SUMMARY OF FINDINGS

This report provides monthly statistics on the number of new privately owned housing units completed and under construction. This report is released jointly by the Bureau of the Census and the U.S. Department of Housing and Urban Development.

Privately owned housing units were completed in February 1999 at a seasonally adjusted annual rate of 1,546,000. This is 6 (± 7) percent below the revised January 1999 rate of 1,645,000, but 7 (± 7) percent above the February 1998 rate of 1,439,000.

The February 1999 rate of single-family housing completions was 1,265,000. This is 2 (± 7) percent below the revised January 1999 rate of 1,287,000. The rate for units in buildings with five units or more was 248,000, and the rate for units in buildings with two to four units was 33,000.

Through the first two months of this year, 219,900 housing units have been completed compared with 189,200 for the same period last year. This is an increase of 16 (± 4) percent.

The seasonally adjusted estimate of housing units under construction at the end of February 1999 was 1,033,000. This is 2 (± 1) percent above the revised January 1999 estimate of 1,011,000. Of these, 713,000 were single-family structures, 294,000 were in buildings with five units or more, and 26,000 were in buildings with two to four units.

EXPLANATION

The statistics in this report are estimated from sample surveys and are subject to sampling variability as well as nonsampling error including bias and variance from

response, nonreporting and undercoverage. Estimated average relative standard errors of preliminary data are shown in the tables. Whenever a statement such as "2 (± 3) percent above" appears in the text, this indicates the range (-1 to +5 percent) in which the actual percent change is likely to have occurred. All ranges given for percent changes are 90-percent confidence intervals and account only for sampling variability. If a range contains zero, it is unclear whether there was an increase or decrease; that is, the change is not statistically significant. For any comparison cited without a confidence interval, the change is statistically significant.

In interpreting changes in the seasonally adjusted rates of housing completions, note that month-to-month changes may reflect movements which may be irregular. It may take 4 months to establish an underlying trend for total completions.

The appendix in the January 1999 issue of this report includes explanations of confidence intervals and sampling variability. On average, the preliminary seasonally adjusted estimates of total housing completions are revised about ± 1 percent.

Housing completions and under construction statistics do not include mobile home units.

HISTORICAL DATA

Housing completions data have been collected since 1968. Housing starts are available from 1889 to the present date. Historical data for all these series are available from the Residential Construction Branch, Manufacturing and Construction Division, Bureau of the Census, Washington, DC 20233-6900. Telephone: 301-457-1321.

¹The implicit seasonal index is the ratio of the unadjusted number of housing units completed in the United States to the seasonally adjusted national total of housing units completed. It provides an indication of the overall seasonality for the particular month.

Note: These seasonal indexes include trading-day adjustment factors.
