U.S. Department of Commerce ECONOMICS AND STATISTICS ADMINISTRATION

JANUARY 1993
BUREAU OF THE CENSUS
-
CB-93-32
INTENTION TO REVISE ESTIMATES. The unadjusted and adjusted monthly retail sales estimates will be revised based on the results of the 1991 Annual Retail Trade Survey. Revised estimates for January 1987 through February 1993 are scheduled for release the week of March 15, 1993. Estimates shown in this report do not reflect this revision.

FOR WIRE TRANSMISSION 8:30 A.M. EST., Thursday, February 11, 1993
The Census Bureau of the Department of Commerce announced today that advance estimates of U.S. retail sales for January adjusted for seasonal, holiday, and trading-day differences, but not for price changes, were $\$ 167.4$ billion, an increase of 0.3 percent ( $\pm 1.5 \%$ ) from the previous month and were 6.6 percent ( $\pm 1.8 \%$ ) above January 1992. Total sales in the November through January period were 7.2 percent $( \pm 1.8 \%)$ above the same period a year ago. The November to December 1992 percent change was revised from +1.2 percent ( $\pm 1.7 \%$ ) as published in the December advance, to +0.8 percent ( $\pm 0.4 \%$ ).

Durable goods increased 1.1 percent ( $\pm 3.3 \%$ ) from the previous month and were 9.8 percent above January 1992.
Nondurable goods decreased 0.1 percent ( $\pm 1.3 \%$ ) from December but were 4.7 percent above January 1992. General merchandise stores increased 1.9 percent from the previous month and were 7.7 percent above last year.

The advance estimates are based on a small subsample of the Bureau's full retail sales sample. Estimates from the advance and the subsequent full survey can differ because of the earlier reporting in the advance and because of sampling variability present in both surveys.

The Advance Monthly Retail Sales Report for February is scheduled to be released March 11, 1993 at 8:30 a.m.

## ESTIMATED MONTHLY RETAIL SALES

February 1990 - January 1993

- Advance estimates are not available from the subsample panel for these kinds of business.

NA Not available.
'Revised.
${ }^{1}$ Data are concurrently adjusted for seasonal variations, holiday, and trading-day differences. Concurrent seasonal adjustment uses all available unadjusted estimates as input to the $\mathrm{X}-11$ program and the factors derived from the program are used in calculating all seasonally adjusted data shown in this publication. The seasonal factors for January 1993 and November and December 1992 department stores and miscellaneous general merchandise stores kinds of business have been modified because of observed changes in the seasonal patterns. Factors and explanatory material are contained in the Monthly Retail Trade Report, BR-92-12.
${ }^{2}$ Advance estimates are based on early reporting by a small subsample of the full survey panel. All other estimates are based on the full sample.
${ }^{3}$ Includes data for leased departments operated within department stores. Data for this line not included in broader kind-of-business totals.
${ }^{4}$ GAF represents stores which specialize in department store types of merchandise.
Note: Totals include data for kinds of business not shown separately.

## Sample Design and Reliability of Data

The advance estimates are based on a small subsample of the Bureau's full retail sales sample. Estimates from the advance and the subsequent fuli survey can differ because of the earlier reporting in the advance and because of sampling variability present in both surveys.

Percentage differences between advance and full sample preliminary estimates of month-to-month percentage change in seasonally adjusted total retail store sales have ranged from approximately -0.9 percent to +1.5 percent with the average of the absolute differences about 0.6 percent for the past 12 months. For individual kind-of-business groups, these differences tend to be higher. Sampling variability of and revisions to advance-to-preliminary estimates are shown in table 4 below.

Preliminary estimates for December 1992 and final estimates for November 1992 based on the full sample are published later this month in the Monthly Retail Trade Report for December (BR-92-12). The complete report will provide sales estimates in greater detail and will present a description of revisions and the techniques used in developing the estimates.

The margin of sampling error, as used on page 1, indicates a range about the estimate which corresponds to a 90 percent confidence interval. If, for example, the estimate is up 0.8 percent and the margin of sampling error is 1.2 percentage points above or below the estimate, then the indicated range is -0.4 percent to +2.0 percent. If the range contains 0 , it is uncertain whether there was an increase or decrease. The Monthly Retail Trade Report includes explanations of confidence intervals and sampling variability along with additional measures of sampling variability.

${ }^{1}$ The ranges of sampling variability shown are based on sales estimates not adjusted for seasonal variation, holiday, and trading-day differences the data months of November 1990 - March 1991.
${ }^{2}$ The ranges shown for the retail trade total are based on sales estimates adjusted for seasonal variations, holiday, and trading-day differences for the $12-$ month period, January 1992 - December 1992. The ranges for all other totals and kinds of business are based on the $12 \cdot \mathrm{month}$ period April 1990 - March 1991.

Note: Coefficients of variation for the ratio of current quarter to current quarter a-year-ago estimates are approximately the same as those for the ratio of current quarter to previous quarter. See appendix B, Reliability of Data in the Monthly Retail Trade Report for a discussion of the measures of sampling variability.
