## New Privately Owned Housing Units Completed

Seasonally Adjusted Annual Rate

Note: Total includes units in structures with two to four units.

## SUMMARY OF FINDINGS

This report provides monthly statistics on the number of new privately owned housing units completed and under construction. This report is released jointly by the Bureau of the Census and the U.S. Department of Housing and Urban Development.

Privately owned housing units were completed in July 1996 at a seasonally adjusted annual rate of 1,429,000. This is 1 ( $\pm 7$ ) percent above the revised June rate of 1,413,000 and 7 ( $\pm 7$ ) percent above the July 1995 estimate of 1,332,000.

The July 1996 rate of single-family housing completions was 1,117,000; this is virtually unchanged ( $\pm 7$  percent) from the June figure of 1,122,000. The July rate for units in buildings with five units or more was 285,000. The July rate for units in buildings with two to four units was 27,000.

During the first 7 months of this year, 758,700 housing units were completed compared with 725,000 units for the same period in 1995. This is an increase of 5 ( $\pm 3$ ) percent.

The seasonally adjusted estimate of housing units under construction at the end of July 1996 was 829,000; this is virtually unchanged ( $\pm 1$  percent) from the revised June figure of 832,000. Of the housing units under construction at the end of July, 598,000 were single-family structures, 203,000 were in buildings with five units or more, and 28,000 were in buildings with two to four units.

In interpreting changes in the seasonally adjusted rates of housing completions, note that month-to-month changes may reflect movements which may be irregular. It may take 4 months to establish an underlying trend for total completions.

The statistics in this release are estimated from sample surveys and are subject to sampling variability as well as nonsampling error including bias and variance from response, nonreporting, and undercoverage. Estimated average relative standard errors of preliminary data are shown in the tables. Whenever a statement such as "2 ( $\pm 3$ ) percent above" appears in the text, this indicates the range (-1 to +5 percent) in which the actual percent change is likely to have occurred. All ranges given for percent changes are 90-percent confidence intervals and account only for sampling variability. If a range contains zero, it is unclear whether there was an increase or decrease; that is, the change is not statistically significant. For any comparison cited without a confidence interval, the change is statistically significant. The December/January issue of Current Construction Reports, C22/96-1, includes explanations of confidence intervals and sampling variability. On average, the preliminary seasonally adjusted estimate of total housing completions is revised about  $\pm 1$  percent.

Housing completions and under construction statistics do not include mobile home units.

## HISTORICAL DATA

Housing completions data have been collected only since 1968; however, housing starts are available from 1889 to the present date. Historical data on housing starts and residential permit authorizations are available from Construction Starts Branch, Manufacturing and Construction Division, Bureau of the Census, Washington, DC 20233. Telephone 301-457-4666.

<sup>P</sup>Preliminary. <sup>r</sup>Revised.<sup>1</sup>The implicit seasonal index is the ratio of the unadjusted number of housing units completed in the United States to the seasonally adjusted national total of housing units completed. It provides an indication of the overall seasonality for the particular month.

Note: These seasonal indexes include trading-day adjustment factors.

## MONTHLY REVISIONS TO ESTIMATES

---

Each month the Census Bureau publishes preliminary estimates of Housing Completions. The Census Bureau releases these estimates to provide government and private data users with early measures of new privately owned residential construction activity. A necessary part of the process of issuing these early data involves the issuance of subsequent revisions. The revisions to monthly housing completions are primarily the result of the replacement of imputed data with data which are reported in subsequent months.

For total housing completions, the range of the difference between the last 12 preliminary and first revision estimates for the same months was from -1.42 percent to 2.47 percent, with a median of 1.08 percent. The range of the difference between preliminary and final estimates was from -0.73 percent to 1.74 percent, with a median of 0.59 percent.
