For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

SUMMARY OF FINDINGS

This report provides monthly statistics on the number of new privately owned housing units completed and under construction. This report is released jointly by the Bureau of the Census and the U.S. Department of Housing and Urban Development.

Privately owned housing units were completed in June 1998 were at a seasonally adjusted annual rate of 1,481,000. This is 1 (± 7) percent above the revised May rate of 1,461,000, and 13 (± 7) percent above the June 1997 rate of 1,307,000.

The June 1998 rate of single-family housing completions was 1,164,000. This is 5 (± 7) percent above the revised May rate of 1,112,000. The rate for units in buildings with five units or more was 271,000, and the rate for units in buildings with two to four units was 46,000.

During the first six months of 1998, there were 663,800 housing units completed compared with 648,400 units completed during the same period of 1997. This is 2 (± 3) percent above last year.

The seasonally adjusted estimate of housing units under construction at the end of June 1998 was 925,000. This is 1 (± 1) percent above the revised May estimate of 915,000. Of these, 635,000 were single-family structures, 258,000 were in buildings with five units or more, and 32,000 were in buildings with two to four units.

EXPLANATION

The statistics in this report are estimated from sample surveys and are subject to sampling variability as well as nonsampling error including bias and variance from response,

nonreporting and undercoverage. Estimated average relative standard errors of preliminary data are shown in the tables. Whenever a statement such as "2 (± 3) percent above" appears in the text, this indicates the range (-1 to +5 percent) in which the actual percent change is likely to have occurred. All ranges given for percent changes are 90-percent confidence intervals and account only for sampling variability. If a range contains zero, it is unclear whether there was an increase or decrease; that is, the change is not statistically significant. For any comparison cited without a confidence interval, the change is statistically significant.

In interpreting changes in the seasonally adjusted rates of housing completions, note that month-to-month changes may reflect movements which may be irregular. It may take 4 months to establish an underlying trend for total completions.

The appendix in the January 1998 issue of this report includes explanations of confidence intervals and sampling variability. On average, the preliminary seasonally adjusted estimates of total housing completions are revised about ± 1 percent.

Housing completions and under construction statistics do not include mobile home units.

HISTORICAL DATA

Housing completions data have been collected since 1968. Housing starts are available from 1889 to the present date. Historical data for all these series are available from the Residential Construction Branch, Manufacturing and Construction Division, Bureau of the Census, Washington, DC 20233-6900. Telephone: 301-457-4666.
