

Housing Completions

This is the last Housing Completions publication. Information previously found in the publication will be available in the "New Residential Construction" press release. This will be found on our Web site at www.census.gov/mcd. We will introduce new estimation methods and revise unadjusted data and seasonally adjusted annual rates back to January 1999.

New Privately-Owned Housing Units Completed

Seasonally adjusted annual rate in thousands

Note: Total includes units started in structures with two to four units.

SUMMARY OF FINDINGS

This report provides monthly statistics on the number of new privately owned housing units completed and under construction. This report is released jointly by the U.S. Census Bureau and the U.S. Department of Housing and Urban Development.

New housing units were completed in March 2001 at a seasonally adjusted annual rate of 1,490,000. This is 6 (± 7) percent below the revised February rate of 1,586,000, and 14 (± 7) percent below the March 2000 rate of 1,728,000.

The March 2001 rate of single-family housing completions was 1,214,000. This is 2 (± 7) percent below the revised February rate of 1,238,000. The rate for units in buildings with five units or more was 250,000, and the rate for units in buildings with two to four units was 26,000.

Through March 2001, there have been 325,900 housing units completed compared with 361,500 completions during the same time period last year. This is a decrease of 10 (± 4) percent.

The seasonally adjusted estimate of housing units under construction at the end of March 2001 was 1,033,000. This is virtually unchanged (± 1 percent) from the revised February estimate of 1,029,000 units. Of these, 704,000 were single-family structures, 297,000 were in buildings with five units or more, and 32,000 were in buildings with two to four units.

EXPLANATION

The statistics in this report are estimated from sample surveys and are subject to sampling variability as well as nonsampling error including bias and variance from response, nonreporting, and undercoverage. Estimated average relative standard errors of preliminary data are shown in the tables. Whenever a statement such as "2 (± 3) percent above" appears in the text, this indicates the range (-1 to +5 percent) in which

the actual percent change is likely to have occurred. All ranges given for percent changes are 90-percent confidence intervals and account only for sampling variability. If a range contains zero, it is unclear whether there was an increase or decrease; that is, the change is not statistically significant. For any comparison cited without a confidence interval, the change is statistically significant.

In interpreting changes in the seasonally adjusted rates of housing completions, note that month-to-month changes may reflect movements, which may be irregular. It may take 4 months to establish an underlying trend for total completions.

The appendix in the January 2001 issue of this report includes explanations of confidence intervals and sampling variability. On average, the preliminary seasonally adjusted estimates of total housing completions are revised about ± 1 percent.

Housing completions and under construction statistics do not include HUD-coded manufactured homes. Data for these units can be found on the Internet at:

www.census.gov/const/www/mhsindex.html

For more information about these data, contact the Construction Expenditures Branch, Manufacturing and Construction Division, U.S. Census Bureau, Washington, DC 20233-6900. Telephone: 301-457-1605.

HISTORICAL DATA

Housing completions data about units under construction have been collected since 1968. Historical data for these series are available on the Internet at:

www.census.gov/const/www/c22index.html

Contact the Residential Construction Branch, Manufacturing and Construction Division, U.S. Census Bureau, Washington, DC 20233-6900, for information or help. Telephone: 301-457-1321.

¹The implicit seasonal index is the ratio of the unadjusted number of housing units completed in the United States to the seasonally adjusted national total of housing units completed. It provides an indication of the overall seasonality for the particular month.

Note: These seasonal indexes include trading-day adjustment factors.

¹Figures based on exterior dimensions times number of floors divided by number of units.

²Average Relative Standard Errors (Avg. RSE): Annual—Avg. RSE for the last 2 years; Quarterly—Avg. RSE for the latest 2-quarter period (quarter 1 through quarter 2 or quarter 3 through quarter 4).

Table 9. Selected Characteristics of New Privately Owned Buildings Completed With 2 Units or More

[Detail may not add to total because of rounding. Percents computed from unrounded figures]

| Period | Total | Number of units per building | | | | | | Number of floors per building | |
|---|-------|------------------------------|--------|----------|----------|----------|------------|-------------------------------|-----------|
| | | 2 to 4 | 5 to 9 | 10 to 19 | 20 to 29 | 30 to 49 | 50 or more | 1 to 3 | 4 or more |
