This report presents data from the American Housing Survey, which was sponsored by the U.S. Department of Housing and Urban Development and conducted by the U.S. Census Bureau. It was prepared primarily under the direction of **Ronald J. Sepanik**, Director, Housing and Demographic Analysis Division, Department of Housing and Urban Development, and **David S. Johnson**, Chief, Housing and Household Economic Statistics Division, Census Bureau.

Ronald J. Sepanik, assisted by **David Vandembroucke** and **Carolyn Lynch**, was responsible for overseeing the American Housing Survey resultant report on behalf of the Department of Housing and Urban Development.

Within the Census Bureau, this report was developed in the Housing and Household Economic Statistics Division. It was prepared under the oversight of **Arthur R. Cresce Jr.**, Assistant Division Chief for Housing Characteristics. Management, coordination, and analysis of this report were under the supervision of **Tamara A. Cole**, Chief, American Housing Survey Branch, assisted by **Joe Huesman**. Primary staff assistance was provided by **Altheria Y. Barnett**, **George T. Boyd**, **George R. Carter, III**, **Janet Freeland**, **Paul P. Harple**, **William L. Hartnett**, **Sandra Lord**, **Matthew B. Streeter**, and **Mary S. Stultz**. Additional support was provided by the following American Housing Branch interns: **Dennis Vasquez** and **Brendan Kaye**.

Under the direction of **Cheryl R. Landman**, Chief, Demographic Surveys Division, **Thomas L. Blatt**, Assistant Division Chief, oversaw the implementation of the American Housing Survey operational activities and directed the systems and processing procedures. Under the supervision of **La Terri D. Bynum**, Chief, Housing Surveys Branch, **Marni L. Brown**, **Edward A. Hayes**, **Nancy J. Midzolek**, **Kyle E. Moore**, **Craig M. Pritzl**, **M. Christopher Stringer**, **Ari L. Teichman**, and **Kenya D. Tyndle** coordinated the operational aspects of the American Housing Survey. Under the supervision of **Debra K. P. Knoll**, Chief, Housing Surveys Programming Branch, **Sharonica L. Baker**, **Lisa A. Ferrer**, **Thomas A. Iseman**, **Cynfon L. Lyle**, **Janet E. Meschkat**, **Jimmy T. Nguyen**, **Cherie L. Nichols**, **Susan K. Peters**, **Diana A. Rubin**, and **Diane S. Schwartz** provided computer programming and processing. **Lewis S. Lenkey**, **Evelyn J. Lincoln**, and **Frederick L. McKee** provided procedures for mailouts and scheduling.

The Demographic Statistical Methods Division, under the direction of **Ruth Ann Killion**, Chief, performed sampling, reinterview, and related activities. Under the supervision of **Dennis**

Schwanz, **Robert Abramson**, **Alphonso M. Mason**, **Toni Marie Warner**, and **Carol Mylet** developed the sample design, weighting, and computation of sampling variances and standard errors. **Shawn P. Barber**, **Debra A. Camper**, **Chongshan Chen**, **Marilyn E. Dorner**, **Leslie R. Flores**, **Kimberly Kochurka**, **Niki L. Lamas**, **Debi Mullen**, **Robert Sanders**, and **Don Washington**, **Chengee B. White**, and the Statistical Methods and Quality Assurance Branch (National Processing Center) implemented the sample selection and prepared sample controls. **Deloris A. Cockrell**, **Nelson R. Freeze**, **Lorie McCray**, **Justin D. Nguyen**, and **Karen Lynn Spinosi** conducted the reinterview design, procedures, analysis, and programming.

Field Division, under the direction of **Brian Monaghan**, Chief, **Michael J. Weiler**, Assistant Division Chief for Surveys, and **Medell E. Ford III**, Branch Chief for Health and Housing Surveys, assisted by **Clinton Borland**, **Laurie A. Jarboe**, **Gayle Marie**, and **Thomas O'Leary** administered the data collection, clerical processing, and data entry activities.

The Technologies Management Office, under the direction of **Barbara M. LoPresti**, Chief, and assisted by **Karen A. Bagwell**, **Geoffrey Pejasa**, and **Steven W. Tornell**, Assistant Division Chiefs, provided overall automation support. **Thomas R. Spaulding**, Authoring Team Leader, provided the computer-assisted interviewing questionnaires used for data collection. **Charles M. Tyler, Jr.**, ROSCO Development Team Leader, **Timothy S. McGarvey**, Laptop Case Management Team Leader, and **Joanne N. Carruba**, Master Control System Team Leader, provided computer programming and systems support. **David Skeehan**, Software Testing Team Leader, provided application and systems testing support. **Christopher A. Garza**, CAPI Telecommunications Team Leader, provided systems support for the CAPI telecommunications system. **Chad G. Nelson**, Technical Assistance Center Team Leader, provided help desk support to the Regional Office and field staff.

Amanda J. Perry and **Steven McIntyre** of the Administrative and Customer Services Division, **Francis Grailand Hall**, Chief, provided publications and printing management, graphics design and composition, and editorial review for print and electronic media. General direction and production management were provided by **Claudette E. Bennett**, Assistant Division Chief, and **Wanda Cevis**, Chief, Publications Services Branch.

Special acknowledgment is also due to the many households whose cooperation contributed to the publication of these data.

Availability of Data Via Electronic Media

In addition to the data shown in this report, users may access a wealth of information based on the American Housing Survey (AHS) by way of the Internet. Through the AHS Web site, data charts are available for users to view the results from the 1993, 1995, 1997, 1999, 2001, 2003, 2005, and 2007 AHS National surveys. The AHS Web site also offers users the opportunity to download national microdata for the years 1997, 1999, 2001, and 2003 by using Ferrett.

National and metropolitan publications dating back to 1973 are available in PDF and scanned format within the AHS Web site at <www.census.gov/prod/www/abs/cons-hou.html>.

Groups of these books are available on CD-ROMs or selectively at <www.census.gov/hhes/www/ahs.html>.

All information can be accessed through the U.S. Census Bureau's home page at <www.census.gov>.

Users may send requests for data or questions regarding the data via e-mail to the Housing and Household Economic Statistics Division of the Census Bureau at <ahsn@census.gov>.

Data users may find similar information concerning the AHS through the HUD USER Web site at <www.huduser.org>.

Major Changes

(For additional details, as well as previous years' changes, see Appendix C.)

ITEMS ADDED

Academic comparison to other area elementary schools. A question was added to determine how the respondents believed their public elementary school compared academically to the other public elementary schools in their area.

Safety equipment. A series of questions were added to determine the number of homes with working smoke detectors, fire extinguishers, sprinkler systems, and/or carbon monoxide detectors.

Down payment. A question was added to determine the percent of purchase price that was used as a down payment.

For detailed definitions of these items, see Appendix A.

ITEMS MODIFIED

Special living. Additional types of services and assistance available to residents (such as bathing and eating) were only asked of those who reported that meals, transportation, or housekeeping were available.

Neighborhood conditions. The series of questions on neighborhood crime, odors, and street noise or traffic was reduced. For each of these items we no longer ask whether or not the condition is bothersome and, if yes, so bothersome that they want to move.

Neighborhood shopping. We no longer ask if satisfactory neighborhood shopping is available and the distance from home (less than 1 mile or 1 mile or more). Instead, we ask if grocery or drug stores are within 15 minutes of the home and, if yes, are they satisfactory.

Public transportation. Instead of asking if the household uses public transportation weekly or less than weekly and the satisfaction level, we now ask if the household uses it regularly for commuting to school or work and the travel time to the nearest mode of transportation.

Selected physical problems. Modified to exclude hallways under severe and moderate physical problems.

Income sources of families and primary individuals. We subdivided the combined Interest/Dividend/Rental income question into separate income receipt items. We also modified the other income to no longer include child support or alimony.

Public elementary school. We no longer ask those who report an unsatisfactory elementary school if they are so bothered they want to move.

Other heating equipment. We no longer ask for the type of fuel used for the secondary sources of heating equipment, nor do we determine if the equipment is a parallel or supplemental heat source.

For detailed definitions of these items, see Appendix A.

For a description of these changes, see Appendix C.

ITEMS DROPPED

Fuels. The question regarding other house heating fuels was dropped.

Height and condition of building. For multiunit structures, the questions on common stairways (and their condition) and light fixtures (and their working order) were dropped.

Explanations and Cautions

EXPLANATIONS

Survey authority and confidentiality. The U.S. Census Bureau conducts the American Housing Survey (AHS) to obtain up-to-date housing statistics for the U.S. Department of Housing and Urban Development (HUD). Title 12, Sections 1701Z-1 and 1701Z-2g of the U.S. Code authorizes the Secretary of HUD to collect data from public and private agencies and protect the confidentiality of the data. Title 12, Section 1701Z-10 mandates the collection of the data for the AHS. The guarantee of confidentiality made to respondents is provided by the Census Bureau. Title 13, Section 9a of the U.S. Code provides that all information that would permit identification of individuals will be held in strict confidence. Such information may be seen only by sworn Census Bureau employees and may be used only for statistical purposes. Section 214 of Title 13 sets penalties for disclosing confidential information. Unauthorized disclosure of individual information by a sworn Census Bureau employee is punishable by a fine of up to \$250,000 or imprisonment of up to 5 years, or both. The Census Bureau is authorized under Title 31, Section 1535 of the U.S. Code to perform special work or services for other federal agencies.

Contents of book. This book presents data on apartments; single-family homes; manufactured/mobile homes; vacant housing units; age, sex, and race of householders; income; housing and neighborhood quality; housing costs; equipment and fuels; and size of the housing units. The book also presents data on mortgages, rent control, rent subsidies, previous unit of recent movers, and reasons for moving.

Scope of the survey. The AHS is conducted by field representatives who obtain information from occupants of homes. They get information on vacant homes from informed people such as landlords, rental agents, or knowledgeable neighbors. Interviewing occurred between April and mid-September 2007. The seven metropolitan areas in the 2007 AHS metropolitan survey have sample sizes ranging from 2,583 to 2,791.

CAUTIONS

Sampling and nonsampling errors. The numbers in this book may have errors from sampling and other causes (incomplete data, wrong answers, etc.).

Appendix D gives more detailed formulas to calculate errors for a wide range of items. Appendix D also gives some estimates of nonsampling errors.

Undercoverage and nonresponse. Each home in the AHS sample represents a large number of other homes. However, because of incomplete sampling lists (i.e., undercoverage) and nonresponse, the homes in the survey do not represent all homes in the country. Therefore, the raw numbers from the survey are raised proportionally so that the published numbers match independent estimates of the total number of homes. These independent estimates are based on Census 2000, plus changes since then. Housing unit undercoverage and household nonresponse rates range from 6–17 percent. Compared to the level derived from the adjusted Census 2000 counts, housing unit undercoverage rates for 2007 metropolitan areas range from 1.8 percent to 7.4 percent.

The weighting procedures used for the AHS-Metropolitan areas partially correct for bias due to nonresponse and housing unit undercoverage, but not for within-household undercoverage. The procedures assume the housing units missed by the survey are like those included, which is not entirely accurate. Housing-unit undercoverage varies by age, ethnicity, and race of householder and by type of household. For some groups, such as Black alone, the undercoverage is at least 9 percent. Some AHS-Metropolitan estimates are affected by missed persons within sample households. These are persons per room, square feet per person, some household composition items (for example, persons per household), and income characteristics. We do not know the effect of this within-household undercoverage on these characteristics. Appendix B explains how the numbers were proportionally adjusted.

Income and poverty. Historically, the AHS underestimates income and overestimates poverty when compared to the Current Population Survey (CPS). The poverty data in the AHS are not published as an official count of households in poverty but to show the housing characteristics of low-income households. For a discussion of income and poverty, see Appendix C.

Computer-assisted interviewing software. In order to improve our data collection systems, the CASES DOS laptop software was replaced in 2007 with the BLAISE for Windows system. BLAISE provides more programming options, higher quality screen displays, and increased user-friendliness. As of the time of this publication, the effect(s) on the data of this software change have not been fully investigated. Therefore, caution is recommended when comparing prior years' data with 2007 data.

Reduction in sample size. The metropolitan area sample sizes have been reduced. Table 2-1 shows the sample size by selected characteristics. Caution is recommended when comparing prior years' data with the 2007 data.

Modifications to metropolitan area boundaries.

Additional counties were added to the Miami, Houston, and Washington, DC MSAs since the last enumeration of these areas. Caution is recommended when comparing prior years' data with the 2007 data for these areas.

The Boston estimates are no longer based on the MSA that contains the city of Boston; they are now based on the NECTAD of Boston. Again, caution is recommended when making comparisons to prior years' data.

No boundary changes have occurred in the Baltimore, Minneapolis, and Tampa MSAs.

DATA AVAILABILITY

The AHS data are presented nationally as well as for major selected metropolitan areas. Table A shows the sources for obtaining AHS data, the product available, and the pricing for each product. Each source or organization sets its own charges, so prices may vary among the sources. For the data user whose needs are not met by the book tabulations (printed books), microdata are available on tapes and on CD-ROMs so that data can be tabulated in any way desired. Microdata are also available on the Internet for 1997 and beyond. Metropolitan data tables are on the Internet for 1974 and beyond. Contact HHES for more details. To protect the confidentiality of the respondent, names, addresses, and areas smaller than 100,000 people are not identified. The sample design generally will not support analysis for areas smaller than those shown in the books.

¹The American Housing Surveys for 1999 and 2001 issued CD-ROMs titled "Table Generating Data Disk." These CDs contain a special type of database file called an EXTRACT. This file allows users to create their own tables (cross tabulations) with the built-in software. On these CDs, there are data tables that users can manipulate to show selected information, to form graphs, and to print. Included also on these CDs is the microdata file in both SAS and ASCII formats along with the associated documentation. The publications also are included.

²Ask for U.S. Census Bureau series H150 and H151. Depository libraries may order Superintendent of Documents prefix C3.215. Libraries often keep national books in a special catalog and section for U.S. government documents. Metropolitan reports may be located in the general catalog since these are not published by the Superintendent of Documents.

¹Native Hawaiian and Other Pacific Islander.

²Because Hispanics may be any race, data can overlap slightly with other groups. Most Hispanics report themselves as White, but some report themselves as Black or in other categories.

³For manufactured/mobile homes, oldest category is 1939 or earlier.

⁴Figures may not add to total because more than one category may apply to a unit.

⁵Includes only those who responded they had some type of air conditioning.

⁶Restricted to units with smoke detector powered by both electricity and batteries, or batteries only.

⁷Beginning with 1989, this item uses current income in its calculation; see Appendix A.

⁸May reflect a temporary situation, living off savings, or response error.

¹Native Hawaiian and Other Pacific Islander.

²Because Hispanics may be any race, data can overlap slightly with other groups. Most Hispanics report themselves as White, but some report themselves as Black or in other categories.

³For manufactured/mobile homes, oldest category is 1939 or earlier.

⁴Figures may not add to total because more than one category may apply to a unit.

⁵Includes only those who responded they had some type of air conditioning.

⁶Restricted to units with smoke detector powered by both electricity and batteries, or batteries only.

⁷Beginning with 1989, this item uses current income in its calculation; see Appendix A.

⁸May reflect a temporary situation, living off savings, or response error.

¹Native Hawaiian and Other Pacific Islander.
²Because Hispanics may be any race, data can overlap slightly with other groups. Most Hispanics report themselves as White, but some report themselves as Black or in other categories.
³For manufactured/mobile homes, oldest category is 1939 or earlier.
⁴Figures may not add to total because more than one category may apply to a unit.
⁵Includes only those who responded they had some type of air conditioning.
⁶Restricted to units with smoke detector powered by both electricity and batteries, or batteries only.
⁷Beginning with 1989, this item uses current income in its calculation; see Appendix A.
⁸May reflect a temporary situation, living off savings, or response error.

¹Native Hawaiian and Other Pacific Islander.

²Because Hispanics may be any race, data can overlap slightly with other groups. Most Hispanics report themselves as White, but some report themselves as Black or in other categories.

³For manufactured/mobile homes, oldest category is 1939 or earlier.

⁴Figures may not add to total because more than one category may apply to a unit.

⁵Includes only those who responded they had some type of air conditioning.

⁶Restricted to units with smoke detector powered by both electricity and batteries, or batteries only.

⁷Beginning with 1989, this item uses current income in its calculation; see Appendix A.

⁸May reflect a temporary situation, living off savings, or response error.

¹See back cover for details.

²Figures may not add to total because more than one category may apply to a unit.

³Includes only those who responded they had some type of air conditioning.

⁴Restricted to units with smoke detector powered by both electricity and batteries, or batteries only.

⁵Excludes units where primary source of water is commercial bottled water.

Definitions

The definitions and explanations given here are, to a considerable extent, drawn from the AHS questionnaire and the *AHS Field Representative Manual*. The definitions are alphabetized by the titles used in summary tables. Some cross-references are provided. If a specific definition is not located, try related definitions. The definitions apply to summary tables and also to the computer files (“micro-data”), unless they are marked “not applicable.”

Academic comparison to other area elementary schools. The respondents were asked to rate the public elementary school attended by the child or children of the household. This rating was made in comparison to other elementary schools in the area.

Access to structure. The purpose for asking members of the household if they enter or exit their home by climbing up or down steps or stairs is to find out if they have wheelchair accessibility. Respondents were asked “Is it possible to enter [your/this] home/apartment from the outside without climbing up or down any steps or stairs?”

Additional central air. See the definition “Equipment.”

Additions, alterations, remodeling, repairs, and replacements.

Publications. Not available. Some tables are available at <www.census.gov/hhes/www/housing/ahs/nationaldata.html>.

Microdata. The statistics are restricted to owner-occupied units. The respondents were first asked if, in the last 2 years, a major disaster, such as an earthquake, tornado, hurricane, landslide, fire, or flood, required them to make extensive repairs to their homes. Replacements and additions were counted as disaster-required repairs only if the damage involved at least 2 rooms or a majority of the home.

The microdata file also shows the total number of replacements/additions reported by all households, and the total cost of these replacements/additions. Each household could name as many as 47 jobs done in their home.

Questions were asked about where the work was done, if any rooms were created or attached, and if the bathroom or kitchen had been remodeled within the last 2 years.

Respondents also were asked if they added or replaced their roofs, siding, interior water pipes; electrical wiring, fuse boxes, or breaker switches; doors or windows;

plumbing fixtures, such as sinks or bath tubs; insulation; wall-to-wall carpeting, flooring; paneling or ceiling tiles; air conditioning; built-in heating equipment; septic tanks; water heaters; dishwashers, garbage disposals; driveways or walkways; fencing or walls; patios, terraces, or detached decks; swimming pools, tennis courts, and other recreational structures; sheds, detached garages, or other buildings.

The microdata file also includes information about whether the household got a low interest loan or grant to pay for the work and the amount spent in a typical year on routine repairs and maintenance.

Adults and single children under 18 years old. See the definition “Household composition.”

Age of householder. The classification refers to the age reported for the householder as of that person’s last birthday.

Age of other residential buildings within 300 feet. The respondent was asked to describe the age of other residential buildings within a half block. For this survey, a half a block is about 300 feet in length. The responses were then classified as: “Older,” “Newer,” “About the same,” or “Very mixed.” “Very mixed” indicates that the ages vary. If there are no other residential buildings within 300 feet, “No other residential buildings” is indicated.

Air conditioning. See the definition “Equipment.”

Alterations. See the definition “Additions, alterations, remodeling, repairs, and replacements.”

Amenities. See the definition “Selected amenities.”

Annual taxes paid per \$1,000 value.

Publications. Real estate taxes paid per \$1,000 value of the house (and lot, except for manufactured/mobile homes) are presented. Medians for taxes per \$1,000 value are rounded to the nearest dollar.

Microdata. Not applicable, can be calculated from taxes and value.

Bars on windows of buildings within 300 feet. The respondent was asked if any of the buildings within 300 feet of the sample unit have metal bars on the windows. For this survey, a half a block is about 300 feet in length. The condition of the windows has no bearing on this item.

The windows might be in perfect condition, but the bars might be there to protect against vandalism. Windows that are boarded up or covered with metal sheeting are not included in this category.

Bathrooms. See the definition “Complete bathrooms.”

Bedrooms. The number of bedrooms in a housing unit includes those rooms that are used mainly for sleeping or designed to be a bedroom, even if used for other purposes. A room reserved only for sleeping, such as a guest room, even if used infrequently, is considered a bedroom. A room built as a bedroom, although not used for that purpose, such as a room meant to be a bedroom but used as a sewing room, is counted as a bedroom. On the other hand, a room designed and used mainly for other purposes, such as a den with a sleep sofa used mainly for watching television, is not considered a bedroom. A housing unit consisting of only one room, such as a one-room efficiency apartment, is classified by definition as having no bedroom.

Bodies of water within 300 feet. These questions determine the proximity of the respondent’s property to bodies of water such as ponds, lakes, rivers, or ocean. Swimming pools and temporary pools of water are not included in this definition. The respondent was also asked if the property is waterfront property and whether the property is on a flood plain.

Building and ground maintenance. Renters were asked their level of satisfaction with the maintenance of the grounds and building in which they lived. The responses could have been “completely satisfied,” “partly satisfied,” “dissatisfied,” or “landlord not responsible for ground maintenance.”

Building neighbor noise. Respondents in multiunit buildings were asked about noise heard through floors, walls, or ceilings of their units. Respondents were also asked about the frequency of noise. The survey also asked the respondents’ opinions of the loudness of noise as well as whether it was bothersome or not bothersome.

Buildings. See the definitions “Bars on windows of buildings within 300 feet,” “External building conditions,” and “Year structure built.”

Business. See the definitions “Income,” “Other activities on property,” and “Rooms.”

Cars and trucks available. Included are passenger cars and station wagons owned or regularly used by one or more household members and ordinarily kept at home. Company cars are counted (if used regularly for non-business purposes and kept at home), as are taxicabs (if they are owned by a household member and kept at home). The total number of vehicles is not published, since cars are counted separately from “trucks or vans.” In

the publications, to obtain a count of all units lacking cars specifically, the lines “no cars, trucks, or vans” and “other households without cars” must be added together.

Included are pickups and small panel trucks of one-ton capacity or less, and small vans that were owned or regularly used by one or more members of the household and ordinarily kept at home. Company trucks and vans are included if used regularly for nonbusiness purposes and kept at home. To obtain a count of all units lacking trucks or vans, the lines “no cars, trucks, or vans” and “with cars, no trucks or vans” must be added together.

Except for units falling in the category “no cars, trucks, or vans,” all units will fall into two categories. For example, a unit with one car only would fall both in the category “1 car with or without trucks or vans” and “with cars, no trucks or vans.”

Cash received in primary mortgage refinance. An owner can receive cash from a mortgage lender by refinancing the primary mortgage. This increases the outstanding balance of the loan.

Census. See the definition “Comparability with Census 2000 of Population and Housing data.”

Central cities.

Since 1985, the National AHS has used the official list of central cities published on June 27, 1983, by the Office of Management and Budget as *OMB Bulletin 83-20*. That list was developed from definitions published January 3, 1980, in the *Federal Register*, Volume 45, pages 956–963. AHS still uses these 1983 boundaries for data in the 2007 national microdata file to measure change consistently over time. However, AHS uses the 1990 census-based geography for the data in the 2007 national publication.

Most metropolitan statistical areas had at least one central city, which was usually its largest city. In addition, any city with at least 250,000 population or at least 100,000 people working within its corporate limits qualified as a central city. Smaller cities were also identified as central cities if they had at least 25,000 population and (1) had at least 75 jobs for each 100 residents who were employed, and (2) 60 percent or fewer of the city’s resident workers commuted to jobs outside the city. Finally, in certain smaller metropolitan statistical areas, there were places with between 15,000 and 25,000 population that also qualified as central cities because they were at least one third the size of the metropolitan statistical area’s largest city and met the two commuting requirements.

See also the definitions “Place size” and “Urban and rural residence.”

Change in housing costs. For the householder and those who moved with the householder, a comparison is made between the share of the housing costs paid in the

previous unit and the share paid in the present residence. Housing costs include mortgage and rent payment, real estate taxes, insurance, utilities, land rent, and mobile home park fees.

Choice of present home and home search. These data are shown for units where the respondent moved during the 12 months prior to the interview. The respondent was asked a three-part question on choice of present home: (1) whether the respondent looked at both houses or manufactured/mobile homes, and apartments; (2) the reasons the respondent chose the present home; and (3) the main reason the present home was chosen. The distribution for choice of present home may not add to the total because the respondent was not limited to one response. See the definition “Reasons for leaving previous unit.”

Choice of present neighborhood and neighborhood search. These data are shown for units where the respondent moved during the 12 months prior to the interview. The respondent was asked a three-part question on choice of present neighborhood: (1) whether the respondent looked for a house/apartment in any other neighborhood; (2) the reasons the respondent chose the present neighborhood; and (3) the main reason the present neighborhood was chosen. The distribution for choice of present neighborhood may not add to the total because the respondent was not limited to one response.

Citizenship.

Citizenship of householder. Place of birth was asked for each householder and every household member. There are five categories of citizenship status: (1) born in the United States, (2) born in Puerto Rico or another U.S. outlying area, (3) born abroad of U.S. citizen parents, (4) naturalized citizens, or (5) noncitizens. People born in the United States are citizens at birth.

Year householder immigrated to the United States. The data are based on information reported for the householder and refer to the year the householder immigrated to the United States.

Community quality. Data are shown for units in communities that have one or more of the following amenities for the use of its members and their guests: a community center or clubhouse, golf course, walking/jogging trails, shuttle bus, day care center, private or restricted-access beach, park, or shoreline.

Commuting. See the definitions “Journey to work” and “Neighborhood conditions and neighborhood services.”

Comparability with Census 2000 Population and Housing data. The concepts and definitions are largely the same for items that appeared in Census 2000 with the following main exceptions.

In the AHS, recent movers are householders who moved into their unit during the 12 months prior to the interview.

In Census 2000, mover households were those who moved between January 1, 1999, and March 31, 2000, a period of 15 months or less.

In the AHS, the number of bedrooms in the housing unit is the count of rooms used mainly for sleeping, even if they also are used for other purposes. In Census 2000, the number of bedrooms was the number that the owner would have listed if the house or apartment were on the market for sale or rent.

Data on poverty status in Census 2000 were compiled using the same approach as the official poverty measure. Since poverty is a family-based measure, this means that household members who were unrelated to the householder had a poverty status based on their own individual incomes, whereas household members related to the householder had a poverty status based on the combined family income. Furthermore, Census 2000 did not evaluate the poverty status of unrelated individuals under the age of 15. In the AHS, data on poverty status are based on the household as a unit. As a result, the total income of the household—the sum of the income of all household members whether or not they are related to the householder—is used to determine the poverty status of the household and all the members living in it. (See the definition “Poverty status” for additional details.)

Income data in the AHS are based on income for the 12 months prior to interview for those household members 16 years and older. The Census 2000 income data are for calendar year 1999 and for income of household members 15 years and older.

Differences between the AHS and Census 2000 data also may be attributed to the method of data collection (mailed questionnaires in the census, personal and telephone interviews in the AHS); differences in processing procedures and sample designs; the sampling variability associated with the sample data from both the AHS and the census; and the nonsampling errors associated with the survey estimates and the census data.

A variety of data on mortgages and owner-occupied properties are presented in the Residential Finance Survey, a specialized study done as part of Census 2000. Differences include the fact that the basic unit of tabulation in the AHS is the housing unit and in Residential Finance publications it is the property. Also, all the data in the AHS are provided by the occupant; in Residential Finance publications, mortgage is reconciled with responses from the lender.

Comparability with Current Construction Reports from the Survey of Construction. The U.S. Census Bureau issues several publications under the series title, *Current Construction Reports*. The data for these reports are primarily from the Survey of Construction.

The major difference with the AHS is that the Survey of Construction shows counts and characteristics of housing units in various stages of construction through completion. The AHS shows only counts and characteristics of completed housing. Additional differences may be attributed to factors such as the sampling variability and non-sampling errors of the data from the two surveys, survey procedures and techniques, and processing procedures.

Complete bathrooms. A housing unit is classified as having a complete bathroom if it has a room or adjoining areas with a flush toilet, bathtub or shower, sink, and hot and cold piped water. A half bathroom has hot and cold piped water and either a flush toilet or a bathtub or shower, but does not have all the facilities for a complete bathroom.

Condition of streets within 300 feet. The respondent was asked if any of the streets within half a block of the sample unit need major repairs, minor repairs, or no repair work. Major repairs include large potholes, badly crumbling or deteriorating shoulders and roadsides, and deep ruts. Minor repairs include small cracks, shallow holes, or missing minor surfacing.

Condominiums. See the definition “Cooperatives and condominiums.”

Condominium and cooperative fee. A condominium fee is charged to the owners of the individual condominium unit on a regular basis. The fee covers operating and maintenance costs of the common property; for example: halls, lobby, parking areas, laundry room, swimming pool; as well as related administrative costs, such as utilities billed communally and management fees.

A cooperative maintenance fee (also called carrying charge) is a fee charged to the owners of the cooperative on a regular basis. It covers a share of the annual amount paid by the cooperative for real estate taxes, mortgage interest, and operating cost. In the publications, medians for condominium fees and cooperative fees are rounded to the nearest dollar.

Consolidated metropolitan statistical areas. A consolidated metropolitan statistical area (CMSA) is made up of at least two primary metropolitan statistical areas. The microdata identify specific CMSAs. See the definition “Metropolitan areas.”

Construction. See the definitions “Comparability with Current Construction Reports from the Survey of Construction” and “Year structure built.”

Cooling degree days. See the definition “Heating and cooling degree days.”

Cooperatives and condominiums. A cooperative is a type of ownership whereby a group of housing units is owned by a corporation of member-owners. Each individual member is entitled to occupy or rent out an individual housing unit and is a shareholder in the corporation

that owns the property, but does not own the unit directly. The corporation may have a mortgage on the whole group of units. The member may have a loan or mortgage to buy his or her shares in the corporation.

A condominium is a type of ownership that enables a person to own an apartment or house directly in a project of similarly owned units. The owner’s name is on the deed, and the owner may have a mortgage on the unit occupied. The owner also may hold common or joint ownership in some or all common areas such as grounds, hallways, entrances, and elevators.

Cooperative or condominium ownership may apply to various types of structures such as single-family houses, rowhouses, and townhouses, as well as apartment units.

Cost. See the definitions “Annual taxes paid per \$1,000 value,” “Change in housing costs,” “Real estate taxes,” “Monthly housing costs,” “Other housing costs per month,” and “Mortgages currently on property.”

Cost and ownership sharing. This item is restricted to owner-occupied housing units. Shared ownership is two or more names on a deed or title. Shared costs include only payments designated for mortgage or utility costs (not taxes or insurance), whether paid directly to a mortgage or utility company, or to household members. Not living here means that one of the people sharing the ownership or costs is not a household member.

Crime. See the subdefinition “Neighborhood crime,” under “Neighborhood conditions and neighborhood services.”

Crop sales.

National microdata. Data on sales of \$1,000 or more of agricultural products during the 12-month period prior to the interview were collected in rural areas.

Metropolitan microdata. Not applicable.

Current income. Current income for families and primary individuals for most respondents is defined as the total income of the family and any primary individuals in the past year.

Upon completion of the detailed income questions, respondents were asked, “Is your total family income THIS MONTH about the same as it was a year ago?” “About the same” was defined as within 10 percent, or just cost of living adjustments. If the respondent answered “no,” a second question was asked, “What do you expect your total family income to be in the NEXT 12 MONTHS?” If the total income of the family and any primary individuals in the past year is unknown, the estimate of the total family income in the next 12 months is used as the current income.

Current income is not published separately. It is used only in the calculation of “Ratio of value to current income” and “Monthly housing costs as percent of current income.”

Current interest rate. This item refers to the annual percentage rate of the primary mortgage in effect as of the date of the interview, not the rate when the mortgage was made, nor any future changes of variable rates of which the respondent may be aware. In the publications, medians for current interest rate are rounded to the nearest tenth of a percent.

Current line-of-credit interest rate. This item refers to the annual percentage rate in effect on current line-of-credit outstanding balances.

Current total loan as percent of value.

Publications. This percentage is computed by dividing the outstanding principal amount by the value of the housing unit. These medians are rounded to the nearest tenth of a percent.

Microdata. Not applicable.

Dependent interviewing. Dependent interviewing is the process by which data from surveys conducted in previous years are used instead of, in addition to, or to verify data collected during the current interview. The first use of dependent interviewing in AHS was for the item “Year structure built” in the year 1984. See Appendix C for dependent interviewing items that were added in 2007.

Description of area within 300 feet. The respondent was asked to describe the area within half a block of the sample unit. The categories include: single-family detached houses, single-family attached houses, low-rise (1–3 story) multiunit buildings, mid-rise (4–6 story) multiunit buildings, high-rise (7-or-more story) multiunit buildings, and manufactured/mobile homes. It also includes the following categories:

Commercial or institutional refers to nonresidential buildings such as offices, stores, restaurants, hotels, banks, churches, parking garages, hospitals, schools, prisons, etc.

Industrial or factory refers to nonresidential buildings such as factories, barns, junkyards, water treatment plants, pumping stations, etc.

Open space refers to areas such as a park, woods, farm, or ranch within half a block of the home/building. It includes other areas such as cemeteries, golf courses, woods, forest preserves, vacant lots, undeveloped land, airport land, ball fields, and school fields.

4-or-more-lane highway, railroad, airport, bodies of water include divided or undivided highways of at least four lanes, railroad or streetcar tracks, public, private, or military airfields.

Down payment. This item refers to the total amount of money used for the down payment or outright purchase of the home. Respondents were allowed to answer by giving a total dollar amount or by giving a percent of the purchase price. See also the definition “Major source of down-payment.”

Educational attainment. Data on educational attainment are derived from a question that asks, “What is the highest level of school ... completed or the highest degree ... has received?” The question on educational attainment applied only to progress in “regular” schools. Regular schools include public, private, and parochial elementary and high schools (both junior and senior), colleges and universities, professional, vocational, trade, and business schools. The credits obtained are regarded as transferable in the regular school system.

Other schools include schools available for children 4 through 16 years of age that are not public or private graded schools. Some examples are ungraded schools, special schools, preschools, early learning centers, etc.

The category “high school graduate” includes people who received either a high school diploma or the equivalent; for example, passed the Test of General Educational Development (GED) and did not attend college. The category “Associate’s degree” includes people whose highest degree is an associate’s degree in (1) an occupational program that prepares them for a specific occupation, and the course work may or may not be creditable toward a bachelor’s degree or (2) an academic program primarily in the arts and sciences, and the course work is transferable to a bachelor’s degree. Some examples of professional degrees include medicine, dentistry, pharmacy, and law.

In the publications, to obtain the total number of householders who are high school graduates, add (1) high school graduates only (includes equivalency), (2) graduates with some college, no degree, (3) with an associate’s degree, (4) with a bachelor’s degree, and (5) with a graduate degree. To obtain the total number of householder graduates with a bachelor’s degree, add (1) with a bachelor’s degree and (2) with a graduate or professional degree. The microdata have similar information on other household members aged 14 years and older.

Elderly.

Publications. Data for the elderly include all households with householders 65 years and older. Note that this definition is narrower than in Department of Housing and Urban Development housing programs, which count as elderly all households where the householder or spouse is 62 or older or has a disability.

Microdata. Not applicable; data can be classified at any age.

Electric fuses and circuit breakers. These statistics are presented for occupied housing units. The data show whether an electric fuse has blown or circuit breaker has

tripped in the home in the 3 months prior to the interview, or while the household was living in the unit if less than 3 months. A blown fuse or tripped breaker switch results in the temporary loss of electricity until the fuse is replaced or the breaker switch reset. Blown fuses inside major pieces of installed equipment (such as some air conditioners) are counted as blown fuses or tripped breaker switches. The item may identify inadequate wiring, but it also happens commonly when people move into houses and are unfamiliar with which items can be turned on at the same time.

Electricity. See the definition “Monthly costs paid for electricity and piped gas.”

Elevator on floor. Statistics are shown for housing units in structures with two or more floors that have one or more passenger elevators in working condition on the same floor as the sample unit. Elevators used only for freight are excluded.

Equipment. This item refers to selected equipment that is not shared with other households. Refrigerators, burners, ovens, and disposals are counted only if they were in working order or the household planned to have them repaired or replaced soon.

Complete kitchen facilities. A housing unit has complete kitchen facilities when it has all of the following: (1) kitchen sink; (2) burners, cook stove, or microwave oven; and (3) refrigerator. These terms are further defined below. The same criteria are used for occupied and vacant units in determining complete kitchen facilities. In some areas of the country it is common for the occupant to bring a refrigerator. In these cases, the vacant unit, lacking a refrigerator, has an incomplete kitchen.

Kitchen sink. Only a sink in the unit or on an enclosed porch is counted, but it does not matter whether it is in the kitchen. However a bathroom sink does not count as a kitchen sink.

Refrigerator. It may or may not have a freezer. Kerosene refrigerators are counted, but not ice boxes.

Cooking stove or range. The cook stove or range can be mechanical or wood-burning.

Burners. Data for burners were collected only if the respondent did not report having a cooking stove with oven. Burners built into a stove or counter top are counted, as are burners on a wood-burning stove.

Microwave oven. Data for microwave ovens were collected only if the respondent did not report having a cooking stove with oven or burners. Prior to 1997, the data collected included all types of ovens except toaster ovens.

Dishwasher. Counter top dishwashers are not counted.

Washing machine. Any kind with a motor is counted.

Clothes dryer. Only clothes dryers with motors are counted, not hand-operated wringers or hand-turned spin dryers.

Disposal in sink. A disposal is a motorized device that grinds waste so it can flow through the waste water pipe.

Trash compactor. Only built-in motorized trash compactors are counted.

Air conditioning. Air conditioning is defined as the cooling of air by a refrigeration unit. This definition excludes evaporative coolers, fans, or blowers that are not connected to a refrigeration unit.

Central air conditioning refers to a central system which air conditions the entire housing unit or major portions of it. In an apartment building, a central system may cool all apartments in the building, each apartment may have its own central system, or there may be several systems that provide central air conditioning for a group of apartments. A central installation with individual room controls is a central air conditioning system.

Additional central refers to a second central air conditioning system (e.g., a dual zone heat pump system).

Room (air conditioning) unit refers to an individual air conditioner that is installed in a window or an outside wall and is generally intended to cool one room, although it may be used to cool several rooms.

External building conditions. The external condition of the building that contains the sample unit is determined by direct questions asked of the respondent. The categories were grouped into the following: roof, walls, windows, and foundation.

Roof. A “sagging roof” is a critical defect indicating continuous neglect, or deep or serious damage to the structure. Only roofs with substantial sagging are included. “Missing roofing material” includes rotted, broken, loose or missing shingles, tiles, slate, shake, and tin, caused by extensive damage from fire, storm, or serious neglect. “Hole in roof” occurs when the missing roof materials expose the interior of the unit directly to weather. Holes caused by construction activity are not counted unless the construction has been abandoned.

Walls. “Missing bricks, siding, other outside wall material” applies to the exterior wall (including chimney) of the structure. These defects may be caused by storm, fire, flood, extensive neglect, vandalism, and so forth. Materials may include clapboard siding, shingles, boards, brick, concrete, and stucco. The missing materials do not necessarily expose the interior of the unit directly to weather. Missing materials resulting from construction activity are not counted unless construction has been abandoned. “Sloping outside walls” is a critical defect indicating continuous neglect or serious damage to the structure. Only walls with substantial sagging are included.

Windows. “Boarded-up windows” have been sealed off to protect against weather or entry and include windows and/or doors covered by board, brick, metal, or some other material. “Broken windows” indicate several broken or missing window panes. “Bars on windows” are to protect against unlawful entry. The condition of the windows has no bearing on this item. The bars can be vertical, horizontal, or a metal grating. Windows completely covered with metal sheeting are not included in this category.

Foundation crumbling or has open crack or hole. This category includes large cracks, holes, and rotted, loose, or missing foundation material.

Extra unit. Extra units include units classified as usual residence elsewhere (URE), vacant units designated as occasional use, and seasonal units (excluding migratory). A series of four questions were asked concerning these units.

Reasons for extra unit owned:

- Previous usual residence—never sold the unit after moving from the unit into a new permanent residence.
- Recreational purposes—used for vacations, weekends, sports, and holidays, but not anyone’s usual residence currently.
- Investment purposes—kept currently for investment purposes regardless of why it was obtained originally.
- Wishes to sell the property but has not been able to yet—the owner is currently attempting to sell the unit but has not been successful.
- Inherited—received as an inheritance in the settling of an estate.
- Some other reason—used if none of the other designations applied.

Location of extra unit. Designates how close the unit is to the owner’s current residence.

Nights owner spent at extra unit. Indicates how often the extra unit was used by the owner.

Nights owner rented extra unit. Determines how often the extra unit was used by people other than the owner.

Family or primary individual. While any occupant of a housing unit is called a household member, each household includes either one of the following:

- *a family*, which is the householder and all (one or more) other people living in the same household who are related to the householder by blood, marriage, or adoption.
- *a primary individual*, which is a householder who lives alone or with nonrelatives only. In any case, the household also may include one or more roommates, lodgers, servants, or other people unrelated to the householder. These are considered members of the household but not of the family.

Married couples related to the householder of a family are included in the family and are not considered as separate families unless they reside in separate living quarters. While they are part of the *family*, they are also usually a *subfamily* (see the definition “Persons other than spouse or children”).

By definition, families include the householder and at least one relative, so in the statistics on household composition, families are always included in the various categories of two-or-more-person households. Primary individuals with nonrelatives living with them also are tabulated as two-or-more-person households. Primary individuals living alone are tabulated as one-person households.

The definition of families and primary individuals is significant in that some income items are collected only for the family or primary individual; these are current income and food stamps. For other household members 16 years and older, who are not related to the householder, total income is collected for each person, but current changes in income are not identified, and their income is not included in comparisons with monthly housing costs or value. The distinction is meant to approximate whose income may be available for housing and other shared living expenses. However it is imperfect in the case of roommates who share more or less equally.

See also the definition “Household composition.”

Farm. See the definition “Crop sales.”

Fire extinguisher. See the definition “Safety equipment.”

First-time owners. If neither the owner nor any co-owner has ever owned or co-owned another home as a usual residence, then the housing unit is reported as the first home ever owned. Previous homes purchased solely as vacation homes or homes purchased for commercial rental purposes are not considered usual residences. However, if a previously owned home was originally purchased as a usual residence and later used as a vacation home or for commercial or rental purposes, the owner is not a first-time owner.

Flush toilet and flush toilet breakdowns. A privy or chemical toilet is not considered a flush toilet. Flush toilets outside the unit are not counted. The statistics on breakdowns of flush toilet are shown for housing units with at least one flush toilet for the household’s use only. The flush toilet may be completely unusable because of a faulty flushing mechanism, broken pipes, stopped up sewer pipe, lack of water supplied to the flush toilet, or some other reason. For households with more than one toilet, the question asked about times when all toilets were unusable.

Food stamps. These data are restricted to families and primary individuals with total incomes of \$25,000 per year or less. Housing units are counted in these data if the

householder or any relative currently living in the unit received food stamps in the past year, even at another address. Throughout most of the United States, stamps have been replaced by the electronic benefit transfer (EBT) which is a system allowing transfer via debit card of government benefits from a federal account to a retail outlet's account. The food stamp program is a joint federal-state program that is administered by the U.S. Department of Agriculture and state and local governments.

Foundation. This item is restricted to one-unit buildings and excludes mobile homes. A structure has a basement if there is an enclosed space at least partially underground in which a person can walk upright under all or part of the building. The basement is under all the building if it is under the entire main structure, excluding garages, carports, and porches. A crawl space is space between the ground and the first floor of the house, but it is not high enough for a person to walk upright. A house is built on a concrete slab if it is built on concrete that has been poured on the ground. The "other" category refers to boats, motor homes, or houses built on stilts or pilings (for example, beach houses).

Fuels.

Electricity may be supplied by above- or underground electric power lines or generated at the housing unit.

Piped gas is gas piped through underground pipes from a central system to serve the neighborhood.

Bottled gas is pressurized gas stored in tanks or bottles that are filled or exchanged when empty.

Fuel oil is heating oil normally supplied by truck to a storage tank for use by the heating system.

Kerosene or other liquid fuel includes kerosene, gasoline, alcohol, and other similar combustible liquids.

Coal or coke is usually delivered by truck.

Wood refers to the use of wood or wood charcoal as a fuel.

Solar energy refers to the use of energy available from sunlight as a heating fuel source.

Other includes briquettes made of pitch and sawdust, coal dust, waste material like corncobs, purchased steam, or any other fuel not listed.

Fuels, other house heating. These are the same types of fuels mentioned above but used in addition to and/or supplementing the main house heating fuel.

Gas. See the definition "Monthly costs paid for electricity and piped gas."

Government subsidy for repairs. "Government subsidy for repairs" refers to an assistance program provided by the federal, state, or local government for the purpose of obtaining or installing energy conservation products for

low income households. The money must be spent that way. The type of products include insulation, storm doors, storm windows, weather stripping, caulking, furnace tune-ups, or for repair of broken doors and windows.

Ground anchors. See the definition "Manufactured housing/mobile home tiedowns."

Group quarters. See the definition "Housing units."

Heating and cooling degree days.

National publications and microdata. Each degree that the average temperature for a day is below 65 degrees Fahrenheit produces one *heating degree day (HDD)*. For example, if the maximum temperature is 70 degrees F and the minimum temperature is 52 degrees F, the average temperature for the day is 61 degrees, resulting in four heating degree days. A day when the average temperature is 65 or more has zero heating degree days.

Each degree that the average temperature for a day is above 65 degrees Fahrenheit produces one cooling degree day (CDD). For example, if the maximum temperature is 80 degrees F and the minimum temperature is 62 degrees F, the average temperature for the day is 71 degrees, resulting in six cooling degree days. A day when the average temperature is 65 or less has zero cooling degree days.

The National Oceanic and Atmospheric Administration (NOAA) provided the information on degree days, based on averages for 1951–80. Each sample unit was assigned heating and cooling degree days using average NOAA data for counties.

Metropolitan publications and microdata. Not applicable.

Heating equipment. Data are shown for the main heating equipment and other heating equipment used in addition to the main heating equipment. More than one category of "Other heating equipment" could be reported for the same household. Only one type of equipment was shown as the "Main heating equipment."

Warm-air furnace refers to a central system that provides warm air through ducts leading to various rooms.

Steam or hot water system refers to a central heating system in which heat from steam or hot water is delivered through radiators or other outlets. It also includes solar heated hot water that is circulated throughout the home.

Electric heat pump refers to a heating and cooling system that utilizes indoor and outdoor coils, a compressor, and a refrigerant to pump in heat during the winter and pump out heat during the summer. Only heat pumps that are centrally installed with ducts to the rooms are included in this category. Others are included in wall units.

Built-in electric units refer to units permanently installed in floors, walls, ceilings, or baseboards.

Floor, wall, or other built-in hot-air unit without ducts refers to a system that delivers warm air to the room right above the furnace or to the room(s) on one or both sides of the wall in which the furnace is installed.

Room heater with flue refers to nonportable room heaters in the wall or free standing heaters that burn liquid fuel, and which are connected to a flue, vent, or chimney to remove smoke and fumes.

Room heater without flue refers to any room heater that burns kerosene, gas, or oil, and that does not connect to flue, vent, or chimney.

Portable electric heater refers to heaters that receive current from an electrical wall outlet.

Fireplace with inserts refers to a fan-forced air circulation system installed in the fireplace to force the heat into the room.

Fireplace without inserts refers to glass door fire screens or fire backs inserted in the back of the fireplace to passively reflect heat.

Cooking stove refers to gas or electric ranges or stoves originally manufactured to cook food.

Stove refers to any range or stove that burns solid fuel including wood burning, pot belly, and Franklin stoves.

Other includes any heating equipment that does not fit the definition for any of the previous definitions.

Heating problems. Statistics are shown for housing units occupied by the householder during the winter prior to the interview and refer only to the main heating equipment. The data are classified by whether the housing unit was uncomfortably cold for 24 hours or more, the number of times equipment breakdowns lasted 6 hours or more, and causes for the breakdowns. The heating equipment is broken down if it is not providing heat at its normal heating capacity through some fault in the equipment.

Utility interruptions occur when there is a cutoff in the gas, electricity, or other fuel supplying the heat.

Inadequate heating capacity refers to heating equipment that is providing heat at its normal capacity, but the housing unit is still too cold for the occupants.

Inadequate insulation refers to air drafts through window frames, electrical outlets, or walls that are cold.

Cost of heating refers to the occupants turning down their thermostat or turning the equipment off altogether to save money. This category includes utilities/fuels that are unavailable due to unpaid bills.

Hispanic. “Hispanic” refers to the origin of the householder, and was determined by asking respondents to identify people living in the unit who were Hispanic or

Spanish-American. There is no intent to include people of Brazilian or Portuguese ancestry. Hispanics may be of any race. Most identify themselves as White or Black, as shown in Table 2-1.

Home-equity line-of-credit. This is a revolving home-equity loan that allows the property owner to borrow against the equity up to a fixed limit set by the lender without reapplying for a loan.

Home-equity lump-sum loan. This is a home-equity loan that is paid out in a one-time lump-sum amount and that must be repaid over a set period of time.

Home-equity mortgage. See the definition “Mortgages currently on property.”

Homes currently for sale or rent. The data are presented in the publication for owner-occupied units, year-round units temporarily occupied by people who have a usual residence elsewhere, and vacant units. The owner may offer the unit up for rent only, up for rent or for sale, or for sale only. In addition, the owner may have contracted to rent or sell the unit, but the transfer has not yet taken place. Finally, the housing unit may be not on the market at all.

Household. A household consists of all people who occupy a particular housing unit as their usual residence, or who live there at the time of the interview and have no usual residence elsewhere. The usual residence is the place where the person lives and sleeps most of the time. This place is not necessarily the same as a legal residence, voting residence, or domicile.

Households include not only occupants related to the householder but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters of the householder. It includes people temporarily away for reasons such as visiting, traveling in connection with their jobs, attending school, in general hospitals, and in other temporary relocations. By definition, the count of households is the same as the count of occupied housing units.

Household composition. Publications. The following categories are published:

Married-couple families. Each household in this group includes the householder and spouse, and other people, if any, who are related to the householder and live in the household. If the householder’s spouse is not present, but another married couple is present; for example, daughter and son-in-law or mother- and father-in-law, the household is not counted here as a married-couple family.

Other male householder. This category includes households with male householders who are widowed, divorced, separated or single, or who are married with wife absent for other reasons.

Other female householder. This category includes households with female householders who are widowed, divorced, separated or single, or who are married with husband absent for other reasons.

No nonrelatives. When this phrase modifies Married-couple households, then households that include householder, spouse, nonrelatives, and other relatives, if any, are included with Other male and Other female householder, rather than with Married-couples, no nonrelatives. The data are published both ways, in the data tables, so readers can see whether their findings are affected by the presence of nonrelatives with married couples.

Single children under 18 years old. This category includes all household members under 18 years, whether related to the householder or not, who are not currently married (they have never been married, or are divorced, separated, or widowed). For example, it includes currently unmarried children of lodgers and foster children.

Own never-married children. This category includes any household member under 18 years old, if he or she has never been married, and is a son, daughter, stepchild, or adopted child of the householder. By definition, children of subfamilies are not children of the householder, so they are excluded from this count. The data are published for both this definition of children and the definition above (based on age and current marital status), in different stub items, so readers can see whether the definition of children affects their findings.

Microdata. Not applicable; researchers may calculate these and other categories from the data on each person. See also the definitions “Persons other than spouse or children” and “Family or primary individual.”

Household moves and formation.

Publications. Data are shown for households that moved into the present unit during the 12 months prior to the date of the interview. The distribution is further classified by (1) whether the household moved together from the same unit, from two or more units, or (2) moved at separate times.

The total does not measure net household formation, since it omits deaths, moves to institutions, and moves abroad, and it does not show whether all occupants of the previous unit moved here; some may have stayed there, or moved elsewhere.

The categories do indicate people moving out of units where they were not the householder (divorce or children setting out on their own), and people moving in with others (marriage, roommates, children moving from one parent to another, or to a grandparent).

Householder. The householder is the first household member listed on the questionnaire who is an owner or renter of the sample unit and is 18 years or older. An

owner is a person whose name is on the deed, mortgage, or contract to purchase. A renter is a person whose name is on the lease. If there is no lease, a renter is a person responsible for paying the rent. If no one meets the full criteria, the age requirement is relaxed before the owner/renter requirement. Where the respondent is one of several unrelated people who all could meet the criteria, the interviewer will select one of them to be listed first who then becomes the householder. See also the definition “Respondent.”

Housing units. A housing unit is a house, apartment, group of rooms, or single room occupied or intended for occupancy as separate living quarters.

Living quarters is a general term that includes both *housing units* and *group quarters*. Living quarters include structures intended for residential use (such as a house, apartment building, boarding house, or mobile home). Living quarters also include the following, but only if they are occupied as usual residences: (a) places such as tents, caves, boats, and railroad cars; and (b) structures intended for nonresidential use (such as rooms in a warehouse where a guard lives). Living quarters exclude quarters being used entirely for nonresidential purposes, such as a store, an office, or quarters used for storing business supplies, machinery, or agricultural products.

Separate living quarters are those in which the occupants live *separately* from any other people in the structure and that have *direct access* from the outside of the structure or through a common hall, lobby, or vestibule that is used or intended for use by the occupants of more than one unit or by the general public. This means that the hall, lobby, or vestibule is not part of any unit, and must be clearly separate from all units in the structure. For vacant units, the criteria of *separateness* and *direct access* are applied to the intended occupants whenever possible. If the information cannot be obtained, the criteria are applied to the previous occupants.

Group quarters. The following types of living quarters are not classified as housing units and are not covered by the AHS interviews (some are in the microdata as Noninterviews):

Institutional group quarters are living quarters occupied by one or more people under care or custody, such as children in an orphanage, people in a nursing home, and prisoners in a penitentiary.

Noninstitutional group quarters do not involve skilled medical care or custody, and do not have separate living. They include college dormitories, fraternity and sorority houses, and nurse’s dormitories.

Note that institutional and commercial establishments that have single-family houses or individual apartments with direct access, where staff live separately, such as some residential hotels, and units for college

professors, are housing units. Military housing for singles is not covered, but housing where civilian family members live is, if it meets the definition of a housing unit.

Hotels. Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; that is, people who consider the hotel as their usual residence or have no usual residence elsewhere. Vacant rooms or suites of rooms are classified as housing units only in those hotels, motels, and similar places in which 75 percent or more of the accommodations are occupied by permanent residents.

Rooming houses. If any of the occupants in a rooming or boarding house live separately from everyone else in the building and have direct access, their quarters are classified as separate housing units. The remaining quarters are combined. If the combined quarters contain eight or fewer roomers unrelated to the householder, or a person in charge, they are counted as one housing unit. Otherwise they are noninstitutional group quarters.

New housing units. Units being built are classified as housing units (though they may be vacant) if construction has reached a point where all exterior windows and doors are installed and final usable floors are in place. Note this stage of construction is earlier than the one used in Duration of vacancy (see the definition “Vacancy, seasonality”), which measures when construction was completed.

The occupants of each housing unit may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living arrangements.

Both occupied and vacant units are counted, except that the following are excluded if they are vacant: (a) tents, caves, boats, railroad cars, and the like; (b) structures intended for nonresidential use; (c) units used for business storage (storage of personal furniture does not disqualify a unit); and (d) units unfit for human habitation (roof, walls, windows, or doors no longer protect the interior from weather, or there is positive evidence, such as a sign on the house or block, that the unit is to be demolished or is condemned).

How the housing unit was acquired. The householder obtained the housing unit by one of several options: by buying a house already built; by signing a sales agreement that included the land as well as the cost of building a house; by having a contractor build it on the householder’s land; by the householder building it on the householder’s own land (this includes a person acting as their own contractor and includes leased land); or by receiving it as a gift or inheritance.

Income. The survey covers total money income in the 12 months before the interview. It covers people age 16 and older (age 14 and older before 1999) currently living in

the housing unit, even if they lived elsewhere during some of the previous 12 months. The figures represent the amount of income before any deductions such as taxes, social security, union dues, bonds, and insurance.

The figures exclude capital gains; lump-sum payments from inheritances or insurance; occasional gifts; other sporadic payments; money borrowed; tax refunds; withdrawal of bank deposits; accrued interest on un-cashed savings bonds; payments between household members except wages in a family business; income “in kind,” such as free living quarters, housing subsidies, food stamps, or food produced and consumed in the home; and money from the sale of property (unless the recipient was in the business of selling such property). Figures also exclude income of people who have died or moved out of the housing unit, even if they lived in it for part of the previous 12 months.

For household members related to the householder, the interviewer asks the respondent for the information. For people not related to the householder, the interviewer tries to ask them directly about their income, but if they are not available, the interviewer asks the respondent. Medians for income are rounded to the nearest dollar.

Figures are shown separately for household income and income of families and primary individuals (see the definition “Family and primary individuals”). Each has its own advantages. Only household income includes the income of lodgers, roommates, employees, and other household members who are not related to the householder.

Wage or salary income includes total money earnings received for work performed as an employee during the past 12 months. It includes wages, salary, armed forces pay, commissions, tips, piece-rate payments, and cash bonuses earned before deductions were made for taxes, bonds, pensions, union dues, etc.

Self-employment income includes net money income (gross receipts minus expenses) from one’s own business, professional practice, partnership, farm, or ranch.

Interest is money received or credited to checking and savings accounts, money market funds, certificates of deposit (CDs), IRAs, KEOGHs, and government bonds.

Dividends are money received, credited, or reinvested from ownership of stocks or mutual funds.

Rental income is money (profits or losses) received from renting land, buildings, real estate, or from roomers or boarders.

Social security income or Railroad retirement. *Social security income* includes social security pensions and survivor benefits, permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance. *Railroad retirement* insurance checks come from the U.S. Government. Medicare reimbursements are not included.

Supplemental security income (SSI) is a nationwide U.S. assistance program administered by the Social Security Administration that guarantees a minimum level of income for needy, aged, blind, or disabled individuals.

Public assistance income includes general assistance and temporary assistance for needy families (TANF). Separate payments received for hospital or other medical care (vendor payments) are excluded. This does not include SSI or noncash benefits such as food stamps.

Retirement pensions and survivor benefits include benefits from a former employer, companies, labor union, or federal, state, or local government, and the U.S. military. Also included are periodic receipts from annuities and insurance, and regular income from IRA and KEOGH plans. This does not include social security income.

Disability payments, workers' compensation, veterans' disability, other disability include payments from companies, unions, and the federal, state, or local government, such as payments from the Social Security Disability Insurance program. Workers' compensation benefits are paid by state workers' compensation programs, and veterans' disability income is paid by the U.S. military.

Child support and alimony. Child support is money received for the support of children not living with their father or mother as a result of a legal separation. Respondents are asked if they received in the past 12 months alimony or child support. They then report the amount. Alimony is money received periodically from a former spouse after a divorce or legal separation.

All other income. All other income includes unemployment compensation, Veterans Administration (VA) payments, royalties, contributions received periodically from people not living in the household, military family allotments, and other kinds of periodic income other than earnings.

There may be significant differences in the income data between the AHS and other surveys and censuses. For example, the time period for income data in the AHS is the 12 months prior to the interview, while other income data generally refer to the calendar year prior to the date of the interview. Additional differences in the income data may be attributed to how income questions are asked, levels of missing data (usually high on questions about income), whether missing data are estimated or ignored, sampling variability, and nonsampling errors.

See also the definition "Current income" in Appendix A, the topics "Poverty" in Appendix C, and "Effect on income" in Appendix D.

Insurance. See the definition "Property insurance."

Interest rate. See the definition "Current interest rate."

Items included in primary mortgage payment. The respondent was asked to indicate which items were

included in the monthly mortgage payment besides principal and interest. These items include property taxes, property insurance, private mortgage insurance, and other charges. Other charges may include disability insurance or life insurance.

Journey to work.

Metropolitan and national publications and microdata. The publications report data on householders. The microdata have similar information on all workers.

Workers. This includes all people 16 years and older who held a job in the United States any time the week before the interview.

Householders who worked last week. This includes householders who reported having a job in the United States any time the week before the interview.

Principal means of transportation to work last week. This refers to the principal mode of travel used to get from home to work. People who use different means of transportation on different days of the week were asked to specify the one used most often. People who used more than one means of transportation to get to work each day were asked to specify the one used for the longest distance during the trip to work. "Mass transportation" refers to bus, streetcar, subway, or trains. "Other means" includes ferryboats, air transport, or motorized carts. See also the definition "Neighborhood conditions and neighborhood services."

Travel time from home to work. This refers to the total elapsed time in minutes to usually get from home to work during the week prior to interview. The elapsed time includes time spent waiting for public transportation and picking up members of carpools. Respondents were instructed to report travel time to the nearest minute.

No fixed place of work. Workers with no fixed place of work are those who did not usually work at the same location each day and do not usually report to a central location to begin work each day.

Distance from home to work. This is the usual one-way, "door-to-door" distance in miles from home to work during the week prior to interview. Respondents were instructed to report travel to the nearest mile.

Departure time to work. This refers to the time (hour and minutes) the respondent left for work. The categories begin with midnight and progress to 11:59 p.m.

Kitchen. See the definition "Equipment."

Land contract. A land contract is an arrangement for the sale of real estate whereby the buyer may use, occupy, and enjoy land, but no deed is given by the seller (and no title passes) until all of the sale price has been paid.

Last used as a permanent residence. See the definition “Vacancy, seasonality.”

Lenders of primary and secondary mortgages. This item is presented for units with two or more mortgages. The data are classified by whether the money was borrowed from a firm (bank or other organization), the seller of the property, or from another individual. Other organizations consist of mortgage corporations, pension plans, credit unions, and savings and loan associations. *Other individual(s)* includes anyone who was not the most recent owner.

Line of credit. See the definition “Home-equity line-of credit.”

Line-of-credit amount used for home additions, improvements, or repairs. This is the percentage of the dollar amount of home-equity loans used for home additions, improvements, or repairs.

Line-of-credit interest rate, current. See the definition “Current line-of-credit interest rate.”

Line-of-credit monthly payment. This is the monthly payment on the line-of-credit paid to the bank at the present interest rate.

Living quarters. See the definition “Housing units.”

Location of previous unit. Publications show data for units in which the householder moved during the 12 months prior to the interview. Microdata show similar information for moves since the previous interview, or for the past 2 years for units added to the sample.

The data compare metropolitan areas of the previous residence and the residence in the AHS sample, where the interview was conducted. The AHS residence is coded by its 1983 metropolitan area definition (see the definition “Metropolitan areas”), which may not be the current area definition. Since 1993, coding the previous residence with comparable 1983 boundaries has not been done because of geographic boundary changes. Therefore, this item has been suppressed to avoid the appearance of spurious changes.

Lodgers. See the definitions “Household,” “Persons other than spouse or children,” and “Rent paid by lodgers.”

Lot size. Lot size includes all connecting land that is owned or rented with the home. Excluded are two-or-more-unit buildings and two-or-more-unit mobile homes. In the publications, median lot size is shown to hundredths of an acre.

Lower cost state and local mortgages. Data are shown for owner-occupied units with one or more mortgages. These are loans generally 1 percent to 3 percent below the current mortgage interest rate at the time the loan was made. The loans are managed through state or

local governments. Excluded are federally funded programs of the Veterans Administration and RHS/RD, formerly Farmers Home Administration.

Lump-sum loan. See the definition “Home-equity lump-sum loan.”

Maintenance cost. See the definition “Routine maintenance in last year.”

Maintenance in last year. Routine maintenance consists of regular maintenance activities necessary for the preventive care of the structure, property, and fixed equipment items. Included are such things as painting; papering; floor sanding; restoring of shingles; fixing water pipes; replacing parts of large equipment, such as a furnace; repairing fences, gutters, sidewalks, decks or patios; removing dangerous trees; or termite inspection. Housecleaning is not included. Routine maintenance does not include work reported under the section on replacements and alterations. Medians for routine maintenance are rounded to the nearest dollar.

Major source of down payment. This item refers to the source of the cash used for down payment or outright purchase of the property (house or lot). If more than one source applied, the one providing the largest amount was recorded.

Sale of previous home was reported only if the previous home was sold during the 12 months preceding the acquisition of the present home.

Savings, or cash on hand, includes money drawn as bank deposits, credit unions, share accounts, saving bonds, certificates of deposits (CDs), money market funds, and IRA or KEOGH accounts.

Sale of other investment includes the sale of other real property or real estate other than the previous home or from the sale of other investments such as stocks, municipal or corporate bonds, mutual funds, or dissolved business ventures.

Borrowing other than a mortgage on this property is shown if the present owner borrowed the down payment, even if the property was mortgaged.

Money received as a gift regardless of the source was categorized inheritance or gift.

Land where building built used for financing means the land on which the structure was built was used as the present owner’s equity in the property.

Sources of down payment that do not fit any of the above categories were recorded in the *other* category.

Manager. See the definition “Owner or manager on property.”

Manufactured/mobile homes. A manufactured/mobile home is defined as a housing unit that was originally constructed to be towed on its own chassis (also called HUD Code homes). It may be built in one or more sections. Since the sections are attached side-by-side at the home site, the final home comprises the number of sections referring to as house “wide.” A unit composed of two sections is a double-wide; three sections is a triple-wide, etc. Single-wide units come from the factory as one section. It also may have permanent rooms attached at its present site or other structural modifications. The term does not include prefabricated buildings, modular homes, travel campers, boats, or self-propelled vehicles like motor homes. Some people use the terms trailer or manufactured housing in the same sense as mobile homes.

Manufactured/mobile home set up.

Manufactured/mobile homes are placed on a permanent masonry foundation; rest on concrete pads; or are up on blocks, but not on concrete pads.

Manufactured/mobile home tiedowns.

Manufactured/mobile home or trailer tiedowns are ground-anchor foundation systems that give physical stability to manufactured/mobile homes.

Manufactured/mobile homes in group.

Manufactured/mobile homes or mobile home sites gathered close together are considered to be in a “group.” This may be a mobile home park or it may be a number grouped together on adjacent individually owned lots not in a mobile home park. See also the definition “Site placement.”

Means of sewage disposal. A *public sewer* is connected to a city, county, sanitary district, neighborhood, or subdivision sewer system, serving six or more units. A *septic tank* or *cesspool* is an underground tank or pit used for disposal of sewage (serving five or fewer units). A *chemical toilet*, which may be inside or outside the unit, uses chemicals to break down or dissolve sewage. Housing units for which sewage is disposed of in some other way are included in the *Other* category. See also the definition “Sewage disposal breakdowns.”

Medians.

Publications. We estimate each median from the printed distribution. For example, if there are 12 million homes of a particular type, the median is the 6 millionth, or halfway point of these homes. Therefore, if 5 million homes are below \$400 rent, then the median is the millionth home above \$400. Finally, if the next interval printed in the publication (from \$400 to \$449) has 3 million homes, the median is assumed to be one-third of the way through the interval (at \$417).

This technique overestimates medians by a few percent because most homes cluster at the bottom of their intervals. The clustering happens because landlords ask for

rent in round numbers, like \$400, and people give answers in round numbers, like \$20,000 income or 40 years old.

We do not show the median at all if the distribution is estimated to have fewer than 25 sample cases (50,000 homes in the national publications).

Microdata. Not applicable; no medians are shown in the public use file.

Median monthly housing costs for owners.

Publications. In addition to the median for “Monthly housing costs,” this item gives two additional medians for *owner-occupied units*. The first median includes maintenance costs in addition to those items included in “Monthly housing costs.” The second median excludes second and subsequent mortgages, installment loans or contracts, and maintenance costs, but includes all remaining items listed in “Monthly housing costs.” Because neither of these medians includes costs for renter-occupied units, they are not comparable to the median presented in “Monthly housing costs,” except in the “Owners column” and the “Owners chapter.”

Microdata. Not applicable.

Metropolitan areas. Metropolitan areas are composed of whole counties (towns in New England) that have significant levels of commuting and contiguous urban areas in common. They may cross state lines, and usually include large amounts of rural land and farm land, provided the county or town as a whole qualifies.

See also the definitions “Central cities,” “Place size,” and “Urban and rural residence,” which is based on much higher population density than metropolitan areas.

National publications and microdata. Since 1985, the National AHS has used the official list of metropolitan areas published on June 27, 1983, by the Office of Management and Budget as OMB Bulletin 83–20. That list was developed from definitions published January 3, 1980, in the Federal Register, Volume 45, pages 956–963. AHS still uses these 1983 boundaries for data in the 2007 national microdata file to measure change consistently over time. However, AHS uses the 1990 census-based geography for the data in the 2003 national publication and beyond. The definitions do not conform with our 2003 OMB definitions.

National microdata identify parts of many metropolitan areas. The sample size is usually too small for analysis, but researchers may group the areas; for example, by growth rate, turnover rate, and size, to have enough cases in each group to analyze. For six broad areas, containing a total of 18 metropolitan area codes, the sample sizes have been augmented to permit analysis: Chicago, Detroit, Los Angeles, New York, Northern New Jersey, and Philadelphia. Elsewhere, metropolitan area codes are shown for (a) central cities of a metropolitan area where they had total

1980 population of 100,000 or more, and (b) urbanized suburbs of a metropolitan area where they had total 1980 population of 100,000 or more. In some areas, only central cities or only suburbs met the cutoff, so only those sample cases show metropolitan codes. Other sample cases show 9999 as their metropolitan code, which is a suppression for confidentiality that does not affect the printed publications.

Metropolitan publications and microdata. Since 1995, the metropolitan AHS has used HUD definitions of metropolitan areas. These start from the definitions of the Office of Management and Budget, but some outlying areas are omitted from the HUD definitions. Those counties have enough commuting to meet the OMB definition, but HUD believes they are not part of the same housing market as the rest of the area and need to be omitted for housing analysis. The areas for a given year included in and excluded from each metropolitan area are listed in the front of the publications for that year.

Monthly costs paid for electricity and piped gas.

Three separate procedures are used to estimate monthly costs of electricity and piped gas. All respondents are asked if they have records available showing their costs for electricity (or piped gas) separate from other utilities. If they respond “yes,” they are asked the amount of their electric (or piped gas) bill for the most recent months of January, April, August, and December. These months are the best predictors of annual costs. On average, more than one-third of respondents provide answers for at least 1 of the 4 months. Respondents are also asked the amount of the most recent bill.

1. If the respondent provides data for only 1 month, the following procedure is used. The data for the month are adjusted using regression formulas to estimate yearly costs that are then divided by 12. These formulas are derived from the Residential Energy Consumption Survey (RECS) sponsored by the U.S. Department of Energy. These formulas take into account the following characteristics of the unit: the census division where it is located, electric heat, electric water heating, natural gas heat, natural gas water heating, year built, type of unit, number of rooms, number of bathrooms, number of appliances, and number of household members.
2. If the respondent provides data for 2, 3, 4, or 5 months, the second procedure is used. As with the first procedure, the monthly data are adjusted using regression formulas, derived from the RECS data, to estimate yearly costs that are then divided by 12. Because more than 1 month’s worth of real costs are available, it is rarely necessary to take into account detailed characteristics of the unit as is done in procedure one. (In some cases where 2 months of data are provided, detailed characteristics of the unit are taken into account.)

3. If the respondent answers “no,” that he or she does not have separate records for the electricity (or gas), the respondent is asked to provide an estimate of the average monthly costs. In this case, a procedure similar to the first is used. As in the case where 1 month of billing data is provided, the reported monthly average is adjusted using regression formulas derived from the RECS data, that take into account both the reported amount of electricity charges and detailed characteristics of the unit.

Finally, a factor is then applied to the electricity and gas costs to benchmark them to RECS averages. A full explanation of the formulas is in Appendix E of *Codebook for the American Housing Survey*, Volume 3.

Monthly expenses, additional help with.

Publications. Not applicable.

Microdata. Additional questions are asked of renters when the ratio of monthly housing costs as percent of current income is high. Rental households receiving housing assistance that report spending more than 35 percent of their incomes on housing, or rental households not receiving housing assistance with incomes less than \$15,000 that report spending more than 50 percent of their incomes on housing were asked whether they received outside help to meet monthly housing expense for food, clothing, car payments, public transportation, child care, medical care or medicine, and utility bills. They were asked to specify the type of help they received.

Monthly housing costs. The data are presented for owner-occupied and renter-occupied housing units as well as vacant-for-rent units.

Monthly housing costs for owner-occupied units include the sum of monthly payments for all mortgages or installment loans or contracts, except reverse annuity mortgages and home-equity lines of credit. Costs also include real estate taxes (including taxes on manufactured/mobile homes, and manufactured/mobile home sites if the site is owned), property insurance, homeowner association fees, cooperative or condominium fees, mobile home park fees, land rent, and utilities. Costs do not include maintenance and repairs, but see the definition “Median monthly housing costs for owners.”

Monthly housing costs for *renter-occupied* housing units include the contract rent, utilities, property insurance, and mobile home park fee. Renter housing units occupied without payment of cash rent are shown separately as “No cash rent.” For rental units subsidized by a housing authority, the federal government, or state or local governments, the monthly rental costs reflect only the portion paid by the household and not the portion subsidized. The figures do not adjust for lost security deposits or the benefit of free rent offered by some owners.

Monthly housing costs for *vacant-for-rent* housing units include rent asked, but not utilities or other charges. The category, *Depends on income of the occupants*, means the rent charged will vary depending on the occupant's income, such as in public housing or some military housing.

The term *utilities* here includes electricity, gas, fuels (oil, coal, kerosene, or wood), water, sewage disposal, garbage and trash collection, but not telephones or cable television. Utility costs are counted if they are paid by the occupant or by someone else, such as a relative, welfare agency, or friend. They may be paid separately or included in rent, condominium fee, or mobile home park fee, and the AHS questions take care to avoid double-counting.

Specified owners and renters. In the publications, Table 19 of each chapter presents financial characteristics for these groups that are comparable to the costs published before 1984. Medians for monthly housing costs are rounded to the nearest dollar.

Monthly housing costs as percent of current income.

Publications. The yearly housing costs (monthly housing costs multiplied by 12) are expressed as a percentage of the total current income (see the definition "Current income"). The percentage was computed separately for each unit and rounded to the nearest percent, so *25 to 29 percent* means 24.5 to 29.49 percent. The category *100 percent or more* counts units with housing costs exceeding income. This situation may mean inaccurate income or housing costs data, or true but temporary situations. For most purposes, readers may wish to treat this line as missing or unreliable data.

Microdata. Not applicable; may be calculated as needed.

Monthly payment for principal and interest. The data present the monthly dollar amount paid on the mortgage for principal and interest only. They do not include that portion of the monthly payment used for property taxes, homeowner's insurance, and/or other charges. In the publications, medians for monthly payment for principal and for interest are rounded to the nearest dollar.

Mortgage origination. Data are shown for owner occupied units with one or more mortgages.

Placed new mortgages data are classified by the date the new mortgage was obtained in relation to the date the property was acquired.

An *assumed* mortgage indicates that the current owner assumed the previous owner's mortgage when the property was acquired and has not been refinanced.

A *wrap-around* mortgage is a mortgage with a face value that encompasses the unpaid balance of the first mortgage(s), plus the amount of any new funds extended by the wrap-around lender.

Combination of the above means that there was more than one method of origination for the outstanding mortgages on the property.

Mortgages.

Total amount of down payment. All sources of money are considered when determining the total amount of the down payment on the property. The amount of the purchasing price can be reported in dollars or percent.

Mortgages currently on property.

Publications. The owner or the owner's spouse was asked the number of mortgages or similar loans (including home equity loans) currently in effect on the home. Data are shown for the number of units with the following mortgage categories: *owned free and clear, reverse mortgages, regular, and home equity.*

A *mortgage or similar debt* refers to all forms of debt for which the property is pledged as security for payment of the debt. It includes such debt instruments as deeds of trust, trust deeds, mortgage bonds, home-equity lines of credit, home-equity lump-sum loans, and vendors' liens. In trust arrangements, usually a third party, known as the trustee, holds the title to the property until the debt is paid. In home-equity lines of credit, home-equity lump-sum loans, and vendors' lien arrangements, the title is kept by the buyer but the seller (vendor) reserves, in the deed to the buyer, a lien on the property to secure payment of the balance of the purchase price. Also included as a *mortgage or similar debt* are contracts to purchase, land contracts, and lease-purchase agreements where the title to the property remains with the seller until the agreed upon payments have been made by the buyer.

Microdata. Not applicable.

Moves. See the definitions "Choice of present home and home search," "Household moves and formation," "Location of previous unit," "Persons—previous residence,"

“Present and previous units,” “Reasons for leaving previous unit,” “Recent mover comparison to previous home,” “Structure type of previous residence,” “Tenure of previous unit,” and “Year householder moved into unit.”

Neighborhood conditions and neighborhood services. The statistics are based on the respondent’s opinion. He or she may define the neighborhood as any size. Some topics are collected by an open-ended question on what, if anything, bothers the respondent about the neighborhood. Others come from questions about specific topics.

Street noise or heavy street traffic. Street noise refers to noise in outdoor public areas made by children playing outdoors, noise from a factory or business, or any other sounds that the respondent considers to be street noise. Traffic refers to the amount of vehicular traffic that the respondent considers “heavy.”

Neighborhood crime. This category refers to all forms of street and neighborhood crime, such as petty theft, assaults against the person, burglary, or any related activities that the respondent judges to be a crime.

Odors. This category refers to smoke, gas, or bad smells. These three specific questions are followed by an open ended question about what (else) bothers the respondent. The category *People* includes such complaints as unfriendly neighbors, noisy children, other races, or specific neighbors.

Public transportation. The respondent answers (1) if service is available; (2) if service is satisfactory; and (3) if any member of the household uses the service at least once a week.

Shopping. The respondent answers whether grocery stores or drug stores were satisfactory and were within 15 minutes of the housing unit.

Police protection. The respondent was asked if police protection was satisfactory.

Elementary schools. Respondents were asked (1) if young children in the household attended public school, private school, ungraded school, special schools, preschools, early learning centers, were schooled at home, or not in school; and (2) if the public elementary school for this address was satisfactory. If at least one child in the household is 13 or younger and there is a child in the household, the respondent was asked (1) how the public elementary school compares academically to other public elementary schools in the area; and (2) if that public elementary school is within one mile from their home. If the household was previously interviewed in prior enumeration and a child lives in the household, then respondents were asked to verify what was recorded previously that the public elementary school is within one mile of household, is correct.

See also the definition “Educational attainment,” “Bars on windows of buildings within 300 feet,” “Condition of streets within 300 feet,” “Description of area within 300 feet,” “Other buildings vandalized or within interior exposed,” “Overall opinion of neighborhood,” and “Trash, litter, or junk on streets or any properties.”

Neighborhood crime. This category refers to any serious crimes that occurred in the respondent’s neighborhood in the past 12 months. For example: burglary, robbery, petty theft, assaults against the person, grand larceny, prostitution, confidence games, rape, vandalism, or murder.

Neighborhood odors. This category refers to smoke, gas, fumes from motor vehicles, industrial, commercial operations, odors from sewers, septic tanks, aerial spraying, or bad smells the respondent finds bothersome in the neighborhood.

Neighborhood shopping. Satisfactory neighborhood shopping could reflect the availability of goods offered, hours of service, prices, or the service available. Respondents are asked only about the quality of grocery stores and drug stores and if the stores are within 15 minutes of their home. A convenience store, such as a 7-Eleven, is not a grocery store. Shopping at other types of neighborhood businesses do not count as neighborhood shopping.

Noise inside building. Respondents were asked if they hear neighbors through floors, walls, or ceilings; if the loudness of neighbor’s noise is bothersome, and if the time of neighbor’s noise is bothersome. The question was only asked of respondents in 1 unit attached or 2 or more unit buildings.

Noninterview.

Publications. Not applicable.

Microdata. Noninterview cases are classified as Type A, Type B, or Type C.

Type A noninterviews are units occupied by people eligible for interview who were not interviewed. A noninterview means that valuable information was lost and the sample returns may not be representative of the population. It is very important to keep noninterviews to a minimum. Type A noninterview categories include (1) no one home, (2) temporarily absent, (3) refused, (4) unable to locate, (5) language problems, and (6) other occupied—specify.

Type B noninterviews are units not eligible for interview at present, but which could become eligible for interviews in the future. Type B noninterview categories include (1) permit granted, construction not started, (2) under construction, not ready, (3) permanent or temporary business or commercial storage, (4) unoccupied site for mobile home or tent, (5) other unit or converted to institutional unit, (6) occupancy prohibited, (7) interior exposed to the elements, and (8) Type B, not classified.

Type C noninterviews are units ineligible for sample, either because they no longer exist or because of sampling reasons. Type C noninterview categories include: (1) demolished or disaster loss, (2) house or mobile home moved, (3) unit eliminated in structural conversion, (4) merged, not in current sample, (5) permit abandoned, (6) Type C not classified elsewhere, and (7) unit eliminated in subsampling.

Number of regular mortgages and home-equity mortgages. See the definition “Mortgages currently on property.”

Number of single children under 18 years old. See the definition “Household composition.”

Occupied housing units. A housing unit is classified as occupied if there is at least one person who lives in the unit as a usual resident at the time of the interview, or if the occupants are only temporarily absent, for example, on vacation. However, if the unit is occupied entirely by people with a usual residence elsewhere, the unit is classified as vacant. By definition, the count of occupied housing units is the same as the count of households.

Other activities on property. Data presented exclude rental units. Property consists of one or more tracts of land that the respondent considers to be the same property, farm, ranch, or estate. The tracts may be adjoining or they may be separated by a road, creek, or other piece of land. For a condominium, this item refers to the sample unit only.

Medical includes a doctor’s or dentist’s office regularly visited by patients.

Commercial establishment includes establishments located in the same building as the sample unit or located elsewhere on the property (such as grocery store, restaurant, gasoline station, and veterinary office). Those housing units that have no recognizable alterations to the outside of the house are not considered as having a commercial establishment. A farm is not classified as a commercial establishment.

Other bothersome neighborhood conditions. The respondent was asked if there were other conditions of the neighborhood that were bothersome, e.g. noise, litter, or housing deterioration, poor city/county services, undesirable commercial, institutional, or industrial property, or people. The respondent is to describe the condition.

Other buildings vandalized or with interior exposed. The respondent was asked if there were any vandalized or abandoned buildings within 300 feet of the sample unit. A unit is counted as vandalized if it has most of the visible windows broken, doors missing, has been badly burned, has words or symbols printed on it, has portions of the roof missing, or in some other way has the interior exposed to weather.

Other housing costs per month. A homeowner’s association fee (excludes condominium and cooperative fees) is a fee charged for services such as upkeep of common property, including painting hallways, cleaning lobbies, mowing lawns, repairing laundry facilities, paving parking areas, and repairing street lights. The fee may include the use and maintenance of either indoor or outdoor swimming facilities or other recreational facilities (party rooms, tennis courts, basketball courts, exercise rooms, and playground areas). Also the homeowner association fee can include payments for security personnel such as security guards or services such as telephone answering service, maid service, or other domestic help.

Mobile home park fees are regular payments to the park management that could include site rental, utility charges, mail handling, and/or fees for the maintenance of common areas. Aside from mobile homes (where site rent is covered in mobile home park fees), in a few areas of the country, occupants may own the unit, but not the land on which it stands. Land rent refers to land that is rented or leased from the land owner, and “ground rent” is paid. These leases are for long periods of time (50–100 years) when originated. The lease obligation transfers with the property and cannot be canceled.

The medians for other housing costs are rounded to the nearest dollar.

Overall opinion of neighborhood. The data presented are based on the respondent’s overall opinion of the neighborhood. The respondent defines neighborhood. The respondent was asked to rate the neighborhood based on a scale from 1 to 10, where 10 is the best and 1 is the worst.

Overall opinion of structure. The data presented are based on the respondent’s overall opinion of the house or apartment as a place to live. The respondent was asked to rate the structure based on a scale from 1 to 10, where 10 is the best and 1 is the worst.

Owner or manager on property. For structures of two or more units, these statistics show the number of rental housing units with the owner or resident manager living on the property.

Own never-married children under 18 years old. See the definition “Household composition.”

Parking lots. Parking lots refer to a cleared level area intended for parking vehicles. There are public and private for pay parking lots.

Payment plans of primary and secondary mortgages. Data are presented separately for primary and secondary mortgages. The term “payment” refers to regular principal and interest payments only, and not to payments for real estate taxes and property insurance.

Fixed payment, self-amortizing mortgages have payments that do not change during the term of the loan, with the principal payments sufficient to pay off the loan completely within the stated term.

Adjustable rate mortgages have interest rates that could be changed during the life of the mortgage, changing the amount of the payments required.

In *adjustable term mortgages* the amount of the payment stays constant, but the number of payments required to pay off the loan can change over time as interest rates change.

Graduated payment mortgages allow monthly payments to change during the term of the mortgage by means other than a change in interest rate. These mortgages begin with lower payments that rise later in the life of the mortgage.

Balloon mortgages are those in which only part or none of the principal is paid off during the term of the loan (which commonly is about 5 years). At the end of the term, the principal is paid off in one lump sum, refinanced with a new loan, or extended by renewal of the loan.

Percent of nonrefinanced primary mortgage, including home-equity lump sum, used for home purchase and improvement. This question is asked of homeowners who have a primary mortgage that is not a refinance of a previous mortgage. These homeowners were asked what percentage of this loan was used for the purchase of the home or additions, improvements, or repairs to the home.

Percent of primary mortgage refinanced cash used for home additions, improvements, or repairs. This question is asked of homeowners who reported “to receive cash” as a reason for the refinance of their mortgage. These homeowners were asked what percentage was used for additions, improvements, or repairs to the home.

Persons. See the definition “Household.”

Persons other than spouse or children.

Publications. Data are shown for households with the following types of people:

Other relatives of householder. This category counts households that include any person related to the householder by blood, marriage, or adoption, except spouse, son, daughter, stepchild, or adopted child under 18 years old (regardless of marital status).

Single adult offspring 18 to 29. This category counts households with at least one member aged 18–29, if he or she is not currently married (that is, they have never been married or are divorced, separated, or widowed), and is a

son, daughter, stepchild, or adopted child of the householder. Note this category has the same marital status categories as *Single children under 18 years old*, but the same relationship to householder categories as *Own never-married children*. These are defined under “Household composition.”

Single adult offspring 30 years of age or over. This category counts households with at least one member aged 30 or older, if he or she is not currently married (that is, never been married or are divorced, separated, or widowed), and is a son, daughter, stepchild, or adopted child of the householder.

Households with three generations. For each person whose parent lives in the household, the parent (biological, adoptive, or stepparent) is identified in the questionnaire. Each person who is a child or grandchild of the householder is also identified. These codes keep count of households where the following live in the unit:

1. One or more sons, daughters, stepchildren, or adopted children of the householder or spouse (regardless of marital status or age), and one or more parents of the householder or spouse, or
2. One or more parents of the householder or spouse, and one or more parents of these parents, or
3. One or more sons, daughters, stepchildren, or adopted children of the householder or spouse (regardless of marital status or age), and one or more of these children’s children (grandchildren of the householder or spouse, regardless of marital status or age).

Note that the definition of children is different from those in “Single children under 18 years old,” and “Own never-married children.” The first does not involve relationship to householder, and neither one involves marital status or age. Also note that if a household has more than three generations, it is still counted here. In addition to the three generations, there also may be other relatives in the household.

Subfamily. A subfamily is one of the following groups that do not include the householder or spouse, but are related to the householder and live in the household: (1) a married couple (with or without children of any type), or (2) one parent with one or more of his or her own never-married children under 18 years old. A common example of a subfamily is a young married couple sharing the home of the husband’s or wife’s parents.

Subfamily householder. For subfamilies that include a couple, the husband is defined as the subfamily householder; for other subfamilies the parent is the householder.

Households with other types of relatives. This category counts households with relatives of the householder, other than the spouse, children, three generations, or subfamilies already counted. Therefore, it includes relatives such

as uncles, nieces, cousins, or grandchildren present without their parents. A household already counted in the above-mentioned categories may be counted again, as long as it has some additional relatives not counted above.

Nonrelatives. A nonrelative of the householder is any person in the household who is not related to the householder by blood, marriage, or adoption. Roomers, boarders, lodgers, partners, resident employees, wards, and foster children are included in this category.

Co-owners or co-renters. This category includes households for which the names of two or more unrelated household members are on the deed of ownership, mortgage, land contract, contract to purchase or similar document, or lease; or, if there is no lease, two or more unrelated household members are responsible for paying the rent.

Lodgers. This category is restricted to members of the household who pay rent to another household member and are 16 years or older; nonrelatives of the householder; not sons, daughters, stepchildren, or adopted children of a co-owner or co-renter; and not co-owners or co-renters themselves. This item does not use the “lodger” answer on relationship to the householder since it is less carefully defined than the question on lodgers rent. See also the definitions “Household” and “Rent paid by lodgers.”

Unrelated children, under 18 years old. This category counts households with members under 18 years old who are unrelated to the householder and are not co-owners, co-renters, or lodgers, regardless of marital status. Thus it includes foster children and children of lodgers and employees as long as they are under 18.

Other nonrelatives. This category counts households with nonrelatives of the householder who are not co-owners, co-renters, lodgers, or under 18. For example, it includes employees and housemates who do not pay a regular rent as lodgers. It also may include households with nonrelatives counted in the categories below.

One or more secondary families. A secondary family is a group of two or more people who are related to each other by birth (Parent/child, child less than 18 years old), marriage, or adoption, but who are not related to the householder nor co-owner nor co-renter. The unrelated secondary family may include people such as guests, roomers, boarders, or resident employees and their relatives living in a household.

Two- to eight-person households, none related to each other. None of the household members are related to any other household member. They may be co-owners, co-renters, lodgers, partners, employees, or foster children. The publications make no distinction between housemates and unmarried partners.

Microdata. Not applicable; may be calculated from household relationships.

See also the definition “Household composition.”

Persons per room.

Publications. Persons per room is computed for each occupied housing unit by dividing the number of people in the unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of housing units having the specified ratio of people per room.

Microdata. Not applicable; may be calculated from household size and rooms.

Persons per bedroom. Persons per bedroom is computed for each occupied housing unit by dividing the number of people in the unit by the number of bedrooms in the unit. The figures shown refer, therefore, to the number of housing units having the specified ratio of people per bedroom.

Microdata. Not applicable; may be calculated from household size and bedrooms.

Persons—previous residence. All people were counted who lived at the previous residence at the time of the move, as well as those who usually lived there but were temporarily away. Persons who were staying there at the time of move, but who had a usual residence elsewhere, were not counted.

Physical problems—severe. A unit has *severe* physical problems if it has any of the following four problems:

Plumbing. Lacking hot or cold piped water or a flush toilet, or lacking both bathtub and shower, all inside the structure (and for the exclusive use of the unit, unless there are two or more full bathrooms).

Heating. Having been uncomfortably cold last winter for 24 hours or more because the heating equipment broke down, and it broke down at least three times last winter for at least 6 hours each time.

Electricity. Having no electricity, or all of the following three electric problems: exposed wiring, a room with no working wall outlet, and three blown fuses or tripped circuit breakers in the last 90 days.

Upkeep. Having any five of the following six maintenance problems: (1) water leaks from the outside, such as from the roof, basement, windows, or doors; (2) leaks from inside structure, such as pipes or plumbing fixtures; (3) holes in the floors; (4) holes or open cracks in the walls or ceilings; (5) more than 8 by 11 inches of peeling paint or broken plaster; or (6) signs of rats in the last 90 days.

Physical problems—moderate. A unit has *moderate* physical problems if it has any of the following four problems, but none being severe:

Plumbing. On at least three occasions during the last 3 months, all the flush toilets were broken down at the same time for 6 hours or more (see the definition “Flush toilet and flush toilet breakdowns”).

Heating. Having unvented gas, oil, or kerosene heaters as the primary heating equipment.

Kitchen. Lacking a kitchen sink, refrigerator, or cooking equipment (stove, burners, or microwave oven) inside the structure for the exclusive use of the unit.

Upkeep. Having any three or four of the six problems listed under “Physical problems—severe” under *Upkeep*.

See also the definitions “Bars on windows of buildings within 300 feet,” “Equipment,” “External building conditions,” “Flush toilet and flush toilet breakdowns,” “Heating equipment,” “Heating problems,” “Overall opinion of structure,” “Primary source of water,” “Water supply stoppage,” “Water leakage during last 12 months,” “Selected deficiencies.”

Place. A concentration of populations which may or may not have legally prescribed limits, powers, or functions. This concentration of population must have a name, be locally recognized, and not be a part of any other state. Examples of nonplaces include the following: (1) populations living in the open countryside, (2) the densely settled fringe of large cities that were built up, but not identified as places. For further explanation of the definition of place, see *1994 Geographic Areas Reference Manual*, chapter 9 available at <<http://www.census.gov/geo/www/garm.html>>.

Not all populations live in a place.¹

Place size.

National publications. The geographic variable place size, as shown in national reports, shows the current count of housing units in places as defined in the 1990 census.

Microdata and metropolitan publications. Not applicable.

See also the definitions “Place,” “Central cities,” and “Urban and rural residence.”

Plumbing facilities. The category “With all plumbing facilities” consists of housing units that have hot and cold piped water as well as a flush toilet and a bathtub or shower. For units with less than two full bathrooms, the facilities are only counted if they are for the exclusive use of the occupants of the unit. Plumbing facilities need not be in the same room. Lacking some plumbing facilities or having no plumbing facilities for exclusive use means that

¹ Does not add up to total because not all population resides in a place, see Appendix A.

the housing unit does not have all three specified plumbing facilities (hot and cold piped water, flush toilet, and bathtub or shower) inside the housing unit, or that the toilet or bathing facilities are also for the use of the occupants of other housing units.

See also the definitions “Complete bathrooms,” “Flush toilet and flush toilet breakdowns,” “Means of sewage disposal,” and “Means of sewage disposal breakdowns.”

Population in housing units.

Publications. Included are all people living in housing units. Persons living in group quarters are excluded.

Microdata. Not applicable; can be calculated by adding weight times household size, for all occupied units.

Poverty status. The poverty data differ from official poverty estimates in two important respects:

1. Interest in housing affordability made it appropriate for AHS to adopt a poverty definition based on household income. The official method is based on the income of families, and of individuals living without relatives. (Under the official approach, the poverty status of two unrelated individuals living together would be determined by comparing the income of each individual to the one-person poverty threshold. The result might be that both were in poverty, both were out of poverty, or one was in poverty and one was not. In the AHS publications, their poverty status was determined by comparing their combined income to the two-person poverty threshold.) The effect of using household income is to count about 6 percent fewer people in poverty than the official estimate. See Technical Paper X, “Effect of Using a Poverty Definition Based on Household Income,” U.S. Department of Health, Education, and Welfare, 1976.
2. The official poverty estimates are based on the Annual Social and Economic Supplement to the Current Population Survey. Income questions in that survey measure income received during the previous calendar year. Income questions in the AHS measure income received during the 12 months just before the interview. Because interviews were conducted over several months, the AHS income measures do not pertain to a fixed period.

The poverty thresholds are based on the Department of Agriculture’s 1961 Economy Food Plan and reflect different consumption requirements by number of adults and children. They consider only money income (see the definition “Income”), not assets or benefits in kind, such as housing subsidies. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index (CPI). The official thresholds are on the next page in Table A-1.

Table A-1. **Poverty Thresholds**

Total persons	HUD average limits (L50) Oct. 2006 to Sept. 2007	HHS guidelines Mar. 2006 to Mar. 2007	Poverty thresholds, January 2007 to December 2007

Note that in the official poverty thresholds, elderly are expected to need less than nonelderly in the one- to two-person groups. Also note that an all-adult household is expected to need less than the same size household where one member is a child, but if additional members are children, costs go down again.

These official poverty thresholds are different from the poverty guidelines published for program purposes by the U.S. Department of Health and Human Services (HHS) on February 18, 2005, Federal Register, Volume 70, number 33, pages 8,373 to 8,375. (Guidelines are 13.1 percent higher in Hawaii, and 20.1 percent higher in Alaska than shown above.)

The HUD “very low income limits” (the L50 series) for four person households are 50 percent of median family income for families in each metropolitan area or nonmetropolitan county. The HUD income limits vary among areas, and the average national HUD income limits in 2007 are shown (local details are at <www.huduser.org/datasets/il/il2007_docsys.html>).

The HUD adjustments for household size in the L50 series are very roughly based on national average differences in housing cost. The HUD limits have smaller adjustments than the official and HHS poverty thresholds, which are based on food cost. Housing cost does not vary as much as food does between small and large households. Academic research suggests even the HUD adjustments may be too large; see van Praag, “The Relativity of the Welfare Concept,” in Nussbaum and Sen, *Quality of Life*, Oxford University Press, 1993, page 374, which suggests 6 percent adjustments per person instead of HUD’s 10 percent and 8 percent adjustments.

Microdata. Not applicable; may be calculated by comparing current or past income to the thresholds.

Present and previous units. The present unit is the one occupied by the householder or respondent at the time of the interview. The previous unit is the one from which the householder or respondent moved. If the householder or respondent moved more than once during the 12 months prior to the date of the interview, the previous unit is the one last moved from.

Previous home owned or rented by someone who moved here.

Publications. These data are shown for units where the householder moved within the United States during the past year.

Microdata. Data are shown for units where anyone in the present household moved within the United States during the past year.

Previous occupancy. The statistics presented are restricted to housing units built in 1990 or later. “Previously occupied” indicates that someone, or people not now in the household, occupied the housing unit prior to the householder or other related household members’ occupancy. “Not previously occupied” indicates that either the householder or some other current household member was the first occupant of the housing unit.

Primary Metropolitan Statistical Area (PMSA). A PMSA is one subcomponent of a CMSA. For example, Washington is one PMSA of the Washington-Baltimore CMSA.

Primary mortgage. Detailed information on regular and lump-sum home-equity mortgages was collected in the AHS on the first three mortgages reported, even if the unit

had four or more mortgages. If the owner(s) had both a regular and a lump-sum home-equity mortgage, priority was given to the regular mortgage(s) for collecting detailed information. On the basis of this information, one of the mortgages was considered to be primary. The definition of the primary mortgage may not agree with legal definitions of a “first mortgage,” which would be paid first after a foreclosure.

If there is only one mortgage, it is primary. If two or more mortgages exist, the following hierarchy was used: (1) regular mortgage (as opposed to a lump-sum home-equity loan); (2) Federal Housing Administration (FHA), Veterans Administration (VA), or Rural Housing Service/Rural Development (RHS/RD) mortgage; (3) assumed mortgage; (4) mortgage obtained first; and (5) largest initial amount borrowed.

Primary source of water. A *public system or private company* refers to any source supplying running water to six or more housing units. The water may be supplied by a city, county, water district, or private water company, or it may be obtained from a well that supplies six or more housing units. An individual well that provides water for five or fewer housing units is further classified by whether it is drilled or dug. Water sources such as springs, cisterns, streams, lakes, or commercial bottled water are included in the other category. See also the definition “Water supply stoppage.”

Principal. Principal is the amount of money raised by a mortgage or other loan, as distinct from the interest paid for its use. It is the amount of debt excluding interest. See the definition “Total outstanding principal amount.”

Private mortgage insurance. Private mortgage insurance is insurance that a lender generally requires a home buyer to obtain if the down payment made by the home buyer is below a certain percentage (often 20 percent down payment for conventional loans).

Problems. See the definitions “Neighborhood conditions and neighborhood services,” “Physical problems,” and “Poverty status.”

Property insurance. This item refers to insurance on the structure and/or its contents (such as furniture, appliances, or clothing) and usually contains some liability insurance. Renters usually do not have property insurance, (renter’s property insurance) but, if they do have it, its cost is counted. The total cost is the most recent yearly cost for which the occupants have actually been billed. Yearly cost was divided by 12 before calculating a monthly median cost. Medians for property insurance are rounded to the nearest dollar.

Public elementary school. See the definitions “Educational attainment,” “Academic comparison of local public elementary schools,” and “Neighborhood conditions and neighborhood services.”

Public transportation. Public transportation includes public bus or subway, taxicabs, trains, ferryboats, or any type of transportation service that is available to the public. Also included are bus or van service provided by the management of a housing development for its residents. School buses are not included as public transportation.

Purchase price. The purchase price refers to the price of the house or apartment and lot at the time the property was purchased. Closing costs are excluded from the purchase price, and for mobile homes the value of the land is excluded. In the publications, the median purchase price is rounded to the nearest dollar.

Quality. See the definitions “Neighborhood conditions and neighborhood services,” “Physical problems,” “Selected amenities,” and “Selected deficiencies.”

Questionnaire. Computer-Assisted Interviewing (CAI) was introduced in 1997, eliminating paper questionnaires. See the topic “Computer-assisted interviewing” in Appendix C.

The AHS questionnaire no longer exists in a printed version. In 1997, the survey converted to an electronic version conducted using laptop computers. The exact wording of the questions can be found in the 2007 Instrument Items Booklet (<www.HUDUSER.org/datasets/AHS/AHSdata07.html>).

Race and origin. In the publications, the classification of “race” refers to the race of the householder occupying the housing unit. The concept of race as used by the Census Bureau does not denote a clear-cut scientific definition of biological stock. Race is determined on the basis of a question that asked for self-identification of a person’s race. For respondents who refused to answer, the interviewer decided on a race only for people she or he saw; others are imputed by computer.

Hispanic is considered an ethnic origin rather than a race and is tallied separately. Most Hispanics report themselves as White, but some report themselves as Black or other categories. Figures are given for race and ethnicity in Table 2-1.

Revisions to the OMB Statistical Policy Directive 15 designate five races (White, Black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or other Pacific Islander) and two ethnic origins (Hispanic or Latino and non-Hispanic or Latino). In 2003, the AHS adopted the new terminology and allowed for reports of more than one race. See the topic “Race” in Appendix C.

The question on race using the new terminology included a list of six race categories. If the race of a respondent did not match the five specific races, then the respondent would select the category “Some other race.” Respondents answering “Some other race” had their answer changed (allocated) to one of the other five categories. The six race categories include:

- White
- Black or African American
- American Indian and Alaska Native
- Asian
- Native Hawaiian and Other Pacific Islander
- Some other race

People who responded to the question on race by indicating only one race are referred to as the race alone population, or the group who reported only one race. For example, respondents who marked only the White category would be included in the “White alone population.” Individuals who chose more than one of the six race categories are referred to as the “Two or more races population,” or as the group who reported more than one race. For example, respondents who reported they were White **and** Black or African American, or White **and** American Indian, or Alaska Native **and** Asian² would be included in the Two or more races category.

Ratio of loan to value. See the definition “Current total loan as percent of value.”

Ratio of value to current income.

Publications. The ratio of value to current income is computed by dividing the value of the housing unit by the total current (family) income (see the definition “Current income”). The ratio is computed separately for each housing unit and is rounded to the nearest tenth. For value and current income, the dollar amounts are used. Units occupied by individuals who reported no income or a net loss compose the category *zero or negative income*. Medians for the ratio of value to current income are rounded to the nearest tenth.

Microdata. Not applicable; can be calculated from value and income.

Real estate taxes. This item includes special assessments, school taxes, county taxes, and any other real estate taxes. Excluded are payments on delinquent taxes due from prior years. Rebates are subtracted from the total. When the real estate taxes are included with the mortgage, a separate amount for the taxes is obtained. To determine average monthly cost, yearly cost was divided by 12. In the publications, medians for real estate taxes are rounded to the nearest dollar.

Reason primary mortgage refinanced. If the current primary mortgage was a regular mortgage (not a lump-sum home-equity loan) and was not an assumed or wrap-around mortgage, the respondent was asked if it was a refinancing of a previous mortgage and the reason for the refinancing.

² The race in combination categories are denoted by quotations around the combinations with the conjunction and in bold and italicized print to indicate the separate races that comprise the combination.

Reasons for leaving previous unit. These data are shown for units where the respondent moved during the 12 months before the interview. The distribution may not add to the total because the respondent was not limited to one reason.

Evicted from residence occurs due to nonpayment of rent or objectionable behavior by the renters.

Private displacement includes situations in which a private company or person wanted to use the housing unit for some other purpose; for example, to develop the land or build commercially, to occupy the unit, to convert the unit to a condominium or cooperative, or to make repairs and renovate the unit..

Government displacement means the respondent was forced to leave by the government (local, state, or federal) because it wanted to use the land for other purposes; for example, to build a road or highway, for urban renewal or other public activity, because the building was condemned, or some other reason.

Disaster loss includes damage by a tornado, storm, flood, earthquake, fire, landslide, or other similar occurrences.

New job or job transfer indicates that the respondent moved to begin a new job or was transferred from the previous location to the present location.

To be closer to work/school/other means that the respondent moved because commuting was too far and respondent wanted to live closer to work, school, or some other commuting purpose.

Other, financial/employment related refers to financial or employment related reasons, such as wanting to look for a new or different job because the person entered or left the U.S. Armed Forces, retired, or some other financial/employment reason.

To establish own household means that the respondent left a previous residence, such as parent’s home, rooming or boarding house, or shared apartment, to establish their own household.

Needed larger house or apartment refers to moves that were necessary because of crowding or for aesthetic reasons.

Married, widowed, divorced, or separated is marked if the respondent moved because of marital reasons.

Other, family/personal related indicates that the respondent moved because of family or personal reasons such as wanting to live closer to relatives.

Wanted better home was marked if the respondent moved because the previous residence was too old, run-down, in need of too many repairs, or if there was nothing wrong with the previous home, the respondent simply wanted to move to a better one.

Change from owner to renter, or change from renter to owner indicates a change in tenure.

Wanted lower rent or less expensive maintenance indicates that the respondent moved because the rent (or mortgage) payments were too high at the previous residence or that the taxes or upkeep was too high.

Other housing related reasons includes such reasons as respondent wanted larger yard, different zoning, or wanted a better investment.

Other includes examples such as respondent wanted a change in climate, neighborhood crime problem, and racial or ethnic composition of neighborhood.

See also the definitions “Choice of present home and home search” and “Choice of present neighborhood and neighborhood search.”

Microdata. These data are shown for units in which the respondent moved during the 24 months before the interview.

Recent movers. Data for recent movers who moved in the 12 months prior to interview are shown for two categories of movers: (1) units where the householder moved into the present unit during the 12 months prior to the interview (shown as a column in most tables, and in Table 10 of each chapter), and (2) units where the respondent moved into the present housing unit during the 12 months prior to the interview (Table 11 of each chapter). In most cases, the two groups represent the same households.

Microdata also show moves of other household members during the 24 months prior to the interview.

Recent mover comparison to previous home. This item is based on the respondent’s comparison between the present unit and previous unit as to which was better.

Recent mover comparison to previous neighborhood. This item is based on the respondent’s comparison between the present neighborhood and the previous neighborhood as to which was better. The definition of neighborhood is whatever the respondent considers it to be.

Regions. States and the District of Columbia contained in each region are as follows:

Northeast. Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, and New Jersey.

Midwest. Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, Kansas, Nebraska, North Dakota, and South Dakota.

South. Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee, Kentucky, Arkansas, Louisiana, Oklahoma, and Texas.

West. Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Idaho, Alaska, Washington, Oregon, Nevada, California, and Hawaii.

Remaining years mortgaged. The owner or owner’s spouse was asked the length of time it would take to pay off the loan at the current payments. The response reflects the amortization schedule. For example, in many balloon mortgages the initial monthly payments are calculated to pay off the loan in 30 years, though the mortgage is due in 5 years, and the 60th payment is very large. Such a mortgage would count here as 30 years, not 5 years, minus whatever number of years have passed. In the publications, medians for remaining years mortgaged are rounded to the nearest year.

Remodeling. See the definition “Additions, alterations, remodeling, repairs, and replacements.”

Rent. See the definition “Monthly housing costs.”

Rent paid by lodgers. This item refers to regular, fixed rent: a set amount of money, billed or charged, which is paid at regular intervals by a lodger (usually weekly or monthly) to a member of the household. This category is restricted to lodgers who are 16 years and older, nonrelatives of the householder, and people who are not spouses of a co-owner or co-renter, not children of a co-owner or co-renter, and not co-owners or co-renters themselves. Medians for rent paid by lodgers are rounded to the nearest dollar.

Rent reductions.

Rent control means that increases in rent are limited by state or local law. The jurisdiction, state, or local agency, mandates that rent increases may not exceed some level, or must be approved by the government. This category does not include limits that HUD puts on all rental projects insured by the Federal Housing Administration.

Owned by a public housing authority means the unit is owned by any local or state government agency, and operated as public housing. These organizations may receive subsidies from the federal or state government, but the local agency owns the property.

Government subsidy means the household pays a lower rent because a federal, state, or local government program pays part of the cost of construction, mortgage, or operating expenses. These programs include rental assistance programs where part of the rent for low-income families is paid by HUD, and direct loan programs of HUD and the Department of Agriculture for reduced cost housing. Units requiring income verification are usually subsidized. Many households in these programs apply through the public housing authority and misreport themselves in public housing. Others do not think of their units as subsidized and misreport themselves as unsubsidized.

Subsidies for homeowners, including HUD subsidies for cooperatives, are not counted, since the questions are asked only of renters.

Other income verification means that the occupants are asked questions about their income when their lease is up for renewal, but they were unable to identify what type of rent reduction they received, if any.

Renter maintenance quality. Renters were asked their opinions of owner's response time and if owners were polite and considerate for maintenance and repairs of major and minor problems. The definition of a major or minor problem was left up to the discretion of the respondent. Satisfaction was measured by the following choices: "usually," "not usually," "very mixed," "haven't needed any," and "landlord not responsible for maintenance." When problems occurred, renters were asked if problems were solved quickly once repairs started.

Renter's property insurance. Renter's property insurance or renter's coverage policy covers those aspects of the apartment and its contents not specifically covered in the blanket policy written for the complex. This policy can also cover liabilities arising from accidents and intentional injuries for guests as well as passers-by up to 150' of the domicile. Common coverage areas are events such as lightning, riot, aircraft, explosion, vandalism, smoke, theft, windstorm or hail, falling objects, volcanic eruption, snow, sleet, and weight of ice.

Repairs. See the definition "Additions, alterations, remodeling, repairs, and replacements."

Replacements. See the definition "Additions, alterations, remodeling, repairs, and replacements."

Respondent. Any knowledgeable adult household member 16 years of age or older is technically eligible to act as the respondent. That is, the one who is the most knowledgeable household member who appears to know—or might reasonably be expected to know—the answers to all or the majority of the questions.

Reverse annuity mortgages. These were defined to the respondent as "reverse annuity mortgage or home-equity conversion mortgage." These mortgages involve borrowing against home equity for retirement or income and sometimes do not need to be repaid until after the owner's death.

Rooms. The respondent was asked to report all rooms in the housing unit. The interviewer then coded the responses into different categories. Rooms counted include whole rooms used for living purposes, such as bedrooms, living rooms, dining rooms, kitchens, recreation rooms, permanently enclosed porches that are suitable for year-round use, lodger's rooms, and other finished rooms. Also included are rooms used for offices by a person living in the unit.

A dining room, to be counted, must be a separate room. It must be separated from adjoining rooms by built-in archways or walls that extend at least 6 inches from an intersecting wall. Half walls or bookcases count if built-in. Movable or collapsible partitions or partitions consisting solely of shelves or cabinets are not considered built-in walls.

Bathrooms, laundry rooms, utility rooms, walk-in closets, pantries, and unfinished rooms are not counted as rooms.

Rooms used for business. A room used for business is set up for use as an office or business for a business owner, contract worker, self-employed person, commercial use (such as daycare or catering), or regular job. The question asked if rooms were exclusively used for business space. Follow-up questions asked if there were direct access to the outside without going through any other room and whether the space was used both as business space and for personal use.

See also the definition "Other activities on property."

Rural. See the definition "Urban and rural residence."

Safety equipment. Safety equipment installed inside the home includes: (1) a working smoke detector powered by electricity, batteries, or both (respondent is asked if the batteries in the smoke detector have been replaced in the last 6 months); (2) fire extinguishers purchased or recharged in the last 2 years; (3) sprinkler systems; and (4) working carbon monoxide detectors.

Safety of primary source of water. Water was considered safe (consumable or potable) if the main water source was used or could be used for drinking. The respondent was not asked what source was used by the household for drinking, but whether or not the main water source was safe for cooking and drinking. This item excludes units where the primary source of household water was commercial bottled water.

Sample size. The sample size is the unweighted count of the actual sample cases. See Appendix B for an explanation of sample design.

Schools. See the definitions "Educational attainment," "Academic comparison to other area elementary schools," and "Neighborhood conditions and neighborhood services."

Seasonal units. See the definition "Vacancy, seasonality."

Secured communities. These types of communities are typically residential communities in which public access by nonresidents is restricted, usually by physical boundaries, such as gates, walls, and fences, or through private security. These communities sometimes require a special entry system, such as entry codes, key cards, or security guard approval. Public access restrictions refers to the community, not a building or units. These communities

exist in a myriad of locations and development types, including high-rise apartment complexes, retirement developments, and resort and country club communities.

Secured multiunits. Secured multiunits refer to one or more multiunit buildings that require some sort of special entry procedure, such as entry codes, key cards, or security guard approval for access. This also includes intercom systems where the occupants can identify and buzz-in visitors.

Selected amenities.

Porch, deck, balcony, or patio is counted if it is attached to the sample unit, not just to the building, or free standing. Porches may be enclosed or open. The porch, deck, balcony, or patio is only counted if it is at least 4 feet by 4 feet.

Usable fireplace excludes the following: fireplaces that have been blocked off or whose chimney or flue has been filled, decorative or artificial fireplaces and wood stoves, even if shaped like a fireplace. Free-standing fireplaces are included in this item.

Separate dining room is an area separated from adjoining rooms by archways or walls that extend at least 6 inches from an intersecting wall. See the definition “Rooms.”

Living rooms, recreation rooms, etc., includes family rooms, dens, recreation rooms, and/or libraries. Garage or carport is only counted if it is on the same property, though not necessarily attached to the house.

Off-street parking includes driveway or parking lot privileges that are paid for as part of the rent or owned with the unit. Data on garage or carport are not collected for occasional-use vacant units and other vacant units.

See also the definition “Overall opinion of structure.”

Selected deficiencies.

Signs of mice or rats refer to respondents who reported seeing mice or rats or signs of mice or rats inside the house or building during the 3 months prior to interview or while the household was living in the unit if less than 3 months. Signs of mice or rats include droppings, holes in the wall, or ripped or torn food containers.

Holes in floors are in the interior floors of the unit. The holes may or may not go all the way through to a lower floor or to the exterior of the unit. The holes are only counted if large enough for someone to trip in.

Open cracks or holes (interior) are in the walls or ceilings of the housing unit. Included are cracks or holes that do not go all the way through to the next room or to the exterior of the housing unit. Hairline cracks or cracks that appear in the walls or ceilings, but are not large enough to insert the edge of a dime, are not counted. Very small holes caused by nails or other similar objects are also not counted.

Broken plaster or peeling paint (interior) are on the inside walls or ceilings, and at least one area of broken plaster or peeling paint must be larger than 8 inches by 11 inches.

Exposed wiring is any wiring that is not enclosed, either in the walls or in metal or plastic coverings. Excluded are appliance cords, extension cords, chandelier cords, and telephone, antenna, or cable television wires.

Rooms without electric wall outlets are rooms without at least one working electric wall outlet. A working electric wall outlet is one that is in operating condition; that is, it can be used when needed. If a room does not have an electric wall outlet, an extension cord used in place of a wall outlet is not considered to be an electric wall outlet.

Selected geographic areas. Data for each county and independent city (in certain states) for which it was estimated that 100 or more interviews occurred are shown in the stub item “selected geographic areas” in Table 2-1 of the metropolitan publications.

Selected subareas. Publications for three of the largest central cities and/or counties in each metropolitan area are shown in Chapters 2 through 6 of the metropolitan publications under the boxhead column “selected subareas.” For a list of the selected subareas in each metropolitan area, see the inside back cover of the metropolitan publications.

Senior citizen communities. These communities are age-restricted, meaning that at least one member of the family must be at least 55 years old or older. Communities that are age specific means that although not required, communities attract people in the 55 or older age group.

Sewage disposal, means of. See the definition “Means of sewage disposal.”

Sewage disposal breakdowns. Sewage disposal breakdowns are limited to housing units in which the means of sewage disposal was a public sewer, septic tank, or cesspool. Breakdowns refer to situations in which the system was completely unusable. Examples include septic tank being pumped because it no longer perked, tank collapsed, tank exploded, sewer main broken, sewer treatment plant not operating as a result of electrical failure, or water service interruption.

Data on breakdowns are shown if they occurred in the 3 months prior to the interview or while the household was living in the unit, if less than 3 months; and if the breakdown lasted 6 consecutive hours or more. Housing units with a breakdown in sewage disposal also are classified according to the number of breakdowns.

See also the definition “Means of sewage disposal.”

Shared ownership. See the definitions “Cost and ownership sharing” and “Time sharing.”

Single children, under 18 years old. See the definition “Household composition.”

Site placement. This item is collected for manufactured/mobile homes. “Site” refers to location (other than the manufacturer’s or dealer’s lot) and not necessarily a manufactured/mobile home park site. The manufactured/mobile home does not have to be occupied at each site, as long as it is set up for occupancy.

Smoke detector. See the definition “Safety equipment.”

Source of drinking water. These statistics are restricted to units where the respondent answered that the primary source of drinking water was not safe to drink. Units where the primary source of water is commercial bottled water are excluded. See the definition “Primary source of water.”

Special or assisted living. Special living refers to services that management of multiunit complexes with 5 or more units in a building provides for residents where at least one household member is age 55 or older. The questions determine whether the management offers the following services to residents: meals, transportation, house-keeping, managing finances, phone use, and shopping. If the resident said yes to any of the above services, then questions are asked if the management offers assistance with personal care, such as bathing, eating, moving about, dressing, and toilet use.

Specified owner and renter. See the definition “Monthly housing costs.”

Square feet per person.

Publications. Square feet per person are computed for each single-family, detached housing unit and mobile home by dividing the square footage of the unit by the number of people in the unit. The figures refer to the number of housing units having the specified square feet per person. Median square footage is rounded to the nearest foot.

Microdata. Not applicable.

Square footage of unit. Housing size is shown for single-family, detached housing units and manufactured/mobile homes. Excluded from the calculation of square footage are unfinished attics, carports, attached garages, porches that are not protected from weather (such as screened porches), and mobile home hitches. Both finished and unfinished basements are included. Median square footage is rounded to the nearest foot. Square footage is based on the respondent’s estimate of the size of the unit.

Stories between main and apartment entrances. Data are presented for multiunit structures with two or more floors and are concerned with the number of floors from the main-entrance level of the building to the main

entrance of the unit. “Same floor” indicates that the main entrance of the sample unit is on the same level as the main entrance that residents use to enter the building.

Stories in structure. The statistics are presented for all housing units, except for manufactured/mobile homes. Any basement is included, whether finished or not. Finished attics also are included; unfinished attics are not. For split levels and bi-levels, the number of stories is determined by the highest number of floors that are physically over each other. When respondents are asked how many stories are in the tallest building within a half block of their home/building, their answer is placed into 1 of 3 categories—7 or more; 6 to 4; or 3 or less.

Street noise or heavy street traffic. See the definition “Neighborhood conditions and neighborhood services.”

Structure type of previous residence. These data are shown for householders who moved within the United States during the previous 12 months. They are based on the respondent’s classification.

Subsidies. See the definition “Rent reductions.”

Suburbs. Suburbs are defined in the AHS as the portion of each metropolitan area that is not in any central city.

See also the definitions “Central cities” and “Metropolitan areas.”

Suitability for year-round use. See the definition “Vacancy, seasonality.”

Taxes. See the definitions “Annual taxes paid per \$1,000 value” and “Real estate taxes.”

Tenure. A housing unit is owner occupied (including a cooperative or condominium unit) if someone whose name is on the deed, mortgage, or contract to purchase lives in the unit. Units where the elderly buy a unit to live in for the remainder of their lives, after which it reverts to the seller, are considered owner occupied.

All other occupied housing units are classified as renter occupied units, including units rented for cash, if occupants or others pay some rent, and/or occupied without payment of cash rent, such as a life tenancy or a unit that comes free with a job. Households who do not pay cash rent may still pay utilities.

Tenure of previous unit. These data are shown for householders who moved within the United States during the 12 months prior to the interview. The previous unit was owner occupied if the owner or co-owner lived in the unit. All other previous units were renter occupied.

Term of primary mortgage at origination or assumption. The term is the number of years from the date the present owner-occupants first obtained the present mortgage to the date the last payment is due

according to the terms of the contract. On a balloon mortgage this term may be short and the last payment very large. In the publications, medians for term of primary mortgage are rounded to the nearest year.

Total home-equity line-of-credit limit. Total home-equity line-of-credit limit is a mortgage loan that is usually in a subordinate position and allows the property owner to obtain multiple advances of the loan proceeds at the borrower's discretion, up to an amount that represents a specified percentage of the borrower's equity in a property. This line-of-credit allows the property owner to borrow against the equity in the home from time to time without reapplying for a loan.

Total outstanding line-of-credit loans. The total outstanding line-of-credit loan is the current balance on the home-equity line-of-credit. The current balance is usually reported on the monthly or quarterly statement.

Total outstanding principal amount.

Publications. The statistics represent the total amount of principal that would have to be paid if the loans were paid off in full on the date of interview. The formula used to calculate the outstanding principal amount does not take into account the fact that some households make additional principal payments. The resulting data, therefore, may be an overestimate of the total outstanding principal. In the publications, medians for outstanding principal amount are rounded to the nearest dollar. The data include all regular mortgages and lump-sum home-equity, but exclude line-of-credit home-equity loans.

Microdata. Not applicable.

Trash, litter, or junk on streets or any properties within 300 feet. The respondent was asked if there was trash, litter, or junk in the streets, roads, empty lots, or on any properties within a half block of the building. For this survey a half block is about 300 feet in length. Major accumulation includes tires, appliances, or large amounts of trash accumulated over a period of time. Minor accumulation includes small amounts of paper, cans, or bottles that do not give the impression of long neglect. The property on which the sample unit is located is included.

Trucks. See the definition "Cars and trucks available."

Type of primary mortgage. The federal government agencies that currently insure or guarantee mortgages or similar debts include the Federal Housing Administration (FHA), the Department of Veterans Affairs (VA), and Rural Housing Service/Rural Development (RHS/RD). Mortgage insurance is a promise to pay the lender's losses in case the borrower fails to keep up the required mortgage payments and defaults on the loan. Such insurance protection is offered by the government, acting as an insurance agent, and by private mortgage insurance companies. Mortgage loans that are not insured or guaranteed by

these government agencies are referred to as "conventional" mortgages. Conventional mortgages, including mortgages insured or guaranteed by state or local governments, are shown as "Other types."

Types of mortgages. See the definition "Mortgages currently on property."

Units. See the definitions "Housing unit," "Occupied housing units," and "Vacancy, seasonality."

Units in structure. In determining the number of housing units in a structure, all units, occupied and vacant, are counted. The statistics are presented for the number of housing units, not the number of residential structures. A structure either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof.

Structures containing only one housing unit are further classified as: detached, if it has open space on all four sides; or attached, if it has unbroken walls extending from ground to roof that divide it from other adjoining structures, as in many row houses or townhouses. If a unit shares a furnace or boiler with adjoining units, then the walls are pierced by pipes or ducts, and all the units thus joined are included in one structure.

Manufactured/mobile homes are shown as a separate category (see the definition "Manufactured/mobile homes").

Urban and rural residence. As defined for the 1980 and 1990 censuses, urban housing comprises all housing units (a) in urbanized areas and (b) in places (see the definition "Place size") of 2,500 or more inhabitants outside urbanized areas, but excluding housing units in the rural portions of extended cities. Housing units not classified as urban are rural housing.

Urbanized areas. In the 1980 and 1990 censuses, each urbanized area comprised an incorporated place and adjacent densely settled area (1.6 or more people per acre, or 1,000 or more people per square mile) that together had a population of at least 50,000. It also included some less dense adjacent land such as industrial parks and golf courses inside city limits.

More information on urbanized areas and the historical development of the urban-rural definition appears in the 1980 Census of Population reports, Characteristics of the Population, Number of Inhabitants, PC80-1-A, for further information call the Census Bureau Library reference desk at 301-763-2511. See also the 1990 Census of Housing reports, General Housing Characteristics, CH-1-1 at <http://www2.census.gov/prod2/decennial/documents/1980a_usC-01.pdf>

Utilities. See the definition "Monthly costs paid for electricity and piped gas."

Vacancy, seasonality. A housing unit is vacant if no one is living in it at the time of the interview, unless its occupants are only temporarily absent. In addition, housing units where all the occupants have a usual residence elsewhere are grouped with vacant units.

Year-round housing units. This includes all units occupied as a usual residence, regardless of design, and all vacant units that are intended by the owner for occupancy at all times of the year. For example, if a unit in a resort area is intended for occupancy in all seasons, it is a year-round unit.

For rent. Owners of some units offer them for rent. Other owners solicit offers either for rent or for sale. When separate categories for these are not shown, they are both included in for rent, as in the rental vacancy rate.

Rental vacancy rate. The rental vacancy rate is the number of vacant year-round units for rent as a percent of the total rental inventory; i.e., all renter-occupied housing units and all year-round vacant housing units for rent or rented, not occupied.

For sale only. Units “for sale only” are offered for sale and the owner does not solicit renter-occupants, even though the owner might eventually rent the unit.

Rented or sold. If any money rent has been paid or agreed upon, but the new renter has not moved in as of the date of the interview, or if the unit has recently been sold, but the new owner has not yet moved in, the unit is classified as rented or sold.

Occasional use. These are units held for weekend or other occasional use throughout the year. Second homes may be classified here or as seasonal.

URE. These are temporarily occupied by people with a Usual Residence Elsewhere. If all people in a housing unit usually live elsewhere, the unit is classified as vacant. For example, a beach cottage occupied at the time of the interview by a family who has a usual residence in the city is included in the count of vacant units. The home in the city or the home of a comparable vacationing family also could be in the AHS sample and would be reported as occupied, since the occupants are only temporarily absent. URE units also may be classified in any of the vacancy categories: seasonal or for sale.

Other vacant. This category includes units held for settlement of an estate, units held for occupancy by a caretaker or janitor, and units held for personal reasons of the owner.

Seasonal units. These are intended by the owner to be occupied during only certain seasons of the year. They are not anyone’s usual residence. A seasonal unit may be used in more than one season; for example, for both summer and winter sports. Published counts of seasonal units also

include housing units held for occupancy by migratory farm workers. While not currently intended for year-round use, most seasonal units could be used year-round; see the next definition.

Suitability for year-round use. For vacant housing units that are not intended by their current owners for year-round use (seasonal and migratory), the respondent was asked whether the construction and heating of the housing unit made it suitable for the unit to be occupied on a year-round basis. A housing unit is suitable for year-round use if it is built as a permanent structure, properly equipped, insulated, and heated as necessitated by the climate.

Time sharing. This item is restricted to vacant housing units, including units temporarily occupied by people who have usual residences elsewhere. Time sharing is a form of ownership in which a single property is owned by multiple owners. Each is entitled to occupy the unit for a limited period of time. The number of years of ownership may vary depending on the terms of the contract. Participants in time-sharing ownership usually, but not always, receive a deed of ownership. See definition “Time sharing.”

Duration of vacancy. This refers to the length of time (in months) from the date the last occupants moved from the housing unit to the date of the interview. The data, therefore, do not provide a direct measure of the total length of time that units remain vacant. For newly constructed units that have never been occupied, the duration of vacancy is counted from the date construction was completed. For recently converted or merged units, the time is reported from the date that conversion or merger was completed.

Last used as a permanent residence. The statistics refer to the length of time (in months) since units that are currently seasonal vacant were last used as a permanent residence, and are measured as of the date of interview. Units that have always been used for short-term or seasonal occupancy are classified as “Never occupied as permanent home.”

Value. Value is the respondent’s estimate of how much the property (house and lot) would sell for if it were for sale. Any nonresidential portions of the property, any rental units, and land cost of mobile homes, are excluded from the value. For vacant units, value represents the sales price asked for the property at the time of the interview, and may differ from the price at which the property is sold. In the publications, medians for value are rounded to the nearest dollar.

See also the definition “Ratio of value to current income.”

Water. See the definitions “Plumbing facilities,” “Primary source of water and water supply stoppage,” “Safety of primary source of water,” and “Source of drinking water.”

Water leakage during last 12 months. Data on water leakage are shown if the leakage occurred in the 12 months prior to the interview or while the household was living in the unit if less than 12 months. Housing units with water leakage are classified by whether the water leaked in from outside the building, and by the most common areas (roof, basement, walls, closed windows, or doors); or inside the building and the reasons of water leakage (fixtures backed up or overflowed or pipes leaked).

Water supply stoppage. Water supply stoppage means that the housing unit was completely without running water from its regular source. Completely without running water means that the water system servicing the unit supplied no water at all; that is, no equipment or facility using running water (in kitchen and bathroom sinks, shower, bathtub, flush toilet, dishwasher, and other similar items) had water supplied to it, or all were inoperable. The reason could vary from a stoppage because of a flood or storm, to a broken pipe, to a shutdown of the water system, to a failure to pay the bill, or other reasons.

Data on water supply stoppage are shown if they occurred in the 3 months prior to the interview, or while the household was living in the unit if less than 3 months, and if the breakdown or failure lasted 6 consecutive hours or more. Housing units with water supply stoppage also are classified according to the number of times the stoppages occurred. See also the definition “Primary source of water.”

Work. See the definitions “Income” and “Journey to work.”

Worked at home last week. This question determines who is working out of the office. This can include telecommuters (a company employee who works from home full- or part-time during normal business hours), real estate salesperson, and any person who works at home on a regular job.

Worked at home last week for householder. This question determines who in the household worked for the householder last week. The person need not be related to the householder. The time worked may have been part-time, even 1 or 2 hours last week. It includes baby-sitting for pay, helping out in a family store or family farm, and similar work. Excluded is the person’s own housework or odd jobs around the house (painting the porch, cutting grass, etc.); unpaid baby-sitting for family, relatives, or friends; and unpaid volunteer work for a church, etc. Work done by residents of an institution is not considered work for the purpose of this survey. The time period covered is

the full calendar week, from Sunday through Saturday, preceding the date the interview is completed.

Year householder immigrated to the United States. See the definition “Citizenship.”

Year householder moved into unit. The data are based on the information reported for the householder and refer to the year of latest move. Thus, if the householder moved back into a housing unit previously occupied, the year of the latest move was to be reported. If the householder moved from one apartment to another in the same building, the year the householder moved into the present unit was to be reported. The intent is to establish the year present occupancy by the householder began. The year the householder moves is not necessarily the same year other members of the household move; although, in the great majority of cases the entire household moves at the same time. In the publications, the median year householder moved into unit is rounded to the nearest year. See also the definition “Year structure built.”

Year primary mortgage originated. The year the primary mortgage was originated is the year the mortgage was signed (see the definition “Primary mortgage”). In the publications, medians for year primary mortgage originated are rounded to the nearest year.

Year structure built. Year structure built represents the respondent’s estimate of when the building was first constructed, not when it was remodeled, added to, or converted. The figures refer to the number of housing units in structures built during the specified periods and in existence at the time of the interview. For manufactured/mobile homes, the manufacturer’s model year was assumed to be the year built. For manufactured/mobile homes, the year the householder moved in can be earlier than the year the structure was built because the manufactured/mobile home site, not the manufactured/mobile home itself, is in sample. The householder could have replaced an older manufactured/mobile home with a newer model. In the publications, median year built is rounded to the nearest year.

Year unit acquired. The year the unit was acquired or inherited refers to the year in which the present owner acquired or inherited the house or apartment; for example, the year the contract was signed. This date may be different from the date when the occupants moved in. If the land and building were bought at different times, the year the building was acquired was recorded. If there was a land contract only, the year the contract was signed was recorded. In the publications, median year acquired is rounded to the nearest year.

Appendix B. Sample Design and Weighting

SAMPLE AREAS

The 2007 American Housing Survey Metropolitan Sample (AHS-MS) provides information on the following seven metropolitan areas interviewed as part of the American Housing Survey (AHS), which was conducted by the U.S. Census Bureau for the U.S. Department of Housing and Urban Development:

- Baltimore, MD (MSA)
- Boston, MA (NECTAD)
- Houston, TX (MSA)
- Miami-Fort Lauderdale, FL (MSA)
- Minneapolis-St. Paul, MN-WI (MSA)
- Tampa-St. Petersburg, FL (MSA)
- Washington, DC-MD-VA-WV (MSA)

These metropolitan areas are consistent with the 2003 Office of Management and Budget (OMB) definitions of the metropolitan statistical area (MSA) or metropolitan New England City and Town Area Division (NECTAD) as a result of the following sample adjustments:

1. Counties/Minor Civil Divisions (MCDs) were added or dropped so that the definition of each metropolitan area in sample was consistent with the final 2003 OMB definition of the metropolitan area and sample was selected in these added areas.
2. The sample in the counties/MCDs in the previous definition that were also in these new definitions (i.e.,

continuing counties/MCDs) was adjusted to maintain an overall sample size of 4,700 and in some cases it was replaced by a new sample for confidentiality reasons.

Interview Schedules

The Census Bureau collected 2007 AHS-MS data between April and September 2007.

Due to budget constraints, the sample sizes for each 2007 metropolitan area were reduced from about 4,700 to about 2,700 as is shown in Table B-1.

Table B-1. **Sample Size in the 2007 American Housing Survey Metropolitan Areas**

2007 AHS metropolitan area	2007 sample size (after reduction)
Baltimore, MD (MSA)	2,645
Boston, MA (NECTAD)	2,703
Houston, TX (MSA)	2,761

Interview Activity

Table B-2 summarizes the interview activity for each of the 2007 metropolitan areas in this report series. The table provides the weighted response rate, the number of eligible units (comprised of completed interviews and noninterviews), and the number of units visited but ineligible for interview.

Table B-2. **Interview Activity for the 2007 AHS-MS Areas**

AHS-MS SAMPLE HOUSING UNITS

1. The sample from continuing counties/MCDs consists of the following:
 - Interviews in the previous survey.
 - Type A noninterviews (that is, units eligible to be interviewed) or Type B noninterviews (that is, units not eligible for interview at the time of the survey but which could become eligible in the future) in the previous survey. For a list of reasons for Type A and Type B noninterviews, see Appendix A for the definition of “Noninterview.”
 - New construction housing units selected from a listing of new residential construction building permits issued since the previous survey. This sample represented the housing units built in permit-issuing areas since the previous survey.
 - Housing units added since the previous survey in sample blocks from the nonpermit universe. This sample represented the housing built in non-permit-issuing areas since the previous survey.
 - 2000 census manufactured/mobile homes.
 - 2000 census special living units.
 - 2000 census housing units replacing current sample housing units for confidentiality reasons.
2. The sample from new counties/MCDs consists of the following:
 - 2000 census housing units.
 - New construction housing units selected from a listing of new residential construction building permits issued since the previous survey. This sample represented the housing units built in permit-issuing areas since Census 2000.
 - Housing units added since the previous survey in sample blocks from the nonpermit universe. This sample represented the housing built in non-permit-issuing areas since Census 2000.

SAMPLE SELECTION

The Census Bureau initially grouped the housing units enumerated in the 1990 (2000) Census of Population and Housing into census blocks and assigned these blocks to either the unit/group quarters frame or the area frame, as follows:

1. Blocks located in an area that issued permits for new construction were assigned to the unit/group quarters frame.
2. All other blocks were assigned to the area frame.

The unit/group quarters frame was then split into the unit frame and the group quarters frame by removing all group quarters and placing them in a separate frame.

All housing units that were built after the 1990 (2000) census in areas where construction of new homes was monitored by building permits were placed into a separate frame, called the permit frame.

Sampling operations for all frames were performed separately within a designated group of counties in each state. Prior to the AHS-MS sample selection, records selected by other Census Bureau surveys were removed from each of the frames to avoid having the same housing unit in sample for more than one survey. The Census Bureau selected the AHS-MS sample from the remaining records.

The following adjustments were made to the AHS-MS in 2007 by adding certain types of units selected from the 2000 census:

- A new sample of manufactured/mobile homes was selected from the 2000 census in an attempt to improve coverage of manufactured/mobile homes built between 1990 and 2000. One-half of this sample was included in the 2007 interviewing and, as a result, one-half of the 1990-design sample was not included.
- In an attempt to improve coverage of the elderly, a sample of special living units was selected from the 2000 census.

Table B-3 presents the percentage of the AHS-MS sample drawn from each frame by sample design year.

Estimation

The sample housing units were weighted according to a multiple-stage ratio estimation procedure. Before implementing the ratio estimation procedure, the basic weight (that is, the inverse of the probability of selection) for each interviewed sample housing unit was adjusted to account for Type A noninterviews.

Type A noninterview adjustment. Type A noninterviews are occupied sample units for which occupants:

- Were not home.
- Refused to be interviewed.
- Were unavailable for some other reason.

The Census Bureau computed the Type A noninterview adjustment by cross-classifying occupied housing units into various categories or cells on the basis of the following data items:

- Central city/balance.
- Frame.
- Tenure (i.e., owner or renter).
- Type of unit (i.e., mobile home, non-mobile home, or special living).
- Rent.
- Value.
- Number of rooms.

Within a given cell, the Type A noninterview adjustment factor was equal to the following ratio:

$$\frac{\text{Weighted count of interviewed housing units} + \text{Weighted count of Type A noninterviewed housing units}}{\text{Weighted count of interviewed housing units}}$$

Mobile home ratio estimation. To adjust for undercoverage of manufactured/mobile homes, the Census Bureau applied the following ratio estimation procedure in all

areas:

Independent estimate of manufactured/mobile homes for the corresponding geographic subdivision of the metropolitan area

Sample estimate of manufactured/mobile homes for the corresponding geographic subdivision of the metropolitan area

The numerator of this ratio was determined using data from the 1980 census, the 1990 census, and the 2000 census. Based upon the increase or decrease in the number of manufactured/mobile homes between 1990 and 2000 for the Boston and Houston metropolitan areas between 1980 and 1990 for the other five metropolitan areas, the Census Bureau estimated the total number of manufactured/mobile homes in the survey year 2007. The denominator was obtained using the existing weight of the AHS-MS sample manufactured/mobile home units (i.e., the product of the basic weight and Type A noninterview adjustment factor).

Independent total housing unit ratio estimation. For the ratio estimation procedure described below, each metropolitan area was subdivided into geographic areas consisting of individual counties or a combination of counties.

To lower the undercoverage of non-mobile homes, the Census Bureau applied the following ratio estimation procedure in all areas:

Independent estimate of the total housing inventory (excluding mobile homes) for the corresponding geographic subdivision of the metropolitan area

Sample estimate of the total housing inventory (excluding mobile homes) for the corresponding geographic subdivision of the metropolitan area

The numerator of this ratio was determined by a model consisting of the following components:

1. Census 2000 Housing Units. The Census 2000 counts of housing units are updated each year through the Geographic Update System to Support Intercensal Estimates to reflect boundary updates from the Boundary and Annexation Survey, Count Question Resolution actions, and administrative revisions.

-
2. Estimated Residential Construction since April 1, 2000. This component is calculated through a formula involving counts of new residential construction in nonpermit issuing areas since April 1, 2000, plus counts of residential building permits that resulted in the construction of new units times a factor of 0.98 (since 2 percent of all building permits never result in the actual construction of a housing unit).
 3. Estimated New Mobile Home Placements. The Census Bureau derives estimates for manufactured/mobile homes by allocating state mobile home shipment data to subcounty areas based on the subcounty area's share of state mobile homes in Census 2000.
 4. Estimated Housing Loss. The yearly estimates of housing unit loss are based on data derived from the 1997–2003 American Housing Survey national sample (AHS-N). The following three types of AHS noninterviews were considered to represent permanent loss of a housing unit:
 - Type B-16—Interior exposed to the elements
 - Type C-30—Demolished or disaster loss
 - Type C-31—House or manufactured/mobile home moved

Housing unit loss rates based on these noninterview types were then developed for housing units based on structure type and age of structure.

5. Final State and County Housing Unit Estimates. The housing unit estimates at the subcounty level are summed to obtain county level housing unit estimates, which are then summed to produce state level housing unit estimates.

For a more detailed description of the determination of these numbers, see <http://www.census.gov/popest/topics/methodology/2003_hu_meth.pdf>. The denominator was obtained using the product of the basic weight and the weighting factors of AHS-MS sample units, excluding mobile homes.

The computed ratio estimation factors were then applied to all appropriate housing units in the corresponding geographic area of each metropolitan area, and the resulting product was used as the final weight for tabulation purposes.

The ratio estimation procedure reduced the sampling error for most statistics below what would have been obtained by simply weighting the results of the sample by the inverse of the probability of selection. Since the housing population of the sample differed somewhat by chance from the metropolitan area as a whole, one can expect that the sample housing population, or different portions of it, is brought into agreement with known good estimates of the metropolitan area housing population.

Appendix C.

Historical Changes

The American Housing Survey (AHS) began in 1973 as the Annual Housing Survey. Since 1981, the U.S. Census Bureau has conducted the national survey every odd-numbered year. In 1984, it was renamed the American Housing Survey. Other historical changes in the survey are listed below by subject area. The year refers to the year the change was made. In some cases, multiple years are mentioned together. In these cases, either corrections were made to the data in more than 1 year or there are specific years for which data are not comparable.

Only changes are noted in this appendix. For example, “Book titles, national” has no entries for 1975–77, since the same titles were published for those years as in 1974.

Access to structure.

2005. A question was added to determine if it was possible “to enter the housing unit from the outside without climbing up or down any steps.”

Age of other residential buildings within 300 feet.

1987, 1989, and 1997. See the topic “Buildings and neighborhood.”

Average monthly cost paid for real estate taxes.

2007. See the topic “Real estate taxes: average monthly cost paid for.”

Bars on windows of buildings.

1987, 1989, and 1997. See the topic “Buildings and neighborhood.”

Book titles, metropolitan sample.

1974. Annual Housing Survey: 1974

Housing Characteristics for Selected Metropolitan Areas (A separate book is published for each metropolitan area.)

Summary of Housing Characteristics for Selected Metropolitan Areas (One book is published containing summary data for all areas.)

1984. American Housing Survey: 1984

American Housing Survey for the (name of area) Metropolitan Area (A separate book is published for each metropolitan area.)

Book titles, national.

1973. Annual Housing Survey: 1973

Part A. General Housing Characteristics (compared central city, suburban, and nonmetropolitan areas)

Part B. Indicators of Housing and Neighborhood Quality

Part C. Financial Characteristics of the Housing Inventory

Part D. Housing Characteristics of Recent Movers

Supplement report number 1. Financial Characteristics by Indicators of Housing and Neighborhood Quality

1974. Parts A, B, C, and D stayed the same.

A new *Part E, Urban and Rural Housing Characteristics*, was added.

Supplement report number 1 was changed to *Part F, Financial Characteristics by Indicators of Housing and Neighborhood Quality*.

1978. Parts A, C, D, and E stayed the same.

Parts B and F from earlier years were combined into a new *Part B, Indicators of Housing and Neighborhood Quality by Financial Characteristics*. A new *Part F, Energy-Related Housing Characteristics* was added.

1985. Parts A, B, C, D, E, and F were combined into one report, *American Housing Survey for the United States*.

A new report was added, *Supplement to the American Housing Survey for the United States*, with data on family types, neighborhood quality, commuting, and ownership of additional residential units.

1997. The supplement to the American Housing Survey for the United States was discontinued.

Buildings and neighborhood.

1987. As a result of using both decentralized telephone interviewing and Computer-Assisted Telephone Interviewing (CATI) in the 1987 AHS-National sample and later, data for several observation items (where the interviewer, rather than the respondent, supplied the data) are not comparable with those reported in the 1985 AHS-National sample. Data for the observation items for units assigned to telephone interviewing were collected only if the sample unit was located in a multiunit structure. Data for the following items in 1987 and later national surveys are restricted to units in a multiunit structure: “Stories in

structure;" "External building conditions;" "Description of area within 300 feet;" "Age of other residential buildings within 300 feet;" "Other buildings vandalized or with interior exposed;" "Bars on windows of buildings;" "Condition of streets;" and "Trash, litter, or junk on streets or any properties." Data for these items were shown for all units in the 1985 national survey, including single-family homes.

The data for these items in the 1987 American Housing Survey—Metropolitan Sample (AHS-MS) are incorrect because of the inadvertent use of the American Housing Survey—National (AHS-N) weighted sample cases for certain items where AHS-N cases should not have been used. In many cases, estimates of not reported are too high and other categories are too low. These items include: "Stories in structure;" "External building conditions;" "Description of area within 300 feet;" "Age of other residential buildings within 300 feet;" "Mobile homes in group;" "Other buildings vandalized or with interior exposed;" "Bars on windows of building;" "Condition of streets;" and "Trash, litter, or junk on streets or any properties."

1989, 1991, and 1993. Because of the methods for weighting the metropolitan samples in 1989, 1991, and 1993, the weighted totals in the metropolitan reports in odd-numbered years for a few items are different from the rest of the items. These are as follows: "Stories in structure;" "External building conditions;" "Description of area within 300 feet;" "Age of other residential buildings within 300 feet;" "Mobile homes in group;" "Other buildings vandalized or with interior exposed;" "Bars on windows of building;" "Condition of streets;" and "Trash, litter, or junk on streets or any properties." In odd-numbered years, other items use a combined metropolitan/national (national is conducted only in odd numbered years) weighted sample; the above items only use a metropolitan weighted sample. See Appendix B for a complete description of combined weighting.

1997. These items ceased being collected by interviewer observation; they have become questions for the respondents. The intent of interviewer observations had been to provide a source of data on housing conditions, independent of the respondents, because these items could be directly observed by the interviewers. While neither respondents nor interviewers are trained building inspectors, and they reported data on different subjects, the data at least gave independent points of view by two people for each housing unit. Furthermore, the observations were collected even at units where interviews could not be obtained, so they could be used in research on the representativeness of AHS noninterview adjustments (which are explained in Appendix B).

As noted above, observations became impossible for many single-unit structures in 1987. Starting in 1997, staff no longer visit many multiunit buildings either, so the

observation items have become questions. The survey could continue to collect observations when visits are done for some other purpose, but the results would be too biased to be useful (high turnover units, subdivided units, and units where the respondent requests a personal interview).

Citizenship.

2001. In the 2001 survey, all households were asked the country of birth questions. This new question series was asked of all existing household members. These questions include:

- In what country was ... born?
- Is ... a citizen of the United States?
- Was ... born a citizen of the United States?
- Did ... become a citizen of the United States through naturalization?
- When did ... come to live in the United States?

Codebooks.

Documentation of codes on data files has been published in various volumes. The *Codebook for the American Housing Survey, Public Use File: 1997 and Later*, provides detailed descriptions of the public use file variables and descriptive text covering survey procedures. Codebooks for earlier years are also available.

All codebooks are available electronically at HUD USER (see <www.huduser.org/datasets.ahs>).

Common stairways.

2007. The question series pertaining to common stairways with loose steps or railing was deleted (applied only to multiunit buildings with 2 or more floors).

Computer-assisted interviewing.

1987–91. Large-scale experiments in computer-assisted telephone interviewing (CATI) were conducted as part of the 1987–91 AHS-National sample (CATI was not used in metropolitan surveys, though some of those interviews were completed on paper by telephone from the interviewer's home). Preliminary analysis of the CATI experiments indicated that CATI has a significant effect on the data. The experiments revealed that data for characteristics of owner-occupied housing, urban housing, and housing with moderate physical problems exhibited high numbers of significant differences between CATI and non-CATI estimates. The moderate physical problems subgroup had the highest incidence of significant differences. The analysis also showed significant differences for total occupied, suburban housing units, and moved in the past year.

CATI estimates were generally lower than non-CATI for units with water leakage, monthly housing costs as percent of current income, other heating fuel, and owners

with a mortgage. However, CATI produced higher estimates for utilities paid separately, income, and shared ownership. Other characteristics that showed significant differences between CATI and non-CATI estimates include routine maintenance costs and heating equipment.

Little is known about whether CATI or non-CATI produces better data. The Census Bureau believes, however, the estimates of change in the AHS-National sample between 1985 and later years will be biased for many characteristics as a result of introducing CATI. See also the topics “Buildings and neighborhood” and “Telephone interviewing.”

1995. CATI was conducted for returning national sample households whenever possible to the extent that CATI staff was able to handle the workload.

1997. The Census Bureau eliminated the paper questionnaire. All interviews were conducted by computer-assisted interviewing (CAI) using laptop computers. Both the survey questions and the skip instructions (that is, telling the interviewer which questions to ask next) were programmed into the laptop. The field representatives either phoned or made a personal visit to the respondent to conduct the interview. The interview questions were displayed on the computer screen one at a time. The programming of the skip instructions eliminated the possibility that the field representative would not follow the correct path and ask inappropriate questions (for example, asking about monthly rent at an owner-occupied unit).

Caution is recommended when comparing prior years’ data with 1997 and beyond because of this change to a laptop computer environment. For a number of reasons, the change could give different responses. The laptop incorporated a wide range of improvements that had been identified during 2 years of research and testing. Skip patterns involved complex branching and calculations that would not have been appropriate with a paper questionnaire. By using the laptop, field representatives found it almost impossible to skip appropriate questions. Online editing features reduced errors at the point of data collection. Feedback of telescoping (the reporting of events in the current data collection that were and should have been reported during an earlier time period) reduced the number of incorrect answers. These changes should improve the quality of the data.

2007. The AHS upgraded the laptop to Blaise for Windows system.

Condition of streets.

1987, 1989, and 1997. See the topic “Buildings and neighborhood.”

Current interest rate.

1990 and 1993. In the 1993 national and 1990 metropolitan surveys, a programming error was discovered and corrected involving the computation of the median for the

item “Current interest rate.” Use caution when making comparisons with earlier surveys. The medians presented in the earlier reports were calculated incorrectly. However, the data distributions are correct and can be used to compute corrected medians.

Dependent interviewing.

Dependent interviewing is the process by which data from surveys conducted in previous years are used instead of, in addition to, or to verify data collected during the current interview. The first use of dependent interviewing in AHS was for the item “Year structure built” in the year 1984.

1984. A new procedure was introduced for the collection of data on the year the structure was built. The answer obtained for the year the structure was built during the current survey interview was compared to any valid answers obtained in previous interviews for the same housing unit. If the answers differed, the answer from the previous interview was used in processing and tabulating the data.

1987. A new procedure was introduced for the collection of data on square footage. If the interview was at a housing unit that was successfully interviewed in the previous survey, the question on square footage was not asked. Instead the respondent was asked, “Since (date of the previous interview), has there been a change in the amount of living space in this (house/apartment) because of putting on an addition, finishing an attic, or converting a garage to living space?” If the respondent answered no, the data on square footage from the previous interview was used in processing and tabulating the data. If the respondent answered yes, the amount of added or lost space was obtained from the respondent and added to or subtracted from the square footage obtained in the previous interview. This new figure was then used in processing and tabulating the data.

1999. Some questions were modified to verify answers with valid answers obtained during the previous survey’s interview. If the current interview was being conducted with the same household at the same housing unit, the respondent was asked if the answer given in the previous survey interview was still correct. Only if the respondent answered “no” was the question for the current year asked. If the respondent said the previously collected information was correct, the information from the previous interview was used in processing and tabulating the data. The modified questions concerned:

- Kitchen equipment, including cooking stove or range, burners, microwave oven, refrigerator, kitchen sink, garbage disposal, trash compactor, and dishwasher
- Washing machine and clothes dryer
- Public sewer

- Source of water
- Drilled or dug well
- Central air conditioning
- Main heating equipment
- Exposed wiring and rooms without electric outlets
- Fuels used for house heating, cooking, clothes dryer, hot water, and central air conditioning
- Porch, deck, or patio
- Lot size
- Foundation
- Other manufactured/mobile homes on property
- Stories in structure and stories from main entrance
- Value
(Value was verified if the current value was 35 percent higher or lower than the value reported in the previous interview.)

Other questions were not asked if a valid answer was obtained in a previous interview and if the current interview was at the same housing unit. In this case, the answers from the previous interview were used to process and tabulate the data. These questions included:

- Mobile home site placement
- Year built
(Year built was verified if the residence was currently owner occupied but renter occupied during the previous interview. Otherwise, it was not asked, and the previous survey's answer was used.)

If the current interview was for the same household at the same housing unit, then another set of questions was asked if a valid answer was not obtained in a previous interview. The answers from the previous interview were used to process and tabulate the data. These questions included:

- Previous occupancy
- Year unit acquired and how unit acquired
- First-time owner
- Source of down payment
- Purchase price or construction cost

2001. Cooking fuel was the only question modified to verify its answer when a valid answer was obtained during the previous survey's interview. Some questions were not asked if a valid answer was obtained in a previous interview and if the current interview was at the same housing unit. In this case, the answers from the previous interview were used to process and tabulate the data. These questions included:

- Structure type
- Spouse of a person
- Relationship of person to reference person

2003. Additional questions were not asked if a valid answer was obtained in a previous interview and if the current interview was at the same housing unit. In this case, the answers from the previous interview were used to process and tabulate the data. These questions included:

- U.S. citizen
- Country of birth
- Year came to live in U.S.

2005. A few additional questions were not asked if a valid answer was obtained in a previous interview and if the current interview was at the same housing unit. In this case, the answers from the previous interview were used to process and tabulate the data. These questions included:

- Bodies of water within 1/2 block of unit
- Unit in a flood plain
- Community recreational facilities available

2007. Some questions were modified to verify answers with valid answers obtained during the previous survey's interview. If the current interview was being conducted with the same household at the same housing unit, the respondent was asked if the answer given in the previous survey interview was still correct. Only if the respondent answered "no" was the question for the current year asked. If the respondent said the previously collected information was correct, the information from the previous interview was used in processing and tabulating the data. The modified questions concerned:

- Unit is a condo
- Unit is waterfront property
- Method used to anchor mobile home
- Type of mobile home foundation
- Walls/fences surrounding community
- Entry system required to access building
- Entry system required to access community
- Age restricted development
- Apartment buildings within 1/2 block
- Buildings w/ bars on windows within 1/2 block
- Business/institutions within 1/2 block
- Factories/other industry within 1/2 block

- Single-family town/row-houses within 1/2 block
- Parking lots within 1/2 block
- Single-family homes within 1/2 block
- Railroad/airport/4-lane highway within 1/2 block
- Garage or carport included with unit
- Owner/resident manager lives on-site
- Neighborhood stores within 15 minutes
- Neighborhood stores within 15 minutes
- Type of sewage disposal

Description of area within 300 feet.

1987, 1989, and 1997. See the topic “Buildings and neighborhood.”

1992. In the 1992 metropolitan surveys, two programming errors were discovered and corrected involving the observation item “Description of Area Within 300 Feet.” The first error was that the stub line “Only single-family detached” had been tallied incorrectly since the redesign of the survey (1984). Therefore, data from 1984–91 in the metropolitan reports are not comparable with data for 1992 and beyond. The second error was that the stub line “Not observed or not reported” had been incorrectly tallied from 1986–91. Data for this stub line from 1986–91 are not comparable with data for 1992 and beyond.

Education.

1995. The question was revised to give less detail for people with less than a high school education and more detail for people with college degrees and advanced vocational training, to be consistent with the decennial census and other surveys.

2007. Academic comparison to other area elementary schools. A question was added to ask how the respondent thinks their public elementary school compares academically to other public schools in the area.

Also see the topic “Public elementary schools.”

External building conditions.

1987, 1989, and 1997. See the topic “Buildings and neighborhood.”

Flush toilet breakdowns.

1998. There was an error in the computer program for the laptop in 1997. As a result, data on flush toilet breakdowns were not collected. In 1998, the error was corrected and data were published.

Fuels.

2007. The question series pertaining to other house heating fuels was deleted.

Geography.

2001. Starting in 2001, the data used for the national books were changed by switching from 1980 census-based geography to 1990 census-based geography. This change affected the following geography data items that are used in the weighting procedures:

- Central city, suburb, or nonmetropolitan
- Urban or rural

Table C-1 provides weighted counts of housing units using 1980 geography and the 1980 weights, versus 1990 geography and the 1990 weights. The microdata file will continue to show only 1980 geography for confidentiality reasons.

Head of household/householder.

1980. Beginning in 1980, the concept “head of household” was dropped and replaced by “householder.” The head of household was the person regarded as the head as reported by the respondent; however, if a married woman living with her husband was reported as the head,

her husband was considered the head. The householder is the first household member listed by the respondent who is 18 years old or over and is an owner or renter of the sample unit.

Heating equipment.

1989. The heating equipment questions were revised to improve the reporting of electric heat pumps as a heating source. Previously, the questionnaire item dealing with the type of heating equipment underreported electric heat pumps. The respondents often answered yes to the first option of “a central warm-air furnace with air vents or ducts to the individual rooms” and did not proceed to the option of “electric heat pump.” The questionnaire item was revised to determine if the central air system is actually a heat pump or another type of warm-air furnace.

Hispanic origin.

2003. In accordance with Office of Management and Budget (OMB) directives, the order of the Hispanic origin and the race question were reversed (placing Hispanic origin before race). Also see the topic “Race.”

Home equity loans. See the topic “Mortgage.”

Housing costs and value.

1984. Value, mortgage data, and taxes are shown for all owners; rent is shown for all renters; and utilities are shown for both groups. From 1973–83, these items were shown only for “specified” owners and renters. For comparability, Table 19 in each chapter of books published since 1984 still shows data separately for “specified” owners and renters. “Specified” homes exclude 1-unit buildings on 10 or more acres and owners in buildings with 2 or more units or with a business or medical office on the property.

Also, the terminology changed. The new term “Monthly housing costs” includes the old terms “Selected monthly housing cost” for owners, “Gross rent” for renters, and “Contract rent” for vacant-for-rent units.

1989. The monthly housing costs items for subsidized renters were revised to improve the reporting of actual rental costs. In 1987, the questionnaire determined the total amount reportedly paid for monthly rental costs. These amounts may have included the partially subsidized amount provided by the public housing authority, the federal government, or state and local governments. Beginning in 1989, a probe was added for subsidized households to determine what they actually paid. The new procedures in 1989 produced lower and more accurate estimates.

Also see the topics “Income,” “Mortgage,” “Rent Reductions,” and “Utilities.”

1995. Mortgage payments were estimated when the respondent did not know the amount. These payments were estimated by amortizing each mortgage at level payments over its full term. If the amount borrowed is unknown, it is imputed first from the value of the house. If the interest rate or term were unknown, it would be imputed from owners who got their mortgages in the same year. This change eliminates a large source of missing data. While not perfect, it gives a much more complete picture of housing costs than in previous years.

1997. A “Separate category,” depending on income of the occupants, was added for vacant-for-rent units. In these units, the rent charged will depend on the income of the occupants, such as in public housing or some military housing. In 1995 and earlier, the category “less than \$100” includes an estimated 166,000 housing units where the rent depended on income of the occupants. They have a code 1 in the microdata. These units were incorrectly published as “less than \$100” from 1985–96.

Housing unit definition.

1984. One major and one minor difference appear in the housing unit definition. The major difference is that since 1984, the AHS includes vacant mobile homes as housing units. Vacant mobile homes added an additional 698,000

seasonal and 642,000 year-round vacant units to the 1985 national housing inventory. The 1973–83 AHS excluded these units from weighted counts, though they are included in the microdata with zero weight.

A minor difference in the definition is the 1973–83 requirement that a housing unit must have either direct access from the outside or through a common hallway, or complete kitchen facilities for the exclusive use of the occupants. In 1984, the complete kitchen facilities alternative was dropped, leaving direct access required of all units.

Another issue was the definition of group quarters. In the 1973–83 AHS, a household containing five or more people unrelated to the householder was considered to be group quarters. In 1984, the cutoff was changed to nine or more people unrelated to the householder.

2005. In 2005, a new definition of a “housing unit” was used. It came out of the Census 2000 Coverage Redesign. It was used to stay consistent with the Current Population Survey (CPS) and other current demographic surveys whose data are collected by the U.S. Census Bureau. The Census Bureau required in the old 1990 sample design that the occupants (1) live and eat separately from other people on the property and (2) have direct access from the outside or a common hallway. The Census Bureau has modified the first condition in the new 2000 sample design definition by dropping the words “and eat.” The occupants must merely “live separately from all other people on the property.”

How the housing unit was acquired.

1997. Beginning in 1997, all homeowners were asked how they obtained their home. The homeowners’ responses were stored on the national microdata file but not published in the national book. The possible answers to the new question include:

- Buy a house already built.
- Sign a sales agreement that included the land as well as the cost of building the house (includes both units that were under construction and those not yet started).
- Build it yourself on your own land (includes person acting as own general contractor; also includes lease land).
- Receive it as a gift or inheritance.

2001. The year the data were first published in the national book.

Income.

1984. See the topic “Poverty.”

1989. Two new items, “Monthly housing costs as percent of current income” and “Ratio of value to current income,” replaced similar items that were published in 1984–88. For income, these new items use “Current income.” In

1984–88, the items “Monthly housing costs as percent of income” and “Value-income ratio” used the “Income of families and primary individuals in the last 12 months.” See Appendix A for the definitions of “Current income,” “Monthly housing costs as percent of current income,” and “Ratio of value to current income.” Use caution when comparing prior years’ data with 1989 because of the differences in the definitions.

For comparative purposes, Table C-2 shows monthly housing costs as a percent of both income in the last 12 months and of current income. For total households and owner households, the medians for housing cost as a percent of income are the same regardless of types of income.

For renter households, the medians are 29 and 27 percent, respectively.

1993. Questions on income sources were revised in an effort to improve income reporting. The question in earlier surveys reported interest or dividend income of \$400 or more. In 1993, it was divided into two questions: one on any interest, the other on any dividends from stocks, regardless of amount. Therefore, both new questions cover even small amounts.

Wage and salary income was underreported for some people and households in the 1993 national survey. The error occurred during the processing of the data collected by computer-assisted telephone interviewing. When the respondent does not know or refuses to report wage and salary income, income is normally allocated during the processing. In 1993, this income was not allocated, but was incorrectly processed as “zero” (no) income. This error was corrected in the 1995 national survey. Although the income data for 1993 are incorrect, analysis of median household income for 1991, 1993, and 1995 indicates that the overall effect of this error on 1993 data is minor, though it significantly increases the apparent number of households with zero income.

Use caution when making income comparisons before and after the 1993 survey.

1999. Income was collected for all people 16 years and older in the household. In previous surveys, income was collected for all people 14 years and older in the household.

2005. After redesigning the AHS in 1997, the Census Bureau and the U.S. Department of Housing and Urban Development compared the income data collected in that survey with those found by the Current Population Survey (CPS).¹ That study found that the AHS reported fewer households with nonwage income than the CPS, and that AHS respondents tended to report self-employment income as wages. Furthermore, AHS users requested that disability-related income sources be reported separately from other sources to make it easier to count the number of households with disabled persons. The 2005 AHS addressed these findings and requests by adopting a series of income questions similar to the questions used in the American Community Survey (ACS).² Prior to 2005, respondents were asked the wages and salaries of each person in the family, and all other sources of income were collected as a single amount for the family as a whole. The 2005 questions collected an amount for each person in the family from nine different types of income (such as wages and salaries or social security). In addition, for each nonrelative (a person not related to the householder), the 2005 questionnaire was changed to ask about wages, self-employment, and other income separately. Prior to 2005, nonrelatives were asked only to report their total income. The AHS chose to adopt the ACS questions because they had already been tested and to facilitate comparisons between the two surveys.

The approach for obtaining household and family income prior to 2005 AHS resulted in reported income that was generally lower than in other surveys. The new income questions were intended to increase the amount of income reported. Comparisons of median household income from the 2003 and 2005 AHS, the 2005 CPS Annual Social and Economic Supplement (ASEC, 2004 income), and the 2004 ACS (2004 inflation adjusted income) indicate that the goal may have been achieved overall. Median AHS household income rose 1 percent more than inflation from 2003 to 2005—from \$41,775³ to \$44,834⁴ (rising 7 percent while inflation was 6 percent). Median household income

¹ See Susin, Scott. 2003. “Discrepancies Between Measured Income in the American Housing Survey (AHS) and the Current Population Survey (CPS): Final Report.” <www.census.gov/hhes/www/income/hudmemo8a.pdf>.

² The AHS adopted the income categories used in the 2003 ACS with one change. Disability-related payments were accorded a separate item in the AHS, while the ACS included these types of payments with retirement and survivor pensions.

³ The margin of error at the 90-percent confidence level is +/- \$265.

⁴ The margin of error at the 90-percent confidence level is +/- \$289.

from the 2005 ASEC was \$44,389,⁵ not statistically different from the 2005 AHS median household income. Finally, a median household income from the 2004 ACS was \$44,684,⁶ also not statistically different from the 2005 AHS median household income.

Comparing receipt of income by source for the 2005 AHS and the 2003 AHS (see Table C-3) shows that the percent reporting wages and salaries and the percent reporting social security or retirement at the family level, while statistically different, are generally comparable. On the other hand, the percent reporting interest, dividend, and rental income is much lower in 2005 than in 2003. One possible explanation for the difference in reporting of interest, dividend, and rental income is that the 2003 AHS included separate questions on receipt of interest, dividend, and rental income, while the 2005 AHS question combined interest, dividend, net rental income, royalty income, and income from estates and trusts into one income category.

⁵ The margin of error at the 90-percent confidence level is +/- \$322.

⁶ The margin of error at the 90-percent confidence level is +/- \$214.

Table C-4 shows that at the person level, reporting of specific types of income in the 2005 AHS and the 2004 ACS is generally comparable except for reporting of interest, dividend, rental, etc., income and "other" income where the percent reporting in these categories is less in the 2005 AHS.⁷ The 2003 AHS had two separate questions about income from "other" sources, such as VA payments, unemployment compensation, child support, or alimony, whereas the 2005 AHS reduced this to one question.

Another difference between the 2003 AHS and the 2005 AHS was a new edit and allocation system for the income questions. The 2005 AHS used "regression-based" hot decks that allow more information to be used to provide a better match between donors and donees. In other words, an income-predicting regression assigns donors and recipients to cells in the hot deck matrix. Preliminary analysis indicates that the edit and allocation system has a minor effect on the percent receiving income types (see Table C-5).

⁷ Please note that the ACS is primarily a mailout/mailback survey with telephone and personal visit interviews for a subsample of people who did not mailback their forms. The AHS, by contrast, is conducted solely through personal visit and telephone interviews.

2007. Based on the comparisons and analysis of income results of the 2003 and 2005 AHS data collections, two of the 2005 income types were reset back to their original 2003 income types:

- “Interest, dividend, and rental income” was split into three separate income types—“Interest,” “Dividend,” and “Rental Income.”
- “Other” income was split into “Child support or alimony” and “Other.”

Since extra effort is used to obtain the estimate of income of families and primary individuals in the last 12 months as compared to their income for the future 12 months, the income used in the calculation of “Monthly housing costs

as percent of current income” and “Ratio of value to current income” was changed to the income of families and primary individuals in the last 12 months. If this amount is not available, then the family’s expected income is used. The method used in 1989–2005, used the income of families and primary individuals in the last 12 months only if the expected income was not reported, which occurred 90 percent of the time.

Income sources.

1993. See the topic “Income.”

2001. In the questions used to inventory the cash benefits a person received over the past 12 months, the answer category “Receive SSI/AFDC/Other Welfare” was changed to “Receive SSI, Public Assistance, or Welfare Payments, such as [state TANF program name].” Individual states used different names for their Temporary Assistance to Needy Families (TANF) programs, so the question wording varied by state. This was done to update the source of income questions because the passage of the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 replaced the AFDC assistance program with TANF.

2004. Whether or not a resident of the housing unit received SSI payments was collected in a separate category. In 2003 and earlier, the receipt of SSI payments was collected in a combined category that included public assistance and welfare payments.

2005. *Alimony or child support and all other income* includes alimony—money received periodically from a former spouse after a divorce or legal separation; child support—money received for the support of children not living with their father/mother as the result of a legal separation; and all other income—unemployment compensation, Veterans Administration (VA) payments, contributions received periodically from people not living in the household, military family allotments, and other kinds of periodic income other than earnings.

Interest, dividends, or net rental income includes interest on savings or bonds, dividends from stockholdings or membership in associations, net income from rental of property to others, receipts from boarders or lodgers, net royalties, and periodic payments from an estate or trust fund.

2007. *Child support or alimony.* Alimony is money received periodically from a former spouse after a divorce or legal separation. Child support is money received for the support of children not living with their father or mother as a result of a legal separation.

Interest; Dividends; and Rental income.

Interest is money received or credited to checking and savings accounts, money market funds, certificates of deposit (CDs), IRAs, KEOGHs, and government bonds.

Dividends are money received, credited, or reinvested from ownership of stocks or mutual funds.

Rental income is money (profits or losses) received from renting land, buildings, real estate, or from roomers or boarders.

All other income. All other income includes unemployment compensation, Veterans Administration (VA) payments, contributions received periodically from people not living in the household, military family allotments, and other kinds of periodic income other than earnings.

Kitchen.

1984. Short questions are asked about each aspect of a complete kitchen; previously only one long question was asked. The 1984 approach finds more homes missing some part of the kitchen than the old longer question did.

In vacant units, the definition was changed. Previously, if the respondent said the kitchen was incomplete, but the future tenant would be expected to complete it (for example, occupant provides a refrigerator), as is the practice in some areas, such a kitchen was counted as complete. Starting in 1984, it is counted as incomplete. Both approaches have problems, but the newer approach was chosen as preferable.

Between 1983 (old question and instruction) and 1985 national (new questions and instruction), the estimate of occupied units with incomplete kitchens changed 59 percent from 827,000 to 1,316,000. The estimate of vacant units with incomplete kitchens changed 274 percent from 665,000 to 2,490,000. Much of this change is assumed to be a result of the changes in the questions.

Starting in 1984, units reported in the category “Complete kitchen facilities” in the printed books had to have an oven. For the microdata files, an oven was not required to be included in the category “Complete kitchen facilities” (under “Equipment”). The definition of “Complete kitchen facilities” in Appendix A of the printed books incorrectly omits that the oven was required in the publication.

1997. The questions concerning each component of kitchen facilities were redesigned in 1997. Prior to 1997, the questions the respondents answered contained a definitional instruction to the field representative that the equipment was for this household’s use only. The field representative, however, did not read this instruction to the respondent. Beginning in 1997, the instruction “this household’s use only” is no longer a part of the question

for each kitchen component. In its place, the field representative asked, when the respondent lived in a unit in a multiunit structure, if any of the kitchen equipment was shared with another household. This change caused large increases in the number of units lacking complete kitchen facilities and large decreases in the number of units with complete kitchen facilities.

Lead paint.

2001. The lead paint questions were dropped. These questions were asked in all housing units built before 1978 to collect data on signs of lead paint hazards (for example, peeling paint, paint chips, and so forth). They also asked if the household was notified of lead paint hazards.

Light fixtures in public halls.

2007. The question series pertaining to the presence of light fixtures in public halls and their working order was deleted (applied only to multiunit buildings with 2 or more units in structure).

Line of credit. See the topic “Mortgage.”

Living rooms, recreation rooms, etc.

1985. Living rooms, recreation rooms, etc. includes family rooms, dens, recreation rooms and/or libraries.

2005. In the 1997–2003 AHS total inventory tables (1A-6, 1B-6, 1C-6, and 1D-6) for the item “With 2 or more living rooms or recreation rooms, etc.” under Selected Amenities, an error was made in the table specifications. The item was intended to include living rooms, recreation rooms, dens, and family rooms. These data do not include family rooms. The error was not made in the occupied chapters for Table 7. The error was corrected for the 2005 AHS publication.

Location of previous unit.

1995. 1995 data were suppressed because it was not possible to code the metropolitan area of the previous unit consistently with the location of the current unit. The data involved comparing the metropolitan area of the previous residence with the current residence’s location. The AHS current residence is coded by its 1983 metropolitan area (see Appendix A for the definition of “Metropolitan areas”). Since 1993, the Census Bureau has not been able to code the previous residence with comparable 1983 boundaries because of updated geographic coding systems. Therefore, this item has been suppressed to avoid spurious changes. (The 1993 national data were not suppressed, but it is unclear whether they were correctly coded.)

1999. In 1999, the item was dropped from the publication.

Lodgers.

1984. A new series of questions concerning lodgers was introduced. Lodgers were defined as household members 14 years or older who are not related to the householder, not co-owners or co-renters, and are not a spouse or child of a co-owner or a co-renter. The respondent was asked if the lodger(s) paid a regular, fixed rent and, if so, what the dollar cost was and if it included food. The questions were intended to measure the cost of housing for the lodger(s). In this, as well as earlier and later years, any lodger's rent received by the householder should be reported as rental income, but it is not certain whether householders do or did so.

1985. The phrase "as a lodger" was added to the questions concerning rent paid. The universe for these questions remained the same, but the wording was changed to make the question clearer.

1993. Questions concerning nonrelative housing costs were added to replace the questions about lodgers. This change modified not only the questions in the survey but also the universe. The new questions were targeted to all household members 14 years or older who are not related to the householder. The new questions included any housing costs paid by the nonrelative (not only rent).

1995. The nonrelative sharing housing costs questions were dropped and the lodger questions used in the 1985 survey were reintroduced using the 1984 definition of lodgers.

1997. The questions concerning lodgers were asked in accordance with the 1984 definition of lodgers. In addition, these questions were also asked of adult relatives. An adult relative is defined as a relative 21 years or older who is not a co-owner or co-renter and is not a spouse of a co-owner or co-renter. The data for these adult relatives are available on the microdata, but the publication only reflects data collected from the lodgers.

1999. Lodger questions were no longer asked of adult relatives (see 1997 above). In addition, the age cutoff in the definition of lodger was changed from 14 years or older to 16 years or older. See also the definition "Rent paid by lodgers" in Appendix A.

Main house heating fuel.

1999. In 1997, the type of gas used (piped versus bottled) as a main house heating fuel was inadvertently omitted for vacant housing units. In 1999, the distinction was reinstated.

Manufactured/mobile homes.

1984. Manufactured/mobile homes with attached permanent rooms began to be counted as mobile homes, while previously they were counted as single-family units.

Manufactured/mobile homes with attached permanent rooms are identified separately in the microdata. See the topic "Housing unit definition."

1985. See the topic "Weighting."

2005. A question was added to determine if a manufactured/mobile home is single-wide, double-wide, or triple-wide (or larger).

Married-couple families.

1985 and 1987. The published 1985 and 1987 national estimates of married-couple families with no nonrelatives were overestimates resulting from a processing error. The 1985 overestimate was approximately 340,000, while the 1987 overestimate was 407,800. The overestimated married-couple families with no nonrelatives should have been tabulated under two-or-more-person households as either "other male" or "other female" householders. This error was corrected in 1989. Table C-6 provides corrected figures for 1987.

Table C-6. **Estimate of Married-Couple Families With No Nonrelatives and Other Two-or-More-Person Households: 1987**

Characteristic	Estimate
Married-couple families, no nonrelatives	50,084,000
Other two-or-more-person households	18,853,000
Male householder	6,421,000
Female householder	12,432,000

Metropolitan areas and central cities.

1984. Books and microdata started using 1983 boundaries. This change increased the number of metropolitan units, especially suburbs, and decreased the number of nonmetropolitan units. These boundaries were established in 1983 based on population and commuting patterns measured in the 1980 census. Therefore, the 1984 AHS metropolitan boundaries are not comparable to those in the 1980 census publications.

National microdata started showing central city and suburban status in all cases. Also, cases in more areas have the identifying code for their area shown because of less strict confidentiality constraints than in the past (areas of 100,000 population may be identified; the previous rule was 250,000).

Metropolitan microdata always identify the total area surveyed, but not necessarily the newer central cities, to protect confidentiality. When an area of less than 100,000 people was added to an AHS Metropolitan survey, sample cases were added there, and extra sample cases also were added in part of the old area, so no one would know which cases were in the small added area.

From 1973–83, all books and microdata had consistently used 1971 boundaries of metropolitan areas and cities. These were called Standard Metropolitan Statistical Areas (SMSAs). The criteria were published by the U.S. Bureau of Budget in *Standard Metropolitan Statistical Areas, 1959*. The boundaries were published by the U.S. Bureau of Budget in *Standard Metropolitan Statistical Areas, 1967* (which also reprinted the criteria), and some boundaries were revised in the Office of Management and Budget’s (formerly U.S. Bureau of the Budget) *Second Amendment*, February 23, 1971. These same boundaries were used in publications from the 1970 census.

Note that major revisions in official SMSA boundaries (but not AHS boundaries) were made in 1973 using results of the 1970 census; additional revisions were made during the 1970s. More major revisions occurred in 1983 using results of the 1980 census. Therefore, the AHS revision in 1984 reflected the cumulative result of 12 years of changes in official definitions.

1995. Starting in 1995, most metropolitan surveys use new samples and new boundaries, which for the first time may differ from standard boundaries published by the Office of Management and Budget. A list of exactly which counties (towns in New England) are covered in each metropolitan survey each year is printed in each metropolitan book.

2001. Data in the 2001 AHS National publication are weighted using 1990 census-based geography. However, data on the 2001 microdata file are weighted using 1980 census-based geography.

2003. Data in the 2003 AHS National publication are weighted using 2000 census-based geography. However, data on the 2003 microdata file are weighted using 1990 census-based geography.

Monthly housing costs.

1984, 1989, and 1995. See the topic “Housing costs and value.”

2007. In prior years the data tables in the publication showed the top size category was \$1,500 or more. In 2007, additional size categories are shown. The resulting top category is now \$2,500.

Mortgage.

1999. The “reverse mortgage” item under “Mortgages currently on property” was eliminated. In 2001, this item was reinstated.

2001. The collection of data for reverse mortgages was reintroduced in 2001. In addition, new mortgage questions were added and modifications were made to existing mortgage questions to more clearly delineate home-equity

loans from regular mortgages, as well as to clearly differentiate between home-equity lump-sum loans and home-equity lines of credit. In addition, more detailed information was collected on home-equity lump-sum loans than in the past.

In 1997 through 1999, respondents were asked if they had a regular (other than a home equity) mortgage. If they answered “yes,” they were asked how many regular mortgages they had. Respondents were also asked if they had a home-equity loan. If they answered “yes,” they were asked how many home-equity loans they had.

Detailed characteristics were collected on the first three regular mortgages. One of the regular mortgages was determined to be the primary mortgage. Data were also collected on the first three home-equity loans; although, not as much detail was collected on home-equity loans as was collected on regular mortgages. One of the home-equity loan questions was if the home-equity loan was a lump-sum line-of-credit.

In 2001, separate counts of lump-sum home-equity loans and lines-of-credit home-equity loans were obtained. As in 1997 through 1999, respondents were asked if they had a regular mortgage and if “yes,” how many. Next they were asked if they had a lump-sum home-equity loan and if “yes,” how many. Finally, they were asked if they had a home-equity line-of-credit and if “yes,” how many.

Detailed characteristics were collected for both regular mortgages and lump-sum home-equity loans in 2001. The detailed characteristics continued to be collected on the first three mortgage loans with regular mortgages having priority over lump-sum home-equity loans. For example, if the respondent had two regular mortgages and two lump-sum home-equity loans, the detailed data were collected on the two regular mortgages and the first lump-sum home-equity loan reported. In addition, regular mortgages also took priority in being designated the primary mortgage. For example, if the respondent reported one regular mortgage and one lump-sum home-equity loan, the regular mortgage was considered to be the primary mortgage. If, however, the respondent only reported having a lump-sum home-equity loan, the lump-sum home-equity loan was designated the primary mortgage. The data collected for home-equity lines-of-credit loans remained the same in 2001 as in 1997 through 1999.

2003. Several programming errors were discovered and corrected in the mortgage edits. These errors primarily affect households that indicated they had a second mortgage but provided little information about it (i.e., had a high level of item nonresponse to the second mortgage questions). The errors typically caused such households to have their second mortgage blanked and also changed the characteristics of the first mortgage.

Compared with data with the erroneous edits, the estimated number of households having two or more mortgages increased by 147,000 (1.64 percent). Most of these

households would have otherwise been coded as having one mortgage only; the number of households with one mortgage decreased by 134,000 (-0.39 percent). Again, compared with data with the erroneous edits, the corrections decreased by 11,000 (0.04 percent) the number of households with units owned free and clear; increased by 21,000 (0.04 percent) the number of households with a regular mortgage; and increased by 5,000 (0.13 percent) the number with a lump-sum home-equity mortgage. The number of home-equity lines of credit was not affected.

The biggest differences in the characteristics of mortgages are for the “Not reported” categories (many of the mortgage variables are not allocated). More than an estimated 100,000 not reported households were added for several of the mortgage items.

All these differences are relatively minor when compared with the total estimates for any given category. As a result, 2001 mortgage data will not be corrected. Users are cautioned, however, that both underestimates of mortgages and their characteristics exist in the published 2001 American Housing Survey data. These errors do not affect survey years prior to 2001.

Neighborhood.

1987, 1989, and 1997. See the topic “Buildings and neighborhood.”

Neighborhood shopping.

1997. Starting in 1997, the respondent was asked if there was satisfactory neighborhood shopping (grocery stores or drug stores) and, if yes, were any within 1 mile of the respondent’s home.

2007. The question was revised to ask if any grocery stores or drug stores are within 15 minutes from the respondent’s home. If the response was yes, they were asked if these stores are satisfactory.

New construction.

1976, 1977, and 1978. The figures for 1973–76 new construction, 1973–77 new construction, and 1973–78 new construction published in the 1976, 1977, and 1978 national books are incorrect. These figures were corrected in 1979 and published in *Part A, General Housing Characteristics for the United States and Regions: 1979*, series H150/79.

1984. In 1984 and later AHS reports, the characteristics of new construction units are based on units constructed during the last 4 years. Prior to 1984, characteristics of new construction were based on units built since the last survey year. In the national survey, this was a 1-year period, except for the 1983 survey, which covered a 2-year period. In the metropolitan survey, this varied from being a 3- to 4-year period.

Nonrelative income.

2005. Before 2005, for household members who are not related to the reference person, income questions asked for “total income earned before deductions in the past 12 months.” Since 2005, the period (12 months) remained the same, but income questions were subdivided into three parts, inquiring about income earned from employer wages and salary, self-employment, and other sources of income.

Other buildings vandalized or with interior exposed.

1987, 1989, and 1997. See the topic “Buildings and neighborhood.”

Other housing costs per month.

1995. A processing error was discovered and corrected involving the category “Homeowner association fee paid.” The “Homeowner association fee paid” data in 1993 and earlier were incorrect and should not be used. The 1995 data are correct.

1999. Several processing errors were discovered and corrected for the category “homeowner association fee paid.” The 1997 and 1998 data published for this category are incorrect. In 1997 and 1998, “homeowner association fee paid” was incorrectly tallied for mobile homes. In addition, the processing of data for units that are not mobile homes was done incorrectly. The 1997 and 1998 data should not be used. The 1999 data are correct.

Parking lots.

2005. The question on whether the use of parking lots in the respondent’s neighborhood is restricted to residents who live in the neighborhood.

Persons other than spouse or children.

1993. See the topic “Lodgers.”

Plumbing facilities. Use caution when making comparisons among any of the surveys after 1983.

1984. Changes in the questionnaire resulted in serious deficiencies in plumbing data. In 1983 and earlier, respondents were asked a question on complete plumbing facilities that specified to the respondent the components necessary for complete plumbing (that is, hot and cold piped water, a flush toilet, and a bathtub or shower). The question further ensured that these facilities were only for the use of the occupants of the unit in which they were located (exclusive use). In those units with complete plumbing, an additional question was asked as to how many bathrooms there were.

Starting in 1984, respondents were first asked how many full bathrooms they had. If they answered one or more, questions on plumbing facilities were not asked; the unit was assumed to have complete plumbing facilities for

exclusive use. Although the 1984–87 definition of a bathroom specified hot and cold piped water, a sink, a flush toilet, and a bathtub or shower, this definition was not read to the respondent. Also, nothing in the question required the bathroom to be only for the use of the occupants of the sample unit (exclusive use). We believe that the 1984–87 AHS counted a significant number of units as having complete plumbing for exclusive use because respondents for these units reported having a bathroom when, in fact, either the bathroom did not contain all plumbing facilities, or the facilities were shared by people living in another unit. Based on previous years' AHS data, we believe the "completeness" was more of a problem than "exclusive use."

The table on plumbing facilities was suppressed in books starting in 1985 (though data were still included in severe physical problems, see Table C-7). Data for 1984 were published but are incorrect.

1989. Beginning in the 1989 national survey (1990 metropolitan surveys), the questionnaire items on bathrooms and plumbing were modified to provide more accurate estimates. Respondents were asked, "How many full bathrooms with a sink, with hot and cold piped water, a flush toilet, and a bathtub or shower does this house/apartment have?" Also, an additional question was asked, "Are the bathrooms for this household's use only?" If the respondent reported no bathrooms, detailed questions on each required plumbing facility were asked separately.

In 1989, there were 3,139,000 year-round housing units in the United States lacking complete plumbing facilities for exclusive use. Prior to 1985, there was a downward trend of units lacking complete plumbing facilities, with 1983 showing 2,233,000 such units. Units lacking plumbing may not have increased between 1983 and 1989, for the 1989–91 figures may be too high, as noted below in the discussion of changes in 1993.

Units lacking complete plumbing facilities are included in the count of units with severe physical problems. The number of units with severe physical problems may have been underestimated in both national and metropolitan surveys in 1984–90. It also appears the units with moderate problems may have been overestimated.

There was an unrealistic increase in units with severe problems in the United States between 1985–89 because of redesigning the plumbing facilities question, and then an unrealistic drop in 1993. Occupied housing units with severe problems went from 1,559,000 in 1985 to 3,161,000 in 1989 and 1,901,000 in 1993. There was a simultaneous decrease in moderate problems, from 5,814,000 in 1985 to 4,442,000 in 1989, which may be unrealistic, but no corresponding increase in 1993. Figures are shown in Table C-7. This increase also affected medians as Table C-8 shows

Table C-7. Measures of Plumbing and Other Problems

1993. In 1993, questionnaire item 29c on bathrooms for exclusive use was modified to provide more accurate estimates. The wording of the answer options to this question was changed to specify whether or not there was exclusive use of the facilities. This change appears to have caused a one-third drop in plumbing problems, compared to 1991, and a similar drop in severe physical problems. Although the decrease between 1991 and 1993 seems unrealistic, the change in the 1993 questionnaire probably resulted in a better estimate.

1997. The definition of a complete bathroom was removed again from the original question (as in 1985–87), although the definition was still available in a help screen. Later in the questionnaire, for homes with only one bathroom, AHS asked specifically if the bathroom had hot and cold water, flush toilet, and bathtub or shower.

For households with more than one toilet, the 1997 questionnaire mistakenly asked about times when *the* toilet was unusable, instead of times when *all* toilets were unusable. The 1997 breakdown data and counts of moderate physical problems may therefore include many units where another toilet was indeed usable.

1998. See the topic “Flush toilet breakdowns.”

1984. The AHS provides housing characteristics for households with income below the poverty level. The AHS poverty data are not comparable to poverty data published from the Current Population Survey (CPS). Table C-9 presents the differences.

Table C-9. **Households in Poverty in AHS and CPS: 1985, 1987, and 1989**

Year	AHS	CPS
1985	13,266,000	11,996,000
1987	11,969,000	11,807,000
1989	12,403,000	11,369,000
1985–87 change	-1,297,000	-189,000
1987–89 change	434,000	-438,000

Compared with the CPS, the AHS drop in poverty between 1985 and 1987 seems too large. The 1987–89 AHS increase in poverty may be, in part, a compensation for the unrealistic 1985–87 drop.

In general, AHS estimates of poverty are higher than the CPS estimates. Research indicates that the AHS slightly underreports income when compared with the CPS, thus

overreporting poverty. Furthermore, the problem seems to be concentrated among elderly households. A detailed discussion of AHS poverty data is presented in the Census Bureau memoranda for the record, “AHS Poverty Data, 1985 to 1989” and “Comparison of the 1989 AHS and CPS Income Reporting.” Copies can be obtained by writing to the Housing and Household Economic Statistics Division, U.S. Census Bureau, Washington, DC 20233.

Analysts are reminded that poverty data are published in the AHS, not as an official count of households in poverty, but to show the housing characteristics of low-income households.

2004. Starting in 2004, we made two changes in the metropolitan microdata files to the method of counting the number of children and adults in the poverty calculations. First, nonrelative children who are household members and under the age of 18 years are now counted as children. Prior to 2004, nonrelative children were counted as adults. Second, the poverty line is defined only for households of nine persons or less. Before 2004, in large households (with more than nine persons), children had been counted first toward the ratio of children to adults within the household. For example, a household with six children and six adults had been treated as a household with six children and three adults for the purpose of calculating poverty. This was changed to count adults first, thus changing this example to six adults and three children.

These changes affected a fairly large number of cases. In the 2003 national data, 5.1 percent of households had their number of children changed by the new procedures. However, they had an extremely small effect on the number of households in poverty. Had this change been implemented in 2003, it would have reduced the number of households in poverty by 29,000, a reduction of 0.03 percentage points (from 13.19 percent to 13.16 percent).

Primary mortgage refinanced, reason.

See the topic “Reasons for refinancing the mortgage.”

Public elementary school.

1997. Satisfaction with the public elementary school was no longer asked at all households with children under 17. It was only asked if the household had a child 13 years old or younger. This change was caused by a desire to focus on households that would be most knowledgeable about elementary schools. A mistake prevented covering all such households.

1999. In 1998 and earlier years, the question on type of school attended was asked of households with children ages 4 to 16. In 1999, the question was asked of households with children ages 5 to 15. The answer category “does not attend school” was replaced with “schooled at home.” However, instructions to the field representative defined both answer categories as the same, meaning children who did not attend school were entered into the “schooled at home” category.

2001. In 2001, a new answer category “Not in school” was added in the school item.

2007. Respondents who report an unsatisfactory public elementary school are no longer asked if they are so bothered by it that they want to move.

Also see the topic “Education.”

Public transportation.

1997. For the first time questions were asked about the availability and use of public transportation in the respondent’s neighborhood. If the respondent answered yes to the availability of public transportation, the question was asked if it was satisfactory. Respondents were then asked if any household member used public transportation at least once a week. If the answer was no, then the question was asked if anyone in the household ever used public transportation.

2001. In 2001, a new item “Does anyone in the household ever use public transportation?” was added to the public transportation series.

2007. The public transportation question series was reduced from four to three parts. The first question remained the same as 1997, establishing if there was public transportation for the respondent’s area. The next question asked if anyone in the respondent’s household used public transportation regularly for commuting to work or school. If the answer was yes, then a third question was asked regarding how many minutes it takes to get to the nearest bus stop, train station, or subway stop from the respondent’s home.

Questionnaire.

1984. A new questionnaire was introduced in 1984. Most of the changes on the questionnaire were made to improve the quality of the data. As a result, however, several items in 1984 and beyond are not comparable to similar data for 1973–83; a discussion of each item can be found in the appendix under the topic of the same name.

Items changed on 1984 questionnaire include:

- Units in structure
- Rooms in unit
- Plumbing facilities
- Kitchen
- Recent movers

Some new items were introduced in 1984, including lot size, square footage, units with severe or moderate problems, elderly householder, heating-degree days (national sample only), and detailed information on mortgages. For detailed definitions of these and other items, see Appendix A.

1987. A major procedure change in collecting data is the use of the Computer Assisted Telephone Interview (CATI) system. In 1987, half of the sample was assigned to CATI.

The other half was interviewed by phone where possible from the interviewer’s home, as done in 1983 AHS National. For the CATI half-sample, units that were vacant, refused to be interviewed (Type A noninterviews), were not currently intended for occupancy (Type B noninterviews) or did not have telephones in 1985, were not eligible for CATI and were assigned to field interviewers for interviews. Also ineligible were units with different occupants than in 1985 or units now vacant or not intended for occupancy. The purpose of CATI was to investigate alternative interviewing techniques, to make use of centralized interviewing, to reduce the costs and data problems caused by field interviewer turnover, and to help eliminate the variations in the way interviews are conducted.

New items added:

One question was added to identify rental units that are rented for short periods of time to persons with a permanent residence elsewhere, such as vacationers.

Items deleted:

Adequate police guard

1989.

Items changed:

Heating equipment questions were revised to improve the reporting of electric heat pumps as a heat source and to make the questions more comparable to the heating equipment questions asked on other census surveys.

Electricity and gas costs questions for regular occupied units were revised as a result of continuing research into AHS response variance problems and to comply with the request OMB made as part of the 1998 AHS-MS clearance to implement bias elimination techniques for the utility costs data questions.

1991.

New items added:

Questions were added to identify occupied units for rent or for sale.

Mobile home questions were added to improve our knowledge about mobile home placements.

A question was added to determine to what extent a second home is on the active rental market.

Homeless Questions were added to identify household members who have recently been homeless.

1995. There is an expanded definition of “Monthly housing costs” as it relates to vacant units. For a detailed definition of this item, see “American Housing Survey for the United States in 1995” report, Series H150/95.

New items added:

- Rooms used for business

- Homes currently for sale or rent
- Safety of primary source of water
- Source of drinking water
- Rent paid by lodgers
- Home equity loan
- New race categories
- Educational attainment of the householder
- Sample size

Items deleted:

- Location of previous unit
- Nonrelatives shared housing costs
- Years of school completed by the householder (replaced by educational attainment of the householder)

1997.

Items changed:

Buildings and neighborhood items were not collected anymore from interviewer observation; they were reworded as questions for the respondents.

Computer-assisted telephone interviewing (CATI) was fully implemented in the 1997 AHS using laptop computers. See the topic “Computer-assisted interviewing.” The paper questionnaire was eliminated.

Housing costs, a separate category, “Depending on income of the occupants,” was added for vacant-for-rent units. In these units, the rent charged depended on the income of the occupants, such as public housing or military housing.

Lodgers, both relatives and nonrelatives age 21 and older who are not (co-)owners or (co-)renters and who are not spouses of (co-)owners or (co-)renters, were asked the housing cost questions. The same questions were asked in 1984 with the addition of whether the person was an employee of the household or contributed to costs (asking separately about contributions for utilities, mortgage/rent, groceries, and other costs).

Plumbing facilities. The definition of a complete bathroom was removed as part of the question; although, the definition was still available in a help screen. Later in the questionnaire, for homes with only one bathroom or none, a specific question asked if it had hot or cold water, toilet, and tub or shower.

Public elementary school. Satisfaction with the public elementary school was no longer asked of all households with children under 17. It was limited to only households with children up to 13 years old or younger. This change focused on households most knowledgeable about elementary schools.

Wiring. Plastic coverings were counted as acceptable, along with metal coverings, since the building industry accepts them. This change should reduce the count of exposed wiring compared with 1995.

New items added:

- Trash compactor to the list of appliances
- Reverse mortgage
- More detail on home equity loans
- Smoke, gas, or bad odors category to neighborhood conditions
- Identification of custom-built homes
- Public transportation
- Whether appliances are in working order
- Lead paint
- Rugs or carpeting in the home
- Wall-to-wall carpeting in the home
- Parallel and supplement heating and cooling systems

Items deleted:

- Age of appliances
- Modifications to homes to accommodate persons with physical limitations and type of disabilities.

Items reinstated:

- Adequate police protection

1999.

Items changed:

Dependent interviewing was greatly expanded in 1999. For a discussion of dependent interviewing and a list of the data items affected, see the topic “Dependent interviewing.”

The procedures for collecting data were changed for four items. See the topics “Income,” “Lodgers,” “Public elementary schools,” and “Rooms in units.” A correction was made for vacant housing units to the item “Main house heating fuel.” See the topic “Main house heating fuel.”

Income was collected for all people in the household 16 years and older. In previous survey years, income was collected for all household members 14 years and older.

Lodgers. Lodger questions were no longer asked of adult relatives. In addition, the age cutoff was changed from 14 years or older to 16 years or older.

Public elementary schools. In 1998 and earlier years, the question on type of school attended was asked of households with children ages 4 to 16. In 1999, the question was asked of households with children ages 5 to 15. The answer category “does not attend school” was replaced with “schooled at home.” However, instructions to the field representative defined both answer categories as the same, meaning children who did not attend school were counted in the “schooled at home” category.

Rent reductions are tabulated differently from how it was tabulated in earlier years. See same topic in Appendix C in the 1999 AHS National report: H150/99.

Rooms in unit. In 1999, tallying room counts by floor was eliminated. Instead, room counts by each housing type were collected for the housing units as a whole. Also, a probe was modified to ensure that one-room units were not underreported. These changes resulted in higher estimates of one-room units with no bedrooms. For a complete discussion of the 1999 procedural change, see same topic in Appendix C in the 1999 AHS National report: H150/99.

Year householder moved into unit. In 1999, a change was made in the way these data were processed. The change allows the “year the householder moved in” to be earlier than the year the structure was built for mobile homes. The change was made in order to accommodate mobile home householders who purchased a new mobile home but were still living on the same site, making the year their structure was built later than the year they moved in.

New items added:

- Bodies of water within 300 feet
- Building and ground maintenance
- Building neighbor noise
- Location of extra unit
- Nights owner spent at extra unit
- Nights owner rented extra unit
- Reasons for extra unit owned
- Renter maintenance quality

(See definition under **Extra unit** in Appendix A.)

Items deleted:

- Adequate inside maintenance
- Buildings and grounds properly maintained
- Reverse mortgages

2001.

Items changed:

Income sources. In the questions used to inventory the cash benefits a person received over the past 12 months, the answer category “Receive SSI/AFDC/Other Welfare” was changed to “Receive SSI, Public Assistance, or Welfare Payments such as [state TANF program name].” Individual states used different names for their Temporary Assistance to Needy Families (TANF) programs, so the question wording varied by state.

Other finished rooms. The range for “Other finished rooms” was increased from 0–5 to 0–10. The question records the number of “other finished rooms” the respondent reports having in the home.

“Farmers Home Administration” was changed to “Rural Housing Service/Rural Development or RHS/RD”

“Mobile homes” was changed to “Manufactured/mobile homes”

Primary mortgage. Beginning in 2001, a lump-sum home-equity loan can be considered a primary mortgage. See also the topic “Mortgage.” Appendix A gives a complete definition of primary mortgage.

Public transportation. A new item “Does ... ever use public transportation?” was added to the public transportation series.

Schooling. Questions on public elementary school included a new answer category, “Not in school,” in 2001.

New items added:

- Access to structure from the outside without climbing up or down any steps
- Cash received in primary mortgage refinanced
- Citizenship of householder
- Community quality
- Current line-of-credit interest rate
- Did ... become a citizen of the United States through naturalization?
- Gated and secured communities
- In what country was ... born?
- Is ... a CITIZEN of the United States?
- Land contract
- Line-of-credit amount used for home additions, improvements, or repairs
- Line-of-credit monthly payment
- Percent of nonrefinanced primary mortgage, including home-equity lump-sum used for home purchase and improvement
- Percent of primary mortgage refinanced cash used for home additions, improvements, or repairs
- Percent of the loan used for the purchase of the home or additions, improvement, or repairs to the home
- Private mortgage insurance payment amount last year
- Reason primary mortgage refinanced
- Reverse mortgages
- Secured communities
- Secured multiunits
- Senior citizen communities
- Total home-equity line-of-credit limit
- Total outstanding line-of-credit loans
- Use of (line of credit) funds for additions, improvement, or repairs to this home
- Was ... born a citizen of the United States?
- When did ... come to live in the United States?

- Year householder immigrated to the United States

Deleted items—Data on painted surfaces were dropped from the AHS. In 1999, data on this topic were published as microdata.

The lead paint questions were deleted.

2005.

New items added:

- *Access to structure.* A question was added to determine if access to the housing unit from the outside was possible without climbing up or down any steps.
- *Manufactured/mobile home size.* A question was added to determine if the manufactured/mobile home was a single-wide, double-wide, or triple-wide unit.
- *Special living.* Questions were added to identify the types of assisted living services offered at multiunit complexes.

Merged items:

Stories in structure. Three questions asking about the height of the apartment buildings within half a block of the home were merged into one question. For a detailed definition of stories in structure, see Appendix A.

Changed items:

- An additional choice for *Reasons for leaving previous unit:* Evicted from residence.
- An additional choice for *Primary mortgage was refinanced:* To reduce the monthly payment.
- Income categories were increased to nine different types of income for each person in the family, such as wages and salaries or social security.

Items deleted:

- Amount of savings and investments
- *Housing unit definition change:* Eating separately was dropped as a requirement of the housing unit definition.
- *Parking lots:* The question on *whether the use of parking lots in the respondent's neighborhood is restricted to residents* was dropped.

2007.

New items added:

- Academic comparison to other area elementary schools
- Down payment
- Fire safety equipment

Changed items:

- Income sources of family and primary individuals
- Neighborhood crime

- Neighborhood conditions
- Neighborhood shopping
- Odors
- Other heating equipment
- Other bothersome neighborhood conditions
- Public elementary school
- Public transportation
- Selected physical problems
- Special living
- Street noise or traffic

Items deleted:

- Common stairways
- Light fixtures in public halls
- Other heating equipment—used as parallel heating equipment or used as supplemental heating equipment

Race.

1995. Beginning in the 1995 national and 1996 metropolitan surveys, two new categories were added to this item: “American Indian, Eskimo, and Aleut” and “Asian and Pacific Islanders.”

2003. In 2003, multiple race classifications were introduced for the first time. The “Other” category was eliminated from the tabulation through the edit process. People were asked to respond to the question on race by indicating one or more of the six race categories. Respondents who chose only one race are referred to as the *race alone* population. Respondents who chose more than one of the six race categories are referred to as the *Two or More Race* population. Starting in 2003, AHS began using the complete CPS persons’ edits. These do not allow “Other” entries in race, but allocate one of the five specified response categories to those people reporting “Other” race. In the past, the “Other” race category contained write-in entries, such as “human being” and “brown.” Previously, many Hispanic householders (about 30 percent in 2001) stated that they were “Other” race, and 78 percent of the “Other” race householders were Hispanic. In 2003, although people may have reported themselves as “Other” race, the edits allocated them to a different race category. So, while over 7,000 people, 6,100 of whom were Hispanic, said they were “Other” race, the edits assigned a category of “White only” to 92 percent of the Hispanics who had reported “Other” race. However, this corresponds to what Hispanics say who report a race category.

Real estate taxes: average monthly cost paid for.

2007. In prior years, the top size category was \$200 or more. In 2007, additional size categories are shown. The resulting top category is now \$600 or more.

Reasons for leaving previous unit.

1998. There was an error in the computer program for the laptop in 1997. As a result, data for the categories “private displacement” and “government displacement” were not collected. In 1998, the error was corrected and data were published.

2005. The answer category “Evicted from residence” was added to the question asking for the reasons for the move from the last residence.

Reasons for refinancing this mortgage.

2005. One more answer choice “To reduce the monthly payment” was added to the list of reasons for refinancing current mortgage.

Recent movers.

1984. In the 1984 AHS and later, some of the data for recent movers are based on the householder’s characteristics and some are based on characteristics of the AHS respondent who may or may not be the householder. Before 1984, all recent-mover data were based on the householder’s characteristics.

Rent control.

1988. In 1988, the computer edits for the metropolitan samples were changed for units reporting rent control. The states of California, Connecticut, New Jersey, New York, and Massachusetts, as well as the District of Columbia, are the only states that have metropolitan areas with rent control. If a respondent answered “yes” to rent control in a metropolitan area not in one of the above mentioned states, the answer was edited to “no.” In survey years prior to 1988, answers of “yes” to rent control in metropolitan areas not in one of the above mentioned states are errors.

Rent reductions.

1999. In the publication, the item “Rent reductions” is tabulated differently for renter-occupied units from how it was in 1998 and earlier years. Although the tabulation was changed in the publication, the data on the microdata file for each component of this publication item remain the same. The change is not a result of any change in the data collection procedure.

Research after the 1998 survey has shown that it is possible for a unit to be both subsidized and either under rent control or having the rent reduced by the owner. For example, the respondent may receive a voucher from the government to help pay the rent and still live in a rent-controlled unit. The procedure used in 1997 and 1998

relied heavily on the respondents’ answers to the questions on rent control and owner reduction. As a result, a large number of units that could have been tallied as “Other, income verification” and therefore “subsidized” were not. A smaller but significant number of units were tallied as “Other, income verification,” which should not have been so classified.

The classification of units as “Other, income verification” in the AHS publications is dependent on the answers respondents gave to a long list of subsidy questions. The tabulations attempt to estimate the number of units that are believed to be subsidized, but for which the type of subsidy is unknown. Past research using AHS data has shown that many respondents are not sure if their units are subsidized or, if subsidized, what type the subsidy may be. A unit that is classified as “Other, income verification” could be a unit that is owned by a public housing authority, a unit receiving some other form of government subsidy, or a unit subsidized by a private organization.

In 1997 and 1998, the classification “Other, income verification” required that the respondent did not answer that the unit was owned by a public housing authority or was part of a specific type of subsidy program and also answered the following:

- “Yes” to the question: “As a part of your rental agreement, do you need to answer questions about your income whenever your lease is up for renewal?”
- Any answer except “A public housing authority or a state or local housing agency” to the question: “To whom do you report your income?”
- “No” to the question: “Do you pay a lower rent because the government is paying part of the cost of the units?”
- “No” to the question: “Does the government limit the rent on the unit through rent control or rent stabilization?”
- “No” to the question: “Is the rent adjusted because someone in the household works for or is related to the owner?”

In 1999, the tabulation procedures were changed. The classification “Other, income verification” now requires that the respondent did not answer that the unit was owned by a public housing authority or was part of a specific type of subsidy program, but did answer the following:

- “Yes” to the question: “As part of your rental agreement, do you need to answer questions about your income whenever your lease is up for renewal?”
- Either “A building manager or landlord” or “a public housing authority or a state or local housing agency” to the question “To whom do you report your income?”

Table C-10 presents 1999 rent reduction data using both the old procedures and the new 1999 procedures for renter-occupied units. The new procedures provide an improved count of the category "Other, income verification." The data using the old procedures should be used, however, when trying to measure historical change, especially between 1997 and 1999. Under the new tabulation procedure, there are 517,000 units that are classified as "Other, income verification" that under the old procedure were classified as:

- Renter control: 149,000
- Rent control not reported: 137,000
- Reduced by owner: 14,000
- Owner reduction not reported: 1,000
- Subsidy not reported: 216,000

Also, under the new tabulation procedure, there are 149,000 units that are classified as "Not reduced by owner" that were classified as "Other, income verification" under the old procedure.

Table C-10. **Rent Reductions Using Old and New Procedure for the United States: 1999**

Category	Old	New
Total, renter occupied	34,007,000	34,007,000
No subsidy	27,093,000	26,942,000
Rent control	1,033,000	884,000
No rent control	25,888,000	26,023,000
Reduced by owner	1,865,000	1,851,000
Not reduced by owner	23,905,000	24,054,000
Owner reduction not reported	118,000	117,000
Rent control not reported	173,000	36,000
Owned by public housing authority	1,865,000	1,865,000
Government subsidy	2,062,000	2,062,000
Other, income verification	1,910,000	2,277,000
Subsidy not reported	1,078,000	862,000

Replacements and additions.

2004. The question, "Was that wall-to-wall carpeting installed over existing, finished flooring, or was that put down over bare sub-flooring, such as concrete or unfinished wood?" was no longer asked. The question, "In the last two years, have you installed any wall-to-wall carpeting?" was still part of the survey.

Rooms in unit.

1984. The number of year-round units with one or two rooms in the United States dropped from 4,056,000 in 1983 to 2,486,000 in 1985. As a result, the median number of rooms per unit increased from 5.1 to 5.3; this does not necessarily indicate an increase in the average size of housing units. In the 1983 AHS, respondents answered a single question asking for a total count of rooms in the unit. The potential to miss specific rooms is high in a question of this type. In the 1984 and later surveys, respondents were asked for a count of each specific type of room. The answers to these questions were then added

together in the tabulations to provide a total count of rooms. Far fewer rooms were missed in this series of questions, which has apparently resulted in lower counts of one- and two-room units. It is also possible, however, that a few rooms may have been double counted. For example, a living room also may have been counted as a family room for a count of two rooms when only one room actually exists.

1997. Unfinished rooms were excluded from the published total number of rooms, but the count of unfinished rooms was available separately in the microdata. Respondents were asked for the number of rooms not only by type of room, but also by floor. Research had shown this approach was helpful for large homes, but it may have caused confusion and double counting in small homes.

1997, 1998, and 1999. The data for rooms published in 1997 and 1998 are not comparable to the data published in 1999 and before 1997. The approach used in 1997 and 1998 resulted in a much lower count of one-room housing units and housing units with no bedroom as shown in Table C-11.

Table C-11. **One-Room Units and Units With No Bedrooms in AHS: Selected Years**

Area and year	One-room units	Units with no bedrooms
United States		
1999	624,000	1,250,000
1997	471,000	619,000
1995	862,000	1,519,000

1998	700	700
1990	4,600	7,500

The 1997-98 approach had the respondent count each type of room for each floor of the housing unit for a total of up to five floors (the fifth includes five or more floors). For example, a count of the total number of bedrooms was obtained for the first, second, third, fourth, and fifth floors. These counts were then added together to get a total count of bedrooms. This same procedure was followed for each type of room (living room, dining room,

family room etc.). The final room counts were then added together to get a total for the housing unit. In addition, a special probe at very small units (those with no bedrooms, baths or half bath, and kitchens) asked if any of these rooms were missed. These procedures evidently produced larger counts of rooms for the smaller units. The low counts in 1997 and 1998 of one-room units and units having no bedrooms do not reflect any change in the characteristics of the housing inventory that might have occurred between these years and earlier or later years. Housing units that should have been counted as one-room units or as having no bedrooms in 1997 and 1998 were counted as having more than one room and/or having one or more bedrooms.

In 1999, the procedure was changed. The room counts by floor were eliminated. Room counts of each type were collected for the housing unit as a whole. These room counts were added together to produce a total count of rooms. Also, the probe was modified to ensure that one-room units were not underreported. If the respondent reported that there were no bedrooms, no kitchens, and zero to one living room in the unit, the field representative did not probe about these rooms. The field representative also did not ask the respondent for a count of family rooms, recreation rooms, dens, laundry rooms, or any other furnished or unfurnished rooms. This reduced the possibility of a one-room unit being counted as a two-or-more room unit by erroneously reporting multiple uses of the same room (e.g., counting a one-room unit as having a living room and a bedroom because the only room was being used as both). The 1999 data for the United States are an improvement over what were collected in 1997 and 1998, but still may not be entirely comparable to the data collected prior to 1997.

2001. The range for “Other finished rooms” was increased from “0 to 5” to “0 to 10.”

Rooms used for business.

1999. As a result of a data collection error, data for this item in 1997 and 1998 were not published. In 1999, the previously suppressed items were corrected and published.

Sample.

1985. A new sample was chosen for the national survey from the 1980 census. The previous sample, selected from the 1970 census, was used from 1973–83. To the degree that the coverage of housing units is different between the 1970 and the 1980 censuses, comparisons of the results of the 1973–83 surveys with the results of the 1985 and later surveys may be affected.

1987. Houston had a new sample based on the 1980 census because AHS sampling techniques did not accommodate its rapid annexations. The previous sample was based on the 1970 census.

1995. A new sample was chosen for the metropolitan surveys from the 1990 census, except in six areas that were covered as part of the 1995 national survey, and therefore have samples based on the 1980 census. The previous metropolitan samples, based on the 1970 census, were used from 1974–94.

All samples are updated continuously to cover new construction. See also the topic “Weighting” and the discussion of “Sample design” in Appendix B.

Sample size.

1995. The item “sample size” was added to Table 2-1 of published books. The sample size shown in the book is the unweighted count of the actual sample cases. See Appendix B for a more detailed explanation on sample design.

School. See the topic “Public elementary schools.”

Selected geographic areas.

1995. The published data for the item “Selected Geographic Areas” in Table 2-1 were found to be incorrect for four of the 1995 metropolitan reports because of errors in processing. The problems with the data were as follows:

Chicago. The data for the three counties not listed in “Selected Geographic Areas” were incorrectly distributed among the data for the five counties that were listed. All published county data for Chicago were incorrect.

New York. The data for the three counties not listed in “Selected Geographic Areas” were incorrectly added to the data for the last county listed, Westchester County. Published data for the first seven counties listed were correct. Data for Westchester County were incorrect.

Northern New Jersey. The data for the first ten counties listed were published correctly. Data for the last county listed, Union County, was incorrectly left off the table.

Philadelphia. No data were published for Philadelphia.

Selected subareas and selected geographic areas.

2002. In the occupied chapters of the following 2002 American Housing Survey (AHS) publications, the data are incorrect for the boxhead columns “Selected Subareas” and the stub item “Selected Geographic Areas.” The metropolitan areas involved are: Anaheim-Santa Ana, CA; Buffalo, NY; Dallas, TX; Fort Worth-Arlington, TX; Milwaukee, WI; Phoenix, AZ; Riverside-San Bernardino-Ontario, CA; and San Diego, CA.

A processing error resulted in a significant number of cases not being tallied under the “Selected Subareas” columns and for the stub item “Selected Geographic Areas.” The data shown in the publications are underestimates for these items. The processing errors were corrected. Although there are no plans to issue new paper copies of

the publications, revised PDF copies can be seen on the Internet at the Census Bureau's Web site <www.census.gov/prod/www/abs/h170sma.html>.

Severe and moderate problems.

1989. The data concerning units with severe and moderate problems in the 1989 national survey (1990 metropolitan surveys) and beyond are not comparable with similar data published earlier. See the topic "Plumbing facilities." Units lacking complete plumbing facilities are included in the count of units with severe physical problems. The number of units with severe physical problems may have been underestimated during the 1985–89 national (1984–90 metropolitan) time period. During the same time period, units with moderate problems may have been overestimated.

Sewage disposal breakdowns.

1998. There was an error in the computer program for the laptop in 1997. As a result, data on sewage disposal breakdowns were collected for only 95 percent of the eligible households. Although the universe was incomplete, the data were published because the households answering the questions did so correctly. In 1998, the error was corrected and all eligible households were asked the questions.

Source of water.

1992. In 1985–91, respondents were asked if the source of water for their homes was a public or private system, an individual well, or some other source. Interviewer instructions specified that the question was concerned about the water used for cooking and drinking. This instruction was not read to the respondent. In 1992, the question changed and the interviewer instructions became part of the question. From 1992 forward, the number of units reporting "Some other source of water" increased, apparently as a result of the wording change in 1992. Therefore, data from 1985–91 and 1992 and later should be compared with caution.

1995. The title of this item changed to "Primary source of water," and the usage restriction "for cooking and drinking" was deleted from the question.

Special living.

2005. New questions were added to identify the types of assisted living services being offered at multiunit complexes. The questions ask whether the management of the building offers the following *services* to residents: meals, transportation, housekeeping; or *assistance* to residents: managing finances, aid with telephone, shopping, bathing, eating, moving about, dressing, and toilet use. *Services* for meals did not include meals in restaurants on the property that were open to the public. Meals may have been served in the unit or in a common area. *Services* for transportation included shuttles or vans provided by the property

management that operated on a fixed schedule or by previous appointment. Municipal buses or other private services (such as taxicabs) were not included. *Services* for housekeeping included linen services, cleaning in the unit and the like that are offered by the facility. Exterior maintenance to the property or housekeeping only performed in the hallways, lobbies, and common areas were not included. *Services* for managing finances included balancing checkbook, check writing and the like; these services must have been provided by the facility rather than through a social service or charitable agency, financial institution, or the like. *Personal services* included bathing, eating, moving about, dressing, and toilet use which were provided by the management of the building or through the facility. Excluded were assistance contracted directly by the units' residents or family, or assistance provided through a social service or charitable agency.

2007. Special living questions were changed so only respondents who reported assistance with meals, transportation, housekeeping, finance management, phone use, or shopping were asked about bathing, eating, moving about, dressing, or toilet use assistance.

Stairways.

See the topic "Common stairways."

Statistical areas.

1995. Beginning in 1995, the item "Statistical Areas" is no longer published in the metropolitan reports because of the complexity of matching geographic files over long periods of time.

Stories in structure.

1987, 1989, and 1997. See the topic "Buildings and neighborhood."

2005. Prior to 2005, respondents, thinking of apartment buildings, were asked if any apartment buildings within a half block were 7 or more stories tall. In 2005, the question was changed where respondents were asked how many stories were in the tallest building within a half block. Then the field representative placed the answer into 1 of the 3 categories—7 or more, 6 to 4, or 3 or less.

Telephone interviewing.

1981. Beginning in 1981, decentralized telephone interviewing was conducted in the national survey for a sample of units that were in sample during the previous enumeration. As a result of analysis conducted in both 1981 and 1983, the Census Bureau concluded that data collected using the decentralized telephone interviewing procedures were not sufficiently different from data collected by regular personal interviews to preclude basing published data on both telephone and personal interview data. Also see the topics "Buildings and neighborhood" and "Computer-assisted interviewing."

Time sharing.

1993. A programming error was discovered and corrected for the item “Time sharing.” In the 1991 national survey, the wrong universe was used. As a result, the published 1991 estimates of time-shared units were too low. Use caution when making comparisons with the 1991 AHS national survey and later national surveys.

Trash, litter, or junk on streets or any property.

1987, 1989, and 1997. See the topic “Buildings and neighborhood.”

Units in structure.

1984. From 1973 through 1983, data on units in structure were based on the respondent’s answer to one question, “How many living quarters, both occupied and vacant, are there in this house (building)?” In 1984 and beyond, data on units in structure were based on the respondent’s answers to a series of questions. The method of collecting units-in-structure data was revised because previous AHS experience showed the concept to be difficult for the respondents. Respondents particularly had difficulty distinguishing between single-family, attached, and multiunit structures.

As a result of this change, the estimated number of one-unit attached structures declined in some MSAs between interview dates of 1984 and later, compared with interview dates prior to 1984. It is estimated that 1974 through 1983 AHS-MS surveys, on average, overestimated the numbers of one-unit, attached structures by approximately 25 percent. The level of overestimation may vary significantly between metropolitan areas. Units incorrectly classified as one-unit, attached in previous survey years are, in 1984 and beyond, correctly classified as being in multiunit structures.

The Census Bureau estimated that the 1983 AHS-National sample overestimated single-family, detached units by 125,000 and single-family, attached units by 696,000. The 1983 AHS-National sample underestimated units in multi-unit structures by approximately 898,000. Table C-12 provides revised levels of 1983–85 growth by adding 1983 overestimates and subtracting 1983 underestimates to the 1983–85 change shown in Table C-13.

Table C-12. **Revised Change in the Year-Round Housing Inventory by Units in Structure: 1983–85**

Units in structure	1983–85 change	Add 1983 over-estimate	Subtract 1983 under-estimate	1983–85 revised change
Single-family, detached	1,744,000	125,000	–	1,869,000
Single-family, attached	–2,000	696,000	–	694,000
2 or more units in structure .	1,935,000	–	898,000	1,037,000

– Represents zero.

Table C-13. **Change in the Published Year-Round Housing Inventory by Units in Structure: 1983–85**

Units in structure	1983	1985	1983–85 change
Single-family, detached	57,029,000	58,773,000	1,744,000
Single-family, attached	4,453,000	4,451,000	–2,000
2 or more units in structure .	26,193,000	28,128,000	1,935,000

Urban, rural, and population

1985. From 1973–83, national books and data files use 1970 populations and 1971 boundaries to define urban and rural areas. Starting in 1985, national books and data files use 1980 populations and 1981 boundaries. 1990 and 1991 data are never used for this topic. (This topic only applies to national surveys, not metropolitan surveys.)

Utilities.

1989. Two procedures were introduced that attempt to correct the overreporting of electricity and gas costs in the AHS. In the first procedure, respondents were asked the amount of the electricity and/or gas bill for the previous months of January, April, August, and December. These months were the best predictors of annual costs. If the respondent provided data for at least 3 of the 4 months (1 month for recent movers), the results were used to provide an annual estimate of costs. This estimate was then divided by 12 to provide average monthly costs.

The backup procedure was applied to the remaining units. If the respondents did not know the amount of their electricity and/or gas bills for at least 3 of the 4 months, their estimate of average monthly costs was used. A factor was then applied that, in effect, lowered these costs to make the total cost from all households consistent with electricity and gas costs reported in the Residential Energy Consumption Survey (RECS) sponsored by the U.S. Department of Energy.

Before 1989, respondents were asked only to provide an estimate of average monthly costs. Research done using the 1987 AHS showed that this approach produces 15 to 20 percent overestimates of electricity and gas costs. The

new procedures in 1989 and later produce lower and more accurate estimates. On average, more than one-third of the respondents provided answers for at least 3 of the 4 months.

1993. The procedures introduced in 1989 were improved and expanded from two to three procedures.

Three separate procedures are used to estimate monthly costs of electricity and gas. All respondents are asked if they have records available showing their costs for electricity (or gas) separate from other utilities. If they respond “yes,” they are asked the amount of their electric (or gas) bill for the most recent months of January, April, August, and December. These months are the best predictors of annual costs. On average, more than one-third of respondents provide answers for at least 1 of the 4 months.

If the respondent provides data for only 1 month, the first procedure is used. The data for the month are adjusted using regression formulas to estimate yearly costs that are then divided by 12. These formulas are derived from the Residential Energy Consumption Survey (RECS) sponsored by the U.S. Department of Energy. These formulas take into account the following characteristics of the unit: the census division where it is located, electric heat, electric water heating, natural gas heat, natural gas water heating, year built, type of unit, number of rooms, number of bathrooms, number of appliances, and number of household members.

If the respondent provides data for 2, 3, or 4 months, the second procedure is used. As with the first procedure, the monthly data are adjusted using regression formulas, derived from the RECS data, to estimate yearly costs that are then divided by 12. Because more than 1 month’s worth of real costs are available, it is rarely necessary to take into account detailed characteristics of the unit as is done in procedure one. (In some cases where 2 months of data are provided, detailed characteristics of the unit are taken into account.)

If the respondent answers “no,” that he or she does not have separate records for the electricity (or gas), the respondent is asked to provide an estimate of the average monthly costs. In this case, a procedure similar to the first is used. As in the case where 1 month of billing data is provided, the reported monthly average is adjusted using regression formulas derived from the RECS data, that take into account both the reported amount of electricity charges and detailed characteristics of the unit. Finally, a factor is then applied to the electricity and gas costs to benchmark them to RECS averages.

1984. See the topic “Housing costs and value.”

2007. The table range for *Value* was increased to reflect current market changes. In prior years the top size category was \$300,000 or more. In 2007 additional size categories were shown. The resulting top category is \$750,000.

Weighting.

Appendix B describes the process of weighting the data to represent the country as accurately as possible. The last steps in weighting involve ratios to make AHS data match other sources. Table C-14 shows that the sources of these control totals have changed.

Table C-18 (at the end of this section) compares basic housing unit characteristics using 1980 and 1990 weights.

1979–83. The 1980-based national estimates are about 2 percent larger than the 1970-based estimates. This 2 percent effect was equally distributed among all types of units. Therefore, percentages and medians should be comparable throughout 1973–83.

1985. The 1980 census count of occupied units in the United States was adjusted for undercount and projected to 1985 using the 1980–85 Current Population Survey’s rate of change. The Census Bureau then ratio-estimated the 1985 AHS-National sample to this number. The procedure used in 1985 resulted in 200,000 additional occupied units that would not have been estimated if the 1983 procedures had been employed in 1985.

1991–2001	1990	Census Bureau data on construction, mobile home placement, vacant units, lost units
2003 and later	2000	Census Bureau data on construction, mobile home placement, vacant units, lost units

Also, all vacant units were adjusted for undercount for the first time. This adjustment added 400,000 vacant units (98,000 seasonal units and 302,000 year-round vacant units) to the housing inventory.

Beginning with 1985, national estimates of mobile homes with a model year of 1980 or later were ratio-estimated into independent counts of mobile home placements from the Survey of Mobile Home Placements. The counts of mobile homes for 1983 and earlier years may be too low and lead to unrealistically high estimates of change between 1985 and earlier years. For example, occupied mobile homes grew from 3,999,000 in 1983 to 4,754,000 in 1985, an increase of 755,000. This level of growth seems excessive as data from the Survey of Mobile Home Placements show approximately 570,000 new mobile homes placed for residential use during the same time period.

1991. On average, the 1990-based national weighting produces numbers that are about 2.5 percent lower than 1980-based weighting. This effect is not equally distributed among all types of units. Table C-15 shows the effects of the weighting change by region for the year 1991.

Table C-16 presents counts of occupied homes using 1990-based weighting. This weighting is consistent with the weighting used to produce the 1991 and later detailed tables in Chapters 1 through 10 of the national books. These data should be used when measuring the change in the size of the occupied inventory. These data provide the most accurate count of the total number of occupied homes in the United States for the years 1985, 1987, and 1989.

2001. Table C-18 compares the switch from using 1980 census-based geography to 1990 census-based geography, which affected several steps in the weighting procedures and the geography data items used in those steps. However, data on the 2001 microdata file are weighted using 1980 census-based geography. For more details, refer to the “Estimates” section of Appendix B.

2003. In 2003, the independent estimates (control totals) used to produce the weights were based on Census 2000 with an estimate of change since then. This 2000-based weighting produces, on average, estimates that are about 1.0 percent lower than 1990-based weighting.

The 2003 AHS-N estimates are not available using 1990-based weighting. For comparative purposes, 2001 data were produced using 2000-based weighting (the original data products used 1990-based weighting). As can be seen in Table C-17, the switch from 1990-based to 2000-based weighting produced a 1.0 percent lower estimate for 2001 at the United States level. The effect of the weighting change ranged from a 2 percent drop in the West to two-tenths of a percent increase in the Northeast.

Summary characteristics of the housing inventory for 2001 using 2000-based weighting are shown in Table C-19. These data should be used when comparing the 2001 AHS to the 2003 AHS.

Wiring.

1997. Plastic coverings began to be counted as acceptable, along with metal coverings, because the building industry accepts them. This change should reduce the count of “exposed wiring” reported in 1995.

Year householder moved into unit.

1999. A change was made in the way data for the year the householder moved in was processed. This change allows the year the householder moved in to be earlier than the year the structure was built for mobile homes. The change was made to accommodate mobile home householders who purchased a new mobile home but were still living in the same site, making the year their structure was built later than the year they moved in.

Appendix D. Errors

All numbers from the American Housing Survey (AHS), except for sample size, are estimates. As in other surveys, errors come primarily from the following:

- Incomplete data (Incomplete data are adjusted by assuming that the respondents are similar to those not answering, and the size of these errors is estimated.)
- Wrong answers (The U.S. Census Bureau does not adjust for wrong answers and does not estimate the size of the errors.)
- Sampling (Sampling errors are not adjusted and the size of the error is estimated.)

Incomplete data and wrong answers are usually the largest source of errors, larger than sampling errors. For example, in the American Housing Survey-National (AHS-N), the changes in weighting in 1991 and 2003 (see Appendix C) corrected some of the error due to incomplete data. That one correction averaged 2.5 percent in 1991 and 1.0 percent in 2003. Worse errors from incomplete data and from wrong answers apply to some items, as discussed below.

Additional information on the quality of AHS data can be obtained from the U.S. Census Bureau, *American Housing Survey: A Quality Profile, Series H121/95-1*.

INCOMPLETE DATA

Coverage errors. Because of deficiencies with the Census Bureau’s sampling lists, the housing units in the survey do not represent all housing units in the country. The Census Bureau attempts to adjust for the deficiencies by raising the raw numbers from the survey proportionally so that the numbers published here match independent estimates of the total number of housing units (see Appendix B, “Independent total housing unit ratio estimation”).

In 2007, the Census Bureau attempted to reduce the undercoverage in two segments of the population by adding sample units selected from the 2000 census (i.e., manufactured/mobile homes built between 1980 and 2000 and special living units). The approximate housing unit undercoverage rates for the 2007 metropolitan areas range from 1.8 percent to 7.4 percent. Table D-1 lists units that have known coverage deficiencies.

Missing data. Some people refuse the interview or some of the questions, or do not know the answers. When the entire interview is missing, other similar interviews

Table D-1. **Poorly Covered Units**

Type of unit	Type of deficiency
Mobile homes, boats, and recreational vehicles (RVs)	No coverage of new mobile home parks, new marinas, and new RV parks since April 1990 in areas where addresses are complete and permits are required for new construction.
Conventional new construction	No coverage of permits issued fewer than 8 months before interviewing or homes built without permits where permits are required. In addition, eligible units could be missed and ineligible units included because of incorrect answers to questions used to screen out ineligible units.
New construction in special places (for example, college campuses, prisons)	Not covered in either permit-issuing or nonpermit-issuing areas.
Group quarters and houses moved in	Eligible units could be missed because of incorrect answers to questions used to screen out ineligible units.
Conversions from non-residential units	1970-based metropolitan areas: Nonresidential units at the time of the 1970 census that converted to residential units were missed.
Within-structure additions	Some extra apartments created illegally or occupied by fugitives are probably missed because people do not report them for fear of penalties.
Whole structure additions not covered by permit sampling	These units are chosen with the aid of screening questions. Eligible units could be missed and ineligible units included because of incorrect answers to the screening questions.

represent the missing ones. See Appendix B, “Type A, non-interview adjustment.” For most missing answers, an answer from a similar household is copied.¹ The Census Bureau does not know how close the imputed values are to the actual values. For other items, “not reported” is used as an answer category. The items with the most missing data are primarily those that people forget or consider personal: mortgages, other housing costs, and income.

Incompleteness can cause large errors since, when even 10 percent of housing units do not answer a particular question, they represent about 13 million housing units that have to be estimated *on little or no basis* (there are

¹Hot deck allocation is used: an answer is copied from the most recently processed similar household before the household with the missing item.

about 130 million housing units in the United States). The survey estimates adjust for them by assuming that they are like some group of housing units that did give data. This assumption is *never exactly true*, although it is usually better than ignoring the housing units with the missing data. Thus, it is not surprising that large biases, as shown in Table D-2, are possible when the survey has data for only 50 to 90 percent of housing units for particular items. Again, readers should be wary of items with highly incomplete data.²

Rates of completeness were not computed for 2007. Table 2 in Appendix D of the *American Housing Survey for the United States in 1995* gives the completeness rates for 1995. Due to the change in data collection methodology, the rates for 2007 may be higher or lower than in the past. However, the items that were most incomplete in 1995 are probably still the most incomplete for 2007.

Effect on income. The nonsampling errors interact poorly for income. Income questions are inconsistently answered, incompletely answered, and the totals fall short of totals known from the National Income Accounts, especially for the elderly.³

Change over time. Several aspects of the AHS make estimates of change from previous data unreliable. These changes may elicit different answers from the past, even if nothing changed in the housing unit. Some examples of changes that may have affected answers include:

- Question wording
- Order of questions
- Switched from paper to computerized questionnaire
- Lack of Spanish questionnaire

WRONG ANSWERS

Wrong answers happen because people misunderstand questions, cannot recall the correct answer, or do not want to give the right answer. Table 1 in Appendix D of the

²Statistical note: The November 1990 paper, *How Response Error, Missing Data and Undercoverage Bias Survey Data*, estimates that 90 percent of errors from incomplete data are less than $1.645 \times (.0012 \times U + .0363 \times (\text{lesser of } A \text{ or } U-A))$ where "A" is any count from the AHS and U is the total number of housing units in the United States or metropolitan area (both in thousands, result also in thousands). Weights are adjusted to reduce these errors, but it is not known how much error remains. See "Where to Get AHS Data" in *How Response Error, Missing Data and Undercoverage Bias Survey Data*, order number HUD-6458. This is available from HUD USER at <www.huduser.org>.

³Data are in the *Codebook for the American Housing Survey Volume 1*, available from HUD USER at <www.huduser.org>. Newer comparisons, though for a different survey, are in *Money Income of Households, Families, and Persons in the United States: 1992*, Series P60-184, pages C12-C14, available from the Superintendent of Documents (see "Where to Get AHS Data").

American Housing Survey for the United States in 1995 shows inconsistency rates for items. These results are from 1995, but the inconsistency rates for 2007 are probably similar.

SAMPLING ERRORS

Sampling errors definition. Error from sampling reflects how estimates from a sample vary from the actual value. (Note: "Actual value" means the value derived if all housing units had been interviewed, under the same conditions, rather than only a sample). A confidence interval is a range that contains the actual value with a specified probability. The range of nonsampling error is usually larger than this confidence interval.

Counts. Most numbers from the AHS are counts of housing units (for example, units with basements or units with an elderly person). These counts have error from sampling. As with the other types of errors, readers should be wary of numbers with large errors from sampling.

Table D-3 gives a list of errors for a range of numbers for the 2007 AHS-MS metropolitan areas. For numbers not found in this table, interpolate between the numbers in the table or use the appropriate formula from Table D-4 for the 2007 AHS-MS metropolitan areas. In each formula, "A" is a number (a count of units in thousands) from the AHS. Remember, in any case, that the total error is larger than sampling error.

For example, suppose there are 320,000 owner-occupied housing units in the Baltimore, MD MSA (that is, $A = 320$). The error from sampling for a 90-percent confidence interval for those 320,000 owner-occupied housing units is

$$1.645 \times \sqrt{(.515 \times 320) - [(.000464) \times (320 \times 320)]} = 17.8.$$

The 90-percent confidence interval can then be formed by adding and subtracting this error to the survey estimate of 320 (that is, 320 ± 17.8). Statements such as "the actual value is in the range 320 plus or minus 17.8 (that is, 302.2 to 337.8)" are right 90 percent of the time and wrong 10 percent of the time.⁴

Numbers in the publication are printed in thousands, so 320 means 320,000. The formulas are designed to use numbers directly from the publication; do not add zeros. The results are also in thousands, so 17.8 means 17,800.

Percents. Any subgroup can be shown as a percent of a larger group. For AHS-MS metropolitan areas, use the appropriate formula in Table D-5. In each formula, p is the percent and A is the denominator, or base of the percent in thousands.

⁴The formula in the text is based on 1.645 times the standard error from sampling. This formula gives "90-percent confidence interval errors." For a 95-percent confidence interval, multiply by 1.96 instead of 1.645. For a 99-percent confidence interval, multiply by 2.576 instead of 1.645.

For example, the error from sampling for a 90-percent confidence interval for 40 percent of 320 (meaning 320,000) is:

$$1.645 \times \sqrt{\frac{.515 \times 40 \times (100 - 40)}{320}} = 3.2.$$

Statements such as “the actual percent is in the range 36.8 percent to 43.2 percent” are right 90 percent of the time.

Note that when a ratio C/D is computed where C is not a subgroup of D (for example, the number of Hispanics as a ratio of the number of Blacks), the error from sampling is different.⁵

Medians. The steps in Table D-6 calculate the error for sampling for a 90-percent confidence interval for medians. This is an approximation to the error.

For small bases, the confidence interval on medians cannot be estimated reliably. To estimate a median’s sampling

⁵The error from sampling for a 90-percent confidence interval for a ratio C/D is $C/D \sqrt{(\text{error for } C/C)^2 + (\text{error for } D/D)^2}$, where the error for C should be interpreted as the error for a 90-percent confidence interval for C. Likewise, the error for D should be interpreted as the error for a 90-percent confidence interval for D.

error more accurately, find the sampling error on 50 percent, as described in Table D-6, and compute the 90-percent confidence interval.

Differences. Two numbers from the AHS, like 34 and 40 or 40 percent and 45 percent, have a “statistically significant difference” if their ranges of error from sampling for a 90-percent confidence interval do not overlap.⁶

Formulas for error from sampling. The letter “A” in the formulas in Tables D-4, D-5, D-6, and D-7 represents a number (a count of units in thousands) from AHS (see the “Counts” section for an example of how “A” is used).

For a 90-percent confidence interval on zero for the 2007 AHS-MS, refer to Table D-3 where the size of the estimate is zero. If a formula gives an error smaller than the error for zero, use the error for zero.

⁶When ranges of error from sampling for a 90-percent confidence interval do overlap, numbers are still statistically different if the result of subtracting one from the other is more than $\sqrt{(\text{error for first number})^2 + (\text{error for second number})^2}$. The error for the first and second numbers should be interpreted as the error for a 90-percent confidence interval for the first and second numbers, respectively.

Table D-6. **How to Compute the Error From Sampling for a 90-Percent Confidence Interval for a Median**

Steps for calculations	The formula	An example	Your data
How many total units is the median based on (in thousands, exclude "not reported" and "do not know")?	A	200	---
What are the end points of the category the median is in?	X-Y	\$600-699	---
What is the width of this category (in dollars, rooms, or whatever the item measures)?	W	\$100	---
How many housing units are in this median category (in thou sands)?	B	30	---
Then the error from sampling for the median is approximately: ¹	$\frac{K \times W \times \sqrt{A}}{B}$	$\frac{.722 \times 100 \times \sqrt{200}}{30} = \34	---
The 90-percent confidence interval for the median is	median $\pm \frac{K \times W \times \sqrt{A}}{B}$	median $\pm \$34$	---

¹Note: To obtain an appropriate value for K, multiply the numerator of the formula for computing the error from sampling for 50 percent by a factor of .01. Refer to Table D-5 for the appropriate formula for AHS-MS metropolitan areas. For example, for estimates consisting of only manufactured/mobile homes in the Baltimore, MD (MSA), $K = .01 \times (1.645 \times \sqrt{.770 \times 50 \times 50}) = .722$ and for all other estimates in Baltimore, MD (MSA), $K = .590$.

¹Statistical note: This formula is based on the error from sampling for 50 percent, using the appropriate formula, $1.645 \times \sqrt{.770 \times 50 \times (100 - 50)/A} = 72.2\sqrt{A}$ for medians involving estimates of only manufactured/mobile homes in the Baltimore, MD metropolitan area. For medians involving all other estimates in the Baltimore, MD metropolitan area, use $1.645 \times \sqrt{.515 \times 50 \times (100 - 50)/A}$. Refer to Table D-5 for the appropriate formula for AHS-MS.
