ACTIVE METAL AND INDUSTRIAL MINERAL UNDERGROUND MINES IN THE UNITED STATES IN 2006

Mining companies with underground mines that were active in 2006 and surveyed by the U.S. Geological Survey (USGS) are listed in this report. The list was derived from data reported on the "Mine, Development, and Mineral Exploration Supplement" statistical survey conducted by the USGS and from data reported on other individual mineral commodity production surveys. These surveys account for 58 nonfuel mineral commodities produced in the United States. Nonfuel minerals exclude coal, petroleum coke, and related products.

Total domestic mining and waste removal for nonfuel mineral materials production at underground operations amounted to 147 million metric tons (Mt) in 2006. Crude ore mined at these underground operations was 144 Mt. The balance was ore and waste from development. Total underground mining for industrial minerals amounted to 129 Mt, nearly all of which was crude ore. Underground mining for metal ores amounted to only 19 Mt, of which 84% was crude ore.

Company name, as listed in table 1, represents the mine owner. The mine operator, where known, is shown in parentheses. Mineral commodity data listed in table 1 are reported according to the primary product of a mine or operation. The primary product is the product with the highest total value for the year.
