Sea level: In this report "sea level" or "mean sea level" refers to the National Geodetic Vertical Datum of 1929--a geodetic datum derived from a general adjustment of the first-order level nets of the United States and Canada, formerly called Sea Level Datum of 1929.

GLOSSARY

Terms related to streamflow, water-quality, and other hydrologic data, as used in this report, are defined below. Refer to the chart for converting English units to International System (SI) Units on page IV of this report.

Acre-foot (ac-ft) is the quantity of water required to cover 1 acre to a depth of 1 foot and is equivalent to 43,560 cubic feet or about 326,000 gallons or 1,233 cubic meters.

Annual 7-day minimum is the lowest mean discharge for 7 consecutive days for a calendar year or a water year. Note that most low-flow frequency analyses of annual 7-day minimum flows use a climatic year (April 1 - March 31). The date shown in the summary statistics table is the initial date of the 7-day period. (This value should not be confused with the 7-day 10-year low-flow statistic.)

Contents is the volume of water in a reservoir or lake. Unless otherwise indicated, volume is computed on the basis of a level pool and does not include bank storage.

Control designates a feature downstream from the gage that determines the stage-discharge relation at the gage. This feature may be a natural constriction of the channel, an artificial structure, or a uniform cross section over a long reach of the channel.

Control structure as used in this report is a structure on a stream or canal that is used to regulate the flow or stage of the stream or to prevent the intrusion of salt water.

Cubic feet per second (ft^3/s) is the rate of discharge representing a volume of 1 cubic foot passing a given point during 1 second and is equivalent to 7.48 gallons per second or 448.8 gallons per minute or 0.02832 cubic meters per second.

Cubic-feet-per-second day (cfs-day) is the volume of water represented by a flow of 1 cubic foot per second for 24 hours. It is equivalent to 86,400 cubic feet, approximately 1.9835 acre-feet, about 646,000 gallons, or 2,445 cubic meters.

Cubic feet per second per square mile (cfs/mi) is the number of cubic feet of water flowing per second divided by the drainage area in square miles.

Discharge is the volume of water (or more broadly, volume of fluid plus suspended sediment) that passes a given point within a given period of time.

Drainage area of a stream at a specified location is that area, measured in a horizontal plane, enclosed by a topographic divide from which direct surface runoff from precipitation normally drains by gravity into the stream above the specified point. Figures of drainage area given herein include all closed basins, or noncontributing areas, within the area unless otherwise specified.

Drainage basin is a part of the surface of the earth that is occupied by a drainage system, which consists of a surface stream or a body of impounded surface water together with all tributary surface streams and bodies of impounded surface water.

Elevation, in this report, refers to the distance above or below the National Geodetic Vertical Datum of 1929 (NGVD of 1929).

Gage height (G.H.) is the water-surface elevation referred to some arbitrary gage datum. Gage height is often used interchangeably with the more general term "stage," although gage height is more appropriate when used with a reading on a gage.

Gaging station is a particular site on a stream, canal, lake, or reservoir where systematic observations of hydrologic data are obtained.

Hydrologic unit is a geographic area representing part or all of a surface drainage basin or distinct hydrologic feature as delineated by the Office of Water Data Coordination on the State Hydrologic Unit Maps; each hydrologic unit is identified by an eight-digit number.

Instantaneous discharge is the discharge at a particular instant of time.

Mean discharge is the arithmetic mean of individual daily mean discharges during a specific period.

National Geodetic Vertical Datum of 1929 (NGVD of 1929) is a geodetic datum derived from a general adjustment of the first order level nets of both the United States and Canada. It was formerly called “Sea Level Datum of 1929” or “mean sea level” in this series of reports. Although the datum was derived from the average sea level over a period of many years at 26 tide stations along the Atlantic, Gulf of Mexico, and Pacific Coasts, it does not necessarily represent local mean sea level at any particular place.

Partial-record station is a particular site where limited streamflow and/or water-quality data are collected systematically over a period of years for use in hydrologic analyses.

Recurrence interval is the average time interval between occurrences of a hydrological event of a given or greater magnitude, usually expressed in years. May also be called return period.

Runoff in inches (in.) shows the depth to which the drainage area would be covered if all the runoff for a given time period were uniformly distributed.

Stage-discharge relation is the relation between gage height (stage) and volume of water per unit of time (discharge) flowing in a channel.

Streamflow is the discharge that occurs in a natural channel. Although the term “discharge” can be applied to the flow of a canal, the word “streamflow” uniquely describes the discharge in a surface stream course. The term “streamflow” is more general than “runoff” as streamflow may be applied to discharge whether or not it is affected by diversion or regulation.

Surface area of a lake is that area outlined on the most recent USGS topographic map as the boundary of the lake and measured by a planimeter in acres. In localities not covered by topographic maps, the areas are computed from the best maps available at the time planimetered. All areas shown are those for the stage when the planimetered map was made.

Water year in USGS reports dealing with surface-water supply is the 12-month period October 1 through September 30. The water year is designated by the calendar year in which it ends and which includes 9 of the 12 months. Thus, the year ending September 30, 1993, is called the “1993 water year.”

7-day 10-year low flow (7 Q10) is the discharge at the 10-year recurrence interval taken from a frequency curve of annual values of the lowest mean discharge for 7 consecutive days (the 7-day low flow). The average runoff is also known as *basin yield*.

Statistical Summaries of Surface-Water Hydrologic Data Collected in the Suwannee River Water Management District, Florida, 1906-93

By M.A. Franklin, G.L. Giese, and P.R. Mixson

INTRODUCTION

Since 1906, hydrologic data have been collected systematically on streams and lakes in the Suwannee River Water Management District (SRWMD) by the U.S. Geological Survey (USGS), the SRWMD, and other agencies. Records of stream discharge and stream and lake stage in the SRWMD (fig. 1), collected largely in cooperation with the SRWMD since 1975, have been published for many years in the USGS annual report series "Water Resources Data for Florida."

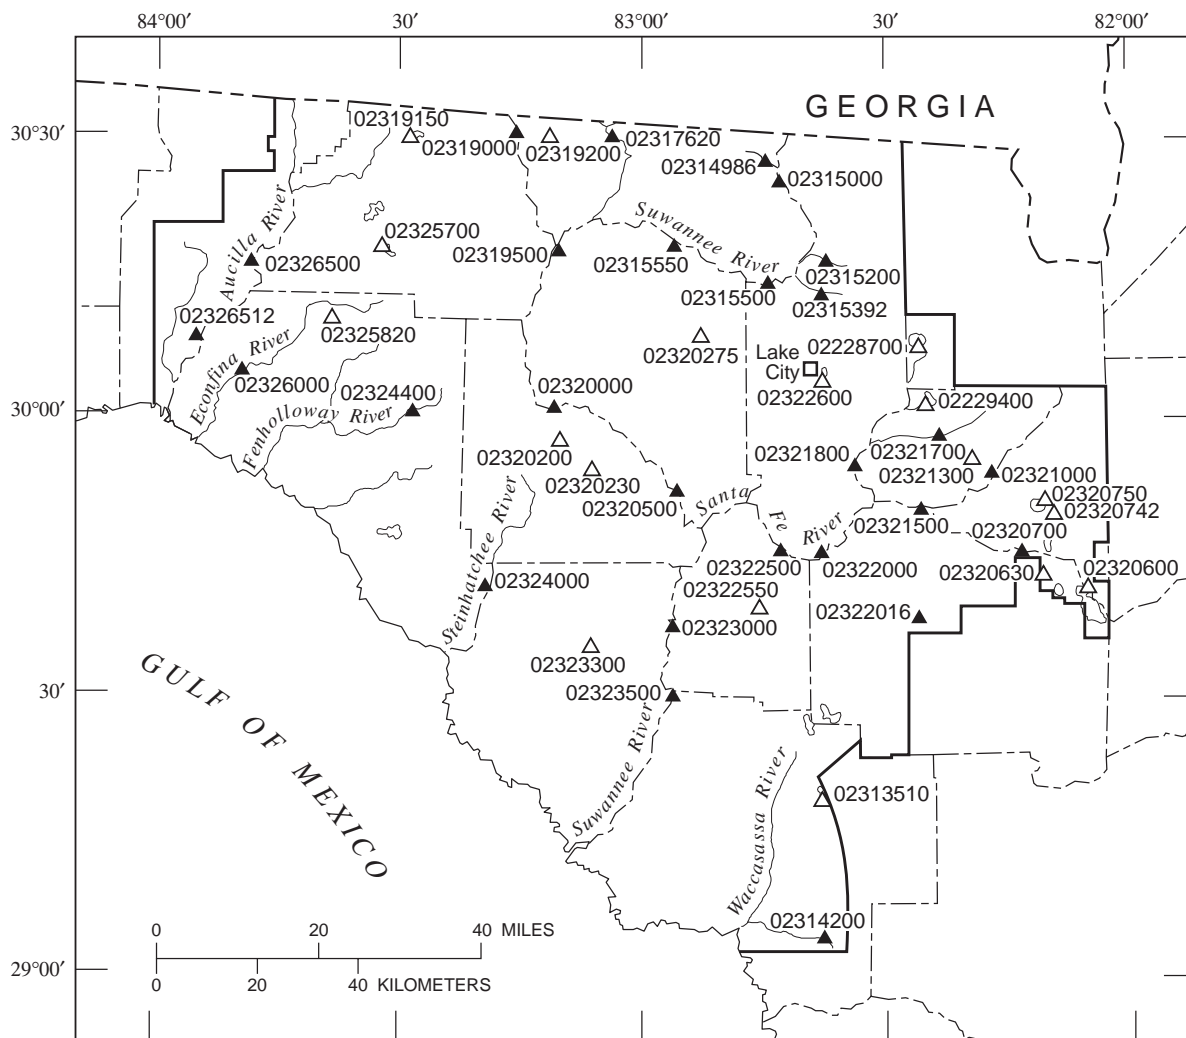

Streamflow and stream and lake elevation statistics are given in this report for sites shown in figure 1. All 27 daily streamflow stations shown are (or were) operated by the USGS in cooperation with the SRWMD; all 18 lake stage stations shown are now (1994) operated by the SRWMD, but were operated until the late 1970's by the USGS in cooperation with the SRWMD. All unregulated stream stations which have three or more years of continuous record are included in this report. All unregulated lake stations having at least three years of intermittent lake elevation readings are also included. There are many other sites in the SRWMD for which shorter records or miscellaneous measurements are available but are not included because statistical summaries for such stations require interpretive analysis beyond the scope of this report.

Basic hydrologic data have long been recognized as fundamental to the analysis of magnitude and frequency of floods, availability of water supplies, potential for reservoir storage, and permitting of waste discharges. Also, in recent times, scientists and water managers have become more aware of the complex relations between flows and water levels and the terrestrial and aquatic plant and

animal life in wetland ecosystems. In 1994, the SRWMD and the USGS began a long-term program of cooperative studies designed to better understand minimum and maximum flow and water levels needed to manage the surface and ground water resources of the District and maintain or improve the various ecosystems therein. Information presented in this report, together with frequency analysis of station data, flow regionalization, studies of the relation of salinity to flow in the lower Suwannee River, definition of ground-water surface-water interactions, surface- and ground-water quality studies, and studies of interaction between surface-water bodies and wetlands, will provide the basis for the SRWMD to establish minimum flow and level requirements for streams and lakes in the SRWMD area.

This report is a necessary first step in the long-term program of study because it contains basic stream discharge and stream and lake elevation statistics, most of which are not contained in the annual report "Water Resources Data for Florida." These statistics, most of which were generated using a U.S. Geological Survey computer program, ADAPS, Automatic Data Processing System, characterize normal flows and levels and departures from normal due to floods and droughts or seasonal climatic variations. Specifically, the report presents for the period of record of each stream or lake gaging station, as appropriate:

- Minimum, maximum, and mean of monthly mean stream elevations and discharges in graphical and tabular form.
- For streams, annual mean discharge, highest and lowest annual mean discharge, highest and lowest daily mean discharge, minimum annual seven-day mean discharge, instantaneous peak discharge and elevation, instantaneous minimum discharge, and basin yield.

EXPLANATION

- SUWANNEE RIVER WATER MANAGEMENT DISTRICT BOUNDARY
- ▲ 02314200 STREAM GAGING STATION—And number
- △ 02313510 LAKE GAGING STATION—And number

Figure 1. Map showing location of Suwannee River Water Management district and location of stream and lake gaging stations.

- Duration of annual daily mean stream elevation and discharge. Duration of daily values are shown in both graphical and tabular form.
- Duration of daily mean stream elevations and discharge, by months, in tables.
- Minimum and maximum 1-,3-,7-,14-,30-, 60-, 90-,120-, and 183-consecutive day stream elevations and discharges (with rankings) for each year of record.
- Mean monthly lake elevations and statistics by month, including number of monthly values, mean, variance, standard deviation, skewness, and coefficient of variation.

For convenience, a GLOSSARY of commonly used terms related to the collection and reporting of surface-water elevations and discharge is included before the Introduction section of this report.

The authors wish to acknowledge Natalie Rackley, formerly of the U.S. Geological Survey, and T.W. Grubbs, U.S. Geological Survey, for their computer assistance in the compilation of station records, and Jim Tomberlin, U.S. Geological Survey, for the mapping of stream and lake gaging stations.

DESCRIPTION OF STREAM AND LAKE STATISTICS

The following sections describe the summary statistics presented in the various graphs and tables given for each station later in this report. A running head for each station contains the name of the major basin in the SRWMD within which the station is located, the station name, and a unique downstream order identification number for the station. Streamflow stations are listed first, then lake elevation stations, each in downstream order.

The downstream ordering system has been in effect since October 1, 1950, for USGS reports. The order of listing of hydrologic-station records in this report is in a downstream direction along the main stream. All stations on a tributary entering upstream from a mainstream station are listed before that station. A station on a tributary that enters between two mainstream stations is listed between them. A similar order is followed in listing stations on first rank, second rank, and other ranks of tributaries. The rank of any tributary with respect to the stream to which it is immediately tributary is indicated by an indentation in the "List of Stations..." in the front of this report. Each indentation represents one rank. This downstream order and system of indentation indicates which stations are on tributaries between any two stations and the rank of the tributaries. Gaps in the series of numbers allow for new stations that may be established; hence, the numbers are not consecutive.

The complete number for each station, such as 02314200, which is left of the station name, includes the two-digit Part number "02" plus the 6 to 13 digit downstream-order number "314200". The part number refers to an area whose boundaries coincide with natural drainage lines; for example, Part "02" is the South Atlantic Slope and eastern Gulf of Mexico basin.

Immediately following the heading is the station manuscript which provides, under various subheadings the following information, as appropriate, for each station:

LOCATION.--Information on locations is obtained from the most accurate maps available. Coordinates of each station are given in terms of latitude and longitude and also in terms of township, range, and quadrant.

DRAINAGE AREA.--Drainage areas are measured using the most accurate maps available. Because the type of maps varies from one drainage basin to another, the accuracy of drainage areas likewise varies. Drainage areas are updated as revised maps become available.

PERIOD OF RECORD.--This indicates the period for which records have been collected for the station or for an equivalent station. An equivalent station is one that was in operation at a time when the present station was not in operation. Also, the location of the equivalent station was such that flow can reasonably be considered equivalent to flow at the present station.

REVISED RECORDS.--Published records, because of new information, occasionally are incorrect, and revisions are printed in later reports. Listed under this heading are all the reports in which revisions have been published for the station and the water years to which the revisions apply. If a revision did not include daily, monthly, or annual figures of discharge, that fact is noted after the year dates as follows: "(M)" means that only the instantaneous maximum discharge was revised; "(m)" that only the instantaneous minimum was revised; and "(P)" that only peak discharges were revised. If the drainage area has been revised, the report in which the most recently revised figure was first published is cited.

GAGE.--The type of gage in current use, the datum of the current gage referred to National Geodetic Vertical Datum of 1929 (NGVD of 1929; see glossary), and a condensed history of the types, locations, and datums of previous gages are given under this heading. The terms "NGVD of 1929" and "mean sea level" (MSL) are used interchangeably in this report.

REMARKS.--This paragraph is used to present information relative to the accuracy of the records, to special methods of computation, and to conditions that affect natural flow at the station. In addition, information may be presented pertaining to average

discharge data for the period of record; to extremes data for the period of record; and, possibly, to other pertinent items. For reservoir stations, information is given on the dam forming the reservoir, the capacity, outlet works and spillway, and purpose and use of the reservoir. Regarding accuracy of the records, "excellent" means that about 95 percent of daily discharges are thought to be within 5 percent of their true values, "good" within 10 percent, and "fair" within 15 percent. Records that do not meet these criteria are rated poor.

AVERAGE DISCHARGE.-- The average discharge for the indicated water years. A water year in USGS reports dealing with surface-water supply is the 12-month period October 1 through September 30. The water year is designated by the calendar year in which it ends and which includes 9 of the 12 months. Thus, the year ending September 30 1994, is called the "1994 water year." The water year was so chosen because major floods seldom occur during September and October; thus it is unlikely that statistics on a flood (for example, flood volumes) will be distorted by ending the year at this time.

COOPERATION.--Records provided by a cooperating organization or obtained for the Geological Survey by a cooperating organization are identified here.

EXTREMES FOR PERIOD OF RECORD.-- For lake stations, the extremes of record are shown here. For stream stations, extremes are shown in a table outside the station manuscript.

EXTREMES OUTSIDE PERIOD OF RECORD.--Included here is information concerning major floods or unusually low flows that occurred outside the stated period of record. The information may or may not have been obtained by the USGS.

Graphs Showing Maximum, Minimum, and Mean of Monthly Mean Stream Elevations

These graphs present summary statistics for monthly mean stream elevations for the period of record. Elevation, in this report, refers to the distance above or below the NGVD of 1929, otherwise referred to as mean sea level. These monthly statistics were derived from daily-mean values of continuously-recorded gage heights, which were converted to elevations by tying arbitrary gage datums to NGVD of 1929. The graphs show the maximum, minimum, and mean of the monthly mean stream elevations for the period of record for each month. This type of graph is

used to show both the seasonal variations in elevations and extremes which have been encountered during the period of record. The relation of current conditions to long-term conditions is evident from such a record, and may be of importance where stream levels affect local aquatic and terrestrial plant and animal life, and in water supply.

Duration Curves of Daily Mean Stream Elevations

These curves show the percentage of time indicated values of daily mean stream elevation were equaled or exceeded for the period of record. For example, if an elevation of 22 ft above mean sea level corresponds to a value of 30 for the percent of time the indicated value is equaled or exceeded, this means that a daily mean elevation of 22 ft was equaled or exceeded 30 percent of all the days of record. Flow (and elevation) duration curves are often used to obtain a general idea of flow and storage characteristics of a basin. Searcy (1959, p. 22) notes:

"A curve with a steep slope throughout denotes a highly variable stream whose flow is largely from direct runoff, whereas a curve with a flat slope reveals the presence of surface- or ground-water storage, which tends to equalize the flow. The slope of the lower end of the duration curve shows the characteristics of the perennial storage in the drainage basin; a flat slope at the lower end indicates a large amount of storage, and a steep slope indicates a negligible amount. Streams whose high flows come largely from snowmelt tend to have a flat slope at the upper end. The same is true for streams with large floodplain storage or those that drain swamp areas."

An elevation duration curve may also be used to estimate the percentage of time a floodplain is flooded or an area normally inundated (such as a spawning bed) is dry. The elevation duration curve can also be used to estimate the percentage of time a navigation channel is at or above a specified depth. An important limitation of duration curves is that no information is provided as to whether the daily elevation or flow values are consecutive or widely scattered in time. This information may be of importance in many applications.

Summary Statistics for Stream Stations

These tables present various summary statistics and extremes by water year for each stream station as follows:

ANNUAL MEAN.--The arithmetic mean of the individual daily mean discharges for the year noted or for the designated period. At some stations, the yearly mean discharge is adjusted for reservoir storage or diversion. The adjusted figures are identified by a symbol and corresponding footnotes.

HIGHEST ANNUAL MEAN.--The maximum annual mean discharge occurring for the designated period.

LOWEST ANNUAL MEAN.--The minimum annual mean discharge occurring for the designated period.

HIGHEST DAILY MEAN.--The maximum daily mean discharge for the year or for the designated period.

LOWEST DAILY MEAN.--The minimum daily mean discharge for the designated period.

ANNUAL 7-DAY MINIMUM.--The lowest mean discharge for 7 consecutive days for a calendar year or a water year. Most low-flow frequency analyses of annual 7-day minimum flows use a climatic year (April 1-March 31). The date shown in the summary statistics table is the initial date of the 7-day period. (This value should not be confused with the 7-day 10-year low-flow statistic.)

INSTANTANEOUS PEAK FLOW.--The maximum instantaneous discharge occurring for the designated period. Secondary instantaneous peak discharges above a selected base discharge are stored in USGS District computer files for stations meeting certain criteria. Those discharge values may be obtained by writing to the USGS District Office in Florida. (See address on page preceding "CONTENTS"..)

INSTANTANEOUS PEAK STAGE.--The maximum instantaneous stage occurring for the water year or for the designated period. If the dates of occurrence for the instantaneous peak flow and instantaneous peak stage differ, the REMARKS paragraph in the manuscript or a footnote is used to provide further information.

INSTANTANEOUS LOW FLOW.--The minimum instantaneous discharge occurring for the designated period.

ANNUAL RUNOFF.--Indicates the total quantity of water in runoff for a drainage area for the year. The value shown in inches indicates the depth to which the drainage area would be covered if all the runoff for a specified period were uniformly distributed. The value shown in cubic feet per second per square mile (CFSM) is the average number of

cubic feet of water flowing per second from each square mile of area drained, assuming the runoff is distributed uniformly in time and area.

Graphs Showing Maximum, Minimum, and Mean of the Monthly Mean Stream Discharges

The graphs for stream *discharge* are similar to the graphs for stream *elevation*, and roughly follow the same trends as stream elevation. That is, months of high and low mean stream elevations will tend to coincide with months of high and low mean stream discharge. However, elevations and discharges are not linearly related due to the curvilinear nature of the relation between elevation and discharge. Whereas knowledge of stream elevations is critical where flooding and drying are issues, knowledge of discharge is critical in issues involving instream flow requirements, water supply, and point discharge permits. These type of discharge graphs are also used to compare with current conditions, especially in tracking the progress of droughts. They are more useful than the elevation graphs in this regard because the discharge at a station is an integrator of flow conditions throughout the drainage basin upstream from the station, whereas the value of stream elevation is much more local to the station.

Duration Curves of Daily Mean Stream Discharges

These curves show the percentage of time that indicated values of daily mean stream discharge were equaled or exceeded for the period of record. For example, if a discharge of 22 cubic feet per second corresponds to a value of 30 for the percent of time the indicated value is equaled or exceeded, this means that a daily mean discharge of 22 cubic feet per second was equaled or exceeded 30 percent of all the days of record. As in the case of graphs showing maximum, minimum, and mean of the monthly mean elevations and discharges, duration curves of daily mean discharge can follow the same patterns as those for elevation. The same caveats apply regarding the curvilinear relation between discharge and elevation and the greater usefulness of discharge over elevation when evaluating conditions in the entire drainage basin. Comments made in the section on duration of stream elevation regarding the relation of shape of the duration curve to basin storage characteristics and flow variability are even more applicable to discharge than to elevation.

Tables Showing Maximum, Minimum, and Mean of the Mean Monthly Stream Elevations and Discharges

These tables list the same information previously shown in graphical form. The data are repeated in tabular form for convenience in reading numerical values. An explanation of the usefulness of these statistics is presented in the previous section.

Tables Showing Duration of Daily Mean Stream Elevations and Discharges

These tables contain information similar to that contained in the duration curves of daily mean stream elevation and discharge. Information in the column headed ANNUAL is identical to that shown before and it contains duration of elevation or discharge based on all the days of every year of record. These data are presented in tabular form for convenience in reading particular values. The columns of monthly data contain duration values based on all the days of a particular month for the period of record. Because stream elevation and discharge exhibit seasonality, it is often more meaningful to consider duration of elevation or discharge by month. During a typically wet month, a daily discharge could be exceeded only a small percentage of the time, for example, 20 percent of the days, considering all the days of all the months of record. However, considering only all the days of all the Julys of record, it may be exceeded just 50 percent of the days.

The variability of elevation and discharge on a monthly basis is much less than on an annual basis. An explanation of the usefulness of duration data is presented in the previous section.

Tables Showing Lowest and Highest Mean Stream Elevations and Discharges for Various Consecutive-Day Periods

These tables show the lowest and highest mean stream elevations and discharges for various consecutive-day periods and rankings for each *climatic* year of record (in the case of lowest values) and each *water* year (in the case of highest values). A climatic year begins April 1 and ends March 31. For example, the 1993 climatic year begins April 1, 1993, and ends March 31, 1994. The climatic year is used because lowest stream elevations and discharges typically occur in months other than March and April

in much of the United States (including Florida). The use of the climatic year for lowest consecutive-day values lessens the chance that a lowest consecutive-day period will be interrupted by the end of the annual computation period. The term *water year* is as previously defined. The water year was used as the annual computation period for maximum values because highest elevations and flows seldom occur in September and October. This minimizes the possibility that a yearly highest consecutive-day period will be interrupted by the end of the annual computation period.

The identification of climatic years in the tables of lowest mean discharge is not made directly. Instead, it is made in terms of the water years in which the climatic year nests. For example, the lowest 7-consecutive-day elevation occurring in the water-year range designated 1976-1977 includes the period of time April 1976 through March 1977.

This report does not assign frequency of occurrence to the annual consecutive-day elevations and discharges. This procedure would involve some interpretive analysis which is beyond the scope of this report. However, the rankings for the annual lowest and highest values for the period of record give some indication of the rarity of the extreme values. The highest annual value of a particular consecutive-day elevation or discharge for the period of record would receive a rank of 1, the next highest, a rank of 2, and so forth. Similarly, the lowest annual value of elevation or discharge for the period of record would receive a rank of 1, the next lowest a rank of 2, and so forth.

Consecutive-day lowest flows have been used in some states as criteria for waste-discharge applications. For example, the North Carolina Department of Environment, Health, and Natural Resources (DEHNR) utilizes the low flow 7Q10, which is the annual minimum 7-consecutive day discharge which would have a 10 percent probability of occurring in any one year (Giese and Mason, 1993). The North Carolina DEHNR also uses the low flow 7Q2, the annual minimum consecutive-day discharge which has a 50 percent probability of occurring in any one year, in draft-storage-frequency analysis for water-supply reservoirs (Arteaga and Hubbard, 1975).

Highest consecutive-day discharges are descriptive of flood volumes and have implications in the design of reservoirs for storage of flood waters. Highest consecutive-day elevations are indicative of length of time of local flood inundation and may be of consequence to terrestrial and aquatic plant and animal species.

Consecutive-day periods of longer than 90 days may lack meaning for many applications and should be used with circumspection. For example, a 183 consecutive-day highest discharge may actually include many days of average or even below-average discharge.

For some stations, several years of lowest and highest consecutive-day mean elevations will not be printed, while lowest and highest consecutive-day discharges will be printed for those same years because ADAPS discards the year if there is any missing record. In the annual processing of hydrographic records, missing days of daily discharge are estimated, but missing days of elevation are not; hence, the discrepancy.

Monthly Mean Lake Elevations

Tables showing monthly normal lake elevations for each month of record are given for each lake station. Although the normal monthly means are in fact mean values of the readings for each month, for most months only a single reading was taken from a nonrecording gage. Hence, the term *normal* was used rather than *mean* to avoid implying that many (or continuous) observations were available for each month. However, lake elevations usually change so slowly that a single monthly reading is sufficient in most situations to adequately characterize lake elevations. Standard statistics which characterize the distribution of normal lake elevations for each month are also given for each lake station, including number of monthly values, mean of the monthly values (Mean), variance (Var), standard deviation (Std), skewness (Slew), and coefficient of variation (Cvar). Duration of daily elevation and consecutive-day elevation data were not available because readings were only taken once a month in most cases; therefore, these analysis were omitted.

Information on lake elevations is important for water supply, recreation, evaluation of the potential for flooding, and has implications for the health of the lake ecosystem.

Significant Figures and Rounding Limits

Many of the values shown in the tables at the back of this report are computer generated by ADAPS and are unrounded. Nevertheless, the following significant figure and rounding criteria should be applied in actual use. These criteria are based not on the accuracy of the values, but solely on their magnitude.

For daily discharge:

Range of discharge (cubic feet per second)	Significant figures	Rounding limits
<0.10	1	hundredths
0.10 - 0.99	2	hundredths
1.0 - 9.9	2	tenths
10 - 99	2	units
≥ 100	3	variable

For monthly and yearly means and average discharge:

Range of discharge (cubic feet per second)	Significant figures	Rounding limits
<0.01	1	thousandths
0.010 - 0.099	2	thousandths
0.1.0 - 0.99	2	hundredths
1.00 - 9.99	3	hundredths
10.0 - 99.9	3	tenths
100 - 999	3	units
≥ 1,000	4	variable

**STATISTICAL SUMMARIES OF HYDROLOGIC DATA
FOR STREAMS**

WACCASASSA RIVER BASIN
02314200 TENMILE CREEK AT LEBANON STATION, FL

LOCATION.--Lat 29°09'39", long 82°38'21", in SE¹/₄ sec.24, T.15 S., R.16 E., Levy County, Hydrologic Unit 03110101, near center of span on downstream side of bridge on U.S. Highways 19 and 98, just downstream from North Prong Tenmile Creek, 0.2 mi south of Lebanon Station, 9.4 mi upstream from mouth, and 13 mi northwest of Dunnellon.

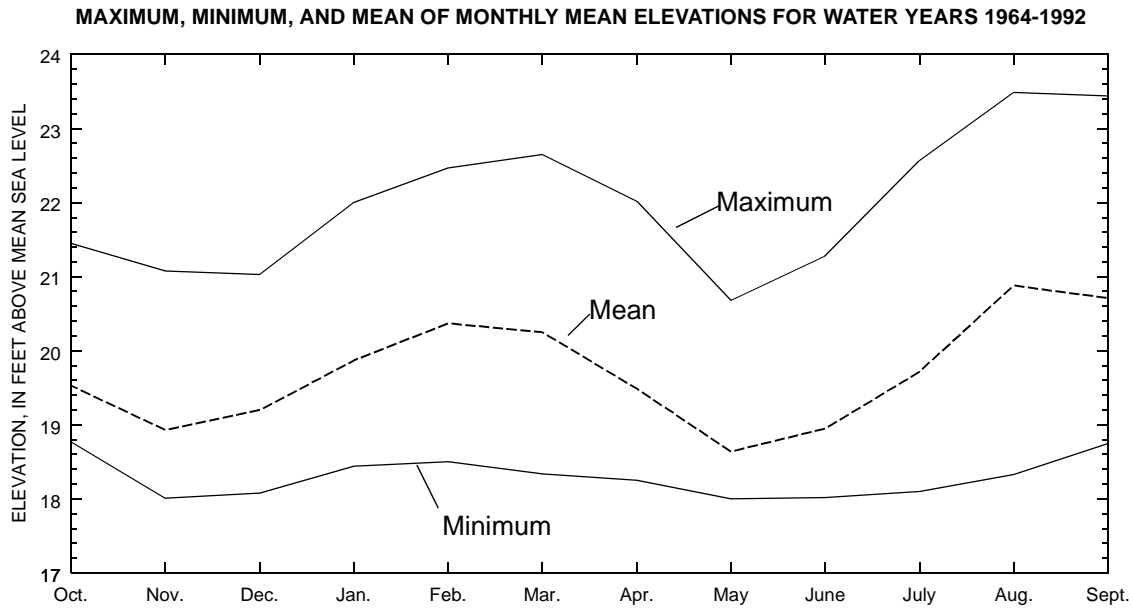

DRAINAGE AREA.--26 mi², approximately; 34 mi², approximately, includes that of Horse Hole Creek.

PERIOD OF RECORD.--October 1963 to September 1992.

GAGE.--Water-stage recorder. Datum of gage is 15.00 ft above National Geodetic Vertical Datum of 1929. Since Feb. 26,1964, nonrecording gage at Horse Hole Creek. Datum of gage is National Geodetic Vertical Datum of 1929.

REMARKS.--Records poor. Records do not include considerable amount of water diverted naturally above station into Horse Hole Creek basin. Discharge measurements of Horse Hole Creek, drainage area 8.1 mi², approximately, are made at bridge on U.S. Highways 19 and 98, 1.9 mi south of Tenmile Creek station.

EXTREMES FOR PERIOD OF RECORD (Horse Hole Creek-02314205).--Maximum discharge measured, 1,270 ft³/s Sept. 11, 1964, elevation, 26.56 ft above NGVD; creek dry at times most years.

SUWANNEE RIVER BASIN
02314986 ROCKY CREEK NEAR BELMONT, FL

LOCATION.--Lat 30°32'40", long 82°44'02", in SE¹/₄ sec. 29, T.2 N., R.16 E., Hamilton County, Hydrologic Unit 03110201, at bridge on county road, 1.4 mi Upstream from mouth, 3.0 mi north of Belmont, and 12 mi east of Bakers Mill.

DRAINAGE AREA.--50 mi², approximately.

PERIOD OF RECORD.--August 1970 to April 1976, (gage heights and discharge measurements only); May 1976 to September 1982 (discontinued).

REVISED RECORDS.--WDR FL-75-1: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 86.64 ft National Geodetic Vertical Datum of 1929. Prior to May 19, 1976, nonrecording gage at same site and datum.

REMARKS.--Records poor. Flow affected by backwater from Suwannee River at times.

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN ELEVATIONS FOR WATER YEARS 1977-1982

DURATION OF DAILY MEAN ELEVATION FOR WATER YEARS 1977-1982

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1977 - 1982**

ANNUAL MEAN	33.8	
HIGHEST ANNUAL MEAN	42.1	1980
LOWEST ANNUAL MEAN	20.5	1979
HIGHEST DAILY MEAN	499	Mar 11 1980
LOWEST DAILY MEAN	.00	May 7 1977
ANNUAL SEVEN-DAY MINIMUM	.00	May 7 1977
INSTANTANEOUS PEAK FLOW	500	Mar 11 1980
INSTANTANEOUS PEAK ELEVATION (FT)	98.89	Sep 11 1964
INSTANTANEOUS LOW FLOW	.00	May 7 1977
ANNUAL RUNOFF (INCHES)	9.19	
ANNUAL RUNOFF (CFSM)	0.68

SUWANNEE RIVER BASIN
02315000 SUWANNEE RIVER NEAR BENTON, FL

LOCATION.--Lat 30°×××××°30'26", long 82°42'59", in NE¹/₄ sec.9, T.1 N., R.16 E., Columbia County, Hydrologic Unit 03110201, near left bank on downstream side of bridge on State Highway 6, 3.7 mi northwest of Benton, 6.4 mi south of Florida-Georgia State Line, 13.7 mi east of Jasper, and 196 mi, upstream from mouth.

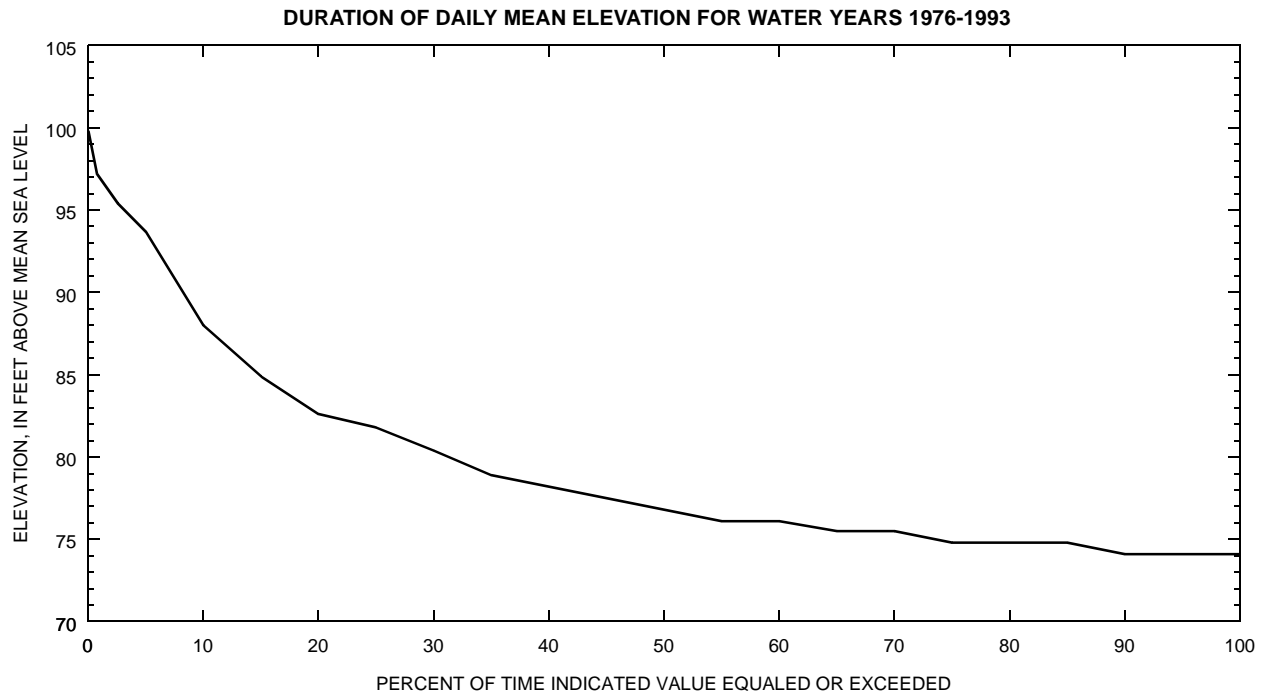

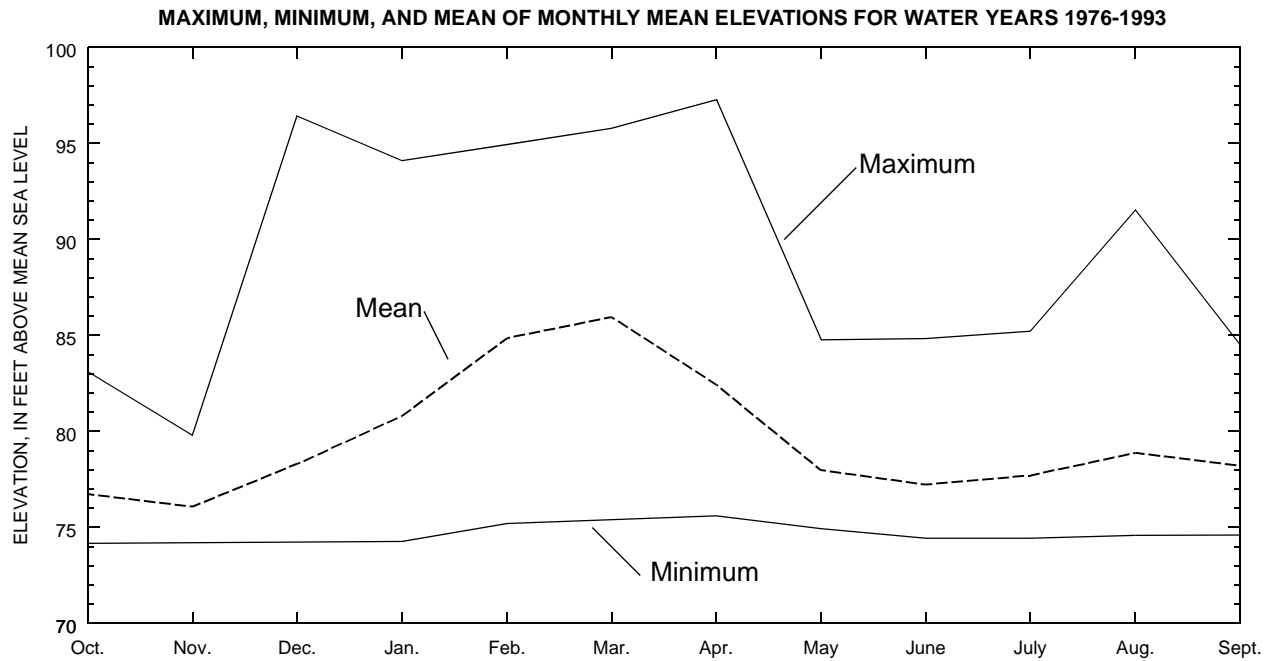

DRAINAGE AREA.--2,090 mi², approximately, includes part of watershed in Okefenokee Swamp which is indeterminate.

PERIOD OF RECORD.--October 1975 to 1993. Miscellaneous discharge measurements for some periods July 1934 to September 1975. Records for December 1931 to June 1934, at site 2.0 mi upstream (at Turner Bridge) not equivalent owing to difference in drainage areas.

GAGE.--Water-stage recorder. Datum of gage is National Geodetic Vertical Datum of 1929. Oct. 1, 1975 to Oct. 14, 1986, nonrecording gage at same site and datum. Dec. 8, 1931 to June 30, 1934, nonrecording gage at site 2.0 mi upstream, datum unknown.

REMARKS.--Records good, except for estimated daily discharges, which are poor.

EXTREMES OUTSIDE PERIOD OF RECORD.--Maximum discharge measured, 27,700 ft³/s Apr. 6, 1973, gage height, 102.80 ft.

SUWANNEE RIVER BASIN
 02315200 DEEP CREEK NEAR SUWANNEE VALLEY, FL

LOCATION.--Lat 30°21'55", long 82°37'13", in NW¹/₄ sec.33, T.1 N., R.17 E., Columbia County, Hydrologic Unit 03110201, near left bank on upstream side of bridge on U.S. Highway 441, 4.0 mi upstream from mouth, 7.2 mi northeast of Suwannee Valley, 12.2 mi north of Lake City.

DRAINAGE AREA.--88.6 mi².

PERIOD OF RECORD.--April 1976 to September 1981, October 1990 to 1993. Miscellaneous discharge measurements for some periods prior to April 1976.

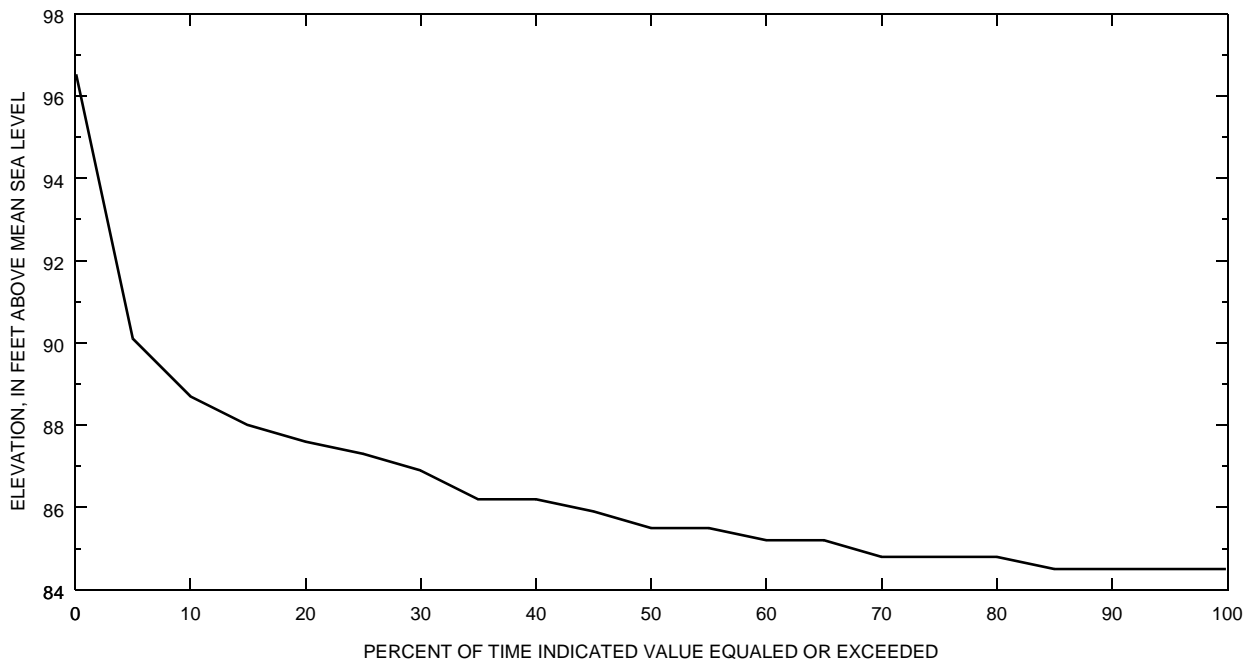

GAGE.--Water-stage recorder. Datum of gage is 82.56 ft National Geodetic Vertical Datum of 1929 (levels by L. L. Lee and Associates).

REMARKS.--Records fair.

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN ELEVATIONS FOR WATER YEARS 1976-1993

DURATION OF DAILY MEAN ELEVATION FOR WATER YEARS 1976-1993

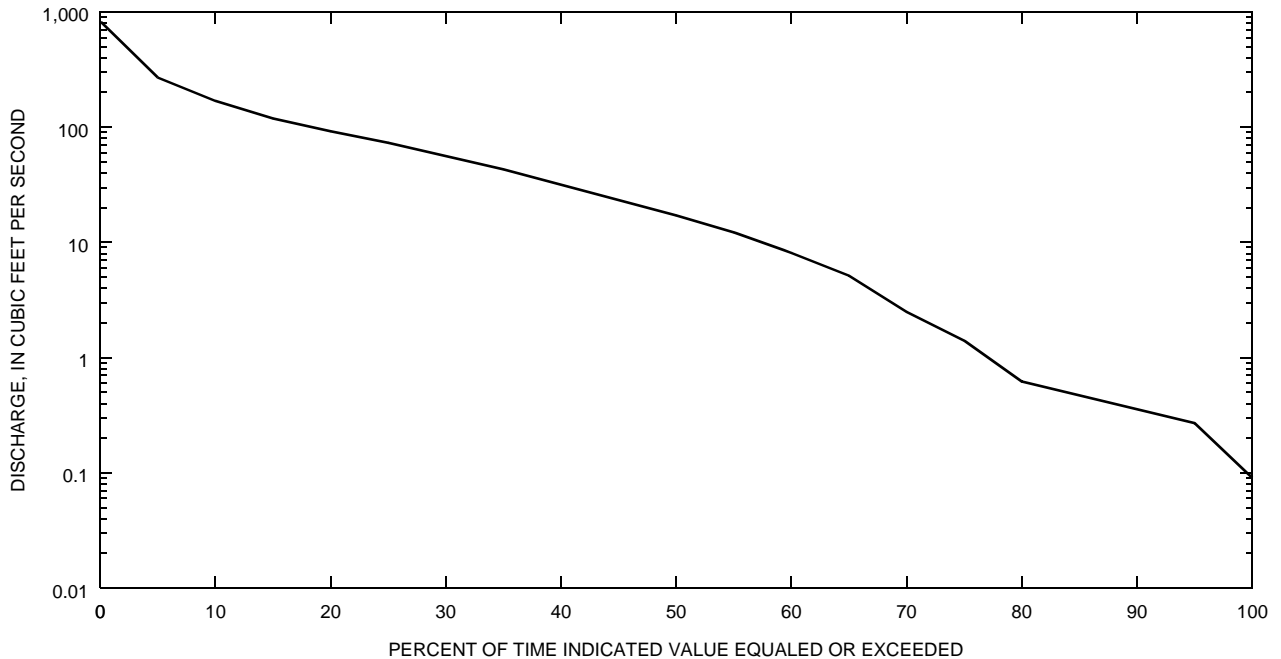

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1976 - 1993**

ANNUAL MEAN	59.3	
HIGHEST ANNUAL MEAN	109	1991
LOWEST ANNUAL MEAN	24.1	1992
HIGHEST DAILY MEAN	937	Mar 11 1980
LOWEST DAILY MEAN	.09	Dec 22 1990
ANNUAL SEVEN-DAY MINIMUM	.09	Dec 21 1990
INSTANTANEOUS PEAK FLOW	961	Mar 11 1980
INSTANTANEOUS PEAK ELEVATION (FT)	97.64	Mar 11 1980
INSTANTANEOUS LOW FLOW	.09	Dec 22 1990
ANNUAL RUNOFF (INCHES/CSFM)	9.09/067	

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN DISCHARGES FOR WATER YEARS 1976-1993

SUWANNEE RIVER BASIN
02315392 ROBINSON CREEK NEAR SUWANNEE VALLEY, FL

LOCATION.--30°18'56", long 82°38'41", in NE¹/₄ sec.18, T.2 S., R.17 E., Columbia County, Hydrologic Unit 03110201, near center of span on downstream side of bridge on State Highway 246, 3.4 mi upstream from mouth, 4.0 mi northeast of Suwannee Valley and 8.7 mi north of Lake City.

DRAINAGE AREA.--27.4 mi².

PERIOD OF RECORD.--April 1976 to September 1981 (discontinued).

GAGE.--Water-stage recorder. Datum of gage is 93.54 ft National Geodetic Vertical Datum of 1929 (levels by L. L. Lee and Associates, from Florida Department of Transportation bench mark). Prior to Apr. 8, 1976, nonrecording gage at site 0.3 mi upstream, at datum unknown.

REMARKS.--Records poor.

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN ELEVATIONS FOR WATER YEARS 1976-1981

DURATION OF DAILY MEAN ELEVATION FOR WATER YEARS 1976-1981

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1976 - 1981**

ANNUAL MEAN	26.6	
HIGHEST ANNUAL MEAN	42.1	1978
LOWEST ANNUAL MEAN	13.4	1979
HIGHEST DAILY MEAN	588	Mar 11 1980
LOWEST DAILY MEAN	.00	May 8 1977
ANNUAL SEVEN-DAY MINIMUM	.00	May 8 1977
INSTANTANEOUS PEAK FLOW	762	Mar 10 1980
INSTANTANEOUS PEAK ELEVATION (FT)	102.78	Mar 10 1980
INSTANTANEOUS LOW FLOW	.00	May 8 1977
ANNUAL RUNOFF (INCHES)	13.21	
ANNUAL RUNOFF (CFSM)	.97	

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN DISCHARGES FOR WATER YEARS 1976-1981

SUWANNEE RIVER BASIN
 02315500 SUWANNEE RIVER AT WHITE SPRINGS, FL

LOCATION.--Lat 30°19'32", long 82°44'18", in SW¹/₄ sec.8, T.2 S., R.16 E., Columbia County, Hydrologic Unit 03110201, on downstream side of bridge on U.S. Highway 41, 1.0 mi southeast of White Springs and 171 mi upstream from mouth.

DRAINAGE AREA.--2,430 mi² approximately, includes part of watershed in Okefenokee Swamp which is indeterminate.

PERIOD OF RECORD.--May 1906 to December 1908, February 1927 to 1993.

REVISED RECORDS.--WSP 1504: 1906, 1908. WSP 1905: WDR FL-75-1: Drainage area.

GAGE.--Nonrecording gage. Datum of gage is National Geodetic Vertical Datum of 1929. Prior to July 31, 1932, nonrecording gage at site 1.0 mi downstream at datum 48.54 ft. August 1, 1932 to October 10, 1979, water-stage recorder, at present site, at datum 48.54 ft. October 11, 1979 to December 1, 1983, nonrecording gage at site 2.2 miles downstream at NGVD.

REMARKS.--Records good, except for estimated daily discharges, which are fair.

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1906 - 1993**

ANNUAL MEAN	1837	
HIGHEST ANNUAL MEAN	6806	1948
LOWEST ANNUAL MEAN	155	1955
HIGHEST DAILY MEAN	38000	Apr 10 1973
LOWEST DAILY MEAN	2.8	Sep 26 1990
ANNUAL SEVEN-DAY MINIMUM	3.4	Sep 26 1990
INSTANTANEOUS PEAK FLOW	38100	Apr 10 1973
INSTANTANEOUS PEAK ELEVATION (FT)	88.56	Apr 10 1973
INSTANTANEOUS LOW FLOW	2.8	Sep 26 1990
ANNUAL RUNOFF (INCHES/CSFM)	10.27/0.76

THIS PAGE INTENTIONALLY BLANK

SUWANNEE RIVER BASIN
02315550 SUWANNEE RIVER AT SUWANNEE SPRINGS, FL

LOCATION.--Lat 30°23'34", long 82°56'00", in NE¹/₄ sec.20, T.1 S., R.14 E., Suwannee County, Hydrologic Unit 03110201, on left bank 0.2 mi upstream from springs at town of Suwannee Springs, 7.5 mi north of Live Oak, and 150 mi upstream from mouth.

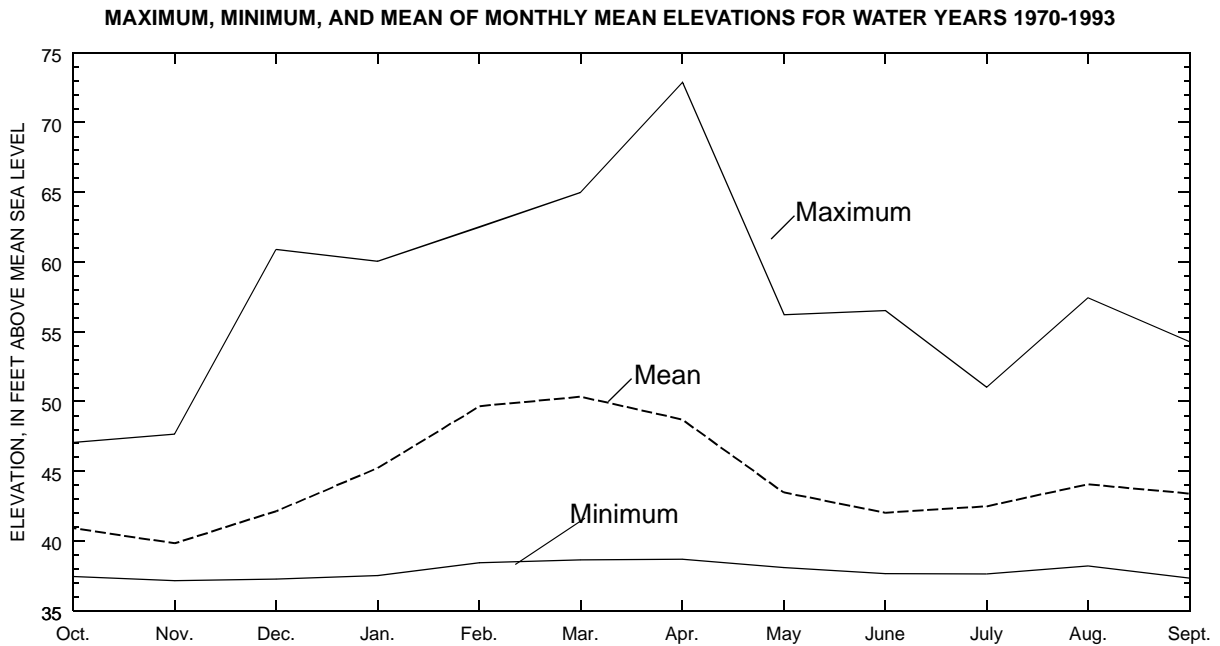

DRAINAGE AREA.--2,630 mi², approximately, includes part of watershed in Okefenokee Swamp, which is indeterminate.

PERIOD OF RECORD.--October 1974 to 1993. Prior to November 1960, six miscellaneous discharge measurements made in 1906, 1951 and 1956. November 1960 to September 1974 (gage heights and discharge measurements only).

REVISED RECORDS.--WSP 2105: WDR FL-75-1: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is National Geodetic Vertical Datum of 1929 (Florida Department of Transportation bench mark). Dec. 13, 1960 to Apr. 26, 1972 and Aug. 21, 1974 to May 8, 1980, auxiliary nonrecording gage 0.3 mi downstream from base gage at same datum. Since Oct. 1, 1982 water stage recorder at Suwannee River at Ellaville (02319500), about 23 mi. downstream from base gage, used to determine discharge during backwater conditions.

REMARKS.--Records good, except for estimated daily discharges, which are fair. Flow affected by backwater from Withlacoochee and Alapaha Rivers at times.

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1975 - 1993**

ANNUAL MEAN	1852	
HIGHEST ANNUAL MEAN	3761	1991
LOWEST ANNUAL MEAN	340	1989
HIGHEST DAILY MEAN	17800	Apr 10 1984
LOWEST DAILY MEAN	49	Oct 5 1990
ANNUAL SEVEN-DAY MINIMUM	53	Sep 29 1990
INSTANTANEOUS PEAK FLOW	30100	Apr 12 1973
INSTANTANEOUS PEAK ELEVATION (FT)	78.91	Apr 12 1973
INSTANTANEOUS LOW FLOW	46	Oct 5 1990
ANNUAL RUNOFF (INCHES/CSFM)	9.57/0.70	

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN DISCHARGES FOR WATER YEARS 1975-1993

DURATION OF DAILY MEAN DISCHARGE FOR WATER YEARS 1975-1993

SUWANNEE RIVER BASIN
02317620 ALAPAHA RIVER NEAR JENNINGS, FL

LOCATION.--Lat 30°35'53", long 83°04'24", in SW¹/₄ sec.1, T.2 N., R.12 E., Hamilton County, Hydrologic Unit 03110202, near left bank on downstream side of bridge on State Highway 150, 150 ft upstream from Southern Railroad bridge, 1,400 ft downstream from Apalahoochee River, 1.5 mi south of Florida-Georgia State line, and 1.6 mi southeast of Jennings, and 20.1 mi upstream from mouth.

DRAINAGE AREA.--1,680 mi², approximately.

PERIOD OF RECORD.--July 1976 to September 1984; October 1984 to September 1985 (gage height and peak discharge only); October 1985 to September 1987 (discontinued). Prior to July 28, 1976 (one miscellaneous discharge measurement in 1923, three in 1928 and six made by Suwannee River Water Management District in 1976).

GAGE.--Water-stage recorder. Datum of gage is 58.22 ft above National Geodetic Vertical Datum of 1929 (Florida Department of Transportation bench mark). Prior to August 18, 1928, nonrecording gage at site 150 ft downstream at datum unknown.

REMARKS.--Records fair.

EXTREMES OUTSIDE PERIOD OF RECORD.--Maximum measured discharge, 17,900 ft³/s May 2, 1928, gage height not determined.

SUWANNEE RIVER BASIN
 02319000 WITHLACOCHEE RIVER NEAR PINETTA, FL

LOCATION.--Lat 30°35'43", long 83°15'35", in NW¹/₄ sec.7, T.2 N., R.11 E., Madison County, Hydrologic Unit 03110203, on right bank 30 ft downstream from bridge, 0.1 mi downstream from small tributary, 0.3 mi west of Bellville, 5.6 mi east of Pinetta, and 22 mi upstream from mouth.

DRAINAGE AREA.--2,120 mi², approximately.

PERIOD OF RECORD.--October 1931 to 1993. Monthly discharge only for October and November 1931, published in WSP 1304.

REVISED RECORDS.--WSP 972: 1941-42. WSP 1905: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 47.21 ft above National Geodetic Vertical Datum of 1929 (levels by Corps of Engineers). Oct. 11, 1931 to Dec. 3, 1941, nonrecording gage at same site and datum. Dec. 3, 1941 to Aug. 2, 1972, water-stage recorder at same site and datum. Aug. 2, 1972 to Apr. 22, 1986, nonrecording gage at same site and datum.

REMARKS.--Records good.

EXTREMES OUTSIDE PERIOD OF RECORD.--Flood in August 1928 reached a stage of 36.75 ft from floodmarks, discharge, 53,600 ft³/s.

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1932 - 1993**

ANNUAL MEAN	1718	
HIGHEST ANNUAL MEAN	5364	1948
LOWEST ANNUAL MEAN	236	1955
HIGHEST DAILY MEAN	73600	Apr 5 1948
LOWEST DAILY MEAN	73	Aug 21 1955
ANNUAL SEVEN-DAY MINIMUM	77	Aug 17 1955
INSTANTANEOUS PEAK FLOW	79400	Apr 5 1948
INSTANTANEOUS PEAK ELEVATION (FT)	85.85	Apr 5 1948
INSTANTANEOUS LOW FLOW	70	Aug 23 1955
ANNUAL RUNOFF (INCHES/CFSM)	11.01/0.81

SUWANNEE RIVER BASIN
02319500 SUWANNEE RIVER AT ELLAVILLE, FL

LOCATION.--Lat 30°23'04", long 83°10'19", in NE¹/₄ sec.24, T.1 S., R.11 E., Suwannee County, Hydrologic Unit 03110205, on left bank at Ellaville, 100 ft upstream from Seaboard Air Line Railroad bridge, 200 ft downstream from Withlacoochee River, 900ft upstream from bridge on U.S. Highway 90, and 127 mi upstream from mouth.

DRAINAGE AREA.--6,970 mi², approximately, includes part of watershed in Okefenokee Swamp which is indeterminate.

PERIOD OF RECORD.--January 1927 to 1993.

REVISED RECORDS.--WSP 1905: WDR FL-75-1: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 27.22 ft above National Geodetic Vertical Datum of 1929. Prior to June 20, 1932, nonrecording gage at same site and datum. Nov. 8, 1955 to Sept. 30, 1970, nonrecording gage 1.1 mi downstream from base gage at datum 2.67ft lower, used as supplementary gage when flow was less than 4,800 ft³/s.

REMARKS.--Records good above 5,000 cfs, and fair below. Since Nov. 7, 1953, slight regulation at low water caused by diversions above control 0.7 mi downstream from gage by a steam-electric powerplant for cooling of condensers. Total diverted flow is returned to river below control and is included in station record. Records include flow of large spring on left bank about 200 ft downstream; spring flow may reverse during high stages.

SUWANNEE RIVER BASIN
02320000 SUWANNEE RIVER AT LURAVILLE, FL

LOCATION.--Lat 30°05'59", long 83°10'18", in NE¹/₄ sec.36, T.4 S., R.11 E., Suwannee County, Hydrologic Unit 03110205, near right bank on upstream side of bridge on State Highway 51, 1.6 mi south of Luraville, 10.8 mi south of Dowling Park and 97 mi upstream from mouth.

DRAINAGE AREA.--7,330 mi² approximately, includes part of watershed in Okefenokee Swamp which is indeterminate.

PERIOD OF RECORD.--February 1927 to December 1937. April 1956, January and March 1976 (one to two discharge measurements made each year); May to August 1977, January 1978 to 1983 (monthly gage heights and discharge measurements only).

REVISED RECORDS.--WDR FL-78-4: Drainage area.

GAGE.--Nonrecording gage. Datum of gage is National Geodetic Vertical Datum of 1929. February 1927 to December 1937, nonrecording gage at site 0.8 mi downstream at datum of 16.49 ft lower.

REMARKS.--Records fair.

SUWANNEE RIVER BASIN
 02320500 SUWANNEE RIVER AT BRANFORD, FL

LOCATION.--Lat 29°57'20", long 82°55'40", in NE¹/₄ sec.20, T.6 S., R.14 E., Suwannee County, Hydrologic Unit 03110205, near left bank on upstream side of bridge on U.S. Highway 27 at Branford, 10.2 mi upstream from Santa Fe River and 75 mi upstream from mouth.

DRAINAGE AREA.--7,880 mi², includes part of watershed in Okefenokee Swamp which is indeterminate.

PERIOD OF RECORD.--July 1931 to 1993.

REVISED RECORDS.--WSP 1905: WDR FL-75-1: Drainage area.

GAGE.--Nonrecording gage. Datum of gage is 4.81 ft above National Geodetic Vertical Datum of 1929.

REMARKS.--Records are good.

EXTREMES OUTSIDE PERIOD OF RECORD.--Flood of August 1928 reached a stage of 32.0 ft from floodmark; discharge, 65,000 ft³/s computed on basis of measured crest flow at Ellaville (station 02319500).

SUWANNEE RIVER BASIN
02320700 SANTA FE RIVER NEAR GRAHAM, FL

LOCATION.--Lat 29°50'46", long 82°13'11", in NE¹/₄ sec.32, T.7 S., R.21 E., Alachua County, Hydrologic Unit 03110206, near left bank on upstream side of bridge on State Highway 225, 1.0 mi south of Graham, 1.5 mi upstream from Sampson River, and 71 mi upstream from mouth.

DRAINAGE AREA.--94.9 mi².

PERIOD OF RECORD.--August 1957 to 1993.

REVISED RECORDS.--WSP 2105: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 103.55 ft above National Geodetic Vertical Datum of 1929.

REMARKS.--Records good except for those below 2 ft³/s, which are poor. Records do not include natural diversions during periods of high stages from Santa Fe Lake through Lochloosa Creek in St. Johns River basin.

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN ELEVATIONS FOR WATER YEARS 1957-1993

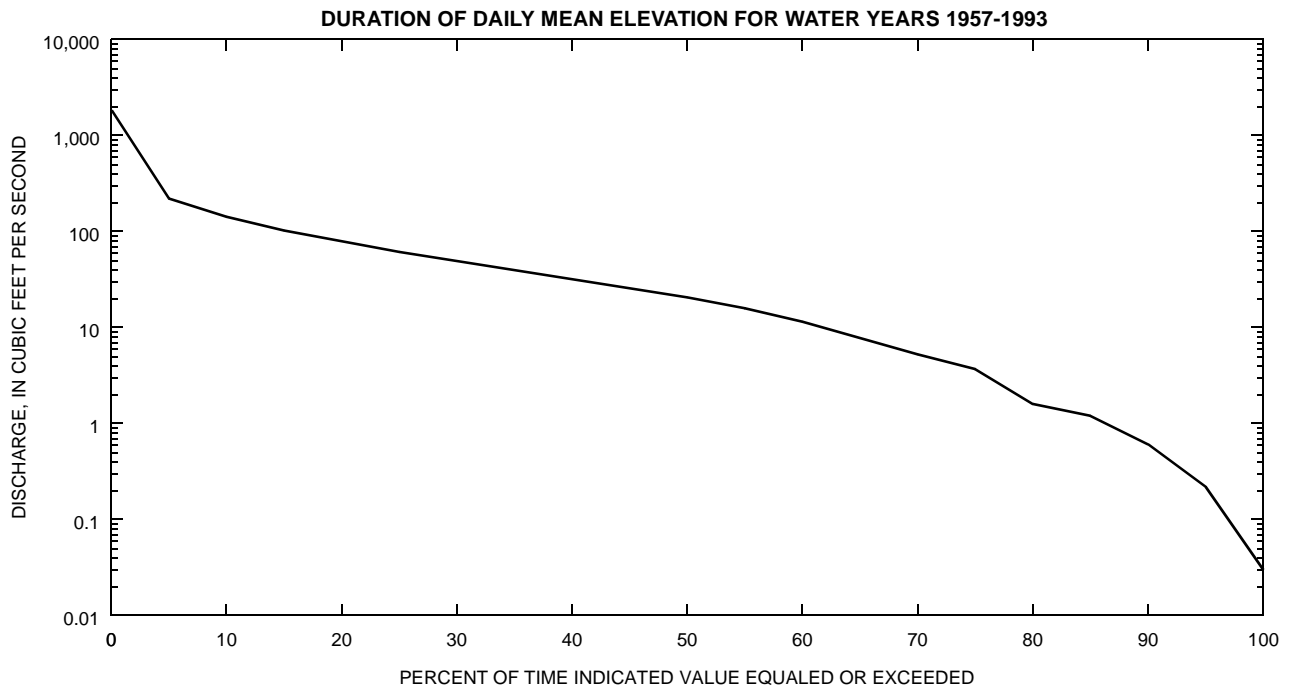

DURATION OF DAILY MEAN ELEVATION FOR WATER YEARS 1957-1993

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1957 - 1993**

ANNUAL MEAN	52.8	
HIGHEST ANNUAL MEAN	155	1970
LOWEST ANNUAL MEAN	5.67	1990
HIGHEST DAILY MEAN	1870	Sep 12 1964
LOWEST DAILY MEAN	.03	May 28 1981
ANNUAL SEVEN-DAY MINIMUM	.03	May 28 1981
INSTANTANEOUS PEAK FLOW	2360	Sep 12 1964
INSTANTANEOUS PEAK ELEVATION (FT)	118.52	Sep 12 1964
INSTANTANEOUS LOW FLOW	.02	Jun 1 1981
ANNUAL RUNOFF (INCHES/CFSM)	7.56/0.56

SUWANNEE RIVER BASIN
 02321000 NEW RIVER NEAR LAKE BUTLER, FL

LOCATION.--Lat 29°59'53", long 82°16'27", in SW 1/4 sec. 2, T.6. S., R.20 E., Union County, Hydrologic unit 03110206, near right bank on downstream side of bridge on State Highway 100, 4.4 miles southeast of Lake Butler.

DRAINAGE AREA.--191 mi².

PERIOD OF RECORD.--January 1950 to September 1971, June 1973 to May 1977, periodic discharge measurements. October 1990 to September 1991, October 1992 to 1993.

REVISED RECORDS.--WRD FLA. 1968 Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 83.8 ft above National Geodetic Vertical Datum of 1929.

REMARKS.--Records good.

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN ELEVATIONS FOR WATER YEARS 1950-1993

DURATION OF DAILY MEAN ELEVATION FOR WATER YEARS 1950-1993

SUWANNEE RIVER BASIN
 02321000 NEW RIVER NEAR LAKE BUTLER, FL

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1950 - 1993**

ANNUAL MEAN	180	
HIGHEST ANNUAL MEAN	457	1970
LOWEST ANNUAL MEAN	9.66	1962
HIGHEST DAILY MEAN	10400	Sep 13 1964
LOWEST DAILY MEAN	.20	Jun 10 1955
ANNUAL SEVEN-DAY MINIMUM	.37	Jun 19 1955
INSTANTANEOUS PEAK FLOW	11400	Sep 12 1964
INSTANTANEOUS PEAK ELEVATION (FT)	99.13	Sep 12 1964
INSTANTANEOUS LOW FLOW	.20	Jun 10 1955
ANNUAL RUNOFF (INCHES/CFSM)	12.70/0.94	

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN DISCHARGES FOR WATER YEARS 1950-1993

DURATION OF DAILY MEAN DISCHARGE FOR WATER YEARS 1950-1993

SUWANNEE RIVER BASIN

SUWANNEE RIVER BASIN
 02321500 SANTA FE RIVER AT WORTHINGTON SPRINGS, FL

LOCATION.--Lat 29°55'18", long 82°25'35", in SE¹/₄ sec.32, T.6 S., R.19 E., Alachua County, Hydrologic Unit 03110206, near center of span on downstream side of bridge on State Highway 121, 0.5 mi south of Worthington Springs, 0.8 mi downstream from New River, and 51 mi upstream from mouth.

DRAINAGE AREA.--575 mi².

PERIOD OF RECORD.--October 1931 to 1993. Published as "near Worthington" prior to October 1965. Monthly discharge only for October 1931, published in WSP 1304.

REVISED RECORDS.--WSP 2105: WDR FL-76-4: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 42.74 ft above National Geodetic Vertical Datum of 1929 (levels by Corps of Engineers). Prior to Jan. 16, 1939, nonrecording gage at site 0.2 mi downstream at present datum; Jan. 16, 1939 to July 23, 1953, nonrecording gage at present site and datum.

REMARKS.--Records good, except estimated periods which are fair. Records do not include diversions,during periods of high stages, from Santa Fe Lake to Lochloosa Creek in St. Johns River Basin.

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1932 - 1993**

ANNUAL MEAN	437	
HIGHEST ANNUAL MEAN	1163	1948
LOWEST ANNUAL MEAN	54.8	1956
HIGHEST DAILY MEAN	19000	Sep 13 1964
LOWEST DAILY MEAN	.60	Jun 24 1955
ANNUAL SEVEN-DAY MINIMUM	1.3	Jun 20 1955
INSTANTANEOUS PEAK FLOW	20000	Sep 13 1964
INSTANTANEOUS PEAK ELEVATION (FT)	71.14	Sep 13 1964
INSTANTANEOUS LOW FLOW	.50	Jun 24 1955
ANNUAL RUNOFF (INCHES/CFSM)	10.33/0.76

SUWANNEE RIVER BASIN
02321700 SWIFT CREEK NEAR LAKE BUTLER, FL

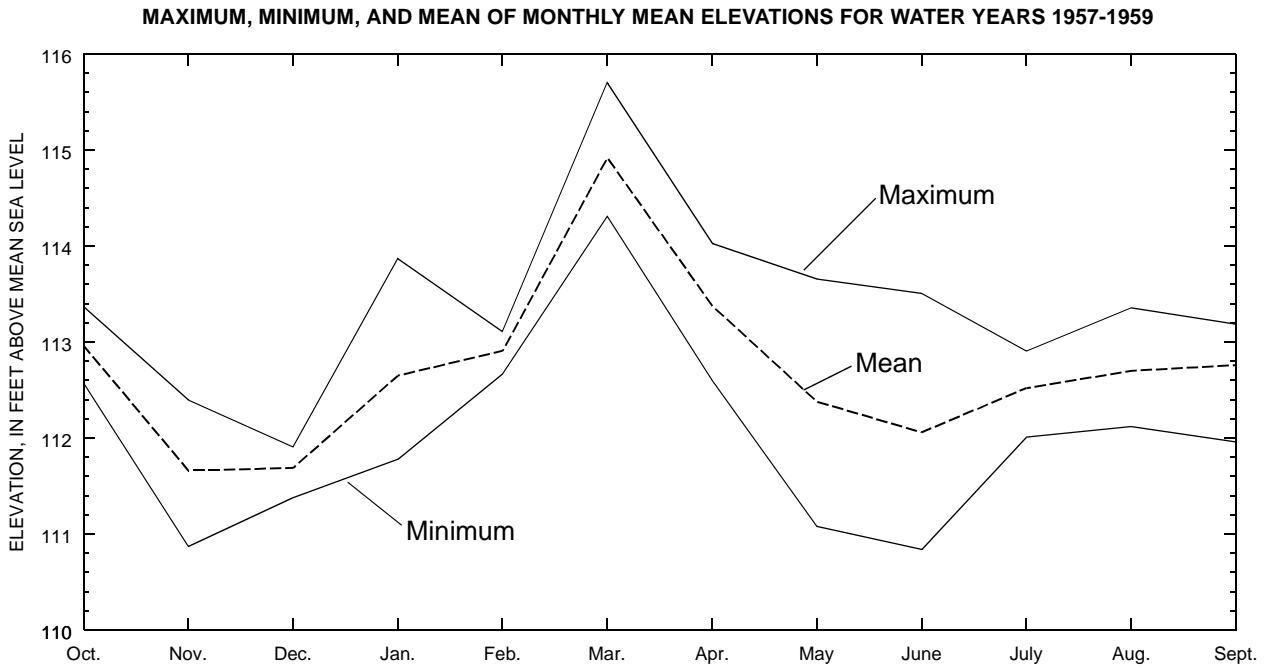

LOCATION.--Lat 30°03', long 82°25', in sec.16, T.5 S., R.19 E., near center of span on downstream side of bridge on State Highway 100 at Guilford, 5 miles northwest of town of Lake Butler, Union County.

DRAINAGE AREA.--27 mi². approximately.

PERIOD OF RECORD.--August 1957 to September 1959.

GAGE.--Water-stage recorder. Datum of gage is 109.56 ft above National Geodetic Vertical Datum of 1929 (Florida Geodetic Survey bench mark).

REMARKS.--Records fair.

SUWANNEE RIVER BASIN
02321800 OLUSTEE CREEK NEAR PROVIDENCE, FL

LOCATION.--Lat 30°00', long 82°34', in sec.36, T.5 S., R.17 E., on upstream side of bridge on State Highway 238, 1.5 miles west of Providence, Union County, 6.1 miles upstream from mouth, and 13.8 miles west of Lake Butler.

DRAINAGE AREA.--88 mi², approximately.

PERIOD OF RECORD.--October 1957 to September 1959.

GAGE.--Water-stage recorder. Datum of gage is 53.35 ft above National Geodetic Vertical Datum of 1929 (State Road Department bench mark).

REMARKS.--Records fair.

SUWANNEE RIVER BASIN
02322000 SANTA FE RIVER NEAR HIGH SPRINGS. FL

LOCATION.--Lat 29°51', long 82°38', in sec. 29. T.7 S., R.17 E., near right bank at upstream side of bridge on U.S. Highway 27, 150 ft upstream from Atlantic Coast Line Railroad bridge and 2 miles northwest of High Springs, Alachua County.

DRAINAGE AREA.--950 mi², approximately.

PERIOD OF RECORD.--January 1931 to September 1971.

GAGE.--Water-stage recorder. Datum of gage is 26.36 ft above National Geodetic Vertical Datum of 1929 (levels by Florida State Road Department). Prior to Jan. 9, 1933, staff gage at same site and datum.

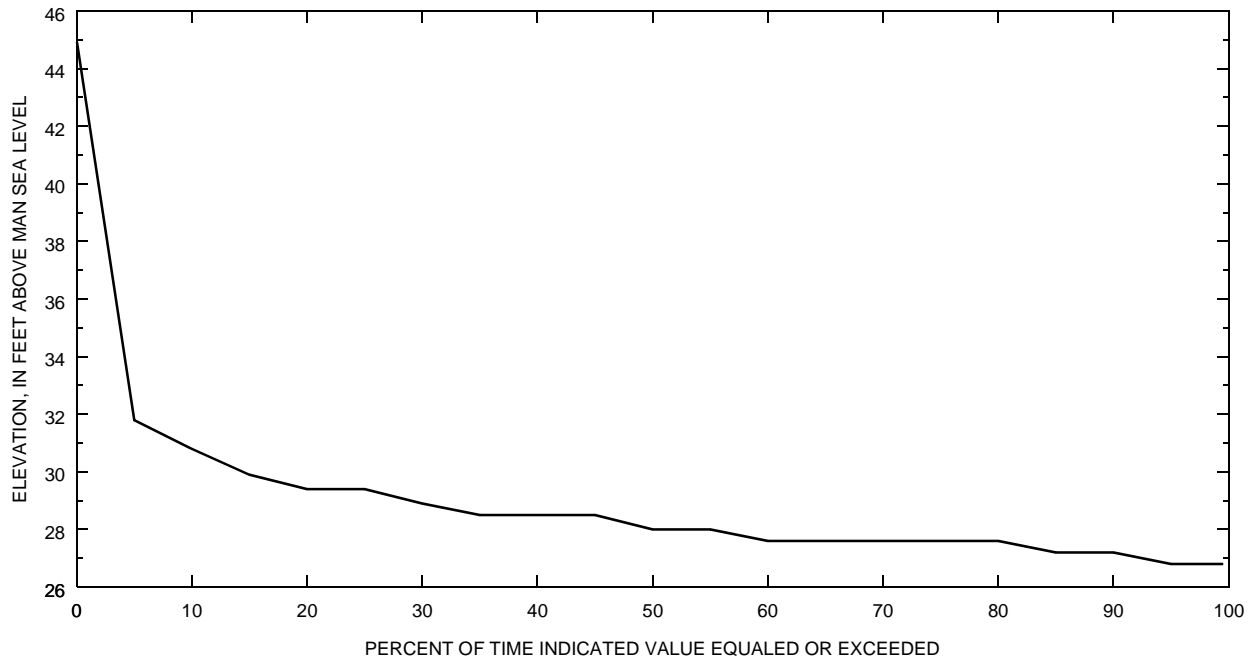

AVERAGE DISCHARGE.--28 years, 763 ft³/s

REMARKS.--Records good.

SUWANNEE RIVER BASIN
02322016 BLUES CREEK NEAR GAINESVILLE, FL

LOCATION.--Lat 29°43'41", long 82°25'54", in NW¹/₄ sec.8, T.9 S., R.19 E., Alachua County, Hydrologic Unit 03080102, about 1 mi above sink, 1 mi northwest of University of Florida Agricultural Experiment Station, 6.0 mi southeast of Alachua and 7.6 mi northwest of Gainesville.

DRAINAGE AREA.--5.12 mi², of which 2.5 mi² are noncontributing at low and medium discharge.

PERIOD OF RECORD.--June 1984 to 1993.

REVISED RECORDS.--WDR FL-88-4: 1985, 1987(M), WDR FL-92-4: Drainage Area.

GAGE.--Water-stage recorder. Elevation of the gage is 105 ft above National Geodetic Vertical Datum of 1929, from topographic map.

REMARKS.--Records fair except for estimated daily discharges which are poor.

SUWANNEE RIVER BASIN
02322500 SANTA FE RIVER NEAR FORT WHITE, FL

LOCATION.--Lat 29°50'55", long 82°42'55", in SE¹/₄ sec.28, T.7 S., R.16 E., Gilchrist County, Hydrologic Unit 03110206, on left bank 2.1 mi upstream from bridge on State Highway 47, 5.1 mi south of Fort White, and 18 mi upstream from mouth.

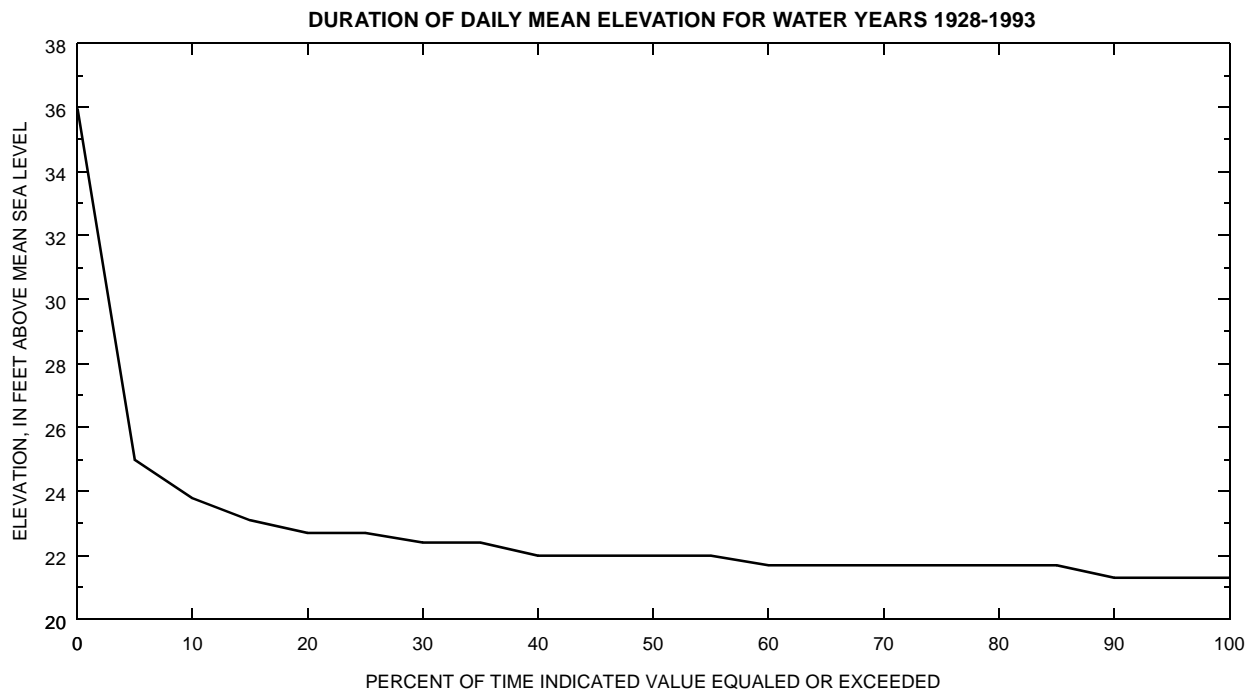

DRAINAGE AREA.--1,017 mi².

PERIOD OF RECORD.--October 1927 to January 1930, June 1932 to September 1993.

REVISED RECORDS.--WDR FL-75-1: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 20.86 ft above National Geodetic Vertical Datum of 1929 (levels by Corps of Engineers). Prior to June 3, 1932, nonrecording gage at several sites within 200 ft of present site at various datums. Oct. 1, 1947 to Feb. 10, 1949, auxiliary nonrecording gage and since Feb. 11, 1949, auxiliary water-stage recorder at bridge on U.S. Highway 129, 16 mi downstream from base gage at datum 3.5 ft above National Geodetic Vertical Datum of 1929.

REMARKS.--Records fair, except for estimated daily discharges, which are poor.

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1928 - 1993**

ANNUAL MEAN	1602	
HIGHEST ANNUAL MEAN	3112	1948
LOWEST ANNUAL MEAN	724	1956
HIGHEST DAILY MEAN	16900	Sep 16 1964
LOWEST DAILY MEAN	608	Jan 7 1991
ANNUAL SEVEN-DAY MINIMUM	611	Jan 4 1991
INSTANTANEOUS PEAK FLOW	17000	Sep 16 1964
INSTANTANEOUS PEAK ELEVATION (FT)	36.20	Sep 16 1964
INSTANTANEOUS LOW FLOW	608	Jan 7 1991
ANNUAL RUNOFF (INCHES/CFSM)	21.40/1.58

SUWANNEE RIVER BASIN
02323000 SUWANNEE RIVER NEAR BELL, FL

LOCATION.--Lat 29°48', long 82°55', in sec.16 or 17, T.8 S., R.14 E., on left bank at Rock Bluff Ferry, 4 1/2 mi northwest of Bell and 10 miles downstream from Santa Fe River.

DRAINAGE AREA.--9,260 mi², approximately

PERIOD OF RECORD.--June 1932 to December 1956 (discontinued).

GAGE.--Water-stage recorder. Datum of gage is 3.60 ft above National Geodetic Vertical Datum of 1929 (levels by Corps of Engineers).

REVISIONS (water years).--WSP 822: 1928(M).

REMARKS.--Records good.

SUWANNEE RIVER BASIN
02323500 SUWANNEE RIVER NEAR WILCOX, FL

LOCATION.--Lat 29°35'22", long 82°56'12", in NW¹/₄ sec.29, T.10 S., R.14 E., Levy County, Hydrologic Unit 03110205, on left bank about 400 ft downstream from Fort Fannin Bridge on U.S. Highway 19, 2.0 mi southwest of Wilcox and 33 mi upstream from mouth.

DRAINAGE AREA.--9,640 mi², approximately, includes part of watershed in Okefenokee Swamp which is indeterminate.

PERIOD OF RECORD.--October 1930 to September 1931, October 1941 to 1993. Monthly discharge only for some periods, published in WSP 1304.

REVISED RECORDS.--WSP 1905: WDR FL-75-1: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 0.53 ft below National Geodetic Vertical Datum of 1929. Prior to July 4, 1931, nonrecording gage at site 400 ft upstream at present datum. July 4 to Sept. 30, 1931, and Mar. 26 to May 14, 1942, water-stage recorder, and May 15, 1942 to Jan. 24, 1951, nonrecording gage at present site and datum. Since Feb. 1, 1951, auxiliary water-stage recorder about 9.0 mi downstream from base gage. Datum of auxiliary gage is 2.99 ft below National Geodetic Vertical Datum of 1929.

REMARKS.--Records fair. Flow generally affected by tide when discharge is less than 17,500 ft³/s.

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN ELEVATIONS FOR WATER YEARS 1931-1993

DURATION OF DAILY MEAN ELEVATION FOR WATER YEARS 1931-1993

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED,
 FOR WATER YEARS 1931 - 1993**

ANNUAL MEAN	10540	
HIGHEST ANNUAL MEAN	24560	1948
LOWEST ANNUAL MEAN	4291	1955
HIGHEST DAILY MEAN	84700	Apr 14 1948
LOWEST DAILY MEAN	2960	Oct 25 1981
ANNUAL SEVEN-DAY MINIMUM	3350	Oct 21 1981
INSTANTANEOUS PEAK FLOW	84700	Apr 14 1948
INSTANTANEOUS PEAK ELEVATION (FT)	21.79	Apr 14 1948
INSTANTANEOUS LOW FLOW	2960	Oct 25 1981
ANNUAL RUNOFF (INCHES/CF5M)	14.85/1.09	

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN DISCHARGES FOR WATER YEARS 1931-1993

DURATION OF DAILY MEAN DISCHARGE FOR WATER YEARS 1931-1993

SUWANNEE RIVER BASIN

STEINHATCHEE RIVER BASIN
 02324000 STEINHATCHEE RIVER NEAR CROSS CITY, FL

LOCATION.--Lat 29°47'11", long 83°19'18", in NE¹/₄ sec.16, T.8 S., R.10 E., Taylor County, Hydrologic Unit 03110102, on right bank 0.7 mi downstream from Atlantic Coast Line Railroad bridge, 0.7 mi south of Clara, 13 mi upstream from mouth, and 16 mi northwest of Cross City.

DRAINAGE AREA.--350 mi², approximately. See REMARKS.

PERIOD OF RECORD.--February 1950 to 1993.

REVISED RECORDS.--WSP 1234: 1950. WSP 1724: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 7.84 ft above National Geodetic Vertical Datum of 1929.

REMARKS.--Records fair. Below about 500 ft³/s, all flow enters sinkhole 0.5 mi downstream from gage. Above about 4,000 ft³/s, discharge measurements are made along U.S. Highways 19, 98, and Alternate 27, measurements include all flow from about 3 mi northwest to 5 mi southwest of main channel, drainage area is increased by about 30 mi².

FENHOLLOWAY RIVER BASIN
02324400 FENHOLLOWAY RIVER NEAR FOLEY, FL

LOCATION.--Lat 30°05'53", long 83°28'19", in NE¹/₄ sec.36, T.4 S., R.8 E., Taylor County, Hydrologic Unit 03110102, near left bank at downstream side of bridge on U.S. Highway 27, 1.8 mi upstream from small tributary, 4 mi northeast of Foley, and 32 mi upstream from mouth.

DRAINAGE AREA.--60 mi² approximately.

PERIOD OF RECORD.--February to August 1955 (discharge measurements only); September 1955 to 1993.

REVISED RECORDS.--WSP 1905: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 53.59 ft above National Geodetic Vertical Datum of 1929 (Florida Department of Transportation bench mark).

REMARKS.--Records fair.

ECONFINA RIVER BASIN
 02326000 ECONFINA RIVER NEAR PERRY, FL.

LOCATION.--Lat 30°10'14", long 83°49'26", in NE 1/4 sec.4, T.4 S., R.5 E., Taylor County, Hydrologic Unit 03110102, on downstream side of concrete bridge, 3.0 mi downstream from Natural Well Branch, 14 mi upstream from mouth, and 14.7 mi northwest of Perry.

DRAINAGE AREA.--198 mi².

PERIOD OF RECORD.--February 1950 to 1993.

REVISED RECORDS.--WSP 1905: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 14.35 ft above National Geodetic Vertical Datum of 1929.

REMARKS.--Records good.

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN ELEVATIONS FOR WATER YEARS 1950-1993

DURATION OF DAILY MEAN ELEVATION FOR WATER YEARS 1950-1993

**SUMMARY STATISTICS IN CUBIC FEET PER SECOND
 FOR WATER YEARS 1950 - 1993**

ANNUAL MEAN	142	
HIGHEST ANNUAL MEAN	317	1991
LOWEST ANNUAL MEAN	18.1	1955
HIGHEST DAILY MEAN	2480	Sep 18 1957
LOWEST DAILY MEAN	2.4	Jul 8 1955
ANNUAL SEVEN-DAY MINIMUM	2.6	Jul 3 1955
INSTANTANEOUS PEAK FLOW	2540	Sep 17 1957
INSTANTANEOUS PEAK ELEVATION (FT)	27.13	Sep 17 1957
INSTANTANEOUS LOW FLOW	2.3	Jul 8 1955
ANNUAL RUNOFF (INCHES/CFSM)	9.76/0.72	

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN DISCHARGES FOR WATER YEARS 1950-1993

DURATION OF DAILY MEAN DISCHARGE FOR WATER YEARS 1950-1993

AUCILLA RIVER BASIN
02326500 AUCILLA RIVER AT LAMONT, FL

LOCATION.--Lat 30°22'11", long 83°48'25", in NE¹/₄ sec.27, T.1 S., R.5 E., Madison County, Hydrologic Unit 03110103, near left bank on downstream side of bridge on U.S. Highway 19, 0.6 mi southeast of Lamont, and 34 mi upstream from mouth.

DRAINAGE AREA.--747 mi².

PERIOD OF RECORD.--February 1950 to September 1979; November 1983 to 1992 (gage heights and peak discharge only).

REVISED RECORDS.--WSP 1204, 1905: Drainage area. WSP 1504: 1953.

GAGE.--Water-stage recorder. Datum of gage is 42.90 ft above National Geodetic Vertical Datum of 1929, unadjusted.

REMARKS.--Minor pumpage above and below station for irrigation during dry seasons. Since Aug. 27, 1963, low-head rock and concrete dam 0.6 mi downstream.

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN ELEVATIONS FOR WATER YEARS 1950-1992

DURATION OF DAILY MEAN ELEVATION FOR WATER YEARS 1950-1992

**SUMMARY STATISTICS, IN CUBIC FEET PER SECOND UNLESS OTHERWISE INDICATED
 FOR WATER YEARS 1950 - 1992**

ANNUAL MEAN	357		
HIGHEST ANNUAL MEAN	1471		1965
LOWEST ANNUAL MEAN	2.68		1955
HIGHEST DAILY MEAN	11500	Apr 8	1973
LOWEST DAILY MEAN	.00	Jun 2	1955
ANNUAL SEVEN-DAY MINIMUM	.00	Jun 2	1955
INSTANTANEOUS PEAK FLOW	11500	Apr 8	1973
INSTANTANEOUS PEAK ELEVATION (FT)	59.47	Apr 8	1973
INSTANTANEOUS LOW FLOW	.00	Jun 2	1955
ANNUAL RUNOFF (INCHES)	6.50		
ANNUAL RUNOFF (CFSM)	.48		

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN DISCHARGES FOR WATER YEARS 1950-1992

DURATION OF DAILY MEAN DISCHARGE FOR WATER YEARS 1950-1992

THIS PAGE INTENTIONALLY BLANK

AUCILLA RIVER BASIN
02326512 AUCILLA RIVER NEAR SCANLON, FL

LOCATION.--Lat 30°13'52", long 83°55'08", in SW¹/₄ sec.10, T.3 S., R.4 E., Taylor County, Hydrologic Unit 03110103, on left bank, 3 mi west of Cabbage Grove, 6.9 mi north of Scanlon, 12 mi southwest of Lamont and 14 mi upstream from mouth.

DRAINAGE AREA.--805 mi².

PERIOD OF RECORD.--March 1950 to November 1957, crest-stage partial-record station; May 1965, May 1967 (one discharge measurement made each water year); August 1976 to 1993.

REVISED RECORDS.--WRD FL-88-4: 1986, 1987.

GAGE.--Water-stage recorder. Datum of gage is 3.14 ft above National Geodetic Vertical Datum of 1929, unadjusted. February 1950 to November 1957, crest-stage gage at same site at present datum. August 30, 1976 to April 24, 1982, water-stage recorder at same site and datum. April 25, 1982 to October 24, 1984, nonrecording gage.

REMARKS.--Records good.

EXTREMES OUTSIDE PERIOD OF RECORD.--Flood of April 9, 1973, reached a stage of about 23.5 ft, from floodmarks, (discharge not determined).

MAXIMUM, MINIMUM, AND MEAN OF MONTHLY MEAN ELEVATIONS FOR WATER YEARS 1976-1993

**STATISTICAL SUMMARIES OF HYDROLOGIC DATA
FOR LAKES**

ST. MARYS RIVER BASIN
02228700 OCEAN POND AT OLUSTEE, FL

LOCATION.--LAT 30°12'55", long 82°26'31", in SW¹/₄ sec.20, T.3 S., R. 19 E., Baker County, Hydrologic Unit 03070204, on south shore on private dock, 1.2 mi northwest of Olustee and 11.3 mi east of Lake City.

SURFACE AREA.--1,793 acres.

DRAINAGE AREA.--13.1 mi².

PERIOD OF RECORD.--December 1974 to September 1993 (intermittent).

GAGE.- Nonrecording gage. Datum of gage is 150.40 ft National Geodetic Vertical Datum of 1929. Gage readings have been reduced to elevations NGVD.

REMARKS.--Some natural diversion flow to the Suwannee River basin at times.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum observed elevation, 156.20 ft Feb. 25, 1988; minimum observed, 153.34 ft Jan. 3, 1991.

WACCASASSA RIVER BASIN

02229400 PALESTINE LAKE NEAR OLUSTEE, FL

LOCATION.--Lat 30°07'46", long 82°24'34", in NW¹/₄ sec.22, T.4 S., R.19 E., Union County, Hydrologic Unit 03070204, on south side of private dock on northeastern shore, 6.2 mi south of Olustee.

SURFACE AREA.--910 acres.

DRAINAGE AREA.--13.1 mi²

PERIOD OF RECORD.--August 1975 to September 1993 (intermittent).

GAGE.--Nonrecording gage. Datum of gage is 133.94 ft National Geodetic Vertical Datum of 1929 (levels by Suwannee River Water Management District). Gage readings have been reduced to elevation NGVD.

REMARKS.--Formerly known as South Prong Pond near Lake Butler. Surface outlet through South Prong swamp to South Prong St. Marys River. Outflow into Olustee Creek will occur at elevations above 145 ft.

COOPERATION.--Gage readings are furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum observed elevation, 145.24 ft Oct. 5, 1992; minimum observed, 141.14 ft Sept. 25, 1989.

SUWANNEE RIVER BASIN
02313510 CHUNKEY POND NEAR BRONSON, FL

LOCATION.--Lat 29°23'36", long 82°37'19" (base gage), in SW¹/₄ sec.33, T.12 S., R.17 E., Levy County, Hydrologic Unit 03110101, at southeast end of pond, near center of outlet channel, 200 ft upstream from culvert control and 3.7 mi south of Bronson.

SURFACE AREA.--650 acres.

DRAINAGE AREA.--23 mi², approximately.

PERIOD OF RECORD.--January 1967 to September 1993 (intermittent)..

GAGE.--Nonrecording gage. Datum of gage is National Geodetic Vertical Datum of 1929 (Florida Department of Transportation bench mark). Supplementary nonrecording gages about 600 ft northeast; 0.5 mi north; and 400 ft west of north gage.

REMARKS.--Lake level outlet is culvert with lift gate in outlet canal. Outflow from lake is through a canal southward to a swampy area called Deerpen Pond and thence through Magee Branch to Waccasassa River.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 56.00 ft Sept. 7, 1967; lake dry at gage during November and December 1977, elevation not determined. Minimum observed since December 1977, 45.80 ft Nov. 18, 1978.

SUWANNEE RIVER BASIN
02319150 CHERRY LAKE NEAR CHERRY LAKE, FL

LOCATION.--Lat 30°37'06", long 83°25'20", in NE¹/₄ sec.33, T.3 N., R.9 E., Madison County, Hydrologic Unit 03110203, on west shore on private dock, 2.7 mi northeast of the village of Cherry Lake and 10.2 mi north of Madison.

SURFACE AREA.--483 acres.

DRAINAGE AREA.--1.58 mi².

PERIOD OF RECORD.--November 1974 to September 1993 (intermittent).

GAGE.--Nonrecording gage. Datum of gage is 148.13 ft National Geodetic Vertical Datum of 1929. Gage readings have been reduced to elevations NGVD.

REMARKS.--Lake is landlocked.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 153.97 ft Apr. 15, 1975; minimum observed, 150.81 ft Nov. 30, 1990.

EXTREMES OUTSIDE PERIOD OF RECORD.--Maximum elevation since April 1973, 154.41 ft from high-water mark by owner.

SUWANNEE RIVER BASIN
02319200 LAKE OCTAHATCHEE NEAR JENNINGS, FL

LOCATION.--Lat 30°36'34", long 83°12'10", in NE¹/₄ sec.3, T.2 N., R.11 E., Hamilton County, Hydrologic Unit 03110203, on northwest shore on private dock, 5.6 mi west of Jennings, 8.8 mi east of Pinetta.

SURFACE AREA.--198 acres.

DRAINAGE AREA.--3.0 mi², includes 0.1 mi² estimated in Georgia.

PERIOD OF RECORD.--November 1974 to September 1993 (intermittent).

GAGE.--Nonrecording gage. Datum of gage is 99.36 ft National Geodetic Vertical Datum of 1929 (levels by Suwannee River Water Management District). Gage readings have been reduced to elevations NGVD.

REMARKS.--Lake level control is lift gates at west end of lake by Lake Co-op (owners).

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum observed elevation, 111.56 ft Mar. 3, 1991, minimum observed 97.23 ft Mar. 11, 1985.

SUWANNEE RIVER BASIN
02320200 TOWNSEND POND NEAR MAYO, FL

LOCATION.--Lat 30°02'27", long 83°07'11", in NE¹/₄ sec.21, T.5 S., R.12 E., Lafayette County, Hydrologic Unit 03110205, on county pier, 235 ft north of peninsula on west shore, 1.4 mi southeast of Alton, 3.5 mi southeast of Mayo.

SURFACE AREA.--111 acres.

DRAINAGE AREA.--6.40 mi².

PERIOD OF RECORD.--November 1974 to September 1993 (intermittent).

GAGE.--Nonrecording gage. Datum of gage 67.44 ft National Geodetic Vertical Datum of 1929 (levels by Suwannee River Water Management District). Gage readings have been reduced to elevations NGVD.

REMARKS.--Lake is landlocked. Locally known as Koon Lake.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 73.17 ft Aug. 8, 1980; minimum observed, 67.24 ft Oct. 16, 1990.

SUWANNEE RIVER BASIN
02320230 PICKETT LAKE NEAR BRANFORD, FL

LOCATION.--Lat. 29°59'18", long 83°02'53", in SW¹/₄ sec.5, T.6 S., R.13 E., Lafayette County, Hydrologic Unit 03110205, on north shore of southwest lobe of lake 1.7 mi southwest of U.S. 27, and 7.5 mi west of Branford.

SURFACE AREA.--88 acres.

DRAINAGE AREA.--6.5 mi² approximately.

PERIOD OF RECORD.--September 1977 to September 1993 (intermittent).

GAGE.--Nonrecording gage. Datum of gage is 48.12 ft National Geodetic Vertical Datum of 1929. Gage readings have been reduced to elevations NGVD.

REMARKS.--Drainage divides are poorly defined and lake interconnects with Adams Lake and adjacent areas during high stage.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 58.12 ft July 27, 1980; minimum observed, 48.20 ft May 15, 1989.

SUWANNEE RIVER BASIN
02320600 SANTA FE LAKE NEAR KEYSTONE HEIGHTS, FL

LOCATION.--Lat 29°45'38", long 82°04'30", in NW¹/₄ sec.35, T.8 S., R.22 E., Bradford County, Hydrologic Unit 03110206, on north shore of lake, on west side of private dock, 3.1 mi southwest of Keystone Heights.

SURFACE AREA.--5,299 acres, open water only, includes that of Little Santa Fe Lake.

DRAINAGE. AREA.--20.9 mi², includes that of Little Santa Fe Lake.

PERIOD OF RECORD.--July 1957 to September 1993 (intermittent).

REVISED RECORDS.--WSP 2105: Drainage area, surface area.

GAGE.--Nonrecording gage. Datum of gage is 132.22 ft National Geodetic Vertical Datum of 1929. Gage readings have been reduced to elevations NGVD.

REMARKS.--Lake is the headwaters of the Santa Fe River and has continuous outflow.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation, 142.72 ft Aug. 25, 1978 from highwater mark; minimum observed, 137.76 ft Dec. 31, 1990.

EXTREMES OUTSIDE PERIOD OF RECORD.--Maximum elevation since 1946, 143.9 ft, furnished by Department of Transportation, from information by local residents.

SUWANNEE RIVER BASIN
02320630 LAKE ALTHO AT WALDO, FL

LOCATION.--Lat 29°47'19", long 82°09'41", in NW¹/₄ sec.24, T.8 S., R.21 E., Alachua County, Hydrologic Unit 03110206, on dock at head of canal on north-west shore of lake, 0.4 mi (0.6 km) east of Waldo, and 5.3 mi southwest of Hampton.

SURFACE AREA.--555 acres.

DRAINAGE AREA.--3.39 mi².

PERIOD OF RECORD.--March 1976 to September 1993 (intermittent).

REVISED RECORDS.--WDR FL-78-4: 1976-77.

GAGE.--Nonrecording gage. Datum of gage is 122.62 ft, National Geodetic Vertical Datum of 1929; gage readings have been reduced to elevations NGVD.

REMARKS.--Lake interconnects with Santa Fe Lake (02320600) through Santa Fe canal on southeast end of lake.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 143.38 ft Feb. 15, 1993; minimum observed, 136.86 ft Dec. 3, 1990.

SUWANNEE RIVER BASIN
02320742 LAKE ROWELL NEAR STARKE, FL

LOCATION.--Lat 29°55'16", long 82°10'01", in NE¹/₄ sec.2, T.7 S., R.21 E., Bradford County, Hydrologic Unit 03110206, on west shore at canal, 2.5 mi east of Sampson City, and 3.8 mi southwest of Starke.

SURFACE AREA.--355 acres.

DRAINAGE AREA.-- mi².

PERIOD OF RECORD.--February 1989 to September 1993.

GAGE.--Nonrecording gage. Datum of gage is National Geodetic Vertical Datum of 1929.

REMARKS.--Outflow from lake is through Sampson Lake to Santa Fe River.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 135.64 ft April.1991; minimum observed, 129.79 ft September and October 1990.

SUWANNEE RIVER BASIN
02320750 LAKE SAMPSON NEAR STARKE, FL

LOCATION.--Lat 29°56'11", long 82°10'15", in NE¹/₄ sec.35, T.6 S., R.21 E., Bradford County, Hydrologic Unit 03110206, on northeast shore at end of canal, 2.7 mi northeast of Sampson City, and 3.7 mi southwest of Starke.

SURFACE AREA.--2,071 acres.

DRAINAGE AREA.--59.3 mi².

PERIOD OF RECORD.--July 1957 to September 1993 (intermittent).

REVISED RECORDS.--WDR FL-74-1: Drainage area.

GAGE.--Nonrecording gage. Datum of gage is 127.49 ft National Geodetic Vertical Datum of 1929. July 1957 to September 1967, at site 2.2 mi southwest at datum 1.23 ft lower. Gage readings have been reduced to elevations NGVD.

REMARKS.--Outflow from lake is through Sampson River to Santa Fe River. Lake level control is concrete spillway culverts and lift gates 0.5 mi downstream from lake outlet. Prior to 1973, outflow through 12-inch drainage well on north side of lake to ground water.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 136.15 ft Mar. 23, 1959; minimum observed, 129.66 ft Oct. 8, 1990.

SUWANNEE RIVER BASIN
02321300 LAKE BUTLER AT LAKE BUTLER, FL

LOCATION.--Lat 30°01'38", long 82°20'18", in SE¹/₄ sec.30, T.5 S., R.20 E., Union County, Hydrologic Unit 03110206, on south shore of lake at public park in Lake Butler.

SURFACE AREA.--437 acres.

DRAINAGE AREA.--3.94 mi².

PERIOD OF RECORD.--July 1957 to September 1993 (intermittent).

REVISED RECORDS.--WDR FL-75-1: Drainage area.

GAGE.--Nonrecording gage. Datum of gage is 127.35 ft National Geodetic Vertical Datum of 1929. July 1957 to September 1967 at same site at datum 3.41 ft lower. Gage readings have been reduced to elevations NGVD.

REMARKS.--Outflow from lake is through a run to Butler Creek, thence to New River.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation, 134.02 ft about Sept. 13, 1964, from high-water mark; minimum observed, 128.71 ft Dec. 30, 1990.

SUWANNEE RIVER BASIN
02322550 WATERS LAKE NEAR TRENTON, FL

LOCATION.--Lat 29°42'31", long 82°43'59", in NW¹/₄ sec.17, T.9 S., R.16 E., Gilchrist County, Hydrologic Unit 03110206, on north shore of lake near end of private dock, 8.2 mi northeast of Trenton.

SURFACE AREA.--183 acres.

DRAINAGE AREA.--15.7 mi².

PERIOD OF RECORD.--July 1972 to September 1993 (intermittent).

REVISED RECORD.--WDR FL-80-4: 1978 (M).

GAGE.--Nonrecording gage. Datum of gage is National Geodetic Vertical Datum of 1929. Prior to June 14, 1977, at site 60 ft northeast at present datum.

REMARKS.--Concrete control at lake outlet at elevation 73.4 ft. There is some pumpage from lake for irrigation purposes.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 75.98 ft Aug. 18, 1978; minimum observed, 55.10 ft Feb. 6, 1982.

SUWANNEE RIVER BASIN
02322600 ALLIGATOR LAKE AT LAKE CITY, FL

LOCATION.--Lat 30°09'25", long 82°38'28", in NE¹/₄ sec.5, T.4 S., R.17 E., Columbia County, Hydrologic Unit 03110206, on west shore of southern portion of lake, 2.0 mi south of Lake City.

SURFACE AREA.--348 acres.

DRAINAGE AREA.--15.4 mi².

PERIOD OF RECORD.--September 1965 to March, 1990 (intermittent).

GAGE.--Nonrecording gage. Datum of gage is 87.18 ft National Geodetic Vertical Datum of 1929. Gage readings have been reduced to elevations NGVD. Prior to Oct. 1, 1974, nonrecording gage at site 2.0 mi northeast at same datum.

REMARKS.--Lake has several contributing creeks but no surface outlet; below about 95 ft elevation, lake is separated into several small ponds.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 99.98 ft Mar. 1, 1966; minimum observed, 90.23 ft Apr. 29, 1968.

SUWANNEE RIVER BASIN
02323300 GOVERNOR HILL LAKE NEAR OLD TOWN, FL

LOCATION.--Lat 29°45'08", long 83°02'18", in SE¹/₄ sec. 29, T.8 S., R.13 E., Dixie County, Hydrologic Unit 03110205, on south shore of lake 10 ft north of private dock, 9.8 mi northeast of Cross City and 10.2 mi northwest of Old Town.

SURFACE AREA.--153 acres (0.24 mi²).

DRAINAGE AREA.--1.61 mi².

PERIOD OF RECORD.--November 1974 to September 1993 (intermittent).

GAGE.--Nonrecording gage. Datum of gage is 46.72 ft National Geodetic Vertical Datum of 1929 (levels by Suwannee River Water Management District.) Gage readings have been reduced to elevations NGVD.

REMARKS.--Lake is landlocked.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 53.82 ft Oct. 2, 1988, Aug. 28, 1991; minimum observed, 47.86 ft Aug. 16, 1977.

ST. MARYS RIVER BASIN
02325700 SAMPALA LAKE NEAR GREENVILLE, FL

LOCATION.--Lat 30°23'03", long 83°32'20", in SE¹/₄ sec.20, T.1 S., R.8 E., Madison County, Hydrologic Unit 03110102, on west shore of the northwest portion of the lake 8.3 mi southeast of Greenville, 9.5 mi southwest of Madison.

SURFACE AREA.--453 acres.

DRAINAGE AREA.--7.13 mi².

PERIOD OF RECORD.--November 1974 to June 1984 (intermittent).

GAGE.--Nonrecording gage. Datum of gage is 99.61 ft National Geodetic Vertical Datum of 1929. Gage readings have been reduced to elevations NGVD.

REMARKS.--Headwaters Sampala Swamp, San Pedro Bay and Econfina River, outlet at south end of lake.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 104.81 ft March. 30, 1984; minimum observed, 102.69 ft Aug. 4, 1977.

RIVER BASIN
02325820 ANDREWS LAKE NEAR SHADY GROVE, FL

LOCATION.--Lat 30°16'14", long 83°39'03", in NW¹/₄ sec.32, T.2 S., R.7 E., Taylor County, Hydrologic Unit 03110102, on southwest shore, 1.2 mi southwest of Econfina River, 1.7 mi southwest of Shady Grove, 2.1 mi northwest of Lake Bird Community, and 13.4 mi northwest of Perry.

SURFACE AREA.--44.5 acres.

DRAINAGE AREA.--0.34 mi².

PERIOD OF RECORD.--November 1974 to September 1993 (intermittent).

GAGE.--Nonrecording gage. Datum of gage is 73.19 ft National Geodetic Vertical Datum of 1929 (levels by Suwannee River Water Management District). Gage readings have been reduced to elevations NGVD.

REMARKS.--Lake will interconnect with Nose Lake at high stages, and at extreme high stage overflow into Econfina River Basin.

COOPERATION.--Gage readings were furnished by Suwannee River Water Management District.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 77.58 ft Oct. 2, 1991; minimum observed, 73.90 ft June 18, 1993.
