Data are calculated, estimated, or reported. See notes for more information.

Thallium Worksheet Notes

Data Sources

The sources of data for the thallium worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Mineral Facts and Problems (MFP); Mineral Commodity Summaries (MCS) and its predecessor, Commodity Data Summaries (CDS); and Metal Prices in the United States through 1998 (MP98). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data either were not available or were withheld because they are proprietary.

Production

Production data report thallium production in the United States. Data were from the MFP. Blank cells in the worksheet for the years 1964–72 indicate that data were withheld in order to avoid disclosing proprietary data. Blank cells for 1942–63 indicate that data were not available. Values for the years 1978–83 were rounded down to zero as they were less than ½ ton.

Imports

Import data report the amount of thallium imported into the United States. Data were from the MFP for the years 1964–83 and the MCS for the years 1984 to the most recent. Blank cells in the worksheet indicate that data were not available for the years 1942–63.

Apparent Consumption

Consumption reported in the CDS and MCS were used for apparent consumption for the years 1969 to the most recent, because of the number of W's and blanks in the production field. Blank cells in the worksheet indicate that data were not available for the years 1942–68 and 2003.

Unit Value (\$/t)

Unit value is the value in dollars of 1 metric ton (t) of thallium apparent consumption. Unit value was estimated in actual dollars for 1942–98 from a price series for domestic thallium from MP98, and from the MCS for the years 1999 to the most recent.

Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

World Production

World production data were for thallium produced. Data were from the MCS. Blank cells in the worksheet indicate that data were not available for the years 1942–79.
