Seattle, Washington 98115-6349
and
States of Delaware,
New Jersey, and Pennsylvania**

FILE DESCRIBES: Digital data for 1996 Delaware, New Jersey, Pennsylvania Environmental Sensitivity Index.

FILE CREATED BY: NOAA Office of Response and Restoration
7600 Sand Point Way N.E.
Seattle, WA 98115-6349
Phone: 206-526-6317
Fax: 206-526-6329
email: library@hazmat.noaa.gov

FILE CREATED ON: 20001101

COMMENTS: Information was developed using the U.S. Federal Geographic Data Committee's Content Standards for Digital Geospatial Metadata, June 8, 1994. The numbering scheme matches the Metadata Standard in order to facilitate referencing definitions of the elements. The items in **bold** are required elements and the others are optional elements. The Spatial Data Transfer Standard (SDTS), ver. 03/92, was referenced to properly identify the geographic entities.

1.0. IDENTIFICATION INFORMATION

1.1. CITATION

1.1.1. ORIGINATOR:

National Oceanic and Atmospheric Administration (NOAA),
National Ocean Service, Office of Response and Restoration,
Hazardous Materials Response Division, Seattle, Washington and
States of Delaware, New Jersey, and Pennsylvania

1.1.2. PUBLICATION DATE:

200011

1.1.4. TITLE:

Sensitivity of Coastal Environments and Wildlife to Spilled Oil:
Delaware, New Jersey, Pennsylvania

1.1.5. EDITION:

First

1.1.6. GEOSPATIAL DATA PRESENTATION FORM:

Atlas

1.1.7. SERIES INFORMATION

1.1.7.1. SERIES NAME:

None

1.1.7.2. ISSUE IDENTIFICATION:

Delaware, New Jersey, Pennsylvania

1.1.8. PUBLICATION INFORMATION

1.1.8.1. PUBLICATION PLACE:

Seattle, Washington

1.1.8.2. PUBLISHER:

National Oceanic and Atmospheric Administration (NOAA),
National Ocean Service, Office of Response and Restoration,
Hazardous Materials Response Division, Seattle, Washington

1.1.9. OTHER CITATION DETAILS:

Prepared by Research Planning, Inc., Columbia, South Carolina for
the National Oceanic and Atmospheric Administration (NOAA),
National Ocean Service, Office of Response and Restoration,
Hazardous Materials Response Division, Seattle, Washington and the
States of Delaware, New Jersey, and Pennsylvania

1.1.11. LARGER WORK CITATION:

None

1.2. DESCRIPTION

1.2.1. ABSTRACT:

This data set comprises the Environmental Sensitivity Index (ESI) maps for the shorelines of Delaware, Delaware Bay, Delaware River, and New Jersey. ESI data characterize coastal environments and wildlife by their sensitivity to spilled oil. The ESI data include information for three main components: shoreline habitats; sensitive biological resources; and human-use resources

1.2.2. PURPOSE:

The ESI data were collected, mapped, and digitized to provide environmental data for oil spill planning and response. The Clean Water Act with amendments by the Oil Pollution Act of 1990 requires response plans for immediate and effective protection of sensitive resources

1.3. TIME PERIOD OF CONTENT

1.3.1. TIME PERIOD INFORMATION

1.3.1.3. RANGE OF DATES/TIMES:

The intertidal habitats were mapped during overflights conducted 10-17 April 1995. The biological and human-use resources data were compiled by regional biologists in 1995. The dates for these data vary and are documented in Section 2.5.1

1.4. STATUS

1.4.1. PROGRESS:

Complete

1.4.2. MAINTENANCE AND UPDATE FREQUENCY:

None planned

1.5. SPATIAL DOMAIN

1.5.1. BOUNDING COORDINATES

1.5.1.1. WEST BOUNDING COORDINATE:

-75.75°

1.5.1.2. EAST BOUNDING COORDINATE:

-74°

1.5.1.3. NORTH BOUNDING COORDINATE:

40.25°

1.5.1.4. SOUTH BOUNDING COORDINATE:

38.375°

1.6 KEYWORDS

1.6.1. THEME

1.6.1.1. THEME KEYWORD THESAURUS:

None

1.6.1.2. THEME KEYWORD:

Sensitivity maps; ESI; coastal resources; oil spill planning;
and coastal zone management

1.6.2. PLACE

1.6.2.1. THESAURUS:

None

1.6.2.2. PLACE KEYWORD:

Maryland/Delaware border to Mid-Barnegat Bay; including
the Delaware River up to Trenton, New Jersey

1.7. ACCESS CONSTRAINTS:

None

1.8. USE CONSTRAINTS:

DO NOT USE ESI MAPS FOR NAVIGATIONAL PURPOSES.

Besides the above warning, there are no use constraints on these data.

Acknowledgment of the publishers and contributing sources listed in 1.11.
would be appreciated in products derived from these data

1.11. DATA SET CREDIT:

This project was supported by the National Oceanic and Atmospheric
Administration (NOAA), National Ocean Service, Office of Response and
Restoration, Hazardous Materials Response Division, Seattle, Washington
and the States of Delaware, New Jersey, and Pennsylvania

1.13. NATIVE DATA SET ENVIRONMENT:

The software packages used to develop the atlas are Environmental Systems Research Institute's ARC/INFO® (version 7.0.3) and ORACLE® RDBMS (version 6.0.36.1.1). The hardware configuration is Hewlett Packard workstations (models 715/50 and 712/80i with 4 X-terminals) with UNIX operating system (HP-UX Release A.09.01). The following files are included in the data set:

bio_lut.e00	biofile.e00	biores.e00
birds.e00	breed.e00	breed_dt.e00
esi.e00	fish.e00	habitats.e00
hab_pt.e00	hydro.e00	index.e00
invert.e00	mgt.e00	m_mammal.e00
nests.e00	reptile.e00	seasonal.e00
soc_dat.e00	soc_lut.e00	socecon.e00
sources.e00	species.e00	status.e00
t_mammal.e00		

The entire data set is approximately 77 megabytes.

2.0. DATA QUALITY INFORMATION

2.1. ATTRIBUTE ACCURACY

2.1.1. ATTRIBUTE ACCURACY REPORT:

The attribute accuracy is estimated to be “good” given the years of ESI experience, the data input methodology, the quality control review sessions, and the digital logical consistency checks.

2.2. LOGICAL CONSISTENCY REPORT:

The digitization of shoreline types, biological resources, and human-use resources is a complex and highly quality-controlled process. Existing digital shoreline and wetlands data are integrated into a study-wide basemap. In order to facilitate digitizing, the entire study area is split into individual quadrangles using the INDEX data layer. The first layer of information digitized is the ESI shoreline classification. The ESI habitat ranking is compiled onto 1:24,000 USGS topographic quadrangles by a geomorphologist. The hardcopy maps are then digitized and checked, using both on-screen and hardcopy reviews. The edited maps are updated, checked once again for completeness and topological and logical consistency. Any errors in the shoreline classification are updated prior to digitization of the biological and human-use layers. All layers use the shoreline as the geographic reference so that there are no slivers in the geographic coordinates.

The hardcopy biological information is compiled onto 1:24,000 USGS topographic quadrangles by a biological expert using data from regional specialists in the form of maps, tables, charts, written descriptions of wildlife distributions, and personal interviews. Concurrently, digital data sources are imported, projected, checked for quality control, and integrated into the data structure. The hardcopy data are digitized, checked using both digital and on-screen procedures, integrated with existing data, plotted, and sent out for review by the regional specialists. The edited maps are updated, checked once again, and the final product plotted (at approximately 1:50,000 scale). A team of specialists reviews the entire series of maps, checks all data, and makes final edits. The data are then merged to form the study-wide layers. The data merging includes a final quality control check where labels, chains, and polygons are checked for attribute accuracy.

To finalize the data checking process, each coverage is checked using a standardized form by two GIS personnel (a technician and the GIS manager), and each attribute database is checked using several programs that test the files for missing or duplicate data, rules for proper coding, GIS topological consistencies (such as dangles, unnecessary nodes, etc.), and ORACLE® to ARC/INFO® consistencies. A final review is made by the GIS manager, where the data are written to tape and the metadata are written.

After the data are delivered to NOAA, they are again subjected to a number of quality and consistency checks. In the process of checking for topological and database consistencies, new IDs and RARNUMs or HUNUMs are also generated. The new IDs are a combination of atlas number, element number, and record number. In addition, the value used to represent the element is modified to reflect the type of feature being mapped. In the case of an element that is normally represented by a point or polygon, a value of 20 is added to the standard element value for mapping of linear features. In the case where an element usually mapped as a polygon is represented by a point, a value of 30 is added to the regular element value. The RARNUMs are also modified to include the atlas number, so multiple atlases can be combined and RARNUMs remain unique. RARNUMs are redefined on an element basis, so "resource at risk" groupings will contain only a single element. HUNUMs are also modified to include the atlas number.

ESI data are processed into multiple formats to make them useful to a wider community of GIS/mapping users. Distribution formats include ARC export, MOSS and Shape files, and MARPLOT map folders. An ArcView ESI project and ESI_Viewer product are also included on the CDs for ease of use of the ESI data. The database files are distributed both in the NOAA standard relational database format (see NOAA Technical Memorandum NOS ORCA 115) and in a simplified desktop flat file format. This metadata document includes information on both of these database formats. Section 3.0, outlining Spatial Data Organization, refers to the source files in ARC export format only.

2.3. COMPLETENESS REPORT:

Shoreline Habitat Mapping:

The shoreline habitats of Delaware, New Jersey, and Pennsylvania were characterized as to their sensitivity to oil spills using a shoreline classification

system which has been used by NOAA for all ESI maps nationwide. Prediction of the behavior and persistence of oil on intertidal habitats is based on an understanding of the dynamics of the coastal environments, not just the substrate type and grain size. The vulnerability of a particular habitat is an integration of the following factors:

- 1) Shoreline type (substrate, grain size, tidal elevation, origin)
- 2) Exposure to wave and tidal energy
- 3) Biological productivity and sensitivity
- 4) Ease of cleanup

All of these factors are used to determine the relative sensitivity of intertidal habitats. Key to the sensitivity ranking is an understanding of the relationships between: physical processes, substrate, shoreline type, product type, fate and effect, and sediment transport patterns. The intensity of energy expended upon a shoreline by wave action, tidal currents, and river currents directly affects the persistence of stranded oil. The need for shoreline cleanup activities is determined, in part, by the slowness of natural processes in removal of oil stranded on the shoreline.

These concepts have been used in the development of the ESI, which ranks shoreline environments as to their relative sensitivity to oil spills, potential biological injury, and ease of cleanup. Generally speaking, areas exposed to high levels of physical energy, such as wave action and tidal currents, and low biological activity rank low on the scale, whereas sheltered areas with associated high biological activity have the highest ranking.

Sensitive Biological Resources:

Regional biologists compiled the biological data. These data denote the key biological resources that are most likely at risk in the event of an oil spill. Seven major categories, or ELEMENTS, of biological resources were considered during data compilation: birds, fish, invertebrates, habitats, marine mammals, reptiles/amphibians, and terrestrial mammals.

There are six attribute tables, or data tables, BIORES, SEASONAL, SPECIES, SOURCES, STATUS, and BREED, that are used to store the complex biological data (Fig. 1). Each biological coverage (BIRDS, FISH, M_MAMMALS, INVERT, REPTILES, and T_MAMMAL) is linked to the Biological Resources

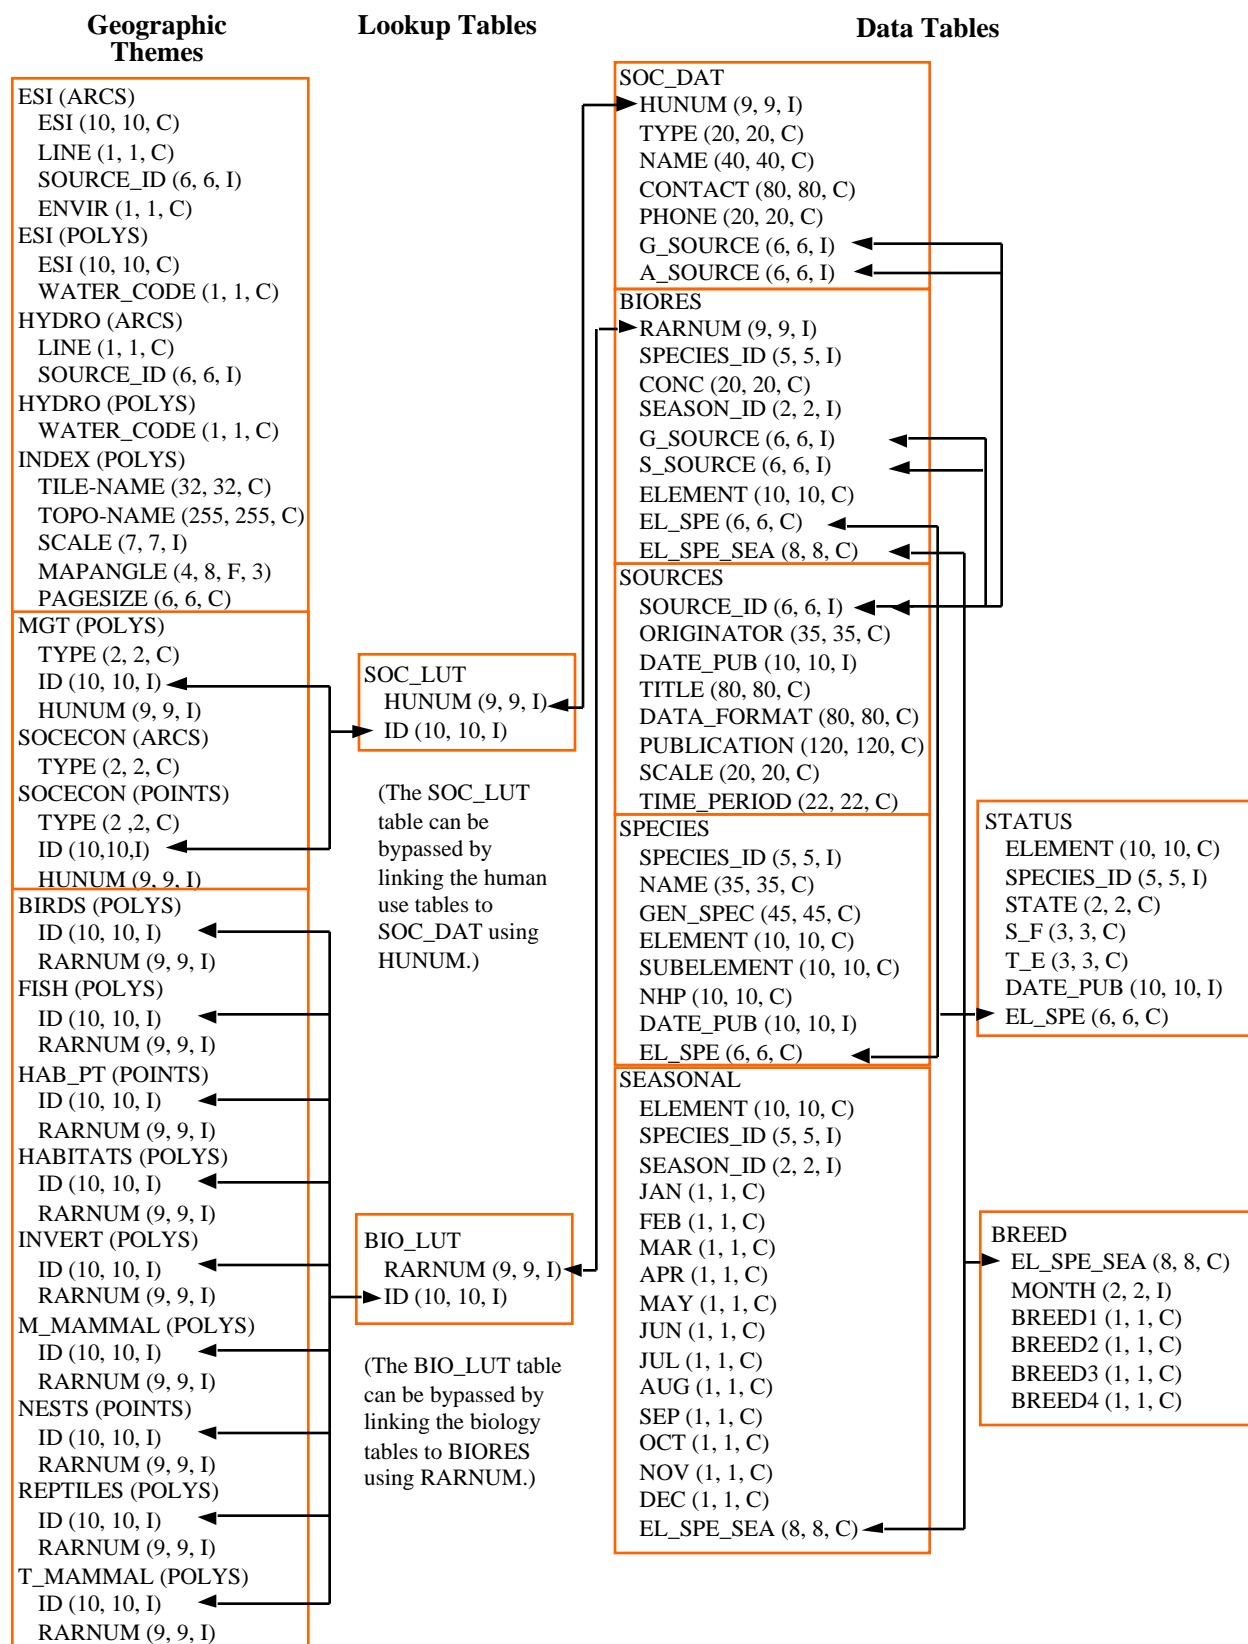

FIGURE 1. Relationship between biology data layers and attribute files.

table (BIORES) using the unique ID and the lookup table BIO_LUT, or it can be linked directly using RARNUM. [The ID is a unique combination of the atlas number (for this atlas, this is 12), an element specific number (birds are layer 1, fish are layer 2, etc.) and a unique record number. The RARNUM represents a unique combination of species, seasonalities, concentrations, and source information. For each of these groupings, a number is generated. That number is concatenated with the atlas number to create a "resource at risk" number that is unique across atlases.]

The items in BIORES include: RARNUM, SPECIES_ID, CONC, SEASON_ID, G_SOURCE, S_SOURCE, ELEMENT, EL_SPE, and EL_SPE_SEA.

SPECIES_ID is the numeric identifier of each species and is unique within each ELEMENT. CONC is the concentration of the species and can be LOW, MEDIUM, HIGH, SPARSE, RARE, OCCASIONAL, or COMMON for all coverages except NESTS, which may have a value for the number of birds, nests, or pairs, and BIRDS, which may have a number range for the number of individuals present. SEASON_ID contains a numeric identifier for the unique monthly presence and life history characteristics of each species at a given location. There can be one seasonality record per species, or the same species can have different monthly presence or breeding activities at different sites. When this occurs, a new record with a different SEASON_ID is referenced.

G_SOURCE contains the SOURCE_ID for geographic information and S_SOURCE contains the SOURCE_ID for seasonality information. Both items link to the SOURCES data table. EL_SPE is a concatenation of ELEMENT and SPECIES_ID and links to other data tables (primarily the SPECIES table) and EL_SPE-SEA is a concatenation of ELEMENT, SPECIES_ID, and SEASON_ID and links to the SEASONAL and BREED data tables.

The SPECIES data table contains the SPECIES_ID (described above), common name (NAME), scientific name (GEN_SPEC), date the list of Natural Heritage Program (NHP) ranks was published (DATE_PUB), biological element (ELEMENT), biological subelement (SUBELEMENT), and the NHP global conservation status rank. The item SUBELEMENT refers to the grouping of the species. The SUBELEMENTS, by ELEMENT, included in this atlas are:

ELEMENT	SUBELEMENT
BIRD	diving
	gull_tern
	raptor
	shorebird
	wading
	waterfowl
FISH	anadromous
	special
INVERT	cephalopod
	clam
	crab
	gastropod
	lobster
	oyster
HABITAT	sav (submerged aquatic vegetation)
	shrub
MARINE MAMMAL	dolphin
	seal
	whale
REPTILE	turtle
TERRESTRIAL MAMMAL	mustelid
	rodent

The STATUS data table contains records for each species that is threatened or endangered on state or federal lists. The items include: ELEMENT, SPECIES_ID, STATE (two-letter state abbreviations), S_F (state or federal status), T_E (threatened or endangered status), DATE_PUB (the date the atlas was published when the given state and federal listings were in effect), and EL_SPE.

The SEASONAL data table indicates the presence of a particular species in a particular location by month (JAN-DEC). The BIORES table is linked to the SEASONAL table using the item EL_SPE_SEA (a concatenation of the first letter of the ELEMENT, SPECIES_ID, and SEASON_ID).

The BREED data table contains the life stage or life history data for each unique combination of ELEMENT, SPECIES_ID, and SEASON_ID (or EL_SPE_SEA). It contains up to 12 records corresponding to each month of

the year that a species is present in that location. The categories of the items BREED1 through BREED4 for each element are:

ELEMENT	BREED 1	BREED 2	BREED 3	BREED 4
BIRD	nesting	laying	hatching	fledging
FISH	spawning	outmigration	larvae/ juvenile	
INVERT	spawning	larvae/ juvenile	mating	
M_MAMMAL	mating	calving	pupping	molting
REPTILE	nesting	hatching	internesting	

NOTE: There are no BREED variables for HABITATS or T_MAMMALS.

The SOURCES data table contains metadata for each biological and human-use source listed in the ESI atlas. The items in SOURCES are: SOURCE_ID, ORIGINATOR (author), DATE_PUB (date of publication), TITLE (title of the data set), DATA_FORMAT (digital type, hardcopy maps, etc.), PUBLICATION (additional citation), SCALE (source scale denominator), and TIME_PERIOD (beginning and ending dates of original data collection). The SOURCES data table is linked to all biological and human-use data at the feature-level.

Due to the complexity of the relational database model, the biological data items are post processed into a flat file format. This file is entitled BIOFILE and it may be used in place of the relational files to ease simple data queries. The items in the flat file are ELEMENT, SUBELEMENT, NAME, GEN_SPEC, S_F, T_E, NHP, DATE_PUB, CONC, JAN, FEB, MAR, APR, MAY, JUN, JUL, AUG, SEP, OCT, NOV, DEC, BREED1, BREED2, BREED3, BREED4, RARNUM, G_SOURCE, S_SOURCE and BREED. All of these items are the same as their counterparts in the individual files described above, except the BREED1–BREED4 items. BREED is a newly generated variable used to link to the BREED_DT file, a modified, more compact version of the aforementioned BREED file. BREED1–BREED4 give a text summary of when each life stage occurs within that polygon. The life stages referred to are the same as those listed in the previous table. The link to the BIOFILE may be made through BIO_LUT using ID to link to RARNUM, or it may be linked directly to the RARNUM in each of the biology cover's attribute files. As mentioned, BREED_DT is an auxiliary support file to the flat file structure, which allows

the user to do searches based on month for seasonal breeding activities. The link from the flat file to BREED_DT is the BREED item. A second supporting data file is SOURCES. This is the same as the SOURCES file described above and the link from the flat file is both G_SOURCE and S_SOURCE.

It should be noted that although the flat file eases data query, it is not a normalized database structure, and actual updates performed by the states and other responsible agencies should be done using the relational files.

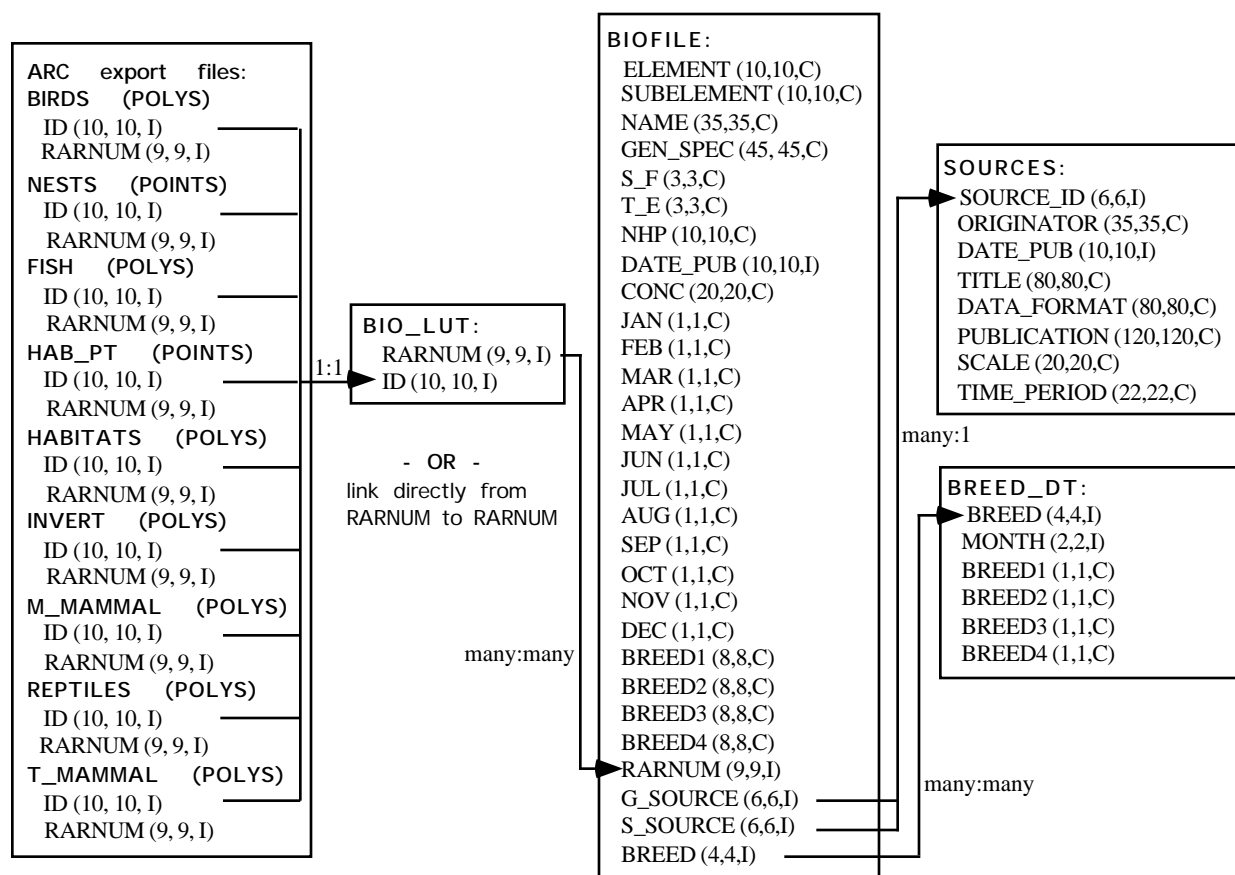

FIGURE 2. Relationship of the BIOFILE to the biological covers and the supplementary BREED_DT and SOURCES data tables.

Human-Use Resources:

Several human-use, or socioeconomic, features are included in ESI atlases. Entity points and complete chains (arcs) are digitized into the data layer SOCECON and managed area polygonal data are stored in the MGT data layer. Both data sets are linked to the data table SOC_DAT using the SOC_LUT

lookup table and the items HUNUM and ID. HUNUM is a unique reference number concatenated with the atlas number (12). ID is a concatenation of atlas number (12), element number (SOCECON = 10 and MGT = 11), and unique record number.

All features are attributed using the item TYPE and identify the type of feature:

Entity Points		Polygons	
Feature	TYPE	Feature	TYPE
Access	A2	State Park	P
Airport	A	Wildlife Refuge	WR
Archaeological Site	AS		
Boat Ramp	BR		
Coast Guard	CG		
Ferry	F		
Historical Site	HS		
Marina	M		
Recreational Fishing	RF		
Water Intake	WI		
Complete Chains			
Feature	TYPE		
State Border	SB		

The table SOC_DAT contains the human-use number (HUNUM), feature type (TYPE), name of the facility (NAME), contact person (CONTACT), telephone number (PHONE), geographic source (G_SOURCE), and attribute source (A_SOURCE).

2.4. POSITIONAL ACCURACY

2.4.1. HORIZONTAL POSITIONAL ACCURACY

2.4.1.1. HORIZONTAL POSITIONAL ACCURACY REPORT:

The ESI data uses USGS 1:24,000 topographic quadrangles as the base map. It is estimated that the ESI has a minimum mapping unit of 50 feet. The biological data sets are developed primarily using regional experts who estimate concentration areas. Unlike shorelines, which maintain relative spatial stability through time, the biological data by nature migrate across the landscape. Therefore, the 1:24,000 USGS quadrangles and 1:40,000 and 1:80,000 NOAA

navigational charts are used as a base map in gathering the data but the data have “fuzzy” boundaries which must be understood when utilizing this information.

2.5.2. PROCESS STEP

2.5.2.1. PROCESS DESCRIPTION:

The digitization of ESI, biological resources, and human-use resources is a complex and highly quality controlled process. In order to facilitate digitizing, the entire study area was split into individual quadrangles using a map index coverage. The first layer of information digitized was the ESI. A digital shoreline was obtained from MSRC and the New Jersey Department of Environmental Protection. Any errors in the shoreline classification were updated prior to digitization of the biological and human-use layers. All data use the shoreline as the geographic reference so that there are no slivers in the geographic layers. The biological information was compiled onto 1:24,000 USGS topographic quadrangles, 1:40,000 NOAA Navigational Charts, or 1:80,000 NOAA Navigational Charts by an in-house biological expert using the data from regional specialists in the form of verbal discussions, maps, tables, charts, and written descriptions of wildlife distributions. The data were digitized, checked using both digital and on-screen procedures, plotted, and sent out for review by the regional specialists. The edited maps were updated on the computer, checked once again, and plotted at final map scale. A team of specialists reviewed the entire series of maps, checked all data, and made final edits. The data were merged to form the study-wide layers that are described in this document. The data merging included a final quality control check where topological consistency,

rules for geography, and database to geography were checked and reported to the GIS manager.

5.1. DETAILED DESCRIPTION: BIRDS

The data layer BIRDS contains the polygons with bird species. The following BIRDS species are found in the Delaware, New Jersey, Pennsylvania ESI data set:

SPECIES ID	NAME
8	Double-crested cormorant
11	Whistling swan (tundra swan)
12	Canada goose
13	Brant
15	Snow goose
16	Mallard
17	Northern pintail
18	Green-winged teal
20	Northern shoveler
21	Canvasback
22	Greater scaup
23	Lesser scaup
24	Common goldeneye
26	Bufflehead
27	Oldsquaw
29	White-winged scoter
30	Surf scoter
32	Common merganser
34	American coot
38	Herring gull
40	Ring-billed gull
45	Common tern
54	Great blue heron
56	Spotted sandpiper
58	Greater yellowlegs
59	Lesser yellowlegs
62	Least sandpiper
76	Bald eagle
77	Osprey
86	Least tern
87	Little blue heron
88	Great egret
89	Snowy egret
90	Black-crowned night heron
91	Glossy ibis
92	Great black-backed gull
93	Cattle egret
94	Tricolored heron

SPECIES ID	NAME
95	Roseate tern
97	Green-backed heron
98	Laughing gull
103	Common eider
107	Peregrine falcon
118	Brown pelican
120	Yellow-crowned night heron
124	Redhead
133	Black skimmer
134	Gull-billed tern
138	Forster's tern
148	Ruddy duck
152	American oystercatcher
153	Piping plover
156	Semipalmated sandpiper
162	Gadwall
169	American wigeon
178	Least bittern
179	Pied-billed grebe
180	Ring-necked duck
181	Northern harrier
184	King rail
186	Black duck
187	Virginia rail
188	Sora rail
190	Blue-winged teal
191	Wood duck
192	Common moorhen
193	Black tern
198	Hooded merganser
214	Solitary sandpiper
217	Mute swan
275	Great cormorant
299	Scaup
300	Goldeneye
301	Merganser
302	Scoter
1,001	Gulls
1,002	Shorebirds
1,003	Waterfowl
1,004	Wading birds
1,008	Terns

5.1. DETAILED DESCRIPTION: BREED_DT

The data table BREED_DT is a supplement to the flat format BIOFILE that allows searches to be conducted for life stage activities by month. This is a condensed version of the BREED table where multiple species of the same element may link to the same BREED_DT records. (There are no breeding activities for the HABITAT or T_MAMMAL elements.)

5.1. DETAILED DESCRIPTION: ESI

The coverage ESI contains arc (Complete Chains) and polygonal (GT-Polygons) features for the ESI shoreline classification and is based on *Guidelines for Developing Digital Environmental Sensitivity Index Atlases and Databases* (Michel, J. and J. Dahlin, 1993, Hazardous Materials Response and Assessment Division, NOAA). The ESI classification was performed in April 1995.

5.1.1. ENTITY TYPES:

5.1.1.1. ENTITY TYPE LABEL:	5.1.1.2. ENTITY TYPE DEFINITION:
<u>Complete Chain</u>	ESI character LINE character SOURCE_ID integer ENVIR character
<u>GT-Polygons</u>	ESI character WATER_CODE character

5.1.2. ATTRIBUTES:**5.1.2.1. ATTRIBUTE LABEL:**

ESI

5.1.2.2. ATTRIBUTE DEFINITION:

The item ESI contains values according to the ESI ranking of the shorelines and polygons. The ESI rankings progress from low to high susceptibility to oil spills. The Delaware, New Jersey, and Pennsylvania shoreline types are listed below. In many cases, the shorelines are also ranked with multiple codes, such as 10/7. The first number is the most landward shoreline type, salt marsh, with exposed tidal flats being the shoreline type closest to the water.

5.1. DETAILED DESCRIPTION: HYDRO

The coverage HYDRO contains polygonal water and land features as well as linear features for rivers/streams that are tidally influenced.

5.1.1. ENTITY TYPES:

5.1.1.1. ENTITY TYPE LABEL:	5.1.1.2. ENTITY TYPE DEFINITION:
<u>GT-Polygons</u>	WATER_CODE character
<u>Complete Chains</u>	LINE character
	SOURCE_ID integer

The LINE, SOURCE_ID, and WATER_CODE attributes are the same as in the ESI coverage. This coverage contains all annotation used in producing the atlas. The annotation features are categorized into three subclasses in order to simplify the mapping and quality control procedures: geog or geographic features, soc or socioeconomic features, and hydro or water features.

5.1.2. ATTRIBUTES:

5.1.2.1. ATTRIBUTE LABEL:

WATER_CODE

5.1.2.2. ATTRIBUTE DEFINITION:

Specifies a polygon as either water or land

Alewife
 American coot
 American cupscale
 American oyster (eastern)
 American oystercatcher
 American shad
 American wigeon
 Atlantic croaker
 Atlantic herring
 Atlantic menhaden
 Atlantic sturgeon
 Atlantic white-sided dolphin
 Awl-leaved rush
 Bald eagle
 Bald eagle
 Bartons St. Johns-wort
 Bay anchovy
 Black drum
 Black duck
 Black seabass
 Black skimmer
 Black tern
 Black-based quillwort
 Black-crowned night heron
 Black-fruited spikerush
 Blue crab
 Blueback herring
 Bluefish
 Blue-winged teal
 Bog asphodel
 Bottlenose dolphin

5.1.2.4.1.1. ENUMERATED DOMAIN VALUE:

Boykins lobelia
 Brant
 Brittons spikerush
 Brown pelican
 Brydes whale
 Bufflehead
 Bur-marigold
 Canada goose
 Canvasback
 Cattle egret
 Channel catfish
 Channeled whelk
 Clustered beaked rush
 Coast flatsedge
 Common dolphin
 Common eider
 Common goldeneye
 Common merganser
 Common moorhen
 Common tern
 Cut-leaved water-milfoil
 Cypress-swamp sedge
 Diamondback terrapin
 Double-crested cormorant
 Dwarf sperm whale
 Eelgrass
 Featherfoil
 Fin whale
 Fin whale
 Floating pennywort
 Fog fruit
 Forsters tern
 Gadwall
 Glade spurge
 Glossy ibis
 Goldeneye
 Grass-like beaked rush
 Gray seal
 Great black-backed gull

5.1.2.4.1.1. ENUMERATED DOMAIN VALUE:

Great blue heron
 Great cormorant
 Great egret
 Greater scaup
 Greater yellowlegs
 Green sea turtle
 Green-backed heron
 Green-winged teal
 Gull-billed tern
 Gulls
 Harbor porpoise
 Harbor seal
 Harp seal
 Herring gull
 Hooded merganser
 Hooded seal
 Horseshoe crab
 Humpback whale
 Humpback whale
 Kemps ridley sea turtle
 Kemps ridley sea turtle
 King rail
 Knieskerns beaked rush
 Knobbed whelk
 Koehns tooth-cup
 Lace-lip ladies-tresses
 Largemouth bass
 Larger buttonweed
 Laughing gull
 Least bittern
 Least sandpiper
 Least tern
 Lesser bladderwort
 Lesser scaup
 Lesser yellowlegs
 Little blue heron
 Loggerhead sea turtle
 Loggerhead sea turtle
 Long-finned pilot whale

5.1.2.4.1.1. ENUMERATED DOMAIN VALUE:

Longs bulrush
Mallard
Merganser
Mink
Minke whale
Minute duckweed
Mudweed
Muskrat
Mute swan
New Jersey rush
Northern harrier
Northern kingfish
Northern lobster
Northern pintail
Northern quahog (hard clam)
Northern raccoon
Northern right whale
Northern right whale
Northern shoveler
Oldsquaw
Osprey
Peregrine falcon
Peregrine falcon
Pied-billed grebe
Pine Barren boneset
Piping plover
Piping plover
Porgy (scup)
Pumpkin Ash
Puttyroot
Pygmy sperm whale
Rare-flowering beaked rush
Red goosefoot
Redhead
Ring-billed gull
Ring-necked duck
Rissos dolphin
River otter
Robin-run-away

5.1.2.4.1.1. ENUMERATED DOMAIN VALUE:

Roseate tern
 Rough cottongrass
 Rough flatsedge
 Rough-toothed dolphin
 Ruddy duck
 Salt marsh bulrush
 Scaup
 Scoter
 Seabeach amaranth
 Sea-beach milkwort
 Seaside alder
 Seaside crowfoot
 Sea-side evening primrose
 Seatrout (weakfish)
 Sei whale
 Sei whale
 Semipalmated sandpiper
 Shorebirds
 Shortfin pilot whale
 Short-fruited rush
 Shortnose sturgeon
 Shortnose sturgeon
 Shortnose sturgeon
 Slender water-milfoil
 Small yellow pond lily
 Small-headed beaked rush
 Snow goose
 Snowy egret
 Snowy orchid
 Solitary sandpiper
 Sora rail
 Sperm whale
 Spot
 Spotted sandpiper
 Squid
 Squirrel (red) hake (ling)
 Stenellid dolphin
 Stinking fleabane
 Stout smartweed

5.1.2.4.1.1. ENUMERATED DOMAIN VALUE:

Striped bass
 Summer flounder
 Surf scoter
 Swamp-pink
 Tautog
 Terns
 Thread-leaved beaked rush
 Tricolored heron
 Twisted spikerush
 Virginia joint-vetch
 Virginia rail
 Virginia thistle
 Wading birds
 Walters St. Johns-wort
 Water oak
 Waterfowl
 Whistling swan (tundra swan)
 White perch
 White-winged scoter
 Whorled nut rush
 Winter flounder
 Wood duck
 Wrinkled jointgrass
 Yellow perch
 Yellow-crowned night heron

5.1. DETAILED DESCRIPTION: T_MAMMAL

The data layer T_MAMMAL contains the polygons with terrestrial mammal species. The following T_MAMMAL species are found in the Delaware, New Jersey, Pennsylvania ESI data set:

SPECIES ID	NAME
8	River otter
37	Muskrat
38	Mink
44	Northern raccoon

5.1.1. ENTITY TYPES:**5.1.1.1. ENTITY TYPE LABEL:**GT-Polygons**5.1.1.2. ENTITY TYPE DEFINITION:**

ID integer

RARNUM integer

5.1.2. ATTRIBUTES:**5.1.2.1. ATTRIBUTE LABEL:**

ID

5.1.2.2. ATTRIBUTE DEFINITION:

A unique identifier that links to the BIO_LUT table. ID is a concatenation of atlas number (12), element number (9), and record number. ID values of 9999 are holes in polygons and do not contain information.
