 Issued November 1996

**New Privately Owned Housing Units Completed**  
 Seasonally Adjusted Annual Rate

Note: Total includes units in structures with two to four units.

Source: U.S. Bureau of the Census, *Housing Completions*.

## SUMMARY OF FINDINGS

This report provides monthly statistics on the number of new privately owned housing units completed and under construction. This report is released jointly by the Bureau of the Census and the U.S. Department of Housing and Urban Development.

Privately owned housing units were completed in September 1996 at a seasonally adjusted annual rate of 1,358,000. This is 6 ( $\pm 7$ ) percent below the revised August rate of 1,442,000, but 7 ( $\pm 7$ ) percent above the September 1995 rate of 1,267,000.

The September 1996 rate of single-family housing completions was 1,105,000; this is 4 ( $\pm 7$ ) percent below the August figure of 1,153,000. The September rate for units in buildings with five units or more was 212,000. The September rate for units in buildings with two to four units was 41,000.

During the first 9 months of this year, 1,014,500 housing units were completed compared with 955,900 units for the same period in 1995. This is an increase of 6 ( $\pm 2$ ) percent.

The seasonally adjusted estimate of housing units under construction at the end of September was 836,000; this is 1 ( $\pm 1$ ) percent above the revised August figure of 824,000. Of the housing units under construction at the end of September, 599,000 were single-family structures, 212,000 were in buildings with five units or more, and 25,000 were in buildings with two to four units.

In interpreting changes in the seasonally adjusted rates of housing completions, note that month-to-month changes may reflect movements which may be irregular. It may take 3 months to establish an underlying trend for total completions.

The statistics in this release are estimated from sample surveys and are subject to sampling variability as well as nonsampling error including bias and variance from response, nonreporting and undercoverage. Estimated average relative standard errors of preliminary data are shown in the tables. Whenever a statement such as "2 ( $\pm 3$ ) percent above" appears in the text, this indicates the range (-1 to +5 percent) in which the actual percent change is likely to have occurred. All ranges given for percent changes are 90-percent confidence intervals and account only for sampling variability. If a range contains zero, it is unclear whether there was an increase or decrease; that is, the change is not statistically significant. For any comparison cited without a confidence interval, the change is statistically significant. The appendix to this report includes explanations of confidence intervals and sampling variability. On average, the preliminary seasonally adjusted estimates of total housing completions are revised about  $\pm 1$  percent.

Housing completions and under construction statistics do not include mobile home units.

## HISTORICAL DATA

Housing completions data have been collected only since 1968; however, housing starts are available from 1889 to the present date. Historical data on housing starts and residential permit authorizations are available from Residential Construction Branch, Manufacturing and Construction Division, Bureau of the Census, Washington, DC 20233. Telephone 301-457-4666.

<sup>p</sup>Preliminary. <sup>f</sup>Revised.

<sup>1</sup>The implicit seasonal index is the ratio of the unadjusted number of housing units completed in the United States to the seasonally adjusted national total of housing units completed. It provides an indication of the overall seasonality for the particular month.

Note: These seasonal indexes include trading-day adjustment factors.
