Table 1. Industry-Product Analysis—Industry Shipments by Product and Receipts for Services: 2002

[This table presents the variety of products shipped and receipts for services from each mining industry. Most products of an industry are the products classified in the industry. Their product codes have the same first six-digits as the industry code and are referred to as primary products. However, an establishment may also ship products or have receipts for services not classified in their industry. The first six-digits of these product or service codes are not the same as the industry code and are referred to as secondary products or receipts for services. Data for products and receipts for services with a value of less than \$5 million are not listed separately. These data are included in the "All other products or services" lines. Data based on the 2002 Economic Census. For information on confidentiality protection, nonsampling error, and explanation of terms, see note at end of table. For meaning of abbreviations and symbols, see introductory text]

Table 1. Industry-Product Analysis—Industry Shipments by Product and Receipts for Services: 2002—Con.

[This table presents the variety of products shipped and receipts for services from each mining industry. Most products of an industry are the products classified in the industry. Their product codes have the same first six-digits as the industry code and are referred to as primary products. However, an establishment may also ship products or have receipts for services not classified in their industry. The first six-digits of these product or service codes are not the same as the industry code and are referred to as secondary products or receipts for services. Data for products and receipts for services with a value of less than \$5 million are not listed separately. These data are included in the "All other products or services" lines. Data based on the 2002 Economic Census. For information on confidentiality protection, nonsampling error, and explanation of terms, see note at end of table. For meaning of abbreviations and symbols, see introductory text]

Table 2. Industry-Product Analysis—Product Shipments and Receipts for Services by Contributing Industry: 2002—Con.

[This table presents the industries contributing to the shipments of a product or receipts for services. Most product shipments or receipts for services come from the industry in which the product or service is primary, which is where the industry code is the same as the first six-digits of the product or service code. However, some shipments or receipts for services may come from secondary industries that are displayed in the table with industry codes that are different than the first six-digits of the product or service code. Data for industries contributing less than \$5 million are not listed separately. These data are included in the total product shipments or receipts for services values. For this reason, the detail may not sum to the total. Data based on the 2002 Economic Census. For information on confidentiality protection, nonsampling error, and explanation of terms, see note at end of table. For meaning of abbreviations and symbols, see introductory text.]
