SUMMARY OF FINDINGS

This report provides monthly statistics on the number of new privately owned housing units completed and under construction. This report is released jointly by the Bureau of the Census and the U.S. Department of Housing and Urban Development.

Privately owned housing units were completed in December 1997 at a seasonally adjusted annual rate of 1,403,000. This is 2 (± 6) percent below the revised November rate of 1,429,000, and 5 (± 5) percent below the December 1996 rate of 1,484,000.

The December 1997 rate of single-family housing completions was 1,085,000, 6 (± 8) percent above the revised November rate of 1,152,000. The rate for units in buildings with five units or more was 276,000, and the rate for units in buildings with two to four units was 42,000.

During 1997, 1,397,800 housing units were completed. In 1996, 1,412,900 units were completed. This is a decrease of 1 (± 2) percent.

The seasonally adjusted estimate of housing units under construction at the end of December was 869,000, 1 (± 1) percent above the revised November estimate of 857,000. Of these, 578,000 were single-family structures, 261,000 were in buildings with five units or more, and 30,000 were in buildings with two to four units.

In interpreting changes in the seasonally adjusted rates of housing completions, note that month-to-month changes may reflect movements which may be irregular. It may take 4 months to establish an underlying trend for total completions.

The statistics in this report are estimated from sample surveys and are subject to sampling variability as well as nonsampling error including bias and variance from response, nonreporting and undercoverage. Estimated average relative standard errors of preliminary data are shown in the tables. Whenever a statement such as "2 (± 3) percent above" appears in the text, this indicates the range (-1 to +5 percent) in which the actual percent change is likely to have occurred. All ranges given for percent changes are 90-percent confidence intervals and account only for sampling variability. If a range contains zero, it is unclear whether there was an increase or decrease; that is, the change is not statistically significant. For any comparison cited without a confidence interval, the change is statistically significant. The January 1997 issue of Current Construction Reports, C22/97-1, includes explanations of confidence intervals and sampling variability. On average, the preliminary seasonally adjusted estimates of total housing completions are revised about ± 1 percent.

Housing completions and under construction statistics do not include mobile home units.

HISTORICAL DATA

Housing completions data have been collected since 1968. Housing starts are available from 1889 to the present date. Historical data for all these series are available from the Residential Construction Branch, Manufacturing and Construction Division, Bureau of the Census, Washington, DC 20233-6900. Telephone: 301-457-4666.

^pPreliminary. S Withheld because estimate did not meet publication standards on the basis of response rate, associated standard error, or a consistency review.

¹Metropolitan statistical areas.

²Includes units completed in structures with two to four units.

³Average Relative Standard Errors (Avg. RSE): Annual—Avg. RSE for the last 2 years; Quarterly—Avg. RSE for the latest 2-quarter period (quarter 1 through quarter 2 or quarter 3 through quarter 4).
