas and of different classes in those 45 years of age and over, the highest death rate in this age group being in males in the metropolitan district (46.61), and the lowest in females in the rural districts of the registration states (1.50).

The following table shows, for each grand group, the proportion of deaths due to alcoholism during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

. GRAND GROUP.	Total.	RU	RAL.	CITIES.		
drand droof.	Totar.	Males.	Females.	Males.	Females.	
1. North Atlantic Coast region	3. 89	4.38	0.90	6. 21	2.74	
2. Middle Atlantic Coast region	4.56	4.01	0.55	7.47	2.31	
3. South Atlantic Coast region	1.82	2.70	 	5.39	0.56	
4. Gulf Coast region	4.23	7.84	0.23	4.72	3.30	
5. Northeastern hills and plateaus	2.72	3.63	0.51	4.75	3. 26	
6. Central Appalachian region	2.09	3, 52	0.32	4.09	0.30	
7. Region of the Great Northern Lakes	3.53	5, 52	0.38	5.71	1.36	
8. Interior plateau	2.88	4.14	0.31	5. 24	1, 41	
9. Southern Central Appalachian region	1.31	2,06	0.12	4.91	0.52	
10. Ohio River belt	2.98	4. 33	0.35	5.92	1.69	
11. Southern Interior plateau	1.85	3. 67	0.10		1.36	
12. South Mississippi River belt	2.53	3. 99	0.47	5. 57		
13. North Mississippi River belt	2.82	3.40	0, 53	4.12	3.01	
14. Southwest Central region	1.88	3.01	0.05	8.65	2.17	
15. Central region, plains, and prairies	2.19	4.09	0.22	3.31	0.68	
16. Prairie region	2.00	3, 66	0.20	1.77		
17. Missouri River belt	3, 25	3.73	0.75	8.54	1.07	
18. Region of the Western plains	4.17	4.38		12.63	3.78	
19. Heavily timbered region of the Northwest	1,76	2.95	0.40			
20. Cordilleran region	9.72	14.02	2.32	21.00	3, 86	
21. Pacific Coast region	7.94	15. 12	1.04	7.95	4.85	

The ratios given in this table are of little value, partly because, as explained above, the greater number of deaths due to alcoholism are not reported, and partly because the proportion of deaths due to this cause depends to a considerable extent on the number of adult males in a given locality.

This table indicates that the proportion of deaths due to this cause in the rural districts was comparatively large on the Pacific coast, in the Cordilleran region, and on the Gulf coast, and was comparatively small in the Appalachian region.

The following table shows, for the registration area and some of its subdivisions, the death rates from alcoholism during the census year per 100,000 of population, with distinction of color and sex:

1771.0		AGGREGAT	s.		WHITE.	-	COLORED.			
AFEAS,	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	
Registration area	8. 07	12.70	3.47	8.13	12.87	3.41	6. 91	9.36	4. 54	
Cities	9.48	14.78	4.25	9, 64	15.11	4.24	6.87	9. 36	4.49	
States	8.05	12.70	3.51	8.11	12.82	3, 51	5.51	7. 56	3.58	
Cities	10.97	17.10	5.14	11.14	17.37	5.20	4.74	6.69	2.99	
Rural	3.59	6.20	0.94	3,53	6.14	0.87	- 7.30	9.40	5.05	
Cities in nonregistration states	8, 10	12.70	3.40	8.16	12.95	3. 25	7.47	10.07	4.92	

This table indicates that the death rate from alcoholism was higher among the whites (8.13) than among the colored (6.91). It was highest of all among the white males in the cities in the registration states (17.37), and lowest of all among the white females in the rural districts of the registration states (0.87).

The following table shows, for each of the registration states and for their sum, the death rates from alcoholism during the census year per 100,000 of population, with distinction of sex, and of cities and rural districts:

registration states.		GGREGATE).		MALES.		FEMALES.				
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.		
* Total	8.05	10.97	3. 59	12.70	17. 10	6. 20	3.51	5.14	0.94		
Connecticut	11.12	17.08	6.88	15.97	21.67	11.97	6.37	12.65	1.83		
Delaware	. 2.37	1.63	27.80	2.34		3,65	2.41 .	3.27	1.91		
District of Columbia	12.59	12.59		19.16	19.16		6.62	6.62			
Massachusetts	7.28	7. 93	5.15	10.76	11. 22	9.26	4.00	4.85	1.13		
New Hampshire	3.72	5.43	3.01	5.90	5.76	5.95	1.58	5.14			
New Jersey	6.44	8.43	3.83	10.82	14.07	6.65	2.07	2.90	0.97		
New York	8.82	12,68	2.57	14.28	20.55	4.48	3.44	5.13	. 0.62		
Rhode Island	10.42	11.50	8.94	16.66	18.77	13.86.	4.51	4.80	4.09		
Vermont	1.80	3.53	1.64	2.95	7.38	2, 57	0.61.		0.67		

It will be seen from this table that the death rate from alcoholism was highest in the District of Columbia (12.59), in Connecticut (11.12), and in Rhode Island (10.42); and lowest in Vermont (1.80), in Delaware (2.37), and in New Hampshire (3.72).

The combined relations of age and race to the death rates from alcoholism are indicated in the following table showing the number of deaths in each of two age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIETHPLACES OF MOTHERS.	15 to 45	YEARS.	45 YEA	
	Deaths.	Rate.	Deaths.	Bate.
White	336	16.12 6.78	207 2	25.60 7.04
Birthplaces of mothers (white):			_	
United States	46	6.00	31	10.57
England and Wales	16	13.83	9	19.19
Ireland	204	32.87	87	42.97
Scotland	9	23.89	11	76.56
Germany	.52	9.48	33	18. 23

It will be seen from the preceding table that the death rate from alcoholism was much higher among the whites than among the colored in each age group. In the age group 15 to 45, among the whites, it was highest in the children of mothers born in Ireland (32.87), and lowest in the children of mothers born in the United States (6.00).

In the age group 45 years of age and over, it was highest in the children of mothers born in Scotland (76.56) and in the children of mothers born in Ireland (42.97), and lowest in the children of mothers born in the United States (10.57) and in Germany (18.23).

The following table shows the death rate from alcoholism per 100,000 of population in the registration states during the census year, with distinction of conjugal condition, sex, color, and general nativity:

		-	COLOR AND NATIVITY.											
CONJUGAL CONDI-	Aggı	ogate.		٠,	WI	iite.			Colored.					
TION.			To	tal.	Native	born.	Foreig	n born.						
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.				
Single	8.61	1.10	8.73	1.09	6. 43	0.61	19.00	3.12	3.76	1.34				
Married	14.27	5,14	14. 35	5.16	10.67	3.83	19.10	7.19	10.44	4.22				
Widowed	47.87	8.79	47.84	8.90	31. 99	3.01	66.68	16.02	48.92	5.78				

This table indicates that the death rate from alcoholism was much higher among the widowed than among the married, and decidedly higher among the married than among the single, especially among females, but the greater part, if not all, of this difference is due to the relative proportion of persons of advanced age in the different classes.

The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to alcoholism during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity.

•					WHITE.				COLORED.			
ARHAS.	Aggre-				N	Vative born	1.		,			
	Aggregate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.	ì
Registration area	4.16	4. 30	6, 43	1.92	2.75	1,84	3, 17	7. 90	2.40	3.09	1.66	
Cities States Cities Rural	4.56 4.18 4.98 2.39	4. 77 4. 25 5. 12 2. 35	7. 00 6. 40 7. 47 4. 01	2. 25 1. 94 2. 56 0. 59	3.03 2.86 3.47 1.74	2.00 1.97 2.29 1.59	3. 27 3. 58 3. 79 2. 41	8. 30 7. 76 8. 42 4. 90	2. 30 2. 03 1. 51 4. 20	2 96 2.65 1.98 5.05	1. 59 1. 39 1. 03 2. 93	
Cities in nonregistration states	4.13	4.37	6.48	1.88	2. 55	0.98	1.32	8.14	2. 53	3, 25	1.76	

This table indicates that in the registration area the proportion of deaths due to alcoholism to the total number of deaths from known causes was much greater among the white (4.30) than among the colored (2.40), and also much greater among the males (white, 6.43; colored, 3.09); than among the females (white, 1.92; colored, 1.66). Among the whites it was much greater among the foreign born (7.90) than among the natives (2.75), which is in part due to the different age distribution of the two groups of population. In the registration states it was decidedly greater in the cities (4.98) than in the rural districts (2.39). It was greatest of all among the foreign born whites in the cities in the registration states (8.42).

The data with regard to alcoholism as a cause of death are too defective and inaccurate to warrant any definite conclusions, but the above tables indicate that it caused a much higher death rate in the cities than it did in rural districts; in the large cities than in the smaller ones; in the whites than in the colored; and in persons whose mothers were born in Ireland than in persons whose mothers were born in Germany or in the United States. It must be remembered, however, that it is only from hospitals that even approximately correct reports are made with regard to persons dying from the effects of alcohol, and that the hospitals are for the most part confined to large cities.

The following table shows the proportion of deaths due to alcoholism at certain ages and groups of ages, per 1,000 deaths at all ages, from this cause, in 1880 and in 1890, with distinction of sex:

	1880 1890		890		1	880	1890		
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females.
Under 5 years	0.75	7.91	3, 62	5.03	50 to 55 years	112.28	98. 81	116, 74	80.40
5 to 10 years	3.01	7.91	3.62	5.03	55 to 60 years	80.63	51.38	80.09	57.79
10 to 15 years	3.01	3.95	3. 17	ļ	60 to 65 years	81.39	55.34	72.40	45.23
15 to 20 years	6.78	7.91	2. 26	10.05	65 to 70 years	50.49	19.76	44.80	27.64
20 to 25 years	30.90	51.38	26. 24	57.79	70 to 75 years	28.64	19.76	27.60	15.08
25 to 30 years	65, 56	110.67	78. 73	115.58	75 to 80 years	13.56	27.67	10.41	5.03
30 to 35 years	103.24	114.62	113.12	145.73	80 to 85 years	6.03	7.91	4.98	2.51
85 to 40 years	154.48	146. 25	132.58	153. 27	85 to 90 years	0.75		2, 26	
40 to 45 years	134.89	106.72	142.53	160.80	90 to 95 years	1.51			
45 to 50 years	122.08	162.06	134.84	113.07	95 years and over				

It will be seen from this table that in each sex in 1890 the greatest proportion of deaths due to alcoholism occurred among those from 40 to 45 years of age. In 1880 the greatest proportion occurred among those from 35 to 40 years of age.

OLD AGE.

The total number of deaths reported as due to old age in the United States during the census year was 16,591, of which 7,366 were of males and 9,225 were of females. In the registration area the number of deaths reported as due to this cause was, males, 3,683; females, 5,140; total, 8,823, giving a death rate per 100,000 of population of 44.88. In England and Wales the corresponding death rate in 1890 was 97.70.

The phrase "death from old age" refers to deaths in persons 60 years of age and over, reported as due to this cause, i. e., to no definite disease or accident, and therefore the so-called death rates to be arrived at are for each locality, or group, proportionate to the number of persons 60 years of age and over living in the locality, which will account for the greater part of all the differences to be noted.

The following table shows, for the registration area and some of its subdivisions, the death rates from old age during the census year per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

-	,		4		WHITE.			1.		COLORED.	
AREAS.	Aggre-		,		. :	Native bor	n.	-		,	
	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born:	Total.	Males.	Femáles.
Registration area	44,88	44. 93	38. 01	51.82	33.71	- 60.05	6.71	75.82	43.88	28.94	58.34
Cities Cities Rural Cities in nonregistration states Cities of 100,000 population and upward Metropolitun district, 6 years	37. 32 52. 02 40. 96 68. 92 33. 97 32. 47 26. 17	36, 95 52, 38 41, 23 69, 26 32, 74 32, 18 26, 01	29. 54 45. 51 33. 25 63. 48 26. 02	44. 28 59. 11 48. 84 75. 13 39. 63	21.82 43.70 27.25 63.63 16.79 15.95 14.10	43. 25 . 66. 54 50. 46 78. 83 27. 68 31. 01 30. 78	5.53 6.77 5.10 11.28 6.51 4.69 3.25	71.78 77.47 70.40 99.74 73.34 65.12 45.99	43. 31 36. 75 31. 06 49. 91 46. 72 38. 23 35. 18	28, 08 24, 20 17, 83 37, 61 30, 80	57. 92 48. 62 42. 89 63. 12 62. 28

It will be seen from this table that the death rate from old age was slightly higher among the whites (44.93) than among the colored (43.88); that it was much higher among females (white, 51.82; colored, 58.34) than it was among males (white, 38.01; colored, 28.94); and that it was much higher among the foreign born whites (75.82) than it was among the native born whites (33.71), which is due mainly to the much larger proportion of persons over 60 years of age in the latter group, which also accounts for the fact that the death rate from this cause among native born whites having both parents native born (60.05) was nearly ten times as high as it was among native born whites one or both of whose parents were foreign born (6.71). In the registration states the death rate from old age was much higher in the rural districts (68.92) than it was in the cities (40.96), and it was lowest in the metropolitan district for the 6-year period (26.17).

The following table shows, for each of the registration states and for their sum, the death rates from old age during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

	2	GGREGATE			MALES.		FEMALES.			
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total	52. 02	40.96	68.92	45. 03	32.86	63.02	58. 86	48. 68	74. 92	
Connecticut	78. 53	66.06	87.40	63.86	55. 16	69,96	92. 91	76, 55	104. 73	
Delaware	24.93	3, 26	37.36	18.70	3.25	27.39	31.36	3.27	47.80	
District of Columbia	16.49	16.49	[13.69	13, 69		19.04	19.04		
Massachusetts	57.35	50. 27	80.51	46.98	40.43	67.91	67. 15	59.46	92.84	
New Hampshire	93. 75	60.63	107.51	85, 76	53.72	98.18	101.60	66.80	117.04	
New Jersey	30. 80	24.67	38. 81	26.64	20.23	34.86	34.94	29.02	42.83	
New York	48.72	38.67	64.95	43.97	31.07	64.13	53. 39	45.97	65.80	
Rhode Island	62.81	55.98	72.19	46. 42	34. 42	62.37	78. 32	75.82	81.87	
Vermont	88. 44	70.68	90.09	75, 59	66.44	76. 39	101.78	74.58	104.49	

It will be seen from this table that the death rate from old age was highest in New Hampshire (93.75) and in Vermont (88.44), and lowest in the District of Columbia (16.49) and in Delaware (24.93); that it was much higher in the rural districts (68.92) than in the cities (40.96); and in the rural districts it was highest in New Hampshire (107.51), and lowest in Delaware (37.36). It was higher among females (58.86) than among males (45.03), and this excess occurred in every state. It was higher among the whites (52.38) than it was among the colored (36.75). The number of deaths attributed to this cause in New Hampshire and Vermont among the colored was so small that the rates derived therefrom have no value.

Of 7,130 deaths reported as due to old age among whites in the registration area during the census year, 2,488 were children of mothers born in the United States, 1,578 children of mothers born in Ireland, 695 children of mothers born in Germany, 290 children of mothers born in England and Wales, 162 children of mothers born in Canada, 114 children of mothers born in Scotland, 37 children of mothers born in France, and 21 children of mothers born in Scandinavia.

The following table shows, for the registration area and some of its subdivisions, the death rates from old age among the whites during the census year per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Germany.	Canada.	Scandi- navia.
Registration area	35. 87	41.53	59. 33	55. 93	45. 13	32. 70	24. 08	8. 61
Cities	26. 29	36.88	57.87	51.46	47.57	31. 24	18.57	7.24
States	40.80	42.06	58. 22	59.07	43.41	29.00	24.54	11.39
Cities	32.90	35.99	56.11	54. 45	46.60	25. 67	18. 21	9. 26
Rural	47.33	54.58	64.82	70. 29	35. 67	43. 35	34. 61	16.41
Cities in nonregistration states	12.22	39. 33	66.55	42. 19	49.20	39. 32	20.35	5.79
Cities of 100,000 population and upward	22. 17	37. 51	53.23	47, 44	49. 28	29.81	12.09	8. 15

It will be seen from this table that the death rate from old age in the registration area was highest in the children of mothers born in Ireland (59.33), in Scotland (55.93), and in France (45.13); and was lowest in the children of mothers born in Scandinavia (8.61), in Canada (24.08), and in Germany (32.70). In the rural districts of the registration states it was highest in the children of mothers born in Scotland (70.29), and was higher in the children of mothers born in the United States (47.33) than it was in the children of mothers born in Germany (43.35).

The following table shows, for the registration area and some of its subdivisions, the death rates from old age during the census year per 100,000 of population 60 years of age and over, with distinction of sex:

	60 x	EARS AND O	VER.
· AREAS.	Total.	Males.	Females.
Registration area.	645. 28	563. 89	719.63
Cities	668.60	568.08	754.71
States	636.07	567.77	698.87
Cities	669. 23	581.15	741.48
Rural	608.69	557.86	660.03
Cities in nonregistration states	667.91	554.27	770.03
Cities of 100,000 population and upward	633. 97	517.60	734.04
Metropolitan district	587. 30	481.85	678.33

It will be seen from this table that the death rate from old age was much higher among females (719.63) than among males (563.89), and that in the registration states it was higher in the cities (669.23) than it was in the rural districts (608.69), and it was lowest of all among males in the metropolitan district (481.85).

The combined relations of age and race to the death rates from old age are indicated in the following table showing the number of deaths and the death rates per 100,000 of population 60 years of age and over, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey, for the census year:

	60 YEARS .	AND OVER.	
. COLOR AND BIRTHPLACES OF MOTHERS.	Deaths.	Rate.	
White	1, 449	545.59	
Colored	56	668.90	
Birthplaces of mothers (white):	}		ı
United States	440	408, 66	
England and Wales	80	514,73	1
Ireland	509	842.55	l
Scotland	30	636.00	Ì
France	14	580. 91	
Germany	217	372.39	

This table indicates that the death rate from old age was higher among the colored (668.90) than among the whites (545.59), and that among the whites it was more than twice as high among the children of mothers born in Ireland (842.55) as among the children of mothers born in the United States (408.66).

For further details with regard to death rates from old age in large cities see Part II of this report, page 137. Out of each 100,000 deaths from all causes in the United States during the census year, 1,894.99 were reported as due to old age, the corresponding figure in 1880 having been 1,872, and, in 1870, 1,621. In England and Wales the corresponding proportion in 1890 was 4,998.20.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to old age during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					COLORED.

This table indicates that the proportion of deaths due to old age was somewhat greater in the registration area (23.13) than it was in the United States (20.56); that in the United States it was greater among the whites (20.98) than among the colored (17.62); and greater among females (white, 24.70; colored, 21.08) than among males (white, 17.70; colored, 14.29). In the metropolitan district for the 6-year period it was only 10.50.

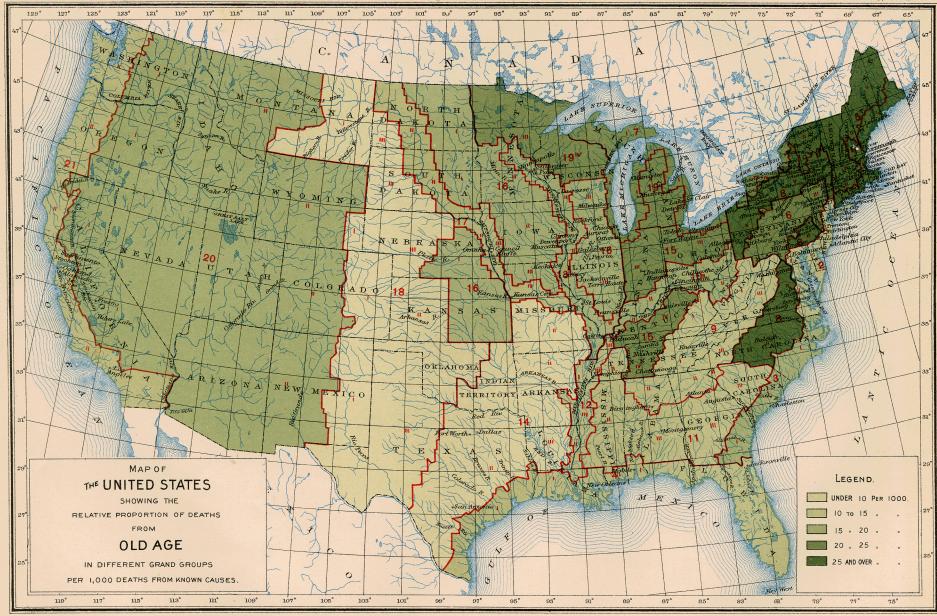

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to old age among the whites during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

											<u> </u>	
AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.
The United States	16. 78	27.94	30. 55	35. 04	31.50	23. 77	14. 43	15.88	3. 38	18. 15	2.81	15.12

Cities of 100,000 population and upward.	11.76	20.91	20.70	25, 06	26.99	16.01	5.77	4.67	3.57	9.49	1.70	8. 28

This table indicates that in the United States as a whole, as well as in the registration area, the greatest proportion of deaths due to old age occurred in the children of mothers born in Scotland, and the least in the children of mothers born in Italy.

The following table shows the proportion of deaths due to old age, at certain ages and groups of ages, per 1,000 deaths at all ages from this cause, in 1880 and in 1890, with distinction of sex:

	18	sso	• 18	890
AGES.	Males.	Females.	Males.	Females
60 to 65 years	12.18	12. 85	14. 66	16.07

95 years and over	67.99	90. 69	49.60	67.80

WERNER-AKRON

It will be seen from the preceding table that in both censuses and each sex the greatest proportion of deaths due to this cause occurred among persons between 80 and 85 years of age.

The average age at death of those dying from old age in the United States in 1890 was 82.26 years. In the registration states it was 83.03 years.

The following table shows, for each grand group, the proportion of deaths due to old age during the census year per 1,000 deaths from known causes, with distinction of sex and color, of rural districts and cities, and of children of mothers born in Ireland and in Germany:

		, RU	RAL.	CIT	ies.	- TVT - 1-	G 11	MOTHERS	DORN IN-

The geographical distribution of deaths from old age in the several grand groups is shown in map No. 18.

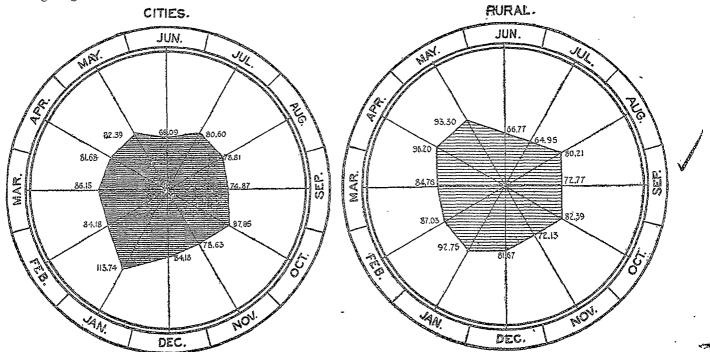

It will be seen from the preceding table and map that the proportion of deaths due to old age to deaths from known causes was greatest in the northeastern portion of the United States and least in the Western plains; that in all the grand groups, except the Cordilleran region, it was greater in the children of mothers born in Ireland than in the children of mothers born in Germany, this difference being especially well marked in the Southern regions. In the northern part of the United States it was greater among the whites than among the colored, but the reverse of this was the case in the Southern regions.

The following table shows, for the United States, the number of deaths from old age in each month during the census year, and the proportion in each month per 1,000 deaths from this cause, with distinction of cities and of rural districts:

DEATHS. PROPORTION IN EACH MONTH PER 1,009 TOTAL DEATHS. United States. Cities. Rural. United States. Cities. Rural. United States. Cities. Rural. United States. Cities. Rural. United States. Cities. It will be seen from this table that the greatest proportion of deaths reported as due to old age occurred in January (99.81), April (91.31), May (89.63), and February (86.07); and the least in June (66.54), July (70.22), and September (73.47). The greatest proportion of all occurred in the cities in January (113.74), and the least in the rural districts in July (64.95).

The relative proportion of deaths due to old age in each month in the cities and in the rural districts, as indicated in the preceding table, and the difference in the proportion of deaths in the two areas are shown in the following diagram:

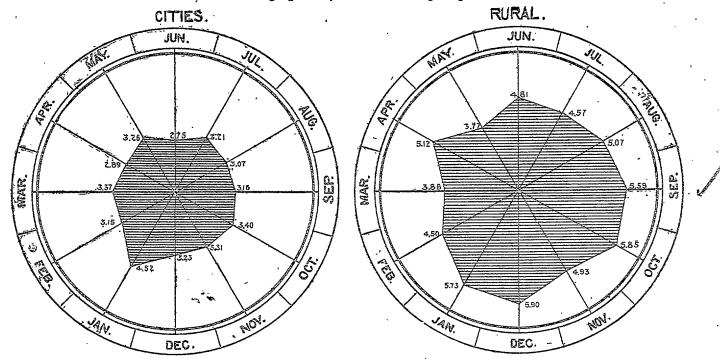

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from old age in each month during the census year and the death rates per 100,000 of population, with distinction of cities and of rural districts:

		DEATHS.			RATE.	
montes.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
June	375	172	203	3.58	2.75	4.81
July	394	201	193	3.76	3.21	4.57
August	406	192	214	3.87	. 3.07	5. 07
September	1	198	236	4. 14	3.16	5. 59
October		213	247	4.39	3.40	5. 85
November		207	208	3.96	3.31	4. 93
December	451	202	249	4.30	3, 23	5.90
January	525	283	242	5.01	4.52	5.73
February		197	190	3. 69	3.15	4.50
March	'	211	164	3.58	3.37	3.88
April	397	181	216	3.79	2.89	5, 12
May	362	204	159	3.46	3.26	3.77

It will be seen from the preceding table that the highest death rate from old age occurred in January (5.01) and the lowest in May (3.46). In the rural districts the death rates from this cause were highest in December (5.90), in October (5.85), and in January (5.73); and were lowest in May (3.77) and in March (3.88).

The death rates in each month, as given in the preceding table, and the relative magnitude of the rates in the cities and the rural districts, are shown graphically in the following diagram:

The following table shows, for three divisions of grand groups, namely, Northern, Middle, and Southern, the number of deaths from old age at 60 years and over, in each month during the census year, and the proportion in each month per 1,000 deaths at 60 years and over from this cause of which the month is known:

months.		n region. groups 17, and 19.	2, 6, 8, 10,	GROUPS		n region. Groups 2, and 14.
	Deaths.	Proportion.	Deaths.	Propor- tion.	Deaths.	Proper-
June	429	71. 91	513	63.12	144	69.06

The gradual rise in the proportion of deaths from June, 1889, to May, 1890, as indicated by the preceding table and diagram, is not greater than that which would be fully accounted for by the greater omissions in the records in the periods of time most distant from the date of taking the census. The greatest proportion of deaths attributed to old age appears to have occurred in January in the Northern and Middle regions, and in April and May in the Southern region.

TUBERCULOSIS.

The census data do not enable us to determine accurately the mortality due to tuberculosis, not even in any part of the registration area, because in cases of death from tuberculosis of other parts of the body than the lungs the fact that the disease was tubercular is usually not stated.

Tuberculosis of the lungs, commonly known as consumption, is the cause of the great majority of the deaths produced by the bacillus of tubercle, but a considerable proportion of the deaths reported as due to scrofula and tabes, to hydrocephalus, to diseases of the bones and joints, to diarrhea, and to debility and atrophy are also caused by this bacillus.

In the United States, during the census year, the number of deaths reported as due to consumption was 102,199; to hydrocephalus, 4,338; to scrofula and tabes, 4,121; and to diseases of the bones and joints, 2,802; making a total of 113,460, of which 90 per cent were attributed to consumption. In the registration area the proportion was about the same, being 89.92 per cent.

In those European countries in which an attempt is made to report the total number of deaths due to tuberculosis the percentage of such deaths due to consumption ranges from 84 in Sweden to 97 in Austria, the mean being about 90 per cent, or the same as that given above for the United States, on the assumption that all eases reported as due to hydrocephalus, scrofula and tabes, and diseases of the bones and joints were due to tuberculosis. This assumption is not strictly correct, especially as regards the diseases of the bones and joints, but on the other hand a certain number of the deaths reported as due to diarrhea, atrophy, etc., were really due to tuberculosis, so that it is safe to say that the number of deaths due to tuberculosis was at least 12 per cent greater than the number attributed to consumption alone.

CONSUMPTION.

The total number of deaths reported as due to consumption in the United States during the census year was 102,199, of which 48,925 were of males and 53,274 were of females, being, as usual, the greatest number of deaths reported as due to any single cause. In the registration area the number of deaths reported as due to this cause was, males, 25,119; females, 23,117; total, 48,236, being 245.36 deaths per 100,000 of population. In 1890 the corresponding death rates from this disease were, in England and Wales, 168.2; in Ireland, 215.7; in Scotland, 191.3; in Italy, 106.8; in Belgium, 178.9; and in Austria, 394.0.

During the 10 years 1880 to 1889 the death rates from consumption per 100,000 population were, in England and Wales, 174.9; in Ireland, 209.7; in Scotland, 201.7; in Norway, 138.9; in Prussia, 304.3; in Austria, 387.6; in Saxony, 238.4; in Massachusetts, 288.4; in Connecticut, 209.1; in Rhode Island, 239.8; and in New Jersey, 239.9.

The following table shows, for the registration area and some of its subdivisions, the death rates from consumption during the census year per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

4					WHITE.					COLORED.	
AREAS.	Aggre-				. 1	Native born	ı. ·-		-		
, .	gate.	Total.	Males.	Females.	Tofal.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.

Cities in nonregistration states	239.85	209.73	224.01	195.08	184.66	178.97	193.82	273.53	552.85	573.74	-532.42
Cities of 100,000 population and upward	268.81	252.85			- 213.32	190.30	266.84	333.07	583.49		
Metropolitan district, 6 years	332, 20	327.75	365.49	290.82	269. 52	233. 93	292.66	425.42	581.54	714. 29	453.86

It will be seen from this table that the death rate from consumption was much higher among the colored (546.11) than among the whites (230.00); that it was higher among males (white, 240.06; colored, 578.25) than among females (white, 219.99; colored, 514.98), and that for the whites it was higher among the foreign born (312.33) than it was among the native born (200.08).

In the registration states the death rate from consumption (248.96) was a little higher than in the registration area as a whole (245.36), and in these states it was much higher in the cities (293.46) than it was in the rural districts (181.00). In the rural districts it was a little higher among females than among males.

The following table shows, for each of the registration states, and for their sum, the death rates from consumption during the census year per 100,000 of population, with distinction of sex, of color, and of cities and rural districts:

? REGISTRATION STATES.		AGGREGATE.	•		MALES.		<u> </u>	FEMALES.

New Jersey	419.84	424. 25	415.88	436.05	540.74	349.31	403.76	317.91	487.0
New York	526.38	662.51	217.00	658.11	857.60	236. 21	394.84	476. 19	195.7
Rhode Island	496.93	445. 87	637. 25	645.70	622.57	705.65	367. 20	296.35	572. 5
Vermont	199, 20	il .i	238. 95	182, 15		216, 92	219.78		265. 9

It will be seen from this table that the death rate from consumption was highest in the District of Columbia (358.95), which is mainly due to the large proportion of colored population in that area. Excluding this, the death rate from this disease was highest in Delaware (282.50) and in Massachusetts (267.13), and lowest in New Hampshire (193.61) and in Vermont (198.84). It was much higher in the cities (293.46) than in the rural districts (181.00). In the rural districts it was highest in Delaware (283.95), being higher than it was in the city of Wilmington (279.99); and was lowest in New York (152.33) and in New Jersey (189.42). It was higher among males (257.73) than among females (240.39), in the aggregate; but in Massachusetts, New Hampshire, and Vermont it was higher among females than among males. It was more than twice as high among the colored (529.20) as among the whites (242.39), and among the colored was excessively high in the cities in Massachusetts (726.37). It was highest of all among the colored males in the cities in New York (857.60).

Of 34,317 deaths from consumption in whites in the registration area during the census year 8,514 were children of mothers born in the United States, 10,559 children of mothers born in Ireland, 4,663 children of mothers born in Germany, 1,446 children of mothers born in Canada, 1,266 children of mothers born in England and Wales, 517 children of mothers born in Scandinavia, 440 children of mothers born in Scotland, 293 children of mothers born in Italy, 167 children of mothers born in France, 110 children of mothers born in Bohemia, and 57 children of mothers born in Hungary.

The following table shows, for the registration area and some of its subdivisions, the death rates from consumption among the whites during the census year per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohefnia.	Italy.	Other foreign coun- tries.
Registration area	122. 76	181. 28	396.97	215.87	203.70	219.40	214.92	212_07	178.10	270.21	209. 21	245. 83
Cities	124.58	191.79	431.38	237.37	220.98	229. 24	239. 32	218. 12	193.49	_275.08	-230.10	261.56
States	135.21	185.72	415.47	227.25	213.56	247.82	216.33	239.90	198.40	437.21	209.95	188.68
Cities	152.91.	202:19	462.75	260.36	245. 25	271.01	246.49	266.16	222.70	467.89	234.71	201.13
Rural	120.57	151.74	267.50	146.79	136.75	147.62	168.31	177.81	73.24	138.22	84.56	119, 28
Cities in nonregistration states	62.25	163.15	276.11	166.12	180.40	168.67	203.51	183.75	102.88	166.96	204.19	397.89
Cities of 100,000 population and upward.	142.64	196.15	484.60	265.67	257.62	243.74	323, 96	238, 46	184.00	280, 65	247.12	-267. 22

It will be seen from this table that the death rate from consumption among the whites in the registration area was highest among those whose mothers were born in Ireland (396.97), in Bohemia (270.21), and in Germany (219.40), and that it was lowest among those whose mothers were born in the United States (122.76). It was highest of all in the children of mothers born in Ireland living in cities of 100,000 population and upward (484.60), and in such cities it was also very high among the children of mothers born in Canada (323.96).

The following table shows, for the registration area and some of its subdivisions, the death rates from consumption during the census year in each of three age groups per 100,000 population of corresponding ages, with distinction of sex:

A .	15	то 45 чел	RS.	. 45	TO 65 YEAR	RS.	65 YEARS AND OVER.			
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	
Registration area	320.07	324.48	31569	319. 34	384.48	254.82	.368.95	410.01	332.30	
Cities	345.47	359_97	331-18	363.28	446.58	280.57	398.89	474. 22	333.71	
States	324.84	327.04	322.71	310.16	372.12	250.51	360.52	381.07	341.88	
Cities	380.66	404.52	358. 21	389.12	487.06	296.50	401.28	458.76	356.15	
Rural	227_38	197.07	258.24	212_26	232.48	192.37	330.72	33128	330.16	
Cities in nonregistration states	313.19	320.90	305. 26	336.52	406.69	263. 23	391.85	491.16	306: 96	
Cities of 100,000 population and upward	347.92	373.46	322.31	388.43	487. 22	288.27	427.52	518.88	352.63	
Metropolitan district	419. 25	477.21	363, 33	481.57	615.82	347.80	519.73	62981	427.82	

It will be seen from this table that the death rate from consumption in persons 65 years of age and over (368.95) was higher than it was in persons from 15 to 45 (320.97), or from 45 to 65 years of age (319.34), in the registration area as a whole, but that in the cities in the registration states the death rate from this cause was higher among males from 45 to 65 years of age (487.06) than it was among males in the age group of 65 years of age and over (458.76). The highest death rates from this disease in each age group occurred in the metropolitan district, being 419.25 for those 15 to 45 years of age, 481.57 for those 45 to 65 years of age, and 519.73 for those 65 years of age and over.

The death rate from this disease was higher in males than in females in each age group for the registration area as a whole and in the cities, but in the rural districts of the registration states it was higher among females 15 to 45 years of age (258.24) than it was among males of the same age group (197.07).

The combined relations of age and race to the death rates from consumption are indicated in the following table showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	15 то 45	YEARS.	· 45 TO 65	YEARS.	65 YEA	rs and er.
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	9, 532	398. 11	2,824	432. 49	682	438. 24
Colored	698	676. 51	159	684.40	34	658.02
Birthplaces of mothers (white):						
United States	1,752	228. 49	539	240, 26	174	252, 26
England and Wales	297	256. 80	132	350.73	28	302.41
Ireland		630.45	1, 108	651.09	243	753.07
Scotland	137	363.66	42	361.01	11	402.34
France	53	276.96	28	444.02	9	633.80
Germany	1,869	340.75	628 .	420.99	144	452.32
Canada	195	490.34	24	350.11	5	462.53
Scandinavia	133	406.06	25	497.22	4	597.01
Hungary	23	193, 85	12	777. 20		
Bohemia		730.47	9	680.79		
Italy	131	261.60	32	385, 08	4	420.17

It will be seen from this table that in each age group the death rate was much higher among the colored than among the whites, the difference being greatest in the age group from 15 to 45, in which age group, however, the death rate of the children of mothers born in Bohemia (730.47) exceeded the death rate of the colored (676.51). In this age group the death rate of children of mothers born in Ireland (630.45) was more than twice as high as that of the children of mothers born in the United States (228.49). The death rate of the children of mothers born in Canada (490.34) and in Scandinavia (406.06) was also very high.

In the age group from 45 to 65 the highest death rates among the whites occurred in the children of-mothers born in Hungary (777.20), in Bohemia (680.79), and in Ireland (651.09); and the lowest in the children of mothers born in the United States (240.26).

In the age group 65 years of age and over the death rates from this disease were highest in the children of mothers born in Ireland (753.07), in France (633.80), and in Scandinavia (597.01); and lowest in the children of mothers born in the United States (252.26).

For further details with regard to the death rates from consumption in large cities, see Part II of this report, page 96.

The following table shows the death rates from consumption in the registration area during the census year in each of certain age groups, with distinction of conjugal condition and of sex:

S .			AGE PERIODS.										
CONJUGAL CONDITION.	15 years	and over.	15 to 4	5 years.	45 to 6	5 years.	65 years	and over.					
•	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.					
Single	330. 44 278. 37 591. 48	282. 07 281. 65 305. 63	314. 84 260. 59 803. 72	277. 50 301. 12 427. 58	595. 42 297. 78 628. 51	312. 66 222. 55 251. 97	660. 54 338. 52 415. 38	484.35 311.05 293.85					

It will be seen from this table that in the registration area the death rates from consumption in persons 15 years of age and over were higher among the single (males, 330.44; females, 282.07) than they were among the married (males, 278.37; females, 281.65); that among the single they were higher in males than in females; and among the married slightly higher in females than in males. The highest of all occurred among the widowed (males, 591.48; females, 305.63).

In the age group from 15 to 45 the death rate from this disease was higher among single males (314.84) than among married males (260.59), but was higher among married females (301.12) than among single females (277.50). It was highest of all among the widowed males of this age group (803.72).

In the age group from 45 to 65 it was much higher among the single males (595.42) than among the married males (297.78). It was highest of all among the widowed males (628.51). Among the females in this age group it was higher among the single (312.66) than among the married (222.55) or the widowed (251.97).

In the age group 65 years and over it was highest of all among the single males (660.54), being for single females, 484.35; for married males, 338.52; and for married females, 311.05.

The following table shows the death rates from consumption per 100,000 of population in the registration states during the census year, with distinction of conjugal condition, sex, color, and general nativity:

ls/						COLOR ANI	TIVITAN C	Υ.			,
CONJUGAL CONDI-	Aggı	regate.			W	nite.					
TION.			To	otal.	Nativ	e born.	Foreig	n born.	Colo	ored.	V
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	
Single	206. 22 281. 00 651. 64	176. 48 289. 14 346. 56	197. 93 275. 12 638. 08	169.73 284.70 344.43	170. 94 229. 72 462. 01	155. 59 268. 46 313. 44	320, 78 338, 56 869, 60	231. 38 303. 86 375. 79	550. 15 555. 43 1, 247. 55	457.70 497.77 410.14	

The much higher death rate from consumption among the widowed than among the married or single, indicated by this and the preceding table, is probably mainly due to the different proportions of persons 45 years of age and over in the three classes. The great difference in the death rates from this disease in males and females among the widowed, especially in the colored and foreign born, is noteworthy.

Out of each 100,000 deaths from all causes in the United States during the census year, 11,673 are reported as due to consumption, which is somewhat less than the corresponding figures for 1880 (12,059) or for 1870 (14,199). In England and Wales the corresponding proportion for 1890 was 8,602; in 1880, 9,141. During the 10 years 1880 to 1889 the corresponding proportions were: England and Wales, 9,090; Ireland, 11,580; Scotland, 10,470; Prussia, 12,226; Austria, 12,600; Norway, 8,207; Massachusetts, 15,130; Connecticut, 12,450; Rhode Island, 11,370; and New Jersey, 13,130.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to consumption during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity.

1					WHITE.			•		COLORED.

MOR—PT 1——21

The preceding table indicates that the proportion of deaths due to consumption to deaths from known causes was very nearly the same in the United States as a whole as it was in the registration area; that it was greater in the United States as a whole among the colored (176.82) than it was among the whites (119.36); and that it was greater among females (whites, 131.45; colored, 195.69) than it was among males (whites, 108.68; colored, 158.68). It should be borne in mind, however, that the absolute death rate of males from this disease was higher than that of females in the registration area as shown in the first table given for this disease. The proportion was greater among the foreign born whites (151.10) than among the native born whites (111.41), and greater among the native born whites having one or both parents foreign (117.79) than among those having both parents native born (111.27). For the colored the proportion was greater in the registration states (195.17) than in the United States as a whole (176.82).

The following table shows for the United States, and for the registration area and some of its subdivisions, the proportion of deaths due to consumption among the whites during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers.

AREA.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.

Cities in nonregistration states	63, 99	110.34	164.50	135.48	121.88	109.09	147.64	130, 67	46.05	66, 88	117.83	155.99
Cities of 100,000 population and upward	75. 68	109.36	188.43	140.35	141.10	130.94	154.64	136. 61	80. 21	97.72	84, 27	123, 05

This table indicates that in the United States as a whole, as well as in the registration area, the greatest proportion of deaths due to consumption among the whites occurred among the children of mothers born in Ireland; and the least among the children of mothers born in Hungary, in Italy, in Bohemia, and in England and Wales.

The proportion of deaths due to consumption in persons from 15 to 45 years of age per 1,000 of all deaths from known causes occurring in this age group was, for the whites, 293.49; for the colored, 342.62; for the Chinese, 431.65; and for the Indians, 507.19. The proportion of deaths due to consumption in persons 45 years of age and over per 1,000 of all deaths from known causes occurring in this age group was, for the whites, 99.01; for the colored, 135.74; for Chinese, 186.15; and for the Indians, 313.04.

These figures indicate that the mortality from this disease was highest among the Indians and Chinese, and lowest among the whites.

The following table shows the proportion of deaths due to consumption at certain ages and groups of ages per 1,000 deaths, at all ages, from this cause, in 1880 and in 1890, with distinction of sex:

1	18	1880 1890		90		18	380	1890

The preceding table and diagram show that at both periods the greatest proportion of deaths due to consumption occurred in the age group from 15 to 45 years of age, although the highest mortality in proportion to population occurred, as has been shown above, in persons 45 years of age and over.

The average age at death of those reported as dying of consumption in the United States during the census year was 35.50 years; in 1880 it was 37 years; in the registration states in 1890 it was 35.97 years.

The following table shows, for each grand group, the proportion of deaths due to consumption during the census year per 1,000 deaths from known causes, with distinction of sex and color, of rural districts and cities, and of children of mothers born in Ireland and in Germany.

1	GRAND GROUPS.	Total.	RU	RAL.	cit	TIES.	White.	Colored.	MOTHERS	BORN IN-

The geographical distribution of deaths in the several grand groups, indicated by the table given above, is shown in map No. 19.

On comparing this table and map with the corresponding ones given for the Tenth Census (Tenth Census Reports, vol. xii, plate lx) it will be seen that the relative distribution of the deaths from this disease was much the same in 1890 as it was in 1880, but that the proportion in the northeastern area was less in 1890 than in 1880, while the reverse was the case in the south.

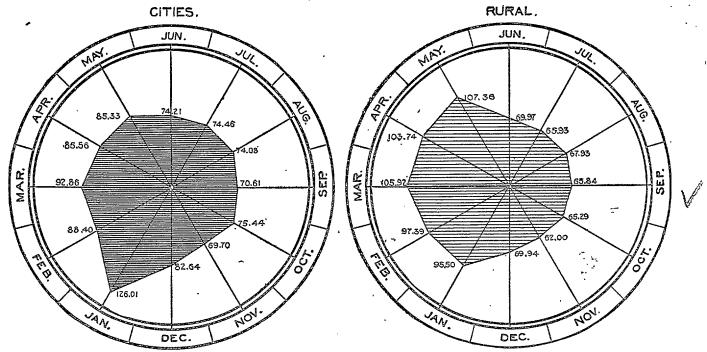

The geographical distribution of deaths from consumption by state groups, per 1,000 deaths from known causes in each group, is shown in map No. 20.

The following table shows, for the United States, the number of deaths from consumption in each month during the census year, and the proportion in each month per 1,000 deaths from this cause, with distinction of cities and of rural districts:

N		DEATHS.		PROPORTION IN EACH MONTH PER 1,000 TOTAL DEATHS.						
MONTHS.	United States.	Cities.	Rural.	United States.	Cities.	Rural				
Total	102, 199	39, 727	62; 472

Unknown	1, 477	28	1,449	14.45	0. 70	23.19				

The relative proportion of deaths from consumption in each month in the cities and in the rural districts, as indicated in the preceding table, and the difference in the proportion of deaths in the two areas, are shown in the following diagram:

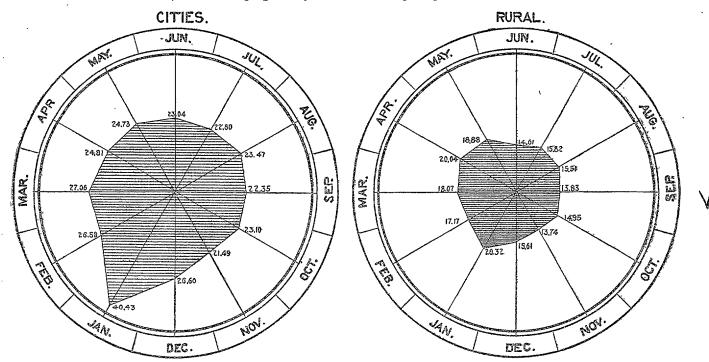

The preceding table and diagram indicate that the greatest proportion of deaths from this disease occurred in the months from January to May, but it must be remembered that the data for the earlier months in the census year were much more incomplete than those for the later months.

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from consumption in each month during the census year and the death rates per 100,000 of population, with distinction of cities and of rural districts:

\sim		DEATHS.					
WONTHS.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
June	2,059	1, 442	617	19.64	23.04	14.61

Мау	2, 345	1,548	797	22.37	24.73	18.88	

The death rates in each month, as given in the preceding table, and the relative magnitude of the rates in the cities and the rural districts, are shown graphically in the following diagram:

It will be seen from this table and diagram that the heaviest death rate from consumption occurred in the month of January and the lightest in the month of November, both in the cities and in the rural districts. It is probable that the epidemic of influenza which prevailed in January, 1890, had some effect in increasing the number of deaths of persons affected with consumption.

For further details with regard to death rates from consumption in large cities, see Part II of this report, page 96.

The following table shows, for the registration area and some of its subdivisions, the death rate of males from consumption per 100,000 males engaged in each specified occupation and class of occupations:

This table shows that in the registration area the average death rate of males from consumption per 100,000 males engaged in the specified occupations was 249.65. It was below this average in the professional class (197.81), the clerical and official class (211.66), the mercantile and trading class (176.44), and the class engaged in agriculture and transportation and other outdoor occupations (168.04); and above the average in all other classes, being highest in the laboring and servant class (388.14).

Taking the principal occupations included in those classes in which the number of persons engaged and the number of deaths among the same in the registration area are sufficient to give reliable results, the death rate from this cause was highest among sailors (613.40), eigar makers and tobacco workers (454.55), laborers (424.09), marble and stone cutters (398.73), and saloon keepers (332.70); and lowest among steam railroad employés (110.12), commercial travelers and salesmen (127.89), farmers and farm laborers (128.02), merchants and dealers (187.54), carpenters and joiners (205.67), mill and factory operatives (textiles, 223.52), and machinists (225.50).

The death rates for the whole registration area, so far as the relation of occupation is concerned, are probably too low, owing to the deficiency of the return of occupation of decedents in the cities in the nonregistration states in which the death rate from consumption among males in all occupations reported was 204.45 per 100,000, while in the cities of the registration states it was 363.60. A very considerable part of this difference is due to the locality of the cities, but the return of occupation of decedents was decidedly less complete than in the registration states.

Of the principal occupations in the registration states the highest death rate of males from consumption occurred among laborers in the cities, being 621.53 per 100,000, and the lowest rate occurred among farmers and farm laborers in the rural districts, being 106.26 per 100,000.

The following table shows, for the registration area and some of its subdivisions, the death rate of females from consumption per 100,000 females engaged in each specified occupation:

	Regis-	REGIS	TRATION S	fates.	Regis- tration	
OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.	
All occupations	221.41	273. 62	284.38	247. 47	146, 30	
Musicians	54.63	62.17	90. 47		43. 97	١
Teachers	130.31	131.33	167.61	94.38	128. 24	
Accountants	103, 03	130.40	127, 32	151. 35	69.00	
Laundresses	123, 45	142.45	162. 21	20.10	112.52	
Nurses	153.52	120.67	139, 55	68.31	201.12	
Servants	302.76	383.02	408.72	330.50	190.01	ĺ
Mill and factory operatives	189, 01	211.28	224.80	180.72	101.13	1
Milliners, dressmakers, etc	115. 21	140.03	134.36	158.79	81.66	

It will be seen from the above table that the death rate from consumption among females engaged in the selected occupations in the registration area was 221.41 per 100,000, being highest in the registration cities of the registration states (284.38), and lowest in the registration cities of the nonregistration states (146.30). In each area the death rate of females from consumption was less than the corresponding death rate for males having specified occupations, except in the rural part of the registration states, in which the death rate from consumption was 247.47 for females and 161.15 for males.

In the registration states the highest death rate from consumption among females occurred among servants, being 383.02 per 100,000. The death rates of females in all other specified occupations in this area were below the average rate from this cause, those of mill and factory operatives being 211.28, of milliners, dressmakers, seamstresses, etc., 140.03, and of accountants, bookkeepers, clerks, and copyists, 130.40. In every occupation specified above for the registration states the death rates of females from consumption were less than the corresponding rates for males.

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths of males due to consumption per 1,000 deaths from all causes among males engaged in each specified occupation and class of occupations:

This table shows that in the United States as a whole the proportion of deaths of males due to consumption per 1,000 from all causes was 171.60. The proportion was below the average for the professional class (157.84), the mercantile and trading class (167.76), and the class engaged in agriculture, transportation, and other outdoor occupations (137.54); and was above the average for all other classes, being highest in the clerical and official class (260.60).

In the registration states the proportion of deaths due to consumption per 1,000 deaths from all causes among males engaged in the specified occupations was 202.13; it was below the average for those in the mercantile and trading class (167.74), in which it was almost identical with the proportion for the United States as a whole; and for those engaged in agriculture, transportation and other outdoor occupations (133.44); and was above the average in all other classes. The greatest proportion in this area, as in the United States, occurred in the clerical and official class (285.49).

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States the proportion of deaths due to consumption per 1,000 deaths from all causes among females engaged in each specified occupation:

	TT. 14. 3	Regis-	REGIS	tration si	TATES.	Regis- tration	Remain- der
occupations.	United States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
All occupations	233. 56	239. 49	239. 72	265. 63	188.44	238.88	230. 79
Musicians	369,86	250,00	260. 87	315. 79		230.77	409.09
Teachers	350.01	301.84	302.79	345, 07	247.71	300.00	369.66
Accountants	366. 91	391.81	413.28	400.00	500.00	350.88	327.10
Laundresses	249.81	216.46	212.50	224, 22	58.82	219.44	274.80
Nurses	144.85	133.13	108.11	134. 92	50.85	166.67	154.43
Servants:	220.92	214. 37	210.67	237. 99	163.28	225.57	224, 02
Mill and factory operatives	391.60	404.73	399.21	398. 23	402.01	456. 79	329.61
Milliners, dressmakers, etc	321.83	324. 59	317. 28	318. 53	313.83	340, 56	344.17

It will be seen from this table that there was very little variation in the proportion of deaths due to consumption per 1,000 deaths from all causes among females engaged in all selected occupations in the different areas. The average proportion of deaths due to this cause among females in selected occupations in the United States was 233.56. In the registration area the proportion was 239.49, and in the nonregistration area it was 230.79. The greatest proportion of deaths among females due to this cause in the United States occurred among mill and factory operatives (391.60), musicians and teachers of music (369.86), and accountants, bookkeepers, clerks, and copyists (366.91); and the least proportion among nurses and midwives (144.85) and servants (220.92).

SCROFULA AND TABES.

The total number of deaths reported as due to scrofula and tabes in the United States during the census year was 4,121, of which 2,071 were of males and 2,050 of females. In the registration area the number of deaths reported as due to these diseases was, males, 651; females, 658; total, 1,309, giving a death rate of 6.66 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from scrofula and tabes during the census year in each of four age groups per 100,000 population, of corresponding ages, with distinction of sex:

AREAS.	UN	DER 5 YE	ARS.	5	ro 15 ye	ARS.	15	TO 45 YI	ears.	45 YI	EARS AND	OVER.
ALUAG	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	31.84	33. 20	30.45	3.32	3.31	3.33	3.36	2.99	3.72	5. 52	5.56	5. 48
Cities	36: 64	38: 20	35.05	3.58	3.73	3.43	3.57	3. 20	3: 95	5.09	5.97	4.24
States	28.07	27.58	28.58	2.44	2.42	2,46	2.41	T. 97	2.83	4.92	4, 35	5.45
Cities	36.24	35.09	37.40	2.41	2.72	2.11	2.31	1.79	2.81	3.53	4.02	3.08
Rural	14.07	14.80	13.32	2.48	1.99	2.99	2.57	2.28	2,87	6.43	4.70	8.14
Cities in nonregistration states	36. 99 ₅	40.87	33.02	4.60	4.61	4.58	4.73	4.43-	5,0⊈	6.73	7.92	5.53
Cities of 100,000 population and upward	35.77	36.85	34.67	2.49	2.50	2:49	3.15	2.77	3.54	4.09	4.66	3.53
Metropolitan district	28.05	28.48	27. 61	0.80	1.28	0.32	1.48	1.39	1.56	2.73:	1.48	3.93

It will be seen from this table that the highest death rate from these causes occurred in children under 5 years of age, and that in this group it was a little higher for males (33.20) than for females (30.45), and more than twice as high in the cities of the registration states (36.24) as in the rural districts of the same states (14.07). In children from 5 to 15 years of age the death rate from these diseases in males (3.31) was about the same as for females (3.33), and the death rate in the rural districts (2.48) was about the same as in the cities in the registration states (2.41). In the age group 45 years of age and over the death rate in the rural districts (6.43) was decidedly higher than it was in the cities of the registration states (3.53).

The following table shows, for each of the registration states and for their sum, the death rates from scrofula and tabes during the census year per 100,000 of population, with distinction of sex, and of cities and rural districts:

	A	GGREGATE		,	MALES.			FEMALES.	
registration states.	Total.	Cities.	Rural.	Total.	Cities	Rural.	Total.	Cities.	Rural.
Total	5.44	6.00	4. 57	5.09	5, 85	- 3.96	5.78	6.15	5, 19
Connecticut	6.30	6, 44	6.19	6.49	8.54	5-0G	6. 1.1	4.43	7.32
Delaware	2.37	3, 26	1.87	3.5t	3. 25	3, 65	1.21	3.27	
District of Columbia	12.59	12.59		11.86	11.86		13.24	13.24	
Massachusetts	7.28	7.58	6.30	6.99	7.24	6.17	7.56	7.90	6.42
New Hampshire	7.97	6. 33	8.65	6.97	7.67	6.69	8.95	5.14	10.64
New Jersey	5.33	6, 23	4.15	4.86	5.92	3.49	5.80	6. 53	4.83
New York	4.15	4.56	3.49	3.80	4.46	2.75	4.50	. 4.66	4.25
Rhode Island	8. 39	9.50	6.88	6.55	7.30	5.54	10.14	11.52	8.19
Vermont	5.41	4.14	4.60	6. 50	14.76	5.78	4.29	13.56	3.37

It will be seen from this table that the highest death rate from scrofula and tabes occurred in the District of Columbia (12.59), which was due mainly to the large proportion of colored population in that area. Excluding this, the death rate from these diseases was highest in Rhode Island (8.39), and lowest in Delaware (2.37). In the rural districts, it was highest in New Hampshire (8.65). It was nearly the same among males (5.09) as among females (5.78).

The combined relations of age and race to the death rates from scrofula and tabes are indicated in the following table showing the number of deaths in each of four age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the State of New Jersey for the census year.

COLOR AND BIRTHPLACES OF MOTHERS.	UNDER 5	5 YEARS.	5 TO 15	YEARS.	15 TO 45	5 YEARS.		RS AND ER.
noihems.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	148	30, 52	11	1. 27	53	2. 21	28	3.46
Colored	28	178. 56	7	21.60	5	4.85	1	3.52
Birthplaces of mothers (white):								•
United States	74	29.96	7	1.71	19	2.48	12	4.09
Ireland	20	30. 29	1	0.66	11	1.77	7	3, 46
Germany	26	32.41			9	1.64		<i></i>
Italy	7	46.56						

It will be seen from this table that in children under 5 years of age the death rate from scrofula and tabes was nearly six times as high among the colored (178.56) as among the whites (30.52), and this difference was still greater among the age group from 5 to 15 (colored, 21.60; whites, 1.27). Among the whites, in children under 5 years of age the death rate was highest in the children of mothers born in Italy (46.56) and lowest in the children of mothers born in the United States (29.96).

The following table shows the proportion of deaths due to scrofula and tabes, at certain ages and groups of ages, per 1,000 deaths at all ages from these causes, in 1880 and in 1890, with distinction of sex:

	18	80	18	90		18	80	18	390

The irregularity of these diagrams indicates the uncertainty and small value of the ratios in the table to which they correspond.

The following table shows, for each grand group, the proportion of deaths due to scrofula and tabes during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

GRAND GROUPS.	Total.	RU	RAL.	СІТ	ies.
GRAND GROUPS.	10041.	Males.	Females.	Males.	Females.
1. North Atlantic Coast region	3.94	3.74	5.62	3.03	4.13
2. Middle Atlantic Coast region	2.47	3.12	3.50	2. 21	2.35
3. South Atlantic Coast region	8.12	8.09	5.92	10.24	11.81

20. Cordilleran region	4.05	4.11	4.25		3.86
21. Pacific Coast region	3.79	4. 35	4.51	3.05	3,77

It will be seen from this table that the proportion of deaths due to scrofula and tabes to deaths from known causes was greatest in the south and west, which is probably due to a considerable extent to the fact that these diseases are more prevalent among the colored than among the whites.

HYDROCEPHALUS.

The great majority of the deaths reported as due to hydrocephalus were probably due to tubercular meningitis. The total number thus reported in the United States during the census year was 4,338, of which 2,468 were of males and 1,870 of females. In the registration area the number of deaths reported as due to this disease was, males, 1,724; females, 1,309; total, 3,033, giving a death rate of 15.43 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from hydrocephalus during the census year in each of four age groups per 100,000 population of corresponding ages, with distinction of sex:

A TOTAL C	UN	der 1 ve	AR.	UN	DER 5 YEA	rs.	5 :	ro 15 yead	RS.	15 YI	ears and (over.	
areas.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	
Registration area	315. 12	370, 62	258. 11	125. 67	141.41	108, 39	8.54	9,07	8.00	1.42	1.70	1.15	,

Cities of 100,000 population and upward	379.96	462. 20	295.66	152.32	174.87	129.34	10.36	11.73	8.99	1.67	1.95	1.39	
Metropolitan district	579.83	696.75	459, 61	227.68	266, 73	188.31	12.03	13.11	10.94	2.17	3.00	1,36	

It will be seen from the preceding table that the highest death rate from hydrocephalus occurred in-children under 1 year of age (315.12), and that the rate for those 15 years of age and over (1.42) was insignificant. In infants under 1 year of age the death rate from this cause was higher in males (370.62) than in females (258.11), and in the registration states it was more than twice as high in the cities (470.20) as in the rural districts (203.63). It was highest of all in the metropolitan district (579.83).

The combined relations of age and race to the death rates from hydrocephalus are indicated in the following table showing the number of deaths in each of four age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	under	1 YEAR.	UNDER 5	YEARS.	5 TO 15	YEARS.	15 YEAR	
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	593	566.29	1,091	224.97	109	12.63	72	2. 25
Colored	24	669.46	41	261.46	8	. 24.69	4	3.04
Birthplaces of mothers (white):					[
United States	301	571.79	533	215.78	48	11.74	12	1,13
England and Wales	15.	412.31	. 29	169.92			. 5	3.08
. Ireland	84	588.11	168	254.45	25	16.59	18	2.19
Germany	98	585.77	158	196.95	22	13.67	17	2.33
Italy	15	405.84	35	232.79	2	11.90	3	5.06

It will be seen from this table that the death rate from this disease in children under 5 years of age was higher among the colored (261.46) than among the whites (224.97), and that among the whites it was highest in the children of mothers born in Ireland (254.45) and the children of mothers born in Italy (232.79); and lowest in the children of mothers born in England and Wales (169.92) and the children of mothers born in Germany (196.95), the rate for the children of mothers born in the United States being 215.78 per 100,000 of population under 5 years of age.

The following table shows the proportion of deaths due to hydrocephalus, at certain ages and groups of ages, per 1,000 deaths at all ages from this cause in 1880 and in 1890, with distinction of sex:

	18	80	. 18	90		18	80	18	990
. AGES. :	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females.

4 years	25,95	27.18	29.71	46, 80	70: to: 75 years	3,77	1.54	3,26	1.08
		1 []	75 to 80 years	2.09	2.,56	204	- 0.54
5 to 10 years	56.51	72.82	80.59	95.75	80-to 85 years	1.67	1.54,	0.,41	1.08
10 to 15 years	18,84	17.95	2L.16	27.43	85 to 90 years		0.51	0.41	0.54
15 to 20 years	7.53	8.72	14.25	12,91,	90-to 95 years	0.42	0.51		
20 to 25 years	5.44	8.21	12:62	13,45	95 years and over		0.51		
25 to 30 years	5.44	5, 64	12.62	8:07					
30 to 35 years	4.60	7.18	5. 29	6.46	15 to 45 years	33.90	38.47	59.44	53, 80
35 to 40 years	6.70	5,13	. 7.33	9.68.	45 to 65 years	12.56	10.25	13.85	10,23
40 to 45 years	4.19	3,59	7.33	3,23	65 years and over	9; 63;	9.22	8.97	4,85

It will be seen from this table that about 80 per cent of all the cases of deaths from hydrocephalus which occurred in 1890 were among children under 5 years of age, the proportion being somewhat less than in 1880, when it was about 86 per cent.

The following table shows, for each grand group, the proportion of deaths due to hydrocephalus during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

GRAND GROUPS.	Total.	RUI	RAL.	CIT	ies.
GRAND GROUPS.	Total.	Males.	Females.	Males.	Females.
1. North Atlantic Coast region	10, 70	7.48	8. 12	12.76	11.64
2. Middle Atlantic Coast region	9.71	5.69	5.52	11.76	9.41
3. South Atlantic Coast region	2.05	3.11	0.63	2.16	2.81
4. Gulf Coast region	2.47	2.87	0.91	3.43	2.54
5. Northeastern hills and plateaus	5.78	5.03	4.97	9.70	4.89
6. Central Appalachian region	4.39	4.07	4.16	5. 73	5. 18
7. Region of the Great Northern Lakes	4.92	2.92	3.50	6. 13	5. 29
8. Interior plateau	3.93	2.51	2, 22	6. 29	4.39
9. Southern Central Appalachian region	2.65	2.46	2.73	1.78	4.71
10. Ohio River belt	5, 52	3.92	4.43	7.66	8.47
11. Southern Interior plateau	1.39	1.62	1. 25		
12. South Mississippi River belt	1.99	1.33	2.34	2.23	4.77
13. North Mississippi River belt	5.68	4.28	3.33	8.36	6.92
14. Southwest Central region	2.87	3.38	2.11	4. 32	4.34
15. Central region, plains and prairies	3.52	3.56	2.82	7. 23	4.44
16. Prairie region	3.17	3.75	2, 44	3.54	5.18
17. Missouri River belt	3.88	3.07	3.02	6. 29	4.82
18. Region of the Western plains	3.86	3, 61	2.87	5.32	5.67
19. Heavily timbered region of the Northwest	3.58	3.30	3.89		
20. Cordilleran region	3.05	2.66	3, 48	5. 25	3.86
21. Pacific Coast region	4.45	4.12	5. 20	4.57	4.04

It will be seen from this table that the greatest proportion of deaths due to hydrocephalus occurred in the North Atlantic Coast region, both in the rural districts and in the cities, and next to this in the Middle Atlantic Coast region.

The following table shows, for each of the registration states and for their sum, the death rates from hydrocephalus during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

		AGGREGATE			MALES.			FEMALES.	
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	17. 46	23.45	8. 30	19.95	27.77	8.39	15.02	19.34	8. 20
Connecticut	14. 20	18.37	11. 24	14.88	21. 67	10.13	13.54	15.18	12.35
Delaware	3.56		5.60	2.34		3.65	4.82		7.65
District of Columbia	14.76	14.76]. 	18. 25	18. 25		11.59	11.59	
Massachusetts	22.56	26.01	11. 26	25. 10	29.33	11.58	20.15	22. 91	10.94
New Hampshire	10.62	10.86	10.53	8.04	5.76	8.93	13.16	15.42	12.16
New Jersey	21. 32	24. 67	16, 93	24.00	27. 1 4	19.96	18.64	22. 25	13.85
New York	16.42	23. 83	4.45	19.72	29. 53	4.39	13.17	18.36	4.51
Rhode Island	20.55	22.99	17.19	22.02	26.08	16.63	19.16	20.16	17.74
Vermont	5.72	14.14	4, 93	5.91	22.15	4.49	5. 52	6.78	5.39

This table shows that the death rates from hydrocephalus were much higher in the cities than in the rural districts in the aggregate, and in every state except Delaware. The rate was highest in Massachusetts (22.56), New Jersey (21.32), and Rhode Island (20.55); and lowest in Delaware (3.56), Vermont (5.72), and New Hampshire (10.62).

CANCER AND TUMOR.

The total number of deaths reported as due to cancer in the United States during the census year was 18,536, of which 6,958 were of males and 11,578 were of females. The total number of deaths reported as due to tumor was 2,448. As it is impossible from the census data to distinguish the cases of tumor from those of cancer, they will be considered together in the first part of the following discussion, the total of deaths attributed to the two in the United States being 20,984. In the registration states the number of deaths reported as due to cancer was, males, 3,255; females, 6,155; and to tumors, males, 459; females, 568, making a total of 10,437 cases, giving a death rate from this cause of 53.09 per 100,000 of population. In 1890 the death rate per 100,000 of population from cancer in England and Wales was 67.5, in Ireland 45.7, in Scotland 60.6, in Italy 42.8, in Austria 52.8, and in Prussia 43.1.

During the 10 years 1880 to 1889 the death rates from cancer, per 100,000 population, were in England and Wales 57.5, in Ireland 39.5, in Scotland 57.0, in Norway 49.9, in Prussia 35.9, in Austria 42.9, in Saxony 73.2, in Massachusetts 54.2, in Connecticut 42.6, in Rhode Island 52.0, and in New Jersey 39.0.

The following table shows, for the registration area and some of its subdivisions, the death rates from cancer and tumor during the census year per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

•		•	,		WHITES.					COLORED.	
AREAS.	Aggre-					Native bor	a.				
	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.
Registration area	53. 09	53, 93	38.83	68.96	39. 60	58.62	17.85	93.34	36. 65	19. 15	53. 60
Cities	52. 18 56. 29	53.11 56.77	38. 45 38. 98	67.61 74.19	34. 52 45. 62	55. 80 62. 08	17. 28 18. 80	95, 90 89, 00	37. 12 35. 65	18. 25 19. 66	· 55, 22
Cities	56. 49 55, 99	57.01 56.42	38. 29 39, 99	74.87 73.12	40.03 52.40	62.45 . 61.79	18.34 20.06	92 43 78. 21	37.38 31.65	15. 60 28. 21	56.86 35.35
Cities in nonregistration states	48. 20 52. 99	49.27 53.60	38.61	60. 20	29.41	41.42	14.86	99.82	37. 05	18.96	54.75
Metropolitan district, 6 years	53. 85	53.54	86. 35	70.34	31. 12 29. 25	52, 32 50, 92	17. 41 15. 16	99. 23 94. 27	41.01 42.78	. 26,50	58.44

It will be seen from this table that the death rate from cancer and tumor was much higher among the whites (53.93) than among the colored (36.65); that it was much higher among females (whites, 68.96; colored, 53.60) than it was among males (whites, 38.83; colored, 19.15), and that the difference between the death rates of the colored and the whites was much greater in males than it was in females. The death rate from these diseases was much higher among the foreign born whites (93.34) than it was among the native born whites (39.60), which is mainly due to the much greater proportion of persons of advanced age in the foreign born population; among the native born whites having both parents native it was much higher (58.62) than it was among those having one or both parents foreign born (17.85). In the registration states the death rate from these diseases was slightly higher in the cities (56.49) than it was in the rural districts (55.99). In the cities of 100,000 population and upward it was slightly below the average for the registration area (52.99). The comparatively small difference in the death rates in the cities and in the rural districts is probably more than accounted for by the fact that many persons suffering from these diseases go from the rural districts to the large cities to have the benefit of the advice of distinguished surgeons and of hospital treatment.

The following table shows, for each of the registration states and for their sum, the death rates from cancer and tumor during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

		AGGREGATE	c.		MALES.			FEMALES.	
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
_ Total	56. 29	56. 49	55.99	38. 54	37.71	39.77	73.64	74.38	72.48
Connecticut	55. 21	52, 52	57.12	34.91	32.83	36.36	75. 12	71.49	77.75

Rhode Island	63. 10	62.98	63.26	43.45	42.76	44.35	81.70	81.58	81.87
Vermont	75. 81	53. 01	77.98	57. 29	44. 29	58.42	95.04	61.02	98.42

The comparative death rates due to cancer and tumor in the different counties of the registration states per 100,000 of population are shown in map No. 21.

MOR-PT I-22

It will be seen from the preceding table that in the registration states the death rate from cancer and tumor was highest in Vermont (75.81) and in New Hampshire (69.58), and was lowest in Delaware (35.02) and in the District of Columbia (49.91). It was higher in the rural districts than in the cities in all the states, except Delaware, New Jersey, and New York. The highest death rate of all from these causes was among females in the rural districts in New Hampshire (104.12). The number of deaths from these diseases among the colored in the individual states were for the most part too few to make the ratios derivable therefrom of any value, but it is noteworthy that the death rate from these diseases among the colored was much higher in the District of Columbia than it was in Delaware.

Of the 8,018 deaths from cancer and tumor in the whites in the registration area during the census year 2,826 were children of mothers born in the United States, 1,552 children of mothers born in Ireland, 1,176 children of mothers born in Germany, 396 children of mothers born in England and Wales, 196 children of mothers born in Canada, 132 children of mothers born in Scotland, 86 children of mothers born in Scandinavia, 62 children of mothers born in France, 42 children of mothers born in Italy, 23 children of mothers born in Bohemia, and 12 children of mothers born in Hungary.

• The following table shows, for the registration area and some of its subdivisions, the death rates from cancer and tumor among the whites during the census year per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.

Cities in nonregistration states	19.50	61.18	57, 20	84. 38	61.50	50.46	31, 21	43.04	73.49	63.60	44. 15	52.49
Cities of 100,000 population and upward	39. 33	57.47	65.40	83. 02	78.41	59.83	37. 15	89, 25	44.98	57.22	35. 87	43.21

It will be seen from this table that among the whites the death rate in the registration area was highest among those whose mothers were born in France (75.62), in Scotland (64.76), and in Ireland (58.35); and that it was lowest among those with mothers born in Canada (29.13), in Italy (29.99), and in Scandinavia (35.28). It was comparatively low in the children of mothers born in the United States (40.75), and in this class it was especially low in cities of nonregistration states (19.50).

The following table shows, for the registration area and some of its subdivisions, the death rates from cancer and tumor during the census year in each of five age groups per 100,000 population of corresponding ages, with distinction of sex:

_	UND	er 5 ye	ARS.	5 T	O 15 YE.	ARS.	15 T	O 45 YE	ARS.	45 1	TO 65 YE.	Ars.	65 YE.	ARS AND	OVER.

It will be seen from this table that the death rates steadily increased with advancing age, being for each 100,000 of those 65 years of age and over, 367.89; for those from 45 to 65 years, 171.32; for those from 15 to 45 years, 21.36; and for those between 5 and 15 years, 1.55. For those under 5 years of age the death rate (5.04) was higher than for those between 5 and 15 years of age, and it was also higher among males (5.93) than among females (4.13). The excessive proportion of deaths in females did not begin until after the age of 15.

The combined relations of age and race to the death rates from cancer and tumor are indicated in the following table showing the number of deaths in each of five age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF	under :	5 YEARS.	5 TO 15	YEARS.	15 TO 45	YEARS.	45 TO 65	YEARS.	65 YEA OVI		
MOTHERS.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	-
WhiteColored	23 .	4.74	12	1.39	585 26	24,43 25,20	1,281 30	196.18 129.13	688 12	442.09 232.24

Italy	ı		11		14	27.96	12	144.40	1.	105.04	

It will be seen from this table that the death rate from cancer and tumor was slightly higher among the colored than among the whites in the age group 15 to 45 years of age, but that in all the other groups it was decidedly higher among the whites. In the age group 65 years of age and over it was, for the whites, 442.09; for the colored, 232.24. In the age group 45 to 65 years of age among the whites the death rate from these diseases was highest among the children of mothers born in Bohemia (302.57); and was lowest among children of mothers born in Hungary (129.53), in Italy (144.40), and in the United States (148.88). In the age group of 65 years of age and over the death rate from these diseases was highest among children of mothers born in Hungary (609.76), in France (563.38), and in Germany (483.73); and was lowest among children of mothers born in Italy (105.04), in Canada (370.03), and in the United States (381.29).

Out of each 100,000 deaths from all causes in the United States during the census year 2,396.74 were reported as due to cancer and tumor:

In each 1,000 deaths from known causes in the United States during the census year in persons 45 years of age and over there were due to cancer and tumor, in the whites, 62.86; in the colored, 29.81; in the Chinese, 12.99; in the Indians, 14.49; and in the total population of the registration area, 62.28.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to cancer and tumor during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, nativity, and parental nativity:

		-			WHITE.		•			COLORED.	
**	Aggre-		,		1	Native bor	n. -

The preceding table indicates that the proportion of deaths due to cancer and tumor was but slightly less in the United States as a whole (26.00) than it was in the registration area (27.37); that in the United States as a whole it was more than twice as great among the whites (28.00) as it was among the colored (12.16), being nearly four times as great among the white males (20.54) as among the colored males (5.83), and nearly twice as great among white females (36.44) as among colored females (18.75).

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to cancer and tumor among the whites during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign conntries.

Cities of 100,000 population and upward.	20. 87	32.04	25. 43	43.86	42, 94	32.14	17.73	22. 49	19.61	19.92	12. 23	19, 90

The following table shows the proportion of deaths due to cancer and tumor, at certain ages and groups of ages, per 1,000 deaths at all ages from these causes, in 1880 and in 1890, with distinction of sex:

	15	880	18	890		18	880	18	390
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females	Males.	Females
Total under 5 years	45. 61	23. 21	21.74	11.90	35 to 40 years	37. 07	68.76	39. 44	63.08
Under 1 year	24.17	10, 25	9, 23	5, 06	40 to 45 years	48.70	93.80	52.72	91.86
1 year.	6.00	4.10	3.03	2.18	45 to 50 years	75.60	121.11	73.83	111.61
2 years		3, 67	2.65	2.10	50 to 55 years	106.49	125.00	94.31	129.50
3 years	4. 91	2.81	3. 67	1.09	55 to 60 years	108.30	111.08	114.03	112.39
4 years	5. 27	2.37	3.16	1.48	65 to 70 years	134. 47 118. 12	107.30 93.16	132.62 139.06	95.05
5 to 10 years	11.08	3.78	6.70	4.28	70 to 75 years	101.76	72.75	107.96	76.07
10 to 15 years	9.09	2.70	6.07	3.42	75 to 80 years	70.69	54.51	72.82	53. 12
15 to 20 years	10, 90	7.56	10,49	7.08	80 to 85 years	41.25	29.15	41.21	31,50
20 to 25 years	14.17	12.95	13.53	10.34	85 to 90 years	17.81	10.79	16.31	14.31
25 to 30 years	15. 16	20.62	21.74	20.61	90 to 95 years	5.09	3.89	4.68	4.74
30 to 35 years	27.44	36.05	29.33	40.37	95 years and over	1.09	1.83	1, 39	1.94

It will be seen from this table that both in 1880 and in 1890 the proportion of deaths due to these diseases increased from the age of 15 to about the age of 65, after which it diminished, but the diminution in the higher ages was due to the fact of the smaller proportion of population of the higher ages; as a matter of fact, the mortality from cancer and tumor, in proportion to population, increases steadily up to the age of 95 years.

The comparative proportions of deaths of males and females in each age group due to cancer and tumor during the census year are shown in the following diagram:

The geographical distribution of deaths from cancer and tumor in the several grand groups is shown in map No. 22.

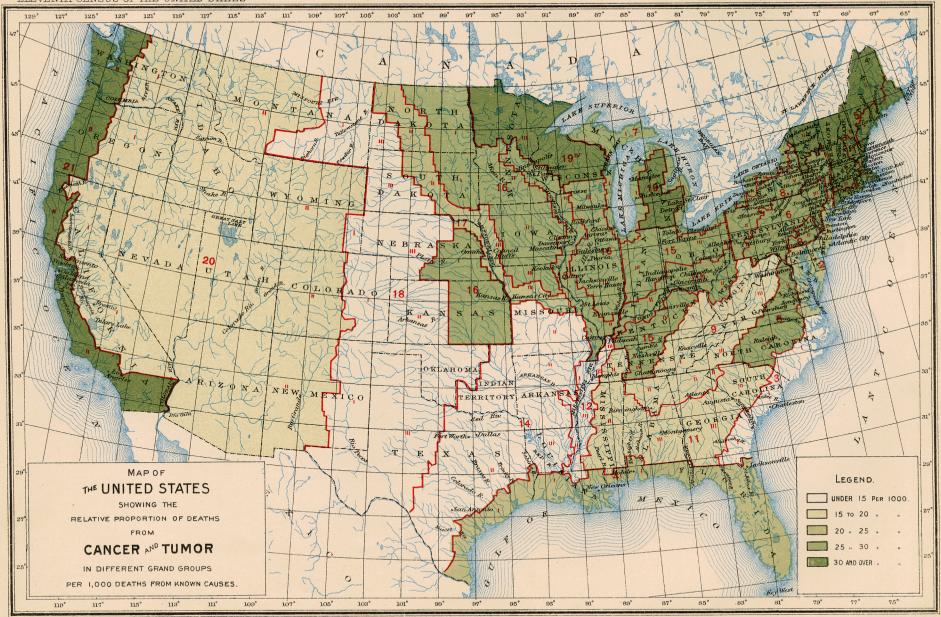

The following table shows the death rates from cancer and tumor per 100,000 of population in the registration states during the census year, with distinction of conjugal condition, sex, color, and general nativity:

						COLOR AND	NATIVITY			
CONJUGAL CONDI-	Aggr	egate.			WI	aite.				_
, TION.			To	otal.	Nativ	e born.	Foreig	n born.	Cole	ored.
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	8. 02 66. 43 196. 91	17. 34 100. 17 265. 53	8. 13 66. 96 200. 27	17. 56 101. 00 268. 43	6. 36 56. 64 159. 96	14. 61 94. 78 272. 25	16.42 78.94 253.12	31, 39 108, 35 245, 34	3, 76 41, 76 48, 92	- 8.03 61.17 179.08

The age distribution of the several classes of persons included in this table dominates these death rates, bearing in mind the fact that the death rates from cancer and tumor increase with advancing age. While the death rates among the colored were much lower than those among the whites, and especially of the foreign born whites, it is noticeable that the proportion of deaths from these diseases in colored females was relatively much greater among married and widowed, as compared with the single, than it was among the whites.

The following table shows the death rates from cancer and tumor in the registration area during the census year in each of certain age groups, with distinction of conjugal condition and of sex:

				AGE PE	RIODS.	•		
CONJUGAL CONDITION.	15 years	and over.	15 to 4	5 years.	45 to 6	5 years.	65 years	and over.
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	13.57	30. 11	6. 95	11.80	103.55	248.69	274.88	472.09
Married	65. 70	93.93	16.39	39.54	105.50	200.66	293.19	389.69
Widowed	183.37	234. 29	33, 09	66.44	155. 19	218.58	310.30	380.53

The preceding table shows that for those 15 years of age and over the death rate from cancer and tumor was much higher among the married (males, 65.70; females, 93.93) than among the single (males, 13.57; females, 30.11).

In the age group 65 years and over, being that most liable to these diseases, the death rate was highest among single females (472.09), being 389.69 for married females and 380.53 for widowed females.

The following table shows the death rate from cancer and tumor per 100,000 of population in each state group in the registration states, with distinction of sex:

	RA	ATE.
STATE GROUPS.	Males.	Females.
Connecticut:		1
Group 1	36.48	73.06
Group 2	32.14	78.73
Delaware	26.88	43.41
Massachusetts:]
Group 1	48.18	93.68
Group 2	33.26	72.81
New Hampshire:		1
Group L	40.79	96.49

65 years and over	32	94	3	4	~ 2	6		3	2	8	2	13	14	28	9	32

The great majority of these cases, and especially those reported as cancer, were inmates of hospitals in the larger cities in these states.

The comparatively large proportion of cases of cancer reported as having existed 5 years and over was probably composed chiefly of epithelioma and rodent ulcer of the lips and face. In the case of tumors, the similarly large proportion of cases reported as having existed 5 years and over was probably composed of cysts, lipomas, and fibromas.

The following table shows the number of persons reported as living and affected with cancer and tumor in the states of Massachusetts, New York, and New Jersey on the 1st of June, 1890, with distinction of sex and of certain age groups, and also the proportion in each age group per 1,000 of the total cases reported:

			NU:	MBER.					PROPO	ETION.		
AGE.		Males.			Females.			Males.			Females.	
	Total.	Cancer.	Tumor.	Total.	Cancer.	Tumor.	Total.	Cancer.	Tumor.	Total.	Cancer.	Tumor.
All ages	399	269	130	1,018	551	467						
Under 5 years	3		3	4	2	2	7. 52		23.08	3.93	3.63	4. 28
5 to 15 years	9	3	6	7	1	6	22.56	11.15	46. 15	6.88	1.81	12.85
15 to 45 years	65	29	36	284	107	177	162. 91	107.81	276.92	278, 98	194, 19	379.01
45 to 65 years	150	97	53	458	270	188	375.94	360. 59	407.69	419.90	490.02	402. 57
65 years and over.	172	140	32	265	171	94	431.08	520. 45	246. 15	260.31	310.34	201. 28

It will be seen from this table that the proportion of cases of cancer increased steadily with advancing age in males, 52 per cent of the total number being in persons 65 years of age and over. In females the greatest proportion of cases reported was in those from 45 to 65 years of age, being 49 per cent of the whole.

The proportion of tumors reported in persons from 15 to 45 years of age was much greater than was the case for cancer, both in males and females. In males the greatest proportion of tumors reported was in persons from 45 to 65 years of age, 40.77 per cent of the whole, the corresponding figure in females being 40.26 per cent.

CANCER.

The following remarks relate only to deaths reported as caused by cancer, tumors being excluded. They may be compared with the remarks on cancer, page evii, volume XII, Tenth Census Reports.

Table 10, Part IV, of this report shows the number of deaths reported as due to cancer in the United States, in the registration area, and in the nonregistration area during the census year, by conjugal condition, and also for each form, or locality of cancer, with distinction of sex, color, general nativity, parental nativity, and birthplaces of mothers, and of certain age groups.

Table 11, Part IV, shows for the same areas the number of deaths from cancer among males engaged in certain occupations and classes of occupations, with distinction of certain ages.

Table 12, Part IV, shows for the females engaged in certain occupations the same information as in the preceding table for males.

Table 12, Part I, gives for the United States and for the registration area the proportion of deaths from cancer at certain ages per 1,000 deaths at known ages, with distinction of sex, color, general nativity, parental nativity, and birthplaces of mothers, by conjugal condition, and also for each form or locality of cancer.

The total number of deaths reported as due to cancer in the registration area during the census year was 9,657, of which 3,332 were males and 6,325 were females. Of these deaths 47 occurred in children under 5 years of age, 28 being males and 19 females.

The following table shows, for the registration area, the death rates from cancer per 100,000 of population at all ages and in each of certain age groups, with distinction of sex, color, general nativity, parental nativity, and, for the whites, of birthplaces of mothers:

	g and a second				•

Hungary	34.37			20.01	200.00		
	34.37 24.99			22.68	115.87	118.55	143.47

This table shows the great importance of taking into consideration the relations of age and sex to death rates from cancer. It will be seen that in children from 5 to 15 years of age the death rates from this cause were so small as to be of no significance, and that in this age group there was practically no difference between the death rates of males and of females. In children under 5 years of age the death rates from cancer were about four times as high as in those from 5 to 15, but the total number of deaths is so small that the difference as shown between the two sexes has little significance. They appear to be slightly higher in males than in females, and in colored than in whites. In the age group 15 to 45 years the death rate from cancer was 18.58 per 100,000 of population, being 9.58 for males and 27.50 for females. In this age group it was higher in the colored (28.17) than in the white (18.04), the difference being greatest in the females (colored, 43.17; white, 26.62). In the age group 45 to 65 years the death rate from cancer was 161.96, and in those 65 and over it is 351.87. The death rate from cancer steadily increased with advancing age. In persons 45 years of age and over the death rate from cancer was much higher among females (256.65) than among males (151.89), and was higher among the whites (207.11) than among the colored (156.38), the difference being most marked among males (whites, 154.98; colored, 74.17). It was higher among the foreign born whites (212.40) than among the native born whites (192.99), but this difference was entirely among the males. In the females the death rate among the native born whites from this disease (255.58) was higher than in the foreign born whites (245.14). In the same age group, 45 years and over, the death rate

from cancer was higher in the children of mothers born in Germany (216.57) than in the children of mothers born in the United States (140.32) or in the children of mothers born in Ireland (199.39). The actual number of deaths from this disease in this age group in the children of mothers born in Canada, France, Scandinavia, Bohemia, Hungary, and Italy was so small that the rates derived therefrom have little scientific value. The difference in the death rate from cancer in males and females 65 years of age and over was much less than the difference by sex of those from 45 to 65 years of age. In this age group the death rate was decidedly higher among the whites (354.63) than among the colored (266.64).

The following table shows, for the registration area for the census year, the death rates from cancer per 100,000 of population in each of three age groups with distinction of conjugal condition, and of sex, color, and general nativity:

It will be seen from this table that in females from 15 to 45 years of age the death rate from cancer was much lower among the single (9.82) than among the married (36.99) or the widowed (62.44), but that in females from 45 to 65 years of age it was higher among the single (236.69) than among the married (192.20) or the widowed (207.45), and the same was true for those 65 years of age and over (single, 447.56; married, 371.43; widowed, 361.80). In males the death rate from cancer was somewhat higher among the married and widowed than among the single in each age group. As a rule the death rate was higher from this disease among the widowed than among the married, the exception being in foreign born females 65 years of age and over, in whom it was higher among the married (377.54) than among the widowed (319.72), which causes a corresponding difference in the figures for the aggregate and for the white females in this age group.

The following table shows, for deaths reported as due to cancer in the registration area during the census year, the proportion of deaths due to cancer of certain specified organs or regions per 1,000 of total deaths from cancer where the seat is known, with distinction of sex and of certain age groups:

It will be seen from this table that, in females, out of each 1,000 cases of cancer 312.46 were of cancer of the uterus, 210.36 of cancer of the stomach, 172.15 of cancer of the breast, and 108.26 of cancer of the liver; while in males the organs affected by cancer causing the greatest proportion of deaths were the stomach (404.19), the liver (144.61), the head, face, and neck (112.21), and the mouth, tongue, and throat (103.91).

The following table shows the proportion of deaths reported as due to cancer per 1,000 deaths from all known causes in the United States during the census year at all ages and in each of five age groups, with distinction of color and of sex:

	5 years.	5 to 15 years.	years.	45 to 65 years.	65 years and over.
Total 22:03	0: 50	1.60	16.02	67.12	43.79
Males 15.59	0.49	, 1.63	8.92,	42:27	38.25
Females29.31	0.52	1. 57.	23.24	97.90	50.05
White 23.86	0.52	1.62	17.06	71.30	45.89
Males 17. 26	0.51	1.77	9.66	45, 91,	40.58
Females 31.46	0.53	1.47	24.71	102.85	51.89
Colored 9.46	i, 0,38	1.46	10.48	30.68	18.42
Males 4.07	0, 30	0.87	4.78	10.01	10.10.
Females 15.13	0.46	2.00	15, 80	55.49	27.79

It will be seen from this table that out of each 1,000 deaths at all ages 22.03 were due to cancer, but that the proportion was much greater for females (29.31) than for males (15.59), and much greater for whites (23.36) than for colored (9.46). The proportion of deaths due to cancer in persons under 15 years of age was so small as to have no significance. It was greatest in the age group of 45 to 65 (67.12), being 42.37 for males and 97.90 for females. It must be remembered that the actual death rate from cancer was higher in persons 65 years of age and over than in those between 45 and 65; and the fact that in the age group 65 and over the proportion of deaths from cancer and deaths from all causes was less than in the age group 45 to 65, is merely due to the fact that there was a much smaller number of living persons at 65 years and over to furnish the deaths than was the case in the other group. In those 45 to 65 years of age the proportion of deaths from cancer was much greater for the whites (males, 45.91; females, 102.85) than for the colored (males, 10.01; females, 55.49).

The geographical distribution of deaths from cancer by state groups, per 1,000 deaths from known causes in each group, is shown in map No. 23.

CANCER OF THE BREAST.

The total number of cases of death from cancer of the breast reported in the registration area during the census year was 839, of which 28 were in males and 811 were in females. Of these but 1 death occurred in persons under 15 years of age, 163 in persons from 15 to 45 years of age (6 being males), and 670 in persons 45 years of age and over (22 being males).

The following table shows, for the registration area, for the census year, the death rate due to cancer of the breast per 100,000 of population, at all ages, and in each of three age groups, with distinction of sex, color, general nativity, parental nativity, and, for the whites, of certain birthplaces of mothers:

SEX, COLOR, NATIVITY, PARENTAL NATIVITY, AND BIRTHPLACES OF MOTHERS.	All ages.	15 to 45 years.	45 to 65 years.	65 years and over

Birthplaces of mothers (white):				
United States	3.55	1.03	11.82	20, 89
England and Wales	4.87	1.61	14.28	29.01
Scotland	4.91	0.90	15.98	28.76
Ireland	5.60	2.37	18.24	27.99
Germany	3.48	1.44	11.53	25.75

This table shows that the death rate from cancer of the breast was much higher in females (8.23) than in males (0.29) per 100,000 of population; that it was much higher for the age group 45 to 65 years (30.08) than at previous ages, and was still higher in those 65 years of age and over (females, 47.25; and males, 2.75). The death rate from this cause in the population of all ages was about the same in white females (8.24) as in colored females (8.04). In the colored females it was higher in the age group 15 to 45 (5.53) than in the white (2.95), while for those 45 years of age and over it was higher in the whites than in the colored. In the white females from 45 to 65 years of age the death rate from this cause was higher among the native born (30.70) than among the foreign born (28.40), and the same was true for those 65 years of age and over (natives, 50.81; foreign born, 39.95). Among the whites of both sexes from 45 to 65 years of age the death rate from cancer of the breast was highest among those whose mothers were born in Ireland (18.24), and lowest among those whose mothers were born in Germany (11.53) and those whose mothers were born in the United States (11.82). In those 65 years of age and over in both sexes the death rate from this cause was highest in those whose mothers were born in England and Wales (29.01), and lowest in the children of mothers born in the United States (20.89).

CANCER OF THE LIVER.

The total number of deaths in the registration area during the census year reported as due to cancer of the liver was 876, giving a death rate of 4.46 per 100,000 of population. Of these deaths 143 occurred in persons from 15 to 45 years of age, and 724 in persons 45 years of age and over. The death rate from this cause in this last group was 19.39 per 100,000 of population, 16.45 for males and 22.23 for females. In the age group 45 years of age and over, the death rate from this cause was higher in the whites (males, 16.76; females, 22.71) than among the colored (males, 8.56; females, 10.56; and among the whites it was much higher among the children of mothers born in Germany (31.27) than among the children of mothers born in Ireland (19.51) or in the United States (10.22).

The following table shows, for the registration area, for the census year, the death rates due to cancer of the liver per 100,000 of population, at all ages, and in each of 4 age groups, with distinctions of sex, color, general nativity, parental nativity, and, for the whites, of birthplaces of mothers:

The preceding table indicates that the death rate from cancer of the liver was higher in females (5.17) than in males (3.73) per 100,000 of population, and this difference was especially more marked in those from 45 to 65 years of age (females, 18.76; males, 13.79) than in those from 65 years of age and over (females, 33.43; males, 25.97). In persons from 45 to 65 years of age the death rate from this cause was higher among the whites (16.55) than among the colored (10.12); this difference was still more marked in those 65 and over (whites, 30.64; and colored, 7.51). Among the whites 45 years of age and over it was higher among the foreign born than among the native born in both males and females. In persons from 45 to 65 years of age it was highest in the children of mothers born in Hungary (41.60), in France (31.33), and in Germany (26.48); and lowest in children of mothers born in the United States (7.22) and in Canada (7.20). In those 65 years of age and over the death rate from this cause was much higher in children whose mothers were born in Germany (51.51) than in the children of mothers born in Ireland (27.03) or in the children of mothers born in the United States (17.81).

CANCER OF THE UTERUS.

The total number of deaths in the registration area during the census year reported as due to cancer of the uterus was 1,472.

The following table shows the death rates due to this cause per 100,000 women in the registration area during the census year at all ages and in each of three age groups, with distinction of color, general nativity, and parental nativity:

COLOR, NATIVITY, AND PARENTAL NATIVITY.	All ages.	15 to 45 years.	45 to 65 years.	65 years and over.
Total	14.93	9. 32	54.01	45. 91
White	14. 41	8.79	52. 29	44. 36
Native born	10.98	7. 51	51.71	43.71
Parents nativo	10.78	6.41	34.77	27.97
Parents foreign	4.55	5.06	50. 23	25.12
Foreign born	22, 92	11.18	50.79	41.77
Colored	24. 94	18.82	94.59	88. 36

It will be seen from this table that the date rate from cancer of the uterus was highest in women from 45 to 65 years of age (54.01), although it continued high in those 65 years of age and over (45.91) as compared with those from 15 to 45 (9.32). It was much higher in the colored than in the white in each group, and was about the same in the native born and in the foreign born in those over 45 years of age, but in those from 15 to 45 it was higher in the foreign born (11.18) than in the native born (7.51).

CANCER OF THE STOMACH.

The total number of deaths reported in the registration area during the census year as due to cancer of the stomach was 2,014, of which 1,023 were in males and 991 in females.

The following table shows the death rates from this disease per 100,000 of population in the registration area for the census year, at all ages, and in each of three age groups, with distinction of sex, color, general nativity, parental nativity, and, for the whites, of certain birthplaces of mothers:

SEX, COLOR, NATIVITY, PARENTAL NATIVITY, AND BIRTHPLACES OF MOTHERS.	All ages.	15 to 45 years.	45 to 65 years.	65 years and over.

Oanadii	49.80	1.07	21.01	10.0%

It will be seen from this table that the death rate from cancer of the stomach was very low in persons under 45 years of age, and that it was more than twice as high in persons 65 years of age and over as it was in persons between 45 and 65 years of age.

In those 65 years of age and over it was higher in males (86.65) than in females (73.99); much higher in whites (81.33) than in the colored (37.55), and higher among the foreign born whites (92.39) than among the native born whites (69.90).

It was very high in the children of mothers born in Germany (123.62), and much below the average in the children of mothers born in the United States (47.72).

CANCER OF THE HEAD, FACE, AND NECK.

The total number of cases of death from cancer of the head, face, and neck reported during the census year was 449, of which 284 were males and 165 were females. Six occurred in persons under 15 years of age, and 56 in persons from 15 to 45; 152 in persons from 45 to 65, and 232 in persons 65 years of age and over, excluding 6 unknown ages.

The following table shows, for the registration area, the death rates due to this group of cancers per 100,000 of population, at all ages and in each of four age groups, with distinction of sex, color, general nativity, and, for the whites, of birthplaces of mothers:

SEX, COLOR, NATIVITY, PARENTAL NATIVITY, AND BIRTHPLACES OF MOTHERS.	All ages.	15 to 45 years.	45 to 65 years.	45 years and over.	65 years and over.

Birthplaces of mothers (white):					
United States	1. 25	0.06	2.16	5.72	14.72
England and Wales	1	0.54	3.97	8.10	23. 21
Scotland	1.96			8.34	38. 35
Ireland	4.29	1.03	9.67	17.36	51. 16
Germany	1.84	0. 25	6.23	8.53	18, 03

It will be seen from this table that the death rate for this group of cancers was much higher in males (2.90) than in females (1.67). It was comparatively low in those under 45 years of age, and much higher in those 65 years of age and over (27.32) than in those from 45 to 65 years of age (5.27). For persons 45 years of age and over, in the whites, it was twice as high among the males (14.04) as among females (7.02), while in the colored it was more than twice as high among the females (7.99) as among the males (2.85); and among the whites it was somewhat higher among foreign born (males, 15.49; females, 7.99) than among the native born (males, 11.94; females, 5.44). In this age group it was highest among the children of mothers born in Ireland (17.36) and least among the children of white mothers born in the United States (5.72). The excessive death rate in the children of mothers born in Ireland may be in part due to the greater prevalence of short-pipe smoking among that class.

CANCER OF THE ABDOMEN.

The total number of deaths reported as due to cancer of the abdomen, excluding cancer of the stomach, atterus, liver, bladder, and ovaries, in the registration area during the census year was 574, of which 449 occurred in persons 45 years of age and over, 174 being in males and 275 in females.

The following table shows the death rates per 100,000 of population from cancer of the abdomen in the registration area, at all ages and in each of four age groups, with distinction of sex, color, general nativity, parental nativity, and, for the whites, of certain birthplaces of mothers:

Germany	2.78	1.10	9.35	11.54	20.60

It will be seen from this table that the death rate due to cancer of the abdomen was higher in females than in males; that it was comparatively low in persons under 45 years of age, and was much higher in those 65 years of age and upward than in those from 45 to 65. Taking the large group 45 years of age and over, among the whites it was decidedly higher among the females (14.70) than among the males (9.46); while among the colored it was about the same in males (9.98) as in females (9.33), and for each sex about the same as it was in the white males (9.46). Among the whites it was somewhat higher among the foreign born (males, 10.61; females, 15.37) than it was among the native born (males, 8.03; females, 13.36). It was highest in the children of mothers born in Scotland (16.67) and in England and Wales (13.70), and lowest in the children of mothers born in the United States (8.47). It was higher in the children of mothers born in Germany (11.54) than in the children of mothers born in Ireland (9.49).

мок-рт 1---23

CANCER OF THE MOUTH, TONGUE, AND THROAT.

The total number of cases of death from cancer of the mouth, tongue, and throat reported in the registration area during the census year was 338, of which 263 were in males and 75 were in females.

The following table shows, for the registration area, the death rate due to cancer of the mouth, tongue, and throat during the census year per 100,000 of population of all ages and for each of three age groups, with distinction of sex, color, general nativity, parental nativity, and, for the whites, of certain birthplaces of mothers:

Germany		0.51	7.79	12.88
Canada	1.93	0.56	11.53	21.50

It will be seen from this table that in those from 45 to 65 years of age the death rate from cancer of the mouth, tongue, and throat per 100,000 of population was much higher among males (10.10) than it was among females (1.86), the difference between the two sexes in this respect becoming less in those 65 years of age and over (males, 20.97; females, 7.35). It was much higher among white males from 45 to 65 years of age (10.39) than it was among colored males of the same age group (3.37). In this age group (45 to 65) it was much higher among the foreign born males (15.50) than it was among the native born (5.34), the same difference existing in those males 65 years of age and over (foreign born, 34.80; natives, 12.37). In white persons 45 to 65 years of age it was highest among children whose mothers were born in Canada (11.53), in Germany (7.79), and in Ireland (6.37); and lowest in children of mothers born in the United States (2.72). In those 65 years of age and over it was highest in the children of mothers born in Canada (21.50) and in Ireland (21.24), and lowest in children of mothers born in the United States (8.55) and in England and Wales (8.70).

CANCER OF THE LARYNX.

The total number of deaths reported as due to cancer of the larynx during the census year was 30, of which 27 occurred in persons 45 years of age and over, 21 being in males and 6 in females. Of these deaths 1 only was of a colored person (male) and 6 were children of German mothers. In whites of 45 years of age and over the death rate from this cause per 100,000 of population was, males, 1.13; females, 0.33.

CANCER OF THE EXTREMITIES.

In the registration area during the census year 37 deaths were reported as due to cancer of the upper extremities and 36 due to cancer of the lower extremities, 30 of the former and 24 of the latter being in persons 45 years of age and over. Fourteen of the former and 12 of the latter were in males, and 16 of the former and 12 of the latter in females. The difference in the death rates for cancer of the upper and lower extremities in the two sexes was very small, and has no significance in view of the smallness upon which they are based.

CANCER OF THE BLADDER.

The total number of deaths reported as due to cancer of the bladder in the registration area during the census year was 81, of which 72 were persons 45 years of age and over, 46 being in males and 26 in females. Two of the males were colored. In those 45 years of age and over the death rate per 100,000 of population for the whites was, males, 2.49; females, 1.43.

CANCER OF THE RECTUM.

The total number of deaths reported as due to cancer of the rectum in the registration area during the census year was 304, of which 156 were males and 148 were females, giving a death rate per 100,000 of population of 1.59 for males and 1.50 for females. Of the deaths from this cause but 1 occurred in persons under 15 years of age, 65 in persons from 15 to 45 years of age, namely, 31 males and 34 females; and 237 in persons 45 years of age and over, 125 being males and 112 being females.

The following table shows, for the registration area for the census year, the death rate due to cancer of the rectum per 100,000 of population, at all ages, and in each of three age groups, with distinction of sex, color, general nativity, parental nativity, and, for the whites, of certain birthplaces of mothers:

	1	1

	<u> </u>	<u> </u>		<u> </u>

It will be seen from this table that the death rate from cancer of the rectum per 100,000 of population was slightly higher in females than in males for those under 65 years of age, but that in those 65 years of age and over it was higher in males (14.23) than in females (9.36), and that in this last age group it was decidedly higher in

the whites (11.91) than it was in the colored (3.76), and among the whites it was higher in the foreign born (14.36) than it was in the natives (10.16). In the whites from 45 to 65 years of age it was highest in the children of mothers born in England and Wales (6.34), and lowest in the children of mothers born in the United States (2.53). In those 65 years of age and over it was highest in the children of mothers born in Scotland (28.76) and in Ireland (17.38), and lowest in the children of mothers born in the United States (7.60) and in Germany (10.30).

CANCER OF THE EYE.

The total number of deaths reported as due to cancer of the eye in the registration area during the census year was 21, of which 14 occurred in persons 45 years of age and over, 10 of these being in males and 4 in females, while 7 occurred in children under 15 years of age, 6 being males and 1 female. This is one form of cancer which is more likely to appear in children. No deaths from this form of cancer were reported among the colored people. The death rates per 100,000 of population of all ages from this cause were, males, 0.16; females, 0.05. In those 45 years of age and over they were, males, 0.54; females, 0.21.

The following table shows, for the registration area, the death rate of males from cancer, in the aggregate, and from cancer of certain specified organs or parts, per 100,000 males engaged in the specified occupations and classes of occupations:

It will be seen from the preceding table that the average death rate of males, in the registration area, from cancer was 34.55 per 100,000. The death rates were above the average in the professional class (37.15), the mercantile and trading class (36.16), the laboring and servant class (41.07), and the class engaged in agriculture, transportation, and other outdoor occupations, in which it was highest of all (44.64).

Of the principal occupations, the highest death rates from cancer occurred among sailors (115.80), miners (99.30), coopers (88.84), clergymen (72.43), gardeners, nurserymen, florists, and vine growers (66.13), farmers and farm laborers (58.14), tailors (53.89), physicians and surgeons (51.82), and brick and stone masons (50.58); and the lowest rates among servants (8.15), commercial travelers and salesmen (10.82), steam railroad employés (11.78), accountants, bookkeepers, clerks, and copyists (12.37), bankers, brokers, and officials of companies (12.39), painters, glaziers, and varnishers (17.68), and mill and factory operatives (19.88).

The average death rate from cancer of the stomach was 11.19 per 100,000, being above the average in the mercantile and trading class (11.93), the laboring and servant class (13.52), the class engaged in manufacturing and mechanical industries (11.24), and the class engaged in agriculture, transportation, and other outdoor pursuits (13.34).

The principal occupations in which the death rate from cancer of the stomach exceeded the average were coopers (40.38), sailors (34.43), clergymen (28.17), gardeners, nurserymen, florists, and vine growers (27.05), cabinet makers and upholsterers (22.63), and tailors (20.08); and those in which the mortality from cancer of the stomach was the lowest were commercial travelers and salesmen (1.27), lawyers (2.72), steam railroad employés (3.53), accountants, bookkeepers, clerks, and copyists (3.64), servants (3.71), and painters, glaziers, and varnishers (4.42).

The average death rate from cancer of the liver was 3.74 per 100,000, being above the average in the professional class, in which it was highest (8.68), the mercantile and trading class (3.79), the entertainment class (4.87), the laboring and servant class (4.43), and the class engaged in manufacturing and mechanical industries (4.61). It was lowest in the clerical and official class (0.64).

The principal occupations in which the highest death rates from cancer of the liver occurred were miners (28.37), tailors (15.85), physicians and surgeons (14.40), sailors (12.52), clergymen (12.07), brick and stone masons (10.59), and butchers (10.30).

The average death rate from cancer of the head, face, or neck was 2.81 per 100,000, and it was above the average only in the personal service, police, and military class (3.34), the laboring and servant class (4.43), and the class engaged in agriculture, transportation, and other outdoor occupations (3.77). The highest death rates from cancer of these parts occurred among miners (14.19), sailors (12.52), coopers (8.08), brick and stone masons (7.06), physicians and surgeons (5.76), and laborers (5.31).

The average death rate from cancer of the abdomen was 2.22 per 100,000, being highest in the personal service, police, and military class (3.34), the mercantile and trading class (3.22), and the class engaged in manufacturing and mechanical industries (2.73). In all other classes the rate was below the average.

Of the individual occupations the highest death rates from cancer of the abdomen occurred among bakers (11.00), miners (7.09), gardeners, nurserymen, florists, and vine growers (6.01), hucksters and peddlers (4.96), merchants and dealers (4.66), engineers and firemen, not locomotive (4.33), and coopers (4.04).

The average death rate from cancer of the mouth, tongue, and throat was 2.55 per 100,000, being above the average in the professional class, in which it was highest (4.82), the mercantile and trading class (3.98), the laboring and servant class (2.75), and the class engaged in manufacturing and mechanical industries (2.63).

Taking the principal occupations, the death rate was highest among coopers (12.11), gardeners, nurserymen, florists, and vine growers (12.02), sailors (9.39), physicians and surgeons (8.64), lawyers (8.15), and hucksters and peddlers (7.44).

The age distribution of the population engaged in the specified occupations and classes of occupations has the greatest influence upon the death rates from cancer, which increase steadily with advancing age. This distribution is indicated for the several occupations and classes in Section VII, showing the relation of occupation to the mortality at different ages and from different causes.

The following table shows, for the registration area, the proportion of deaths of males due to cancer, in the aggregate, and to cancer of certain specified organs or parts per 1,000 deaths from all causes among males engaged in each specified occupation and class of occupations:

		CANCER OF—						
OCCUPATIONS.	All cancers,	Stomach.	Liver.	Head, face, and neck.	Abdo- men.	Month, tongue, and throat.

The two preceding tables furnish data for comparing the relative proportions of deaths of males from cancer in the United States as a whole, for which the returns are too deficient to compute death rates, with those in the registration area, for which the death rates are given in a previous table.

It will be seen from these tables that the average proportion of deaths from cancer per 1,000 deaths from all causes in the United States as a whole (26.58) was somewhat less than in the registration area (28.13), being less in each class of occupations except the clerical and official class (United States, 18.83; registration area, 18.12), the entertainment class (United States, 21.14; registration area, 18.63), and the personal service, police, and military class (United States, 31.58; registration area, 23.52).

The proportion due to cancer of the stemach in the United States (9.28) was somewhat greater than the proportion in the registration area (9.11), and the proportion due to cancer of the head, face, and neck was also greater in the United States (3.16) than in the registration area (2.28).

The following table shows, for the registration area, the death rate of females from cancer in the aggregate and from cancer of certain specified organs or parts per 100,000 females engaged in the selected occupations:

		CANCER OF						
OCCUPATIONS.	All cancers.	Stomach.	Uterus.	Breast.	Liver.	Head, face, and neck.	Abdo- men.	Mouth, tongue, and throat.
Total	49. 77	7.52	11.31	4. 67	3. 45	1. 49	2.78	0.74
Teachers in schools. Laundresses. Nurses and midwives. Servants. Mill and factory operatives (textiles). Milliners, dressmakers, seamstresses, and sewing machine operators.	12. 46 24. 49 67. 83 80. 46 10. 50 21. 04	3. 40 3. 06 10. 71 12. 46 1. 11 2. 76	2. 27 10. 20 21. 42 18. 46 1. 11 4. 83	1. 13 2. 04 7. 14 7. 89 1. 11 2. 76	1. 13 1. 02 5. 84 1. 11 0. 69	1. 02 3. 57 2. 68	1.18 7.14 4.42 0.55 1.72	1.74

It will be seen from this table that the average death rate of females in the registration area was 49.77 per 100,000 of those engaged in the selected occupations, which was much greater than the corresponding rate for males (34.55). The highest death rates occurred among servants (80.46) and nurses and midwives (67.83), these being the only occupations in which the rate exceeded the average either in the aggregate or from cancer of any of the organs or parts specified.

The following table shows, for the registration area, the proportion of deaths of females due to cancer, in the aggregate, and to cancer of certain specified organs or parts per 1,000 deaths from all causes among females engaged in the selected occupations:

	P			c.	ANCER OF-	_		
OCCUPATIONS.	All cancers.	Stomach.	Uterus.	Breast.	Liver.	Head, face, and neck.	Abdo- men.	Mouth, tongue, and throat.
Total	53. 83	8. 13	12. 23	5.05	3.74	1. 61	3.00	0.81
Teachers in schools	28.87	7.87	5. 25	2.62	2.62		2. 62	
Laundresses	42.93	5. 37	17. 89	3.58	1.79	1.79		
Nurses and midwives	58.82	9. 29	18.58	6. 19		3.10	6. 19	
Servants	56.97	8.82	13.07	5.59	4.13	1.90	3.13	1.23
Mill and factory operatives (textiles)	22.49	2.37	2.37	2.37	2.37		1.18	
Milliners, dressmakers, seamstresses, and sewing machine operators	59. 28	7.77	13, 61	7.77	1.94	0.97	4.86	

The following table shows, for the United States, the proportion of deaths of females due to cancer, in the aggregate, and to cancer of certain specified organs or parts per 1,000 deaths from all causes among females engaged in the selected occupations:

				c.	ANCER OF-	_		•
OCCUPATIONS.	All cancers.	Stomach.	Uterus.	Breast.	Liver.	Head, face, and neck.	Abdo- men.	Mouth, tongue, and throat.
• Total	24. 86	6, 97	9, 06	5. 29	1.98	1.70	1.70	0.86
Teachers in schools	29.61	6. 07	5. 32	1.52	3.04		1. 52	
Laundresses	31.42	4.60	15, 33	3. 07	0.77	2. 30		
Nurses and midwives	47.35	5.57	16.71	5.57		1.39	2.79	
Servants	43.36	8. 23	9. 20	5.96	2.05	2.05	1.98	1.15
Mill and factory operatives (textiles)	20.51	1.96	1.96	3. 91	1.96		0.98	
Milliners, dressmakers, seamstresses, and sewing machine operators	52.84	9. 17	10.92	8.30	1.75	2.62	3.06	0.44

It will be seen from the two tables preceding that the average proportion of deaths of females due to cancer, in the registration area, was greater than in the United States as a whole and greater in each occupation except teachers (registration area, 28.87; United States, 29.61). The proportions of deaths due to cancer of the stomach, uterus, liver, and abdomen were greater in the registration area than in the United States; and those due to cancer

of the breast, head, face, and neck, and the mouth, tongue, and throat, were greater in the United States than in the registration area.

The greater proportions in the registration area were probably due to the fact that this area includes most of the large cities to which those affected with cancer resort for treatment, and also includes those states in which there was a larger proportion of population of advanced age.

DIABETES.

The total number of deaths reported as due to diabetes in the United States during the census year was 2,407, of which 1,527 were of males and 880 of females. In the registration area the number of deaths reported as due to this disease was, males, 618; females, 471; total, 1,089, giving a death rate of 5.54 per 100,000 of population. In England and Wales the corresponding death rate in 1890 was 6.50.

The following table shows, for the registration area and some of its subdivisions, the death rates from diabetes during the census year in each of two age groups per 100,000 population of corresponding ages, with distinction of sex:

	15	то 45 чел	RS.	45 YE	EARS AND	OVER.

Cities	2.67	3. 20	2, 15	18.61	20.00	17. 28
States	3.16	3.84	2.50	20.03	21.60	18.54
Cities	2.60	2.82	2.40	21.87	23, 18	20.68
Rural	4.13	5, 55	2.69	18.03	19.96	16.12
Cities in registration states	2.73	3.52	1.91	15.16	16.81	13.50
Cities of 100,000 population and upward	2.38	2.88	1.89	18.71	19.40	18.04
Metropolitan district	2. 22	2.43	2.01	23. 99	24.78	23. 22

It will be seen from this table that the highest death rate from diabetes occurred in persons 45 years of age and over, being for this age group in the registration area 18.42, as against 2.98 per 100,000 for persons between 15 and 45 years of age. In those of 45 years of age and over the death rate from this disease was higher among males (19.99) than among females (16.91). In the registration states it was higher in the cities (21.87) than it was in the rural districts (18.03); and it was highest of all in the metropolitan district, where it was 23.99.

The proportion of deaths reported as due to diabetes per 100,000 deaths from known causes in the United States during the census year was 286.13. In 1880 it was 200.48. In England and Wales it was 331.3 in 1890, and 200.30 in 1880.

The following table shows, for each grand group, the proportion of deaths due to diabetes during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

	m	RUI	RAL.	CIT	ies.	
GRAND GROUPS.	Total.	Males.	Females.	Males.	Females.	-
1. North Atlantic Coast region	4.02	6.75	4. 41	3, 08	3.28

21. Pacific Coast region	3.68	5.96	2.08	2.88	3.50	1

The number of deaths reported as due to diabetes in many of the grand groups was so small that the ratios have little value, and the same was the case in a still greater degree in regard to the comparative data for rural districts and cities and for males and females.

The following table shows, for each of the registration states and for their sum, the death rates from diabetes during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

	A	GGREGATE	i. [MALES.		FEMALES.			
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total	6. 37	5.74	7.34	7. 10	6.14	8. 52	5. 66	5, 36	6. 14	
Connecticut	8.04	8. 38	7.80	8. 66	8.54	8.75	7.43	8. 22	6.86	
Delaware	3.56	4.88	2.80	3.51	3. 25	3.65	3.62	6. 53	1.91	
District of Columbia	3.04	3.04		2.74	2 74		3.31	3. 31		
Massachusetts	6.92	5, 95	10.11	7.81	6. 28	12. 73	6.08	5.64	7. 55	
New Hampshire	6.64	6. 33	6.77	6, 97	3.84	8.18	6.32	8.56	5. 82	
New Jersey	5. 81	4.64	7.35	5.83	4.94	6.97	5. 80	4. 35	7. 78	
New York	5.90	5. 69	6. 24	6.72	6.34	7. 32	5. 10	5.08	5. 13	
Rhode Island	9. 26	8.50	10.31	10, 71	9.39	12.47	7.89	7.68	8.19	
Vermont	10.23	3.53	10.85	12.40		13.48	7.97	6.78	8. 09	

This table indicates that the death rate from diabetes was much higher among males (7.10) than it was among females (5.66); that it was higher in the rural districts (7.34) than it was in the cities (5.74). It was highest in Vermont (10.23), in Rhode Island (9.26), and in Connecticut (8.04); and was lowest in the District of Columbia (3.04), in Delaware (3.56), and in New Jersey (5.81).

The combined relations of age and race to the death rates from diabetes are indicated in the following table showing the number of deaths in each of certain age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	15 TO 45	YEARS.	45 YEARS AND OVER.		
COLOR AND DIBITIDADES OF MOTIVALIS.	Deaths.	Rate.	Deaths.	Rate.	
White	. 64	2. 67	190	23, 50	
Colored	. 2	1.94	7	24.65	
Birthplaces of mothers (white):					
United States	25	3.26	65	22.16	
England and Wales	. 4	3.46	17	36. 25	
Ireland	. 15	2.42	29	14. 32	
France	. 1	5. 23	6	77. 66	
Germany	. 13	2. 37	53	29, 28	

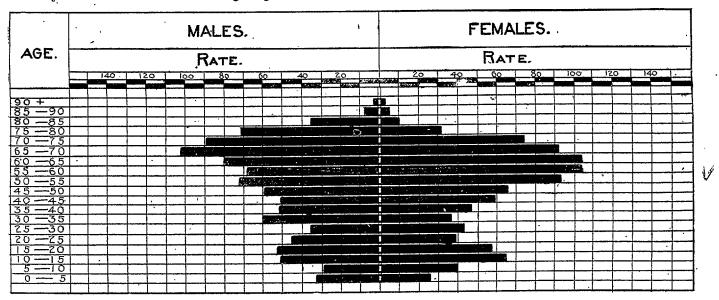

It will be seen from this table that in the age group of 45 years of age and over the death rate from diabetes was a little higher among the colored (24.65) than it was among the whites (23.50). Among the whites it will be seen that the highest death rate from this cause occurred in children of mothers born in France (77.66), in England and Wales (36.25), and in Germany (29.28); and the lowest in children of mothers born in Ireland (14.32).

The average age at death from diabetes was 47.66 years in the United States and 50.69 years in the registration states.

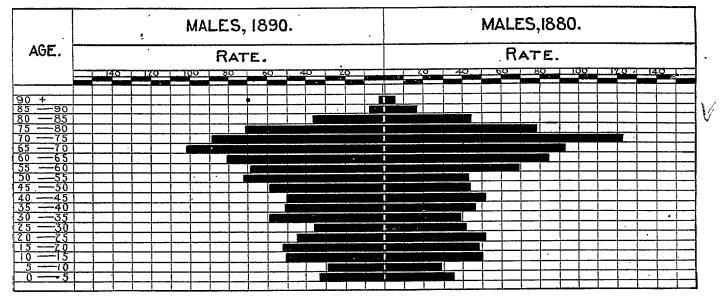

The following table shows the proportion of deaths due to diabetes, at certain ages and groups of ages, per 1,000 deaths at all ages from this cause in 1880 and in 1890, with distinction of sex:

	18	880	. 18	890	-	18	80	1890

The comparative proportions of deaths of males and females in each age group due to diabetes during the census year are shown in the following diagram:

The comparative proportion of deaths of males in each age group due to diabetes in 1880 and 1890 are shown in the following diagram:

DISEASES OF THE NERVOUS SYSTEM.

The total number of deaths reported as due to diseases of the nervous system in the United States during the census year was 89,974, of which 48,664 were of males and 41,310 of females, giving a ratio of 106.95 per 1,000 of all deaths from known causes. In 1880 the corresponding ratio was 108.21.

In the registration area the number of deaths reported as due to this class of diseases was, males, 25,958; females, 22,673; total, 48,631, being 120.29 per 1,000 of all deaths from known causes, and 247.37 per 100,000 of population living at the end of the year.

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the nervous system during the census year per 100,000 of population, with distinction of color and sex:

	SAP!		AGGREGATE			WHITE.			COLORED.	
0	AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
	Registration area	247. 37	264.83	230.00	243.00	261.00	225. 08	332. 90	340.95	325. 11
1	Cities	259.10	281.58	236. 91	253. 64	276.86	230. 68	347.16	358. 98	335. 83
	States	240. 28	253. 61	227. 26	239. 19	252.66	226.01	287. 02	294.88	279. 58
- 1	Cities	260.09	281.54	239. 65	258. 12	279.51	237.70	332.70	358. 91	309. 24
1	Rural	210.03	212.33	207. 70	210.54	213. 29	207.75	181.38	159. 85	204. 51
	Cities in nonregistration states	258. 19	281. 62	234. 28	249. 24	274.34	223.52	351. 19	358. 99	343.55

This table shows that the death rate from this class of diseases in the registration area was higher among males (264.83) than among females (230.00); that it was higher among the colored (332.90) than among the whites (243.00); and higher in the cities of the registration states (260.09) than in the rural districts of the same states (210.03).

The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to diseases of the nervous system during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

H. 71	ļ				WHITE.				l	COLORED.	
* *	Aggre-				3	Native born	1.			-	
Subon. AREAS.	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.
Registration area	127. 51	128. 47	130.35	126. 36	139. 03	146, 21	118. 47	101.40	1,15. 59	112. 43	118. 99
Cities	124, 76 124, 76	125.55 125.39	128.33 126.13	122, 39 124, 60	136. 93 133, 63	142. 62 146. 18	118. 13 111. 61	99. 98 103. 41	116, 22 105, 86	113.62 103 20	119.00

Cities in nonregistration states	131.63	133. 53	137. 29	129.08	148. 15	146.43	149. 15	98. 18	119. 16	115. 76	122.85

This table indicates that the proportion of deaths due to diseases of the nervous system per 1,000 deaths from known causes was greater among the whites (128.47) than among the colored (115.59); that among the whites it was greater among the native born (139.03) than among the foreign born (101.40). In the registration states it was greater in the rural districts (139.58) than in the cities (118.13).

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the nervous system during the census year at all ages and in each of six age groups per 100,000 population of corresponding age, with distinction of sex:

AREAS.	All ages.	Under 1 year.	Under 5 years.	5 to 15 years.	15 to 45 years	45 to 65 years.	65 years and over.

This table shows that the highest death rate from diseases of this class occurred in infants and young children; that it was comparatively low in those from 5 to 45 years of age, after which it rapidly increased until in those 65 years of age and over it was higher than in those under 5 years of age.

In infants under 1 year of age the death rate from diseases of the nervous system was higher among males (3,777.33) than among females (2,987.21). It was twice as high in the cities of the registration states (3,267.89) as in the rural districts of the same states (1,595.06). It was highest among males in the cities in the nonregistration states (4,880.27), and lowest among females in the rural districts of the registration states (1,435.31).

In persons from 45 to 65 years of age it was higher among males (307.87) than among females (263.45). It was higher in the cities of the registration states (339.35) than in the rural districts of the same states (212.86). It was highest of all among males in the metropolitan district (407.89), and lowest among males in the rural districts of the registration states (211.34).

The following table shows the death rates from diseases of the nervous system in the registration area during the census year in each of four age groups, with distinction of conjugal condition and of sex:

	AGE PERIODS.										
CONJUGAL CONDITION.	15 years	and over.	15 to 4	5 years.	45 to 6	5 years.	65 years and over.				
	Males.	Females.	Males.	Females.	. Males.	Females.	Males.	Females.			
Single	83. 07 205. 55 796. 60	74. 94 131. 66 540. 38	56. 12 60. 32 127. 65	41. 31 51. 26 78. 42	382, 23 253, 50 461, 25	325. 45 212. 04 306. 36	1, 509. 81 1, 174. 58 1, 603. 04	1, 465.31 1, 070.06 1, 219.84			

 $\sqrt{}$

This table shows that among persons 15 years of age and over the death rate from diseases of the nervous system was higher among the married (males, 205.55; females, 131.66) than among the single (males, 83.07; females, 74.94).

In the age group 45 to 65 years, among males, it was decidedly higher among the single (382.23) than among the married (253.50), and the same was the case among the females (single, 325.45; married, 212.04). In each of these age groups it was higher among the widowed males than among the single or married.

In the age group 65 years of age and over, among males, the death rate from these diseases was higher among the single (1,509.81) than among the married (1,174.58).

The following table shows the death rates from diseases of the nervous system per 100,000 of population, in the registration states during the census year, with distinction of congujal condition, sex, color, and general nativity:

1						COLOR AND	NATIVITY	·.		
CONJUGAL CON-	Aggı	regate.	White.							
DITION.			То	Total. Native bo			Foreig	gn born.	Colored.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.

V

The great differences shown in this table between the death rates of the single, married, and widowed, and between those of the native and foreign born whites of the different classes, are mainly due to differences in the age distribution of the corresponding groups of population.

For further details with regard to the death rates from diseases of the nervous system in large cities, see Part II of this report, page 128.

The following table shows, for the registration area and some of its subdivisions, the death rate of males from diseases of the nervous system per 100,000 males engaged in each specified occupation and class of occupations:

It will be seen from the preceding table that the gross death rate of males from diseases of the nervous system per 100,000 of males engaged in the specified occupations in the registration area was 132.72, being highest in the cities of the registration states (164.90); and lowest in the registration cities in the nonregistration states (93.21).

In the registration states as a whole the death rate of males from these causes was 158.96. It was above the average in the professional class (250.70), the mercantile and trading class (168.41); the personal service, police and military class (161.04), and the laboring and servant class (204.39); and was below the average in all other classes, being lowest in the clerical and official class (107.09).

Taking the principal occupations in the registration states, the highest death rates from diseases of the nervous system among males occurred among laborers (231.44), merchants and dealers (216.01), boot and shoe makers (206.88), carpenters and joiners (198.19), farmers and farm laborers (178.07), and tailors (177.30). The rates were below the average for painters, glaziers, and varnishers (146.44), accountants, bookkeepers, clerks and copyists (108.89), draymen, hackmen, teamsters, etc. (94.20).

Among other occupations the death rate from diseases of the nervous system was excessively high among sailors (492.75), physicians and surgeons (400.29), clergymen (332.82), lawyers (328.44), and was very much below the average for compositors, printers, and pressmen (82.26), bankers, brokers, and officials of companies (68.57), plumbers and gas and steam fitters (66.30), mill and factory operatives (60.81), and steam railroad employés (51.96).

No other marked differences appear between the cities and the rural districts of the registration states.

The following table shows, for the registration area and some of its subdivisions, the death rate of females from diseases of the nervous system per 100,000 females engaged in each specified occupation:

	Regis-	REGIS	TRATION ST	ATES.	Regis- tration
OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.
All occupations	95, 67	123. 72	103.38	173. 11	55. 32
Teachers	38. 53	39.76	37. 63	41. 95	36. 17
Laundresses	48. 97	67.04	71.37	40.19	38.58
Nurses	171.37	168.94	164. 18	182.15	174.89
Servants	162. 50	218.52	181. 23	293. 51	83. 83
Mill and factory operatives	28. 19	32. 56	32. 97	31.63	10.93
Milliners, dressmakers, etc	26, 56	35.01	31.76	45. 75	16.16

It will be seen from the above table that the average death rate of females from diseases of the nervous system among females engaged in the selected occupations in the registration area was 95.67 per 100,000, being considerably less than the corresponding rate for males in the same area (132.72). The highest death rate from these diseases among females occurred in the rural portion of the registration states (173.11), which was higher than the corresponding rate for males in the same area (150.59); and the lowest in the registration cities of the nouregistration states (55.32).

In the registration states the highest death rate from these diseases occurred among servants (218.52) and nurses and midwives (168.94); and the lowest among mill and factory operatives (32.56) and milliners, dressmakers, seamstresses, etc. (35.01).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States the proportion of deaths of males due to diseases of the nervous system, per 1,000 deaths from all causes, among males engaged in each occupation and class of occupations:

·		Regis-	REGIS	TRATION ST	PATES.	Regis- tration	Remain- der

It will be seen from the preceding table that the average proportion of deaths of males due to diseases of the nervous system per 1,000 deaths from all causes among males in the specified occupations was 94.50. The proportion of deaths due to these causes was highest in the rural part of the registration states (134.28), and lowest in the nonregistration area (86.22).

In the United States the proportion of deaths of females due to these causes was below the average among hotel and boarding house keepers, saloon keepers, etc. (92.83), laborers and servants (78.83), and those engaged in agriculture, transportation, and other outdoor occupations (87.51); and was above the average for all other occupations, being highest in the professional class (139.59).

Taking the principal occupations specified for the United States, the greatest proportion of deaths of males due to diseases of the nervous system occurred among lawyers (158.70), clergymen (156.92), physicians and surgeons (152.67), collectors, auctioneers, and agents (145.27), bankers, brokers, and officials of companies (144.17), and merchants and dealers (136.31); and the least proportion from these causes among servants (71.12), mill and factory operatives (75.09), iron and steel workers (76.57), and draymen, hackmen, teamsters, etc. (77.80).

The following table shows, for the United States, for the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths of females due to diseases of the nervous system, per 1,000 deaths from all causes, among females engaged in each specified occupation:

	United	Regis-	REGIST	ration st	ATES.	Regis- tration	Remain- der
OCCUPATIONS.	States.	tration area.	Total.	Cities.	Rural.		of the United States.
All occupations.	83. 87	103. 49	108.40	96. 56	131. 82	90.32	74. 71
Teachers	62, 26	89. 24	91.63	77.46	110.09	84. 62	51, 28
Laundresses	79, 69	85. 87	100.00	98. 65	117.65	75, 24	75.07
Nurses	114. 21	148.61	151, 35	158.73	135. 59	144. 93	86.08
Servants	93.45	115.06	120.19	105.88	145.60	99. 50	83, 20
Mill and factory operatives	58.59	60.36	61.52	58.41	70.35	49.38	50.28
Milliners, dressmakers, etc	66, 81	74.83	79. 32	75. 29	90.43	65. 02	60. 27

This table shows that the proportion of deaths of females due to diseases of the nervous system per 1,000 deaths from all causes among females engaged in the selected occupations in the United States was 83.87. The greatest proportion of deaths due to these causes occurred among nurses and midwives (114.21), and servants (93.45); and the least proportion among mill and factory operatives (58.59), and teachers (62.26).

The comparative proportions of deaths due to these causes among females in the several occupations in the nonregistration area corresponds very closely with those given for the United States.

APOPLEXY AND PARALYSIS.

The total number of deaths reported as due to apoplexy and paralysis in the United States during the census year was 31,569, of which 16,594 were of males and 14,975 of females. In the census enumerators' reports these two causes of death must be taken as being practically the same for all persons over 15 years of age.

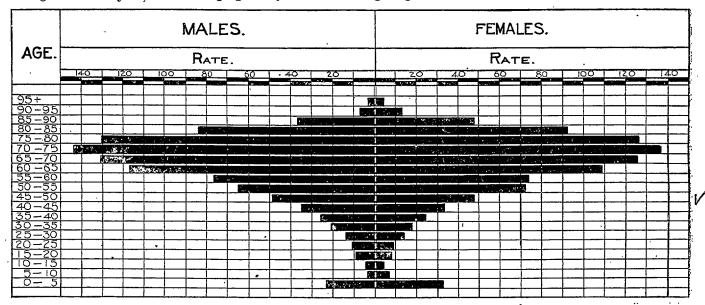

In the registration area the number of deaths reported as due to these diseases was, males, 9,631; females, 6,980; total, 16,611, giving a death rate of 84.49 per 100,000 of population.

The following table shows the proportion of deaths due to apoplexy and paralysis, at certain ages and groups of ages per 1,000 deaths at all ages from these causes in 1880 and in 1890, with distinction of sex:

	18	880.	1890				880	1890	
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females.
Under 5 years	38. 03	36. 81	24. 52	23.77	50 to 55 years	63.65	61. 76	65. 59	72.04

· 建二烷二烷 " "。

The comparative proportions of deaths of males and females in each age group, due to apoplexy and paralysis during the census year, are shown graphically in the following diagram:

The comparative proportions of deaths of males in each age group, due to these diseases in 1880 and 1890, are shown in the following diagram:

The preceding table and diagrams indicate that the greatest proportion of deaths due to apoplexy and paralysis occurred in persons from 60 to 80 years of age, and that there was comparatively little difference between the proportions occurring in different ages, shown by the censuses of 1880 and 1890, or between males and females in 1890.

The following table shows, for the registration area and some of its subdivisions, the death rates from apoplexy and paralysis during the census year in each of three age groups per 100,000 population of corresponding ages, with distinction of sex:

	15	то 45 ува	RS.	45	то 65 уел	RS.	65 YEARS AND OVER.			
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	
Registration area	18. 89	20.98	16. 82	187. 67	195. 17	180. 25	1, 024. 76	1, 053. 99	998. 68	
Cities	19, 99	22. 59	17. 43	205.98	217. 30	194.74	1, 065. 51	1, 120. 72	1,020.40	
States	19. 26	21.49	17.11	188.80	191.59	186.11	1,046.60	1,069.71	1,025.65	
Cities	21.78	25. 24	18.52	225.69	233. 25	218.54	1, 152. 73	1, 221. 90	1, 098. 41	
Rural	14.88	15. 20	14.55	143.06	140.98	145.11	969.02	972.16	965. 86	
Cities in nonregistration states	18. 36	20, 28	16.39	185. 57	201.59	168.84	965.39	1,009.88	927. 37	
Cities of 100,000 population and upward	19.91	22.54	17. 26	209.52	222, 75	196.11	1, 059. 68	1, 131. 12	1,001.13	
Metropolitan district	22. 40	26. 52	18.43	254.81	260.57	249. 06	1, 221. 25	1,316.06	1, 142. 10	

It will be seen from this table that the highest death rate from apoplexy and paralysis occurred in persons 45 years of age and over. In the age group from 45 to 65 years the death rate per 100,000 of population of that age group in the registration area was higher in males (195.17) than in females (180.25), and in the registration states it was much higher in the cities (225.69) than it was in the rural districts (143.06). In the rural districts it was a little higher among females (145.11) than among males (140.98). It was highest of all in the metropolitan district (254.81). In the age group 65 years of age and over the death rate from these diseases was also higher among males (1,053.99) than among females (998.68), and higher in the cities of the registration states (1,152.73) than it was in the rural districts of the same states (969.02).

The combined relations of age and race to the death rates from apoplexy and paralysis are indicated in the following table showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	15 TO 45	YEARS.	45 TO 65	YEARS.	65 YEARS AND OVER.		
the state of the s	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	547	22. 85	1, 539	235. 69	1, 896	1, 218. 33	
Colored	31	30, 05	63	271.18	74	1, 432.17	
Birthplaces of mothers (whit-)							
United States	115	15.00	396	176.52	799	1, 158. 36	
England and Wales	26	22.48	88	233.82	129	1, 393. 24	
Ireland	192	30.94	514	302.04	378	1, 171. 44	
Scotland	12	31. 85	19	163. 31	28	1,024.14	
France	6	31. 35	15	237. 87	20	1, 408. 45	
Germany	109	19.87	327	219. 21	298	936, 05	
Canada	4	10.06	12	175.05	10	925.07	
Scandinavia	-3	9.16	11	218.77	5	746.27	

It will be seen from this table that in the age group from 45 to 65 the death rate from apoplexy and paralysis was higher among the colored (271.18) than it was among the whites (235.69). Among the whites it was highest among the children of mothers born in Ireland (302.04) and in France (237.87); and lowest in the children of mothers born in Sectland (163.31), and in Canada (175.06). It was slightly higher among the children of mothers born in the United States (176.52). In the age group 65 years of age and over the death rate from these diseases was higher among the colored (1,432.17) than among the whites (1,218.33), and among the whites it was highest among the children of mothers born in France (1,408.45) and in England and Wales (1,393.24); and lowest among the children of mothers born in Scandinavia (746.27) and in Canada (925.07).

The following table shows, for each grand group, the proportion of deaths due to apoplexy and paralysis during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

GRAND GROUPS.	Total.	RU	RAL.	CIT	TES.
GRAD GROES.	Total.	Males.	Females.	Males.	Females.
1. North Atlantic Coast region	53.01	69. 19	75.41	40.44	. 45.86
2. Middle Atlantic Coast region	36.78	55. 20	53. 31	30.57	35. 21
3. South Atlantic Coast region	31.24	33.62	26, 20	31. 25	38. 25
4. Gulf Coast region	25.42	20.08	16. 20	31.54	35. 52
5. Northeastern hills and plateaus	59.72	65. 75	66.44	46.30	47.85
6. Central Appalachian region	56.57	60, 52	63. 19	33. 28	39. 92
7. Region of the Great Northern Lakes	32.70	46.62	46. 90	26.14	25.88
8. Interior plateau	51.62	58.97	59, 97	40.18	48.88
9. Southern Central Appalachian region	28, 03	30.48	26, 60	23.20	23.57
10. Ohio River belt	36.36	41.89	37.46	30.77	29.13
11. Southern Interior plateau	26.68	27.77	25.39	26, 35	32.75
12. South Mississippi River belt	11.57	10.83	12.19	11.14	14. 31
13. North Mississippi River belt	27. 91	31. 03	31.14	23.15	25.87
14. Southwest Central region	16.42	17. 20	15.11	20.18	19.54
15. Central region, plains and prairies	40.12	41.14	41.69	33, 44	26.96
16. Prairie region	34. 21	36.41	31. 62	38.98	32.13
17. Missouri River belt	22.73	26.30	21.38	22.03	17. 67
18. Region of the Western plains	19.41	24. 23	15.30	14.63	20.78
19. Heavily timbered region of the Northwest	40.30	41.98	38.40		
20. Cordilleran region	24.63	26. 59	19.89	47, 25	23. 17
21. Pacific Coast region	40.55	40.09	31.54	42.81	44. 48

It will be seen from this table that in the rural districts among males the proportion of deaths due to these diseases to the total deaths from known causes was greatest in the North Atlantic Coast region, the Northeastern hills and plateaus, and the Central Appalachian region; and was least in the South Mississippi River belt, the Southwest Central region, and the region of the Western plains.

TETANUS AND TRISMUS NASCENTIUM.

The total number of deaths reported as due to these diseases in the United States during the census year was 2,019, of which 1,238 were of males and 781 of females, giving a ratio of 2.40 per 1,000 of all deaths from known causes. In 1880 the corresponding ratio was 3.35.

In the registration area the number of deaths reported as due to these diseases was, males, 780; females, 502; total, 1,282, being 2.40 per 1,000 of all deaths from known causes and 6.52 per 100,000 of population living at the end of the year.

The following table shows, for the registration area and some of its subdivisions, the death rates from tetanus and trismus nascentium during the census year in each of four age groups per 100,000 population of corresponding ages, with distinction of sex:

AREAS.	UNDER 1 YEAR.			5 to 15 years.			15	то 45 үн	EARS.	45 YEARS AND OVER.		
A LOUISION .	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	248. 01	284. 05	211. 00	1.74	2.83	0.64	1.04	1.37	0.71	1.42	2, 23	0, 63
Cities	298. 25	341.98	253, 41	2.04	3.38	0.70	1.20	1. 62	0.77	1.62	2, 58	0, 69
States	99.66	115.89	82, 99	0.95	1.71	0.18	0.65	0.95	0.36	1.16	1.89	0.47
Cities	127.72	149. 48	105.44	1.06	2.12		0.76	1.25	0.31	1.30	2, 25	0.44
Rural	47.37	53. 58	40.94	0.79	1.10	0.46	0.46	0.46	0.46	0.40	1.51	0.50
Cities in nonregistration states	447. 42	570.08	383.06	2.89	4.48	1.31	1.59	1.95	1.22	1.95	2.91	0.81
Cities of 100,000 population and over	298.60	349. 26	246, 68	1.52	2, 61	0.43	1.12	1.54	0.69	1.72	2.97	0.50
Metropolitan district	167. 11	204.78	128.38	1.28	2.56		0.80	1.27	0.34	1.64	2. 22	1.07

Practically all the cases under this heading occurring under 1 year of age occurred in the first month of life, and may be reckoned as cases of trismus nascentium.

It will be seen from the preceding table that the death rate from this disease in infants was decidedly higher among males (284.05) than it was among females (211.00); that in the registration states it was nearly three times as high in the cities (127.72) as it was in the rural districts (47.37). It was highest of all among males in the cities in the nonregistration states (570.08), and lowest among females in the rural districts of the registration states (40.94).

The death rate from tetanus was higher in persons from 5 to 15 years of age (1.74) than it was in those from 15 to 45 (1.04) or in those 45 years of age and over (1.42). This was probably due in the main to the greater liability to wounds in such position that they were liable to be contaminated with earth in children than in older persons. It will be seen that among boys from 5 to 15 the death rate was 2.83 as against 0.64 among girls.

The following table shows, for each of the registration states and for their sum, the death rates from tetanus and trismus nascentium during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

	A	.GGREGATE			MALES.		FEMALES.			
REGISTRATION STATES.	.Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total	2. 81	3, 68	1. 49	3.66	4. 91	1.81	1. 98	2, 50	1.16	
Connecticut	2. 41	4.19	1. 15	2.44	3. 94	1.38	2.39	4. 43	0. 91	
Delaware	4. 15	3. 26	4. 67	5.84	6.49	5.48	2.41		3.82	
District of Columbia	25.17	25.17		28. 29	28. 29		22. 35	22. 35		
Massachusetts	0.85	0.82	0.95	1.29	1. 21	1.54	0.43	0.45	0.38	
New Hampshire	0.27		0.38				0.53		0.76	
New Jersey	5.54	6.35	4.47	7.08	8.64	5.07	4.00	4.11	3.86	
New York	2.43	3. 35	0.96	3.39	4.79	1.21	1.49	1.96	0.71	
Rhode Island	1.45	0.50	2, 75	2.38	1.04	4.16	0.56		1.36	

It will be seen from this table that the death rate from tetanus and trismus nascentium was much higher among males than among females, and more than twice as high in the cities as in the rural districts. It was highest of all in the District of Columbia (25.17), owing to the comparatively large number of cases of trismus nascentium among colored infants. It was lowest in New Hampshire (0.27) and in Massachusetts (0.85).

CONVULSIONS.

• The total number of deaths reported as due to convulsions during the census year was 16,598, of which 8,981 were of males and 7,617 of females, giving a ratio of 19.73 per 1,000 of all deaths from known causes.

In the registration area the number of deaths reported as due to convulsions was, males, 5,994; females, 5,056; total, 11,050, being 27.33 per 1,000 of all deaths from known causes and 56.21 per 100,000 of population living at the end of the year.

In England and Wales in 1890 the death rate from this cause per 100,000 of population was 74.9.

The following table shows, for the registration area and some of its subdivisions, the death rates from convulsions during the census year in each of two age groups per 100,000 population of corresponding ages, with distinction of sex:

•	UN	DER 5 YEA	lrs.	5 YEARS AND OVER.				
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.		
Registration area	513.89	558. 62	468. 24	3. 97	3. 55	4.38		
Cities	587.05	642.79	530.30	3.95	3. 63	4.27		
States	392.79	419.85	365. 26	3.46	3.09	3.82		
Cities	479.99	520.44	439.12	3.09	2.94	3.24		
Rural	243, 22	248.83	237.44	4.01	3.31	4.73		
Cities in nonregistration states	679.57	747.83	609.65	4.75	4.25	5.26		
Cities of 100,000 population and upward	608.70	672.00	544. 22	3. 28	3.30	3, 25		
Metropolitan district	483.95	519.76	447.85	2.42	2.63	2. 22		

It will be seen from this table that the deaths from convulsions occurred almost entirely in infants under 5 years of age. The death rate in this age group was higher among males (558.62) than among females (468.24). In the registration states it was about twice as high in the cities (479.99) as it was in the rural districts (243.22). It was highest of all in the cities in the nonregistration states (679.57).

The combined relations of age and race to the death rates from convulsions are indicated in the following table, showing the number of deaths in each of two age groups and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	UNDER 5	5 YEARS.	5 YEARS AND OVER.			
COLOR AND BIRTHPLACES OF MOTHERS.	Deaths.	Rate.	Deaths.	OVER.		
White	2, 203	454. 27	85	2. 09		
Colored	. 146	931.06	9	5.49		
Birthplaces of mothers (white):			Į.			
United States	1,027	415.77	36	2.45		
England and Wales	68	398.43	2	1.01		
Ireland	288	436.20	22	2. 26		
Scotland	28	515.08				
France	7	350.53				
Germany	417	519.79	12	1.35		
Canada		255.75				
Scandinavia	34	512.20				
Hungary	25	768.99				
. Bohemia	9	457.08				
Italy	91	605. 25				

It will be seen from the preceding table that the death rate of children under 5 years of age from convulsions was much higher among the colored (931.06) than among the whites (454.27). Among the whites the highest death rate from this cause occurred among the children of mothers born in Hungary (768.99), in Italy (605.25), and in Germany (519.79); and the lowest among the children of mothers born in Canada (255.75), in France (350.53), and in England and Wales (398.43). The death rate among children of mothers born in Ireland (436.20) was below the average for white children of this age (454.27).

The following table shows the proportion of deaths due to convulsions, at certain ages and groups of ages, per 1,000 deaths at all ages from this cause in 1880 and in 1890, with distinction of sex:

	18	880	1890			
AGES.	Males.	Females.	Males.	Females.		
Total under 5 years	912, 33	867.15	926. 49	891.78		
Under 1 year	690. 57	635, 68	730. 61	668, 21		
1 year	122. 25	120.00	114.41	130. 57		
2 years	57.95	61. 62	46. 28	50. 67		
3 years	25.38	33. 87	23.08	27. 91		
4 years	16.18	15.98	12.10	14.42		
5 to 10 years	29.72	30.03	22.75	26. 86		

It will be seen from this table that much more than one half the deaths due to convulsions occurred in infants under 1 year of age, the proportion of deaths at this age being greater for males than for females.

The following table shows, for each grand group, the proportion of deaths due to convulsions during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

GRAND GROUPS.	Total.	RU	RAL.	CIT	ries.
GAALID GAOOFS.	Total.	Males.	Females.	Males.	Females.
1. North Atlantic Coast region	16. 76	11.85	11.73	19.41	19. 25
2. Middle Atlantic Coast region	21.42	20.51	23. 57	21.71	20.83
3. South Atlantic Coast region	14.94	8.72	12.47	22.09	30.93
4. Gulf Coast region	17.84	12.63	13.46	21.88	24, 86
5. Northeastern hills and plateaus	15.26	12.18	12.68	22.16	19.54
6. Central Appalachian region	26. 94	20.98	19.86	56. 19	47, 55
7. Region of the Great Northern Lakes	40.86	19.17	17.40	55.04	47.42
8. Interior plateau	26.61	17.32	14. 07	. 37.50	35. 83
9. Southern Central Appalachian region	11.05	9. 23	9. 27	22.76	29. 33
10. Ohio River belt	18. 47	14. 10	12.75	28.60	26. 75
11. Southern Interior plateau	13. 33	12.69	12.36	41.86	34.11
12. South Mississippi River belt	15. 47	12.72	11. 25	33.44	41.34
13. North Mississippi River belt	23.34	17. 21	16. 23	31.40	29.78
14. Southwest Central region	9.80	9. 17	9.77	14.41	J8. 46
15. Central region, pla'ns and prairies	12.83	11.04	9.64	33.43	29. 35
16. Prairie region	13.15	12. 42	13.09	25. 69	25.91
17. Missouri River belt	15.76	11.84	14. 34	19.33	24. 10
18. Region of the Western plains	12.00	7. 99	12.43	15.96	19.83
19. Heavily timbered region of the Northwest	11.55	12.14	10.88		
20. Cordilleran region	11.07	9. 79	12.36	10.50	15.44
21. Pacific Coast region	18.08	8.71	13. 52	20.98	28.03

It will be seen from this table that the proportion of deaths due to convulsions among males in the rural districts was greatest in the region of the Great Northern Lakes and in the Central Appalachian region; and was least in the Southwest Central region, and the Southern Central Appalachian region.

The geographical distribution of deaths from convulsions under 5 years of age, by state groups, per 1,000 deaths from known causes under 5 years of age in each group, is shown in map No. 24.

DISEASES OF THE CIRCULATORY SYSTEM.

The total number of deaths reported as due to diseases of the circulatory system in the United States during the census year was 48,757, of which 25,938 were of males and 22,819 of females, giving a ratio of 57.96 per 1,000 of all deaths from known causes. In the registration area the number of deaths reported as due to this class of diseases was, males, 13,838; females, 12,549; total, 26,387, being 65.27 per 1,000 of all deaths from known causes, and 134.22 per 100,000 of population living at the end of the year.

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the circulatory system during the census year per 100,000 of population, with distinction of color and sex:

•	AGGREGATE.				WHITE.		COLORED.			
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	
Registration area	134. 22	141.18	127.30	131.79	138.71	124.89	181.90	190. 27	173. 79	
CitiesStates	132. 27 143. 99	139.06 150.02	125. 57 138. 10	128.82 143.38	135. 48 149. 67	122, 24 137, 21	187. 90 170. 15	197. 74 164. 83	178. 47 175. 19	
Cities	146.32	151.49	141.39	145.06	150.52	139.85	192.67	188.37	196. 52	
Rural	140.43	147.84	132.90	140.83	148.43	133.10	118.08	115.18	121. 19	
Cities in nonregistration states	119.,30	127.97	110.45	112.82	121.17	104.27	186.58	200. 23	173. 22	

It will be seen from this table that the death rate from diseases of the circulatory system was higher among males (141.18) than among females (127.30); that it was higher among the colored (181.90) than it was among the whites (131.79); and that it was but slightly higher in the cities in the registration states (146.32) than it was in the rural districts (140.43).

The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to diseases of the circulatory system during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

	:		WHITE.								colored.			
AREAS.	Aggre-				נ	Native born	1.							
AROAD.	gate.	Total.	Males.	Females.	Total.	Both parents native.	Both parents foreign.	Foreign born.	Total.	Males.	Females.			
Registration area	69. 19	69.67	69. 28	70.12	58.88	77.48	33.48	98. 27	63. 16	62.74	63. 61			
CitiesStates	63, 69 74, 76	63. 76 75. 17	62. 80 74. 72	64. 85 75. 65	50. 39 65. 66	67. 09 81. 62	31. 66 35. 36	95. 65 100. 76	62. 90 62. 75	62. 59 57. 69	63. 24 68. 07			
Cities	66. 46 93. 33 60. 82	66. 65 93. 85 60. 44	64.75 66.90 60.64	68. 72 90. 63 60. 22	53. 22 88. 71 47. 23	71. 74 93. 49 50. 52	33. 40 46. 48 25. 04	96.70 117.55 94.29	61. 53 67. 83 63. 31	55. 76 65. 51 64. 57	67. 54 70. 38 61. 94			

It will be seen from this table that the proportion of deaths due to diseases of the circulatory system to the total number of deaths from known causes was a little greater among females (white, 70.12; colored, 63.61) than it was among males (white, 69.28; colored, 62.74); that it was slightly greater among the whites (69.67) than among the colored (63.16); that among the whites it was decidedly greater among the foreign born (98.27) than among the native born (58.88), which is due mainly to the different age distribution of the two classes; and that in the registration states it was greater in the rural districts (93.33) than it was in the cities (66.46). It was greatest of all among the foreign born in the rural districts (117.55).

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the circulatory system during the census year, at all ages and in each of six age groups, per 100,000 population of corresponding ages, with distinction of sex:

				7	,	· · · · · · · · · · · · · · · · · · ·

Cities in nonregistration states	119.30	426. 30	105. 19	27.64	61. 98	286. 67	1,069.16
Males	127. 97	469, 49	115.37	23, 96	66, 54	318.65	1, 211, 29
Females	110. 45	381.93	94.75	31. 31	57. 28	253, 26	947.67
Cities of 100,000 population and upward	130. 91	485. 07	118. 25	31. 66	68.37	318. 46	1, 116. 10
Males.	138. 72	539, 53	132, 23	26, 38	73.85	345, 75	1, 250, 15
Females	123. 10	429, 25	104. 01	36.93	62.87	290. 78	1, 006. 23
Metropolitan district	146. 29	558. 31	137. 49	38. 97	76.03	353. 95	1, 170. 92
Males	153, 89	636, 82	159.38	31.34	82, 33	373.83	1, 270. 91
Females	138.86	477.58	115.41	46.64	69. 94	334.14	1,087.45

It will be seen from this table that the death rate from diseases of the circulatory system was much higher in infants and children under 5 years of age than in those from 5 to 45 years of age; that it increased markedly in those from 45 to 65, and was highest of all in those 65 years of age and over.

In those from 15 to 45 years of age it was much higher in the cities of the registration states (68.22) than it was in the rural districts of the same states (38.98), and was highest of all among males in the metropolitan district (82.33).

. In persons from 45 to 65 years of age it was somewhat higher among males (294.49) than among females (254.13), and in the registration states it was decidedly higher in the cities (320.81) than it was in the rural districts (201.54). In this age group it was highest of all among males in the metropolitan district (373.83), and lowest among females in the rural districts of the registration states (190.48).

In persons 65 years of age and over it was decidedly higher among males (1,184.08) than among females (964.35). It was highest of all among males in the cities in the registration states (1,358.92), and lowest among females in the rural districts of the same states (877.44).

The following table shows the proportion of deaths reported as due to this class of diseases in the registration area and also in the United States, in each of three age groups per 1,000 deaths from known causes, excluding stillbirths, in those age groups, with distinction of white, colored, Chinese, and Indians:

AREA AND RACE.	Under 15 years.	15 to 45 years.	45 years and over.
Registration area	185. 25	61.77	131.11
United States:			
White	172.89	49.38	120.99
Colored	81.54	44. 32	112,06
Chinese		67.62	86, 58
Indians	12. 20	16.78	84.06

It will be seen from the preceding table that of those dying between 15 and 45 years of age, during the census year, the proportion dying from diseases of the circulatory system per 1,000 of all deaths from known causes was greater in the registration area (61.77) than it was in the United States as a whole, in which it was, for the whites, 49.38; and for the colored, 44.32. It was greatest of all among the Chinese (67.62.)

In those 45 years of age and over it was greatest in the registration area (131.11); and in the United States as a whole it was greater among the whites (120.99) than it was among the colored (112.06); and was nearly the same among the Chinese (86.58) as among the Indians (84.06).

The following table shows the death rates from diseases of the circulatory system in the registration area during the census year, in each of four age groups, with distinction of conjugal condition and of sex.

	AGE PERIODS.										
CONJUGAL CONDITION.	15 years	and over.	15 to 4	5 years.	45 to 6	5 years.	65 years and over				
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females			
Single	72. 98	68.09	50.44	42, 23	353, 29	266.28	1, 103. 64	1, 115. 85			
Married	186.83	132.01	58.10	61.83	241.98	220.17	991.07	834. 84			
Widowed	703.49	433.08	159. 17	94.91	425. 90	270.44	1, 365. 11	917. 91			

This table shows that the death rate from this class of diseases among persons 15 years of age and over was higher among the married (males, 186.83; females, 132.01) than among the single (males, 72.98; females, 68.09), and very much higher among the widowed (males, 703.49; females, 433.08). This excess of the death rate of the married over the single from this class of diseases occurred exclusively in the ages from 15 to 45 years. Above the age of 45 the death rate from this class of diseases was higher among the single than among the married in each sex.

The following table shows the death rates from diseases of the circulatory system per 100,000 of population in the registration states during the census year, with distinction of conjugal condition, sex, color, and general nativity:

			-	COLOR AND NATIVITY.							
CONJUGAL CONDI-	Agg	regate.									
TION.			To	otal.	Nativ	Native born. Foreign born.			Colored.		
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	
Single	69.15	64. 36	68.80	64.04	65, 11	60.35	79. 69	79.62	83. 96	77.62	
Married	199.91	142.06	199.09	140.87	191.93	121.41	202.99	168.14	238.04	198. 27	
Widowed	804.48	515, 16	808.31	515.19	835. 57	483.90	730.79	530.50	636.01	514.12	

The great differences shown in this table between the death rates of the single, married, and widowed, and between those of the native and foreign born whites of the different classes, are mainly due to differences in the age distribution of the corresponding groups of population.

ANGINA PECTORIS.

The total number of deaths reported as due to angina pectoris in the United States during the census year was 1,255, of which 714 were of males and 541 of females, giving a ratio of 1.49 per 1,000 of all deaths from known causes.

In the registration area the number of deaths reported as due to this disease was, males, 385; females, 292; total, 677; being 1.67 per 1,000 of all deaths from known causes, and 3.44 per 100,000 of the population living at the end of the year.

The following table shows, for each of the registration states and for their sum, the death rates from angina pectoris during the census year per 100,000 of population, with distinction of sex and of rural districts and cities:

	.4	AGGREGATI	g.		MALES.		FEMALES.			
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total	3. 90	3.44	4. 59	4. 34	3.94	4. 93	3.46	2.96	4. 25	
Connecticut	5. 09	5. 80	4.59	4.06	3.28	4. 60	6. 11	8. 22	4.57	
Delaware	2.37	4.88	0.93	[<i>.</i>		[4.82	9.80	1.91	
District of Columbia	2.60	2. 60		3.65	3,65		1.66	1.66		
Massachusetts	2.95	2. 39	4.77	3. 13	2.66	4.63	2.78	2.14	4.91	
New Hampshire	7.70	5.43	8. 65	9.11	9. 59	8.93	6.32	1.71	8. 36	
New Jersey	5.40	4. 52	6.55	5. 69	4.44	7. 29	5. 11	4.59	5.80	
New York	3. 62	3. 37	4.01	4.40	4.30	4.56	2.85	2.49	3, 45	
Rhode Island	5. 21	5.00	5.50	5. 95	5. 22	6.93	4.51	. 4.80	4.09	
Vermont	2. 11	3. 53	1. 97	1.77	7.38	1.28	2.45	:	2.70	

This table indicates that the death rate from angina pectoris was somewhat higher among males (4.34) than it was among females (3.46), and that it was higher in the rural districts (4.59) than it was in the cities (3.44). It was highest in New Hampshire (7.70), and lowest in Vermout (2.11).

The following table shows the proportion of deaths due to angina pectoris at certain ages and groups of ages, per 1,000 deaths at all ages from this cause, in 1880 and in 1890, with distinction of sex:

	1880		1890			18	80	1890	
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females.
15 to 20 years	8. 85	27. 13	13.57	20. 35	60 to 65 years	129. 79	77. 52	128. 96	104. 65
20 to 25 years	23.60	34.88	9, 05	29.07	65 to 70 years	132.74	127. 91	158.37	95. 93

This table indicates that the greatest proportion of deaths due to angina pectoris occurred in persons from 60 to 80 years of age.

The following table shows, for the registration area and some of its subdivisions, the death rates from angina pectoris during the census year in each of four age groups per 100,000 population of corresponding ages, with distinction of sex:

	UNI	er 15 y	EARS	15	то 45 чі	EARS.	45	TO 65 YE.	ARS. ·	65 YEARS AND OVER.			
ABEAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	
Registration area	0. 16	0.10	0. 21	1. 25	1.15	1.36	9. 01	11. 56	6. 48	32. 27	38. 20	26.97	
Cities	0.14	0.05	0. 23	1. 31	1. 27	1. 35	9. 29	12.46	6, 14	31.80	38.99	25, 93	
States	0.18	0.12	0.24	1.12	0. 85	1. 38	• 9.09	11.60	6.68	34.80	40.65	29, 49	
Cities	0.15		0. 29	1.16	0.92	1.38	9.70	13.44	6. 17	37.38	45. 96	30.6£

Cities in nonregistration states	0.13	0.08	0.17	1.45	1.57	1.32	8.86	11.49	6.10	25.39	31. 35	20.30	
Cities of 100,000 population and over	0.10	0.07	0.14	1.31	1.46	1.16	10.00	13.18	6.76	29.79	39. 67	21.68	
Metropolitan district				1. 19	1.16	1. 23	12.36	15.93	8.82	40.06	60.95	22. 62	

It will be seen from the preceding table that the death rate from angina pectoris increased steadily with advancing years, being comparatively trivial below 45 years of age. In persons from 45 to 65 years of age it was much higher among males (11.56) than among females (6.48). In those 65 years of age and over this difference in the mortality of the two sexes was not so great (males, 38.20; females, 26.97). The death rate was highest of all among males 65 years of age and upward in the metropolitan district (60.95).

The combined relations of age and race to the death rates from angina pectoris are indicated in the following table showing the number of deaths in each of three age groups, and the death rate per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	15 TO 45	YEARS.	45 TO 65	YEARS.	65 YEAI		
COLOR AND BIRITERIACES OF MOUREAGE.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	25	1.04	68	10.41	74	47.55	}
Colored	2	1.94	1	4.30			
United States	• 9	- 1.17	25	11.14	48	69.59	1
England and Wales	1	0.86	4	10.63	5	54.00	İ
Ireland	7	1.13	17	9.99	8	24.79	
Germany	5	0.91	17	11.40	5	15.71	

It will be seen from this table that the death rate from this disease was much higher among the white than among the colored, and among the whites 65 years of age and over it was higher among the children of mothers born in the United States than among the children of mothers born in other countries.

ANEURISM.

The total number of deaths reported as due to aneurism in the United States during the census year was 551, of which 381 were of males and 170 of females, giving a ratio of 0.65 per 1,000 of deaths from known causes.

In the registration area the number of deaths reported as due to aneurism was, males, 267; females, 85; total 352, giving a death rate per 100,000 of population of 1.79.

The following table shows, for each of the registration states and for their sum, the death rates from aneurism during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

,	1	AGGREGATE			MALES.			FEMALES.		
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total	1. 52	1.96	0.85	2. 33	3.11	1.18	0.73	0.87	0. 51	
Connecticut	1.21	1. 29	1.15	1.89	1. 97	- 1.84	0.53	0.63	0.46	L
District of Columbia	5.64	5.64		10.04	10.04		1.66	1.66		
Massachusetts	1.21	1.34	0.76	2.02	2.41	0.77	0.43	0.34	0.75	
New Hampshire	0.80		1.13	1.07		1.49	0.53		0.76	
New Jersey	1.31	1.47	1.12	1.80	1.97	1.58	0.83	0, 97	0.64	
New York	1, 65	2.24	0.70	2.52	3.42	1.12	0.79	1.11	0.27	
Rhodo Island	2.89	4.00	1.38	3.57	5. 22	1.39	2. 25	2.88	1.36	
Vermont	0.30		0.33	0.59		0.64		<u>-</u>		

It will be seen from this table that the death rate from aneurism was much higher among males (2.33) than among females (0.73), and that it was much higher in the cities (1.96) than in the rural districts (0.85). It was highest of all in the District of Columbia (5.64), and lowest in Vermont (0.30).

The following table shows, for the registration area and some of its subdivisions, the death rates from aneurism during the census year in each of three age groups per 100,000 population of corresponding ages, with distinction of sex:

17710	15	TO 45 YEA	RS.	45	то 65 чел	.RS.	65 YEARS AND OVER.				
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females

Cities	1. 75	2. 66	0.85	6. 50	10.50	2. 53	7.34	11. 79	3, 70		
States	1.20	1.70	0.72	3.88	6. 72	1.15	5.64	8. 13	3.38		
Cities	1.68	2.60	0.82	5.57	9, 49	1.87	7.25	11.27	4.09		
Rural	0.37	0.18	0.56	1.79	3. 36	0.24	4.46	6.11	2.80		
Cities in nonregistration states	1.81	2.71	0.88	7.46	11.49	3. 25	7.44	12.35	3. 25		
Cities of 100,000 population and over	2.19	3.38	1.00	8. 7 5	14. 27	3.15	8.41	13. 22	4.46		
Metropolitan district	2. 27	3.71	0.89	8.17	13.71	2.64	7.19	6.77	7.54		

It will be seen from this table that the death rate from aneurism increased with advancing age, being highest of all in persons 65 years of age and over.

The combined relations of age and race to the death rates from aneurism are indicated in the following table, showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	15 то 45	YEARS.	45 TO 65	YEARS.	65 YEA	RS AND ER.
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	48	2.00	51	7. 81	13	8. 35
Colored	7	6.78	5	21.52		
Birthplaces of mothers (white):			İ			
United States	2	0.26	14	6.24	6	8.70
England and Wales	3	2, 59	4	10.63		
Ireland	23	3.71	14	8.23	5	15.50
Germany	14	2.55	13	8.71	`2	6, 28

It will be seen from this table that the death rate from aneurism was much higher among the colored than among the whites among persons from 15 to 65 years of age, and that among the whites it was higher among the children of mothers born in England and Wales, in Ireland, and in Germany than in the children of mothers born in the United States.

HEART DISEASE AND DROPSY.

The total number of deaths reported as due to heart disease and dropsy in the United States during the census year was 55,029, of which 28,538 were of males and 26,491 were of females. Although a certain number of cases of death reported as due to dropsy, which is merely a symptom, were no doubt due to disease of the liver or to Bright's disease, they are included with diseases of the heart, to which a great majority of them were due, in order to permit of comparison with the statistics given in the Tenth Census Reports, including the data as to the distribution of these two diseases in England and Wales. Dropsy alone in the United States is reported as the cause of the death of 4,829 males and 5,241 females, or a total of 10,070, being 1,197 deaths out of every 100,000 deaths from all causes, as against 1,954 in 1880 and 1,596 in 1870. In the registration area the number of deaths reported as due to heart disease and dropsy was, males, 13,325; females, 12,648; total, 25,973, being 132.11 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from heart disease and dropsy during the census year per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

			•		WHITE.					COLORED.	
	Aggre-	•			ı	Native born	ı.				
AREAS.	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.
Registration area	132. 11	128.44	132. 26	124. 65	105. 29	139.00	69.17	192.15	203.99	209. 21	198.94
Cities	127.72 140.61 137.00 146.11 119.14 122.18 128.32	122. 63 139. 83 135. 63 146. 18 109. 82 117. 76 127. 52	125. 95 143. 25 137. 81 151. 23 114. 68	119. 35 136. 48 133. 56 141. 05 104. 84	92. 99 119. 36 105. 40 136, 29 81. 47 83. 73 89. 34	123. 79 147. 54 136. 47 156. 00 96. 40 108. 75 121. 77	69.37 72.71 74.32 68.38 57.97 66.23 68.24	190. 86 198. 98 198. 74 199. 75 181. 95 186. 84 191. 57	209. 79 173. 83 187. 41 142. 43 216. 01 209. 30 172. 72	217. 16 166. 34 183. 92 129. 29 226. 00	202. 71 180. 91 190. 53: 156. 54 206. 25

It will be seen from this table that the death rate from heart disease and dropsy was much higher among the colored (203.99) than among the whites (128.44), and that it was slightly higher among males (white, 132.26; colored, 209.21) than among females (white, 124.65; colored, 198.94). Among the whites it was higher for the foreign born (192.15) than for the native born (105.29), owing largely to the greater proportion of persons of advanced age among the foreign born. Among the native born whites it was much higher among those having both parents native born (139.00) than among those having one or both parents foreign born (69.17). In the registration states the death rate from these causes was higher in the rural districts (146.11) than in the cities (137.00), and it was lower in the large cities of 100,000 population and upward (122.18) than in the average of all the registration cities (127.72).

The following table shows, for each of the registration states and for their sum, the death rates from heart disease and dropsy during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

	A	GGREGATE			MALES.		FEMALES.				
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Kural.		
Total	140.61	137.00	146, 11	143.77	138. 99	150. 83	137.52	135. 11	141.31		
Connecticut	128.37	123. 41	131. 90	132.33	130.02	133.94	124. 50	117.05	129.88

New York	137. 83	133.67	144.57	142.30	136.68	151.07	133.43	130.77	137, 89		
Rhode Island	142.69	141.95	143.70	143.43	146.02	139. 99	141.99	138. 21	147.30		
Vermont	154.92	166,10	153.88	161.82	199.31	158.56	147.77	135.60	148.9		

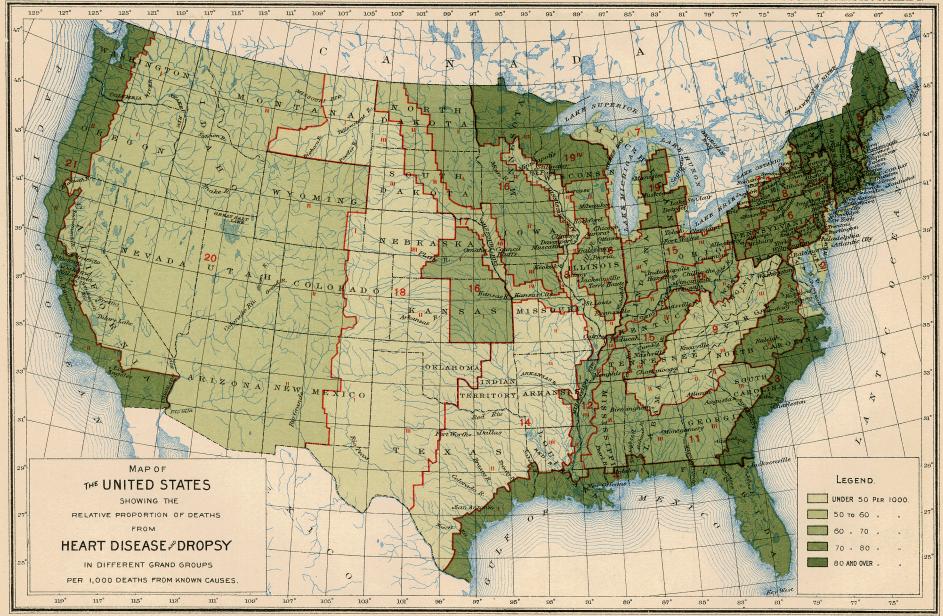

It will be seen from this table that in the rural districts the death rate from heart disease and dropsy was highest in New Hampshire (183.06), and lowest in Delaware (118.62); while in the cities it was highest in Delaware (180.69), and lowest in New Jersey (121.27).

The following table shows the proportion of deaths due to heart disease and dropsy, at certain ages and groups of ages, per 1,000 deaths at all ages from these causes in 1880 and 1890, with distinction of sex:

	18	880	18	890		18	880	18	890

The comparative proportions of deaths of males in each age group due to heart disease and dropsy, in 1880 and 1890, are shown in the following diagram:

It will be seen from the preceding table and diagrams that the proportion of deaths from these diseases increased steadily in each quinquennial age group from 30 to 75 years of age; that it was greatest in the age group from 65 to 75 years, and was a little greater among females than among males up to the age of 55, after which it became greatest among males; also, that in the census of 1880 the proportion of deaths from these diseases was greater in males under 30 years of age than it was in 1890, and that above the age of 30 the proportion for most of the age groups was greater in 1890. The relative proportions of deaths in each of the age groups taken as a whole do not differ very materially for the two periods.

The following table shows, for each grand group, the proportion of deaths due to heart disease and dropsy during the census year per 1,000 deaths from known causes, with distinction of sex and color, of rural districts and cities, and of children of mothers born in Ireland and in Germany:

The geographical distribution of deaths from heart disease and dropsy in the several grand groups is shown in map No. 25.

Of the 25,973 deaths from heart disease and dropsy in the registration area, 24,025 were of whites and 1,948 of colored. Of the deaths from these causes among the whites, 6,577 were children of mothers born in Ireland, 2,464 children of mothers born in Germany, 954 children of mothers born in England and Wales, 541 children of mothers born in Canada, 270 children of mothers born in Scotland, 129 children of mothers born in France, 100 children of mothers born in Italy, 35 children of mothers born in Bohemia, 31 children of mothers born in Scandinavia, and 28 children of mothers born in Hungary.

The following table shows, for the registration area and some of its subdivisions, the death rates from heart disease and dropsy among the whites during the census year per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.
Registration area	94. 83	136. 60	153. 69	132. 47	157.35	115. 94	80.41	53.74	87. 49	85 . 9 8	71.40	100.377
Cities	86.46	130.64	161.37	121. 58	167. 27	113. 41	84. 68	51. 15	96.74	84. 05	68. 36	100: 88:
States	106.31	142.94	155.67	141. 05	138, 90	123.39	81. 29	60.18	99.20	102.87	63.97	77.96
Cities	107.97	137.88	165. 54	130. 18	147.15	120.86	86, 96	56.70	113.72	99. 25	58.92	74.67
Rural	104.94	153.38	124.80	167.47	118. 91	134. 34	72. 26	68.39	24.41	138. 22	89.53	96, 26
Cities in nonregistration states	39. 68	110.71	140, 75	94. 92	200.90	102.62	73. 26	47.18	44.09	75.53	121.41	160.00
Cities of 100,000 population and upward	81.48	128.70	169.20	125.72	179. 21	114.94	107.99	55.54	94.04	89. 92	68.76	105.78

It will be seen from this table that the death rate from heart disease and dropsy in the registration area was highest in those whose mothers were born in France (157.35), in Ireland (153.69), and in England and Wales (136.60); and lowest among those whose mothers were born in Scandinavia (53.74), in Italy (71.40), and in Canada (80.41). It was lower in the children of mothers born in the United States (94.83) than in the children of mothers born in Germany (115.94). In the cities in the registration states it was highest in the children of mothers born in Ireland (165.54), and in the rural districts in the children of mothers born in Scotland (167.47).

The following table shows, for the registration area and some of its subdivisions, the death rates from heart disease and dropsy during the census year in each of three age groups per 100,000 population of corresponding ages, with distinction of sex:

	15	то 45 чел	.RS.	45	то 65 чел	RS.	65 YEARS AND OVER.				
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.		
Registration area	59. 80	60.13	59.47	278. 65	289. 90	267.52	1, 111. 32	1, 219. 54	1, 014. 72	1	
Cities	64. 89	66.92	62. 89	305.80	320.02	291. 67	1, 174. 16	1, 310. 23	1, 062. 99	19/	
States	57.37	55, 89	58. 80	267.93	273, 24	262.83	1,093.80	1, 193. 69	1, 003. 23	القنه	
Cities	66. 62	67.89	65.42	312.64	320. 23	305.47	1, 187. 44	1,326.84	1,077.98		
Rural	41.23	35. 77	46. 79	212.50	216, 15	208. 92	1, 025. 35	1, 108. 34	941.80	1	
Cities in nonregistration states	63.30	66.06	60.46	298.71	319, 82	276.65	1, 158. 91	1, 292. 04	1, 045. 12	1	
Cities of 100,000 population and upward	66.72	70.59	62.84	311.74	327, 45	295. 82	1, 135. 38	1, 251. 70	1,040.03		
Metropolitan district	72.96	78.05	68. 04	334, 74	346. 84	322. 67	1, 125.73	1, 207. 70	1, 057. 29		

It will be seen from this table that the death rate from heart disease and dropsy rapidly increased with advancing years, being for those between 15 and 45 years of age 59.80, for those from 45 to 65 years of age 278.65, and for those 65 years of age and over 1,111.32. In the age group from 15 to 45, the death rate from these diseases was about the same for males (60.13) as for females (59.47), and in the registration states it was higher in the cities (66.62) than in the rural districts (41.23), which is contrary to the proportion above shown for the total number of cases, the difference being due to the fact that the cases of death from these diseases in the rural districts occurred in persons under 15 years of age. In the age group from 45 to 65 years the death rate from these diseases was a little higher for males (289.90) than for females (267.52), and in the registration states it was higher in the cities (312.64) than in the rural districts (212.50), and was a little higher in the cities of 100,000 population and upward (311.74) than in the average of all the registration cities (305.80). In the age group 65 years of age and over, the death rate from these diseases was higher among males (1,219.54) than among females (1,014.72). In the registration states it was higher in the cities (1,187.44) than in the rural districts (1,025.35).

The combined relations of age and race to the death rates from heart disease and dropsy are indicated in the following table showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

. COLOR AND BIRTHPLACES OF MOTHERS.	15 TO 45	YEARS.	45 TO 65	YEARS.		ARS AND ER.
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	1,588	66. 32	1,996	305.68	1,757	1, 129, 01
Colored	121	117. 27	102	439.05	78	1,509.58
Birthplaces of mothers (white):	,					•
United States	277	36.13	443	197.47	651	943.79
England and Wales	85	73. 50	110	292, 27	109	1, 177. 23
Ireland	601	96. 86	684	401.94	387	1, 199. 33
Scotland	25	66. 36	36	309.44	26	950.99
France	11	57.48	19	301.30	23	1, 619. 72
Germany	332	60.53	469	314.40	331	1,039.70
Canada	33	82.98	22	320.93	9	832.56
Italy	28	55. 91	17	204.57	9	945.38

It will be seen from this table that the death rate from heart disease and dropsy was higher in every age group in the colored than among the whites, the difference being greatest in the age group from 15 to 45 years. In this age group the death rate among the whites was highest for the children of mothers born in Ireland (96.86), in Canada (82.98), and in England and Wales (73.50); and lowest in the children of mothers born in the United States (36.13), in Italy (55.91), and in France (57.48). In whites from 45 to 65 years of age the death rate from these diseases was highest in the children of mothers born in Ireland (401.94), in Canada (320.93), and in Germany (314.40); and lowest in the children of mothers born in the United States (197.47), in Italy (204.57), and in England and Wales (292.27). In this age group the death rate of those of Irish descent (401.94) was a little more than double that of the children of mothers born in the United States (197.47). In white persons 65 years of age and over the death rate from these diseases was highest in the children of mothers born in France (1,619.72), in Ireland (1,199.33), and in England and Wales (1,177.23); and lowest in the children of mothers born in Canada (832.56), in the United States (943.79), and in Italy (945.38).

For further details with regard to death rates from heart disease and dropsy in large cities, see Part II of this report, page 117.

The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to heart disease and dropsy during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					COLORED.	
	Aggre-			Males. Females.	1	Native born	1.				
AREAS.	Aggregate.	Total.	Males.		Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.
The United States	68.18	67.64	66.82	68. 56	59. 01	70. 23	36. 37	102.07	71.92	67.85	76. 16
Registration area	68. 10	67.89	66. 09	69.90	55. 95	81.50	32. 52	100.11	70.83	68. 99	72.81
Cities	61.50	60.70	58.38	63.32	45, 55	65. 77	29. 91	96. 82	70. 23	68. 75	71.82
States	73.01	73.30	71.51	75.24	63. 25	85. 97	33.54	. 101. 17	64.11	58. 22	70.30
Cities	62.23	62, 32	59.28	65, 63	47.41	68. 63	30.22	95.57	59.85	54.47	65.43

Cities in nonregistration states	60.74	58.84	57.39	60.55	43. 49	58.34	29.02	98. 42	73. 30	72.87	73. 75
Cities of 100,000 population and upward	56.77	55.92			38. 87	50.08	27. 69	93.07	68. 21		
Metropolitan district, 6 years	51. 47	51. 22	49.08	53. 63	33. 29	44.71	25. 68	88. 52	64.02	58. 05	70. 75

The preceding table indicates that the proportion of deaths due to heart disease and dropsy to deaths from known causes was very nearly the same in the United States as a whole (68.18) as it was in the registration area (68.10); that in the United States as a whole it was greater among the colored (71.92) than among the whites (67.64); and that it was greater among females (white, 68.56; colored, 76.16) than it was among males (white, 66.82; colored, 67.85). This last is an erroneous indication, since the death rates from these diseases were higher among males than among females, as is shown above. The proportion of deaths due to these causes was greater in the rural districts than in the cities of the registration states, and less in the cities of 100,000 population and upward (56.77) than in the average of all the cities (61.50).

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to heart disease and dropsy among the whites during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

ward.													

This table indicates that among the whites the proportion of deaths due to heart disease and dropsy was greatest for the children of mothers born in France (100.88), and the same is true for the registration area, in which the rate was 96.77 for this class.

The following diagram shows the relative proportion of deaths from these causes among white persons having mothers born in the specified countries:

The number of deaths due to heart disease and dropsy in persons 45 to 65 years of age per 1,000 of all deaths from known causes occurring in this age group was, for the United States, whites, 123.89; colored, 168.40; Chinese, 125.60; Indians, 77.92. In the registration area the proportion was 127.11. The proportion of deaths due to these diseases in persons 65 years of age and over per 1,000 of all deaths from known causes occurring in this age group was, for the United States, whites, 82.78; colored, 165.32; Chinese, 0.00; Indians, 93.46. In the registration area the corresponding proportion was 142.43.

In the following tables showing the relations of occupations, deaths attributed to dropsy are excluded. The following table shows, for the registration area and some of its subdivisions, the death rate from heart disease per 100,000 males engaged in each specified occupation and class of occupations:

The preceding table shows that the death rate from heart disease per 100,000 males engaged in the specified occupations in the whole registration area was 112.55. In the registration states it was 131.87, being 138.13 in the cities and 123.02 in the rural districts, while in the registration cities of the nonregistration states it was 83.46. In this last mentioned area the rate is too low, on account of a deficient return of occupation of decedents in many cities, which fact also renders the rate for the whole registration area somewhat too low.

In the registration states the death rate of males from heart disease per 100,000 in the specified occupations was above the average (131.87) for those in the professional class (177.97), the mercantile and trading class (137.82), the personal service, police, and military class (150.81), and the laboring and servant class (181.56); and was below the average for all other classes, being lowest for the clerical and official class (83.94).

Taking the principal occupations in the registration states the highest death rates of males from heart disease occurred among laborers (201.83), blacksmiths (161.50), farmers and farm laborers (146.16); and the lowest rates among mill and factory operatives (textiles, 72.07), draymen, hackmen, teamsters, etc., (85.31), painters, glaziers, and varnishers (126.24), and machinists (127.44).

The age distribution of the population engaged in the different occupations has much to do with the differences in the mortality from heart disease in the different classes.

The following table shows, for the registration area and some of its subdivisions, the death rate from heart disease per 100,000 females engaged in each specified occupation:

	Regis-	REGIS	TRATION ST	TATES.	Regis- tration
OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.
All occupations	87.08	108.92	102. 09	125. 51	55. 65
Teachers	32. 86	32. 85	30.79	34. 96	32, 88
Laundresses	82.64	111.73	120.03	60. 29	65.90
Nurses	121.39	120.67	106.71	159.38	122. 42
Servants	138. 99	182.33	172, 98	201.43	78.14
Mill and factory operatives	27.08	31.17	33. 97	24. 85	10.93
Milliners, dressmakers, etc	25. 53	34. 38	35. 01	32. 30	14. 62

This table shows that the death rate from heart disease per 100,000 females in selected occupations in the registration area was 87.08, being highest in the rural districts of the registration states (125.51). In each area the death rate of females from this cause was lower than the corresponding death rate for males having specified occupations, except in the rural districts of the registration states, in which the rates were, males, 123.02; and females, 125.51. The average death rate of females from this cause in the registration states was 108.92, being less in the cities (102.09) than in the rural districts (125.51). The highest death rate from heart disease in the registration states occurred among servants (182.33), being higher than the corresponding death rate of males from this cause in the same area (111.39). The death rate of female mill and factory operatives from heart disease in the registration states (31.17) was less than half the corresponding rate for the males (72.07), and the death rate of milliners, dressmakers, seamstresses, etc. (34.38) was also very much below the average rate from this cause, which is mainly due to the fact that the great majority of females engaged in these occupations were under 45 years of age.

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to heart disease per 1,000 deaths from all causes among males engaged in each specified occupation and class of occupations:

The preceding table shows that in the United States the proportion of deaths due to heart disease per 1,000 deaths from all causes among males engaged in the specified occupations was 79.49. In the registration area the proportion was 91.65, being 95.31 in the registration states (cities, 88.02; rural districts, 109.70), and in the registration cities of the nouregistration states it was 83.98. Taking the principal occupations in the registration states, the greatest proportion of deaths of males due to heart disease occurred among merchants and dealers (128.11), farmers and farm laborers (122.48), machinists (112.04), boot and shoe makers (106.88), and blacksmiths (103.68); and the least proportion among draymen, hackmen, teamsters, etc. (70.38), accountants, bookkeepers, clerks, and copyists (77.86), laborers (79.91), mill and factory operatives (textiles, 88.89), and carpenters and joiners (94.97).

The following table shows, for the United States, the registration area and some of its subdivisions, and the remainder of the United States the proportion of deaths due to heart disease per 1,000 deaths from all causes among females engaged in each specified occupation:

•	United	Regis-	REGIS'	TRATION ST	TATES.	Regis- tration	Remain- der
OCCUPATIONS.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
All occupations.	74, 66	94. 18	95. 42	95. 35	95. 57	90.86	65. 55
Teachers	50.11	76. 12	75.70	63. 38	91.74	76. 92	39.53
Laundresses	110.34	144.90	166. 67	165.92	176.47	128, 53	84.45
Nurses	91.92	105. 26	108.11	103. 17	118.64	101.45	81.01
Servants	78.11	98.41	100.28	100.73	99.51	92.75	68.48
Mill and factory operatives	54.79	57.99	58.90	60.18	55, 28	49.38	39. 11
Milliners, dressmakers, etc	61.14	71.91	77.90	83. 01	63.83	58. 82	52.34

This table shows that the proportion of deaths due to heart disease per 1,000 deaths from all causes among females in the selected occupations was 74.66, being below this average in the nonregistration area and all of its subdivisions. The greatest proportion of deaths due to heart disease among females in the United States occurred among laundresses (110.34) and nurses and midwives (91.92), and the least proportion among teachers (50.11) and mill and factory operatives (54.79).

DISEASES OF THE RESPIRATORY SYSTEM.

The total number of deaths reported as due to diseases of the respiratory system, excluding consumption, during the census year, was 138,361, of which 75,314 were of males and 63,047 were of females, giving a ratio of 164.47 per 1,000 of all deaths from known causes.

In the registration area the number of deaths reported as due to this class of diseases during the census year was, males, 34,762; females, 30,173; total, 64,935, being 160.61 per 1,000 of all deaths from known causes, and 330.30 per 100,000 of population living at the end of the year.

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the respiratory system during the census year per 100,000 of population, with distinction of color and sex:

	A	.GGREGATE	.		WHITE.			COLORED.	
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	330, 30	354. 65	306.08	323. 12	346, 30	300.04	470.92	520. 57	422. 83
Cities	359 53	390. 48	328. 98	351. 61	381. 28	322. 27	487.40	541. 27	435. 73
States	340.91	362.90	319.41	337.09	358.65	316.00	503.84	547. 42	462.63
Cities	408.77	444.48	374.74	403.74	438.85	370. 23	593.81	658.75	535.68
Rural	237. 28	242.36	232. 11	236, 24	241.08	231.32	295.81	312.64	277.74
Cities in nonregistration states	314.09	342. 32	285. 29	300. 26	326, 54	273. 33	457.80	510.06	406.70

It will be seen from this table that the death rate from this class of diseases was higher among males (354.65) than among females (306.08), and that it was much higher among the colored (470.92) than among the whites (323.12); that in the registration states it was higher in the cities (408.77) than in the rural districts (237.28), and that in the rural districts the difference between the death rate of the white (236.24) and of the colored (295.81) was much less marked than it was in the registration area as a whole.

The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to diseases of the respiratory system during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

	. WHITE.							COLORED.			
AREAS,	Aggre- gate.	Total.		Females.	Native born.				•		
ARDAS,			Males.		Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.
Registration area	170. 26	170.83	172.96	168. 45	167.83	165.43	188. 87	181. 97	163.52	171.66	154.76
Cities	173.12 177.01 185.66	174. 04 176. 72 185. 51	176. 74 179. 04 188. 78	170. 98 174. 21 181. 93	171. 20 172. 05 180. 87	168.06 166.56 170.87	193. 37 190. 92 196. 96	183. 68 192. 89 198. 55	163. 16 185. 82 189. 64	171. 32 191. 59 194. 99	154. 40 179. 77 184. 09
Rural Cities in nonregistration states	157. 69 160. 13	157.44 160.86	157. 37 163. 41	157.51 157.85	155. 69 160. 45	161. 38 158. 04	156.71 179.70	169.46 164.50	169. 93 155. 34	177. 81 164. 47	161, 29 145, 43

It will be seen from this table that the proportion of deaths due to this class of diseases out of the total number of deaths from known causes was a little greater among males (white, 172.96; colored, 171.66) than among females (white, 168.45; colored, 154.76); that it was a little greater among the whites (170.83) than among the colored (163.52); and that among the whites it was greater among the foreign born (181.97) than among the native born (167.83).

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the respiratory system during the census year, at all ages and in each of six age groups, per 100,000 population of corresponding ages, with distinction of sex:

AREAS.	All ages.	Under 1 year.	Under 5 years.	5 to 15 years.	15 to 45 years.	45 to 65 years.	65 years and over.

ξ

It will be seen from the preceding table that the death rate from diseases of the respiratory system was highest in infants and young children, and lowest in the age group from 5 to 15.

In infants under 1 year of age it was higher among males (3,415.13) than among females (2,795.43), and in the registration states it was more than twice as high in the cities (3,955.39) as it was in the rural districts (1,746.64). It was highest of all among males in the metropolitan district (5,214.39), and lowest among females in the rural districts of the registration states (1,519.60).

In the age group from 45 to 65 years it was higher among males (432.75) than among females (340.09), and in the registration states it was more than twice as high in the cities (517.10) as it was in the rural districts (237.52). It was highest of all among males in the metropolitan district (715.36), and lowest among females in the rural districts of the registration states (215.77).

In those 65 years of age and over it was higher among females (1,397.39) than among males (1,243.01). It was higher in the cities than it was in the rural districts of the registration states and highest of all among females in the metropolitan district (2,208.82).

The following table shows the death rates from diseases of the respiratory system per 100,000 of population in the registration states during the census year, with distinction of conjugal condition, sex, color, and general nativity:

				COLOR AND NATIVITY.								
CONJUGAL CON-	Aggr	egate.	White.					White.				
DITION.			То	Total. Native born. Foreign born.					Colored.			
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	\	
Single	347.98	299. 92	341, 14	293.33	358. 60	312.96	227.44	165. 27	631. 61	574.14		
Married	306.38	206, 33	305. 21	205. 42	239, 66	161. 20	400.12	276. 87	361. 24	248. 89		
Widowed	1, 059. 59	843. 19	1, 064. 77	853.62	835. 57	757.49	1, 358. 16	955. 73	831.70	531. 45		

The great differences shown in this table between the death rates of the single, married, and widowed, and between those of the native born and foreign born whites, are mainly due to differences in the age distribution of the corresponding groups of population.

The following table shows, for three divisions of grand groups, namely, Northern, Middle, and Southern, the number of deaths from diseases of the respiratory system under 5 years of age in each month during the census year, and the proportion in each month per 1,000 deaths under 5 years from these diseases of which the month is known:

MONTHS.	GRAND	n region. groups 17, and 19.	GRAND 2, 6, 8, 10,	REGION. GROUPS 15, 16, 18, ND 21.	GRAND	n region. groups 12, and 14.	
	Deaths.	Proportion.	Deaths.	Proportion.	Deaths.	Proportion.	
June	655	49.75	1,320	47.31	478	48, 01	
July	471	35.77	1,051	37.67	400	40.18	2
August	486	36.91	1, 111	39.82	492	49.42	E
September	545	41.39	1, 219	43.69	601	60.37	
October	861	65.40	1,657	59.39	721	72.41	
November	934	70.94	1,843	66.06	687	69.00	
December	1,075	81.65	2, 352	84.30	747	75.03	
January	2,155	163.68	4, 010	143.73	1, 123	112.80	
February	1,620	123.04	3, 534	126.67	1, 351	135.70	
March	1,696	128.82	3, 859	138.32	1, 404	141.02	İ
April	1, 371	104.13	3, 307	118.53	1,006	101.04	
May	1, 297	98. 51	2, 636	94. 48	946	95.02	

The relative proportion of deaths in each month in the several divisions, as given in the preceding table, is shown in the following diagram:

It will be seen from the preceding table and diagram that in the Northern region the greatest proportion of deaths from diseases of the respiratory organs in children under 5 years of age occurred in the month of January, averaging 16.5 per cent of all the cases of death for the year, and reaching 17.06 per cent in the Northeastern region.

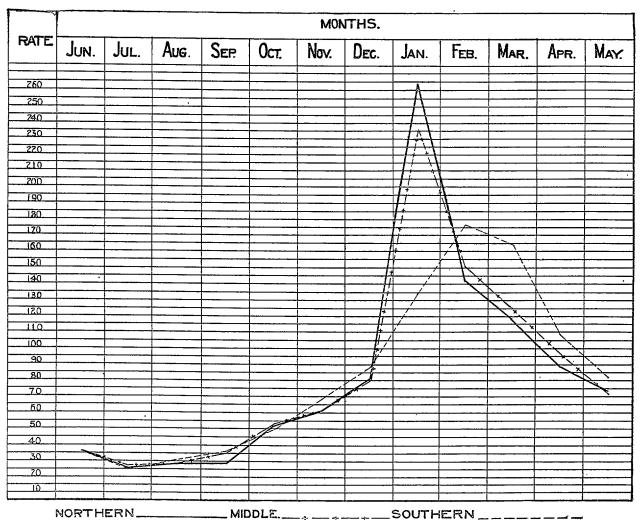

In the Middle region the greatest proportion of deaths occurred in the month of January, being 14.4 per cent, and reaching 17.1 per cent on the Central plains.

In the Southern region the month of greatest proportion of mortality was also March, in which 14.0 per cent of all the cases occurred, the highest proportion being 16.6 per cent in the Southwest Central region. The least proportion of deaths from these diseases occurred in all parts of the United States in the month of July, ranging from 3.to 4 per cent of the total number of deaths.

The following table shows, for three divisions of grand groups, namely, Northern, Middle, and Southern, the number of deaths from diseases of the respiratory system in persons 5 to 60 years of age in each month during the census year, and the proportion in each month per 1,000 deaths at from 5 to 60 years from these causes, of which the month is known:

months.	GRAND	n region. groups 17, and 19.	GRAND 2, 6, 8, 10,	REGION. GROUPS 15, 16, 18, ND 21.	SOUTHERN REGION. GRAND GROUPS 3, 4, 9, 11, 12, AND 14.		
,	Deaths.	Proportion.	Deaths.	Proportion.	Deaths.	Proportion.	
June	477	35. 58	1,035	35. 69	435	36. 37	
July	351	26. 18	794	27.38	304	25.41	
August	372	27. 75	816	28. 14	365	30.51	
September	395	29.47	1,018	35.10	425	35. 53	
October	691	51. 55	1, 534	52.89	603	50.41	
November	823	61.40	1, 759	60.65	815	68.13	
December	1,086	81. 01	2, 330	80.34	1,057	88. 36	
January	3, 537	263. 86	6, 837	235. 75	1, 611	134. 68	
February	1,898	141.59	4, 390	151. 37	2, 109	176.31	
March	1, 599	119.28	3, 629	125.13	1,965	164. 27	
April	1, 192	88. 92	2, 790	96. 20	1, 289	107.76	
May	984	73. 41	2,069	71.34	984	82. 26	

The relative proportion of deaths in each month in the several divisions, as given in the table above, is shown in the following diagram:

It will be seen from the preceding table and diagram that in this age group the differences in the proportions of death due to diseases of the respiratory organs were much greater in different months of the year than they were in children under 5 years of age. In the Northern and Middle regions the greatest proportion of deaths from these causes occurred in January, being over 23 per cent of all the deaths during the year. In the Southern belt the greatest proportion of deaths occurred in February, being 17.63 per cent of all the deaths during the year, and reaching 20.9 per cent in the Southwest Central region. The least proportion of deaths occurred, as among children under 5 years of age, in the month of July in each division.

The following table shows, for three divisions of grand groups, namely, Northern, Middle, and Southern, the number of deaths from diseases of the respiratory system of persons 60 years of age and over in each month during the census year and the proportion in each month per 1,000 deaths of persons at 60 years and over from these causes of which the month is known:

months.		n REGION. GROUPS 17, AND 19.	2, 6, 8, 10,	GROUPS	GRAND	n REGION. GROUPS 12, AND 14.

It will be seen from the preceding table and diagram that the proportion of deaths from diseases of the respiratory organs in persons of this age group in the Northern and Middle regions was greatest in January, while in the Southern region it was greatest in March, and that in all the regions it was lowest in July.

The following table shows, for the registration area and some of its subdivisions, the death rate from diseases of the respiratory system, excluding consumption, per 100,000 males engaged in each specified occupation and class of occupations:

	Regis-	REGIST	TRATION ST	ATES.	Regis- tration

It will be seen from this table that the average death rate from diseases of the respiratory system, of male engaged in specified occupations in the registration area, was 203.09. In the registration states the death rate was 237.27, being 287.51 in the cities and 166.33 in the rural districts. In the registration cities in other states, the death rate was less, being 151.61 per 100,000.

In the registration states the death rate of males from these diseases was below the average in the clerical and official class (171.59), the mercantile and trading class (216.88), the class engaged in manufacturing and mechanical industries (214.75), and the class engaged in agriculture, transportation, and other outdoor pursuits (192.13); and was above the average in all other classes, being highest in the laboring and servant class (427.76).

Taking the principal occupations in the registration states, the death rate of males from these diseases was highest among sailors (572.97), laborers (483.40), tailors (292.36), and merchants and dealers (253.09); and was lowest among commercial travelers and salesmen (99.53), farmers and farm laborers (187.10), accountants, bookkeepers, elerks, and copyists (196.20), and carpenters and joiners (214.07).

The following table shows, for the registration area and some of its subdivisions, the death rate from diseases of the respiratory system, excluding consumption, per 100,000 females engaged in each specified occupation:

	Regis-	REGIST	ration st	TATES.	Regis- tration	
OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.	
All occupations	130. 21	167. 91	153.62	202. 62	75, 96	
Teachers	55. 52	55.32	54.73	55.93	55. 90	79

Nurses	171.37	199. 11	180. 59	250. 46	131.16	
Servants	199.89	267.14	241.37	319. 81	105. 45	l
Mill and factory operatives	64.11	71.35	82. 92	45. 18	35.53	
Milliners, dressmakers, etc	46. 57	66. 27	60. 26	86. 12	22.32	
	<u> </u>]	ŧ.	l'	J

It appears from this table that the average death rate from diseases of the respiratory system, of females engaged in all selected occupations in the registration area, was 130.21 per 100,000. In the registration states the death rate was higher, being 167.91 (cities, 153.62; rural districts, 202.62); and in the registration cities of the nonregistration states it was much less, being 75.96 per 100,000. The average death rates of females in selected occupations in each area were much less than the corresponding rates for males, except in the rural part of the registration states, in which the death rate of females (202.62) was considerably higher than the corresponding rate for males (166.33).

In the registration states the highest death rates of females from diseases of the respiratory system occurred among servants (267.14) and nurses and midwifes (199.11); and the lowest rates among teachers (55.32) and milliners, dressmakers, seamstresses, etc. (66.27).

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States the proportion of deaths due to diseases of the respiratory system, excluding consumption, per 1,000 deaths from all causes among males engaged in each specified occupation and class of occupations:

Sailors	123.44	136. 74	144.30	153. 66	130.71	123. 04	91. 52
Steam railroad employés	109.48	104 06	107.75	114. 96	89.20	99. 69	112. 64
Stock raisers, herders, and drovers	142.10	272. 73	350.00	454. 55	222.22	208. 33	131. 02
Telegraph and telephone operators	124.60	177. 97	175.00	163. 64	200.00	184. 21	92. 31

It will be seen from this table that the average proportion of deaths due to diseases of the respiratory system per 1,000 deaths from all causes among males engaged in the specified occupations in the United States was 167.36, being greatest in the registration cities of the registration states (183.22); and least in the rural districts of the registration states (148.32). The proportion of deaths due to these causes in the nonregistration area (168.57) was but slightly greater than the corresponding proportion for the United States.

MOR-PT I-26

In the United States the proportion of deaths of males due to these causes was above the average among hotel and boarding house keepers, saloon keepers, etc. (174.47), laborers and servants (169.84), and those engaged in agriculture, transportation, and other outdoor occupations (175.65); and was below the average in all other classes.

Taking the principal occupations in the United States, the greatest proportion of deaths of males due to these causes occurred among miners (199.25), farmers and farm laborers (180 60), and laborers (170.65); and the least proportion among steam railroad employés (109.48), carpenters and joiners (147.18), and merchants and dealers (154.35).

In the registration states the greatest proportion of deaths of males due to diseases of the respiratory system occurred among saloon keepers (206.43), draymen, hackmen, teamsters, etc. (195.75), laborers (191.40), tailors (177.75), accountants, bookkeepers, clerks, and copyists (175.93), and merchants and dealers (172.69), and the least proportion among mill and factory operatives (144.45), and carpenters and joiners (155.37).

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to diseases of the respiratory system, excluding consumption, per 1,000 deaths from all causes among females engaged in each specified occupation:

OCCUPATIONS.	United States.	Regis- tration	REGIS	stration s	TATES.	Regis- tration cities	Remain- der of the
	Duales.	area.	Total.	Cities.	Rural.	in other states.	United States.
All occupations	142. 28	140, 84	147.11	143.•48	154. 28	124.02	142. 96
Teachers	144. 27	123. 61	127.49	112. 68	146. 79	130. 77	150.64
Laundresses	138.70	157.42	154.17	152 47	176.47	159.87	124.66
Nurses	147.63	148.61	178.38	174.60	186.44	108.70	146, 84
Servants	146.33	141.53	146.93	140.55	158.00	125. 17	148.61
Mill and factory operatives	134.77	137. 28	134.82	146.90	100.50	160.49	122.91
Milliners, dressmakers, etc	121.40	131.20	150.14	142. 86	170. 21	89. 78	113. 40

It will be seen from the above table that the average proportion of deaths due to diseases of the respiratory system per 1,000 deaths from all causes, among females in the selected occupations in the United States, was 142.28, and that the proportion was very nearly uniform throughout the different areas except in the registration cities of the nonregistration states, in which it was less, being 124.02 per 1,000, which is probably due to the deficient return of occupations in many of these cities.

The least proportion of deaths due to diseases of the respiratory system in the United States occurred among milliners, dressmakers, seamstresses, etc. (121.40); for females in all other specified occupations the proportion was very uniform.

BRONCHITIS.

The total number of deaths reported as due to bronchitis in the United States during the census year was 21,422, 10,760 being of males and 10,662 of females. In the registration area the number of deaths reported as due to this disease was, males, 7,207; females, 7,425; total, 14,632, giving a death rate of 74.43 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from bronchitis during the census year in each of six age groups per 100,000 population of corresponding ages, with distinction of sex:

AREAS.	Under 1 year.	Under 5 years.	5 to 15 years.	15 to 45 years.	45 to 65 years.	65 years and over.
Registration area	1, 223. 24	397.60	9.10	12. 20	65. 09	373.77

Cities of 100,000 population and upward	1, 560. 75	520. 27	11.17	14.21	90, 74	540.00
Males	1,672.44	546. 13	10.53	14.90	87. 02	493. 21
Females	1, 446. 25	493.94	11.80	13.52	94, 52	578.36
Metropolitan district	2, 095. 23	674. 51	12.51	21. 67	132, 92	802.19
Males	2, 172. 66	700.50	11.83	21.77	120.78	706. 56
Females	2, 015, 61	648.31	13.19	21,56	145.03	882, 02

It will be seen from this table that the highest death rate from bronchitis occurred in infants under 1 year of age (1,223.24 per 100,000), and that in this age group the death rate was higher for males (1,306.53) than for females (1,137.69), and that it was much higher in the cities of the registration states (1,667.94) than in the rural districts of the same states (537.61), and was highest of all in the metropolitan district (2,095.23). The death rates from this cause were comparatively low for those between 5 and 45 years of age, being for the age group from 5 to 15 years 9.10, and for the age group from 15 to 45 years 12.20. In the age group 45 to 65 years the death rate rose to 65.09, and was slightly higher in females (66.36) than in males (63.80). In this group it was also much higher in the cities of the registration states (101.65) than in the rural districts of the same states (30.73). In those 65 years of age and over the death rate from this cause was 373.77 per 100,000, being decidedly higher for females (419.44) than for males (322.61). In this group also it was much higher in the cities than in the rural districts of the registration states, and was highest of all in the large cities and in the metropolitan district.

The following table shows the proportion of deaths due to bronchitis at certain ages and groups of ages per 1,000 deaths at all ages from this cause, in 1880 and in 1890, with distinction of sex:

ACTO	18	880	18	390		18	880	18	890

The preceding table and diagrams indicate that over half the deaths reported as due to bronchitis occurred in children over 5 years of age; that in adults the greatest proportion of deaths from this disease occurred, both in 1880 and in 1890, in persons from 70 to 75 years of age.

The following table shows, for each grand group, the proportion of deaths due to bronchitis during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

	m., r	RU	RAL.	CI	ries.	
GRAND GROUPS.	Total.	Males.	Females.	Males.	Females.	
1. North Atlantic Coast region	35.72	23. 25	27.38	37. 55	44. 82	
2. Middle Atlantic Coast region	42.16	23.96	27.44	42. 20	50. 32

14. Southwest Central region	16.01	15.55	16.06	17. 29	23. 89	
15. Central region, plains and prairies	16.31	14.60	15, 98	26.81	21. 16	
16. Prairie region	17.41	16.80	18.06	19.49	16.58	
17. Missouri River belt	23.76	19.51	23.15	26. 53	32.14	-
18. Region of the Western plains	15.76	12.63	15.30	19.95	22.66	
19. Heavily timbered region of the Northwest	15.00	14. 97	15.04			ļ
20. Cordilleran region	15.12	15.96	13.72	10.50	30.89	
21. Pacific Coast region	27.56	15.35	18.72	35, 36	36, 39	

This table indicates that the proportion of deaths from bronchitis to all deaths from known causes was greatest in the North and Middle Atlantic Coast regions, both in the cities and in the rural districts; and in the rural districts was least in the South Atlantic Coast region and the Southern Interior plateau.

The following table shows, for each of the registration states and for their sum, the death rates from bronchitis during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

	I	GGREGAT	Е.		MALES.	!		FEMALES.	
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

Rhode Island	105.06	120.46	83.88	111. 29	124. 12	94.25	99.17	117.09	73, 68
Vermont	21, 96	53.01	19, 07	20.08	51, 67	17. 33	23.91	54. 24	20, 90

It will be seen from this table that the death rate from bronchitis was higher among females (81.12) than among males (77.00), and that it was more than twice as high in the cities (101.71) as it was in the rural districts (44.52). It was highest of all in Rhode Island (105.06), and lowest in Vermont (21.96).

The combined relations of age and race to the death rates from bronchitis are indicated in the following table showing the number of deaths in each of certain age groups and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the State of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS,	UNDER	1 YEAR.	UNDER	5 YEARS.	5 TO 15	YEARS.	15 то 45	YEARS.	45 то 65	YEARS.		RS AND ER.
CODER AND BRUIK BACKS OF MOTHERS.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	1, 879	1, 794, 38	2,788	574. 90	95	11. 01	450	18. 79	725	111.03	1,024	658. (10

Italy	197	5, 330, 09	337	2, 241, 44	4	23.80	8	15.98	6	72, 20	7	735. 29

It will be seen by this table that for children under 5 years of age the death rate from bronchitis was nearly three times as high among the colored (1,600.66) as among the whites (574.90), but that above the age of 15 years it was only about one-half as high among the colored as among the whites, being for those 65 years of age and over, whites, 658.00; colored, 329.01. Among the whites under 5 years of age the death rate from this disease was enormous among the children of mothers born in Italy (2,241.44). Next in this group it was highest among the children of mothers born in Ireland (727.00) and of mothers born in England and Wales (609.36), and lowest among the children of mothers born in the United States (459.49) and among the children of mothers born in Germany (493.62). In persons from 45 to 65 years of age it was highest among the children of mothers born in Ireland (239.75), being more than double the rate for the children of mothers born in any other country; and was lowest of all for the children of mothers born in the United States (29.86). For those 65 years of age and over the death rate was also highest among the children of mothers born in Ireland (1,134.25), being nearly three times as high as for the children of mothers born in the United States (385.64).

PNEUMONIA.

The total number of deaths reported as due to pneumonia in the United States during the census year was 76,496, of which 42,739 were of males, and 33,757 were of females. More deaths were attributed to it than to any other single form of disease, except consumption. In the registration area the number of deaths reported as due to this disease was, males, 20,196; females, 16,556; total, 36,752, giving a death rate per 100,000 of population of 186,94.

In 1890 the corresponding death rates from pneumonia were, in England and Wales, 140.3; in Ireland, 70.3; in Scotland, 122.9; in Italy, 251.5.

During the 10 years 1880 to 1889 the death rates from pneumonia per 100,000 population were, in England and Wales, 103.2; in Ireland, '3.3; in Scotland, 104.00; in Norway, 78.1; in Prussia, 140.4; in Massachusetts, 156.5; in Connecticut, 126.5; and in Rhode Island, 135.7.

The following table shows, for the registration area and some of its subdivisions, the death rates from pneumonia during the census year per 100,000 population, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					COLORED.	
AREAS.	Aggre-		:			Native born	n.				:
AREAS.	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.

Metropolitan district, 6 years	240, 44	239. 86	269. 25	211. 10	237. 73	226, 13	245, 28	243.42	272.87	304. 46	242.47

It will be seen from this table that the death rate from this cause was higher among the colored (278.97) than among the whites (182.24); that it was higher among males (white, 200.65; colored, 313.28) than among females (white, 163.92; colored, 245.74), and that for the whites it was higher among the foreign born (223.90) than among the native born (167.11), which, however, is mainly due to the difference of age distribution of the two classes of population. Among the native born having one or both parents foreign born the death rate from this disease (197.15) was higher than that among those having both parents native born (153.98.) In the registration states, which are mainly situated in the northeastern part of the country, the death rate from this disease was higher than in the registration area as a whole, and in these states it was decidedly higher in the cities (234.07) than it was in the rural districts (141.09).

The following table shows, for each of the registration states and for their sum, the death rates from pneumonia per 100,000 of population for the census year, with distinction of sex and of cities and rural districts:

	A	GGREGAT	Ε.		MALES.			FEMALES.	
1 EGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	197. 28	234. 08	141.09	215. 49	262.31	146, 32	179. 48	207. 18	135, 77
Connecticut	180.10	206. 87	161.04	205. 93	236. 41	184, 57	154.76	178. 42	137. 65

Massachusetts	177. 09	186. 55	146, 15	185.53	197.94	145.86	169. 12	175. 91	146, 43
New Hampshire	165.72	137. 55	177.43	169. 91	132.38	184, 46	161.61	142.17	170, 23
New Jersey	185.06	2 36, 19	118. 19	202.13	272.91	111.23	168.07	200, 21	125, 26
New York	215. 83	266.58	133, 79	239.98	303. 01	141.51	192.03	231, 60	125. 86
Rhode Island	166. 13	173, 44	156.08	172.00	183.57	156.62	160.58	164.12	155. 54
Vermont	169, 06	176.70	168, 35	167. 13	162. 40	167. 54	171.07	189, 84	169. 20

It will be seen from the preceding table that the highest death rate from pneumonia occurred in New York (215.83), and the lowest in Delaware (159.06). The death rate was much higher in the cities (234.08) than it was in the rural districts (141.09). In the rural districts it was highest in New Hampshire (177.43), and lowest in New Jersey (118.19). It was higher among males than among females in every state except Vermont; but in the rural districts it was higher among females than among males in Delaware, Massachusetts, New Jersey, and Vermont.

Of 27,161 deaths from pneumonia in whites in the registration area, during the census year, 8,702 were children of mothers born in the United States, 6,790 children of mothers born in Ireland, 3,501 children of mothers born in Germany, 1,134 children of mothers born in England and Wales, 906 children of mothers born in Canada, 527 children of mothers born in Italy, 361 children of mothers born in Scandinavia, 317 children of mothers born in Scotland, 153 children of mothers born in France, 105 children of mothers born in Bohemia, and 81 children of mothers born in Hungary.

The following table shows, for the registration area and some of its subdivisions, the death rates from pneumonia among the whites during the census year per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.
Registration area	125.47	162. 38	255. 27	155. 53	186. 62	166.14	134. 66	148. 08	253. 09	257. 93	376. 29	205. 13
Cities	140.71	173.34	284. 24	165. 97	202.56	172.05	156. 90	152. 49	283.06	262.34	421.01	218. 92
States	134.95	167.00	267.52	169.38	196, 20	187.77	134.70	175.66	273.80	360.06	396. 12	199.18
Cities	168.65	184. 19	306, 25	188.89	225.63	202.76	161. 4 3	197.89	317.46	382. 82	452.72	218.02

Cities in nonregistration states	79.94	143.48	175.30	94, 92	164.00	127.52	134. 32	120.02	176.37	194.78	242.83	220.96
Cities of 100,000 population and upward.	185.60	199. 24	339. 73	196.88	208.33	189.82	186. 60	169.59	286. 22	272.47	452.39	250, 28

It will be seen from this table that the death rate from pneumonia in the registration area was highest among those whose mothers were born in Italy (376.29), in Bohemia (257.93), in Ireland (255.27), and in Hungary (253.09); and that it was lowest among those whose mothers were born in the United States (125.47).

The following table shows, for the registration area and some of its subdivisions, the death rates from pneumonia during the census year in each of three age groups per 100,000 population of corresponding ages, with distinction of sex:

	1	5 то 45 чн	ARS.	45	5 то 65 чел	rs.	65 x	EARS AND O	VER.
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	100.05	123.60	76. 69	263. 12	301.04	225. 57	783.77	701. 66	762.43
Cities	109.78	137. 69	82, 29	302. 23	347. 10	257. 67	785. 83	772. 54	796. 69
States	105.58	130. 01	81.94	272.67	307 61	239. 03	758.90	707.95	805. 10
Cities	129.10	164.00	96. 29	357. 22	405.82	311.27	890.67	853.34	919.99.

Cities of 100,000 population and upward	121. 28	153.70	88.76	337. 28	385. 31	288. 58	836. 46	831. 62	840. 44
Metropolitan district	165. 25	212.96	119. 21	460. 59	519.38	402.02	1, 078. 48	1, 038. 40	1, 111. 95

It will be seen from this table that the death rate from pneumonia of persons 65 years of age and over (733.77) was much higher than of persons from 45 to 65 years of age (263.12), and more than seven times as high as the death rate from this disease in persons from 15 to 45 years of age (100.05). This peculiarity of rapidly increasing mortality with advancing age is found in all the subdivisions of the registration area, and the proportions of population must be taken into consideration in endeavoring to estimate the influence of age upon the mortality from this disease.

The combined relations of age and race to the death rates from pneumonia are indicated in the following table showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year.

Italy		187.71	34	409.15	16	1,680.67

The total number of deaths from pneumonia reported on this record of persons between 15 and 45 years of age was 3,482 for whites, and 193 for colored; the highest death rate in this age group occurred in the children of mothers born in Ireland (249.15), and the lowest in the children of white mothers born in the United States (79.03); the death rate in this age group was high among the colored (187.06), and comparatively low among children of mothers born in Germany (115.59).

For the age group from 45 to 65 years this record includes 2,527 deaths of whites, and 102 deaths of colored; the highest death rate in this age group occurred among children of mothers born in Ireland (655.20), of mothers born in Hungary (518.13), and of mothers born in Scotland (455.56); and the lowest death rate was among the children of white mothers born in the United States (209.50), which was less than one-third of the corresponding rate for the children of mothers born in Ireland.

In the age group 65 years and over this record includes 1,448 deaths of whites, and 40 of colored. In this age group the death rate of the whites (930.45) was higher than that of the colored (774.14); and it was highest among the children of mothers born in Italy (1,680.67), and lowest among children of mothers born in Canada (555.04).

Out of each 100,000 deaths of all causes in the United States during the census year, 8,623 were reported as due to pneumonia, which is slightly greater than the corresponding figure in 1880 (8,330) or in 1870 (8,128). In England and Wales the corresponding proportion for 1890 was 7,180; in 1880, 4,772.

For further details in regard to death rates from pneumonia in large cities, see Part II of this report, page 99. The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to pneumonia during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

		Section 1			WHITE.	•	•			COLORED.

The preceding table indicates that the proportion of deaths due to pneumonia was a little greater for the whites in the registration area (96.33) than it was in the United States as a whole (93.68), but that for the colored it was greater in the United States as a whole (103.37) than it was in the registration area (96.87). It must be remembered that by far the greater part of the colored population of the United States is not included in the registration area.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to pneumonia among the whites during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

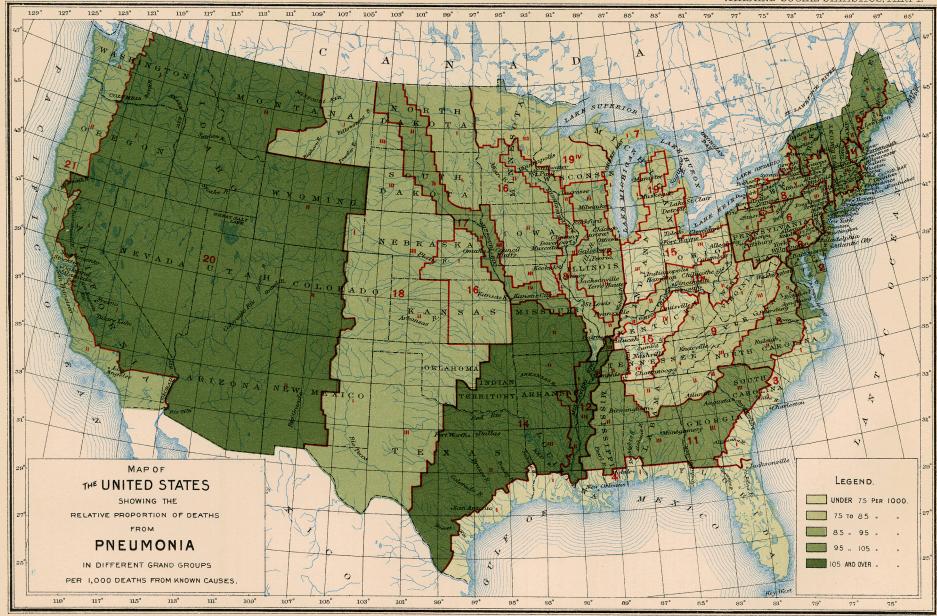

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.

This table indicates that in the United States as a whole, as well as in the registration area, the greatest proportion of deaths due to pneumonia among the whites occurred among children of mothers born in Ireland and in Italy, and the least among children of mothers born in the United States and in Canada; the proportion due to this cause was below the average in the children of mothers born in Germany.

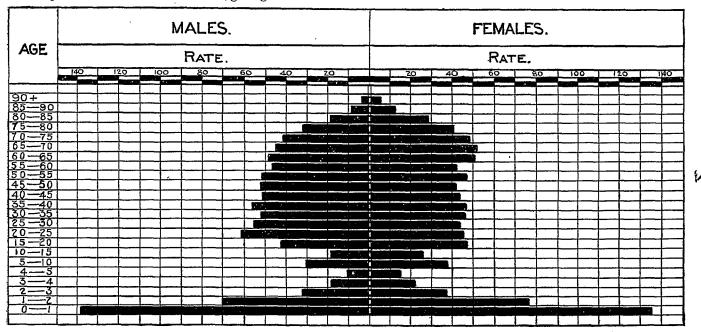

The following table shows the proportion of deaths due to pneumonia, at certain ages and groups of ages, per 1,000 deaths at all ages from this cause, in 1880 and in 1890, with distinction of sex:

	18	880	18	890		18	880	1890

1

The comparative proportion of deaths of males and females in each age group due to pneumonia during the census year are shown in the following diagram:

The comparative proportions of deaths of males in each age group due to pneumonia, in 1880 and 1890, are shown in the following diagram:

The following table shows, for each grand group, the proportion of deaths due to pneumonia during the census year per 1,000 deaths from known causes, with distinction of sex and color, rural districts and cities, and of children of mothers born in Ireland and in Germany:

GRAND GROUPS.	Total.	RUI	RAL.	CIT	IES.	White.	Colored.	MOTHERS	BORN IN-

This table should be compared with the corresponding table No. 63, page lxiv, in volume XII, of the Tenth Census Reports. It will be seen that in 1890 the greatest proportion of deaths from this disease occurred in the South Mississippi River belt, in the Southwest Central region, and in the Cordilleran region, and that the proportion was uniformly much greater among the children of mothers born in Ireland than among the children of mothers born in Germany.

The geographical distribution of deaths from pneumonia in the several grand groups, indicated in the table above, is shown in map No. 26.

The geographical distribution of deaths from pneumonia, by state groups, per 1,000 deaths from known causes in each group, is shown in map No. 27.

DISEASES OF THE DIGESTIVE SYSTEM.

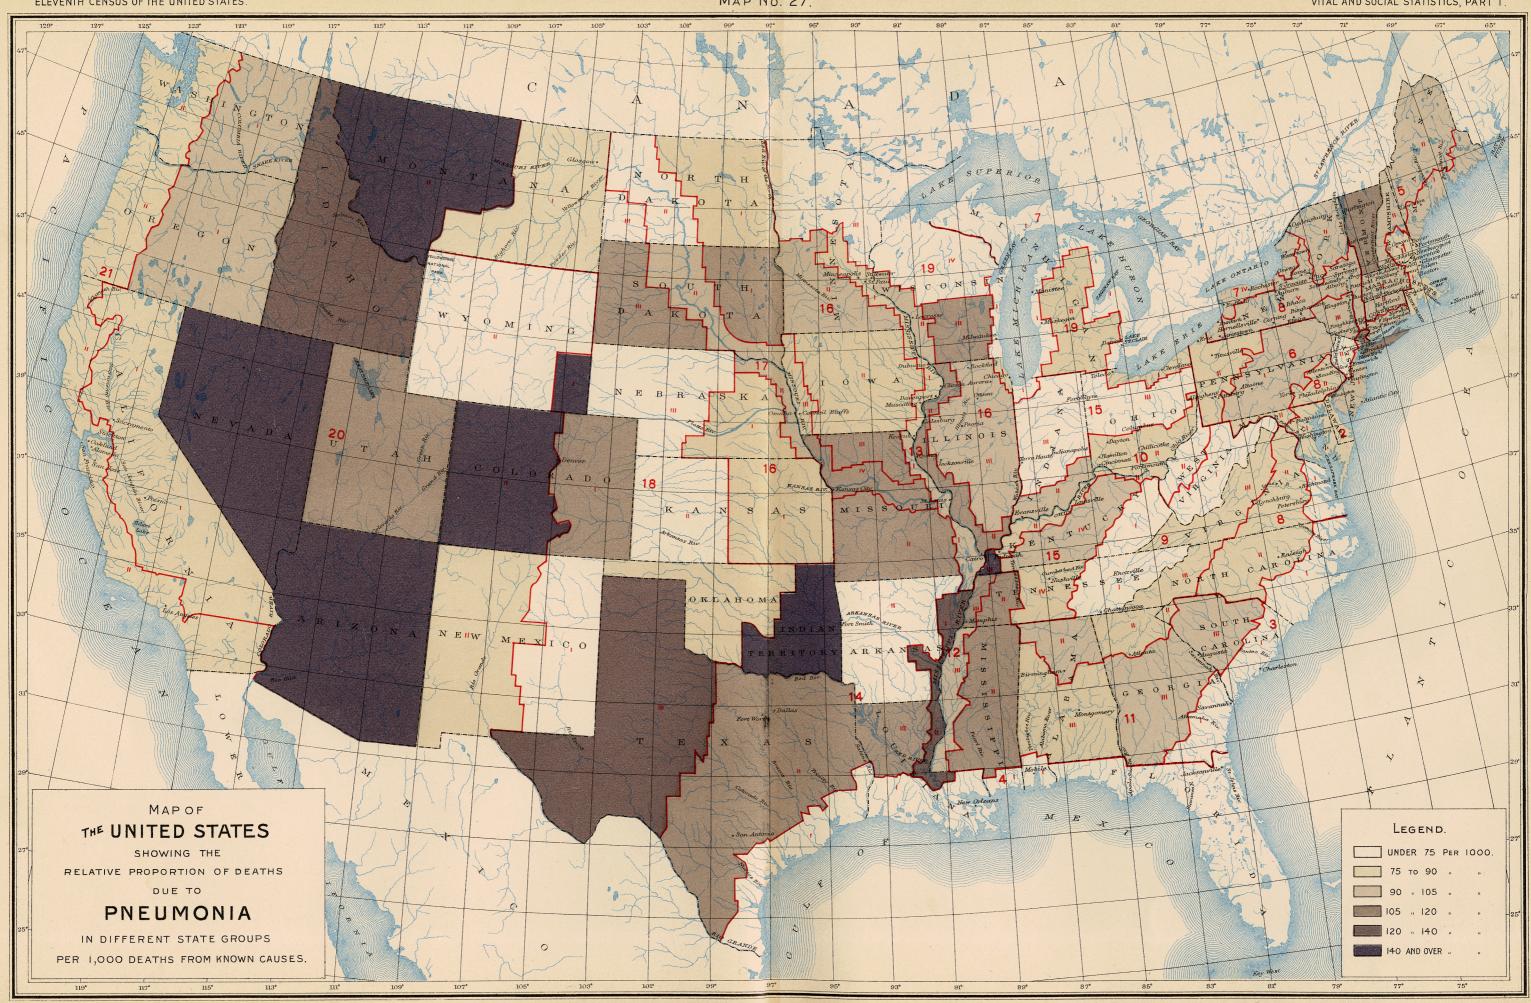

The total number of deaths reported as due to diseases of the digestive system in the United States during the census year was 39,466, of which 20,979 were of males and 18,487 of females, giving a ratio of 46.91 per 1,000 of all deaths from known causes.

In the registration area the number of deaths reported as due to this class of diseases was, males, 9,204; females, 8,790; total, 17,994, being 44.51 per 1,000 of all deaths from known causes, and 91.53 per 100,000 of population at the end of the year.

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the digestive system during the census year per 100,000 of population, with distinction of color and sex:

	. ,	AGGREGATE	s.		WHITE.		COLORED.		
AREA.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	91. 53	93. 90	89. 17	89. 40	91. 47	87. 33	133.31	142. 17	124.72
Cities	97. 68	101. 66	93.75	95. 15	98. 85	91.50	138.41	147.66	129. 53
States	85.97	86. 24	85.70	85. 63	85.76	85. 51	100.33	107. 37	93.67
Cities	95. 14	97. 51	92.88	94. 75	97.00	92.60	109.50	117.04	102.75
Rural	71.96	69. 60	74. 37	71.83	69. 28	74.43	79.13	86. 97	70.70
Cities in nonregistration states	100.02	105.36	94. 59	95. 56	100.61	90.38	146. 45	155. 80	137.30

The preceding table shows that in the registration area the death rate from this class of diseases was a little higher among males (93.90) than among females (89.17); that it was decidedly higher among the colored (133.31) than it was among the whites (89.40); that in the registration states it was higher in the cities (95.14) than it was in the rural districts (71.96); and it was the highest of all among the colored males in the cities in the nonregistration states (155.80), and lowest among the white males in the rural districts in the registration states (69.28).

The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to diseases of the digestive system during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					COLORED.	
4	Aggre-				1	Vative born	1.				
· AREA.	Aggregate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.
Registration area	47.18	47. 26	45. 68	49. 03	42. 67	46.07	36.30	59. 89	46. 29	46.88	45. 65
-Cities	47. 03	47.10	45. 82	48. 55	41.42	44.02	35.41	60.67	46. 33	46, 74	45.90
States	44.64	44.89	42.81	47.14	40.84	45. 47	34.49	56.69	37.00	37. 58	36.40
Cities	43.21	43.53	41.73	45.50	37. 52	42.34	33, 05	57.30	34.97	34.64	35.31
Rural	47.82	47.87	45.22	50.68	46.99	49. 23	42.65	54.14	45.45	49. 47	41.06
Cities in nonregistration states	51.00	51. 19	50.35	52. 19	45.76	49, 99	44.36	65.02	49, 69	50, 24	49.10

This table indicates that the proportion of deaths due to diseases of the digestive system to the total number of deaths from known causes in the registration area was nearly the same among the whites (47.26) as among the colored (46.29), and among the males (white, 45.68; colored, 46.88) as among the females (white, 49.03; colored, 45.65). In the registration states it was a little greater in the rural districts (47.82) than in the cities (43.21), and was greatest of all among the foreign born whites in the cities in the nonregistration states (65.02).

The following table shows, for the registration area, the proportion of deaths due to diseases of the digestive system in each of three age groups per 1,000 of all deaths from known causes occurring in those age groups, and also for the United States, with distinction of white, colored, Chinese, and Indians:

AREA AND RACE.	Under 15 years.	15 to 45 years.	45 years and over.
Registration area	31.94	49, 93	57.55
United States:			
White	38.89	45.54	59.16
Colored	54.02	30.87	44.40
Chinese	61.54	38.84	38. 96
Indians	30.51	28.65	57. 97

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the digestive system during the census year at all ages and in each of six age groups per 100,000 population of corresponding ages, with distinction of sex:

AREAS.	All ages.	Under 1 year.	Under 5 years.	5 to 15 years.	15 to 45 years.	45 to 65 years.	65 years and over
Registration area.	91. 53	789.33	240. 85	20. 98	48.00	152. 57	359. 41

Females	94, 59	869.77	275. 87	20.04	54. 15	144. 63	400.34
Cities of 100,000 population and upward	101.07	913.84	274. 34	21.04	54. 22	187.34	443. 29
Males	105.49	1, 003. 47	300.75	22. 91	51.77	203. 98	486. 99
Females	96. 65	821.98	247. 44	19.17	56. 67	170.48	407.47
Metropolitan district	104.63	834. 29	248. 85	25. 34	56.47	212. 19	447.83
Males	108.82	948. 98	291, 92	26. 23	53, 85	213, 68	480. 82
Females	100.54	716.38	205. 43	24. 44	58. 99	210.71	420. 28

This table shows that the death rate from diseases of this group was highest of all in infants under 1 year of age; that it was comparatively low in those from 5 to 45 years of age, after which it steadily increased with advancing age.

In infants under 1 year of age it was higher among males (872.26) than among females (704.14), and in the registration states it was higher in the cities (750.41) than it was in the rural districts (487.87). It was highest of all among males in the cities in the nonregistration states (1,057.45), and lowest of all among females in the rural districts of the registration states (423.85).

In those from 45 to 65 years of age it was greater in males (163.89) than it was in females (141.35), and in the registration states it was much higher in the cities (178.04) than it was in the rural districts (96.25). It was highest of all among males in the metropolitan district (213.68), and lowest among males in the rural districts of the registration states (93.42).

In those 65 years of age and over it was a little higher among males (367.31) than it was among females (352.36), and in the registration states it was higher in the cities (400.52) than it was in the rural districts (287.22). It was highest of all among males in the cities of 100,000 population and upward (486.99), and lowest among males in the rural districts of the registration states (277.92).

The following table shows the death rates from diseases of the digestive system in the registration area during the census year in each of four age groups, with distinction of conjugal condition and of sex:

	AGE PERIODS.										
CONJUGAL CONDITION.	15 years	and over.	15 to 48	years.	45 to 6	j years.	65 years	and over.			
,	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.			
Single	43.71 96.80 258.99	39, 62 88, 78 189, 23	34.87 46.23 85.10	31. 27 60. 82 72. 43	169. 03 138. 94 232. 78	119. 15 129. 98 147. 74	365. 10 324. 26 398. 53	318.81 329.30 335.35			

This table shows that among persons 15 years of age and over the death rate from this class of diseases was higher among the married (males, 96.80; females, 88.78) than among the single (males, 43.71; females, 39.62), the excess occurring chiefly in the age group 15 to 45 years.

Above 45 years of age the death rate from this class of diseases among males was higher among the single than among the married. In each age group and in each sex the death rates were highest of all among the widowed.

The following table shows the death rates from diseases of the digestive system per 100,000 of population in the registration states during the census year, with distinction of conjugal condition, sex, color, and general nativity:

						COLOR AND	NATIVITY									
CONJUGAL CON-	Aggı	egate.			WI	nite.			`							
DITION.			To	otal.	Nativ	e born.	Foreig	n born.	Col	ored.						
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females,	Males.	Females.						
Single	66. 65	58.73	65, 53	57. 83	68. 22	58. 56	46.48	50.52	112.79	96.36						
Married	95.01	88.57	95.12	88.84	77.55	75.06	118, 53	109.99	89.79	75.93						
Widowed	264.35	213.70	266.47	217.18	212.66	169.57	334.78	241.22	171.23	109.76						

The great difference shown in this table between the death rates of the single, married, and widowed, and between those of the native and foreign born whites of the different classes, are mainly due to differences in the age distribution of the classes of population.

DISEASES OF THE STOMACH.

The total number of deaths reported as due to diseases of the stomach in the United States during the census year was 8,080, of which 4,010 were of males and 4,070 of females.

In the registration area the number of deaths reported as due to diseases of the stomach was, males, 1,713; females, 1,852; total, 3,565, giving a death rate of 18.15 per 100,000 of population.

The following table shows, for each of the registration states and for their sum, the death rates from diseases of the stomach during the census year per 100,000 of population with distinction of sex, and of cities and rural districts:

	1	GGREGATE			MALES.			FEMALES.			
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Ŗural.	Total.	Cities.	Rural.		
Total	17. 90	19.09	16.08	16. 67	18.04	14. 64	19. 11	20.10	17.55		
Connecticut	17.96	19.33	16.98	15.42	13.13	17.03	20, 44	25. 31	16.92		
Delaware	15.43	13.02	16.81	11.69	12.98	10.96	19.30	13.06	22.94		
District of Columbia	23. 87	23.87		20.99	20.99		26, 49	26.49			
Massachusetts	14.16	13.82	15.26	13.05	12.91	13.51	15, 20	14. 67	16.98		
New Hampshire	19.65	19. 91	19.55	13.40	.13. 43	13.39	25, 79	25.69	25.84		
New Jersey	20.62	23.94	16.29	18.73	21.96	14.58	22, 51	25.87	18.03		
New York	18.57	20.16	16.01	18.31	19.89	15.84	18, 84	20.42 ′	16.19		
Rhode Island	19.68	20. 99	17.88	16.07	19.82	11.09	23, 10	14.08	24.56		
Vermont	12. 33	14.14	12.17	8.86	14.76	8. 35	15.94	13. 56	16.18		

The preceding table indicates that the death rate from diseases of the stomach was higher among females (19.11) than it was among males (16.67), and that it was higher in the cities (19.09) than it was in the rural districts (16.08). It was highest in the District of Columbia (23.87) and in New Jersey (20.62), and lowest in Vermont (12.33) and in Massachusetts (14.16).

The following table shows the proportion of deaths due to diseases of the stomach, at certain ages and groups of ages per 1,000 deaths at all ages from these diseases, in 1880 and in 1890, with distinction of sex:

	18	80	18	890		18	80	18	90
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females

20 to 25 years	31.87	54.50	29. 40	49. 25	85 to 90 years	6.73	14.70	11.45	18.08
25 to 30 years	30.81	53.42	22. 91	50. 79	90 to 95 years	4. 25	3.59	2. 29	3. 85
30 to 35 years	36.47	47.33	31.31	49.63	95 years and over	0.35	0.72	0.38	2.31

This table indicates that in males about one-fourth of all the deaths reported as due to diseases of the stomach occurred in children under 5 years of age, and that the proportion in persons from 40 to 70 years of age increased with advancing age. Between the ages of 15 and 40 years a larger proportion of deaths due to this disease occurred in females than was the case for males.

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the stomach during the census year in each of four age groups per 100,000 population of corresponding ages, with distinction of sex:

	UNDER 5 YEARS.			5	ro 15 ye	ARS.	15	то 45 ув	ARS.	45 YEARS AND OVER.		
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males	Females.
Registration area.	39. 48	41. 31	37. 61	3.48	2. 99	3. 97	8. 27	6. 98	9. 54	48.07	48. 03	48. 09
Cities	44. 25	47. 25	41. 20	3, 83	3.10	4. 55	8.73	7.68	9.77	51. 21	51. 62	50. 83
States	33, 08	34. 43	31. 72	3.16	2.69	3.64	8.04	€. 46	9.58	47.54	45. 67	49.31
Cities	39.66	43. 26	36.02	3.70	2.72	4.67	8.89	7. 65	10.05	53.19	50.55	55. 59
Rural	21.81	19. 43	24. 27	3.37	2.65	2.07	6.57	4.46	8.71	41.40	40.58	42, 20
Cities in nonregistration states	48.22	50.68	45. 70	3.94	3.42	4. 45	8. 59	7.71	9.49	49, 13	52. 69	45. 55
Cities of 100,000 population and over	48. 51	51. 99	44. 96	3. 31	2.71	3.90	9. 27	8.18	10.36	53, 83	53, 15	54.50
Metropolitan district	55, 82	66. 27	45, 28	3.37	2. 24	4. 50	10.06	9.03	11.06	61.43	56, 60	66.09

It will be seen from this table that the death rate from diseases of the stomach was highest in those 45 years of age and over (48.07) and in those under 5 years of age (39.48), and least in those from 5 to 15 years of age (3.48). In those from 15 to 45 years of age it was 8.27. In children under 5 years of age it was somewhat higher among males (41.31) than among females (37.61), and in the registration states it was decidedly higher in the cities (39.66) than in the rural districts (21.81). It was highest of all in the metropolitan district (55.82).

In those 45 years of age and over the death rate of males was 48.03, and was about the same as that of females (48.09), and was higher in the cities of the registration states (53.19) than in the rural districts of the same states (41.40). It was highest of all in the metropolitan district (61.43).

The combined relations of age and race to the death rates from diseases of the stomach are indicated in the following table, showing the number of deaths in each of four age groups and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	under 5	YEARS.	5 то 15	YEARS.	15 TO 45	S YEARS.	45 YEA OVI		
COHOL AND DANIEL MODE OF MCLASSIC	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	246	50.73	31	3. 59	223	9. 31	477	58. 99	
Colored	11	70.15	. 1	3.09	17	16.48	13	45.78	
Birthplaces of mothers (white):			•						
United States	98	39.67	12	2.94	54	7.04	123	41. 93	
England and Wales	8	46.87			12	10.38	28	59.71	
Ireland	29	43.92	11	7.30	102	16.44	184	90.89	
Scotland	3	55. 19	1	9.38	1	2, 65	12	83, 52	
France	1	50.08			1	5.23	5	64.72	
Germany	59	73.54	4	2.48	23	4.19	82	45.30

Scandinavia	1	15, 06	1	12.97	2	6.11	5	87.75	
Hungary	3	92. 28				. 	1 1	58. 55	
Italy	,	99.77			1	2.00	4	43.19	

It will be seen from this table that the death rate from diseases of the stomach in children under 5 years of age was higher among the colored (70.15) than among the whites (50.73), and the same was the case in the age group from 15 to 45 (colored, 16.48; white, 9.31); but among those 45 years of age and over the death rate was higher among the whites (58.99) than among the colored (45.78). Among white children under 5 years of age the death rate from these diseases was highest among the children of mothers born in Germany (73.54).

OBSTRUCTION OF THE BOWELS.

The total number of deaths reported as due to obstruction of the bowels in the United States during the census year was 2,203, of which 1,269 were of males and 934 of females.

In the registration area the number of deaths reported as due to this cause was, males, 585; females, 540; total, 1,125, giving a death rate from this cause of 5.72 per 100,000 of population.

The following table shows, for each of the registration states and for their sum, the death rates from obstruction of the bowels during the census year per 100,000 of population, with distinction of sex, and of cities and rural districts:

										,
	1	GGREGATE	.		MALES.			FEMALES.		
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

				•	•	<u></u>	<u> </u>	<u> </u>		1

This table indicates that the death rate from obstruction of the bowels was a little higher among males (5.52) than it was among females (4.86); and that it was higher in the cities (5.70) than it was in the rural districts (4.40), this being the case for both males and females. The death rate from this cause was highest in the District of Columbia (8.25), and lowest in New Hampshire (2.12).

MOR-PT I-27

The following table shows, for the registration area and some of its subdivisions, the death rates from obstruction of the bowels during the census year in each of four age groups per 100,000 population of corresponding ages, with distinction of sex:

	UNDER 15 YEARS.			15	то 45 ув	ARS.	45	то 65 т	EARS.	65 YEARS AND OVER.		
AREAS.	Total.	Males.	Females.	Total.	Males	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	5. 44	6, 90	3. 96	3. 29	3. 65	2. 93	9. 08	7.87	10. 28	24.73	20. 73	28. 30
Cities	5. 85	7.31	4. 39	3.69	4. 21	3.17	10.12	8. 83	11.40	31.19	24. 94	36.30
States	4.57	6.30	2.81	2 84	2.96	2.73	7.98	7. 26	8.66	22.07	19. 65	21.27
Cities	4.91	6.80	3.02	3.42	3.74	3.11	9.13	8.70	9.53	30.52	26. 02	34.05
Rural	4.03	5. 53	2.48	1.84	1.64	2.04	6, 55	5.52	7.56	15.89	15. 56	16.23:
Cities in nonregistration states	6. 67	7.75	5. 59	3.93	4.62	3. 23	11.14	8.96	13. 43	.31.96	23.75	38.98
Cities of 100,000 population and upward	6.13	7.90	4. 35	3.81	4.30	3.31	10.54	8. 22	12.90	33.99	25, 67	40.81
Metropolitan district	6.08	9.00	3 05	3.58	4.17	3 02	10.38	9.73	11.02	31.84	22.57	39, 58

This table indicates that the death rates from obstruction of the bowels were lowest in persons from 15 to 45 years of age, and highest in those 65 years of age and over. In those under 45 years of age the death rate was higher among males than among females, while in those 45 years of age and over it was higher among females than among males. The highest death rate of all occurred in females 65 years of age and over in cities of 100,000 population and upward (40.81), and the lowest in males from 15 to 45 years of age in the rural districts of the registration states (1.64).

The combined relations of age and race to the death rates from obstruction of the bowels are indicated in the following table showing the number of deaths in each of certain age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	under 1	5 YEARS.	15 то 45	YEARS.	45 TO 65	YEARS.		RS AND ER.
•	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	77	5. 71	88	3, 68	70	10.72	53	34. 06
Colored	4	8.32	5	4.85	2	8.61		
Birthplaces of mothers (white):				į]		lì.	
United States	40	6.10	26	3. 39	23	10.25	. 18	26.10
Ireland	12	5.54	19	3.06	16	9.40	14	43.39
Germany	12	4.97	21	3.83	15	10,06	11	84.55
Italy	2	6. 28	4	7.99	3	36.10		

The number of deaths among the colored from obstruction of the bowels in the different age groups was so small that the difference in the death rates between the colored and the white has no significance. Among the whites also, the differences in the death rates are not sufficiently great to indicate any special liability to or exemption from this cause of death in the different races.

Ü.

The following table shows the proportion of deaths due to obstruction of the bowels, at certain ages and groups of ages, per 1,000 deaths at all ages from this cause, in 1880 and in 1890, with distinction of sex:

	. 18	80	18	90		18	sso	1890		
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females.	
Total under 5 years	247. 67	210. 83	194.34	166.67	35 to 40 years	39. 95	58. 03	41.18	67. 90	
Under 1 year	190.41	150.87	135.14	100.82	40 to 45 years	41. 28	52. 22	46.33	28.81	
1 year	14, 65	21.28	-21.88	28. 81	50 to 55 years	. 51.93 41.28	59. 96 59. 96	36. 04 45. 05	57. 61 51. 44	
2 years	18.64	15.47	15.44	20.58	55 to 60 years	51. 93	56.09	50.19	53.50	
3 years	10.65	19.34	9.01	8. 23	60 to 65 years	61, 25	65. 76	70.79	90.53	
4 years	13.32	3.87	12.87	8,23	65 to 70 years	55. 93	75, 44	61.78	67.90	
5 to 10 years	54. 59	46.42	52. 77	59.67	70 to 75 years	34. 62	46.42	47.62	55. 56	
10 to 15 years	62.58	42.55	72.07	45. 27	75 to 80 years	33, 29	44.49	39.90	32.92	
15 to 20 years	54.59	29.01	55, 34	53.50	80 to 85 years	13.32	19.34	12.87	39.09	
20 to 25 years	45.27	34. 82	63.06	28. 81	85 to 90 years	6, 66	11.61	9.01	10.29	
25 to 30 years	59.92	42.55	46.33	39.09	90 to 95 years	1.33		2.57	4.12	
30 to 35 years	42.61	44. 49	52.77	47.33	95 years and over					

The proportions given in this table are so irregular, owing to the small number of cases on which they are based, as to have little or no significance, beyond indicating that much the largest proportion of deaths in any quinquennial age group occurred in children under 5 years of age.

HERNIA.

The total number of deaths reported as due to hernia in the United States during the census year was $1,482_{p}$ of which 933 were males and 549 females.

In the registration area the number of deaths reported as due to hernia was, males, 352; females, 299; total, 651, giving a death rate from this cause of 3.31 per 100,000 of population.

The following table shows, for each of the registration states and for their sum, the death rates from hernia during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

	A	GGREGATE	· .		MALES.			FEMALES.		
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total	3.37	3.48	3.19	3.54	3.94	2, 95	3. 20	3.05	3. 43	
Connecticut	3.48	5.16	2. 29	2.44	4. 60	0.92	4.51	5. 69	3. 66	,
Delaware	2.37	3.26	1.87	1.17		1.83	3.62	6.53	1.91	(
District of Columbia	5.64	5.64		7.30	7.30		4.14	4.14		1
Massachusetts	2.86	2.51	4.01	2.67	2.41	3, 47	3.04	2.60	4.53	į.
New Hampshire	4.25	2.71	4.89	4.82	1.92	5.95	3.68	3.43	3.80	1
New Jersey	3.11	3.42	2.72	3.75	4.44	2.85	2.49	2.42	2.58	(i
New York	3.33	3. 48	3.10	3.63	4.24	2.67	3.05	2.75	3.54	i.
Rhode Island	5. 21	7.00	2.75	5.36	6.26	4.16	5.07	7.68	1.36	ľ.
Vermont	4.21	· 7.07	3.95	4.72	7.38	4.49 ·	3.68	6.78	3.37	ľ

This table indicates that the death rate from hernia was slightly higher among males (3.54) than it was amongfemales (3.20), and also slightly higher in the cities (3.48) than it was in the rural districts (3.19), but the differences were so small in connection with the actual number of deaths from this cause as to have little or no significance. The highest death rates from hernia occurred in the District of Columbia (5.64) and in Rhode Island (5.21), and the lowest in Delaware (2.37) and in Massachusetts (2.86).

The following table shows, for the registration area and some of its subdivisions, the death rates from hernia during the census year in each of four age groups per 100,000 population of corresponding ages, with distinction of sex:

	UNDER 15 YEARS.			15	то 45 уг	IARS.	45	to 65 YE	ARS.	65 YEARS AND OVER.

This table indicates that the death rate from hernia increased with advancing age, being comparatively low for persons under 45 years of age. Among those under 45 years of age the death rate was higher among males than among females, while in those from 45 to 65 years it was slightly higher among females than among males.

The combined relations of age and race to the death rates from hernia are indicated in the following table showing the number of deaths in each of certain age groups and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year.

COLOR AND BIRTHPLACES OF MOTHERS.	UNDER 1	5 YEARS.	15 то 45	YEARS.	45 TO 65	YEARS.	65 YEAR OVE	
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	17	1. 26	27	1. 13	80	12, 25	55	35. 34
Colored	5	10.40			4	17. 22	2	38.71
Birthplaces of mothers (white):								
United States	9	1.37	4	0.52	9	4.01	13	18.85
England and Wales			1	0.86	4	10,63	7	75.60
Ireland	2	0.92	9	 1.45 	30	17.63	14	43.39
Germany	1	0.41	10	1.82	29	19.44	14	43.98

The number of deaths contained in the above table is so small that no definite conclusion can be drawn therefrom, except that the death rate from hernia increased with advancing age. According to the ratios, however, the death rate from hernia was higher among the colored than among the whites, and among the whites it was higher among the children of Irish and German mothers than it was among the children of mothers born in the United States.

DISEASES OF THE LIVER.

Under the heading "Diseases of the liver" in the following remarks are included jaundice, inflammation and abscess of the liver, and other diseases of the liver.

The total number of deaths reported as due to these diseases in the United States during the census year was 9,460, of which 5,465 were of males and 3,995 were of females. In the registration area the number of deaths reported as due to these diseases was, males, 2,756; females, 1,986; total, 4,742, giving a death rate of 24.13 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the liver during the census year per 100,000 of population, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.	-				COLORED.	٠,
AREAS.	Aggre-				1	Native bor	n.				
·	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.
Registration area	24. 13	24.12	27.93	20.32	16. 68	19.31	11.99	44.59	24. 29	31. 92	16. 90
Cities	26. 01 23. 17 26. 48 18. 12 25. 58 27. 48 31. 83	26. 04 23. 34 26. 71 18. 25 25. 38 27. 50 32. 06	31. 08 25. 01 29. 50 18. 43 32. 59	21. 05 21. 71 24. 04 18. 07 18. 00	16. 78 16. 68 16. 91 16. 41 16. 67 16. 85 18. 29	20. 01 19 51 20. 79 18. 53 18. 33 20. 77 23. 63	12. 73 12. 12 13. 24 9. 12 11. 56 14. 03 14. 82	47. 35 42. 59 47. 17 28. 20 47. 56 49. 10 55. 16	25. 55 15. 80 17. 90 10. 96 27. 68 27. 12 19. 02	93. 93 19. 66 23. 41 11. 75 36. 73	17. 51 12. 16 12. 97 10. 10 18. 83

It will be seen from this table that the death rate from diseases of the liver was about the same among the colored (24.29) as among the whites (24.12); that it was higher among males (white, 27.93; colored, 31.92) than among females (white, 20.32; colored, 16.90); and that for the whites it was much higher among the foreign born (44.59) than among the native born (16.68), which is in part due to the different age distribution in these two classes of population. In the registration states the death rate from these diseases (23.17) was a little lower than in the registration area as a whole (24.13), and was much higher in the cities (26.48) than in the rural districts (18.12). It was highest of all in the metropolitan district for the 6-year period (31.83), especially among the foreign born (55.16). In the rural districts of the registration states the death rate from these diseases for males (18.43) was about the same as for females (18.07).

The following table shows, for each of the registration states and for their sum, the death rates from diseases of the liver during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

-		AGGREGATE	i.		MALES.			FEMALES.		ĺ
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.]
Total	23.17	26.48	18. 12	24. 89	29. 34	18. 31	21.49	23.74	17.94	
Connecticut	25.19	26.75	24.09	25.98	32. 18	21. 63	24.42	21.51	26. 52	١,
Delaware	15.43	17.91	14.01	21.03	19.47	21.91	9.65	16.33	5.74	
District of Columbia	24.31	24.31		32.85	32. 85		16.56	16.56		l
Massachusetts	20.14	20.18	20.03	19.49	19.55	19. 29	20.76	20.76	20.76	ı
New Hampshire	24.43	28.96	22, 55	28.94	30. 70	28. 26	20.00	27.41	16.72	i
New Jersey	25. 33	29.19	20.28	27.33	33. 56	19.33	23.34	24.91	21. 25	l
· New York	23.98	28. 77	16.23	26. 27	32.06	17. 22	21.71	25.60	15. 21	
Rhode Island	25.47	31. 99	16.50	27.38	39, 63	11.09	23.66	24.95	21.83	
Vermont	14.44	14.14	14. 47	12.40	22.15	11.55	16.55	6. 78	17.53	

It will be seen from this table that the highest death rates from diseases of the liver occurred in Rhode Island (25.47), in New Jersey (25.33), and in Connecticut (25.19); and the lowest in Vermont (14.44) and in Delaware (15.43). The death rate from these causes was decidedly higher in the cities (26.48) than it was in the rural districts (18.12).

In the rural districts the highest death rate occurred in Connecticut (24.09), and the lowest in Delaware (14.01). The death rate from this cause was higher among males than among females in every state except Massachusetts and Vermont. The number of deaths among the colored from this cause was so small in several of the registration states that the ratios derivable therefrom have no scientific value, but they were in each case lower among the colored than among the whites.

Of 3.384 deaths from diseases of the liver in the registration area during the census year, 974 were children of mothers born in the United States; 864, children of mothers born in Ireland; 577, children of mothers born in Germany; 143, children of mothers born in England and Wales; 100, children of mothers born in Canada; 49, children of mothers born in Scotland; 42, children of mothers born in Italy; 30 each, children of mothers born in France and in Scandinavia; 6, children of mothers born in Hungary; and 3, children of mothers born in Bohemia.

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the liver among the whites during the census year per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bobemia.	Italy.	Other foreign coun- tries.

It will be seen from this table that among the whites the death rate from diseases of the liver was highest in the children of mothers born in France (36.59), in Ireland (32.48), and in Italy (29.99); and lowest in the children of mothers born in Bohemia (7.37), in Scandinavia (12.31), and in the United States (14.04). It was higher in the children of mothers born in Germany (27.15) than in those of mothers born in England and Wales (20.48). In the cities in the registration states it was highest among the children of mothers born in Ireland (36.95), being a little more than double that of the children of mothers born in the United States in the same cities (17.39).

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the liver during the census year in each of five age groups per 100,000 population of corresponding ages, with distinction of sex:

					i			l	!		l	<u>.</u> 1			

It will be seen from this table that the death rate from diseases of the liver increased steadily with advancing age after the age of 15, being nearly twice as high in those 65 years of age and over (122.00) as it was in those from 45 to 65 years of age (67.17), and more than five times as high in this last group as in those from 15 to 45 years of age (12.07). In each group it was higher among males than among females, except in the rural districts of the registration states, for those 45 years of age and over, in whom it was a little higher among females than among males. In each age group it was higher among the residents of the cities than among those of the rural districts.

The combined relations of age and race to the death rates from diseases of the liver are indicated in the following table showing the number of deaths in each of five age groups and the death rates per 100,000 population of corresponding ages, with distinction of color and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	UNDER 5 YEARS.		UNDER 15 YEARS.		15 TO 45 YEARS.		45 то 65	YEARS.	65 YEARS AND OVER.		
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	!

It will be seen from this table that the death rate from diseases of the liver in children under 15 years of age was highest in children of mothers born in Italy (28.26), and lowest in children of mothers born in Ireland (6.92). In those from 45 to 65 years of age it was more than twice as high among the whites (89.29) as among the colored (43.04); and among the whites it was highest in the children of mothers born in Italy (156.44), in Ireland (137.50), and in Germany (111.95); and lowest in the children of mothers born in the United States (43.68) and in England and Wales (69.08). In the age group 65 years and over it was higher among the whites (149.72) than among the colored (96.77), and among the whites it was highest in the children of mothers born in Italy (210.08) and in Ireland (207.64); and lowest in the children of mothers born in England and Wales (75.60) and in the children of mothers born in the United States (121.78).

For further details with regard to the death rates from diseases of the liver in large cities, see Part II of this report, page 125.

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to diseases of the liver during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

:				COLORED.							
AREAS.	Aggre-				Native born.						
AREAS.	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.	Males.	Females.

Cities in nonregistration states	13.04	13. 60	16. 31	10, 40	8.90	11.09	5.79	25.73	9.39	11.84	6. 73
Cities of 106,000 population and upward	12.77	13.06	¦		7.82	9. 56	5. 87	24.46	8.84		
Metropolitan district, 6 years	12.77	12.88	13.61	12.05	6.81	8. 67	5.58	25.49	7,05	8, 42	5. 50

This table indicates that the proportion of deaths due to diseases of the liver to all deaths from known causes was but little less in the United States (11.72) than it was in the registration area (12.44); that in the United States as a whole it was greater among the whites (12.37) than among the colored (7.21), and greater among males (white, 13.45; colored, 8.29) than among females (white, 11.15; colored, 6.08). Among the whites it was much greater among the foreign born (21.35) than among native born (10.12), owing largely to the greater proportion of persons of higher ages among the foreign born. Among the native born it was greater among those of whom both parents were native born (11.82) than among those one or both of whose parents were foreign born (6.16).

In the registration states the ratio was about the same in the cities (12.03) as in the rural districts (12.04), although, as has been shown above, the true death rate from this cause was decidedly greater in the cities than in the rural districts.

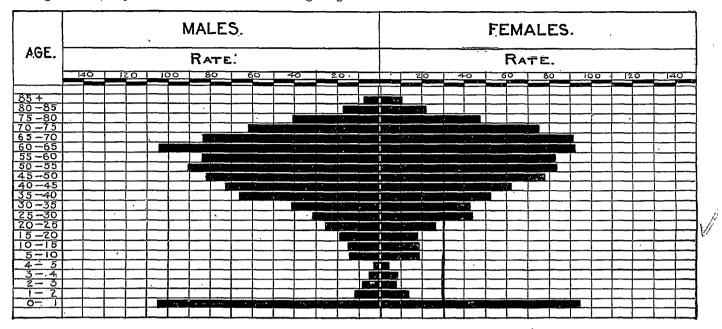

The following table shows, for the United States and for the registration area and some of its subdivisions, the proportion of deaths due to diseases of the liver among the whites during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign countries.

The comparative proportions of deaths of males and females in each age group due to diseases of the liver during the census year are shown in the following diagram:

The comparative proportions of deaths of males in each age group due to diseases of the liver in 1880 and 1890 are shown in the following diagram:

The following table shows, for each grand group, the proportion of deaths due to diseases of the liver during he census year per 1,000 deaths from known causes, with distinction of sex and color, of rural districts and cities, and of children of mothers born in Ireland and in Germany:

GRAND GROUPS.	Total.	RU	RAL.	СІТ	TES.	1	Colored.	MOTHERS	BORN IN-
GRAND GROUPS.	Total.	Males.	Females.	Males.	Females.	w mile.	Colored.	Ireland.	Germany.

17. Missouri River belt	7, 76	9. 65	8.30	6.75	3 21	8.34	3.39	15. 21	15. 15
18. Region of the Western plains	6, 88	6. 19	6.05	11.30	5.66	6.94	5.96	16. 39	6. 29
19. Heavily timbered region of the Northwest	10.99	11.20	10.73	. .	j	10. 93	13.37	10.71	9.05
20. Cordilleran region	9, 30	9. 79	7. 73	18.37	11 58	9, 45	7.42	15.36	14.78
21. Pacific Coast region	15, 65	13.06	8.01	20.47	16.97	15.61	16. 23	25. 94	20. 92

It will be seen from this table that the proportion of deaths due to diseases of the liver to deaths from known causes was greatest for the rural districts in the Gulf Coast and Southwest Central regions; and least on the Western plains, the Southern Interior plateau, and in the South Mississippi River belt. In the cities it was greatest in the South Mississippi River belt and in the Southwest Central region, and least in the Prairie region and the Southern Interior plateau.

PERITONITIS.

The total number of deaths reported as due to peritonitis in the United States during the census year was 4,995, of whom 2,107 were males and 2,888 were females. In the registration area the number of deaths reported as due to this disease was, males, 1,419; females 2,000; total, 3,419, giving a death rate from this cause of 17.39 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from peritonitis during the census year in each of four age groups per 100,000 population of corresponding ages, with distinction of sex:

	UNI	er 15 ye	ARS.	15	то 45 ук.	ARS.	45	то 65 че.	ARS.	65 YEARS AND OVER.		
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	11. 27	12.30	10. 23	18. 34	12. 89	23. 75	20.41	18. 53	22. 28	36. 86	36. 2Ì	37.44
Cities	11.41	12. 63	10.19	19. 45	13. 64	25. 18	22. 63	20.41	24. 84	41.58	42.16	41.11
States	12.82	13.90	11.72	17.47	13. 19	21.62	20, 53	18.76	22, 23	34.80	34. 21	35.32
Cities	14.10	15.64	12.55	19.30	14.98	23. 37	24. 98	22, 73	27. 11	40.81	42.49	39.50
Rural	10 81	11. 22	10.38	14.28	10.19	18.44	15.01	13.93	16.07	30.40	28. 90	31.90
Cities in nonregistration states	9.08	10.02	8.13	19.60	12.47	26. 91	20. 20	18.11	22, 38	42.47	41.80	43.04
Cities of 100,000 population and upward	11.43	12.98	9.87	19.77	13. 52	26.04	22, 57	20.17	25.01	42.75	43.56	42.09
Metropolitan district	16 81	18.98	14. 63	19. 96	14.82	24.92	23. 18	21. 24	25. 13	45. 19	38.38	50.89

It will be seen from the preceding table that the death rate from this disease increased with advance of years. In males this increase does not appear until after the age of 45, and it was about twice as high in males 65 years of age and over (36.21) as in males from 45 to 65 years of age (18.53). In the age group under 15 years it was higher for males (12.30) than for females (10.23); but for those above 15 it was higher for females than for males, the difference being greatest in the age period 15 to 45 (males, 12.89; females, 23.75). In the registration states the death rate from this disease was higher in the cities than in the rural districts for all groups of ages, and it was highest of all in the metropolitan district for those under 45 and over 65 years of age. The excessive mortality in females from 15 to 45 years of age is probably due to affections connected with pregnancy or to diseases of the internal genital organs. In males the greater part of deaths reported as due to this disease were probably due to appendicitis or to displacements or diseases of the intestines, and hernia.

The following table shows, for each of the registration states and for their sum, the death rates from peritonitis during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

	1	AGGREGATE	ı .		MALES.			FEMALES.	'	
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total	17.53	19.40	14.68	15.30	17. 16	12.57	19.71	21.54	16.82	
Connecticut	16.08	19.01	13.99	14.07	18.39	11.05	18.05	19.61	16.92	ļ
Delaware	13.06	13.02	13.08	10.52	12.98	9. 13	15.68	13.06	17.21	Ì
District of Columbia	10.85	10.85		7.30	7.30		14.07	14.07		
Massachusetts	18.04	19.42	13.55	16.55	17.98	11.96	19.46	20.76	15.10	l
New Hampshire	15, 93	12.67	17. 29	13.94	11.51	14.88	17.90	_ 13.70	19.76	l
New Jersey	19.93	25.16	13.10	16. 23	21.71	9.19	23.62	28.53	17.07	i
New York	17.84	19.05	15.88	15.75	16.53	14.55	19.89	21.48	17.25	
Rhode Tsland	16. 21	17.99	13.75	11.90	13.56	9.70	20.28	22.08	17.74	
Vermont	11.43	21. 20	10.52	10.63	36. 91	8. 35	12, 26	6.78	12.81	

This table shows that the death rate from peritonitis was higher among females (19.71) than among males (15.30), and that it was higher in the cities (19.40) than it was in the rural districts (14.68). It was highest of all in New Jersey (19.93), and lowest in the District of Columbia (10.85).

The combined relations of age and race to the death rates from peritonitis are indicated in the following table showing the number of deaths in each of certain age groups and the death rates per 100,000 population of corresponding ages, with distinction of color and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	UNDER 1	5 YEARS.	15 TO 45	YEARS.	. 45 то 65	YEARS.	. 65 YEAD OVE		
COLOR AND BIRLINGS OF MOLDING.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	189	14.02	457	. 19. 09	176	22.36	59	37. 91	1
Colored	6	12.48	20	19.38	5	21.52	2	38,71	'
Birtliplaces of mothers (white):									
United States	78	11.90	121	. 15.78	33	14.71	19	27.55	1
England and Wales	5	966	15	12.97	12	31 88	1	10.80	
Ireland	30	13.84	129	20.79	50	29.38	9	27.87	ì
Germany	30	12.44	94	17. 14	32	21.45	15	47. 12	
Italy	10	31.40	10	19.97	. 2	24.07	1	105.04	

It will be seen from this table that the death rate from peritonitis was about the same for the white and colored in each age group; that among the whites it was highest for the children of mothers born in Ireland for those under 65 years of age, and especially so for those between 15 and 45 years of age. For the children of mothers born in the United States it was below the average in each age group.

The following table shows the proportion of deaths due to peritonitis, at certain ages and groups of ages, per 1,000 deaths at all ages from this cause, in 1880 and in 1890, with distinction of sex:

	18	880	18	390		18	880	18	390
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females.
Total under 5 years	155. 98	82. 81	124. 76	75. 58	35 to 40 years	63.41	110.59	54.97	87.12
Under 1 year	85. 28	41.93	64. 53	37. 09	40 to 45 years	59. 04 56. 85	59.75 45.07	56. 88 48. 28	65, 08 52, 48

2 years	14.58	12.58	12. 91	10.85	55 to 60 years	43.00	34. 59	42.54	33.94
3 years	11.66	7.34	10, 99	7.00	60 to 65 years	44. 46	34. 07	48. 28	29. 74
4 years	9.48	5. 24	13. 38	6. 30	65 to 70 years	39.36	24.11	35. 85	29.74
5 to 10 years	56.12	30.92	64.53	37.44	70 to 75 years	42, 27	20.96	32, 50	22. 39
10 to 15 years	64.87	31. 45	73, 61	47. 59	75 to 80 years	26.97	16.77	23, 42	12.95
15 to 20 years	88. 19	72.85	92. 26	77. 68	80 to 85 years	21.87	12.05	13. 38	9.80
20 to 25 years	70.70	131.55	86. 52	123, 86	85 to 90 years	2, 92	3.14	4.30	5. 25
25 to 30 years	64.87	135.74	87.00	133. 31	90 to 95 years	2.19	1.57	1.43	1.05
30 to 35.years	43.73	115. 31	65. 97	117. 91	95 years and over	0.73	1. 57	<u> </u>	

It will be seen from this table that in 1890 the greatest proportion of deaths due to peritonitis occurred in males in children under 5 years of age, and in females from 20 to 35 years of age. Between the ages of 35 and 50 it was greater among females than among males, and over 50 years of age the reverse is the case.

The average age at death of those reported as dying of peritonitis during the census year 1890 was 32.71 years. In the registration states it was 33.67 years.

The following table shows, for each grand group, the proportion of deaths due to peritonitis during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

an un anoma	T-+al	RU	RAL.	CIT	ies.	
GRAND GROUPS.	Total.	Males.	Females.	Males.	Females.	
1. North Atlantic Coast region	7.94	4.74	8.72	7.28	9. 95	
2. Middle Atlantic Coast region	6.97	5. 53	8. 93	5.51	8.56	ĺ

12. South Mississippi River belt	2.89	2.09	2, 58	4.46	9.54	
13. North Mississippi River belt	5. 90	3. 29	4.79	6.55	9. 93	ļ
14. Sonthwest Central region	3. 52	2.51	4. 12	4. 32	14. 12	1
15. Central region, plains and prairies	4.51	3, 51	4, 21	6.02	13.31	
16. Prairie region	4,86	3.84	5. 85	5.31	9. 33	
17. Missouri River belt	6, 41	3.07	5.79	7, 64	14.46	ł
18. Region of the Western plains	6.89	4.12	5.10	9.31	18.89	1
19. Heavily timbered region of the Northwest	5. 52	4.60	6.58			İ
20. Cordilleran region	4. 68	3, 02	6.76	2, 62	19.31	
21. Pacific Coast region	8. 95	2.06	6.59	9.81	17. 52	

It will be seen from this table that in the rural districts the proportion of deaths due to peritonitis among males was greatest in the region of the Northeastern hills (7.15), of the Great Northern Lakes (6.98), and of the Middle Atlantic Coast region (5.53); and was least in the South Atlantic Coast region (0.83) and in the Southern Central Appalachian region (1.66). Among females in the rural districts it was greatest among the Northeastern hills (9.43), the Middle Atlantic Coast region (8.93), and the region of the Great Northern Lakes (8.89).

DISEASES OF THE URINARY SYSTEM AND MALE ORGANS OF GENERATION.

The total number of deaths reported as due to diseases of the urinary system and male organs of generation in the United States during the census year was 23,652, of which 15,447 were of males and 8,205 of females, giving a ratio of 28.12 per 1,000 of all deaths from known causes.

In the registration area the number of deaths reported as due to this class of diseases was, males, 8,309; females, 5,594; total, 13,903, being 34.39 per 1,000 of all deaths from known causes, and 70.72 per 100,000 of population living at the end of the year.

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the urinary system and male organs of generation during the census year per 100,000 of population, with distinction of color and sex:

AREAS.	A	GGREGATE	•		WHITE.			COLORED.	
AADAS.	Total.	Males,	Females.	Total.	Males.	Females.	Total.	Males.	Females.

W

This table shows that in the registration area the death rate from this class of diseases was higher among males (white, 83.66; colored, 106.84) than among females (white, 56.33; colored, 64.73); that it was higher among the colored (85.45) than among the whites (69.97); and that in the registration states it was higher in the cities (94.37) than it was in the rural districts (58.30). It was highest of all among the colored males in the cities in the registration states (122.61), and lowest among the white females in the rural districts of the registration states (38.72).

The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to diseases of the urinary system and male organs of generation during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

0%

This table shows that the proportion of deaths due to diseases of this class to the total number of deaths from known causes in the registration area was greater among the whites (36.99) than among the colored (29.67); that it was greater among males (white, 41.78; colored, 35.23) than among females (white, 31.62; colored, 23.69); an that among the whites it was much greater among the foreign born (59.08) than it was among the natives (28.76) which is due to the differences in the age distribution of the two classes of population. In the registration state: it was somewhat greater in the cities (42.86) than in the rural districts (38.75).

The following table shows the death rates from diseases of the urinary system in the registration area during, the census year in each of certain age groups, with distinction of conjugal condition and of sex:

				AGE PE	RIODS.			
CONJUGAL CONDITION.	15 years	and over.	15 to 4	5 years.	45 to 6	5 years.	65 years	and over.
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females
Single	48. 63	33. 43	31.66	22. 54	260.40	155. 93	820.55	324. 94
Mariled	123.72	71, 65	43.34	48.71	156.89	107. 21	631.34	257. 68
Widowed	434. 15	162.49	148. 14	66.44	321. 58	144.71	743. 52	258. 95

This table shows that the death rate from discases of the urinary system in persons 15 years of age and over was higher among the married (males, 123.72; females, 71.65) than among the single (males, 48.63; females, 33.43). This excessive death rate among the married from these causes of disease occurred entirely in the age group from 15 to 45 years.

In persons 45 years of age and over the death rate from diseases of the urinary system was higher in the single than in the married. Among males it was highest of all among the widowed in persons under 65 years of age. In persons 65 years of age and over it was higher among the single than it was among the married or widowed for either sex.

The following table shows the death rates from diseases of the urinary system per 100,000 of population in the registration states during the census year, with distinction of conjugal condition, sex, color, and general nativity:

						COLOR ANI	NATIVITY	:.		
ORIGINAL CONDI-	Aggr	egate.			W	hite.			~ .	-
TION,			To	tal.	Nativ	e born.	Foreig	n born.	Col	ored.
,	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	37.41	27. 51	37. 19	27. 56	31. 51	24. 05	60.87	44.07	46.37	25.43
Married	138. 20	81.71	137.58	80.98	125. 28	65. 58	151. 67	105.45	167.05	116.01
Widowed	514,02	207. 15	515, 14	207. 89	457.30	141.32	577.01	291.57	464.77	184.85

The great difference shown in this table between the death rates of the single, married, and widowed, and between those of the native and foreign born whites of the different classes, are mainly due to the differences in the age distribution of the corresponding classes of population.

For further details with reference to the death rates from diseases of the urinary system in large cities, see Part II of this report, page 131.

DISEASES OF THE URINARY SYSTEM AND MALE ORGANS OF GENERATION, EXCLUDING BRIGHT'S DISEASE.

The total number of deaths reported as due to diseases of the urinary system and male organs of generation, excluding Bright's disease, in the United States during the census year was 12,015, of which 8,173 were of males and 3,842 of females. In the registration area the number of deaths reported as due to these diseases was, males, 4,321; females, 2,596; total, 6,917, giving a death rate of 35.18 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from this group of diseases during the census year in each of five age groups per 100,000 population of corresponding ages, with distinction of sex:

Cities in nonregistration states	24.70	28. 26	21.06	13.34	14.73	11.94	15.08	16.94	13. 16	65.97	84.92	46.18	256.56	424.66	112.88
Cities of 100,000 population and upward	34.82	41. 15	28.38	18.35	20.95	15.74	25.08	25, 31	24. 85	102.07	123.47	80.36	343, 42	527.44	192.57
Metropolitan district	55. 54	64.63	46. 39	28.36	32. 10	24.59	41. 11	39. 26	42, 90	151.69	178.73	124.75	473.51	654. 64	322, 28

It will be seen from this table that the highest death rates from this group of diseases occurred in persons 45 years of age and over, the rates being, for persons from 15 to 45 years, 18.21; for those from 45 to 65 years, 67.10; and for those 65 years of age and over, 269.91. In the age group from 45 to 65 the death rate from these diseases was higher in males (84.07) than in feinales (50.29), and in the registration states it was more than three times as high in the cities (97.91) as in the rural districts (30.26). It was highest of all in the metropolitan district, being 151.69; or, for males, 178.73; and, for females, 124.75 per 100,000 of population of this age group. In those 65 years of age and over the death rate from these diseases was much higher in males (428.99) than in females (127.93), and in the registration states it was higher in the cities than in the rural districts; but the difference is not so marked as it is for the age group 45 to 65 years. In children under 5 years of age the death rate from these diseases was higher among males (33.01) than among females (24.40), and in the cities of the registration states (41.03) than in the rural districts of the same states (15.71). It was highest of all in the metropolitan district (55.54).

The following table shows, for each of the registration states and for their sum, the death rates from diseases of the urinary system and male organs of generation, excluding Bright's disease, during the census year, per 100,000 of population, with distinction of sex, and of cities and rural districts:

	A	GGREGATE	.	-	MALES.			FEMALES.	
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	39.67	46. 89	28. 63	49.37	54. 84	41. 29	30.18	39.33	15. 75
Connecticut	26. 93	30.29	24. 55	36.80	39.40	34. 98	17. 25	21.51	14. 18
Delaware	23. 15	24.42	22.42	31. 55	38.94	27. 39	14.47	9.80	17. 21
District of Columbia	40.37	40.37		57.49	57.49		24.83	24.83	
Massachusetts	32.11	32. 25	31.67	39.99	36, 57	50.93	24. 67	28. 21	12.83
New Hampshire	30.81	27. 15	32. 33	42.34	40. 29	43.14	19.48	15.42	21. 28
New Jersey	37.58	42.74	30, 83	44.95	48. 12	40.88	30. 24	37.48	20.61
New York	46. 23	57.64	27. 79	56. 13	66. 44	40.03	36.48	49.20	15. 21
Rhode Island	39. 65	43.99	33.69	55. 35	57. 37	52.67	24.79	31.67	15.01
Vermont	27.68	28. 27	27. 62	42.52	44. 29	42. 37	12, 26	13.56	12.13

This table shows that the death rate from this group of diseases was higher among males (49.37) than among females (30.18), and much higher in the cities (46.89) than it was in the rural districts (28.63). The death rate from these diseases was highest in New York (46.23), the District of Columbia (40.37), and Rhode Island (39.65); and lowest in Delaware (23.15), Connecticut (26.93), and Vermont (27.68).

The combined relations of age and race to the death rates from diseases of the urinary system and male organs of generation, exclusive of Bright's disease, are indicated in the following table showing the number of deaths in each of five age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	UNDER 5	YEARS.	UNDER 15	YEARS.	15 TO 45	YEARS.	45 TO 65	YEARS.	65 YEA	
	Deaths:	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	- Rate.	Deaths.	Rate.
White	227	46.81	314	23. 29	817	34. 12	807	123, 59	667	428. 60
Colored Birthplaces of mothers (white):	7 .	44. 64	11	22.87	33	31. 98	30	129, 13	15	290. 30
United States	89	36.03	120	18.30	144	18.78	140	62, 40	239	346, 49
England and Wales	11	64.45	17	32.86	37	31. 99	44	116. 91	42	453, 61
Ireland	28	42.41	42	19.38	342	55.12	333	195. 68	168	520, 64
Italy	13	86.46	14	43.96	9	17.97	5	60. 17	5	525. 21

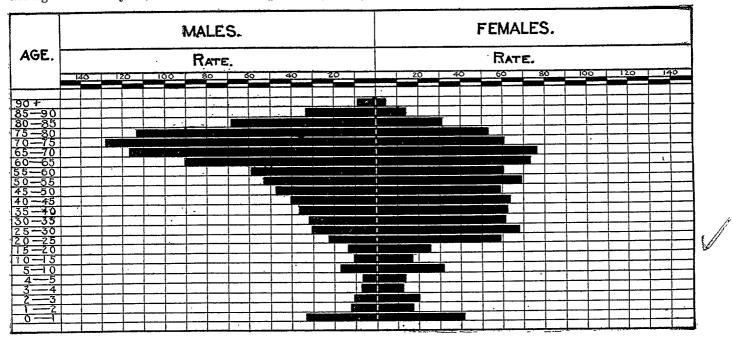

It will be seen from this table that the death rates from this group of diseases were about the same for the whites and the colored, except for those 65 years of age and over, for which the death rates were, whites, 428.60; colored, 290.30. Among the whites the death rate from this group of diseases in the age group from 45 to 65 was highest among the children of mothers born in Ireland (195.68), and lowest among the children of mothers born in the United States (62.40) and Italy (60.17).

The following table shows the proportion of deaths due to diseases of the urinary system and male organs of generation, excluding Bright's disease, at certain ages or groups of ages per 1,000 of the total of all deaths reported as caused by these diseases in the censuses of 1880 and 1890, with distinction of sex:

00 to 35 years	23.77	60. 25	32. 19	61, 24	95 years and over	3.42	2, 32	2.47	0.79

The average age at death from this group of diseases was, the United States, 52.11 years; the registration states, 51.22 years.

The comparative proportions of deaths of males and females in each group, due to this group of diseases during the census year, as indicated in the preceding table, are shown in the following diagram:

The comparative proportions of deaths of males in each age group, due to this group of diseases in 1880 and 1890, are shown in the following diagram:

mor--pt 1---28

The following table shows for each grand group the proportion of deaths due to diseases of the urinary system and male organs of generation, excluding Bright's disease, during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

BRIGHT'S DISEASE.

The total number of deaths reported as due to Bright's disease in the United States during the census year was 11,637, of which 7,274 were of males and 4,363 were of females. In the registration area the number of deaths reported as due to this disease was, males, 3,988; and females, 2,998; total, 6,986.

The proportion of deaths from Bright's disease in each 100,000 deaths from all causes was 1,329, as against 712 in 1880 and 349 in 1870.

In England and Wales the proportion for 1890 was 1,301.6, as against 915.9 in 1880.

The following table shows, for each of the registration states and for their sum, the death rates from Bright's disease during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

		AGGREGATE.			MALES.		FEMALES.			
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total	40. 43	47.48	29. 67	45. 74	52. 24	36. 15	35. 24	42 94	23. 09	
Connecticut	38.86	39. 31	38. 54	41.13	36.77	44. 19	36. 63	41.76	32.93	
Delaware	32.05	39. 07	28 02	39. 73	45.43	36.52	24. 12	32, 66	19.12	
District of Columbia	26.48	26.48		38. 33	38. 33	·	15. 73	15 73		
Massachusetts	31. 93	31.43	33.58	35. 86	33.67	42.83	28, 23	29 34	24. 53	
New Hampshire	33. 20	35. 29	32. 33	38.06	38.37	37. 93	28. 43	32 54	26. 60	
New Jersey	33.77	37. 13	29.39	39.68	41.95	36.76	27. 90	32 40	21. 90	
New York	47.10	59.80	26. 57	53. 11	65.95	33.05	41.18	53. 91	19.90	
Rhode Island	39. 36	44.49	32. 32	37. 49	44. 85	27.72	41. 13	44.15	36.84	
Vermont	33.09	53.01	31. 24	40.16	66.44	37.87	25, 75	40.68	24. 27	

This table indicates that the death rate from Bright's disease was decidedly higher among males (45.74) than it was among females (35.24), and that it was much higher in the cities (47.48) than it was in the rural districts. (29.67). It was highest in New York (47.10), Rhode Island (39.36), and Connecticut (38.86); and was lowest in the District of Columbia (26.48), Massachusetts (31.93), and Delaware (32.05).

The following table shows, for the registration area and some of its subdivisions, the death rates from Bright's disease during the census year in each of three age groups per 100,000 population of corresponding ages, with distinction of sex:

	15	то 45 уп.	ARS.	45	TO 65 YEA	ARS.	65 YEARS AND OVER.

Metropolitan district	44. 58	48.52	40.78	202.92	225.18	180.73	449.88	537. 26	376. 93	

It will be seen from this table that the death rates from this disease rapidly increased with advancing years, being more than twice as high in persons 65 years of age and over as it was in persons between 45 and 65 years of age, and more than nine times as high as it was in persons between 15 and 45 years of age. In the age group from 45 to 65 years it was decidedly higher in males (110.54) than it was in females (77.95), and in the registration states it was more than twice as high in the cities (133.94) as it was in the rural districts (55.39). In the age group 65 years of age and over the death rate was nearly twice as high among males (280.41) as it was among females (149.10), but the difference in the death rate of the two sexes was much more marked in the rural districts of the registration states (males, 228.45; females, 97.37) than in the cities in the registration states (males, 367.70; females, 228.13. In this age group the highest death rate of all occurred in the metropolitan district, being, males, 537.26; females, 376.93.

The combined relations of age and race to the death rates from Bright's disease are indicated in the following table showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color, and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	15 TO 45	YEARS.	45 TO 65	YEARS.	65 YEARS AND OVER.		
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	844	35.25	1, 017	155.75	536	344. 42	
Colored	33	31.98	53	228.13	18	348.36	
Birthplaces of mothers (white):					l i		
United States	150	19.56	204	90.93	148	214. 56	
England and Wales	35	30. 26	51	135. 51	35	378.01	
Ireland	379	61.08	415	243.87	176	545. 43	
Scotland	10	26. 54	15	128.93	13	475. 49	
France	6	31.35	9	142.72	2	140.85	
Germany	148	26.98	222	148. 82	104	326. 67	
Canada	11	27.66	5	72.94	4	370.03	
Scandinavia	10	30.53	8	159.11]]	 	
Bohemia	7	104.35	5	378. 21			
Italy	12	23.96	10	120.34	7	735. 29	
·	I	l			11		

It will be seen from this table that in the age group from 45 to 65 years the death rate was decidedly higher in the colored (228.13) than it was in the whites (155.75); that it was highest in children of mothers born in Bohemia (378.21) and in children of mothers born in Ireland (243.87), while it was lowest in the children of mothers born in Canada (72.94) and in the children of mothers born in the United States (90.93). In the age group 65 years of age and over the death rate was highest in the children of mothers born in Italy (735.29) and in children of mothers born in Ireland (545.43).

VITAL AND SOCIAL STATISTICS.

The following table shows the proportion of deaths due to Bright's disease at certain ages and groups of ages per 1,000 deaths at all ages from this cause in 1880 and in 1890, with distinction of sex:

	1880		18	890		18	880	1890

This table and the diagrams indicate that from the age of 15 and upward there was a comparatively steady increase in the proportion of deaths from Bright's disease in each quinquennial age group, the maximum being reached in 1890 in the age group from 60 to 65 years. It should be remembered, however, that the apparent diminution in the proportion of deaths in the age groups from 65 to 90 years was probably due to the fact of the much smaller proportion of persons living at these advanced ages than in the lower age groups, so that it is probable that the tendency to death from this disease increased steadily with advancing age.

The following table shows, for each grand group, the proportion of deaths due to Bright's disease during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

_		RUI	RAL.	CIT	ies.	
GRAND GROUPS.	Total.	Males.	Females.	Males.	Females.	
1. North Atlantic Coast region	17. 20 22. 78	23.34 24.20	16. 95 14. 64	15. 60 23. 90	15. 62 22. 99

21. Pacific Coast region	18, 26	16.04	12.13	26.23	12.94	
	<u> </u>	11	1		<u> </u>	1

It will be seen from this table that the proportion of deaths due to this cause in the rural districts was greatest in the Middle and North Atlantic Coast regions, in the Southeastern hills and plateaus, and least in the southern portions of the United States.

The following table shows, for the registration area and some of its subdivisions, the death rate from Bright's disease per 100,000 males engaged in each specified occupation and class of occupations:

	Regis-	REGIST	ration s	TATES.	Regis- tration

It will be seen from this table that the death rate from Bright's disease among males engaged in all of the specified occupations in the registration states was 51.18 per 100,000. The death rate from this disease was above the average in the professional class (78.72), the mercantile and trading class (58.77), the laboring and servant class (74.46), and among hotel and boarding house keepers, saloon keepers, etc. (69.38); and was below the average for all other classes, being least among those engaged in agriculture, transportation, and other outdoor pursuits (39.90).

Taking the principal occupations in the registration states, the highest death rates of males from Bright's disease occurred among sailors (148.97), lawyers (107.77), physicians and surgeons (92.37), bakers and confectioners (92.34), and laborers (81.04); and the lowest rates among mill and factory operatives (18.02), commercial travelers and salesmen (19.66), machinists (33.89), accountants, bookkeepers, clerks, and copyists (37.55), and farmers and farm laborers (40.04). The death rate from this disease was also above the average among painters, glaziers, and varnishers (78.27), merchants and dealers (74.75), and boot and shoe makers (56.14); and was below the average among carpenters (45.10).

The following table shows, for the registration area and some of its subdivisions, the death rate from Bright's disease per 100,000 females engaged in the specified occupations:

	Regis-	REGIS	TRATION S	PATES.	Regis- tration
OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.
All occupations	23, 22	29, 50	31.76	24.00	14. 20
Teachers	10. 20	12. 10	17.10	6. 99	6. 58
Laundresses	14.28	22.35	25, 95		9.64
Servants	35. 50	46. 46	50.29	38.64	20.10
Milliners, dressmakers, etc	10. 69	13.75	15.47	8.07	6.93

It will be seen from this table that the death rate from Bright's disease among females engaged in the selected occupations in the registration area was 23.22 per 100,000, which was much less than the corresponding rate for males in this area (41.46). The highest death rate among females occurred in the cities in the registration states (31.76), and the lowest in the registration cities of the nonregistration states (14.20).

In the registration states the death rate of females from this cause was highest among servants (46.46), and lowest among teachers (12.10). In each area the death rate of females in selected occupations was but little more than half as much as the corresponding rate for males from this cause.

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to Bright's disease per 1,000 deaths from all causes, among males engaged in each specified occupation and class of occupations:

	United	Regis-	REGIS	tration st	PATES.	Regis- tration	Remain- der

It will be seen from the preceding table that the proportion of deaths due to Bright's disease per 1,000 deaths from all causes among males engaged in all specified occupations in the United States was 26.92. The proportion due to this disease was greatest in the cities in the registration states (38.45), and was least in the nonregistration area (22.75). In the United States as a whole the proportion was below the average in the laboring and servant class (22.73), and the class engaged in agriculture, transportation, and other outdoor pursuits (23.72); and above the average in all others, the greatest proportion being in the professional class (37.64).

Taking the principal occupations in the United States, the greatest proportions of deaths of males due to Bright's disease occurred among lawyers (55.06), collectors, auctioneers, and agents (50.73), bakers and confectioners (46.63), hotel and boarding house keepers (43.41), painters, glaziers, and varnishers (43.36), and physicians and surgeons (42.75), and the least proportions among steam railroad employés (10.24), miners (10.96), clergymen (21.40), laborers (22.30); and farmers and farm laborers (24.67).

Of other principal occupations the proportions of deaths of males due to Bright's disease among boot and shoe makers was (37.05), saloon keepers (33.37), servants (28.45), merchants and dealers (40.21), and carpenters and joiners (27.38).

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to Bright's disease per 1,000 deaths from all causes among females engaged in each specified occupation:

	TT 't - 3	Regis-	REGIS	ration s	TATES.	Regis- tration	Remain- der
OCCUPATIONS.	United States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
All occupations	13. 38	25. 12	25. 84	29. 67	18. 27	23. 19	7.89
Teachers	16. 70	23. 62	27. 89	35. 21	18.35	15. 38	13.89
Laundresses	15. 33	25.04	33.33	35. 87		18.81	8.04
Servants	13.36	25, 13	25. 55	29. 28	19.09	23. 86	7.79
Milliners, dressmakers, etc	20. 52	30. 13	31. 16	36. 68	15. 96	27. 86	12. 69

This table shows that the average proportion of deaths due to Bright's disease per 1,000 deaths from all causes among females in the selected occupations in the United States was 13.38. In the registration area the proportion was 25.12 per 1,000, being greatest in the cities in the registration states (29.67); and least in the rural districts of the same states (18.27). In the nonregistration area it was 7.89 per 1,000. The greatest proportion of deaths due to this cause among females in the United States occurred among milliners, dressmakers, seamstresses, etc. (20.52); and the least proportion among servants (13.36).

DISEASES OF THE FEMALE ORGANS OF GENERATION.

The total number of deaths reported as due to diseases of the female organs of generation in the United States during the census year was 2,895, giving a ratio of 7.33 per 1,000 of all deaths from known causes in females.

In the registration area the number of deaths reported as due to this class of diseases was 1,028, being 5.41 per 1,000 of all deaths from known causes among females, and 10.43 per 100,000 of population living at the end of the year.

The following table shows, for the registration area and some of its subdivisions, the death rates due to diseases of this class during the census year per 100,000 of female population, with distinction of color:

AREAS.	Aggregate.	White.	Colored.	
Registration area	10.43	9. 86	21.44	
Cities	11. 35	10.65	22. 45	1
States	9.49	9. 27	18.59	~
Cities	10.77	10.46	21.95	į
Rural	7.47	7.42	10. 10	
Cities in nonregistration states	11.89	10.84	22. 59	1

It will be seen from this table that in the registration area the death rate from this class of diseases was much higher among the colored (21.44) than among the whites (9.86), and that in the registration states it was higher in the cities (10.77) than it was in the rural districts (7.47).

The following table shows, for each of the registration states and for their sum, the death rates from diseases of the female organs of generation during the census year per 100,000 of female population, with distinction of cities and rural districts:

		FEMALES.		
REGISTRATION STATES.	Total.	Cities.	Rural.	
Total	9.49	10.77	7.47	İ
Connecticut	11.41	12. 65	10.52	
Delaware	12.06	13.06	11.47	1 Jacob
District of Columbia	9. 93	9.93]	7
Massachusetts	9.38	9.93	7.55	
New Hampshire	9.48	8.56	9, 88	
New Jersey	8.70	8.70	8. 69	
New York	9. 53	* 11. 48	6,28	
Rhode Island	7, 89	10.56	4.09	
Vermont	8.58	20.34	7.42	

This table indicates that the death rate from this class of diseases was higher in the cities (10.77) than it was in the rural districts (7.47); that it was highest in Delaware (12.06) and in Connecticut (11.41), and lowest in Rhode Island (7.89) and Vermont (8.58).

The following table shows, for the registration area and some of its subdivisions, the death rate from diseases of the female organs of generation during the census year in each of three age groups per 100,000 female population of corresponding ages:

AREAS.	15 to 45 years.	45 to 65 years.	65 years and over
Registration area	12.41	20. 35	19, 39
Cities	13.66	23.38	21, 11
States	10.79	18.48	17.82
Cities	12.45	22.81	19.07
Rural	7.78	13.00	16.79
Cities in nonregistration states	14.82	24.00	23. 55
Cities of 100,000 population and upward	15.41	25.48	19.13
Metropolitan district	13.41	29.09	24.50

It will be seen from this table that the greatest death rate from these diseases occurred in women from 45 to 65 years of age, being 20.35, while in those from 15 to 45 years of age it was 12.41, and in those 65 years of age and upward 19.39. In all age groups it was greater in the cities of the registration states than in the rural districts of the same states. For women 45 years of age and over it was greatest of all in the metropolitan district.

The following table shows, for each grand group, the proportion of deaths due to diseases of the female organs of generation during the census year per 1,000 deaths from known causes, with distinction of cities and rural districts:

	. FEMALES.			FEMALES.		
GRAND GROUPS.	Cities.	Rural.	GRAND GROUPS.		Rural.	
1. North Atlantic Coast region	5.12	4. 61	12. South Mississippi River belt	6.36	14.07	
2. Middle Atlantic Coast region	5.30	5.52	13. North Mississippi River belt	8.27	8.38	
3. South Atlantic Coast region	7.31	11. 20	14. Southwest Central region	3.26	10.62	
4. Gulf Coastregion	7.61	14.60	15. Central region, plains and prairies	7.51	8.64	
5. Northeastern hills and plateaus	4.89	5. 17	16. Prairie region	3.11	8.15	
6. Central Appalachian region	1.83	6, 33	17. Missouri River belt	7.50	9.06	
7. Region of the Great Northern Lakes	6.11	5.58	18. Region of the Western plains	7.55	7.97	
8. Interior plateau	4: 85	6.39	19. Heavily timbered region of the Northwest		8.06	
9. Southern Central Appalachian region	6.29	9.57	20. Cordilleran region	15.44	6.76	
10. Ohio River belt	4.74	9.48	21. Pacific Coast region	5.66	11.79	
11. Southern Interior plateau	2.73	12.74		ĺ		

The preceding table indicates that the proportion of deaths due to diseases of the female organs of generation per 1,000 of all deaths from known causes was greater in the southern than in the northern portion of the country, and was especially large in the Gulf Coast region, the South Mississippi River belt, the South Atlantic Coast region, and in that of the Southern Interior plateau.

The combined relations of age and race to the death rates from diseases of the female organs of generation are indicated in the following table, showing the number of deaths in each of certain age groups, with distinction of color and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 45 years.		45 TO 65	YEARS.	65 YEARS AND OVER.		
THE SAME PROPERTY OF THE SAME PARTY.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	155	6.47	83	12.71	18	11. 57	
Colored	14	13.57	4	17.22	2	38.71	
Birthplaces of mothers (white):							
United States	52	6. 78	26	11.59	8	11.60	
England and Wales	8	6.72	5	13. 29	1	10.80	
Ireland	33	5.32	22	12, 93	2	6. 20	
Germany	25	4.56	16	10.73	3	9.42	

This table indicates that the death rate from these diseases was higher among the colored than among the whites in each age group; that among the whites it was generally higher among the children of mothers born in England and Wales and in the United States than it was among the children of mothers born in Germany or in Ireland.

The following table shows the death rate from diseases of the female organs of generation in the registration area during the census year in each of four age groups, with distinction of conjugal condition:

		AGE PE	RIODS.	
CONJUGAL CONDITION.	15 years and over.	15 to 45 years.	45 to 65 years.	65 years and over
Single	6. 81	5. 53	25. 59	24. 52
Married	17. 26	16. 29	18.97	23. 87
Widowed	16.71	16, 48	18.72	13, 96

This table shows that among women 15 years of age and over the death rate from diseases of the organs of generation was much higher among the married (17.26) than it was among the single (6.81).

For women 45 years of age and over the death rate from this cause was higher among the single than it was among either the married or the widowed.

The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to diseases of the female organs of generation during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, general nativity, and parental nativity:

				WHITE.				
AREAS.	Aggre-]	Native born	n.		Colored.	
AREAS.	gate.	Total.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	C0.016u.	,
Registration area	5. 70	5. 54	4. 99	5. 99	2. 48	7.00	7. 85	
Cities	5, 85	5. 65	4. 96	5. 88	2. 51	7, 22	7.95	
States	5. 18	5.11	4. 46	5. 87	2.45	7.05	7. 22	ļ
Cities	5. 23	5.14	4. 11	5. 62	2. 48	7.44	7.54	
Rural	5.07	5.05	5.09	6. 16	2.30	5.32	5.87	
Cities in nonregistration states	6.51	6. 26	5. 92	6, 81	2, 64	6. 91	8.08	

The preceding table indicates that in the registration area the proportion of deaths due to diseases of this class to the total deaths from known causes was greater among the colored (7.85) than among the whites (5.54); and that among the whites it was greater among the foreign born (7.00) than among the native born (4.99), which is owing to the different distribution of the ages in the two classes.

The following table shows the proportion of deaths due to diseases of the female organs of generation, at certain ages and groups of ages, per 1,000 deaths from these causes in 1880 and in 1890:

. AGES.	1880	1890	AGES.	1880	1890
Under 5 years	3. 69	3.15	50 to 55 years	75.44	81.47
5 to 10 years	0.82	0.70	55 to 60 years	48.38	57.34
10 to 15 years	11.07	14.34	60 to 65 years	43.46	47.90
15 to 20 years	63, 96	66.78	65 to 70 years	25.42	36.71
20 to 25 years	94.71	76.57	70 to 75 years	21.73	22.73
25 to 30 years	113.16	108.39	75 to 80 years	15. 17	13.64
30 to 35 years	109.47	103.15	80 to 85 years	4.92	8.74
35 to 40 years	135.30	123.78	85 to 90 years	2.87	3.50
40 to 45 years	120.13	117.48	90 to 95 years	0.41	
45 to 50 years	109.06	113.64	95 years and over	0.82	

It will be seen from this table that the greatest proportion of deaths due to these diseases occurred between the ages of 25 and 50.

The number of deaths attributed to these diseases, per 1,000 deaths from known causes, in females in the United States during the census year was 7.33.

The following table shows, for the registration area and some of its subdivisions, the death rate from diseases of the organs of generation per 100,000 females engaged in each specified occupation:

	Regis-	REGIS	ration s	TATES.	Regis- tration	
OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.	d
All occupations	10.43	10.90	11.18	10, 23	9.74	
Teachers	14.73	10.37	10. 26	10.49	23.02	
Laundresses	5.10	8.38	9.73		3, 21	ĺ
Servants	14.51	15.67	16.90	13. 15	12.90	
Milliners, dressmakers, etc	4.14	4.38	4.89	2. 69	3.85	

This table shows that the death rate from diseases of the organs of generation per 100,000 of females engaged in the selected occupations in the registration area was 10.43, being highest in the cities in the registration states (11.18), and lowest in the registration cities in other states (9.74).

The highest death rates from these causes in the registration area occurred among teachers (14.73) and servants (14.51); and the lowest rates among milliners, dressmakers, seamstresses, etc. (4.14), and laundresses (5.10).

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to diseases of the organs of generation per 1,000 deaths from all causes among females engaged in each specified occupation:

,		Regis-	REGIS:	FRATION S	CATES.	Regis- tration	Remain- der	
OCCUPATIONS.	United States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.	
All occupations	12. 33	11.28	9. 55	10.44	7. 79	15. 91	12.82	V
Teachers	15. 19	34. 12	23.90	21.13	27.52	53.85	7.48	
Laundresses	16.86	8.94	12.50	13.45		6. 27	22.79	
Servants	11.14	10.28	8.62	9.84	6, 50	15. 31	11.55	
Milliners, dressmakers, etc	12.66	11.66	9.92	11.58	5.32	15.48	13.48	

It will be seen from this table that the proportion of deaths due to diseases of the organs of generation per 1,000 deaths from all causes among females engaged in the selected occupations in the United States was 12.33. The proportion of deaths due to these causes in the registration area was 11.28, being greatest in the registration cities in the nonregistration states (15.91), and least in the rural districts of the registration states (7.79). In the nonregistration area the corresponding proportion was 12.82.

Taking the principal occupations in the United States, the proportion of deaths due to these causes was greatest among laundresses (16.86), and least among servants (11.14). In the registration area the proportion of deaths due to these causes was greatest among teachers (34.12), and least among laundresses (8.94).

AFFECTIONS CONNECTED WITH PREGNANCY.

The total number of deaths reported as due to affections connected with pregnancy in the United States during the census year was 11,257. In the registration area the number of deaths reported as due to diseases of this class was 3,011, giving a death rate of 30.54 per 100,000 females.

The proportion of deaths from these diseases per 100,000 deaths from all causes among females was 2,737.65, as against 2,003.93 in 1880 and 2,076.95 in 1870. In England and Wales the proportion was 408.90 in 1890.

The following table shows, for the registration area and some of its subdivisions, the death rates from affections connected with pregnancy during the census year per 100,000 of female population, with distinctions of color, general nativity, and parental nativity:

			WH	ITE.			
AREAS.	Aggre-		Nativ	e born.		Colored.	
	gate.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Coloreu.	
Registration area	30, 54	29. 78	20, 91	26. 92	47. 23	45.35	
CitiesStates	33. 04 28. 00	32. 24 27. 75	22. 34 19. 47	27. 42 27. 11	49. 72 43. 68	45. 80 38. 61	
Cities	31.49	31.31	19. 71	27. 90	47. 17	37. 91	
Cities in nonregistration states	22. 49 34. 52 43. 24	22. 18 33. 18 43. 21	19, 29 28, 23 29, 12	24. 88 26. 32 33. 00	31. 70 52. 84 63. 11	40. 40 48. 09 44. 76	

It will be seen from this table that the death rate from affections connected with pregnancy was much higher among colored females (45.35) than among whites (29.78), and that among whites it was much higher in the cities than in the rural districts of the registration states, being highest of all in the metropolitan district for the 6-year period (43.21). Among colored females it was a little higher in the rural districts in the registration states (40.40) than it was in the cities in the same states (37.91).

The following table shows, for each of the registration states and for their sum, the death rates from affections connected with pregnancy during the census year per 100,000 of female population, with distinction of cities and rural districts:

REGISTRATION STATES.	Aggregate.	Cities.	Rural.	
Total	28. 00	31.49	18. 19	
Connecticut	25. 22	34. 80	18. 29	
Delaware	32.56	6.53	47.80	
District of Columbia	37. 25	37.25		
Massachusetts	24. 67	23.92	27.17	1
New Hampshire	21. 58	17.13	23, 56	V
New Jersey	28. 59	35, 30	19.64	
New York	28. 86	34, 60	19.28	
Rhode Island	31.55	28.79	35.48	
Vermont	33.72	27. 12	34, 38	

This table shows that the death rate from affections connected with pregnancy was much higher in the cities (31.49) than it was in the rural districts (18.19). It was highest in the District of Columbia (37.25), Vermont (33.72), and Delaware (32.56); and lowest in New Hampshire (21.58), Massachusetts (24.67), and Connecticut (25.22).

The following table shows, for the registration area and some of its subdivisions, the death rates from affections connected with pregnancy during the census year, between 15 and 50 years of age, per 100,000 female population of corresponding age:

AREAS.	15 to 50 years.
Registration area.	53.60
Cities	56, 68
States	49.72
Cities,	53, 81
Rural	42.47
Cities in nonregistration states	59.47
Cities of 100,000 population and upward	60.39
Metropolitan district	

It will be seen from this table that the death rate from these diseases was highest of all in the metropolitan district (65.26), and lowest in the rural districts of the registration states (42.47).

Out of each 100,000 deaths of females from known causes, excluding stillbirths, in the United States during the census year, 2,955.61 were due to affections connected with pregnancy.

The following table shows the proportion of deaths due to affections connected with pregnancy, at certain ages and groups of ages, per 1,000 deaths at all ages from these causes in 1880 and in 1890:

. [AGES.												
	CENSUS YEARS.	15 to 20 years.	20 to 25 years.	25 to 30 years.	30 to 35 years.	35 to 40 years.	40 to 45 years.	45 to 50 years.						
	1880	110.84 98.25	234. 58 223. 56	200. 54 217. 50	182.14 196.69	165. 09 158. 60	81. 55 78. 44	19.22						

It will be seen from this table that the greatest proportion of deaths due to these diseases occurred between the ages 20 and 25 in each census year.

The following table shows the proportion of deaths reported as due to affections connected with pregnancy in each 1,000 deaths of females, from known causes, in each grand group of the United States during the census year, with distinctions of rural districts and cities:

GRAND GROUPS.	Rural.	Cities.	GRAND GROUPS.	Rural.	Cities.
1. North Atlantic Coast region	1 5 34	11. 99	12. South Mississippi River belt	60. 26	19.08
2. Middle Atlantic Coast region	24.58	16.00	13. North Mississippi River belt	37.79	26.02
3. South Atlantic Coast region	49.86	22.50	14. Southwest Central region	55.67	28. 23
4. Gulf Coast region	63.20	13.44	15. Central region, plains and prairies	30.45	13.99
5. Northeastern hills and plateaus	18.16	16.49	16. Prairie region	39.81	21.76

11. Southern Interior plateau	49.81	10.91	_		· ·

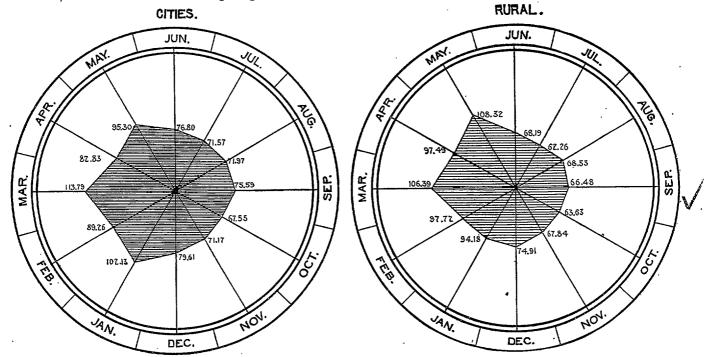

The combined relations of age and race to the death rates from affections connected with pregnancy are indicated in the following table showing the death rates between 15 and 45 years of age per 100,000 female population of corresponding age, with distinction of color and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHEES.	Death rate per 100,000 female population between 15 and 45 years.
Aggregate	70. 16
White	69.79
Colored	78.40
Birthplaces of mothers (white).	
United States	56. 09
England and Wales	54. 23
Ireland	71. 92
Scotland	71. 95
France	77.39
Germany	84.07
Canada	72. 16

March	1,216	283	933	108.02	113. 79	106.39
April	1,061	206	855	94. 25	82. 83	97.49
May	1, 187	237	950	105.45	95.30	108.32
Unknown	217	6	211	19. 28	2.41	24, 06

The relative proportion of deaths due to affections connected with pregnancy in each month in the cities and in the rural districts, as indicated in the preceding table, and the difference in the proportion of deaths in the two areas, are shown in the following diagram:

The following table shows, for the registration area and some of its subdivisions, the death rate from affections connected with pregnancy per 100,000 females engaged in each specified occupation:

		Regis-	REGIS	rration s:	TATES.	Regis- tration	
	OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.	
	All occupations	17.47	18.94	18.31	20.46	15.36	V
Tea	chers						
Lat	Indresses	13.26	11.17	12.98		14.47	
	vants	32.50	37.82	38, 22	37.00	25.04	
Mil	liners, dressmakers, etc	3.79	2.50	2.44	2.69	5.39	

It will be seen from this table that the death rate from affections connected with pregnancy per 100,000 females engaged in the selected occupations in the registration area was 17.47. In the registration states the death rate from these causes was 18.94, being highest in the rural districts (20.46), and lowest in the cities (18.31). In the registration cities of the nonregistration states the death rate from these causes was 15.36.

Taking the principal occupations, the highest death rate from these causes occurred among servants in each of the registration; areas and the lowest rate in each of the same areas occurred among milliners, dressmakers, seamstresses, etc.

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to affections connected with pregnancy per 1,000 deaths from all causes among females engaged in each specified occupation:

	United	Regis- tration	REGIS	TRATION ST	TATES.	Regis- tration	Remain- der	
OCCUPATIONS.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.	V
All occupations	34. 04	18. 90	16. 59	17.10	15. 58	25.07	41.11	
Teachers	14.43						20.30	
Laundresses	34.48 .	23. 26	16.67	17.94		28. 21	42.90	
Servants	31.36	23.01	20.80	22, 25	18. 28	29.72	35. 32	ı
Milliners, dressmakers, etc	18.34	10.69	5.67	5.79	5. 32	21.67	24.58	

The preceding table shows that the proportion of deaths due to affections connected with pregnancy per 1,000 deaths from all causes among females engaged in the selected occupations in the United States was 34.04. The proportion was very much greater in the nonregistration area (41.11) than in the area covered by the registration returns (18.90), and was also greater in the registration cities of the nonregistration states (25.07) than in the registration cities in the registration states (17.10).

Taking the principal occupations in the United States, the greatest proportion of deaths due to these causes occurred among laundresses (34.48), and the least proportion among teachers (14.43).

DISEASES OF THE BONES AND JOINTS.

The total number of deaths reported as due to diseases of the bones and joints in the United States during the census year was 2,802, of which 1,615 were of males and 1,187 were of females. Two thousand one hundred and seven, or about three-fourths of the whole number, were due to diseases of the spine. In the registration area the number of deaths reported as due to these causes was, males, 462; females, 323; total, 785, giving a death rate of 3.99 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from diseases of the bones and joints during the census year in each of four age groups per 100,000 population of corresponding ages, with distinction of sex:

12212	UN	DER 5 YI	EARS.	5	to 15 YE	ARS.	15	то 45 уі	EARS.	45 Y	EARS ANI	OVER.
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	6. 59	7.81	5.34	4. 92	5. 60	4. 24	2.77	3.51	2. 03	4. 95	5.34	4. 58
Dities	6. 85	8.42	5. 25	5. 83	6. 83	4 83	2. 97	3. 80	2.15	5. 09	5, 97	4.24
States	6. 22	7. 02	5.40	5.42	5.74	5.10	2.66	3.40	1.94	4.96	4, 93	4.99
Cities	6.56	7. 89	5.22	7.70	8.47	6. 93	3.02	3.96	2.14	5, 22	5. 80	4, 69
Rural	5. 63	5. 55	5.71	2.03	1.77	2.30	2.02	2.46	1.58	4.67	4.02	5.32
Cities in nonregistration states	7.09	8.87	5. 26	4. 20	5.40	3.01	2. 92	3. 66	2.15	4.95	6.14	3.74
lities of 100,000 population and upward	6. 13	7. 11	5. 14	6.83	8.03	5. 63	2.88	3.76	2.00	5.11	5. 56	4.67
Aetropolitan district	6. 32	6.57	6.07	9.30	9.59	9.01	3.01	4. 17	1.90	5. 45	4.81	6. 07

It will be seen from this table that the highest death rate from this cause occurred in children under 5 years of age (6.59); that in this age group it was higher in males (7.81) than in females (5.34); that in the registration states it was somewhat higher in the cities (6.56) than it was in the rural districts (5.63), but for female children it was higher in the rural districts (5.71) than in the cities (5.22). In the age group from 5 to 15 years the death rate per 100,000 from this cause was 4.92, and was much higher in the cities of the registration states (7.70) than in the rural districts (2.03), and in most localities was higher in males than in females, but in the rural districts of the registration states it was higher in females (2.30) than in males (1.77). A part of the higher mortality from this class of diseases in this age group in the cities is probably due to the bringing of children from the rural districts to the cities to be treated in hospitals and special institutions for this class of diseases. The death rate from this class of causes was low in the age group from 15 to 45 (2.77), and was higher in the age group 45 years of age and over (4.95).

The following table shows, for each grand group, the proportion of deaths due to diseases of the bones and joints during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

. GRAND GROUPS.	Total.	RU	RAL.	CIT	TES.	
GAAND GROUPS.	Total.	Males.	Females.	Males.	Females.	
1. North Atlantic Coast region	2. 52	2, 46	3.11	2.88	1.89	
2. Middle Atlantic Coast region	1.86	1.28	1.93	2.11	1.70	ĺ
3. South Atlantic Coast region	2.35	3.53	1.27	2.69	1.69	
4. Gulf Coast region	2.03	2.68	1.83	1.29	2.28	ĺ
5. Northeastern hills and plateaus	2.42	2.72	3.04	1.39	1.63	ļ
6. Central Appalachian region	3.57	5.11	2.56	2.45	1.83	ĺ
7. Region of the Great Northern Lakes	2.24	3.09	3.97	1.95	1.27	İ
8. Interior plateau	2.24	2.51	2.40	2.37	1.66	1
9. Southern Central Appalachian region	5.77	7.39	5.33	1.34		1
10. Ohio River belt	5.33	7.93	7.17	1.01	1.35	ļ
11. Southern Interior plateau	2.68	3.05	2.39	3.10		
12. South Mississippi River belt	2.53	2.28	2.34	6.69		
13. North Mississippi River belt	3.46	4.71	4.26	2.18	2.41	l
14. Southwest Central region	4, 52	5.02	4. 23	2.88		
15. Central region, plains and prairies	6.68	7.98	6.30	3.92	2.05	
16. Prairie region	4.95	5. 55	4.46	1.77	3.11	ŀ
17. Missouri River belt	3.41	3.51	4.78	3.15	3.75	İ
18. Region of the Western plains	3. 13	4.12	3.51	0.66	1.89	
19. Heavily timbered region of the Northwest	4.83	4.83	4.83			l
20. Cordilleran region	3. 55	3.38	3.86	2.62	3.86	
21. Pacific Coast region	2,07	3.44	2.77	1.86	0.27	

This table indicates that the proportion of deaths due to diseases of the bones and joints, as compared with all deaths from known causes, was greatest in the Central region of plains and prairies, the Southern Central Appalachian region, and the Ohio River region; and least in the Middle Atlantic Coast, the Gulf Coast, and the Pacific Coast regions.

The following table shows the proportion of deaths due to diseases of the bones and joints, at certain ages and groups of ages per 1,000 deaths at all ages from these causes in 1880 and in 1890, with distinction of sex:

	18	380	18	390		18	880	18	390

The preceding table and diagrams indicate that the proportion of deaths due to diseases of the bones and joints was greatest in those under 15 years of age.

The following table shows, for each of the registration states and for their sum, the death rates from diseases of the bones and joints during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

,	A	GGREGATE			MALES.		' FEMALES.			
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total	4. 02	4. 64	3. 08	4. 55	5, 54	3.08	3, 51	3.78	3. 09	
Connecticut	4.02	4.19	3.90	3. 25	2. 63	3.68	4.78	5. 69	4.12	
Delaware	2.37		3.74	3, 51		5.48	1. 21		• 1.91	
District of Columbia	4.34	4.34		4. 56	4.56		4.14	4.14		
Massachusetts	4.82	4.84	4.77	5. 98	6.40	4.63	3.74	3, 39	4.91	
New Hampshire	2.92	2.71	3.01	2.68	3.84	2.23	3, 16	1.71	3, 80	
New Jersey	3, 39	4.40	2.08	4.58	6.17	2.54	2.21	2.66	1.61	
New York	3.77	4.75	2.18	4.13	5.40	2. 15	3.41	4. 13	2, 21	
Rhode Island	4.05	5.00	2.75	4.76	6.26	2.77	3.38	3.84	2.73	
Vermont	7.82	3.53	8.22	7.68]	8. 35	7.97	6.78	8.09	

This table shows that the death rates from diseases of the bones and joints was higher among males (4.55) than it was among females (3.51), and that it was higher in the cities (4.64) than it was in the rural districts (3.08). It was highest in Vermont (7.82), and lowest in Delaware (2.37).

The combined relations of age and race to the death rates from diseases of the bones and joints are indicated in the following table showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	UNDER 5	UNDER 5 YEARS. 5 TO 15 YEARS.			15 TO 45	YEARS.	45 YEARS AND OVER.		
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	33	6, 80	71	8. 23	82	3.42	41 .	5. 07	
Colored	1	6.38	4	12.34	4	3.88	1	3.52	
Birthplaces of mothers (white):] [
United States	16	6.48	28	6.85	24	3.13	15	5.11	
Ireland	8	12.12	17	11.28	36	5.80	11	5. 43	
Germany	5	6. 23	10	6.21	7	1.28	6	3.31	
Canada	1	13.46	3	22.34	3	7.54	2	25. 20	

The number of deaths in the colored population from these diseases was so small that the ratios derivable from them have little scientific value. So far as they go they indicate that there was little difference in the mortality from these diseases in the two groups, except in those from 5 to 15 years of age, in which it was greater in the colored (12.34) than in the whites (8.23). Among the whites under 5 years of age the highest death rates from these diseases were in the children of mothers born in Canada (13.46) and in Ireland (12.12), and lowest in the children of mothers born in Germany (6.23) and in the United States (6.48). In children from 5 to 15 years of age the same relative proportions are found, the rates being, for children of mothers born in Canada, 22.34; in Ireland, 11.28; in Germany, 6.21; and in the United States, 6.85. In the age group 45 years of age and over the highest death rate from these diseases was in the children of mothers born in Canada (25.20), and the lowest in the children of mothers born in Germany (3.31).

ADDISON'S DISEASE.

The total number of deaths reported as due to Addison's disease in the United States during the census year was 99, 59 being of males and 40 of females. In the registration area the number of deaths reported as due to this disease was, males, 33; females, 23; total, 56, giving a death rate of 0.28 per 100,000 of population.

The following table shows, for the registration area and some of its subdivisions, the death rates from Addison's disease during the census year in each of three age groups per 100,000 population of corresponding ages, with distinction of sex:

	15	то 45 чел	RS.	45	TO 65 YEA	RS.	65 YI	EARS AND	OVER.	ĺ
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	ĺ
Registration area	0. 25	0. 28	0. 22	0.73	0.84	0.62	0.94	1. 50	0.45	
Cities	0.24	0.25	0, 22	0.78	0.98	0.58	1.02	2. 27		1
States	0.32	0.37	0. 26	0.85	0.87	0.84	0.81	1.02	0.61	ľ
Cities	0.34	0.38	0.31	1.06	1.19	0.93	0.76	1. 73		
Rural	0.28	0.36	0.19	0.60	0.48	0.71	0.84	0.56	1.12	
Cities in nonregistration states	0.14	0.14	0.15	0.50	0.78	0.20	1.31	2.85		ĺ
Cities of 100,000 population and upward	0. 27	0.31	0.23	0.94	1.24	0.63	1.75	3.89		
Metropolitan district	0.34	0.35	0.34	0.88	1.33	0.44	1.03	2. 26		i

The number of deaths from Addison's disease in many of these subdivisions was so small that the death rates derivable therefrom have little scientific value. The figures in the table indicate that the death rate was higher in those from 45 to 65 years of age (0.73) than in those from 15 to 45 (0.25), and still higher in those 65 years of age and over (0.94); that it was higher among males than among females, and a little higher in the cities than in the rural districts.

The following table shows, for each of the registration states and for their sum, the death rates from Addison's disease during the census year per 100,000 of population with distinction of sex and of cities and rural districts:

,	A	GGREGATE	ı. 		MALES.			FEMALES.	1
BEGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	0. 35	0.38	0.30	0. 37	0. 43	0.30	0.32	0. 33	0. 30
Connecticut Delaware	0. 67	0.32	0.92	0.81		1.38	0.53	Ú. 63	0.46
District of Columbia Massachusetts	1.30 0.09	1.30 0.06	0.19	1.83	1.83		0.83 0.17	0. 83 0. 11	0.38
New Hampshire	0. 27 0. 14 0. 43	0. 24 0. 54	0, 38	0. 14 0. 50	0. 25 0. 66	0, 26	0. 53 0. 14 0. 36	0.24	0. 76 0. 27
New York Rhode Island Vermont	1	0.34	0. 20	0.50	0.00	0. 64	0.30	0.42	0. 27

It will be seen from this table that the death rate from Addison's disease was higher in the cities (0.38) than it was in the rural districts (0.30), and higher among males (0.37) than among females (0.32). It was highest of all in the District of Columbia (1.30), and lowest in Massachusetts (0.09).

The combined relations of age and race to the death rates from Addison's disease are indicated in the following table showing the number of deaths among the whites in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the estate of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	15 то 45	YEARS.	45 то 65	YEARS.	65 YEARS AND OVER.		
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	9	0.38	5	0.77	1	0.64	
United States	1	0.13	1	0.45	1	1.45	
Ireland	4	0.64	2	1.18			
Germany	3	0, 55					

No deaths from this disease were reported among the colored or among the children of mothers born in England and Wales, in Scotland, in France, in Scandinavia, in Hungary, in Bohemia, or in Italy.

It will be seen from this table that in persons from 15 to 45 years of age the death rate from this disease was: decidedly higher in children of mothers born in Ireland (0.64) than in any other group. In children of mothers born in the United States it was only 0.13.

ACCIDENTS AND INJURIES.

Of the special causes included under the general heading "Accidents and injuries" the most important areburns and scalds, drowning, gunshot wounds, homicide, railroad accidents, suffocation, and suicide.

The total number of deaths reported as due to accidents and injuries in the United States during the census-year was 45,149, of which 34,724 were of males and 10,425 were of females.

In the registration area the number of deaths reported as due to these causes was, males, 13,831; females, 4,230; total, 18,061, giving a death rate of 91.87 per 100,000 of population; or, for males, 141.11; and for females, 42.91.

In England and Wales the corresponding death rate in 1890 was 65.30; or, for males, 96.10; and for females, 36.20. In 1890 the death rate from accidents and injuries per 100,000 of population was, in England and Wales, 57.4; in Ireland, 35.7; in Scotland, 66.2; in Italy, 32.4; in Belgium, 35.3; and in Prussia, 39.7.

The following table shows, for the registration area and some of its subdivisions, the death rate from accidents and injuries during the census year at all ages and in each of eight age groups, per 100,000 population of corresponding ages, with distinction of sex:

AREAS.	All ages.	Under 1 year.	Under 5 years.	·5 to 15 years.	Under 15 years.	15 to 45 years.	45 years and over.	45 to 65 years.	65 years and over.

Females	47.55	269.60	107.68	19.30	51.83	34. 19	81.10	61.71	163. 97

It will be seen from this table that the highest death rate from accidents and injuries in the registration area occurred in infants under 1 year of age (296.86), and next to these in those 65 years of age and over (215.74). It was lowest in those from 5 to 15 years of age (42.26), and next to these in those from 15 to 45 years of age (82.77).

In children under 1 year of age it was higher among males (332.25) than it was among females (260.51), and in the registration states it was higher in the cities (331.05) than in the rural districts (260.52). It was highest of all among male infants in the cities in the registration states (375.59), and least among females in the rural districts of the registration states (219.15).

In persons from 15 to 45 years of age it was more than four times as high among males (137.72) as among females (28.27), and was highest of all among males in the cities in the nonregistration states (159.31).

In those 65 years of age and over it was higher among males (278.92) than among females (159.35), and in the registration states it was a little higher in the cities (216.66) than it was in the rural districts (196.59). It was highest of all among males in the cities in the nonregistration states (342.01), and lowest among females in the cities in the registration states (156.62).

It will be seen from this table that in persons 45 years of age and over the death rate from these causes was about three times as high among males (221.55) as among females (74.33); that in the registration states it was much higher among males in the cities (230.11) than it was in the rural districts (169.38), and a little higher among females in the cities (76.13) than in the rural districts (71.61).

In the age group under 15 years of age it was higher among males (88.27) than among females (46.28), and in the registration states it was higher in the cities (74.05) than it was in the rural districts (51.59). It was lowest of all among the females of the rural districts of the registration states (34.86).

The following table shows, for each of the registration states and for their sum, the death rates from accidents and injuries during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

	A	GGREGATE			MALES.		FEMALES.			
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
Total .:	84.95	91.49	74. 96	130.08	142. 16	112. 24	40. 82	43. 22	37. 03	
Connecticut	88. 58	97. 31	82. 35	138. 55	146.44	133.02	39, 55	49. 98	32, 01	
Delaware	75 97	97. 67	63.51	118.03	139.55	105.92	32, 56	55. 52	19. 12

Rhode Island	81.62	80.47	83.20	127.36	129.33	124.74	38.31	35.51	42. 30	
Vermont	75. 51	88. 35	74.31	106.89	155, 02	102.71	42. 92	• 27.12	44.49	

It will be seen from this table that the death rate from this class of causes was much higher among males (130.08) than among females (40.82); that it was higher in the cities (91.49) than it was in the rural districts (74.96); and that it was highest in the District of Columbia (94.19) and in New Jersey (92.46), and lowest in Vermont (75.51) and in Delaware (75.97).

The following table shows, for the registration area and some of its subdivisions, the death rates from accidents and injuries during the census year per 100,000 of population, with distinction of color and sex:

	AGGREGATE.				WHITE.		COLORED.			
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	
Registration area	81. 56	124.99	38. 38	79. 43	122.08	36. 97	123. 25	182.82	65. 56	
Cities	86. 15	132 97	39. 92	83. 58	129.54	38. 14	127. 52	189. 32	68. 24	
States	76 17	116. 26	36.97	75. 55	115.43	36.52	102.53	151. 98	55.77	
Cities	82. 20	127. 28	39. 24	81.36	126. 21	38. 55	113. 18	168.31	63 84	
Rural	66.96	99.96	33. 39	66. 77	99.64	33. 35	77.91	117. 53	35. 35	
Cities in nonregistration states	89, 79	138. 05	40. 57	85.78	132. 70	37.71	131. 51	194. 90	69. 52	

This table shows that in the registration area the death rate from accidents and injuries was much higher among males (124.99) than among females (38.38); that it was higher among the colored (123.25) than among the whites (79.43); that in the registration states it was higher in the cities (82.20) than in the rural districts (66.96), and that it was highest of all among the colored males in the cities in the nonregistration states (194.90).

The combined relations of age and race to the death rates from accidents and injuries are indicated in the following table showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	UNDER 1	5 YEARS.	15 TO 45	YEARS.	45 YEARS AND OVER.		
,	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	943	69. 95	2,044	'85. 37	1,321	163. 37	
Colored	82	170.52	93	90.14	24	84.51	
Birthplaces of mothers (white):							
United States	375	57.19	368	47. 99	264	90.00	
England and Wales		79. 24	86	74. 36	68	145.00	
Ireland	183	84. 45	598	96.37	409	202.03	
Scotland	17	105.62	23	61.05	21	146. 16	
France	3	47.01	12	62.71	11	142.38	
Germany	147	60.94	363	66.18	285	157. 45	
Canada	14	67.12	38	95. 55	10	126. 01	
Scandinavia	4	27.88	49	149.60	14	245.70	
Hungary	10	141.44	15	126.42	4	234.19	
Bohemia,	4	81.17	7	104.35	7	443.04	
Italy		103.63	66	131.80	11	118.76	

This table indicates that in children under 15 years of age the death rate from accidents and injuries was much higher among the colored (170.52) than among the whites (69.95); and that among the whites it was highest among the children of mothers born in Hungary (141.44), in Scotland (105.62), and in Italy (103.63); and lowest among the children of mothers born in Scandinavia (27.88), in France (47.01), and in the United States (57.19).

In persons from 15 to 45 years of age the death rate from accidents and injuries was highest among the children of mothers born in Scandinavia (149.60), in Italy (131.80), and in Hungary (126.42); and was lowest among the children of mothers born in the United States (47.99).

In those 45 years of age and over it was much higher among the children of mothers born in Ireland (202.03) than among the children of mothers born in Germany (157.45) or in the United States (90.00).

The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to accidents and injuries during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

					WHITE.					COLORED.	•	
,	Aggre-				1	Native born	ı

This table indicates that in the registration area the proportion of deaths due to accidents and injuries to the total number of deaths from known causes was much greater among males (white, 60.97; colored, 60.28) than among females (white, 20.76; colored, 23.99); that it was nearly the same among the whites as among the colored, and that among the whites it was much greater among the foreign born (54.15) than among the native born (34.53). In the registration states it was greater in the rural districts (44.50) than it was in the cities (37.33).

The proportion of deaths reported as due to accidents and injuries per 1,000 deaths from known causes in the United States during the census year 1890 was 51.57. In 1880 it was 47.43.

In 1890 the proportion of deaths due to accidents and injuries per 1,000 deaths from all causes was, in England and Wales, 29.3; in Scotland, 33.5; in Ireland, 19.5; in Prussia, 16.5; in Belgium, 16.9; and in Italy, 12.3.

The following table shows the proportion of deaths due to accidents and injuries at certain ages and groups of ages per 1,000 deaths at all ages from these causes in 1880 and in 1890, with distinction of sex:

	18	880	18	390		18	880	18	390

It will be seen from this table that both in 1880 and in 1890 the proportion of deaths due to accidents and injuries in children under 10 years of age was greater in females than in males; that from the age of 10 to 65 years the proportion was greater for males than for females, while above 65 years it again became greater for the females.

The following table shows, for each grand group, the proportion of deaths due to accidents and injuries during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

CRAND CROTTE	Total.	RU	RAL.	CIT	ies.
GRAND GROUPS.	Total.	Males.	Females.	Males.	Females.
1. North Atlantic Coast region	41.07	68.37	23. 67	56.03	19.60

19. Heavily timbered region of the Northwest	62, 72	91, 97	29, 40		
20. Cordilleran region	106.38	147.36	41.32	133. 86	57.92
21. Pacific Coast region	79. 91	150, 06	42.29	77. 16	31.00

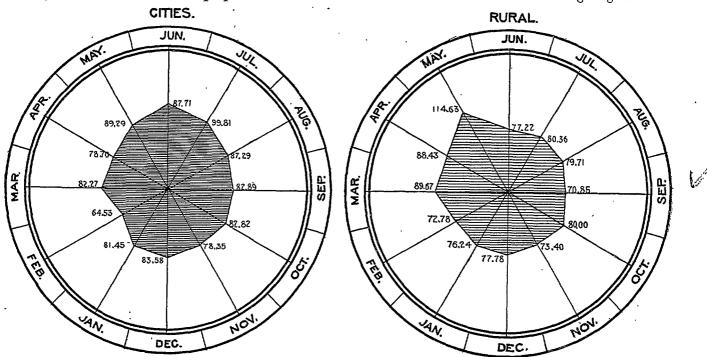

It will be seen from this table that the proportion of deaths due to these causes out of the total number of deaths from known causes was less in the cities than it was in the rural districts, and in the rural districts it was greater in the west and south than it was in the north and east, but the difference occurred chiefly in the males and not in the females.

Of each 1,000 deaths reported as due to accidents and injuries in the United States during the census year, 120.31 cases in males, and 295.69 cases in females occurred in children under 5 years of age.

The following table shows, for the United States, the number of deaths from accidents and injuries in each month during the census year, and the proportion in each month per 1,000 deaths from these causes, with distinction of cities and of rural districts:

MONTHS.	•	DEATHS.			ION IN EAC 00 TOTAL 1		
MONTHS.	United States.	Cities.	Rural.	United States.	Cities.	Rural.	
Total	45, 149	14, 537	30, 612				
June	3, 639	1, 275	2,364	80. 60	87.71	77. 22	1

The relative proportion of deaths from accidents and injuries in each month in the cities and in the rural districts, and the difference in the proportion of deaths in the two areas is shown in the following diagram:

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from accidents and injuries in each month during the census year, and the death rates per 100,000 of population, with distinction of cities and of rural districts:

		DEATHS.		RATE.				
MONTHS.	Total.	Cities.	Rural.	Total.	Cities.	Rural.		
June	791	517	274	7. 55	8. 26	6. 49		
July	817	533	284	7.79	8. 51	6.73		
August	819	533	286	7.81	8. 51	6.77		
September	720	468	252	6. 87	7.48	5. 97		
October	717	484	233	6. 85	7.73	5.52		
November	688	462	226	6. 56	7.38	5.35		
December	696	439	257	6.64	7.01	6.09		
January	704	482	222	6. 72	7.70	5. 26		
February	598	398	200	5.71	6. 36	4.74		
March	680	444	236	6, 49	7.09	5, 59		
April	670	438	232	6, 39	7.00	5, 50		
Мау	768	481	287	7. 33	7. 68	6. 80		

. The death rates in each month, as given in the table above, and the relative magnitude of the rates in the cities and the rural districts are shown graphically in the following diagram:

It will be seen from this table and diagram that the highest death rate from these causes occurred in the months of May, June, July, and August; and the lowest in the months of February, March, and April.

BURNS AND SCALDS.

The total number of deaths reported as due to burns and scalds in the United States during the census year was 3,850, of which 1,652 were of males and 2,198 were of females. In the registration area the number of deaths reported as due to these causes was, males, 456; females, 625; total, 1,081, giving a death rate of 5.50 per 100,000 of population. In England and Wales the corresponding death rate in 1890 was 9.10.

The following table shows, for the registration area and some of its subdivisions, the death rates from burns and scalds during the census year in each of four age groups per 100,000 population of corresponding ages, with distinction of sex:

	אַט	UNDER 5 YEARS.		UNI	UNDER 15 YEARS.			15 TO 45 YEARS.			45 YEARS AND OVER.		
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	
Registration area	22. 51	23.91	21.07	10.64	9. 95	11.35	2. 69	2, 18	3. 19	5. 22	3. 10	7. 27	
Cities	25. 42	26.77	24. 05	12. 25	11. 41	13.08	3.13	2. 54	3.72	5, 80	3.63	7.87	
States	19.61	21.58	17.60	8.72	8, 60	8.85	1.92	1.56	2, 27	4.56	2.55	6. 47	
Cities	24. 20	26. 39	22: 00	10.94	10.88	11.00	2.42	1.95	2.86	5.07	3.06	6.89	
Rural	11.73	13.41	9.99	5. 25	5.08	5.42	1.06	0.91	1.20	4.01	2.01	5, 98	
Cities in nonregistration states	. 26.47	27.09	25.84	13.38	11.87	14.90	3.79	3.05	4, 55	6.57	4.20	8.95	
Cities of 100,000 population and upward	24.06	25.81	22. 29	11.98	11.61	12.36	3.35	2.69 ·	4.01	5.88	3.23	8.45	
Metropolitan district	26.40	28.48	24.30	11.85	11.91	11. 79	2, 22	1.39	3, 02	5.63	2.96	8. 22	

It will be seen from this table that the death rate from these causes was highest in children under 5 years of age and that in this age group it was a little higher among males (23.91) than among females (21.07), and was more than twice as high in the cities in the registration states (24.20) as it was in the rural districts of the same states (11.73).

In the age group under 15 years it was higher among females (11.35) than among males (9.95), and twice as high in the cities of the registration states (10.94) as in the rural districts of the same states (5.25.)

In the age group from 15 to 45 years the death rate from these causes was only 2.69 per 100,000 of population of those ages, but above the age of 45 it was 5.22, being more than twice as high among females (7.27) as among males (3.10).

The combined relations of age and race to the death rates from burns and scalds are indicated in the following table showing the number of deaths in each of four age groups and the death rates per 100,000 population of corresponding ages, with distinction of color and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MOTHERS.	UNDER 5	YEARS.	UNDER 15	5 YEARS.	15 TO 45	YEARS.	45 YEAT OV:	
,	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.
White	121	24.95	144	10.68	. 66	2.76	46	5. 69
Colored	10	63.77	12	24.95	6	5.82	4	14.09
Birthplaces of mothers (white):								
United States	49	19.84	56	8.54	12	1. 57	8	2, 73
England and Wales	5	29. 30	7	13.53			4	8. 53
Ireland	11	16.66	17	7.84	20	3. 22	20	9. 88
Germany	27	33.66	31	12.85		1.64	7	3.87
Italy	10	66.51	12	37.68				

It will be seen from this table that the death rate from these causes was much higher among the colored than among the whites in each group of ages; that among the white children under 5 years of age it was much higher in the children of mothers born in Germany (33.66) than in the children of mothers born in Ireland (16.66) or in the United States (19.84), and the same proportions hold good for the age group under 15 years.

In the age group from 15 to 45 years the death rate was higher in children of mothers born in Ireland (3.22) than in the children of mothers born in Germany (1.64) or in the United States (1.57), and this was also the case in the age group 45 years and over.

The following table shows, for each grand group, the proportion of deaths due to burns and scalds during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

GRAND GROUPS.	Total.	RU	RAL.	CIT	ies.
	1000.	Males.	Females.	Males.	Females.
1. North Atlantic Coast region	2.42	1. 91	1.91	2.44	2. 93
2. Middle Atlantic Coast region	2.51	3. 28	4. 33	1.78	2.73
3. South Atlantic Coast region	10.24	12. 45	12.68	2.16	6. 19
4. Gulf Coast region	6.31	7.08	12.32	1.50	4.31
5. Northeastern hills and plateaus	2.39	1.31	3.75	1.58	2.65
6. Central Appalachian region	4.16	3.93	4.89	3.55	3.05
7. Region of the Great Northern Lakes	2.67	3.00	4.16	1.72	2.90

10. Ohio River belt	4.59	4.41	6.38	3. 18	3, 22
11. Southern interior plateau	12, 29	9. 93	15. 33		4.09
12. South Mississippi River belt	8. 23	7.03	11.49	3.34	3.18
13. North Mississippi River belt	3.39	3. 18	4.79	2. 55	3.16
14. Southwest Central region	6.95	5.02	9.14	5.76	9.77
15. Central region, plains and prairies	4.94	4.51	5.69	3. 92	3. 75
16. Prairie region	3.66	3.36	4.09	2.66	2.07
17. Missouri River belt	5. 16	3.73	5.79	4.50	8.03
18. Region of the Western plains	5, 22	4. 38	7.33	1.99	6. 61
19. Heavily timbered region of the Northwest	4.96	4. 95	4.97		
20. Cordilleran region	4.61	3.26	6.37	7.87	7.72
21. Pacific Coast region	4.21	5.96	6. 24	2.03	4.04

This table indicates that the proportion of deaths due to burns and scalds, compared with the total number of deaths from known causes, was greater in the southern part of the United States than in the north, being greatest of all in the rural districts. It was greatest of all in the South Atlantic and Gulf Coast regions.

The following table shows, for each of the registration states and for their sum, the death rates from burns and scalds during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

D77G70MD 1 M7037 0 = 1 = 2	A	AGGREGATE			MALES.			FEMALES.	
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

New York	3. 83	4.88	2.14	2.96	3.97	1.38	. 4. 70	5, 77	2. 92
Rhode Island	3.18	3.00	3.44	4.76	4. 17	5.54	1.69	1.92	1.36
Vermont	1.80		1.97				3.68		4.04

This table indicates that the death rate from this cause was higher among females (4.99) than it was among males (3.81), and that it was higher in the cities (5.35) than it was in the rural districts (2.98). It was highest in Delaware (6.53) and in the district of Columbia (6.51), and lowest in Vermont (1.80) and in Rhode Island (3.18). It was highest of all among males in Wimington, Del. (9.74).

The following table shows the proportion of deaths due to burns and scalds at certain ages and groups of ages per 1,000 deaths at all ages from these causes in 1880 and in 1890, with distinction of sex:

5 to 10 years	96. 93	206.94	96.08	194.32	70 to 75 years	7.00	9.28	14.08	16.50
10 to 15 years	32. 85	79.06	22.03	68.74	75 to 80 years	5.39	11.34	7.96	11.00
15 to 20 years	25.31	55. 69	34. 27	44.91	80 to 85 years	4.31	11.69	8.57	16.50
20 to 25 years	24.77	38.50	28.76	36. 21	85 to 90 years	3.23	2.41	1.84	7.79
25 to 30 years	20.46	28.53	34.88	30.25	90 to 95 years	2.15	2.06	1.84	1.83
30 to 35 years	26.39	22.00	26. 93	27. 96	95 years and over	1.62	2.75	1.84	3.67

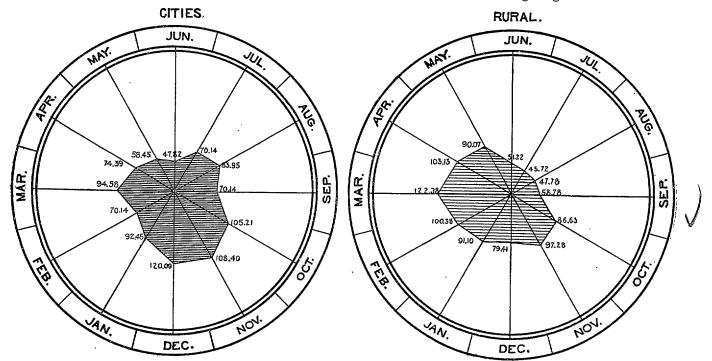

It will be seen that over 60 per cent of all the deaths due to these causes in males occurred in infants under 5 years of age.

The number of deaths reported as due to burns and scalds per 1,000 of all deaths from known causes in the United States during the census year was 4.58. In 1880 it was 47.4. In England and Wales in 1890 it was 46.7.

The following table shows, for the United States, the number of deaths from burns and scalds in each month during the census year, and the proportion in each month per 1,000 deaths from these causes, with distinction of cities and of rural districts:

		DEATHS.	,		ON IN EAC 00 TOTAL E		
MONTHS.	United States.	Cities.	Rural.	United States.	Cities.	Rural.	
Total	3, 850	941	2,909				
June	194	45	149	50.39	47.82	51. 22	
July	199	66	183	51.69	70.14	45.72	l
August	218	79	139	56.62	83. 95	47.78	
September	237	66	171	61.56	70.14	58.78	
October	351	99	252	91.17	105. 21	86.63	
November	385	102	283	100.00	108.40	97. 28

January	352	87	265	91.43	92.45	91.10	
February	358	66	292	92. 99	70.14	100.38	
March	445	89	356	115.58	94.58	122.38	ļ
April	370	70	300	96.10	74.39	103.13	i
May	317	55	262	82.34	58. 4 5	90. 07	
Unknown	80	4	76	20.78	4. 25	26.13	

The relative proportion of deaths due to burns and scalds in each month, in the cities and in the rural districts, and the difference in the proportion of deaths in the two areas is shown in the following diagram:

It will be seen from the preceding table and diagram that the greatest proportion of deaths from these causes occurred in March and in November, and the least in June and July.

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from burns and scalds in each month during the census year, and the death rates per 100,000 of population, with distinction of cities and of rural districts:

		DEATHS.		RATE.				
MONTHS.	Total.	Cities.	Rural.	Total.	Cities.	Rural.		
June	31	18	13	0. 30	0. 29	0.31		
July	18	15	3	0.17	0.24	0.07		
August	31	25	6	0.30	0.40	0. 14		
September	32	23	9	0.31	0.37	0. 21		
October	39	34	5	0.37	0.54	0. 12		
November	62	41	21	0. 59	0.65	0.50		
December	60	36	24	0. 57	0.58	0.57		
January	56	41	15	0.53	0.65	0.36		
February	56	37	19	0.53	0.59	0.45		
March	50	32	18	6.48	0.51	0.43		
April	50	29	21	0, 48	0.46	0.50		
Мау	43	22	21	0.41	0.35	0.50		

It will be seen from this table that the highest death rates from burns and scalds occurred in the months from November to May, being that part of the year in which fires are used for heating; and the lowest in the summer months.

SUICIDE.

The total number of deaths reported as due to suicide in the United States during the census year was 3,932, of which 3,074 were of males and 858 of females. In the registration area the number of deaths reported as due to this cause was, males, 1,580; females, 447; total, 2,027, giving a death rate of 10.31 per 100,000 of population. In England and Wales in 1890 the death rate from suicide per 100,000 of population was 7.70.

The following table shows, for the registration area and some of its subdivisions, the death rates from suicide per 100,000 of population, with distinction of color and sex:

	1	\GGREGAT!	ı.		WHITE.			COLORED.	
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Registration area	10.31	16. 12	4. 53	10.61	16. 62	4. 63	4. 40	6. 17	2. 68
Cities	11.04	17.35	4.81	11.44	18.01	4.96	4. 47	6, 55	2.47
States	8.78	13.82	3.85	8.90	14.04	3.87	3.68	4.54	2.86
Cities	9. 29	14.87	3.97	9.44	15.12	4.03	3.68	5. 57	2.00
Rural	8.00	12. 27	3. 65	8.08	12.46	3.62	3.65	2.35	5. 05
Cities in nonregistration states	12.65	19. 55	5.61	13.42	20.75	5.91	4.69	6.81	2. 61

This table shows that for the registration area the death rate from suicide was much higher among males (16.12) than among females (4.53), and also much higher among the whites (10.61) than among the colored (4.40). In the registration states it was somewhat higher in the cities (9.29) than in the rural districts (8.00). It was highest of all among white males in the cities in the nonregistration states (20.75), and lowest among the colored females in the cities in the registration states (2.00).

The following table shows the death rates from suicide, per 100,000 of population, in the sum of the registration states during the census year, with distinctions of conjugal condition, sex, color, and general nativity:

				,		COLOR AND	NATIVITY							
CONJUGAL CONDI-	Aggr	egate.			Wh	ite.			0.1	7				
TION.			То	tal.	Nativ	e born.	Foreig	n born.	Colored.	ι				
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.				
Single	6. 81	2.17	6.86	2.09	4. 88	1.60	13.10	3.74	5.01	5. 35				
Married	19.12	4.92	19.44	5.03	16. 30	4.46	23, 25	5, 55	4.18					
Widowed	52.76	7.30	53.96	7.54	42.34	9.71	65.32	4.12			,			

In this, as in preceding tables, it is the age grouping of the population of the different classes which dominates the death rates.

The death rate from suicide among married native born white males was more than three times as high as that of single native born white males, while among the married foreign born white males the difference was much less, this being due mainly to the much greater proportion of young persons among the native born whites.

The fact that the death rate among married colored males from suicide (4.18) was less than among single colored males (5.01) is probably to be explained in part by the smallness of the actual number of deaths from which the rates were derived, making them of little scientific value; but it was also due in part to the fact that the proportion of adults among the single colored males in the registration states is much greater than it is among the whites.

The following table shows, for each of the registration states and for their sum, the death rates from suicide during the census year per 100,000 of population, with distinction of sex and of cities and rural districts:

	A	GGREGATE	G.		MALES.		FEMALES.				
REGISTRATION STATES.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.		
Total	8.78	9. 29	8. 00	13. 82	14. 87	12. 27	. 3, 85	3.97	3. 65		
Connecticut	6. 70	7.09	6. 42	10.82	11.16	10. 59	2, 65	3. 16	2. 29		
Delaware	2.37	1.63	2.80	3.51	3.25	3. 65	1. 21		1. 91		
District of Columbia	9. 11	9.11	[<u>.</u>	18. 25	18. 25	. 	0.83	0.83			
Massachusetts	8. 35	7.99	9. 54	12.87	12. 31	14.66	4.08	3.95	4.53		
New Hampshire	9. 83	6, 33	11. 28	13.94	9. 59	15. 62	5.79	3.43	6.84		
New Jersey	8. 10	7.82	8.46	12. 90	11.60	14.58	3. 31	4.11	2.25		
New York	9. 54	10.74	7.59	14. 98	17. 24	11. 45	4.17	4.50	3.63		
Rhode Island	8. 10	7.00	9.63	13. 69	13, 56	13.86	2. 82	0.96	5.46		
Vermont	8. 12	10.60	7.89	12.40	22. 15	11. 55	3.68		4.04		

It will be seen from this table that the death rate from suicide was much higher among males than among females, and was somewhat greater in the cities than in the rural districts. It was highest of all in New Hampshire (9.83), in which state it was specially high in the rural districts (11.28). Among males it was highest of all in the cities in Vermont (22.15), and next to this in the District of Columbia (18.25). The absolute number of deaths from suicide in the smaller states was so small that the ratios derivable from them have little scientific value.

The following table shows, for the registration area and some of its subdivisions, the death rates from suicide during the census year in each of three age groups per 100,000 population of corresponding ages, with distinction of sex:

	15	15 TO 45 YEARS.			45 TO 65 YEARS.			65 YEARS AND OVER.			
AREAS.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.		
Registration area	10.43	15. 13	5. 76	24. 54	41.44	7. 80	27. 32	49.19	7.80		
Cities	11. 58	16. 81	6. 42	27. 67	47.78	7.70	30.78	58.48	8. 15		
States	8.38	12.61	4. 28	20. 32	33, 29	7.83	22.39	39.63	6.76		
Cities	9.60	14.71	4.80	23, 06	39.34	7.66	22.12	42. 49	6.13		
Rural	6, 24	9.10	3.34	16. 91	25. 94	8, 04	22. 59	37.80	7. 27		
Cities in nonregistration states	13. 39	18.66	7.97	32. 44	56. 10	7.73	40.72	76.00	10.56		
Cities of 100,000 population and upward	13.04	19.39	6.67	32. 25	56.46	7.71	36.79	73. 13	7.01		
Metropolitan district	12. 28	18.53	6. 26	30. 91	54, 86	7.05	26.71	49.66	7.54		

It will be seen from this table that the death rate from suicide was highest in those 65 years of age and over (27.32), and that it was more than twice as high in those from 45 to 65 years of age (24.54) as in those between 15 and 45 years of age (10.43).

In the age group from 15 to 45 years it was much higher among males (15.13) than among females (5.76), and higher in the cities of the registration states (9.60) than in the rural districts of the same states (6.24). It was highest of all among males in the cities of 100,000 population and upward (19.39), and lowest of all among females in the rural districts (3.34).

In the age group from 45 to 65 years it was more than five times as high among males (41.44) as among females (7.80), and was much higher in the cities of the registration states (23.06) than in the rural districts of the same states (16.91). It was highest of all among males in cities of 100,000 population and over (56.46), and lowest of all among females in the metropolitan district (7.05).

In the age group 65 years and over it was nearly seven times as high among males (49.19) as among females (7.80). In the registration states it was about the same in the rural districts (22.59) as it was in the cities (22.12). It was highest of all among males in the cities of the nonregistration states (76.00), and lowest of all among females in the cities of the registration states (6.13).

The following table shows, for the registration area and some of its subdivisions, the death rates from suicide among the whites during the census year per 100,000 of white population, with distinction of birthplaces of mothers:

AREAS.	United States.	England and Wales.	Ireland.	Scotland.	France.	Ger- many.	Canada.	Scandi- navia.	Hun- gary.	Bohemia.	Italy.	Other foreign coun- tries.
Registration area	5. 03	9. 16	5. 26	6.38	10.98	16, 09	5. 95	12.72	28. 12	22.11	6. 43	17. 11
Cities	4.64	9.12	5. 52	7. 72	13.81	16.32	7.25	14.96	32, 25	22. 92	7.50	18. 20
States	5. 61	8. 38	5. 16	6.63	8.68	15.49	5.34	16. 26	23. 81	32, 15	4.92	13, 68
Cities	5.73	7.94	5. 43	8.51	12.26	15.73	6.52	23.14	28. 43	35.45	5.89	14.63
Rural	5.51	9, 28	4.30	2.07		14. 45	3.46					8.37
Cities in nonregistration states	2, 26	12.38	5.95	5. 27	16.40	17.17	10.85	9.10	44.09	15. 90	16. 56	26. 24

It will be seen from this table that the death rate from suicide was highest among the children of mothers born in Hungary (28.12), in Bohemia (22.11), and in Germany (16.09); and was lowest among the children of white mothers born in the United States (5.03), in Ireland (5.26), and in Canada (5.95).

The combined relations of age and race to the death rates from suicide are indicated in the following table showing the number of deaths in each of three age groups, and the death rates per 100,000 population of corresponding ages, with distinction of color and, for the whites, of birthplaces of mothers, the data being derived from a combination of the returns from Boston, Brooklyn, Cincinnati, New York city, the District of Columbia, and the state of New Jersey for the census year:

COLOR AND BIRTHPLACES OF MUTHERS.	15 TO 48	5 YEARS.	45 TO 65	YEARS.	65 YEA OV:		
	Deaths.	Rate.	Deaths.	Rate.	Deaths.	Rate.	
White	290	12.11	189	28.94	46	29.56	
Colored	7	6.78				•••••	v
Birthplaces of mothers (white):			ji l				}
United States	57	7.43	36	16.05	11	15.95	
England and Wales	10	8, 65	8	21. 26	2	21.60	
Ireland	33	5. 32	28	16.45	7	21.69	
Germany	97	17.68	68	45.59	16	50. 26	
Canada	7	17.60	1	14. 59			
Scandinavia	8	24. 42	9	179.00			

This table indicates that suicide was much more frequent among the whites than among the colored. Among the whites it was most frequent among the children of mothers born in Scandinavia and in Germany, and least frequent in the children of mothers born in Ireland and in the United States.

The following table shows the death rates from suicide in the registration area during the census year in each of four age groups, with distinction of conjugal condition and of sex:

	AGE PERIODS.												
CONJUGAL CONDITION.	15 years	and over.	15 to 4	5 years.	45 to 6	5 years.	65 years	and over.					
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.					
Single	14. 12 21. 83 57. 44	5. 29 5. 73 7. 15	12. 12 14. 27 40. 97	5. 04 5. 26 6. 99	51.78 32.43 63,80	10.40 6.94 6.07	36. 92 37. 29 60. 47	3. 07 6. 32 8. 82					

2

This table shows that among males 15 years of age and over the death rate from suicide was much higher among the married (21.83) than among the single (14.12), and was highest of all among the widowed (57.44).

MOR—PT I——30

In the age group from 45 to 65 years among males the death rate from this cause was much higher among the single (51.78) than among the married (32.43), and was highest of all among the widowed (63.80).

Among females the death rate for the single (5.29) was nearly the same as for the married, but in the age group 45 to 65 years it was decidedly higher among the single (10.40) as compared with the married (6.94).

Out of each 100,000 deaths from all causes in the United States during the census year, 449 were reported as due to suicide, the corresponding figure in 1880 having been 331, and in 1870 273. In England and Wales the corresponding proportion for 1890 was 362.2, and in 1880 374.3.

The following table shows, for the registration area and some of its subdivisions, the proportion of deaths due to suicide during the census year per 1,000 deaths from known causes, excluding stillbirths, with distinction of color, sex, general nativity, and parental nativity:

		. WHITE.								. COLORED.			
AREAS.	Aggre- gate.				נ	Native born	1.			Males.			
AREAS.	gate.	Total.	Males.	Females.	Total.	Both parents native.	One or both parents foreign.	Foreign born.	Total.		Females.		
Registration area	5. 31	5. 61	8. 30	2. 60	3, 66	4. 15	1.77	9. 95	1.53	2.04	0.98		
Cities States Cities Rural Cities in nonregistration states	5. 31 4. 56 4. 22 5. 32 6. 45	5. 66 4. 66 4. 34 5. 38 7. 19	8. 35 7. 01 6. 50 8. 13 10. 38	2. 63 2. 13 1. 98 2. 47 3. 41	3. 27 3. 51 2. 70 5. 00 3. 91	3. 69 4. 14 3. 56 4. 85 4. 17	1.56 1.81 1.55 3.28 1.62	10. 47 7. 11 7. 35 6. 15 14. 50	1.50 1.36 1.18 2.10 1.59	2. 07 1. 59 1. 65 1. 84 2. 20	0.88 1.11 0.69 2.93 0.93		

This table indicates that in the registration area the proportion of deaths due to suicide to the total number of deaths from known causes was much greater among the whites (5.61) than among the colored (1.53), and much greater among males (white, 8.30; colored, 2.04) than among females (white, 2.60; colored, 0.98). Among the whites it was much greater among the foreign born (9.95) than among the native born (3.66), which was in part due to the different age distribution of the two groups and in part to the special predilection of certain foreign races to this form of death. In the registration states the proportion was greater in the rural districts (5.32) than in the cities (4.22).

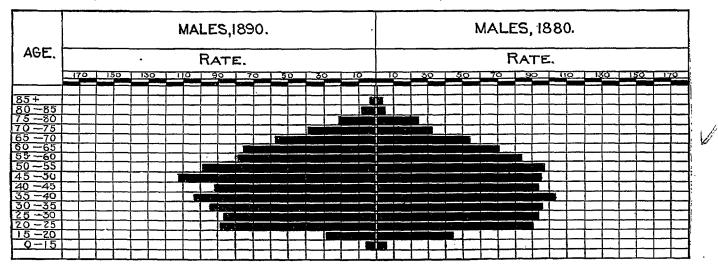

The following table shows the proportion of deaths due to suicide in the United States at certain ages and groups of ages per 1,000 deaths at all ages from this cause in 1880 and in 1890, with distinction of sex:

	18	880	18	390		18	880	1890	
AGES.	Males.	Females.	Males.	Females.	AGES.	Males.	Females.	Males.	Females.
5 to 10 years	1.00	2.03	1.34		55 to 60 years	84.80	50. 81	79.91	53. 38
10 to 15 years	6, 02	8.13	5, 68	11.86	60 to 65 years	70.75	42.68	75. 23	43. 89

45 to 50 years	94. 33	85, 37	112.34	68.80	95 years and over	0.50			<u> </u>
50 to 55 years	97.84	58.94	99.30	93.71					

The comparative proportions of deaths of males and females in each age group due to suicide during the census year are shown in the following diagram:

The comparative proportions of deaths of males in each age group due to suicide in 1880 and 1890 are shown in the following diagram:

It will be seen from the preceding table and diagrams that the greatest proportion of deaths due to suicide in females occurred between the ages of 15 and 30, while in males it occurred between the ages of 30 and 55.

The average age at death of those committing suicide in 1890 was 43.54 years. In the registration states it was 45.50 years.

The following table shows, for each grand group, the proportion of deaths due to suicide during the census year per 1,000 deaths from known causes, with distinction of sex and of rural districts and cities:

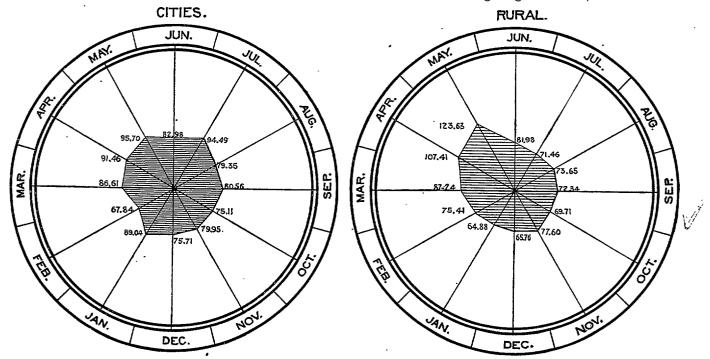

GRAND GROUPS.	Total.	RU	RAL.	СІТ	nes.
	Total.	Males.	Females.	Males.	Females.
1. North Atlantic Coast region	4. 26	7.48	2. 60	5. 67	1.90

It will be seen from this table that the proportion of deaths due to suicide to deaths from known causes was greatest in the Northern and Western regions, and least in the South. This was in part due to the large proportion of colored population in the South, in which class suicide is comparatively rare.

The following table shows, for the United States, the number of deaths from suicide in each month during the census year, and the proportion in each month per 1,000 deaths due to this cause, with distinction of cities and of rural districts:

		DEATHS.		PROPORTION IN EACH MONTH PER 1,000 TOTAL DEATHS.					
MONTHS.	United States.	Cities.	Rural.	United States.	Cities.	Rural			
Total	3, 932	1,651	2, 281

The relative proportion of deaths due to suicide in each month in the cities and in the rural districts and the difference in the proportion of deaths in the two areas are shown in the following diagram:

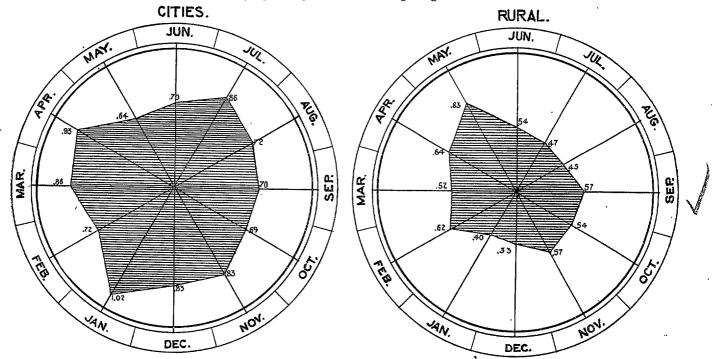

The preceding table and diagram indicate that the greatest proportion of deaths due to suicide occurred in the months of April and May, and the least proportion in December and October. The large proportions in April and May occur especially in the rural districts.

The following table shows, for the sum of Grand Groups 1, 2, and 5, which were mainly registration areas, the number of deaths from suicide in each month during the census year and the death rates per 100,000 of population, with distinction of cities and of rural districts:

		DEATHS.			RATE.		
MONTHS.	Total.	Cities.	Rural.	Total.	Cities.	Rural.	
June	67	44	23	0.64	0.70	0.54	
July	74	54	20	0.71	0.86	0.47	
August	64	45	19	0.61	0.72	0.45	
September	68	44	24	0.65	0.70	0.57	1
October	66	43	23	0.63	0.69	0.54	•

December	66	52	14	ი, ჩვ	0.83	0.33	
January	81	64	17	0.77	1.02	0.40	
February	71	45	26	0.68	0.72	0,62	
March	76	54	22	0.73	0.86	0.52	ĺ
April	85	58	27.	0.81	0.93	0.64	
May	75	40	35	0.72	0.64	0.83	

The death rates in each month, as given in the table preceding, and the relative magnitude of the rates in the cities and the rural districts are shown graphically in the following diagram:

It will be seen from the preceding table and diagram that the highest death rate from suicide occurred in the month of April (0.81), and the lowest in the month of August (0.61); that in the cities it was highest in January (1.02); and in the rural districts it was highest in May (0.83), and lowest in December (0.33).

The following table shows, for the registration area and some of its subdivisions, the death rate from suicide per 100,000 males engaged in each specified occupation and class of occupations:

	Regis-	REGIS	FRATION ST	TATES.	Regis- tration

It will be seen from the preceding table that the death rate from suicide per 100,000 males engaged in all specified occupations in the registration area was 16.92, being highest in the registration cities of the nonregistration states (18.89), and lowest in the rural districts in the registration states (12.71).

In the registration states the death rate was below the average in the mercantile and trading class (15.47) and the class engaged in agriculture, transportation, and other outdoor occupations (11.31); and above the average in all other classes, being highest in the professional class (24.81) and the personal service, police, and military class (28.12).

Taking the principal occupations in the registration states, the death rate of males from suicide was above the average among painters, glaziers, and varnishers (27.77), collectors, auctioneers, and agents (24.57), and tailors (24.52); and was below the average among steam railroad employés (5.90), carpenters and joiners (9.53), and farmers and farm laborers (12.04).

In the registration cities of the nonregistration states the death rate of males from suicide among tailors (48.05), saloon keepers (33.89), boot and shoe makers (31.95), and blacksmiths (30.77) was very high, being in each case much above the corresponding rate in the cities in the registration states.

The following table shows, for the registration area and some of its subdivisions, the death rate from suicide per 100,000 females engaged in each specified occupation:

,	Regis-	REGIS	TRATION ST	TATES.	Regis- tration	
OCCUPATIONS.	tration area.	Total.	Cities.	Rural.	cities in other states.	
All occupations	4. 88	4.82	4.70	5.11	4.95	67
Servants	6. 15 1. 72	7.02 1.88	6 84 0.81	7. 40 5. 38	4. 93 1. 54	

The number of deaths from suicide among females was not sufficient to give reliable rates, except for one or two of the principal occupations. The preceding table shows that the average death rate from suicide per 100,000 engaged in all selected occupations in the registration area was 4.88. The death rate from suicide in the registration states was 4.82, being 4.70 in the cities and 5.11 in the rural districts. In the registration cities of the nonregistration states the corresponding rate was 4.95.

Of 72 deaths from suicide reported among females in the registration area 39 occurred among servants, the death rate being 6.15 per 100,000. Among milliners, dressmakers, seamstresses, etc., in this area, 5 deaths were reported from suicide, giving a death rate of 1.72 per 1,000.

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to suicide per 1,000 deaths from all causes among males engaged in each specified occupation and class of occupations:

00000	United	Regis-	REGIS	TRATION S	TATES.	Regis- tration	Remain- der

Draymen, hackmen, teamsters, drivers, etc. Farmers, planters, overseers, and farm laborers. Steam railroad employés.	9. 15 9. 99 7. 88	8. 45 10. 15 11. 40	7. 33 10. 09 6. 57	5. 76 8. 48 5. 47	20. 27 10. 34 9. 39	10. 46 10. 75 17. 13	10. 75 9. 97 5. 82

It appears from this table that the average proportion of deaths due to suicide per 1,000 deaths from all causes among males engaged in the specified occupations in the United States as a whole was 11.93. In the registration area the proportion was 13.78, being 11.28 in the registration states and 19.01 in the registration cities of the nonregistration states. The least proportion appears in the nonregistration area, being 10.81 per 1,000 deaths from all causes.

In the United States the proportion of deaths due to suicide per 1,000 deaths from all causes among males in the specified occupations was below the average (11.93), in the laboring and servant class (9.73), and the class engaged in agriculture, transportation, and other outdoor occupations (9.91); and was above the average for all other classes, the greatest proportion occurring in the personal service, police, and military class (23.27).

Taking the principal occupations in the United States in which the number of population engaged and the deaths reported were sufficient to give reliable results, the greatest proportion of deaths of males due to suicide occurred among tailors (23.32), accountants, bookkeepers, clerks, and copyists (20.57), painters, glaziers, and varnishers (18.85), and merchants and dealers (13.90); and the least proportion occurred among farmers and farm laborers (9.99), and laborers (9.61).

The following table shows, for the United States, the registration area and some of its subdivisions, and for the remainder of the United States, the proportion of deaths due to suicide per 1,000 deaths from all causes among females engaged in each specified occupation:

	United	Regis-	REGIS	TRATION S	CATES.	Regis- tration	Remain- der
OCCUPATIONS.	States.	tration area.	Total.	Cities.	Rural.	cities in other states.	of the United States.
All occupations	4. 15	5. 27	4.22	4.39	3, 89	8. 09	3. 62
Servants	4. 17 5. 24	4.36 4.86	3.86 4.25	3. 98 1. 93	3. 66 10, 64	5. 85 6. 19	4. 08 5. 55

This table shows that the proportion of deaths due to suicide per 1,000 deaths from all causes among females engaged in the selected occupations in the United States was 4.15. In the registration area the proportion due to this cause per 1,000 deaths from all causes was 5.27, being greatest in the registration cities of the nonregistration states (8.09), and least in the rural districts in the registration states (3.89). In the nonregistration area the proportion was 3.62.

In the United States the proportion of deaths due to suicide among servants was 4.17 per 1,000, and among milliners, dressmakers, seamstresses, etc., it was 5.24 per 1,000; but the statement showing the comparative death rates of females in these occupations shows that the death rate of servants was between three and four times higher than that of milliners, dressmakers, seamstresses, etc.

SECTION XI.

MORBIDITY, OR SICK RATES.

The attempt made in the Tenth Census to obtain on the schedule for the living population the number of those who were, on June 1, so sick or disabled as to be unable to pursue their ordinary occupations was renewed in the Eleventh Census, and a large amount of data was thus obtained, but it has only been found possible to compile these data for a few of the states.

The following table shows, for the northeastern states, namely, Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, and Delaware, being part of the registration states; and also for certain southern states, namely, Virginia, Tennessee, and Alabama, and for the sum of each group, the total population, the number reported as suffering from diseases and recent accidents, and the ratio per 100,000 of population:

STATES.	Population.	Sick and disabled.	Ratio.
Northeastern states	12, 312, 024	207, 302	1, 684
Maine	661, 086	8, 535	1, 291
New Hampshire	376, 530	9, 854	2, 617
Vermont	332, 422	10, 942	3,292
Massachusetts	2, 238, 943	33, 400	1,492
Connecticut	746, 258	13, 270	1, 778
Rhode Island	345, 506	7, 213	2, 088
New York	5, 997, 853	100, 551	1, 676
New Jersey	1, 444, 933	20, 857	1, 443
Delaware	168, 493	2, 680	1, 591
Southern states	4, 936, 515	91, 578	1,855
Alabama	1, 513, 017	26, 536	1,754
Tennessee	1, 767, 518	32, 079	1, 815
Virginia	1, 655, 980	32, 963	1,991

It will be seen from this table that in the northeastern states, out of each 100,000 of population on June 1, 1890, 1,684 were affected with sickness or recent accidents, the greatest proportion being found in the state of Vermont (3,292), and the least in Maine (1,291). In the 3 southern states for which the figures are given, the greatest proportion of sickness was found in Virginia (1,991), and the least in Alabama (1,754). These figures are no doubt too small for each state, but they are larger than any that have been heretofore reported as a result of inquiries of this kind, and furnish therefore probably the best data with regard to the morbidity of a large general population which have heretofore been obtained. The most complete and satisfactory returns of this kind which were obtained in the census of 1890 were those from the state of Rhode Island, which gave a ratio of 1,098 sick and disabled per 100,000 of population.

The corresponding figures for the state census of Massachusetts for 1885 were 931; for Ireland in 1891, 759; for Victoria in 1891, 1,333; for South Australia in 1891, 1,244; for New South Wales in 1891, 1,034; and for Tasmania in 1891, 929. It should be remembered that the United States census was taken at the time of the year when there is probably the least amount of sickness.

The following table shows, for 9 large cities of the United States, arranged in order of magnitude of population, the total population and the number reported as suffering from diseases and recent accidents on June 1, 1890, with the corresponding ratios per 100,000 of population:

CITIES.	Population.	Sick and disabled.	Ratio.
Aggregate	6, 330, 444	63, 414	1, 002
New York	1, 515, 301	12, 511	826
Chicago	1, 099, 850	8, 862	806
Philadelphia	1, 046, 964	13, 615	1, 300
Brooklyn	806, 343	4, 388	544
St. Louis	451,770	6, 641	1, 470
Boston	448, 477	5, 164	1, 151
Baltimore	'434, 4 39	4, 731	1,089
Cincinnati	296, 908	4, 131	1, 391
Washington	230, 392	3, 371	1, 463

It will be seen from the preceding table that the proportion of sick to total population in the large cities was less than it was in the states as a whole, which is contrary to what would have been anticipated, since from the large cities we have full returns from the hospital population. It may be in part due to the fact that the sick poor of some of the cities are treated in part in institutions which are outside of the city limits, this being notably the case in Brooklyn; and in part due to a more defective enumeration of the sick in the large cities than in the smaller towns and rural districts.

The following table shows, for the states of Massachusetts, Vermont, and Maine, and for their sum, the number reported as sick on June 1, 1890, in the aggregate and for each of nine age groups, and the corresponding ratios per 100,000 of the population, with distinction of sex and color:

•			AGGRI	EGATE.					MA	INE.

a Ratios for the colored omitted, except in total.

It will be seen from this table that for the total population the proportion of sick per 100,000 was greater among males (1,760) than among females (1,073); and that it was greater among the whites (males, 1,764; females, 1,074) than among the colored (males, 1,342; females, 1,042).

For the age group under 15, it was greater among the colored (males, 772; females, 356) than among the whites (males, 260; females, 237).

In the age group from 45 to 65 the proportion of sick among males (4,994) was more than twice as great as among females (2,216).

The following table shows, for each of 9 states and for their sum, the number of those reported as affected with acute or chronic diseases on June 1, 1890, with distinction of certain forms of disease, and the corresponding ratio per 100,000 of population:

. STATES.	All causes (exclud- ing pa- ralysis).	Acute fevers.	Rheuma- tism.	Diar- rheal diseases.	Con- sump- tion.	Cancer and tumor.	Diabetes.	Diseases of the respira- tory system.	Diseases of the digestive system.	Diseases of the nervous system.	Diseases of the circula- tory system.	Diseases of the bones and joints.	Accidents and injuries.

Excluding the cases of paralysis, it will be seen that the average proportion of sick reported per 100,000 of population was 1,444, the proportion being greatest in Vermont (2,898) and in New Hampshire (2,209), and least in New Jersey (1,223) and in Massachusetts (1,231).

The proportion of cases of acute fevers per 100,000 of population was, for the total area, 60, being greatest in Rhode Island (113) and in Vermont (107), and least in New York (52) and in Massachusetts (57).

The proportion of cases of rheumatism per 100,000 of population for the total area was 432, being greatest in Vermont (903) and in New Hampshire (611), and least in Massachusetts (353) and in Delaware (356).

The proportion of cases of diarrheal diseases per 100,000 of population for the total area was 53, being greatest in Vermont (140) and in New Hampshire (110), and least in Alabama (33) and in Delaware (41).

The proportion of cases of consumption per 100,000 of population for the whole area was 71, which is certainly much below the true figure. The greatest proportions were reported in Vermont (122) and in New Hampshire (101), and the least in New York (65) and in Alabama (68).

The proportion of cases of cancers and tumors reported per 100,000 of population was 37, being greatest in Vermont (76), and least in New Jersey (27).

The proportion of cases of diseases of the respiratory system per 100,000 of population for the total area, excluding consumption, was 174, the greatest being in Vermont (324) and in New Hampshire (255), and the least in Massachusetts (137) and in New Jersey (152).

The proportion of cases of diseases of the digestive system per 100,000 of population for the total area was 103, the greatest being in Vermont (228) and Rhode Island (157), and the least in Massachusetts (67) and in New York (97).

The proportion of cases of diseases of the nervous system reported per 100,000 of population was, for the total area, 92, being greatest in Vermont (177) and in New Hampshire (148), and least in New Jersey (70) and in Delaware (75).

The proportion of cases of diseases of the circulatory system reported per 100,000 of population was, for the total area, 130, being greatest in Vermont (329) and in New Hampshire (257), and least in Delaware and in New Jersey (each 99).

The proportion of cases of diseases of the bones and joints reported per 100,000 of population was, for the total area, 88, being greatest in Vermont (148) and in New Hampshire (132), and least in New Jersey (64) and in Connecticut (72).

The proportion of cases of accidents and injuries reported per 100,000 of population was, for the total area, 129, being greatest in New Hampshire (241) and in Vermont (166), and least in Massachusetts and in New Jersey (each 93).

It will be observed that not only is the proportion of cases of sickness to population highest in Vermont and in New Hampshire, but that the same is the case for nearly all the several classes of diseases named, and also for accidents and injuries; and it is probable that this is due not so much to an actually greater prevalence of disease in these states as to more accurate and complete reports from them as to the number of sick than were furnished by the other states.

The following table shows, for each of 9 states and for their sum, the total number of all cases of diseases, excluding paralysis, reported as existing on June 1, 1890, and also the number of cases for each of certain diseases. or classes of diseases, with the proportion from each per 1,000 of all diseases reported:

STATES.	All causes (excluding paralysis).	Acute fevers.	Rheuma- tism.	Diar- rheal diseases.	Consumption.	Cancer and tumor.	Diabetes.	Diseases of the respira- tory system.	Diseases of the digestive system.	Diseases of the nervous system.	Diseases of the circula- tory system.	Diseases of the bones and joints.

Tropognon		91.00	210 00	40. 41	20.12	. 20. 10	2. 31	111.00	10.01	01.10	119.44	91.004

It will be seen from this table that out of each 1,000 cases of diseases reported for the total area 41.72 were cases of acute fevers, the greatest proportion being in Rhode Island (61.47), and the least in Vermont (37.05).

For rheumatism, the corresponding figures were, for the total area, 299.76; greatest, New York, 319.25; least, Rhode Island, 251.06.

For diarrheal diseases, the corresponding figures were, for the total area, 36.98; greatest, New Hampshire, 50.01; least, Alabama, 22.18.

For consumption, the corresponding figures were, for the total area, 49.86; greatest, Delaware, 66.64; least, Vermont, 42.14.

For cancers and tumors, the corresponding figures were, for the total area, 26.27; greatest, Delaware, 34.67; least, New Jersey, 21.68.

For diabetes, the corresponding figures were, for the total area, 3.06; greatest, New Hampshire, 4.09; least, Delaware, 1.35.

For diseases of the respiratory system, the corresponding figures were, for the total area, 131.70; greatest, Rhode Island, 134.12; least, Massachusetts, 111.25.

For diseases of the digestive system, the proportion was, for the total area, 71.73; greatest, New Jersey, 86.73; least, Massachusetts, 54.34.

For diseases of the nervous system, the proportion was, for the total area, 63.93; greatest, Massachusetts, 81.07; least, Delaware, 56.73.

For diseases of the circulatory system, the proportion was, for the total area, 90.26; greatest, New Hampshire, 116.36; least, Delaware, 75.15.

For diseases of the bones and joints, the proportion was, for the total area, 61.43; greatest, Massachusetts, 71.13; least, Connecticut, 47.50.

The following table shows, for each of 12 states and for their sum, the number of persons living on June 1, 1890, reported as having lost arms and legs, with the ratios per 1,000,000 of population:

	·	PERSONS :	HAVING LO	ST LIMBS.			RATIO.	
STATES.	Total.	One arm.	Both arms.	One leg.	Both legs.	Total.	One arm.	One leg.
Aggregate	12, 455	6, 198	113	5,866	278	722	359	340
Maine	560	290	10	253	7	847	439	383
New Hampshire	460	221	5	223	11	1,222	587	592
Vermont	450	259	9	178	4	1, 354	779	535
Massachusetts	1,731	829	12	836	54	773	370	37 3
Connecticut	588	290	5	275	18	788	389	369
Rhode Island	237	120		109	8	686	347	315
New York	3, 883	1,881	37	1, 876	89	647	314	313
New Jersey	982	472	8	471	31	680	327	326
Delaware	145	77	1	64	3	861	457	380
Virginia	1, 176	531	14	603	28	710	321	. 364
Tennessee	966	503	7	442	14	547	285	250
Alabama	1, 277	725	5	536	11	844	479	354

It will be seen from this table that in each 1,000,000 of population, 359 persons were reported as having lost one arm, 340 as having lost one leg, and 722 as having lost one or more limbs; the highest proportion for those last being in Vermont (1,354) and in New Hampshire (1,222), and the lowest in Tennessee (547) and in New York (647).

The following table shows, for 3 states, namely, Maine, Vermont, and Massachusetts, and for their sum, the male population, and the number of males reported as having lost limbs on June 1, 1890, with the corresponding ratio per 1,000,000 of population:

		MALES.	
STATES.	Population.	Limbs lost.	Ratio.
Aggregate	1, 589, 626	2, 521	1, 586
Maine Vermont. Massachusetts	332, 590 169, 327 1, 087, 709	523 420 1, 578	1, 573 2, 480 1, 451

It will be seen from this table that the ratio per 1,000,000 for the total area was 1,586, being greatest in Vermont (2,480), and least in Massachusetts (1,451).

These figures may be compared with the following table showing the results of the examinations of recruits and drafted men in the cities, in certain states, with regard to loss of limbs, as reported in "Statistics, Medical and Anthropological, of the War Department, 1875":

	PERSONS EXAMINED.						
STATES.	Total.	Limbs lost.	Ratio.				
Aggregate	206, 510	263	1, 274				
Maine	20, 479	22	1,074				
New Hampshire	10,013	9	899				
Vermont	7,224	8	1, 107				
Massachusetts	36, 380	64	1,759				
Connecticut	11,017	13	1, 180				
Rhode Island	4,072	23	5, 648				
New York	95, 576	99	1,036				
New Jersey	15, 388	13	845				
Delaware	6, 361	12	1, 886				
 		<u> </u>					

These data refer to males only, and it will be seen that out of each 1,000,000 of men examined 1,274 were found to have lost one or more limbs.

The following table shows, for the states of Virginia and Tennessee, the number of persons reported on June 1,1890, as having lost limbs, with distinction of color, and the corresponding ratios per 1,000,000 of population:

	LIMBS LOST.							RATIO.						
STATES.	One arm. One leg.					One arm		One leg.						
	Total.	White.	Colored.	Total.	White.	Colored.	Total.	White.	Colored.	Total.	White.	Colored.		
Virginia Tennessee		386 386	145 117	603 442	425 328	178 114	320 285	378 289	228 272	364 250	417 245 '	290 265		

It will be seen from this table that the proportion of maimed in Virginia was less among the colored than among the white. In Tennessee the proportion of those who had lost arms was greatest among the whites, and for those who had lost legs it was greatest among the colored.

The following table shows, for 3 states in 1890 and for 19 states in 1880, the number of whites reported as sick on June 1, with distinction of sex, and the ratio of sick in each of 7 age groups per 100,000 population of corresponding ages:

NUMBER SICK AND RATIO PER 1,000 OF POPULATION AT	THREE STA	ATES, 1890.	NINETEEN STATES, 1880.		
CERTAIN AGES.	Males.	Females.	Males.	Females.	
Total number sick	27, 981	17, 636	135, 338	122, 347	
Ratio of sick at certain ages:					
15 years and over	17.60	10.73	13.41	12.15	
15 to 25 years	5. 33	4.85	6. 90	6.80	
25 to 35 years	7. 90	7. 25	8.60	9. 70	
35 to 45 years	16.64	12.03	12. 20	11.50	
45 to 55 years	47. 27	18. 69	16. 80	14.40	
55 to 65 years	53.92	27. 24	25, 50	20.40	
65 years and over	67.76	39. 49	44.50	35.30	

a Maine, Massachusetts, and Vermont.

b Alabama, California, Connecticut, Delaware. Georgia, Illinois, Maine, Maryland, Michigan. New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia, and West Virginia.

It will be seen from this table that the proportion of sick in the total population over 15 years of age, in the specified states in 1890, was greater among males (17.60) per 1,000 than it was in 1880 (13.41), but that it was somewhat less in the former states in 1890 among females (10.73) than it was in 1880 (12.15).

For the age group 15 to 35 the proportion of sick reported per 1,000 of population was less in 1890 than it was in 1880, while in the age groups above 35 it was greater in 1890 than in 1880 in each sex.

SECTION XII.

BIRTHS AND BIRTH RATES.

The data for estimating the number of births and computing birth rates of either the United States as a whole or of the several states are not sufficient to give accurate results.

No attempt was made to secure returns of births through the enumerators, but the number, as in 1880, has been estimated by adding to the living children under 1 year of age on June 1, 1890, as shown by the population returns, the number of those who were born during the year ending May 31, 1890, but who died before the end of the year, as shown by the return of deaths. If these returns were entirely accurate the addition of these two factors would give the actual number of births during the year.

The population reported as under 1 year of age on June 1, 1890, was 1,566,734, and the number of those reported as born during the year, but dying before its close, exclusive of stillbirths, was 104,087, making a total of 1,670,8216 births, and giving a birth rate of 26.68 per 1,000 of population.

In 1880 the population reported as under 1 year of age was 1,447,983, and the number of the "Born and died", excluding stillbirths, was 104,314, making a total of 1,552,297 estimated births, and giving a birth rate of 30.95 per 1,000 of population.

It will be seen that the number of the "Born and died" in 1890 (104,087) was less than the corresponding number in 1880 (104,314), which was no doubt largely due to a more defective enumeration of deaths in the nonregistration area, and which in itself accounts to some extent for the decrease in the birth rate.

It will be seen that in estimating births in this way the factor represented by the "Born and died" is comparatively insignificant, being only about 6 per cent of the whole, while the population factor constitutes about 94 per cent, hence any deficiency in the enumeration of the population under 1 year of age has a much greater effect in diminishing the estimated number of births.

In Section XIV (ages of the living population) a comparison of the number of children enumerated in Massachusetts with the number of births registered shows a deficiency in the number of children enumerated in 1890 of 25 per cent and in 1880 of 5 per cent, and the conclusion is reached that the deficiencies shown for Massachusetts are applicable to the United States as a whole.

Proceeding upon this basis, and applying the deficiency percentages found in Massachusetts to the figures given above for the United States, gives for 1890 a corrected number of births of 2,062,507, and a birth rate of 32.94 per 1,000 of population; and for 1880 a corrected number of births of 1,624,696, and a birth rate of 32.26 per 1,000 of population, stillbirths being excluded in each case.

It will be seen from the preceding that the births and birth rates given in the following tables, which are estimated upon the number of children under 1 year of age on June 1, 1890, as reported, plus the number of "Born and died", are from 20 to 25 per cent too low, but the deficiency in the enumeration of children in the different states and areas varies so greatly that any correction based upon a uniform percentage of omission would be unreliable, and the figures are given, therefore, without correction.

The following table shows, for the registration area and some of its subdivisions, the birth rate per 1,000 females of all ages, per 1,000 females between 15 and 50 years of age, and per 1,000 married females between 15 and 45 years of age, with distinction of color:

REGISTRATION AREAS.	FEMALES OF ALL AGES.				BETWEEN		MARRIED FEMALES BETWEEN 15 AND 45 YEARS OF AGE.		
-	Total.	White.	Colored.	Total.	White.	Colored.	Total.	White.	Colored.
Registration area	48. 15	48.18	47.47	85.40	85.79	78. 45	183.63	184.12	174. 61
Cities	51.01	51.24	47. 24	88. 22	88.96	77.11	191.99	193. 28	172.16
States	45.00	44. 93	47.90	80.82	80.83	80.49	176.07	175.88	183.76
Cities	48.86	48.91	47.04	83.98	84. 24	75.33	189.00	189.38	175.88
Rural	38. 91	38.72	50.07	75. 21	74.84	96.15	155.06	154. 21	205.68
Cities in other states	53.06	53.63	47. 30	92. 32	93.86	77.64	194. 70	197.05	171.12

This table indicates that in all parts of the registration area, except the rural portions of the registration states, the birth rate of the colored was less than that of the whites, and that the birth rate of the whites was greater in the cities than in the rural districts.

Table XII

The following table shows, for the United States, for several groups of states, and for each state and territory, the birth rates per 1,000 females of all ages, per 1,000 females between 15 and 50 years of age, and per 1,000 married females between 15 and 45 years of age, with distinction of color:

				,,				·	
STATES AND TERRITORIES.	FEMAI	LES OF ALL	AGES.		BETWEEN EARS OF A		MARRIED 15 AND	FEMALES 45 YEARS	BETWEEN OF AGE.

Illinois Texas New Moxico Missouri	90, 582 91, 064 92, 052 92, 387 92, 789 92, 809 92, 939 93, 041 93, 051 93, 370 93, 493 93, 541 93, 653 93, 653 93, 850 93, 893 94, 040 94, 161 94, 321 94, 384	Minnesota Pennsylvania Maryland Wisconsin Kentucky New York Vermont Oklahoma Arkansas Colorado North Carolina Ohio South Dakota Massachusetts Iowa Florida Idaho Nebraska Georgia District of Columbia Utah Arizona	94, 749 94, 771 94, 384 94, 949 95, 179 95, 498 95, 593 95, 673 95, 893 95, 974 96, 139 96, 201 97, 065 97, 584 97, 584 97, 942 98, 284 100, 278

The following table shows, for certain states, the number of female births to 100,000 male births, with distinction of color:

STATES AND TERRI-	NUMBER OF FEMALE BIRTHS TO 100,000 MALE BIRTHS.			STATES AND TERRI-	NUMBER OF FEMALE BIRTHS TO 100,000 MALE BIRTHS.			
TORIES.	Total.	White.	Colored.	, TORIES.	Total.	·White.	Colored.	
Alabama Arkansas Delaware District of Columbia Florida Georgia Louisiana	93, 051 95, 532 93, 493 98, 284 97, 065 97, 942 94, 600	90, 944 94, 602 92, 399 97, 202 93, 507 92, 582 93, 050	95, 889 98, 290 98, 267 99, 710 101, 994 104, 030 96, 215	Maryland	94, 749 93, 653 95, 673 93, 665 93, 850 94, 161 94, 669	93, 277 93, 004 94, 867 92, 522 93, 096 93, 395 92, 010	101, 286 94, 131 97, 184 94, 376 96, 158 97, 054 98, 842	

The birth rate per 1,000 females between 15 and 50 years of age, in the several states and territories, is shown by map No. 28.

SECTION XIII.

LIFE TABLES.

The expectation of life, as derived from life tables computed for Massachusetts, New Jersey, and certain cities, as shown below. These tables were computed according to the method described on page exliii of volume xii of the Tenth Census Reports, the population data being used as reported, but for Massachusetts and New Jersey additional tables were computed in which the population under 15 years was adjusted by the formula of Mr. Elliott (Vital Statistics, Ninth Census Report, page 517).

Owing to the marked deficiency in the population data for children under 1 year of age, as explained in Section XIV, page 490, et seq., of this report, these life tables were even more inaccurate than those given in volume xII of the Tenth Census Reports, and the same must therefore be said of the expectation of life derived from them. The deficiency in the return of children under 1 year of age was so great that the omission assumed by Mr. Elliott as the basis of his formula in 1870 is entirely inadequate.

The following table shows the expectation of life in Massachusetts, census year; New Jersey, 6 years; District of Columbia, census year; Baltimore, 6 years; Brooklyn, 6 years; Chicago, census year; Cincinnati, census year; New York, 6 years; and Philadelphia, 6 years. For purposes of comparison, the expectation of life as shown by Farr's English Life Table, No. 3, is also given.

This table, showing the expectation of life as calculated from census data, can not properly be compared with the corresponding table given on pages exliv and exlv of volume XII of the Tenth Census Reports, and merely indicates that the relative duration of life after each of certain ages probably varies in the several states and cities in about the proportions shown.

SECTION XIV.

AGES OF THE LIVING POPULATION.

The age distribution of the population is of great importance in the study of death rates in relation to age, sex, locality, occupation, etc., and the peculiarities in the age distribution in different localities must be taken into account in comparing gross death rates, birth rates, and the mortality from different diseases in one section with those in another.

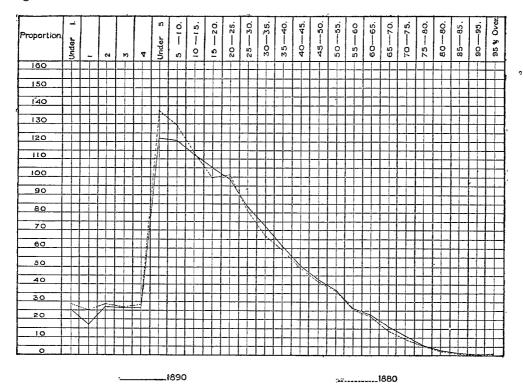

Table 22, Part I, shows the age distribution of the aggregate population of the United States, and the proportion at each age, and under each age, per 100,000 at known ages, with distinction of sex, color, general nativity, and parental nativity.

Tables 23 to 25, inclusive, Part I, show the age distribution of the population of the United States, and of each state and territory, and the proportion at each age, and under each age, per 100,000 at known ages, in the aggregate, and for the white and the colored.

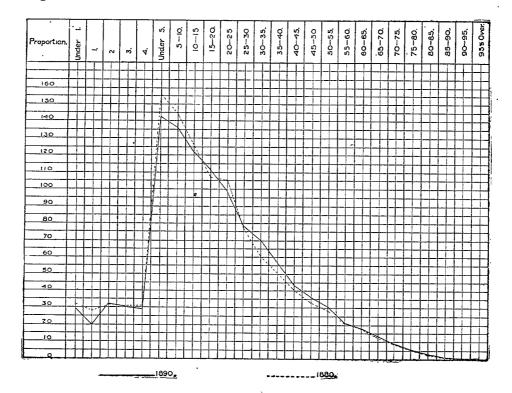

The following table shows the proportion of the living population at each age per 1,000 at known ages, with distinction of native born whites, foreign born whites, and colored, at the censuses of 1880 and 1890:

	ALL C	LASSES.	NATIVE	WHITES.	FOREIGN	whites.	COLO	ORED.
AGES.	1890	1880	1890	1880	1890	1880	1890	1880
Under 1 year	25. 1	28.8	29.6	32.9	0. 5	0.0	27.3	33. 9

100 years and over	0.1		0.0		0.0		0.4	

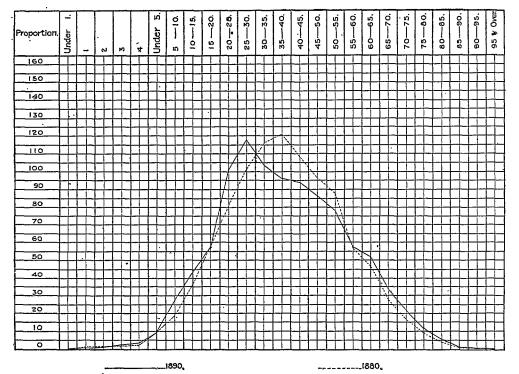

The following diagram shows the comparative proportions of the aggregate population at each age per 1,000 at known ages at the censuses of 1880 and 1890:

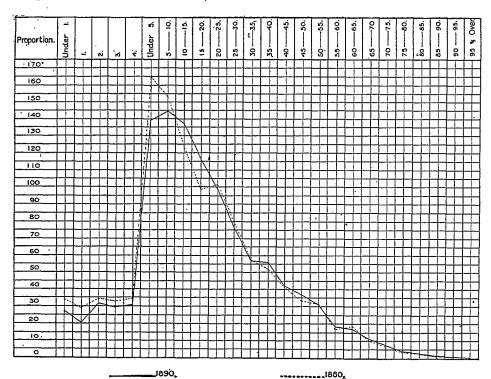

The following diagram shows the comparative proportions of the native born white population at each age per 1,000 at known ages at the censuses of 1880 and 1890:

The following diagram shows the comparative proportions of the foreign born white population at each age per 1,000 at known ages at the censuses of 1880 and 1890:

The following diagram shows the comparative proportions of the colored population at each age per 1,000 at known ages at the censuses of 1880 and 1890:

The most striking feature of the results shown by the preceding table and diagrams is the apparent decrease in the proportions of the population in the early years of life in 1890 as compared with 1880, this decrease being most marked in the colored.

It will be seen from the preceding table that the proportion of children of all classes under 5 years of age in 1890 was 122.2, while the corresponding proportion in 1880 was 137.8, the loss being 15.6 per 1,000. For the native born whites the loss in proportion under 5 was 13.8, and for the colored 26.1 per 1,000, the proportion of colored children under 5 years of age being 6.0 per 1,000 less than the proportion from 5 to 10 years of age.

The loss in proportion under 1 year of age was 3.7 per 1,000 for all classes, 3.3 per 1,000 for the native born whites, and 6.6 per 1,000 for the colored. The loss in the proportions from 1 to 2 years of age is still more marked, being 7.8 per 1,000 for all classes, 8.4 per 1,000 for the native born whites, and 8.8 for the colored.

A comparison of the proportions at and under each age given by states and territories for the aggregate population, the white population, and the colored population, in Tables 23 to 25, shows that while there was a general decrease throughout the country in the proportions in the early years of life, it was not uniform, severally of the states showing an actual decrease in the number of children under 1 and under 5 years of age from the numbers enumerated in 1880, while showing a large increase in gross population during the decade.

The first area for which population data by ages was furnished for computation of death rates, etc., was the District of Columbia, and as a comparison of the results for 1890 with those of 1880 showed that, notwithstanding a gain of 52,768 in the gross population, there was an apparent loss of 332 children under 5 years of age the question at once arose as to the accuracy of the figures submitted, and it was thought that the discrepancy might possibly be due to errors arising from the application of a new method of (mechanical) tabulation. To determine this question the population schedules for the District of Columbia were withdrawn and an entirely independent and complete hand tally made by ages, which agreed almost exactly with the results obtained by the mechanical tabulation, and completely established the accuracy of the transcription and tabulation under the new method.

Subsequently an effort was made to obtain some data for mathematical correction of the age distribution of the population between 1 and 5 years of age, which is always incorrectly reported, and regarding which the discrepancies were much more marked than usual. As a means to this end the return of deaths in Massachusetts, secured from the registration records of that state, were compared with the births recorded in the state as given in the annual registration reports. It proved that the data available were not sufficient for determining the error in the age distribution, but the results showed that the census returns of the population under 1 and under 5 years of age in Massachusetts fell far short of the number surviving out of those born during the census year and the 4 years preceding the census year.

As the records of births and deaths in Massachusetts were both made under compulsory registration laws, and were entirely independent of the return of the living population made by the enumerators, these data were used to determine the probable error in the population figures showing the number of children under 1 and under 5 years of age, it being assumed that this error would be at least as small in Massachusetts as in any other state.

The number of births registered (which includes only those born within the state) in Massachusetts during the census year ending May 31, 1890, was 57,813, and of the deaths recorded as occurring during the same period 5,098 occurred at ages which would bring the births within the census year, but this includes a small number (41) of children of foreign birth, who should be excluded as not occurring out of the stated number of births, and the population returns also show a small number (498) of children of foreign birth which must be added to the survivors out of those born in the state, to give the living population under 1 year of age on June 1, 1890. The results are shown in the following statement:

CENSUS YEAR, 1890.

Births registered	
Less foreign born	
2000 10101811 00111111111111111111111111	5, 057
Survivors of native birth	
Total children under 1 year	
Deficiency	10, 211

From this statement it appears that there is a deficiency of 10,211 in the population of Massachusetts reported by the enumerators as under 1 year of age, in comparison with the survivors out of the number born during the year, or 23.72 per cent of the number reported. Adding the estimated deficiency of 2 per cent in the registration of births to the number registered, the deficiency in the population under 1 year of age would be 26.41 per cent,

and it is probable that the actual deficiency is not less than 25 per cent in round numbers. A similar calculation made for the census year 1880 shows an approximate deficiency of 5 per cent in the population of Massachusetts under 1 year of age at the Tenth Census.

For those under 5 years of age the results are shown in the following statement:

YEARS 1886 TO 1890.

Births	,
Deaths under 5 years	
Of those born previously 6,000	
Foreign born	
7,329	ı
Corrected	49, 382
Survivors	219. 125
Foreign born, living.	,
Total under 5 years	227 154
Population reported June 1, 1890	,
· · · · · · · · · · · · · · · · · · ·	<u> </u>
Deficiency	23,296

Allowing a deficiency of 2 per cent in the registration of births, as in case of those under 1 year of age, the deficiency would be 14.12 per cent of the population reported.

The corresponding deficiency in the population reported as under 5 years of age on June 1, 1880, is proportionally the same as the deficiency under 1 year of age, and is approximately stated as 2.80 per cent.

These comparisons show that the returns made in 1880 were more accurate, and that the proportions of children under 1 and under 5 years of age in 1880, given in the preceding tables, were more correct.

The following table shows the application of the deficiency percentages determined above to the figures for Massachusetts in comparison with those given in the population reports:

-	REPÒR	TED.	CORRECTED.		
POPULATION, BIRTHS, DEATHS, AND RATES.	1880	1890	1880	1890	
Population	1,783,085	2, 238, 943			
Under 1 year	37,587	43, 043	39, 466	53, 804	
Under 5 years	1	203, 758	184, 328	232, 284	
Proportion per 100,000:	į		[
Under 1 year	2, 108	1,922	2,213	2,403	
Under 5 years	10,056	9, 101	10,338	10, 375	
Births	41, 338	48, 156	43, 217	58, 902	
Birth rate	23.18	21, 51	24, 24	26.31	•
Deaths:	.				
Under 1 year	5, 891	8,792	[[[
Under 5 years	10, 219	13, 336			
Death rate per 1,000 population:					
Under 1 year	156, 73	204.26	149.27	163.41	
Under 5 years	56, 99	65, 45	55.44	57.41	

It will be seen from this table that when the number of children under 1 and under 5 years of age in 1880 and 1890 is increased by the amount of the deficiencies calculated above, the proportions at each age in 1890 show a small increase over the proportions in 1880. It also shows that while the death rate at each age was somewhat higher than in 1880, the birth rate in 1890 was also higher than in 1880.

In the following table an application of the results obtained for Massachusetts is made to the figures reported for the United States:

	REPO	RTED.	CORRECTED.		
POPULATION AND PROPORTION.	1880	1890	1880	1890	
Population	50, 155, 783	62, 622, 250			
Under 1 year	1, 447, 983	1, 566, 736	1,520,382	1, 958, 420	
Under 5 years	6, 914, 516	7, 634, 693	7, 108, 122	8, 703, 550	
Proportion:					
Under 1 year	2, 887	2,502	3, 031	3, 127	
Under 5 years	13, 786	12, 192	14, 172	13, 898	

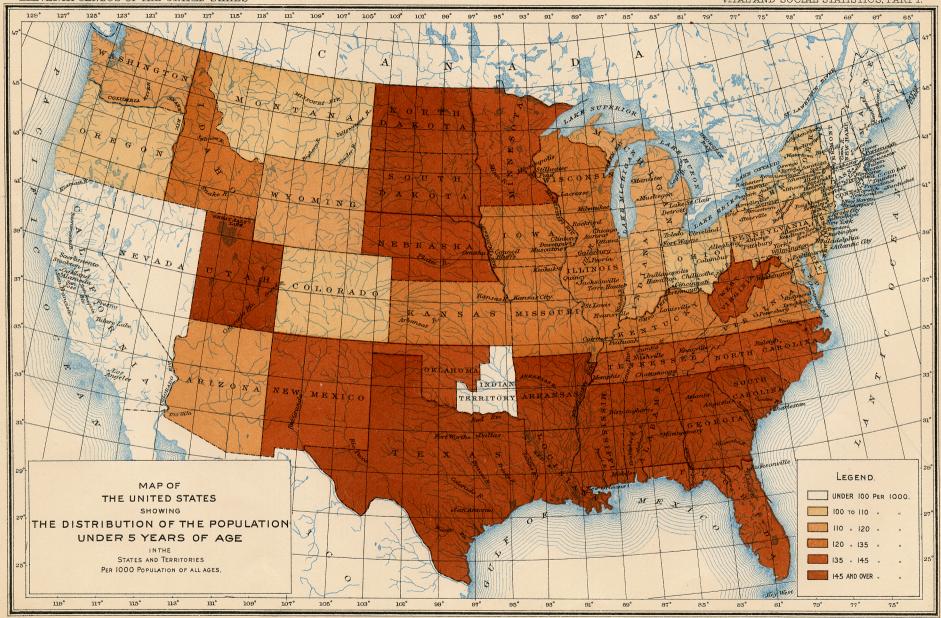

It will be seen from this table that the difference between the number of children reported as under 5 years of age (7,634,693) and the number estimated upon the basis of the 14 per cent deficiency shown for Massachusetts (8,703,550) is 1,068,857. Calculating the deficiency upon the basis of the corrected proportion in 1880, gives a difference of 1,240,132. The probable deficiency is at least 1,000,000.

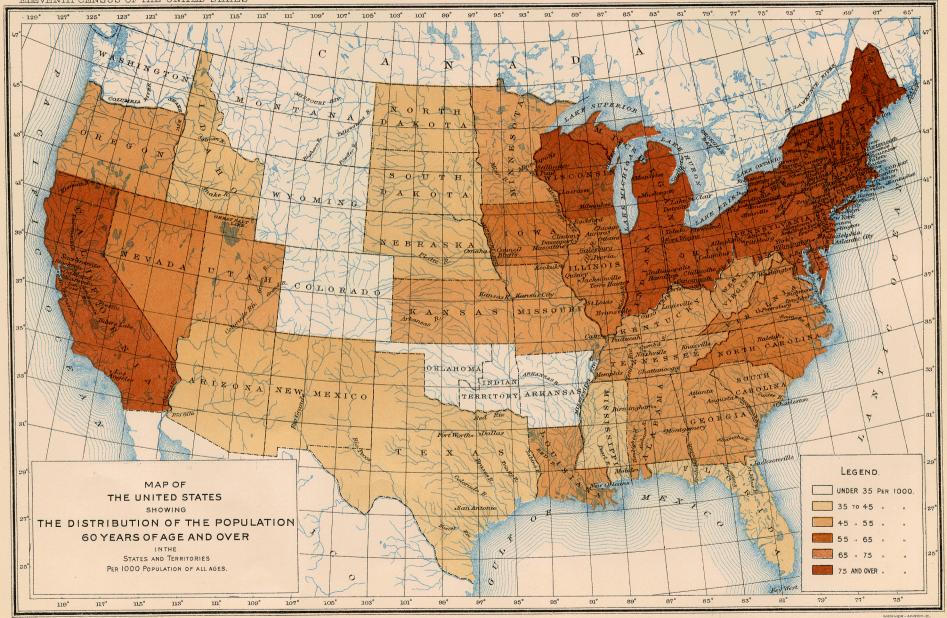

It will be seen from the tables of proportions given that the deficiency in the enumeration of the population extends to 15 years, and this deficiency is so general and so great as to render the death rates at ages under 15 years, and particularly those under 1 and under 5 years of age, unreliable, as they are generally much too high. The birth rates are, for the same reason, much too low. (See remarks under Births and Birth Rates, Section XII.) The effect of this deficiency is also shown to a marked degree in the life tables given for different areas, since in the computation of these tables the result of errors in the numbers living at early ages is carried forward and affects each higher age. The general expectation of life, as expressed in the tables given, is from 1 to 4 years less than it should be. (See remarks under Life Tables, Section XIII).

The following table shows the proportion of the living population reported under 5 years of age per 100,000 of all ages in each state and territory:

STATES AND TERRITORIES.	Per 100,000 of all ages.	STATES AND TERRITORIES.	Per 100,000 of all ages.	STATES AND TERRITORIES.	Per 100,000 of all ages.

The distribution of the population under 5 years of age per 100,000 of all ages in the several states and territories is shown by map No. 29.

It will be seen from the preceding table and the accompanying map that the proportion of the living population under 5 years of age was lowest in the northeastern or New England states, and highest in the southern states, although, as shown by the preceding tables, the deficiency in the population reported under 5 years of age was greatest in the states having the largest percentage of colored population.

The following table shows the proportion of the living population 60 years of age and over per 100,000 of all ages in each state and territory:

STATES AND TERRITORIES.	Per 100,000 of all ages.	STATES AND TERRITORIES.	Per 100,000 of all ages.	STATES AND TERRITORIES.	Per 100,000 of all ages.
Wyoming		Louisiana	4,780	California	
Montana	,	South Carolina	1 1	Pennsylvania	, , ,
Oklahoma	,	Kansas		Maryland	
Colorado	3,002	Oregon	4,992	New Jersey	6,948
Washington	3, 194	Tennessee	5,007	Michigan	6,961
Arkansas		Missouri	5,021	Delaware	7, 075
North Dakota	3,582	Utah	5, 346	Ohio	7, 482
Arizona		Minnesota	5, 373	Wisconsin	7, 592
Texas	3, 697	West Virginia	5, 423	New York	7, 873
` Nebraska	3,782	Kentucky	5, 491	Rhode Island	7,901
Idaho	3, 913	Nevada	5, 512	Massachusetts	8, 419
South Dakota	4, 186	North Carolina	5, 534	Connecticut	9, 315
Florida	4, 249	Illinois	5, 902	Maine	11,564
Mississippi		Virginia	6, 267	Vermont	12, 159
New Mexico	4, 490	District of Columbia	6, 314	New Hampshire	12, 223
Alabama	4, 549	Iowa	6, 534		
Georgia	4,723	Indiana	6, 574		

The distribution of the population 60 years of age and over per 1,000 of all ages in the several states and territories is shown by map No. 30.

The preceding table and map show that the proportion of the living population reported as 60 years of age and over was highest in the northeastern or New England states. The lowest proportion of this age group cocurred in the northwestern and middle southern states.

APPENDIX.

DESCRIPTION OF AREAS FOR WHICH DATA ARE GIVEN IN THIS REPORT,

a. The registration states are as follows: Connecticut, Delaware, District of Columbia, Massachusetts, New-

Hampshire, New Jersey, New York, Rhode Island, and Vermont.

b. The cities in the registration states are the following: Adams, Mass., Albany, N. Y., Amesbury, Mass., Ámsterdam, N. Y., Andover, Mass., Arlington, Mass., Athol, Mass., Atlantic city, N. J., Attleboro, Mass., Auburn, N. Y., Batavia, N. Y., Bayonne, N. J., Beverly, Mass., Binghamton, N. Y., Blackstone, Mass., Bordentown, N. J., Boston, Mass., Brattleboro, Vt., Bridgeport, Conn., Bridgeton, N. J., Brockton, Mass., Brookline, Mass., Brooklyn, N. Y., Buffalo, N. Y., Burlington, N. J., Burlington, Vt., Cambridge, Mass., Camden, N. J., Canandaigua, N. Y., Chelsea, Mass., Chicopee, Mass., Clinton, Mass., Cohoes, N. Y., Concord, N. H., Corning, N. Y., Cortland, N. Y., Danbury, Conn., Danvers, Mass., Dedham, Mass., Dover, N. H., Dunkirk, N. Y., Edgewater, N. Y., Elizabeth, N. J., Elmira, N. Y., Everett, Mass., Fall River, Mass., Fitchburg, Mass., Flushing, N. Y., Framingham, Mass., Gardner, Mass., Geneva, N. Y., Glens Falls, N. Y., Gloucester, Mass., Gloucester, N. J., Gloversville, N. Y., Grafton, Mass., Greenbush, N. Y., Harrison, N. J., Hartford, Conn., Haverhill, Mass., Hoboken, N. J., Holyoke, Mass., Hoosick Falls, N. Y., Hornellsville, N. Y., Hudson, N. Y., Hyde Park, Mass., Ithaca, N. Y., Jamestown, N. Y., Jersey city, N. J., Johnstown, N. Y., Keene, N. H., Kingston, N. Y., Lansingburg, N. Y., Lawrence, Mass., Leominster, Mass., Leroy, N. Y., Little Falls, N. Y., Lockport, N. Y., Long Branch, N. J., Long Island city, N. Y., Lowell, Mass., Lynn, Mass., Malden, Mass., Malone, N. Y., Manchester, N. H., Marblehead, Mass., Marlboro, Mass., Matteawan, N. Y., Medford, Mass., Medina, N. Y., Melrose, Mass., Meriden, Conn., Middleboro, Mass., Middletown, Conn., Middletown, N. Y., Milford, Mass., Millville, N. J., Montague, Mass., Morristown, N. J., Mount Vernon, N. Y., Nashua, N. H., Natick, Mass., Newark, N. J., New Bedford, Mass., New Brunswick, N. J., Newburg, N. Y., Newburyport, Mass., New Haven, Conn., New London, Conn., Newport, R. I., New Bochelle, N. Y., Newton, Mass., New York, N. Y., Niagara Falls, N. Y., North Adams, Mass., Northampton, Mass., North Attleboro, Mass., Norwich, Conn., Norwich, N. Y., Nyack, N. Y., Ogdensburg, N. Y., Olean, N. Y., Oneida, N. Y., Oneonta, N. Y., Orange, N. J., Oswego, N. Y., Palmer, Mass., Passaic, N. J., Paterson, N. J., Pawtucket, R. I., Peabody, Mass., Peekskill, N. Y., Perth Amboy, N. J., Phillipsburg, N. J., Pittsfield, Mass., Plainfield, N. J., Plattsburg, N. Y., Plymouth, Mass., Port Jervis, N. Y., Portsmouth, N. H., Poughkeepsie, N. Y., Providence, R. I., Quincy, Mass., Rahway, N. J., Revere, Mass., Rochester, N. Y., Rockland, Mass., Rockville, Conn., Rome, N. Y., Rutland, Vt., Salem, Mass., Sålem, N. J., Såratoga Springs, N. Y., Sčhenectady, N. Y., Sěneca Falls, N. Y., Singsing, N. Y., Somerville, Mass., Southbridge, Mass., Spencer, Mass., Springfield, Mass., Stoneham, Mass., Syracuse, N. Y., Tarrytown, N. Y., Taunton, Mass., Tonawanda, N. Y., Trenton, N. J., Troy, N. Y., Union, N. J., Utica, N. Y., Wakefield, Mass., Waltham, Mass., Ware, Mass., Washington, D. C., Waterbury, Conn., Watertown, Mass., Watertown, N. Y., Webster, Mass., Westboro, Mass., Westfield, Mass., West Troy, N. Y., Weymouth, Mass., Whitehall, N. Y., Willimantic, Conn., Wilmington, Del., Woburn, Mass., Woonsocket, R. I., Worcester, Mass., and Yonkers, N. Y.

c. The rural part of the registration states includes all of such states not included in the cities enumerated above (paragraph b).

d. The registration cities in the nonregistration states are the following: Alameda, Cal., Allegheny, Pa., Altoona, Pa., Atlanta, Ga., Augusta, Ga., Aurora, Ill., Baltimore, Md., Birmingham, Ala., Charleston, S. C., Chattanooga, Teñn., Chicago, Ill., Chillicothe, Ohio, Cincinnati, Ohio, Cleburne, Tex., Cleveland, Ohio, Columbus, Ohio, Council Bluffs, Iowa, Dallas, Tex., Davenport, Iowa, Dayton, Ohio, Denver, Colo., Detroit, Mich., Dubuque, Iowa, Erie, Pa., Evansville, Ind., Fort Smith, Ark., Fort Wayne, Ind., Fort Worth, Tex., Fresno, Cal., Galesburg, Ill., Galveston, Tex., Hamilton, Ohio, Indianapolis, Ind., Jackson, Miss., Jacksonville, Ill., Kansas city, Mo., Keokuk, Iowa, Knoxville, Tenn., Lacrosse, Wis., Laporte, Ind., Lewiston, Me., Los Angeles, Cal., Louisville, Ky., Lynchburg, Va., Manistee, Mich., Memphis, Tenn., Milwaukee, Wis., Minneapolis, Minn., Mobile, Ala., Montgomery, Ala., Muscatine, Iowa, Muskegon, Mich., Nashville, Tenn., New Orleans, La., Norristown, Pa., Oakland, Cal., Omaha, Neb., Ottawa, Ill., Paducah, Ky., Peoria, Ill., Petersburg, Va., Philadelphia, Pa., Pittsburg, Pa.,

Portsmouth, Ohio, Raleigh, N. C., Reading, Pa., Richmond, Va., Rockford, Ill., Sacramento, Cal., San Antonio, Tex., San Francisco, Cal., San Jose, Cal., Savannah, Ga., Scranton, Pa., Springfield, Ohio, St. Louis, Mo., St. Paul, Minn., Stillwater, Minn., Stockton, Cal., Terre Haute, Ind., Titusville, Pa., Toledo, Ohio, and York, Pa.

e. The registration area consists of the registration states (parapraph a), including the cities (paragraph b)

and the registration cities in the nonregistration states (paragraph d).

f. The total registration cities (sometimes-designated as 271-registration-cities) includes those enumerated in paragraphs b and d above.

g. The cities of 100,000 population and upward are the following: New York, Chicago, Philadelphia, Brooklyn, St. Louis, Boston, Baltimore, San Francisco, Cincinnati, Cleveland, Buffalo, New Orleans, Pittsburg, Washington, Detroit, Milwaukee, Newark, Minneapolis, Jersey city, Louisville, Omaha, Rochester, St. Paul, Kansas city (Mo.),

Providence, Denver, Indianapolis, and Allegheny.

h. The 54 ward cities, i. e., those in which the return of deaths was compiled by wards, are the following: Albany, N. Y., Allegheny, Pa., Atlanta, Ga., Baltimore, Md., Boston, Mass., Bridgeport, Conn., Brooklyn, N. Y., Buffalo, N. Y., Cambridge, Mass., Charleston, S. C., Chicago, Ill., Cincinnati, Ohio, Cleveland, Ohio, Columbus, Ohio, Detroit, Mich., Erie, Pa., Evansville, Ind., Fall River, Mass., Fort Wayne, Ind., Galveston, Tex., Hartford, Conn., Holyoke, Mass., Indianapolis, Ind., Jersey city, N. J., Kansas city, Mo., Lawrence, Mass., Los Angeles, Cal., Louisville, Ky., Lowell, Mass., Lynn, Mass., Memphis, Tenn., Milwaukee, Wis., Minneapolis, Minn., Mobile, Ala., Newark, N. J., New Haven, Conn., New Orleans, La., New York, N. Y., Oakland, Cal., Philadelphia, Pa., Pittsburg, Pa., Reading, Pa., Richmond, Va., St. Louis, Mo., St. Paul, Minn., Salem, Mass., San Antonio, Tex., San Francisco, Cal., Scranton, Pa., Springfield, Mass., Toledo, Ohio, Washington, D. C., Wilmington, Del., and Worcester, Mass.

i. The Metropolitan district includes the following counties, namely: New York, Kings, Queens, Richmond, Westchester, in New York; Hudson and Essex, all inclusive of the cities therein, and the cities of Paterson and

Passaic, in New Jersey.

k. The grand divisions for which certain tables are presented are composed of states, as follows:

Grand Division A includes Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Grand Division B includes Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, and Virginia.

Grand Division C includes Alabama, Arkansas, Kentucky, Louisiana, Mississippi, Tennessee, and Texas.

Grand Division D includes Arizona, Colorado, Idaho, Illinois, Indiana, Indian territory, Iowa, Kansas, Michigan, Minnesota, Missouri, Montana, Nebraska, Nevada, New Mexico, North Dakota, Ohio, Oklahoma, South Dakota, Utah, West Virginia, Wisconsin, and Wyoming.

Grand Division E includes California, Oregon, and Washington.

A list of the registration cities in each of the grand divisions is given on page 583, Part III.

1. The grand groups are composed of state groups, as follows:

Grand Group 1, North Atlantic Coast region, includes Connecticut 1, Maine 1, Massachusetts 1, New Hampshire 1, Rhode Island.

Grand Group 2, Middle Atlantic Coast region, includes Delaware, District of Columbia, Maryland 1, New Jersey 1, New York 1, Virginia 1.

Grand Group 3, South Atlantic Coast region, includes Georgia 1, North Carolina 1, South Carolina 1.

Grand Group 4, Gulf Coast region, includes Alabama 1, Florida, Louisiana 1, Mississippi 1, Texas 1.

Grand Group 5, Northeastern hills and plateaus, includes Connecticut 2, Maine 2, New Hampshire 2, New

York 2, Vermont.
Grand Group 6, Central Appalachian region, includes Maryland 2, New Jersey 2, New York 3, Pennsylvania 1.
Grand Group 7, Region of the Great Northern Lakes, includes Illinois 1, Indiana 1, Michigan 1, New York 4,

Grand Group 7, Region of the Great Northern Lakes, includes Illinois 1, Indiana 1, Michigan 1, New York 4, Ohio 1, Wisconsin 1.

Grand Group 8, Interior plateau, includes New York 5, North Carolina 2, Pennsylvania 2, Virginia 2.

Grand Group 9, Southern Central Appalachian region, includes Alabama 2, Georgia 2, Kentucky 1, North Carolina 3, South Carolina 2, Tennessee 1, Virginia 3, West Virginia 1.

Grand Group 10, Ohio River belt, includes Indiana 2, Kentucky 2, Ohio 2, West Virginia 2.

Grand Group 11, Southern Interior plateau, includes Alabama 3, Georgia 3, Mississippi 2, South Carolina 3, Tennessee 2.

Grand Group 12, South Mississippi River belt, includes Arkansas 1, Kentucky 3, Louisiana 2, Mississippi 3, Tennessee 3.

Grand Group 13, North Mississippi River belt, includes Illinois 2, Iowa 1, Minnesota 1, Missouri 1, Wisconsin, 2. Grand Group 14, Southwest Central region, includes Arkansas 2, Louisiana 3, Missouri 2, Texas 2, Indian territory.

Grand Group 15, Central region, plains and prairies, includes Indiana 3, Kentucky 4, Ohio 3, Tennessee 4.
Grand Group 16, Prairie region, includes Illinois 3, Iowa 2, Kansas 1, Minnesota 2, Missouri 3, Nebraska 1, North Dakota 1, South Dakota 1, Wisconsin 3.

Grand Group 17, Missouri River belt, includes Iowa 3, Missouri 4, Nebraska 2, North Dakota 2, South Dakota 2.

Grand Group 18, Region of the Western plains, includes Colorado 1, Kansas 2, Montana 1, Nebraska 3, New Mexico 1, North Dakota 3, Oklahoma, South Dakota 3, Texas 3, Wyoming 1.

Grand Group 19, Heavily-timbered region of the Northwest, includes Michigan 2, Minnesota 3, Wisconsin 4. Grand Group 20, Cordilleran region, includes Arizona, California 1, Colorado 2, Idaho, Montana 2, Nevada, New Mexico 2, Oregon 1, Utah, Washington 1, Wyoming 2.

Grand Group 21, Pacific Coast region, includes California 2, Oregon 2, Washington 2.

The registration cities located in each grand group are enumerated in the table given on page 203, Section IX, of this volume.

m. The state groups are composed of certain counties in each state, as follows:
