Cadmium Worksheet Notes

Data Sources

The sources of data for the cadmium worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). Years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data are not available.

Production

Data are domestic production of cadmium metal. Beginning in 1960, production includes secondary cadmium production. Data are from the MR and the MYB.

Imports

Data are imports of cadmium into the United States. No data are available for the years 1900–02 and 1916–20. Data are from the MR and the MYB. For the years 1989–2001, import data on unwrought metal were combined with the data for cadmium waste & scrap from the U.S. Census Bureau's (USCB) Harmonized Tariff Schedule (HTS) code 8107.10. Beginning in the year 2002, trade data for the two categories were reported separately, either as unwrought metal and powders (HTS 8107.20) or waste and scrap (HTS 8107.30). A third code, other articles thereof [including alloys] (HTS 8107.90), was retained. The import figures for the years 2002 to the most recent were obtained by summing these three categories. The import figures for 2002 to the most recent exclude cadmium sulfide, cadmium oxide, and other cadmium chemicals in Chapter 28 of the HTS.

Exports

Data are exports of cadmium from the United States. With the exception of the years 1912 and 1918, no export data are available prior to 1937. No datum is available for the year 1939. Export data prior to the year 1950 are for cadmium metal only. Export data for the years 1951–93 are in terms of cadmium content. Beginning in the year 1991 export data includes secondary cadmium. Data for the years 1994–2001 include exports of cadmium metal, alloy, and scrap. Beginning in the year 2002, trade data for the two categories were reported separately either as unwrought metal and powders (HTS B 8107.20) or waste and scrap (HTS B 8107.30). A third code, other articles thereof [including alloys] (HTS B 8107.90), was retained. The export figures for the years 2002 to the most recent were obtained by summing these three categories. The export figures for 2002 to the most recent exclude cadmium sulfide, cadmium oxide, and other cadmium chemicals in Chapter 28 of the HTS Schedule B. Data are from the MR and the MYB and include unpublished data revisions by the Commodity Specialist prior to 1978.

Shipments

Data are producer shipments, in terms of cadmium content. Shipments data are not available prior to 1929. For the years 1930–59 shipments are for cadmium compounds. Beginning in 1960, data include shipments of cadmium in compounds and metal from producer plants. Data are from the MR and the MYB.

Stocks

Stocks Data are not available prior to 1940. For the years 2001 to the most recent, stock data are industry stocks of cadmium metal only and are end of year, December 31. Data are from the MR and the MYB.

Apparent Consumption

Apparent consumption data are not available prior to 1903. Data for the years 1903–28 were estimated using the following equation:

APPARENT CONSUMPTION = PRODUCTION + IMPORTS - EXPORTS ± STOCK CHANGES.

Data for the years 1929 to the most recent are from the MR and the MYB.

Unit Value (\$/t)

Unit value is defined as the value of 1 metric ton (t) of cadmium apparent consumption. The cadmium metal market price data as published in the MR and the MYB, are used to calculate this unit value. Data for the years 1987 to the most recent represent the New York Dealer price published in the annual tables of Platts Metals Week.

Unit Value (98 \$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

World Production

Data are world refinery production of cadmium. World production data begins in 1932. Data prior to 1932 are production data from selected countries. Data are from the MR and the MYB.
