 $^{^{1}}$ Incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as: (N/EH) x 200,000 where

N = number of injuries and illnesses

EH = total hours worked by all employees during

the calendar year

200,000 = base for 100 equivalent full-time workers

(working 40 hours per week, 50 weeks per year).

NOTE: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.

SOURCE: Bureau of Labor Statistics, U.S. Department of Labor, Survey of Occupational Injuries and Illnesses, in cooperation with participating State agencies

 $^{^{2}\,}$ Days-away-from-work cases include those that result in days away from work, some o which also include job transfer or restriction.

³ Excludes farms with fewer than 11 employees.

⁴ Incidence rate less than 0.05.

⁵ Fewer than 50 cases.

⁶ Fewer than 15 cases.
