2007		93	6,060	1,060		21,120	16,600	25,700

<sup>1</sup>Compiled by T.D. Kelly (retired), P.A. Lyday (retired), R.L. Virta, and D. Polyak.  
 Data are calculated, estimated, or reported. See notes for more information.

## **Iodine Worksheet Notes**

### **Data Sources**

The sources of data for the iodine worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB); Mineral Commodity Summaries (MCS) and its predecessor, Commodity Data Summaries (CDS); and Mineral Facts and Problems (MFP). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data either were not available or were withheld from publication because they are proprietary.

### **Production**

Production is given for three time periods (1932–37, 1969–83, and 1988 to the most recent year). Data for the first and last time periods were from the salient statistics table and/or a production table in the MYB. Data from 1969–83 were from the MFP. Production data for other time periods were withheld because the data were proprietary.

### **Government Shipments**

Shipment data are only available from 1981 to the most recent year. These data were from the salient statistics table in the MCS. Shipments were not available for other years.

### **Imports**

All import data were from the salient statistics or imports for domestic consumption tables in the MYB.

### **Exports**

Exports are not reported for the time periods 1928–46, 1965–68, and 1980–89. Data for all other years were from the salient statistics and export tables, and in a few instances, the text (for the earlier years) in the MYB except for the years 1969–79, where the data were from the MFP.

### **Apparent Consumption**

For the years, 1928–47 and 1969–74, apparent consumption was calculated by the formula:

$$\text{APPARENT CONSUMPTION} = \text{PRODUCTION} + \text{IMPORTS} - \text{EXPORTS}.$$

However, in some cases data are only available for imports, meaning that apparent consumption was estimated using only this information. For the years 1948–68 and 1984–86, reported consumption, from the MCS, was used due to the lack of production data. For the years 1975–83 and 1987–2005, the apparent consumption data as reported in the salient statistics or a consumption table in the MYB were used. Data for 2006–07 was withheld because the data are proprietary.

### **Unit Value (\$/t)**

Data for this column come from a variety of sources. The unit value for the years 1928–69 was calculated using imports and import value (in the MYB). For the years 1970–76, unit value was from table 1 in the 1990 MYB. For the years 1977 to the most recent, the unit value was from the prices section of the MYB. Unit values for the years 1970 to the most recent are average c.i.f. import values.

### **Unit Value (98\$/t)**

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

### **World Production**

World production data for the years 1960–75, are reported in the world mine production table of the CDS. Data for the years 1976 to the most recent are reported in the world production table of the MYB. Excludes production in the United States in 2006.
