Data are calculated, estimated, or reported. See notes for more information.

Gallium Worksheet Notes

Data Sources

The sources of data for the gallium worksheet were the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB), Mineral Facts and Problems (MFP), and Metal Prices in the United States through 1998 (MP98). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data either were not available or were withheld because they are proprietary.

Production

Production data for gallium in the United States were for refined gallium. Gallium was first produced in 1943. Data were from the MFP for the years 1978–79 and the MYB for the years 1948, 1953–54, and 1980 to the most recent. Data were withheld for the years 1943–47, 1949–52, 1955–77, and 1987 in order to avoid disclosing proprietary data.

Imports

Import data report the amount of gallium imported into the United States. Data were from the MYB. Blank cells in the worksheet indicate that data were not available for the years 1943–62.

Exports

Export data report the amount of gallium exported from the United States. Data were from the MYB. Blank cells in the worksheet indicate that data were not available for the years 1943–76 and from 1984 to the most recent.

Stocks

Stocks data report the amount of refined gallium held in stocks by consumers at the end of the year. Data were from the MYB. Blank cells in the worksheet indicate that data were not available for the years 1943–70.

Apparent Consumption

Reported consumption was utilized for apparent consumption for the years 1970 to the most recent. Data were from the MYB. Blank cells in the worksheet indicate that data were not available for the years 1943–69.

Unit Value (\$/t)

Unit value is the value in dollars of 1 metric ton (t) of gallium apparent consumption. Unit value was estimated for the United States in actual dollars by using price data from the MP98 for refined gallium for the years 1943–98 and from the MYB for the years 1999 to the most recent.

Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

World Production

World production data were for refined gallium produced. Data were from the Commodity Specialist. Blank cells in the worksheet indicate that data were not available for the years 1943–72.
