Executive Summary

Part II: Appendixes A & B: Overall Results by Hospital and Respondent Characteristics

Appendices A and B present data tables that show average percent positive scores on the survey composites and items across database hospitals broken down by the following hospital and respondent characteristics:

Appendix A: Overall Results by Hospital Characteristics

- Bed size
- Teaching status
- Ownership and control
- Geographic region

Appendix B: Overall Results by Respondent Characteristics

- Work area/unit
- Staff position
- Interaction with patients

Highlights from these results by hospital and respondent characteristics were presented in the main body of the report, Part I: Comparative Database Report, at the end of Chapter 6 and are also shown on the next two pages. Highlights were based on results for the 12 patient safety culture composites, and on patient safety grade and number of events reported. In the bottom row of the composite-level tables, an overall average across composites is shown as a summary statistic when comparing across breakout categories.

To ensure hospital confidentiality, a rule was established requiring at least 20 hospitals to be in a particular breakout category before data would be displayed by that category. Therefore, in Appendix A two of the standard AHA regions have been combined.

You can compare your hospital's percent positive scores on the patient safety culture composites and items against the averages shown in Appendix A for hospitals with your same bed size, teaching status, ownership and control, and geographic region. You can use a 5 percent difference as a rule of thumb for determining what differences to pay attention to.

To compare your hospital's results against Appendix B, your hospital will have to compute percent positive scores on the safety culture composites and items broken down by work area/unit, staff position, and interaction with patients. You would then compare your hospital's percent positive scores against the averages shown in the tables.

Again, you can use a 5 percent difference as a rule of thumb for determining what differences to pay attention to. Hospitals that did not ask respondents for their work area/unit, staff position, or interaction with patients will not be able to make comparisons by these categories. Such hospitals were excluded from the breakout tables in Appendix B. Also, respondents who selected "Many different work areas/No specific work area" (for their work area) or "Other" (for their work area or staff position) or who did not answer (missing) were not included in the breakout tables in Appendix B.

Highlights From Appendix A: Overall Results by Hospital Characteristics

Bed Size (Tables A-1, A-3, A-4)

- Smaller hospitals (49 beds or fewer) had the highest average percent positive response on all 12 patient safety culture composites.
- The largest difference by bed size was on Handoffs & Transitions, where the smallest hospitals (6-24 beds) scored 22 percent higher than large hospitals (400-499 beds) (55 percent compared to 33 percent positive).
- Large hospitals (400-499 beds) scored lowest on the percentage of respondents who gave their work area/unit a patient safety grade of “Excellent” or “Very good” (64 percent for 400-499 beds compared to 78 percent for 25-49 beds).
- There were no noticeable differences on number of events reported based on bed size (all differences were 3 percent or less).

Teaching Status and Ownership and Control (Tables A-5, A-7, A-8)

- Non-teaching hospitals had the highest average percent positive response on Handoffs & Transitions (46 percent compared to 41 percent respectively).
- Government-owned hospitals were more positive than nongovernment on Handoffs & Transitions (6 percent more positive) and Staffing (5 percent more positive).
- There were no noticeable differences on patient safety grade or number of events reported based on teaching status or ownership and control (all differences were 3 percent or less).

Geographic Region (Tables A-9, A-11, A-12)

- East South Central hospitals had the highest average percent positive response across the 12 patient safety culture composites; Pacific hospitals had the lowest.
- The largest difference by region was on Staffing and Handoffs & Transitions, where West North Central hospitals were 10 percent more positive than Mid-Atlantic/New England hospitals (for Staffing) and Pacific hospitals (for Handoffs & Transitions).
- West South Central hospitals scored highest on the percentage of respondents who gave their work area/unit a patient safety grade of “Excellent” or “Very good” (77 percent).
- Pacific hospitals had the highest percentage of respondents who reported one or more events in the past year (53 percent); the lowest percentage of respondents reporting events was in the West South Central region (40 percent).

Highlights From Appendix B: Overall Results by Respondent Characteristics

Work Area/Unit (Tables B-1, B-3, B-4)

- Respondents in Rehabilitation had the highest average percent positive response on 8 of the 12 patient safety culture composites.
- The largest difference by work area/unit was on Nonpunitive Response to Error (22 percent). On this composite, Rehabilitation was 59 percent positive and Emergency was 37 percent positive.
- Rehabilitation had the highest percentage of respondents who gave their work area/unit a patient safety grade of “Excellent” or “Very good” (81 percent); Emergency and Medicine had the lowest percentage (62 percent).
- ICU (any type) had the highest percentage of respondents reporting one or more events in the past year (66 percent); Anesthesiology had the lowest percentage of respondents reporting events (43 percent).

Staff Position (Tables B-5, B-7, B-8)

- Respondents in Administration/Management had the highest average percent positive response on 11 of the 12 patient safety culture composites.
- The largest difference (26 percent) by staff position was on Nonpunitive Response to Error; Administration/Management was 62 percent positive and Patient Care Assistants/Aides/Care Partners were 36 percent positive.
- Administration/Management had the highest percentage of respondents who gave their work area/unit a patient safety grade of “Excellent” or “Very good” (82 percent); Registered Nurse/LVN/LPN had the lowest percentage (66 percent).
- Pharmacists had the highest percentage of respondents reporting one or more events in the past year (75 percent); Unit Assistants/Clerks/Secretaries had the lowest percentage reporting events (22 percent).

Interaction With Patients (Tables B-9, B-11, B-12)

- Respondents with direct patient interaction were 7 percent more positive on Handoffs & Transitions compared to those without direct patient interaction (45 percent compared to 38 percent positive).
- Respondents without direct patient interaction were 7 percent more positive about Management Support for Patient Safety than those with direct patient interaction (76 percent compared to 69 percent positive).
- Respondents without direct patient interaction had the highest percentage of respondents who gave their work area/unit a patient safety grade of “Excellent” or “Very good” (77 percent) compared to those with direct patient interaction (72 percent).
- More respondents with direct patient interaction reported one or more events in the past year (53 percent) than respondents without direct patient interaction (32 percent).

Part III: Appendixes C & D: Trending Results by Hospital and Respondent Characteristics

In Part III of the report, Appendixes C and D show trends over time for the 204 hospitals (of the 622 total database hospitals) that administered the survey and submitted data twice. Average percent positive scores across hospitals from the most recent and previous administrations are shown on the survey composites and items, broken down by the following respondent characteristics:

Appendix C: Trending Results by Hospital Characteristics

- Bed size
- Teaching status
- Ownership and control

Appendix D: Trending Results by Respondent Characteristics

- Work area/unit
- Staff position
- Interaction with patients

To ensure hospital confidentiality, a rule was established requiring at least 20 hospitals to be in a particular breakout category before data would be displayed by that category. As a result of not having 20 hospitals in each breakout category, in Appendix C the trending results for the standard AHA regions are not displayed.

Tables 1 and 2 below show examples of the statistics shown in this appendix. The tables show the average percentage of respondents who answered positively among the trending hospitals for the hospitals' most recent survey administration (top row) and their previous administration (middle row). The change over time is shown in the bottom row as a negative number if the most recent administration showed a decline, or is shown as a positive number if the most recent administration showed an increase. Changes in scores of 5 percent or greater, whether positive or negative, are bolded.

Table 1: Example of Decrease in Average Score Over Time (Negative Change)

Most Recent	85%
Previous	90%
Change	-5%

Table 2: Example of Increase in Average Score Over Time (Positive Change)

Most Recent	70%
Previous	60%
Change	10%

Highlights of the findings from the breakout tables in these appendixes are provided on the following pages.

Highlights from Appendix C: Trending Results by Hospital Characteristics

Bed Size (Tables C-1, C-3, C-4)

- Hospitals with 100-299 beds had the largest increases in percent positive response over time on 10 of the 12 patient safety culture composites (average increase across the 10 composites was 5 percent).
- Hospitals with 200-299 beds had the greatest average change across the 12 patient safety culture composites (average 5 percent change).
- The largest increase over time was for medium-large hospitals (200-299 beds) on Teamwork Within Units and Organizational Learning—Continuous Improvement, both increasing 8 percent from the previous administration.
- The largest decrease over time was for large hospitals (500 or more beds) on the Overall Perceptions of Patient Safety, decreasing 6 percent from the previous administration.
- Small hospitals (6-24 beds) had the highest increase in percent of respondents who gave their work area/unit a patient safety grade of “Excellent” or “Very good” (a 7 percent increase, from 71 percent in the previous administration to 78 percent in the most recent administration).
- Small hospitals (6-24 beds) also had the highest increase in percentage of respondents reporting one or more events in the past year (a 6 percent increase, from 41 percent to 47 percent).

Teaching Status, and Ownership and Control (Tables C-5, C-7, C-8)

- There were no noticeable differences or changes across the patient safety culture composites for teaching versus nonteaching hospitals or government-owned versus nongovernment hospitals (all changes and differences were 4 percent or less).
- Non-teaching hospitals had a greater increase than teaching hospitals in the percentage of respondents who gave their work area/unit a patient safety grade of “Excellent” or “Very good” (a 5 percent increase, from 69 percent to 74 percent).
- Government-owned hospitals had a greater increase than nongovernment hospitals in the percentage of respondents who gave their work area/unit a patient safety grade of “Excellent” or “Very good” (a 6 percent increase, from 69 percent to 75 percent).
- There were no noticeable differences or changes in the percentage of respondents who reported one or more events in the past year based on teaching status.

Highlights from Appendix D: Trending Results by Respondent Characteristics

Work Area/Unit (Tables D-1, D-3, D-4)

- Respondents in Psych/Mental Health had the greatest average change in percent positive response across the 12 patient safety culture composites, with an average change of 5 percent.
- Respondents in Obstetrics had the largest increases in positive response over time on 5 of the 12 patient safety culture composites (average increase across the 5 composites was 6 percent).
- Respondents in Anesthesiology had the largest decreases in positive response over time on 4 of the 12 patient safety culture composites (average decrease across the 4 composites was 5 percent).
- Medicine had the largest average percentage of respondents who increased over time in giving their work area/unit a patient safety grade of “Excellent” or “Very good” (an 8 percent increase from 56 to 64 percent), followed by ICU (7 percent increase), Surgery (6 percent increase), and Lab (5 percent increase).
- Lab had the largest average percentage of respondents who increased over time in their reporting of one or more events in the past year (a 7 percent increase: from 48 to 55 percent) followed by Anesthesiology, Radiology, and Rehabilitation (all increasing by 5 percent); the largest decrease in percent reporting was in Obstetrics (a 6 percent decrease from 58 to 52 percent).

Staff Position (Tables D-5, D-7, D-8)

- Pharmacists had the largest increases in positive response over time on 4 of the 12 patient safety culture composites (average increase across the 4 composites was 6 percent).
- Admin/Mgmt, RN/LVN/LPN, and Technicians had the largest average percentage of respondents who increased over time in giving their work area/unit a patient safety grade of “Excellent” or “Very good” (5 percent increases).
- There were no noticeable differences in the percentage of respondents reporting one or more events over time based on staff position (all changes over time were less than +/- 5 percent).

Interaction With Patients (Tables D-9, D-11, D-12)

- There were no noticeable composite differences over time based on respondent interaction with patients (all were increases over time of 4 percent or less).
- There were no noticeable differences in the percentage of respondents giving their work unit/area a patient safety grade of “Excellent” or “Very good” or those reporting one or more events over time based on respondent direct patient interaction.

Part II

Appendix A Overall Results by Hospital Characteristics

(1) Bed Size

NOTE: The number of hospitals and respondents in each breakout category is shown in each table (e.g., the number of hospitals and respondents by bed size). However, the precise number of hospitals and respondents corresponding to each data cell in a table will vary because hospitals may have omitted a specific survey item and because of individual nonresponse/missing data.

Appendix B
Overall Results by Respondent Characteristics

(1) Work Area/Unit

NOTE 1: Hospitals that did not ask respondents to indicate their work area/unit were excluded from these breakout tables. In addition, respondents who selected “Many different work areas/No specific work area” or “Other” or who did not answer (missing) were not included.

NOTE 2: The number of hospitals and respondents in each work area/unit is shown. The number of hospitals is based on: (1) hospitals that asked respondents to indicate their work area/unit (not all hospitals asked this question), and (2) whether the hospital had at least one respondent in a particular work area/unit. However, the precise number of hospitals and respondents corresponding to each data cell in the tables will vary because hospitals may have omitted a specific survey item and because of individual nonresponse/missing data.

(2) Staff Position

NOTE 1: Hospitals that did not ask respondents to indicate their staff position were excluded from these breakout tables. In addition, respondents who selected “Other” or who did not answer (missing) were not included.

NOTE 2: The number of hospitals and respondents in each staff position is shown. The number of hospitals is based on: (1) hospitals that asked respondents to indicate their staff position (not all hospitals asked this question), and (2) whether the hospital had at least one respondent in a particular staff position. However, the precise number of hospitals and respondents corresponding to each data cell in the tables will vary because hospitals may have omitted a specific survey item and because of individual nonresponse/missing data.

(3) Interaction With Patients

NOTE 1: Hospitals that did not ask respondents to indicate their interaction with patients were excluded from these breakout tables. In addition, respondents who did not answer (missing) were not included.

NOTE 2: The number of hospitals and respondents is shown in each table. The number of hospitals is based on: (1) hospitals that asked respondents to indicate their interaction with patients (not all hospitals asked this question), and (2) whether the hospital had at least one respondent in the response categories (WITH or WITHOUT direct interaction with patients). However, the precise number of hospitals and respondents corresponding to each data cell in the tables will vary because hospitals may have omitted a specific survey item and because of individual nonresponse/missing data.

Appendix C: Trending Results by Hospital Characteristics

(1) Bed Size

NOTE: The number of hospitals and respondents in each breakout category is shown in each table (e.g., the number of hospitals and respondents by bed size). However, the precise number of hospitals and respondents corresponding to each data cell in a table will vary because hospitals may have omitted a specific survey item and because of individual nonresponse/missing data.

NOTE: The number of hospitals and respondents in each breakout category is shown in each table (e.g., the number of hospitals and respondents by teaching status and ownership and control). However, the precise number of hospitals and respondents corresponding to each data cell in a table will vary because hospitals may have omitted a specific survey item and because of individual non-response/missing data.

Appendix D: Trending Results by Respondent Characteristics

(1) Work Area/Unit

NOTE 1: The number of hospitals and respondents in each breakout category is shown in each table (e.g., the number of hospitals and respondents by work area/unit). However, the precise number of hospitals and respondents corresponding to each data cell in a table will vary because hospitals may have omitted a specific survey item and because of individual nonresponse/missing data.

NOTE 2: Only hospitals that had at least one respondent in the particular work area/unit for both their previous and most recent administrations of the survey are included.

NOTE 3: Respondents who selected “Many different work areas/No specific work area” or “Other” or who did not answer (missing) are not included.

(2) Staff Position

NOTE: The number of hospitals and respondents in each breakout category is shown in each table (e.g., the number of hospitals and respondents by staff position). However, the precise number of hospitals and respondents corresponding to each data cell in a table will vary because hospitals may have omitted a specific survey item and because of individual nonresponse/missing data.

NOTE 2: Only hospitals that had at least one respondent in the particular staff position for both their previous and most recent administrations of the survey are included.

NOTE 3: Respondents who selected "Other" or those who did not answer (missing) are not included.

(3) Interaction With Patients

NOTE: The number of hospitals and respondents in each breakout category is shown in each table (e.g., the number of hospitals and respondents by interaction with patients). However, the precise number of hospitals and respondents corresponding to each data cell in a table will vary because hospitals may have omitted a specific survey item and because of individual nonresponse/missing data.

NOTE 2: Only hospitals that had at least one respondent in the response categories (WITH or WITHOUT direct interaction with patients) for both their previous and most recent administrations of the survey are included.

NOTE 3: Respondents who did not answer (missing) are not included.
