Iron Oxide Pigments End-Use Worksheet Notes

Data Source

The source of data for the iron oxide pigments end-use worksheet is the Minerals Yearbook, an annual collection, compilation, and analysis of mineral industry data, published by the U.S. Bureau of Mines and the U.S. Geological Survey.

End Use

End use is defined as the use of the mineral commodity in a particular industrial sector or product. End-use estimates are derived by applying the estimated end-use percentages of reported shipments to the calculated U.S. apparent consumption; actual consumption may be greater. The end-use categories for iron oxide pigments are:

- Coatings (industrial finishes, trade sales lacquers, paints, varnishes).
- Construction materials, (cement, mortar, preformed concrete, roofing granules).
- Colorants (for ceramics, glass, paper, plastics, rubber, and textiles).
- Foundry sands.
- Industrial chemicals (such as catalysts).
- Ferrites and other (magnetic and electronic) applications.
- Animal feed and fertilizers, and
- Other industrial uses (including cosmetics, magnetic ink and toner, polishing agents, and data indicated by the symbol W).

Data for 1975 and 1976 applied the same percentage distribution as in the year 1977. End-use data were not collected for these years.

W in spreadsheet indicates information withheld to avoid disclosing company proprietary data; data included with the other uses category. Data are rounded to no more than three significant digits; data may not add to totals shown.
