

# AYK Region

## Chum and Chinook Salmon

### Stock Status and Harvest

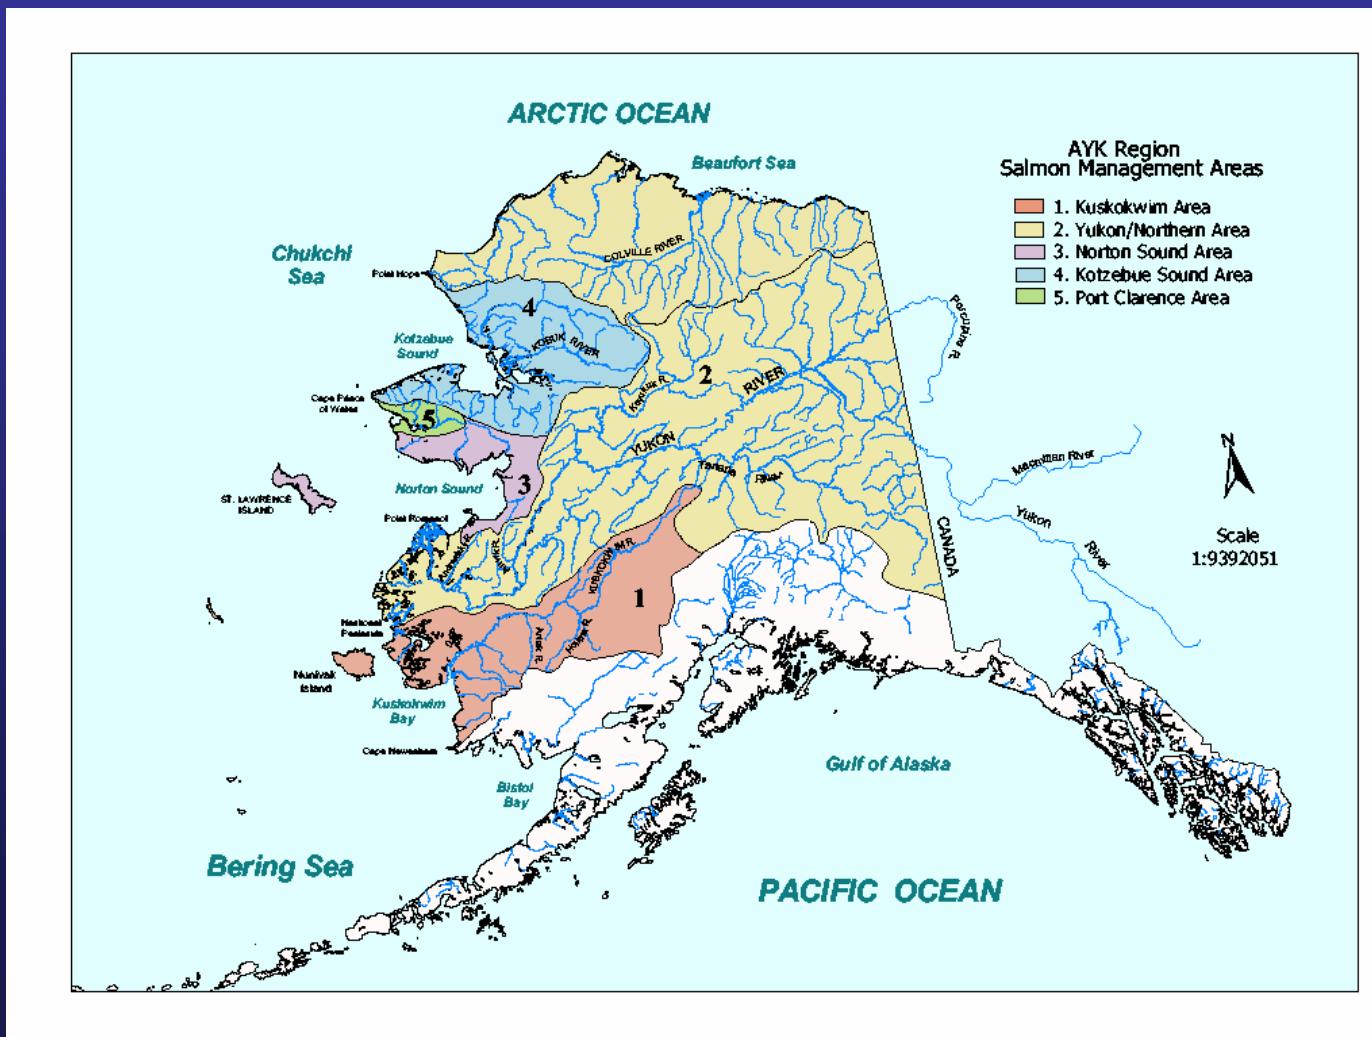

NPFMC Salmon bycatch Workshop  
Anchorage, Alaska  
April 4, 2006  
Gene J. Sandone

# Goals of Presentation

---

- ✓ Nature of Fisheries
- ✓ Salmon Management
- ✓ Area-specific Harvest and Stock Status of Chinook and Chum Salmon

# AYK Region

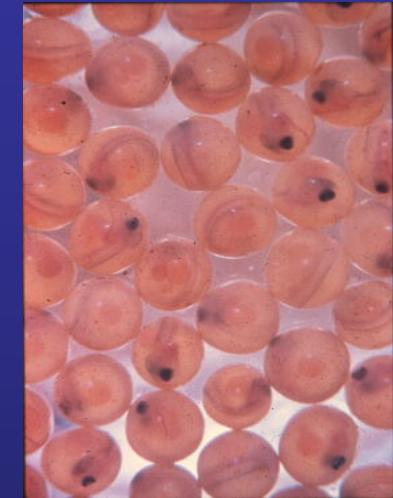

# **People of AYK and Use of Salmon**

---

**50,000 RURAL RESIDENTS  
100 VILLAGES AND SMALL TOWNS  
CITY OF FAIRBANKS – 84,000 POP.**

**Amount Necessary for Subsistence  
500,000 – 800,000 Salmon  
Commercial Harvest of up to 3  
Million**

# Salmon Fisheries of AYK

**Small Scale  
Community  
Based Fisheries**

# Subsistence

---

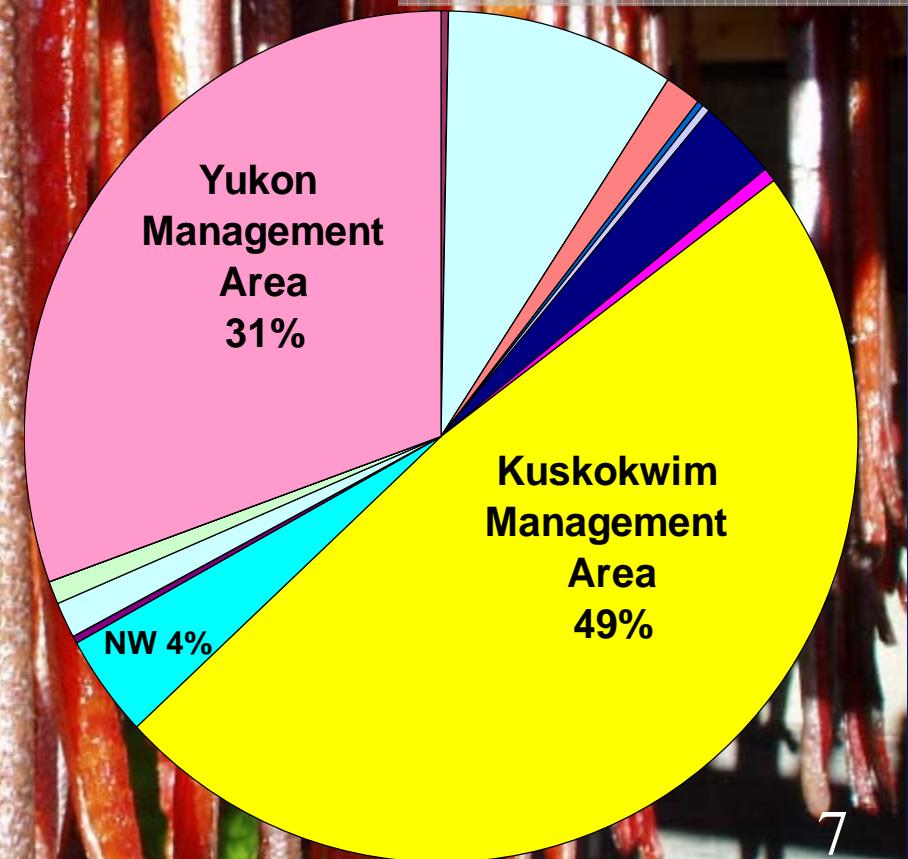

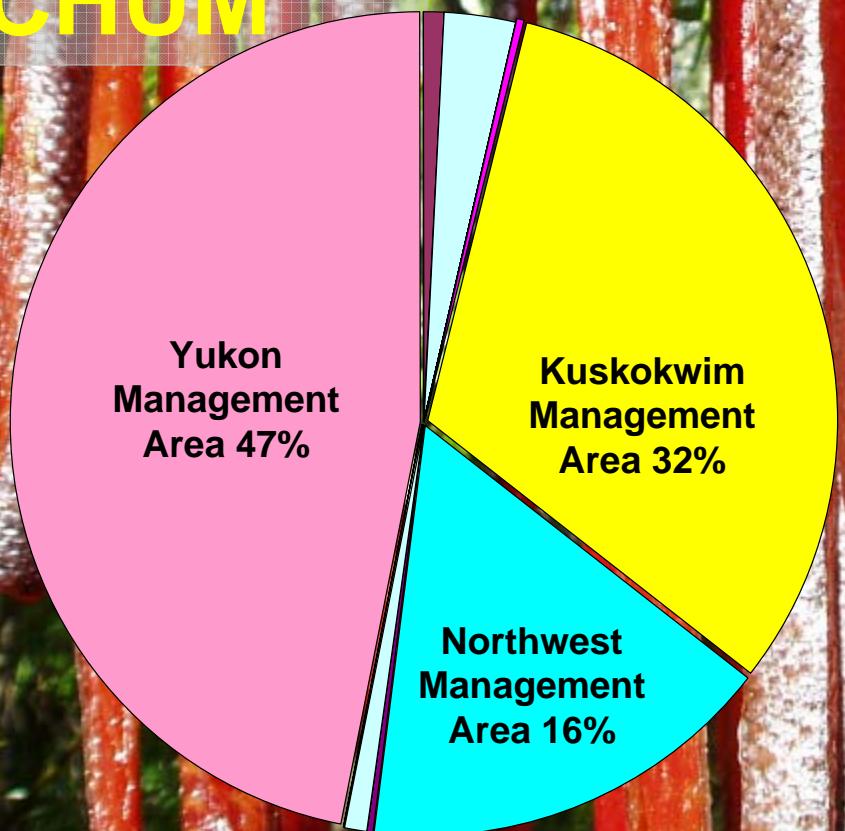

---

## 2002 State Wide Subsistence Salmon Harvest

CHUM

CHINOOK

# Commercial

---

# Sport and Subsistence Rod and Reel

---

---

# Subsistence and Commercial Fishing are Intertwined

---

# **AYK Salmon Management Model**

---

- **Based On:**
  - ✓ Abundance Based
  - ✓ Local Managers Knowledgeable About Area
  - ✓ Flexible Management Through Emergency Orders Based on Inseason Information
  - ✓ Public Process Through Board of Fisheries and Local Fish and Game Advisory Committees

# Cooperative Management

---

✓ Kuskokwim River Salmon  
Management Working Group - 1988

✓ Yukon River Drainage Fisheries  
Association – 1990

- Declining Runs, Lack of Data, More Stringent Management Actions
- Public and Department Looking for a BETTER WAY
- Integral to Current Management

# **Preparing for the Future**

## **2001 to Present**

---

- ✓ Biological Escapement Goals**
- ✓ Stocks of Concern**
- ✓ Program Development**

# Biological Escapement Goal (BEG)

---

---

**“Biological Escapement Goal” or “BEG” means the escapement that provides the greatest potential for maximum sustained yield; BEG will be the primary management objective for the escapement unless an optimal escapement or inriver run goal has been adopted; BEG will be developed from the best available biological information, and should be scientifically defensible on the basis of available biological information; Beg will be determined by the department and will be expressed as a range based on factors such as salmon stock productivity and data uncertainty; the department will seek to maintain evenly distributed salmon escapements within the bounds of a BEG.**

**(Sustainable Salmon Fisheries Policy, 2001)**

# Biological Escapement Goal (BEG)

---

“Biological Escapement Goal” or “BEG” means the escapement that provides the greatest potential for maximum sustained yield; BEG will be the primary management objective for the escapement unless an optimal escapement or inriver run goal has been adopted; BEG will be developed from the best available biological information, and should be scientifically defensible on the basis of available biological information; Beg will be determined by the department and will be expressed as a range based on factors such as salmon stock productivity and data uncertainty; the department will seek to maintain evenly distributed salmon escapements within the bounds of a BEG.

(Sustainable Salmon Fisheries Policy, 2001)

# Biological Escapement Goal (BEG)

---

“**Biological Escapement Goal**” or “**BEG**” means the escapement that provides the greatest potential for maximum sustained yield; BEG will be **the primary management objective for the escapement** unless an optimal escapement or inriver run goal has been adopted; BEG will be developed from the best available biological information, and should be scientifically defensible on the basis of available biological information; Beg will be determined by the department and will be expressed as a range based on factors such as salmon stock productivity and data uncertainty; the department will seek to maintain evenly distributed salmon escapements within the bounds of a BEG.

**(Sustainable Salmon Fisheries Policy, 2001)**

# Biological Escapement Goal (BEG)

---

“**Biological Escapement Goal**” or “**BEG**” means the escapement that provides the greatest potential for maximum sustained yield; BEG will be the primary management objective for the escapement unless an optimal escapement or inriver run goal has been adopted; BEG will be **developed from the best available biological information**, and should be scientifically defensible on the basis of available biological information; Beg will be determined by the department and will be expressed as a range based on factors such as salmon stock productivity and data uncertainty; the department will seek to maintain evenly distributed salmon escapements within the bounds of a BEG.

# Biological Escapement Goal (BEG)

---

“**Biological Escapement Goal**” or “**BEG**” means the escapement that provides the greatest potential for maximum sustained yield; BEG will be the primary management objective for the escapement unless an optimal escapement or inriver run goal has been adopted; BEG will be developed from the best available biological information, and should be **scientifically defensible** on the basis of available biological information; Beg will be determined by the department and will be expressed as a range based on factors such as salmon stock productivity and data uncertainty; the department will seek to maintain evenly distributed salmon escapements within the bounds of a BEG.

**(Sustainable Salmon Fisheries Policy, 2001)**

# **Biological Escapement Goals (BEG) in the AYK Region**

---

- ✓ Based On Spawner/Recruit Analyses For These Stocks
  - Yukon River
    - Chinook – Chena, Salcha
    - Summer Chum – Andreafsky, Anvik
    - Fall Chum – Entire Stock and Components
  - Norton Sound
    - Chum salmon - Subdistrict 1, Kwiniuk, Tubutulik

# AYK Salmon Escapement Goals

- Most escapement goals for AYK Region salmon stocks of salmon are Sustainable Salmon Escapement Goals (SEGs).

# **Sustainable Escapement Goal (SEG)**

---

**“Sustainable Escapement Goal” or “SEG” a level of escapement, indicated by an index or an escapement estimate, that is known to provide for sustained yield over a 5 to 10 year period, used in situations where a BEG cannot be estimated due to the absence of a stock specific catch estimate.....**

**(Sustainable Salmon Fisheries Policy, 2001)**

# **Sustainable Escapement Goal (SEG)**

---

**“Sustainable Escapement Goal” or “SEG” a level of escapement, indicated by an index or an escapement estimate, that is known to provide for sustained yield over a 5 to 10 year period, used in situations where a BEG cannot be estimated due to the absence of a stock specific catch estimate.....**

**(Sustainable Salmon Fisheries Policy, 2001)**

# Kuskokwim Management Area

**Alaska Department of Fish and  
Game**

# Kuskokwim Management Area

The map displays the Kuskokwim Management Area, which includes four districts: District W-1, District W-2, District W-4, and District W-5. District W-1 is located on the coast near Bethel. District W-2 is located further inland near Aniak. District W-4 is located on the coast further south. District W-5 is located on the coast at the bottom of the map.

Game**

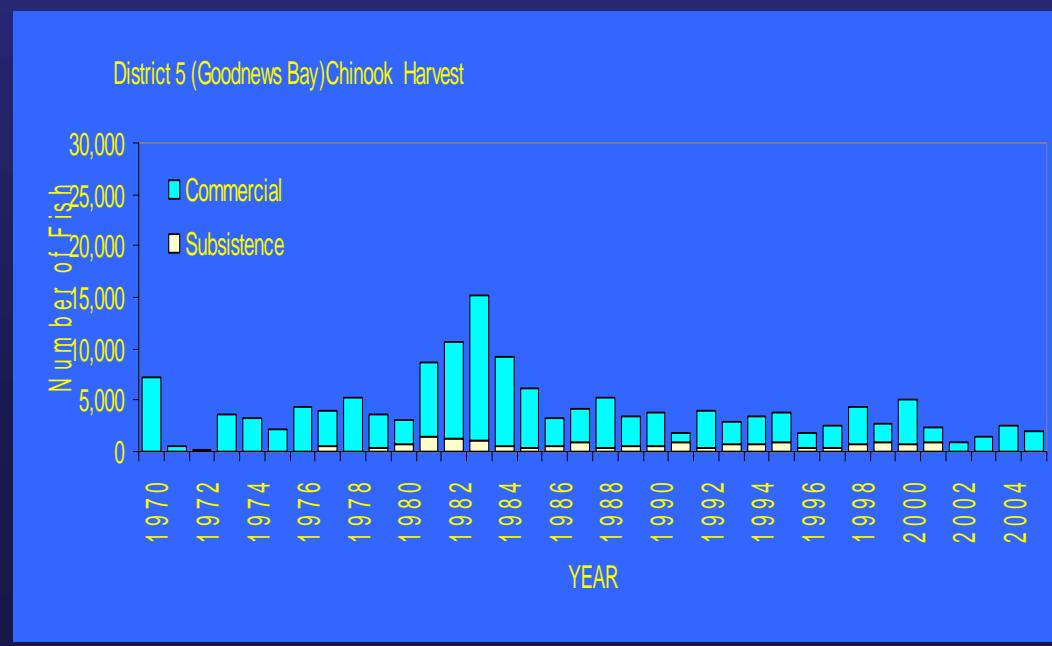

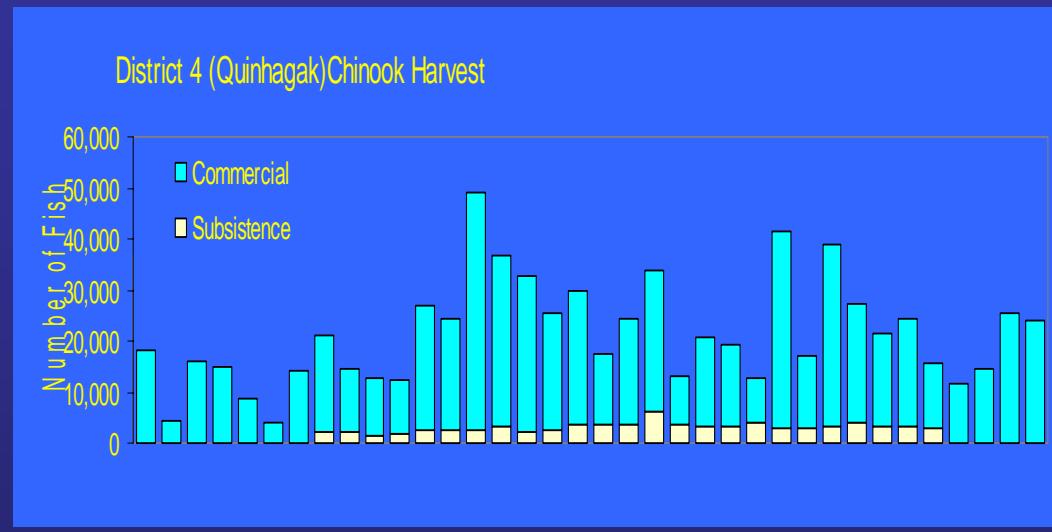

# Kuskokwim Bay *Chum* Salmon Harvest

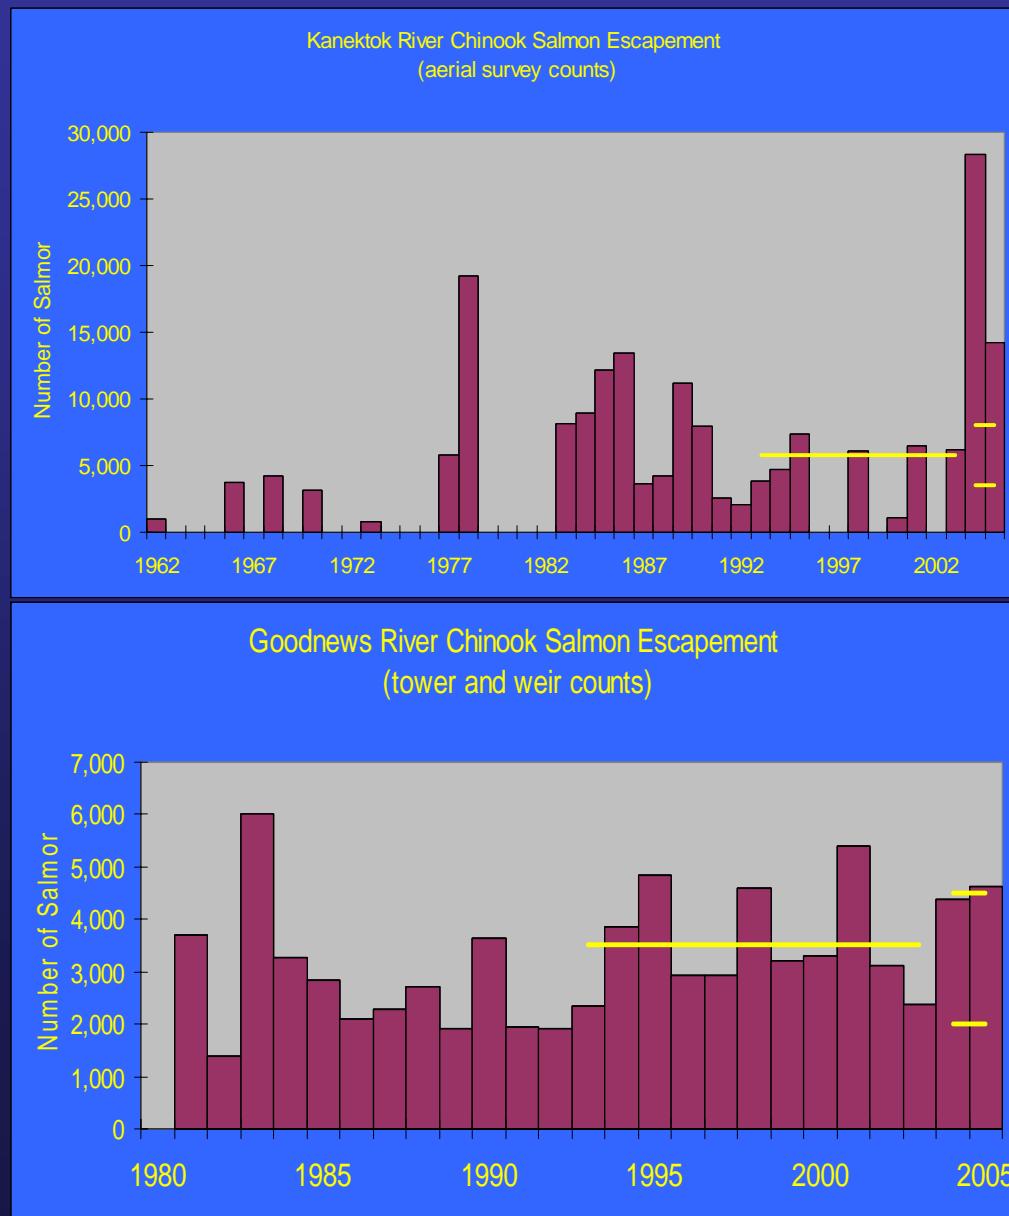

# Kuskokwim Bay Chum Salmon Escapement

# Kuskokwim Bay Chinook Salmon Harvest

# Kuskokwim Bay Chinook Salmon Escapement

# Kuskokwim Bay Stock Status Summary

- Both Chum and Chinook Salmon Stocks are producing adequately to provide for escapement requirements, subsistence needs, and sustainable fisheries.
- It appears that the production failure that resulted in the very poor runs in 1998-2000 in most areas of the AYK Region were not apparent or as severe.

# Kuskokwim River m Salmon Stock Status Summary

---

---

- Adequate parent year escapements in 1992 to 1994 produced poor runs in 1998 to 2000.
- Poor parent year escapements in 1998 – 2000 are producing strong run in 2004, 2005 and 2006(?).
- Outlook is for continued good production and for a large run of Chinook salmon in 2006, with little or no anticipated commercial harvest.

## Yukon River Fisheries Management Area

The Yukon Area showing communities, fishing districts, and subdistricts.

# Chinook Distribution 2003

# **Run Assessment Tools**

## **Run Index tools**

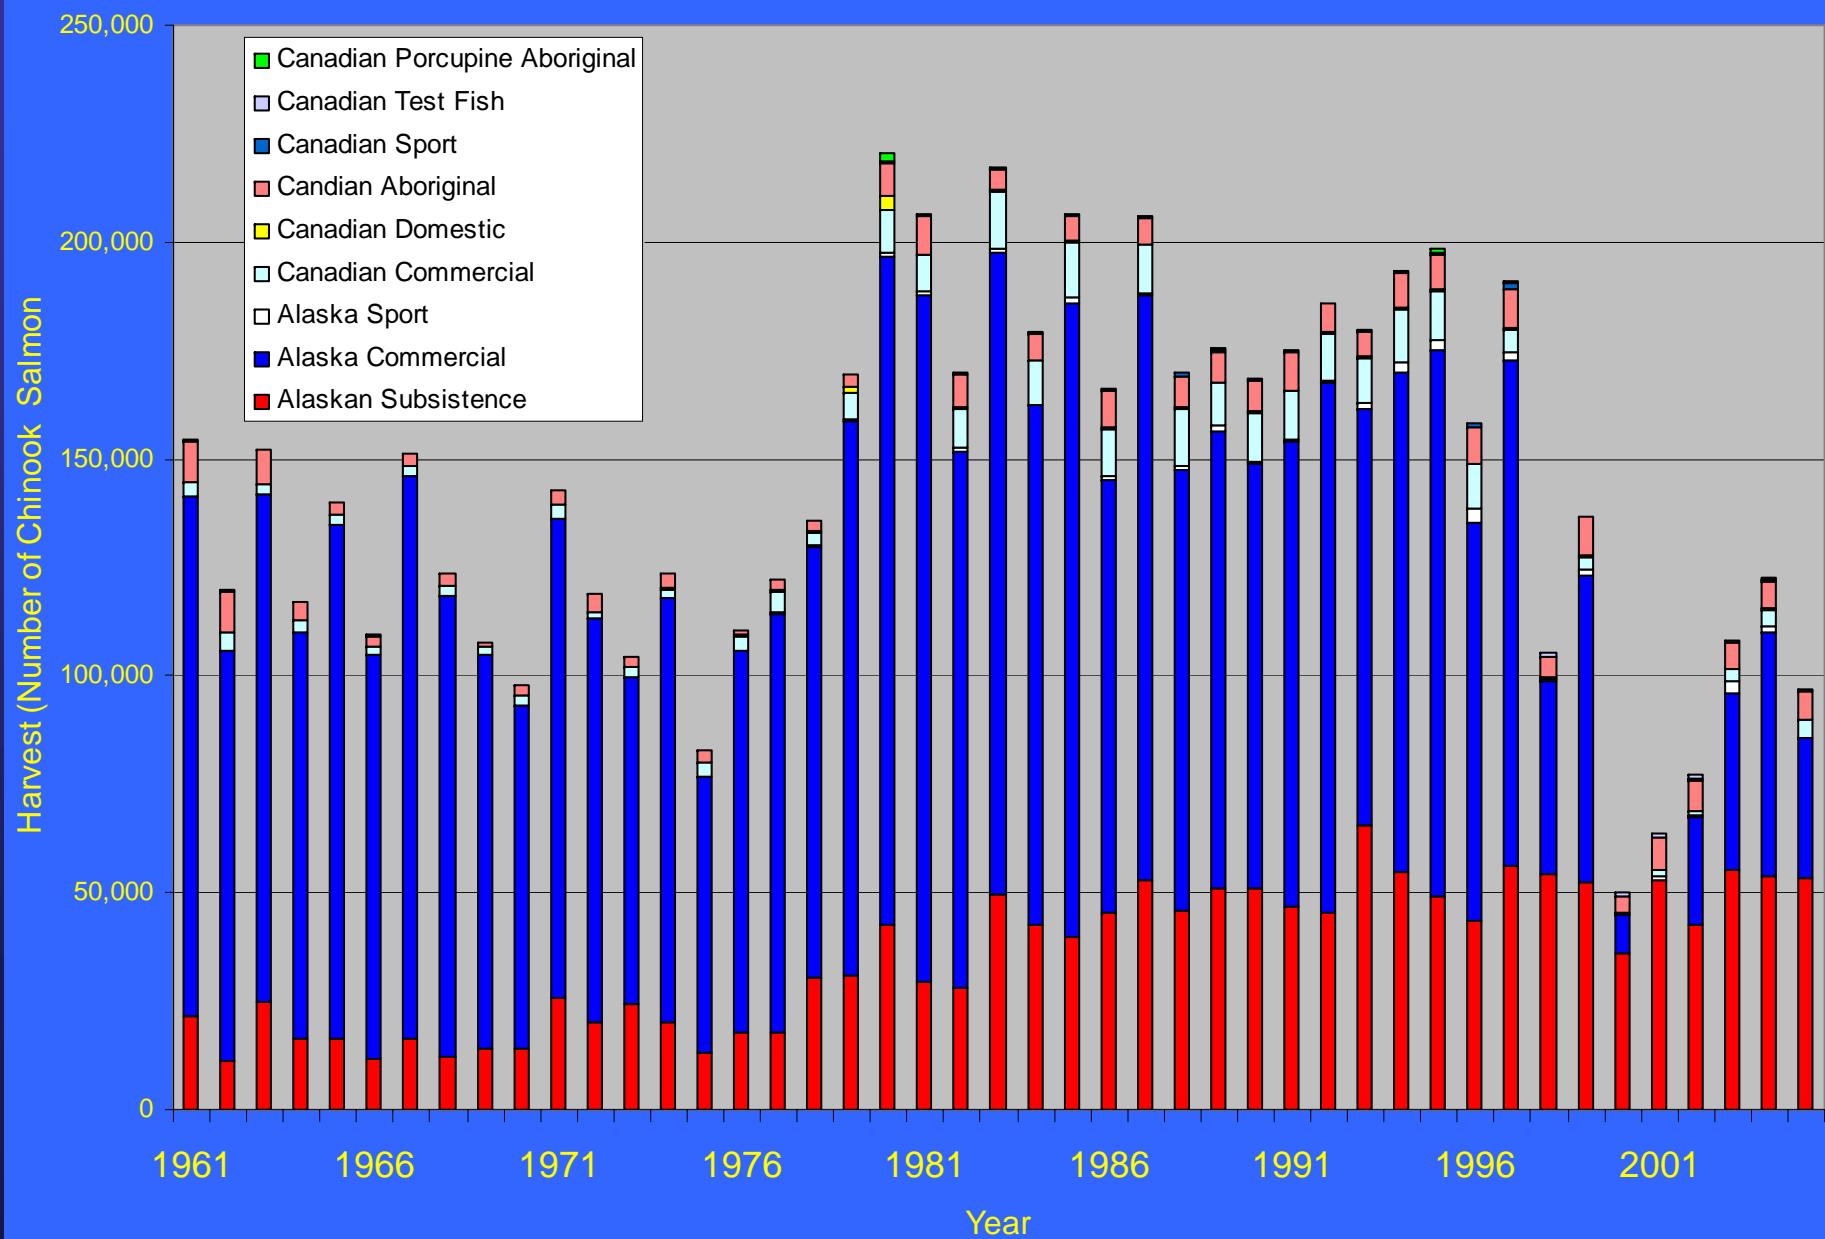

- Pilot Station Sonar (mainstem assessment)
- Set net test fishery at Emmonak
- Subsistence reports
- YRDFA Teleconferences
- Commercial fisheries, if open

## **Escapement Projects**

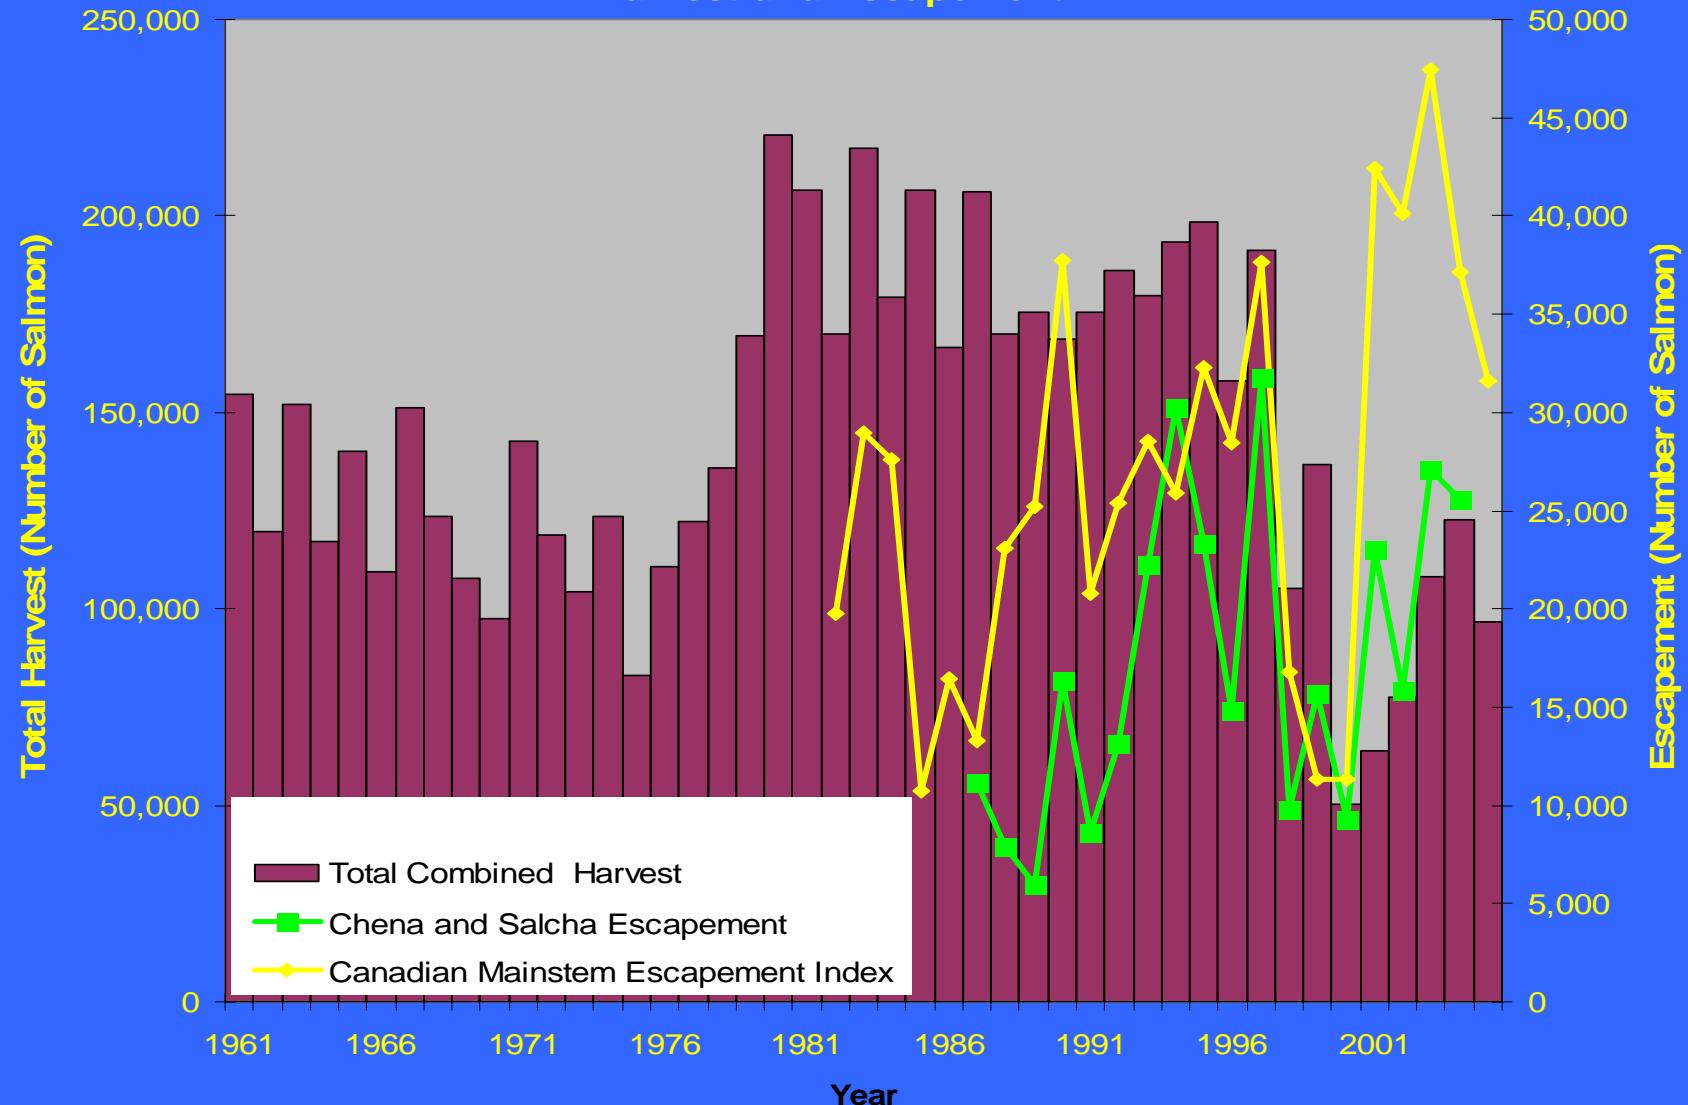

- Chena and SalchaTowers/Aerial Surveys
- U.S./Canada Border Passage

# Yukon River Chinook Salmon Harvest

## 1961-2005

### Yukon River Chinook Salmon Harvest and Escapement

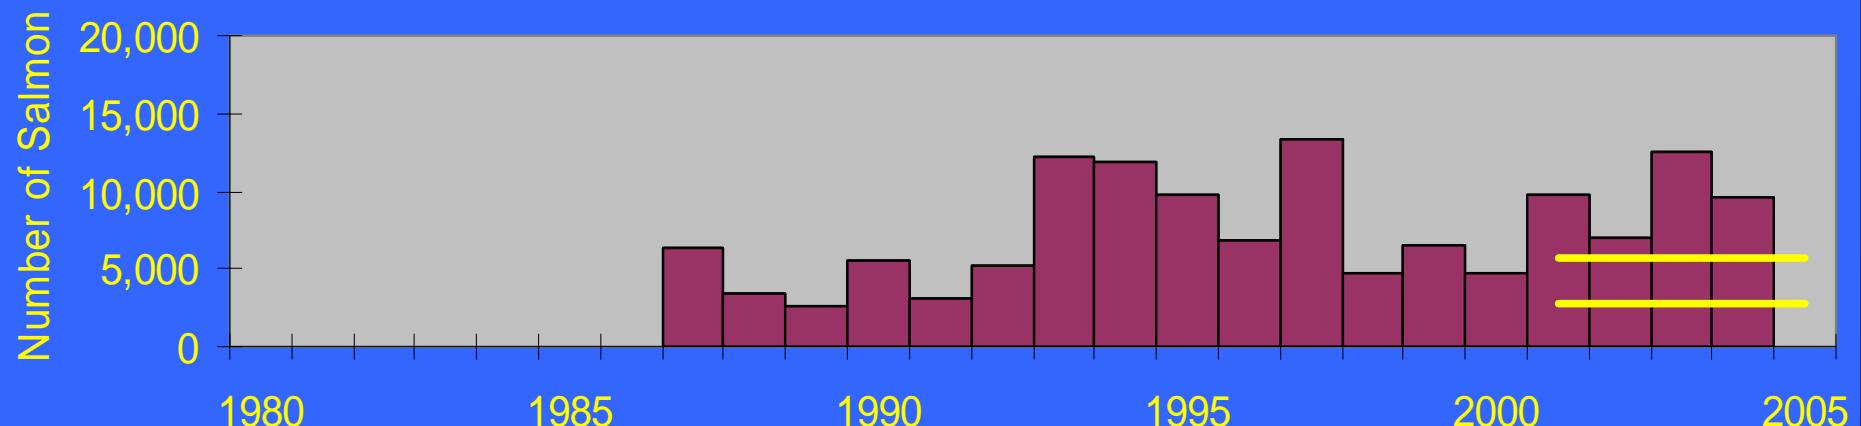

# 2005 US Chinook Harvest Summary

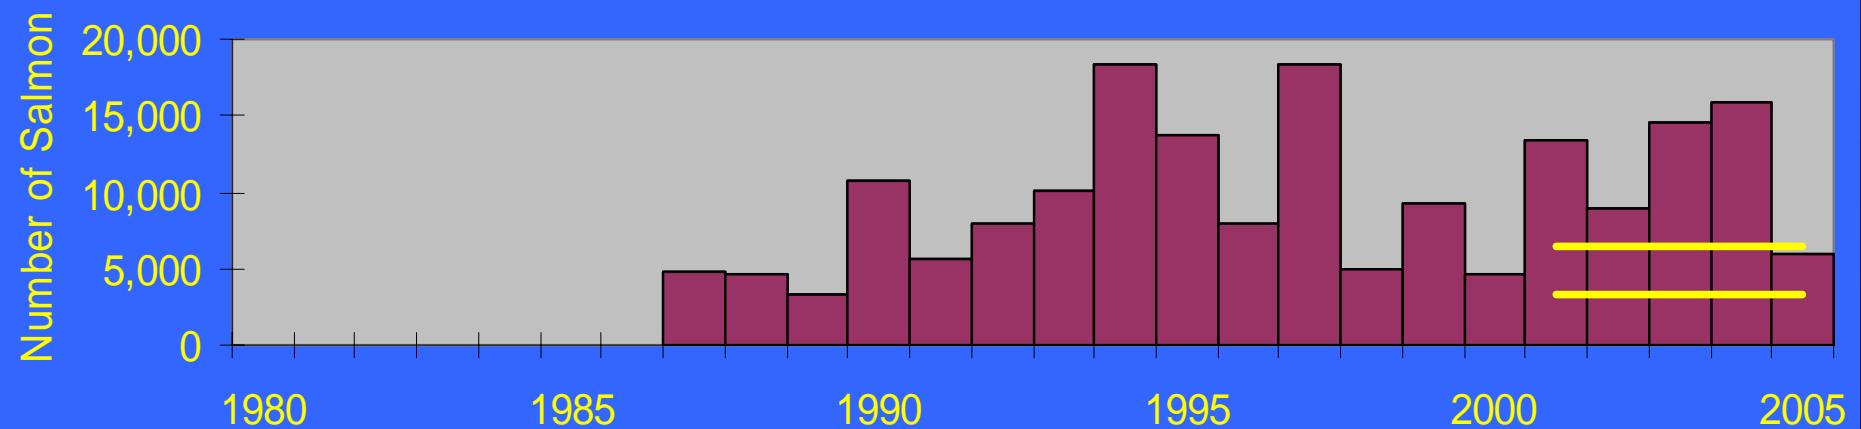

---

- Commercial Harvest = 32,000
  - Recent 10 - year avg = 68,450 Chinook  
(not including 2001)
  - 53% below most recent avg
- Subsistence Harvest = 53,300
- Total US Harvest = 85,700

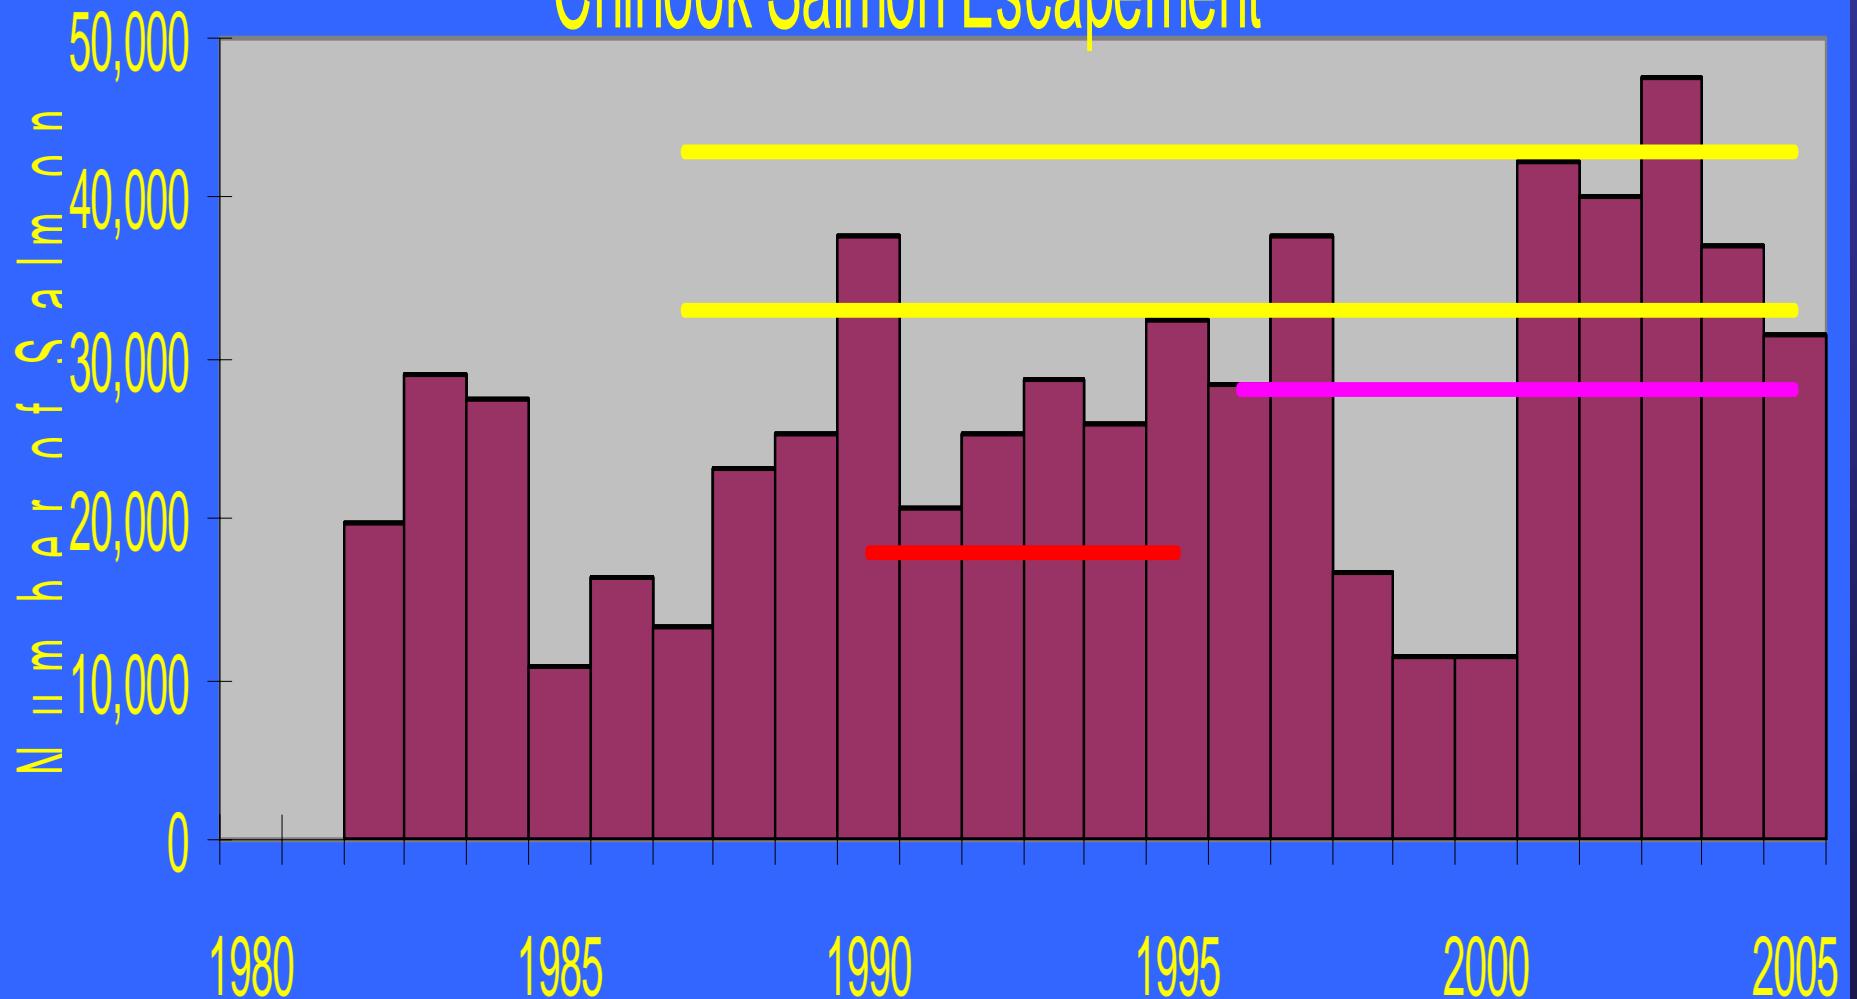

## Chena River Chinook Salmon Escapement (tower counts)

## Salcha River Chinook Salmon Escapement (tower counts)

# Yukon River Canadian-origin Chinook Salmon Escapement

# **Chinook Salmon Stock Status Summary**

- Poor runs of 1998-2001 from good escapements
  - Escapement goals met and runs improved starting in 2001
  - Outlook for continued improvement
- 
- Subsistence Harvest Steady
  - Commercial Harvest Reduced
  - Overall Yield Decrease since 1998
  - Continued Yield Concern
  - Continued Conservative Management

# US Chinook Value Summary

---

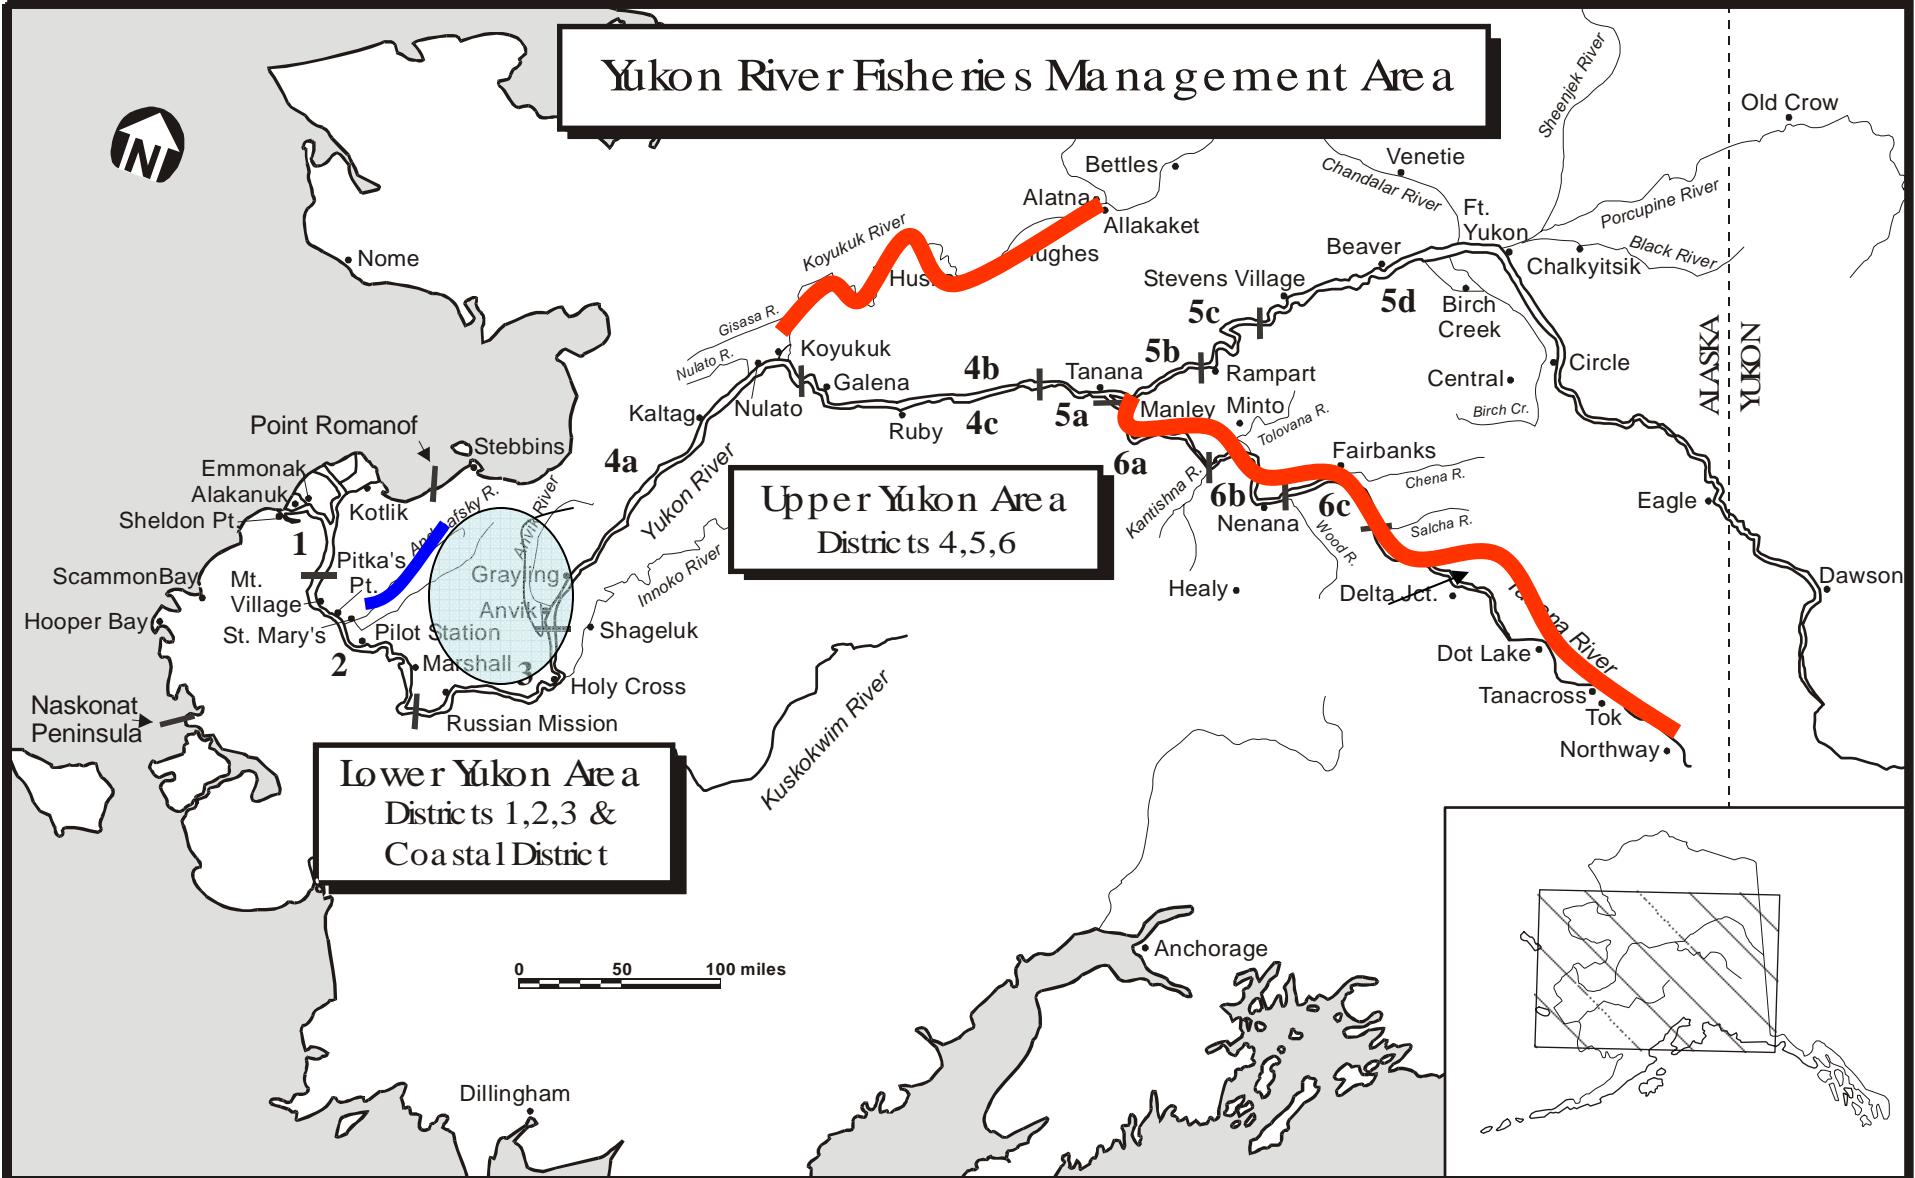

- 2.0 Million - Commercial Value
  - Recent 10 - year - average = 3.5 Million  
(not including '00 and '01)
  - 48% below recent average

# **Yukon River Summer Chum Salmon Stock Status and Management**

**Alaska Department of Fish and  
Game**

## Yukon River Fisheries Management Area

Alaska portion of the Yukon River drainage showing communities and fishing districts.

# **Run Assessment Tools**

## **Run Index tools**

- Pilot Station Sonar (mainstem assessment)
- Drift net test fishery at Emmonak
- Subsistence reports
- YRDFA Teleconferences
- Commercial fisheries, if open

## **Escapement Projects**

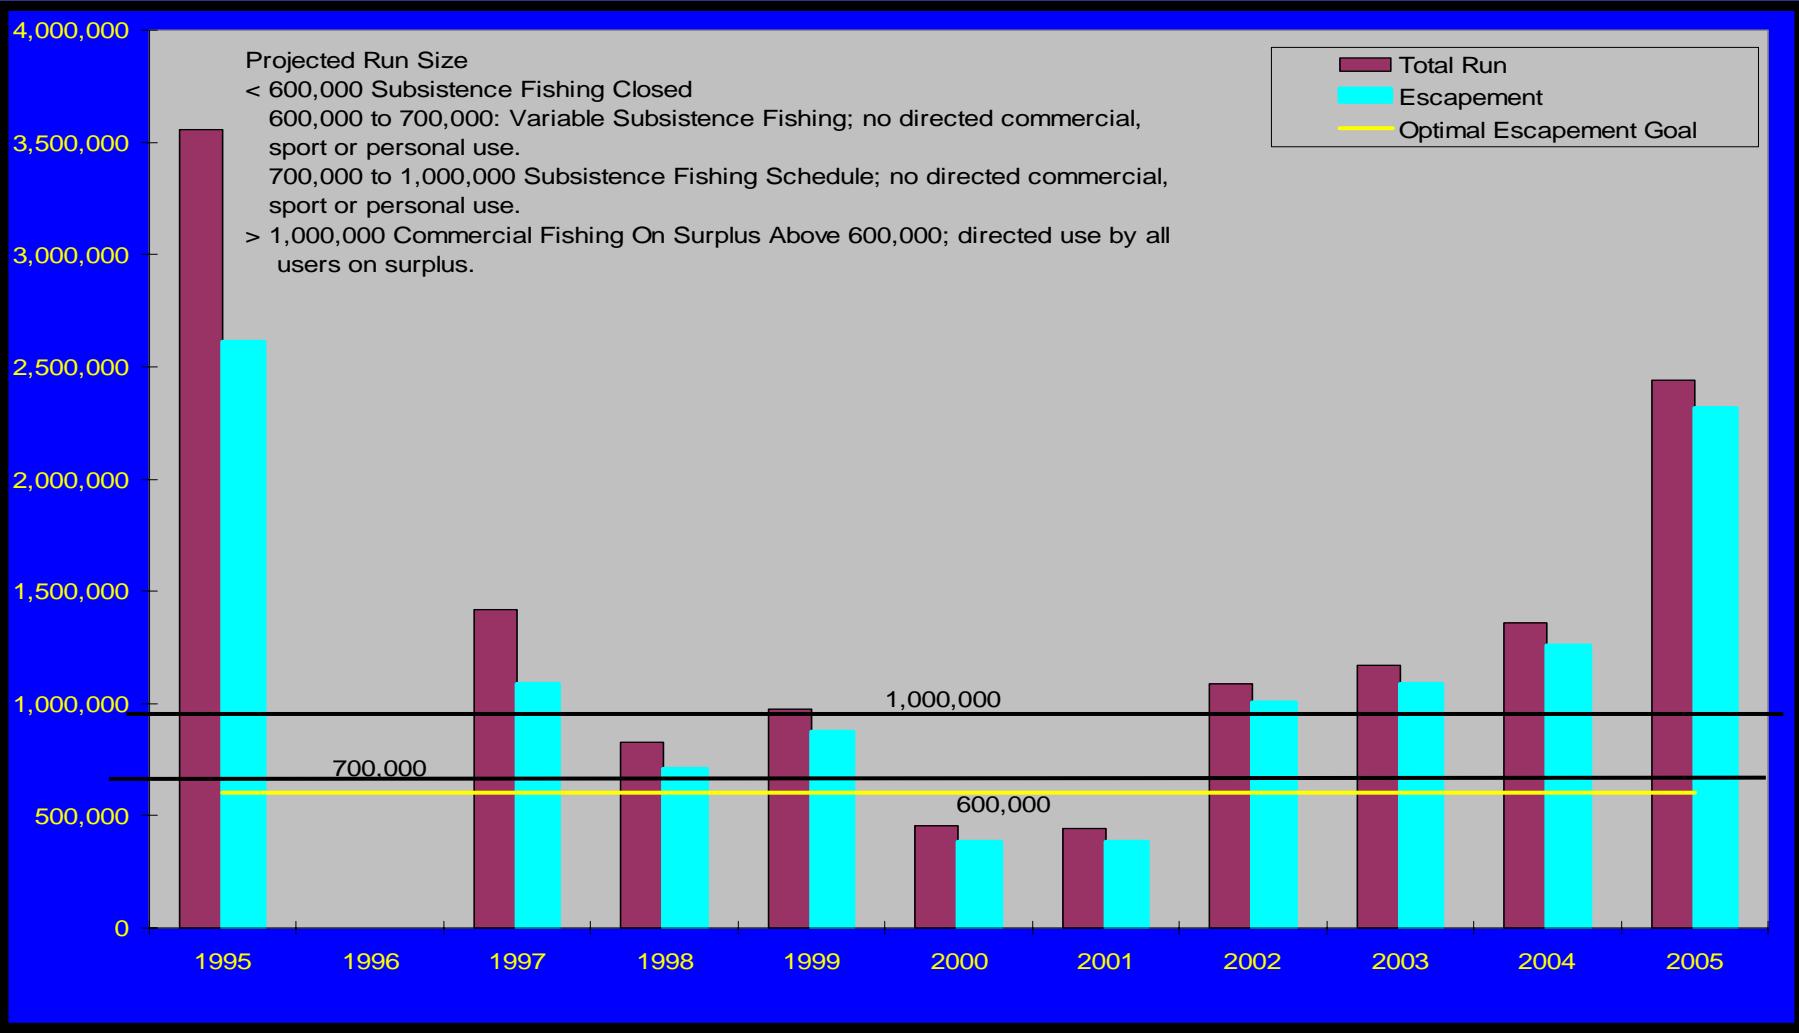

- Weirs and Towers
- Anvik River sonar

# **Stock Assessment Background**

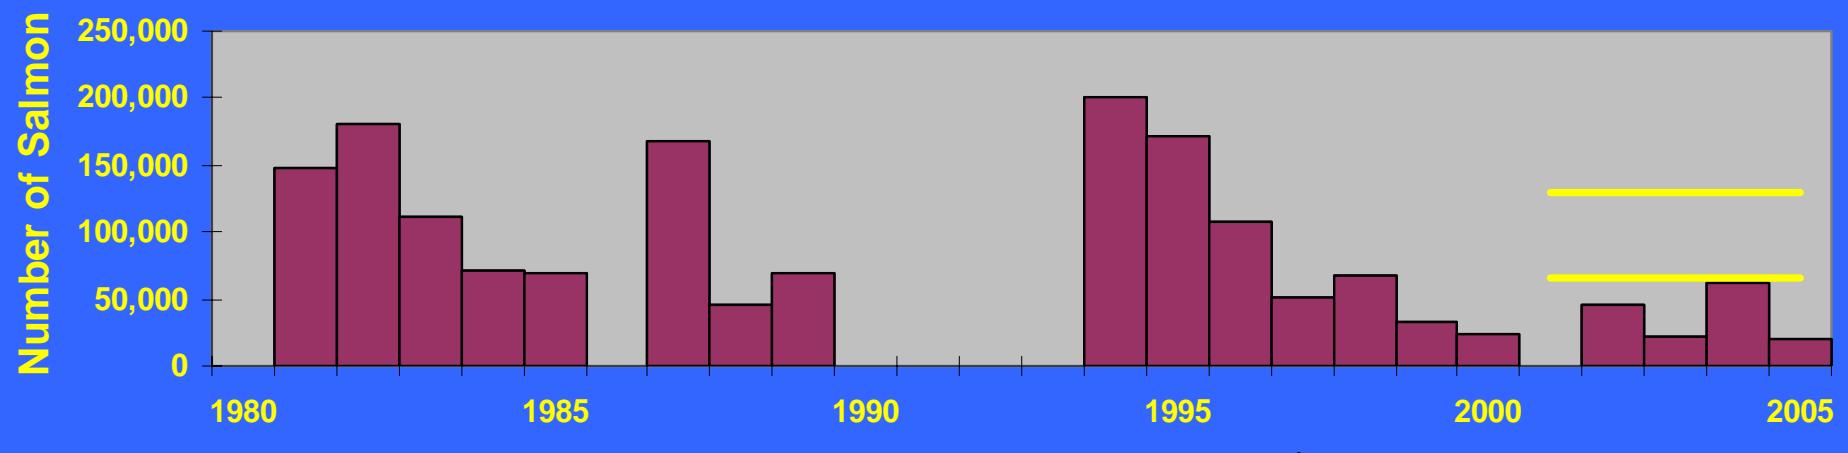

- Escapement Goals
- Anvik River (sonar based index)
- Andreafsky River (sonar, tower, and weir based estimate)

# Yukon River Drainage Summer Chum Salmon Management Plan

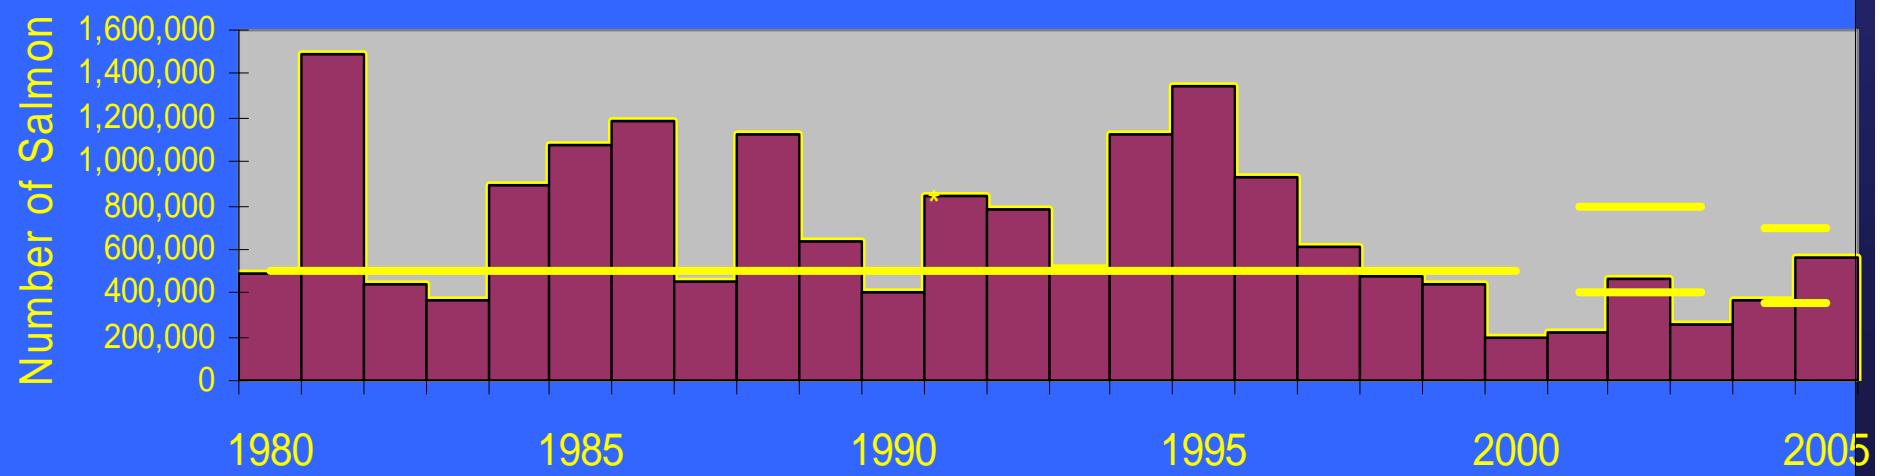

## *Total Run Size and Escapement*

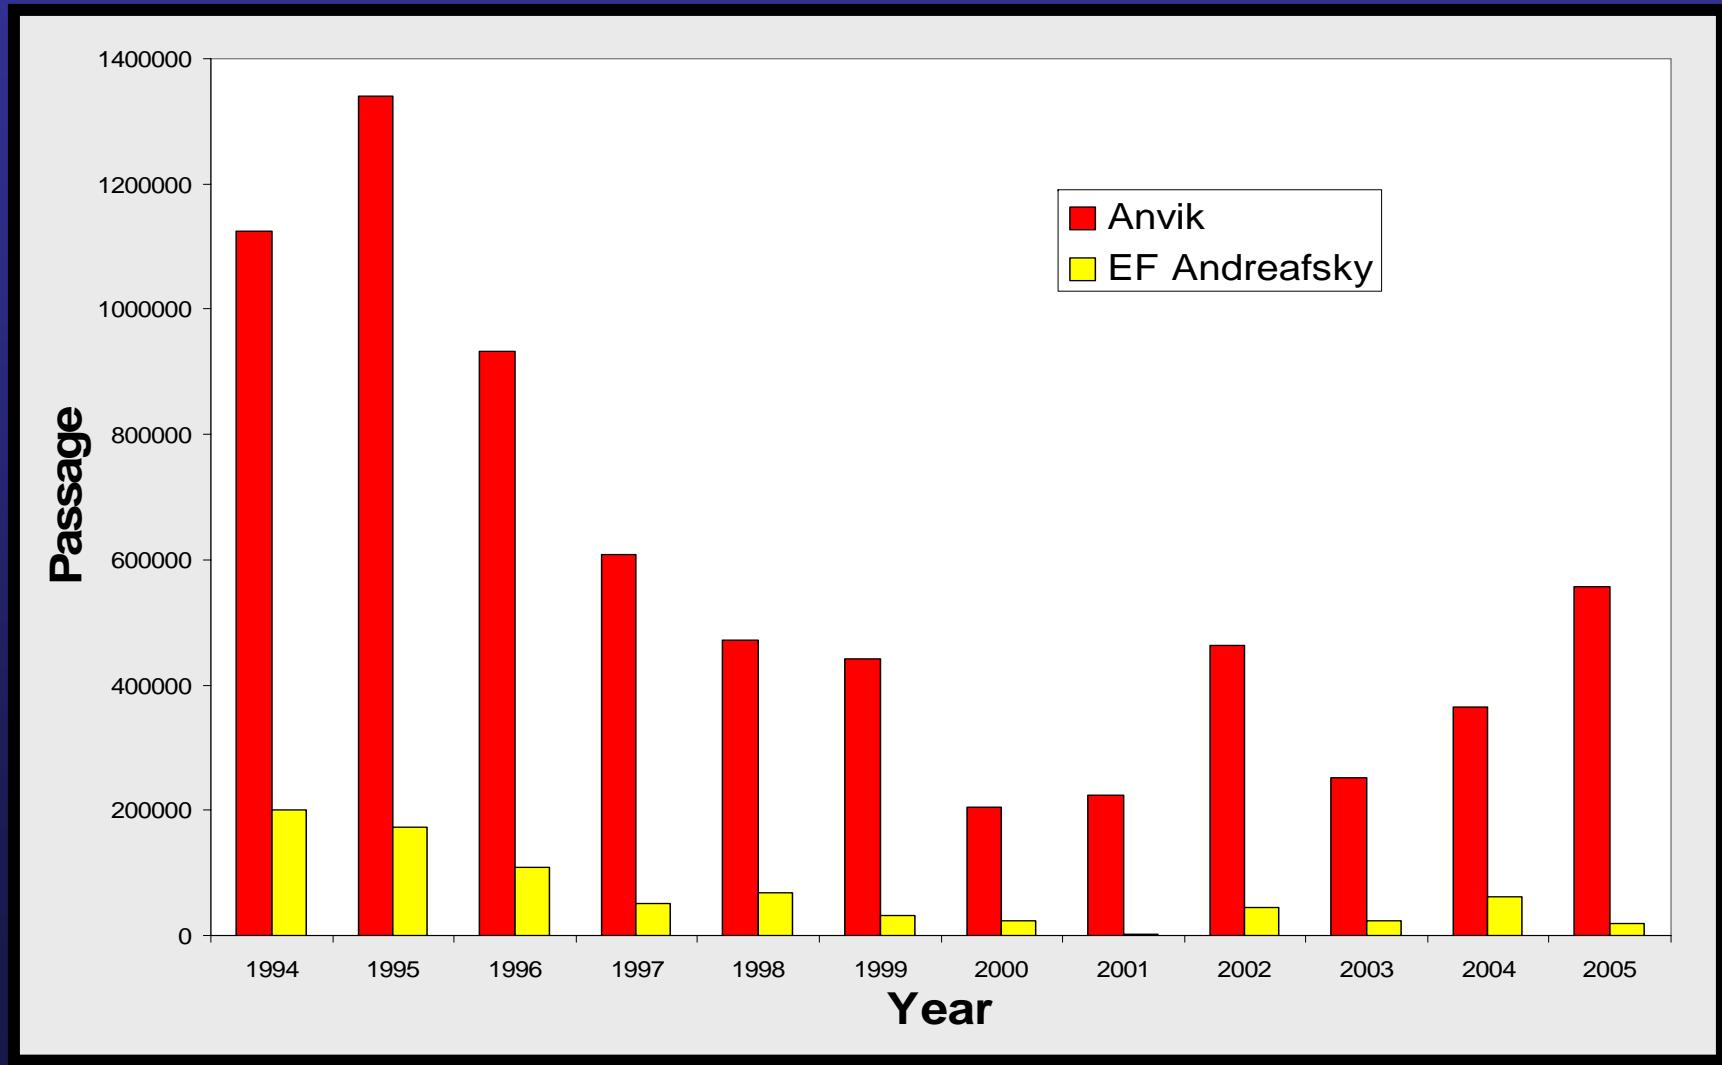

## Andreafsky River Summer Chum Salmon Escapement 1981 - 2005

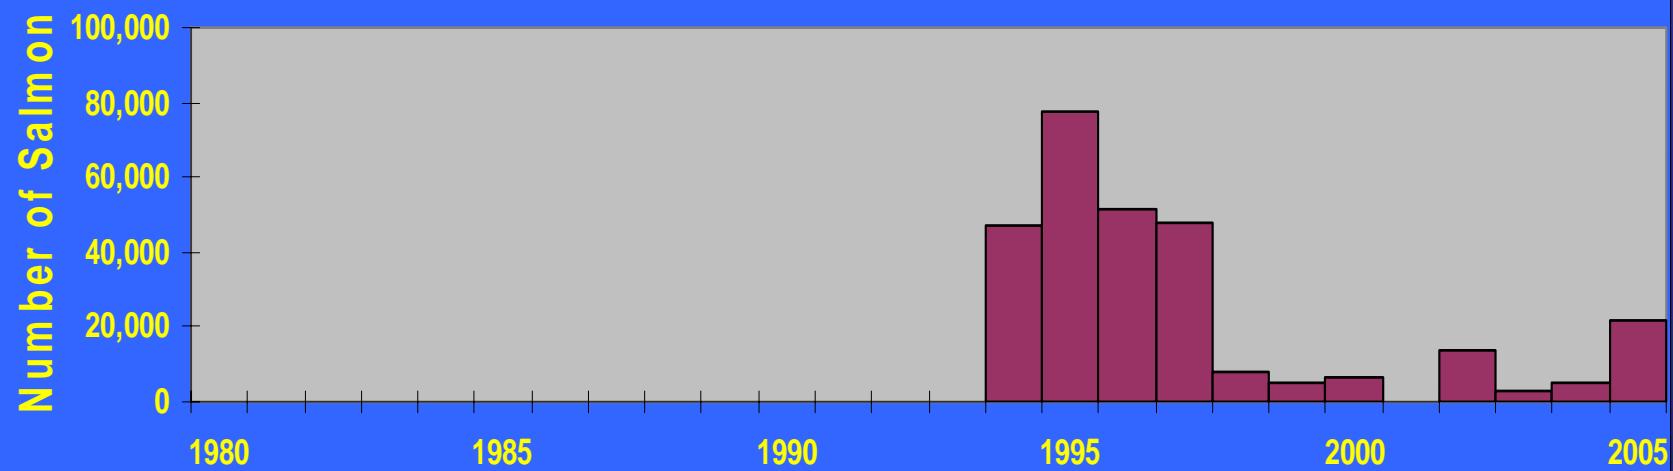

## Anvik River Summer Chum Salmon Escapement 1980-2005

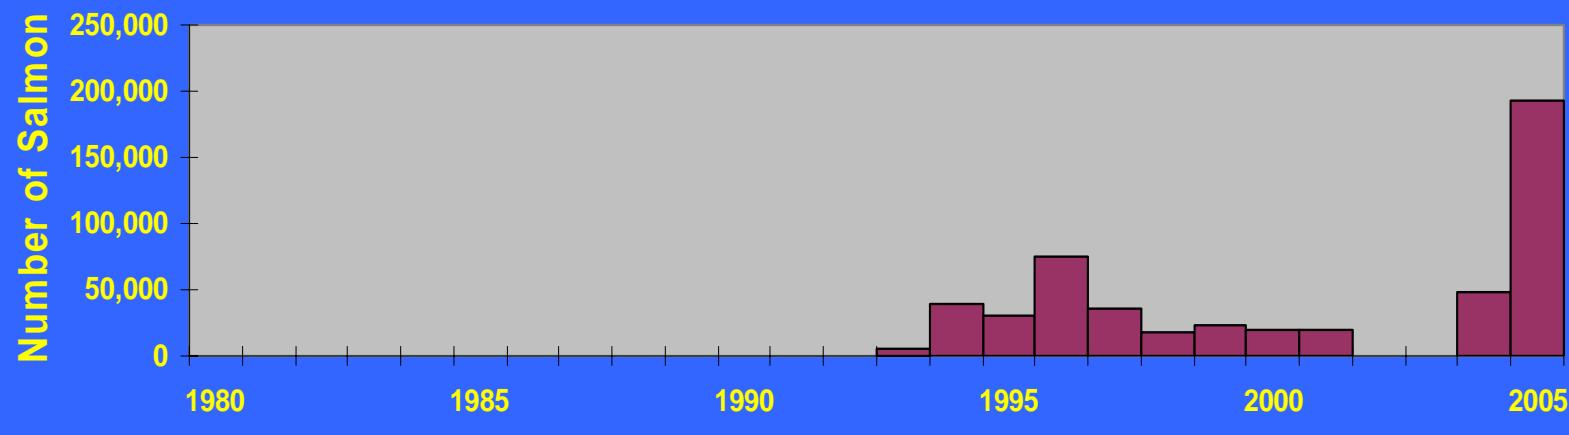

# Observed Declines in Lower River Summer Chum Escapement

## Kaltag Creek Summer Chum Salmon Escapement 1994 - 2005

## Salcha River Summer Chum Salmon Escapement 1994 - 2005

# 2005 Summer Chum Stock Status Summary

---

- Total run estimate passed Pilot Station sonar was 2.4 Million
- Drainage wide maximum escapement objective for the Yukon River, 1,200,000, based on the Pilot station sonar project, was exceeded.
- Total run abundance shows continued improvement but lower production in Lower River Tributaries
- Harvests are below anticipated because of poor commercial markets

# 2005 Summer Chum Harvest Summary

---

- Commercial Harvest = 41,264
  - Recent 10 - year - average = 204,198
  - (not including 2001)
  - 80% below Recent 10 - year - average
- Subsistence Harvest = 85,823
- Total US Harvest = 127,373

# Summer Chum Value Summary

---

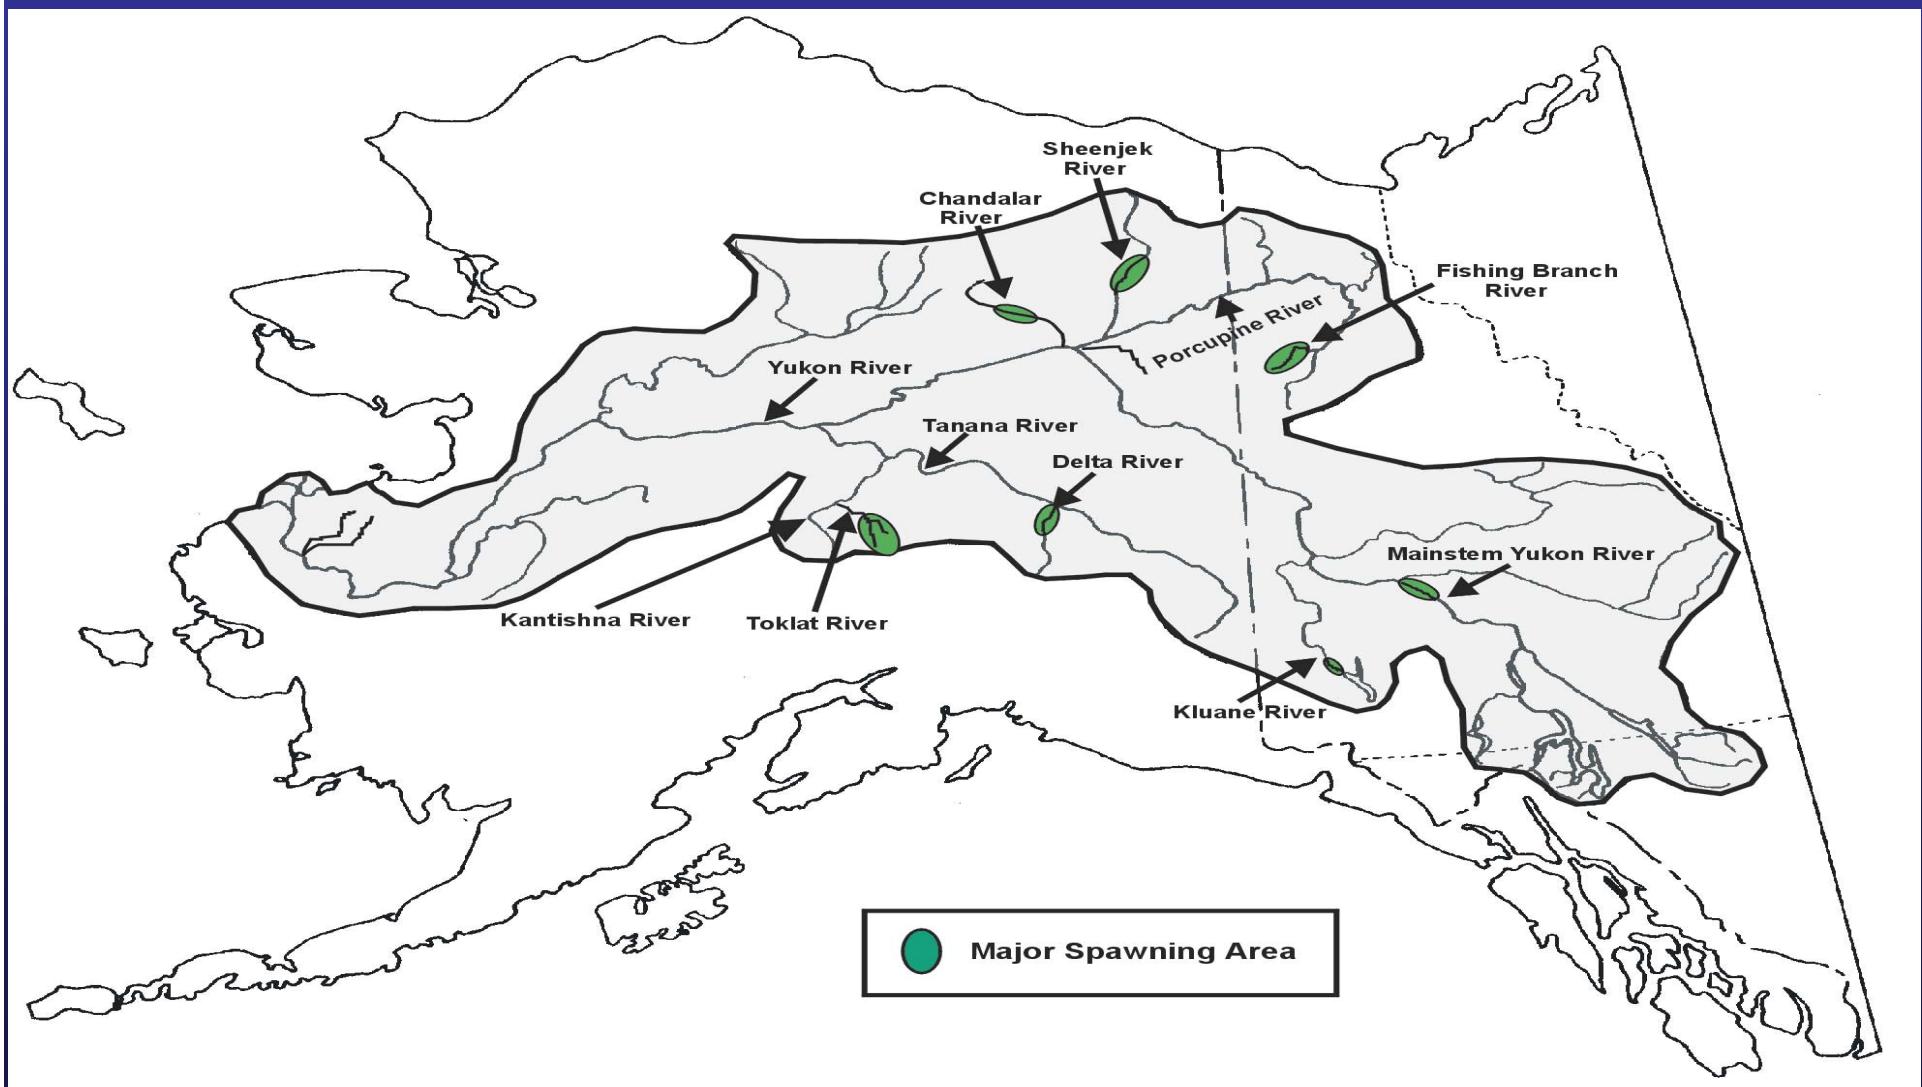

- \$25,000 - Commercial Value
  - Recent 10 - year - avg = 325,000 (not including '00 or '01)
  - 92% below recent average

# **Yukon River Fall Chum Salmon Stock Status and Management**

**Alaska Department of Fish and  
Game**

# Map of Major Fall Chum Salmon Spawning Areas

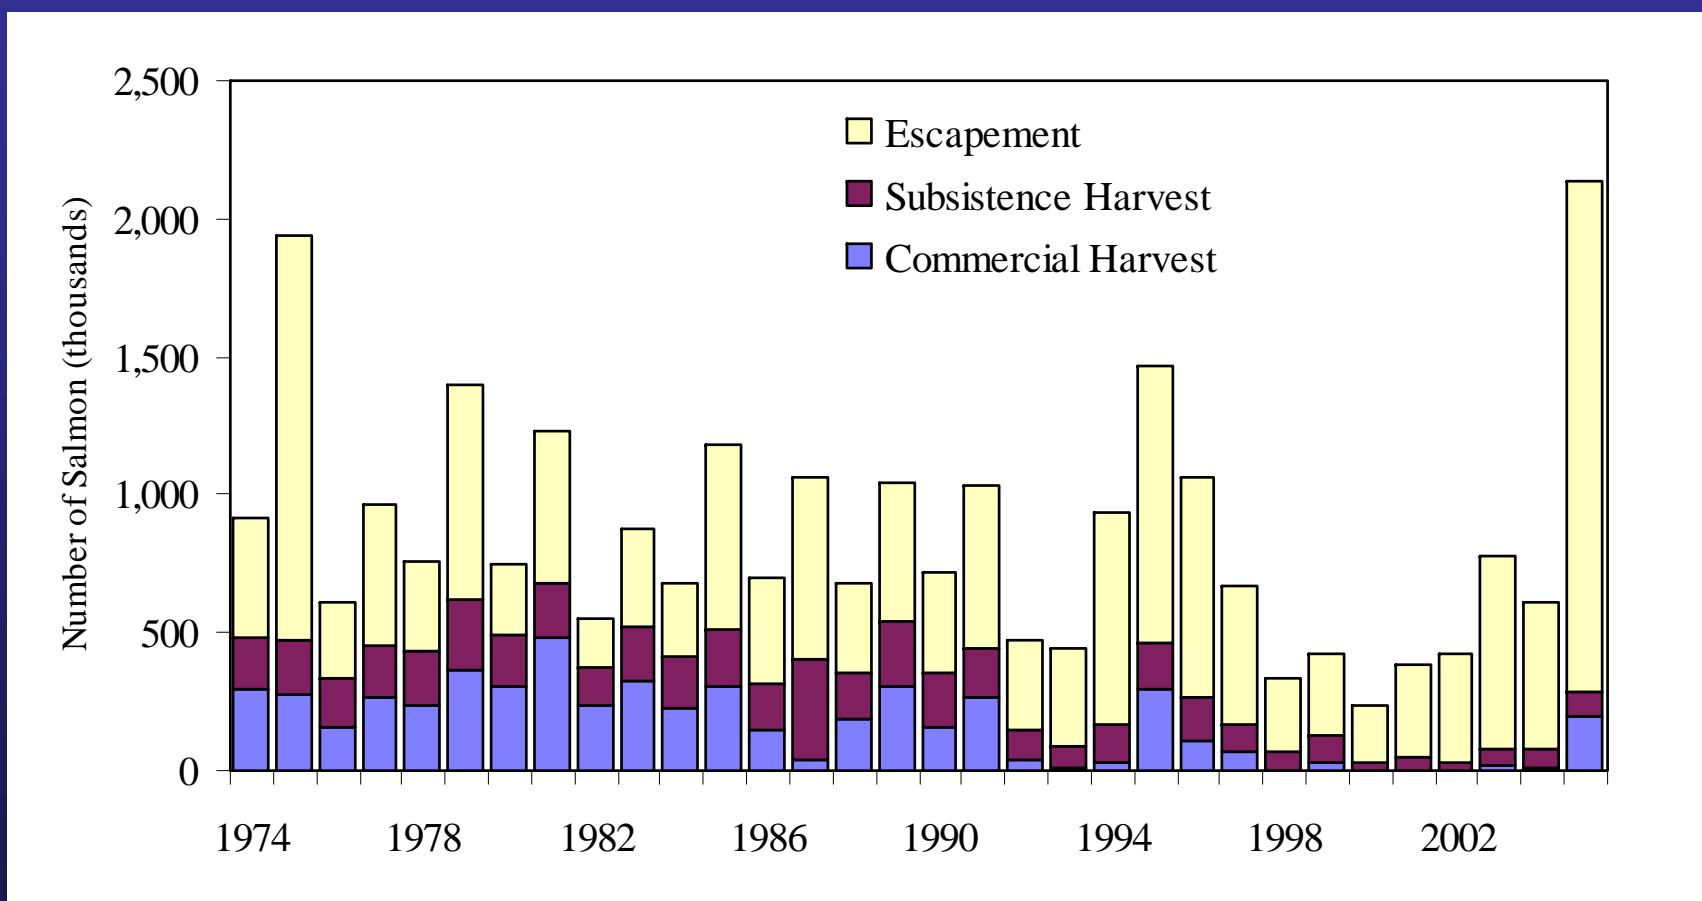

# Fall Chum Stock Status

---

---

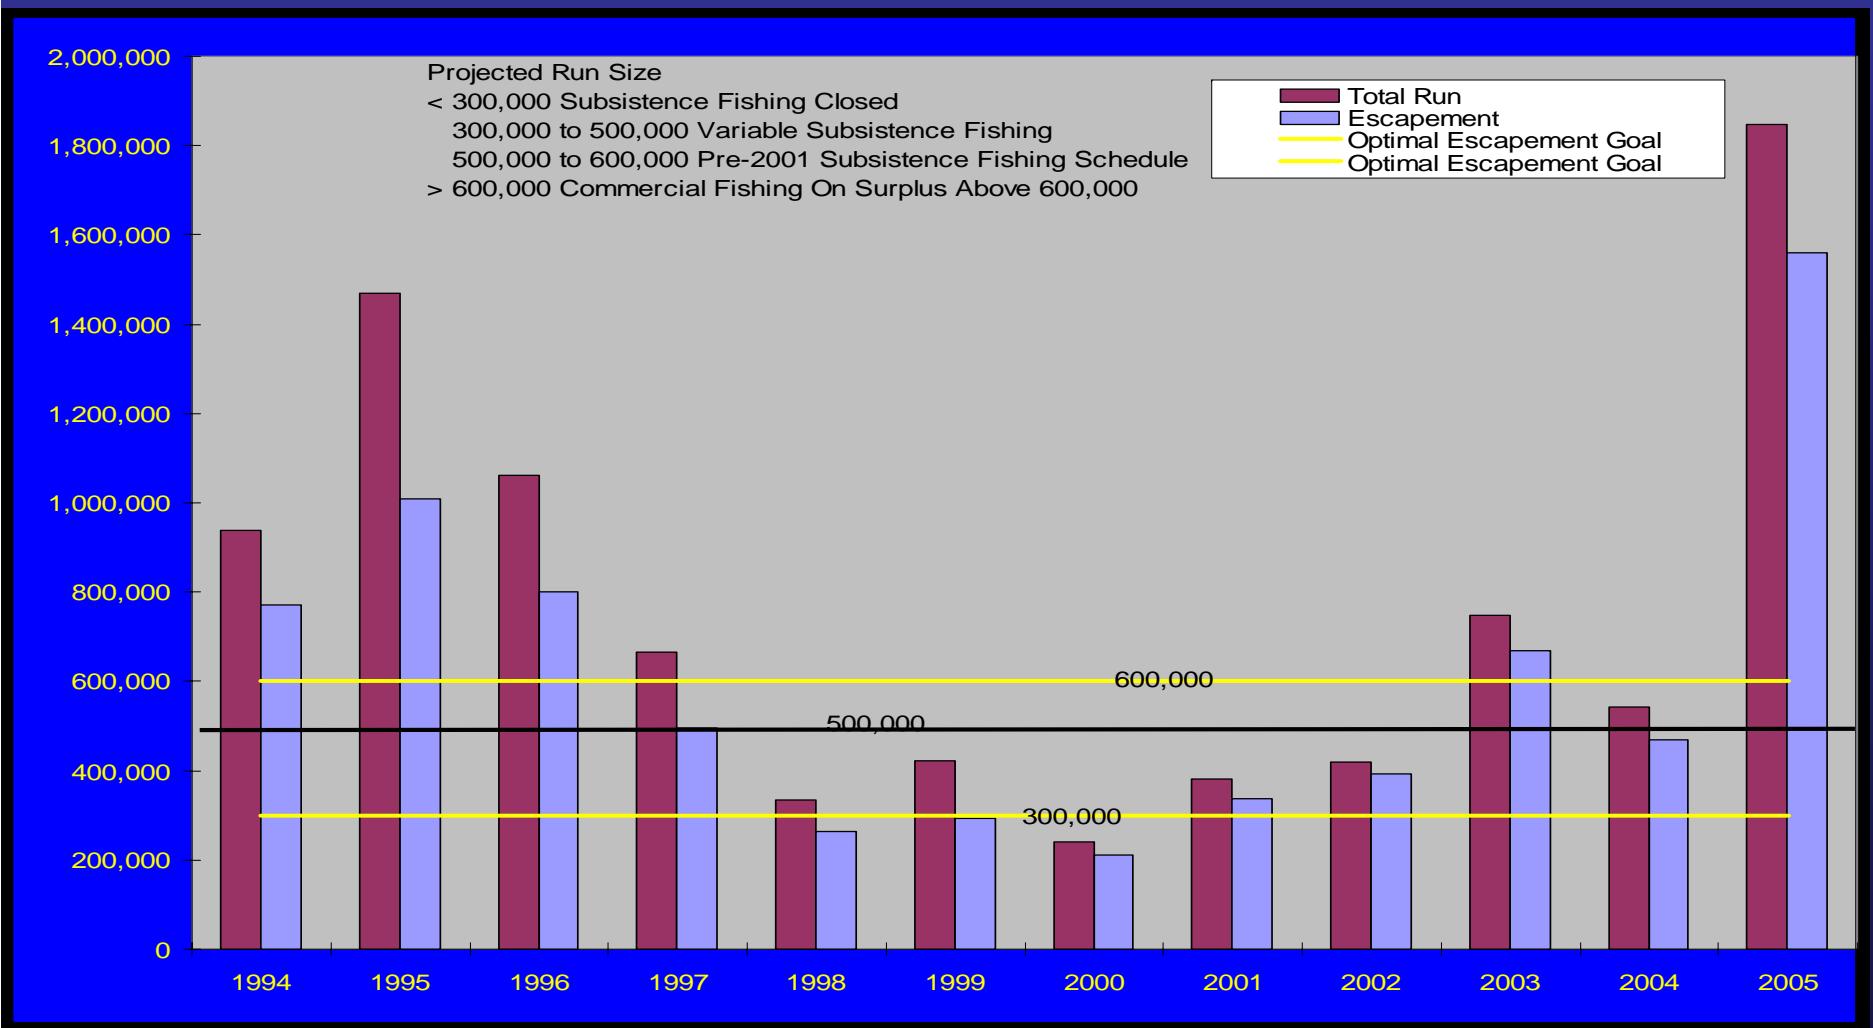

- Yukon fall chum - classified as a “Yield Concern” since September 2000 by the Alaska Board of Fisheries.
- Management regulations developed to benefit subsistence opportunity and to rebuild stocks.
- Fall chum production is improving.

# Estimated Fall Chum Salmon Abundance Yukon River 1974 to 2005

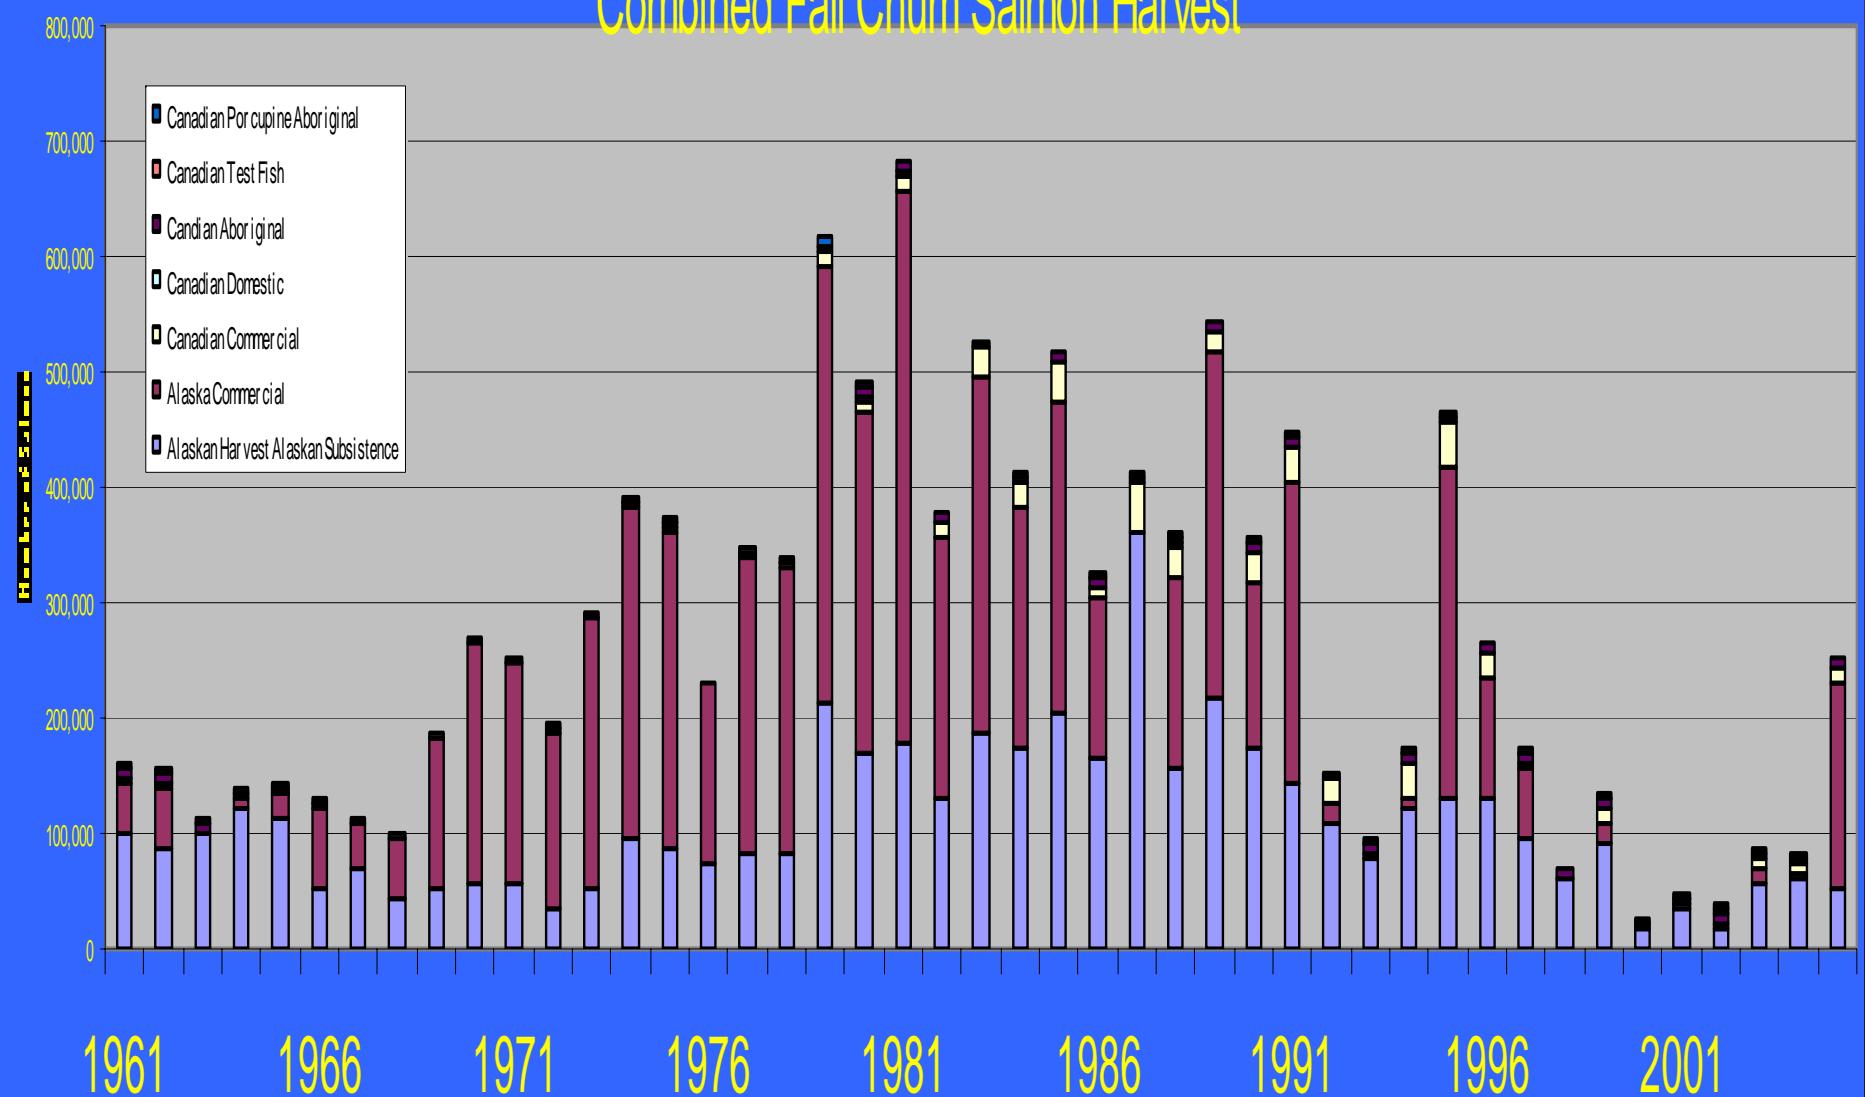

# Yukon River Drainage Fall Chum Salmon Management Plan

## *Total Run Size and Escapement*

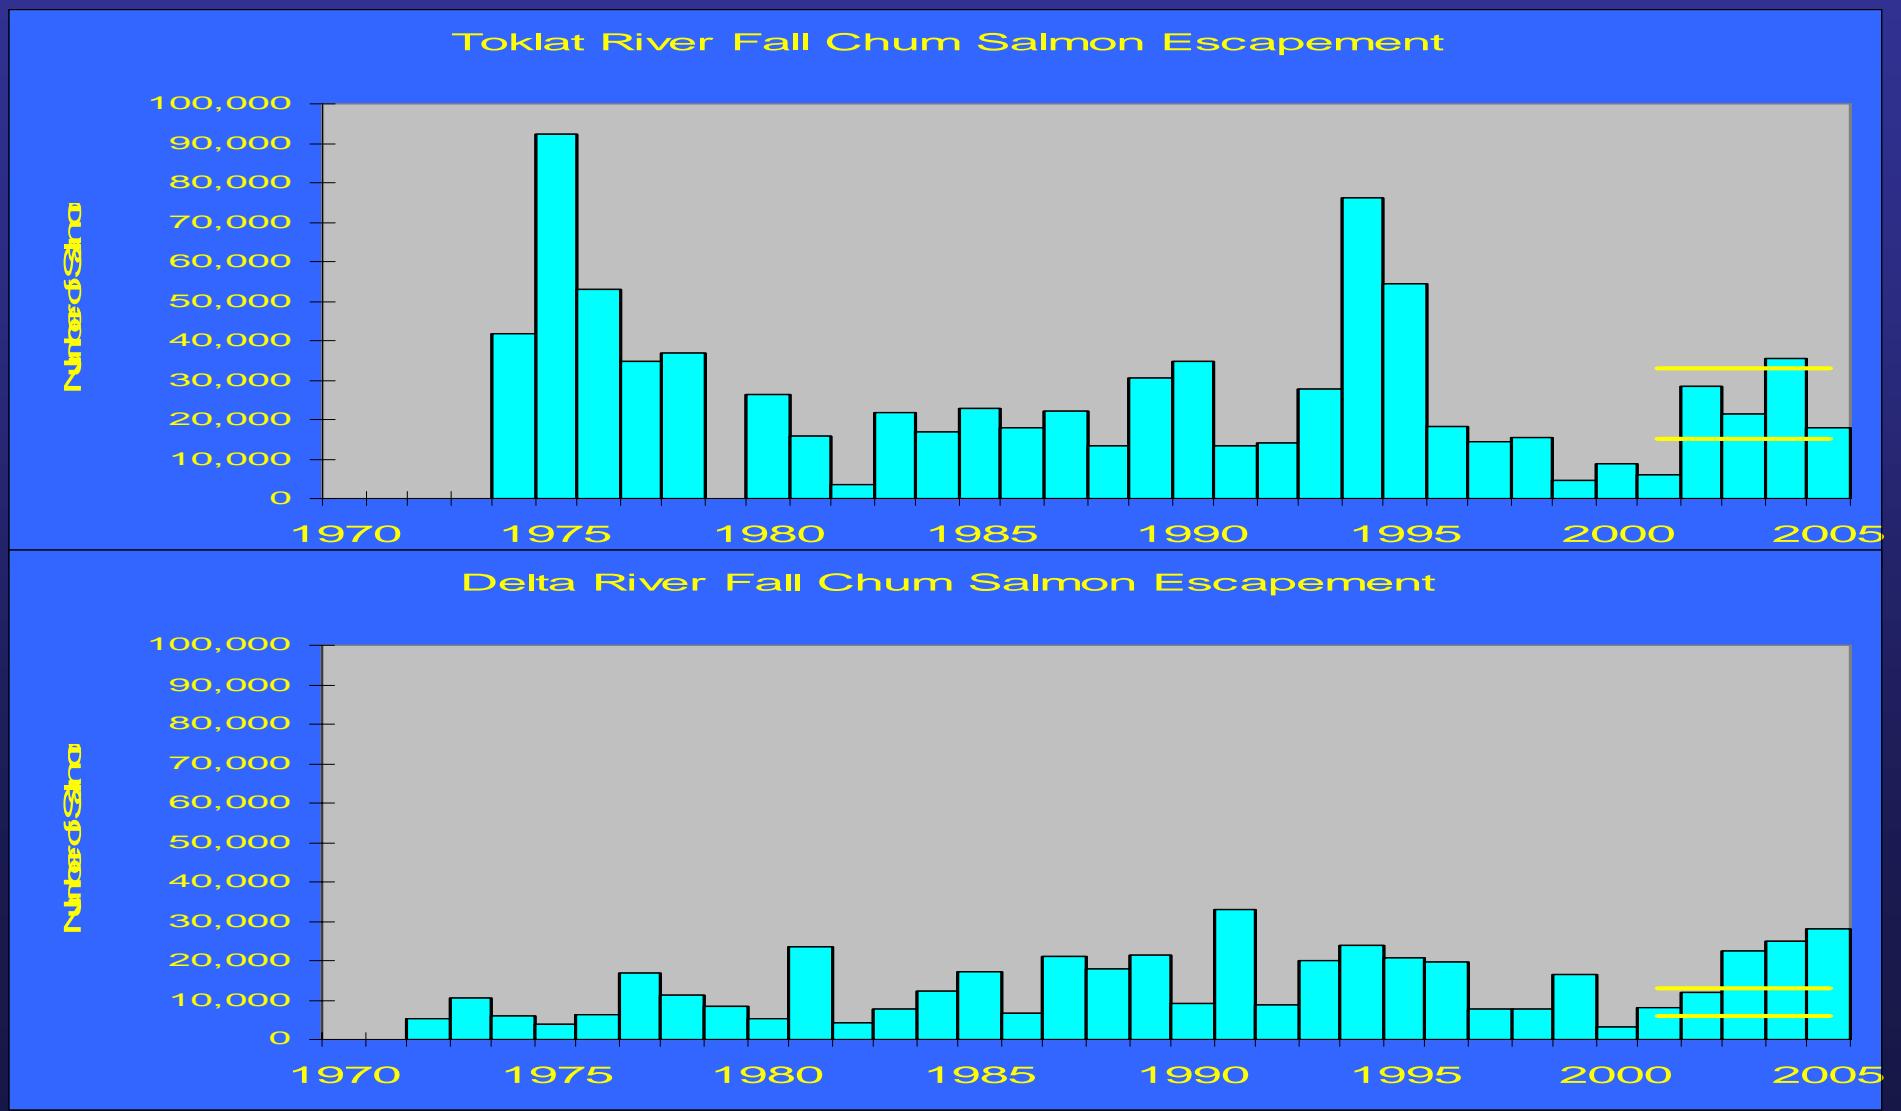

# Yukon River

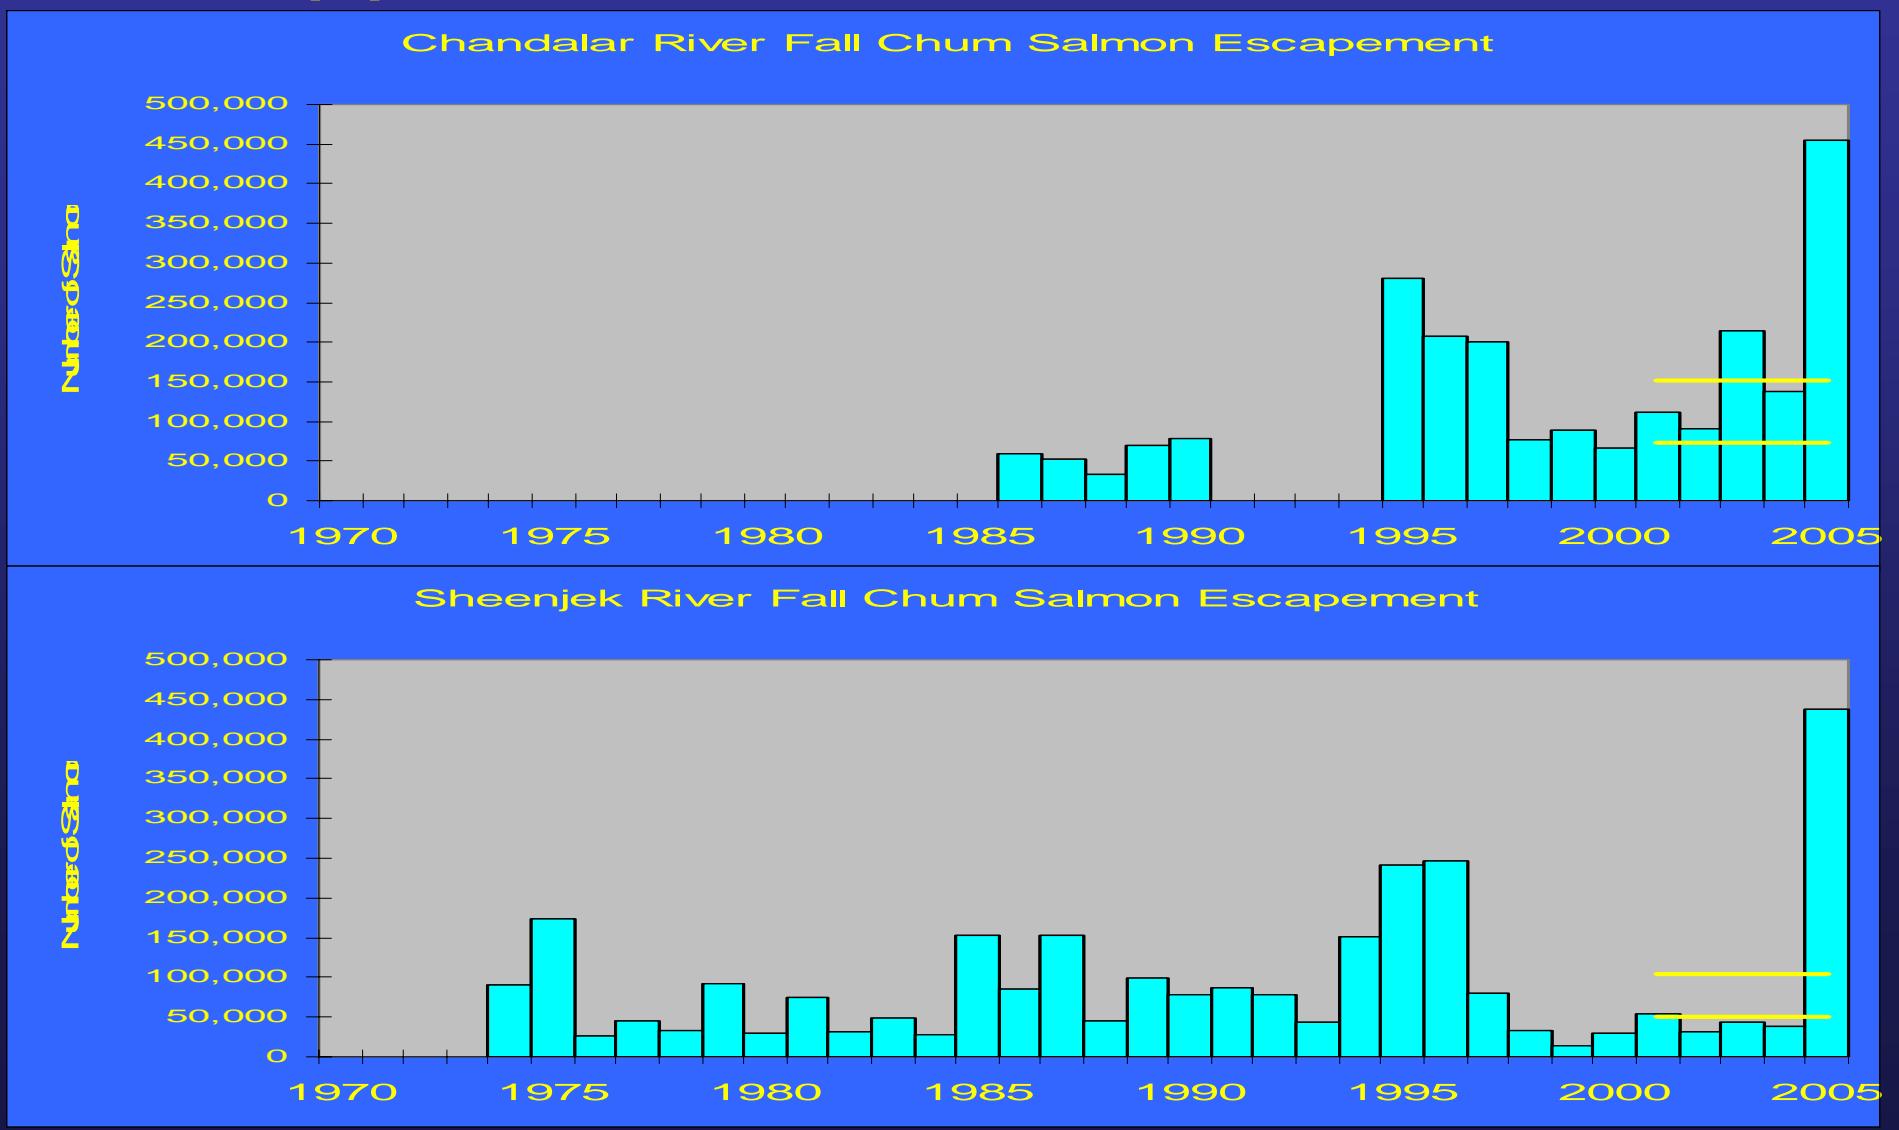

## Combined Fall Chum Salmon Harvest

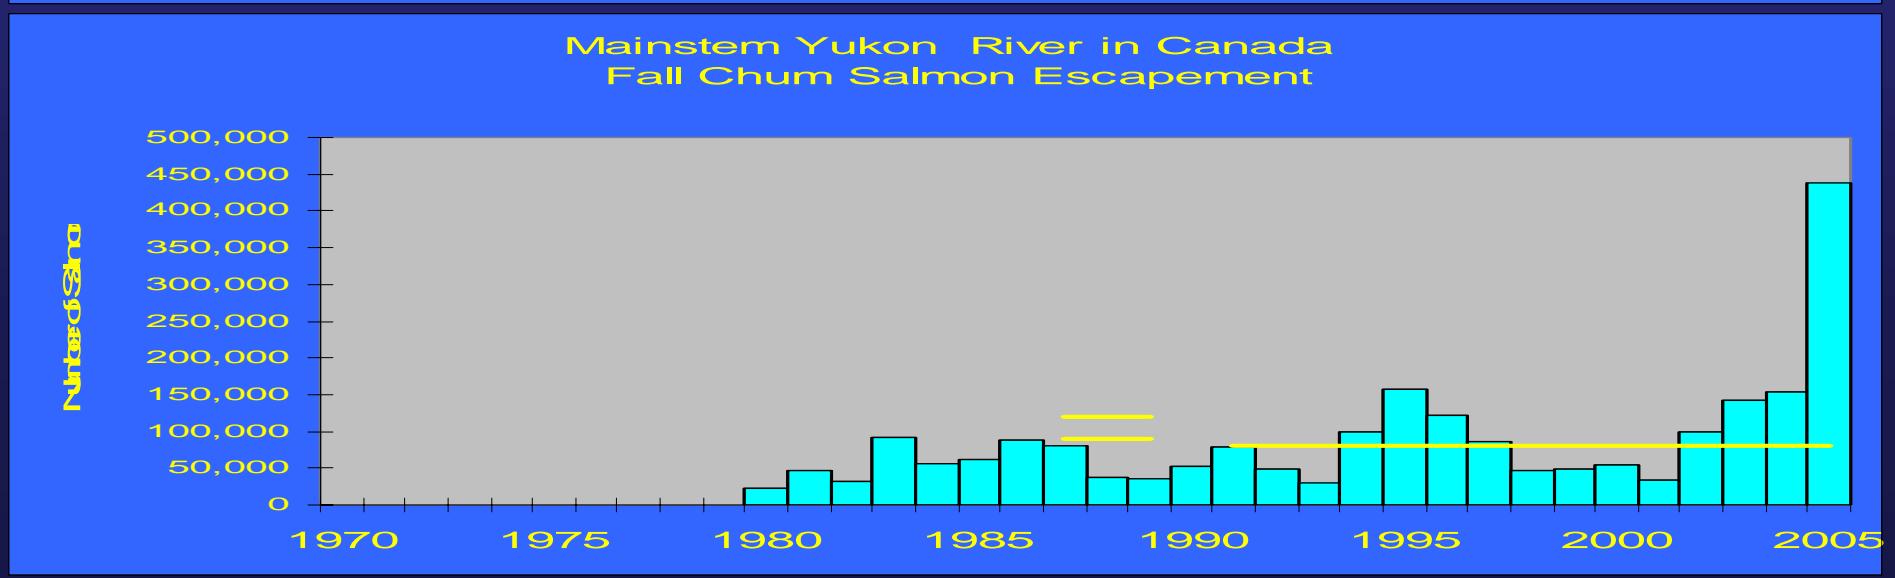

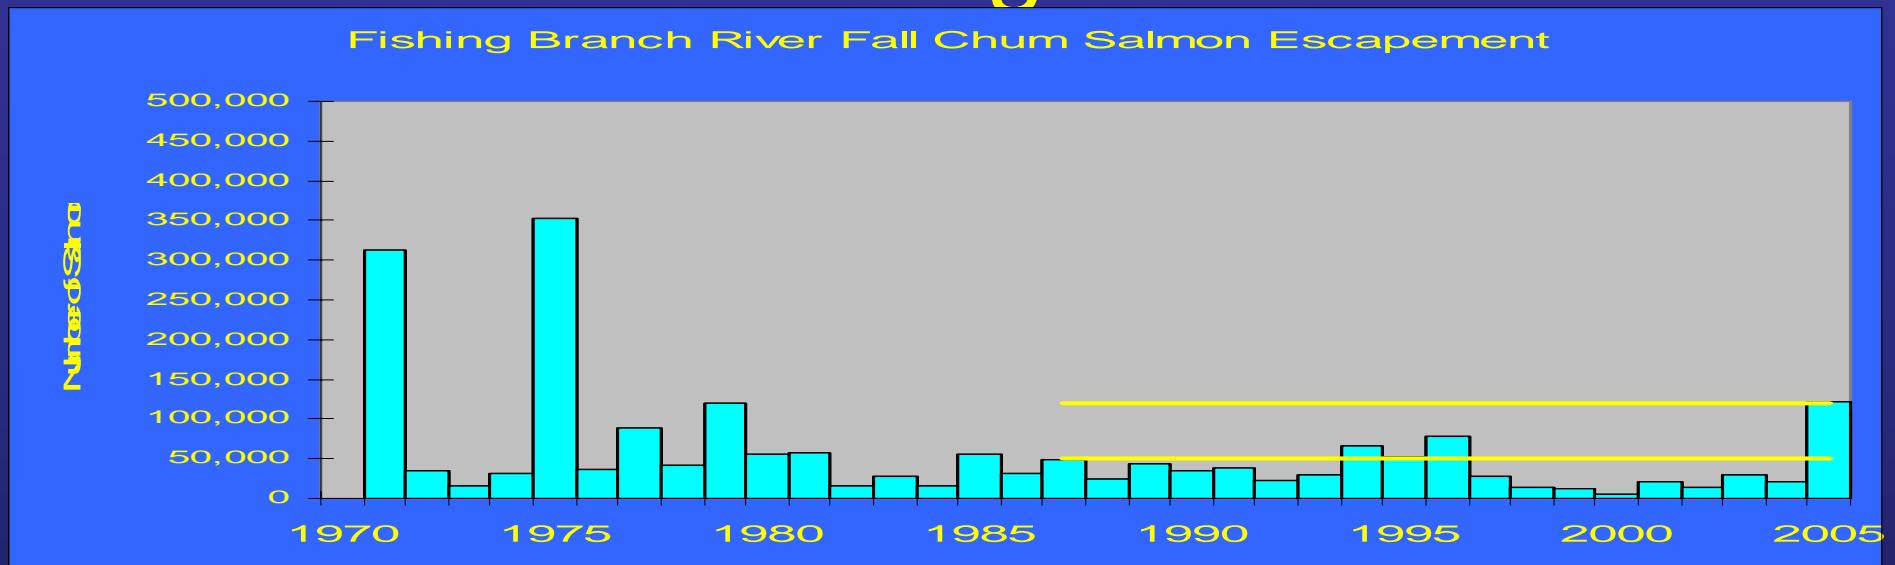

# Yukon River Fall Chum Salmon Tanana River Tributaries

# Yukon River Fall Chum Salmon Upper Yukon River Tributaries

# Yukon River Fall Chum Salmon Canadian-origin Salmon

# Fall Chum Salmon Stock Status Summary

---

---

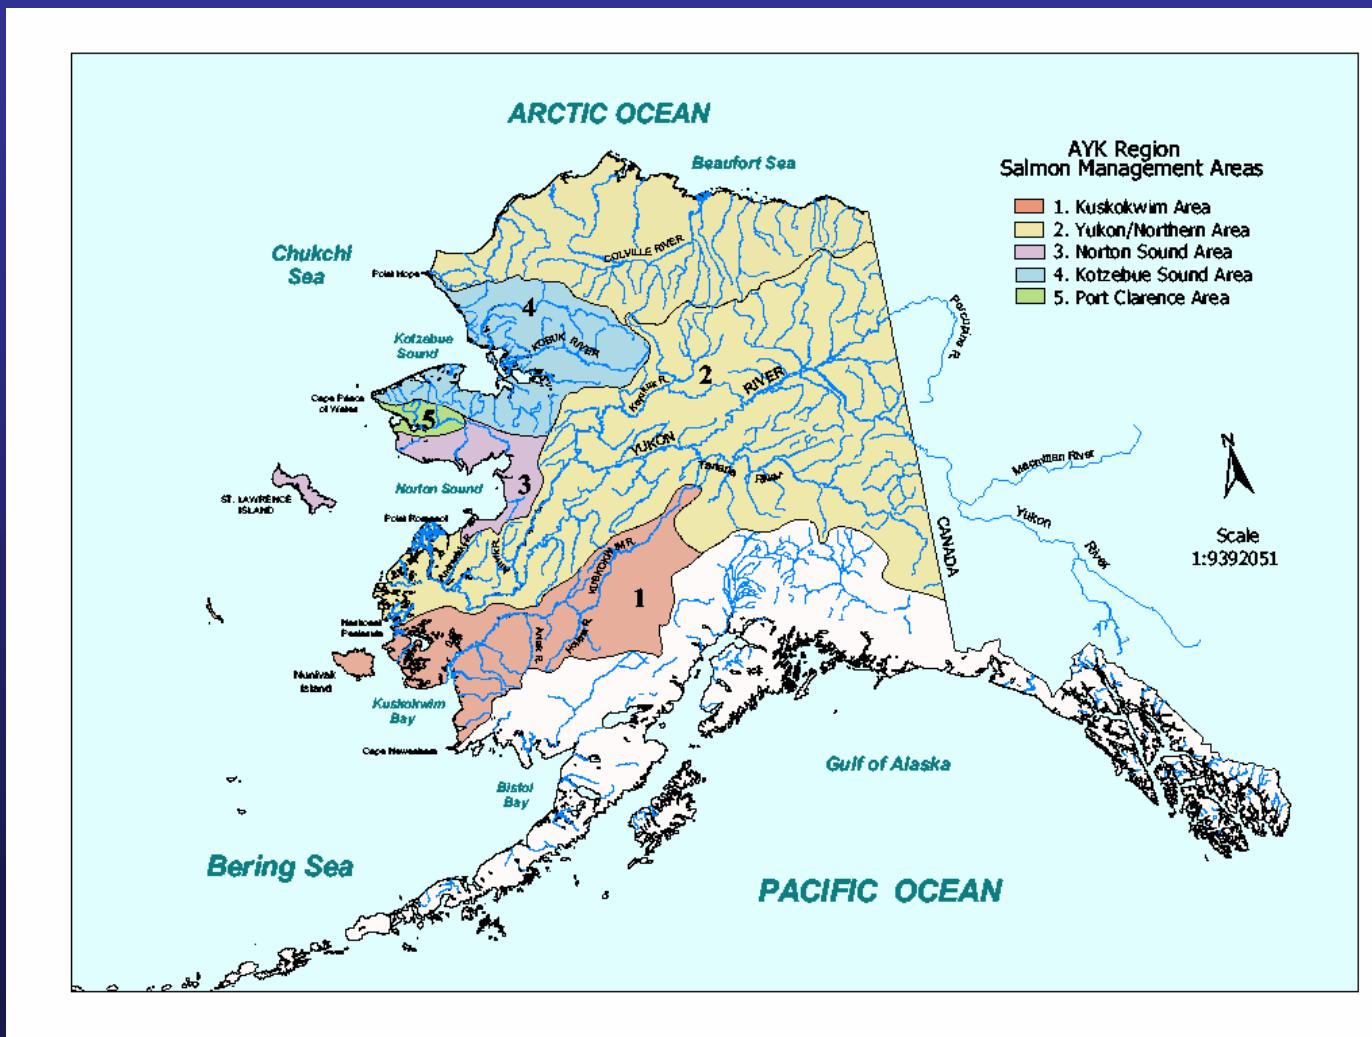

- Strong parent year escapements in 1994 to 1998 produced poor returns from 1998 to 2002.
- Poor parent year escapements in 1999, and 2000 produced strong run in 2003 and 2004.
- Poor parent year escapement in 2001 produced a record run in 2005 ( $R/S >8.0$ )
- Commercial harvest nearly eliminated since 1997.
- Subsistence opportunity severely restricted to attempt to meet escapement goals.
- Significant opportunity was forgone in 2003 because of conservative management.
- Harvest in 2005 was the highest since 1995.
- Outlook is optimistic the run in 2006 will provide sufficient abundance for most subsistence needs and possibly a small commercial harvest.

# Norton Sound, Port Clarence, and Kotzebue Areas

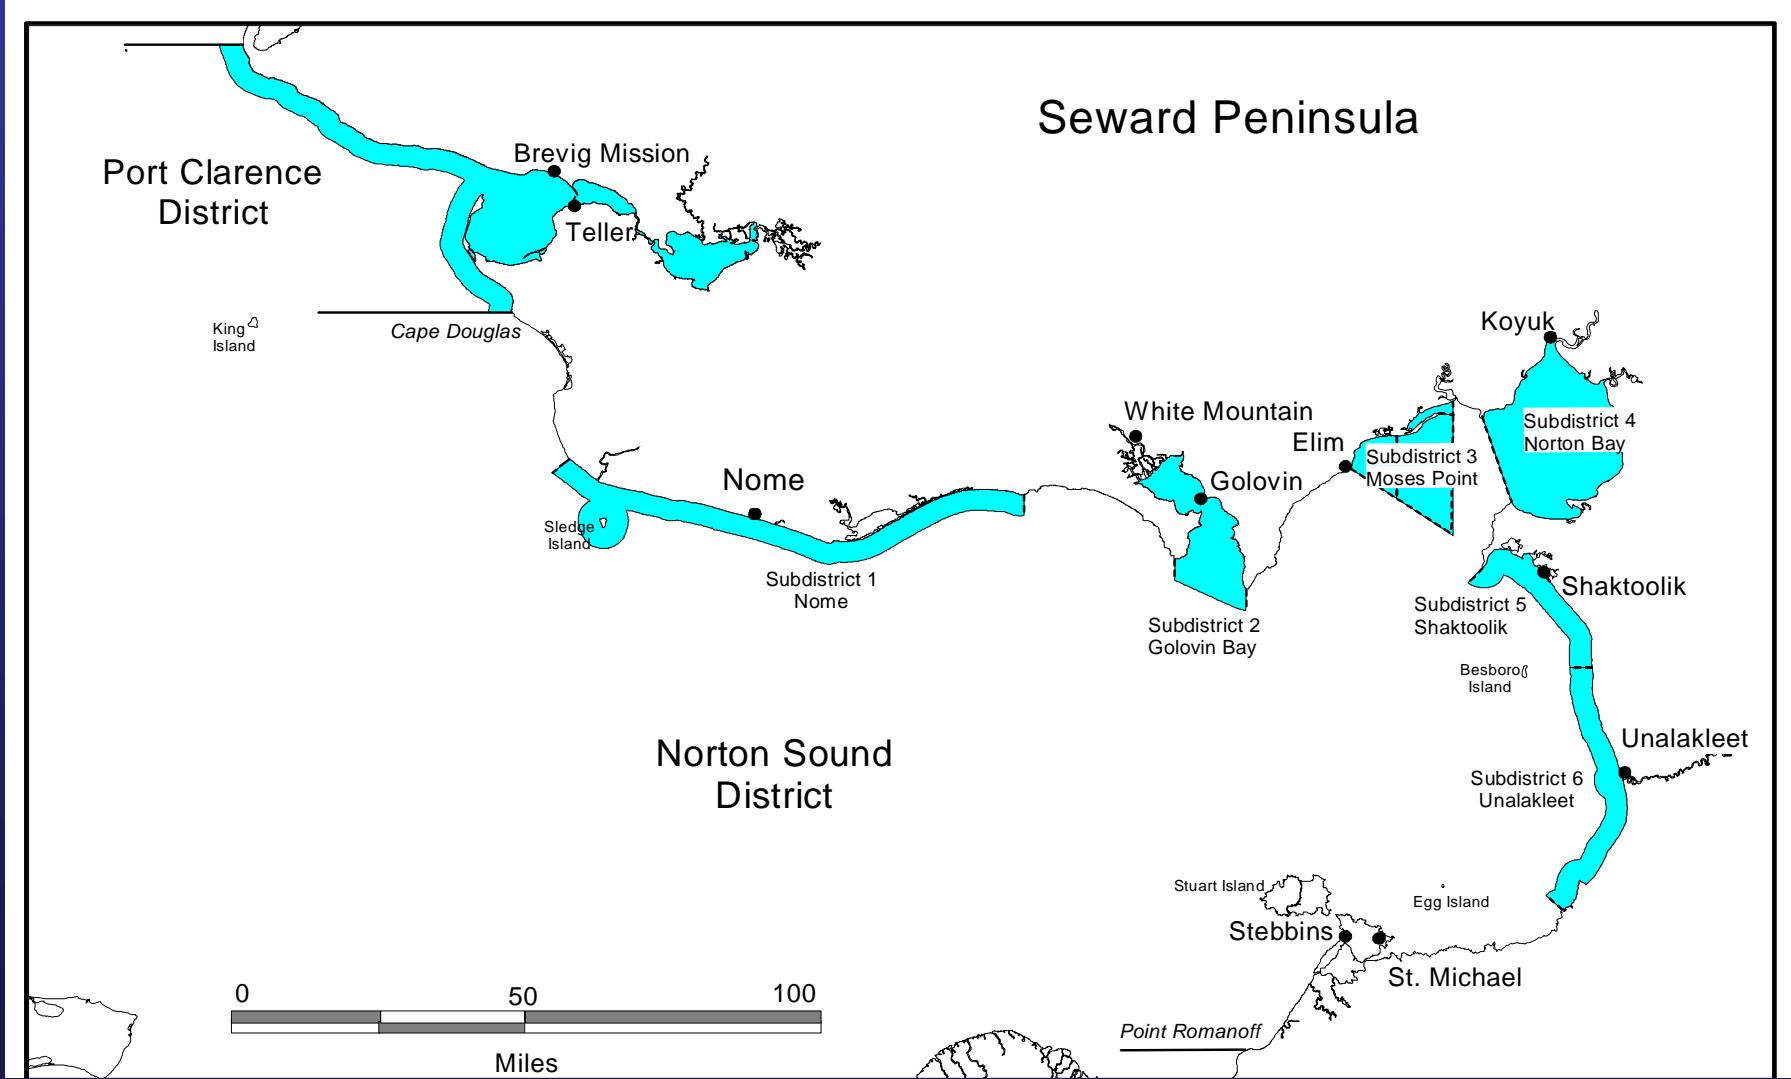

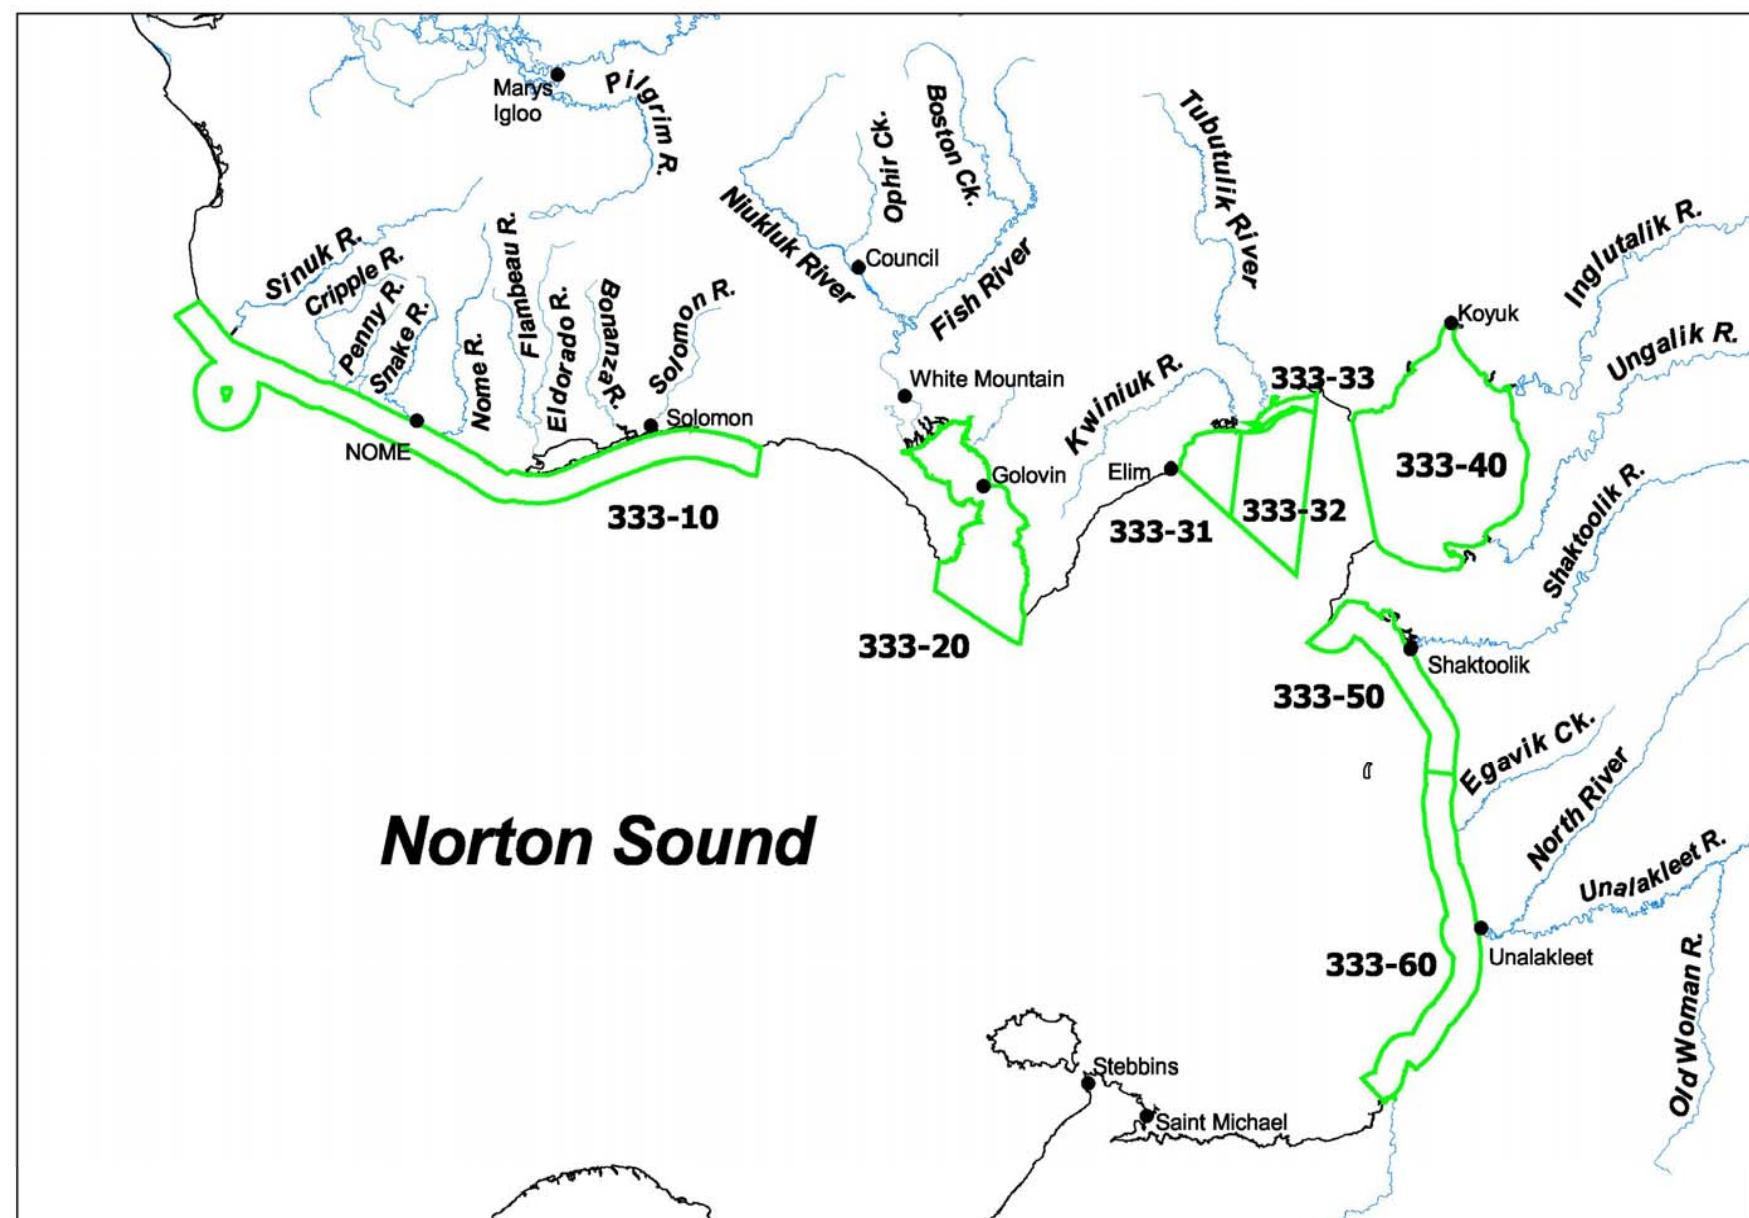

**Alaska Department of Fish and  
Game**

# AYK Region

# Norton Sound and Port Clarence commercial salmon fishing districts and subdistricts.

# Norton Sound Salmon Stocks and Alaska Board of Fisheries Stocks of Concern

## Chum Salmon Stocks of Concern

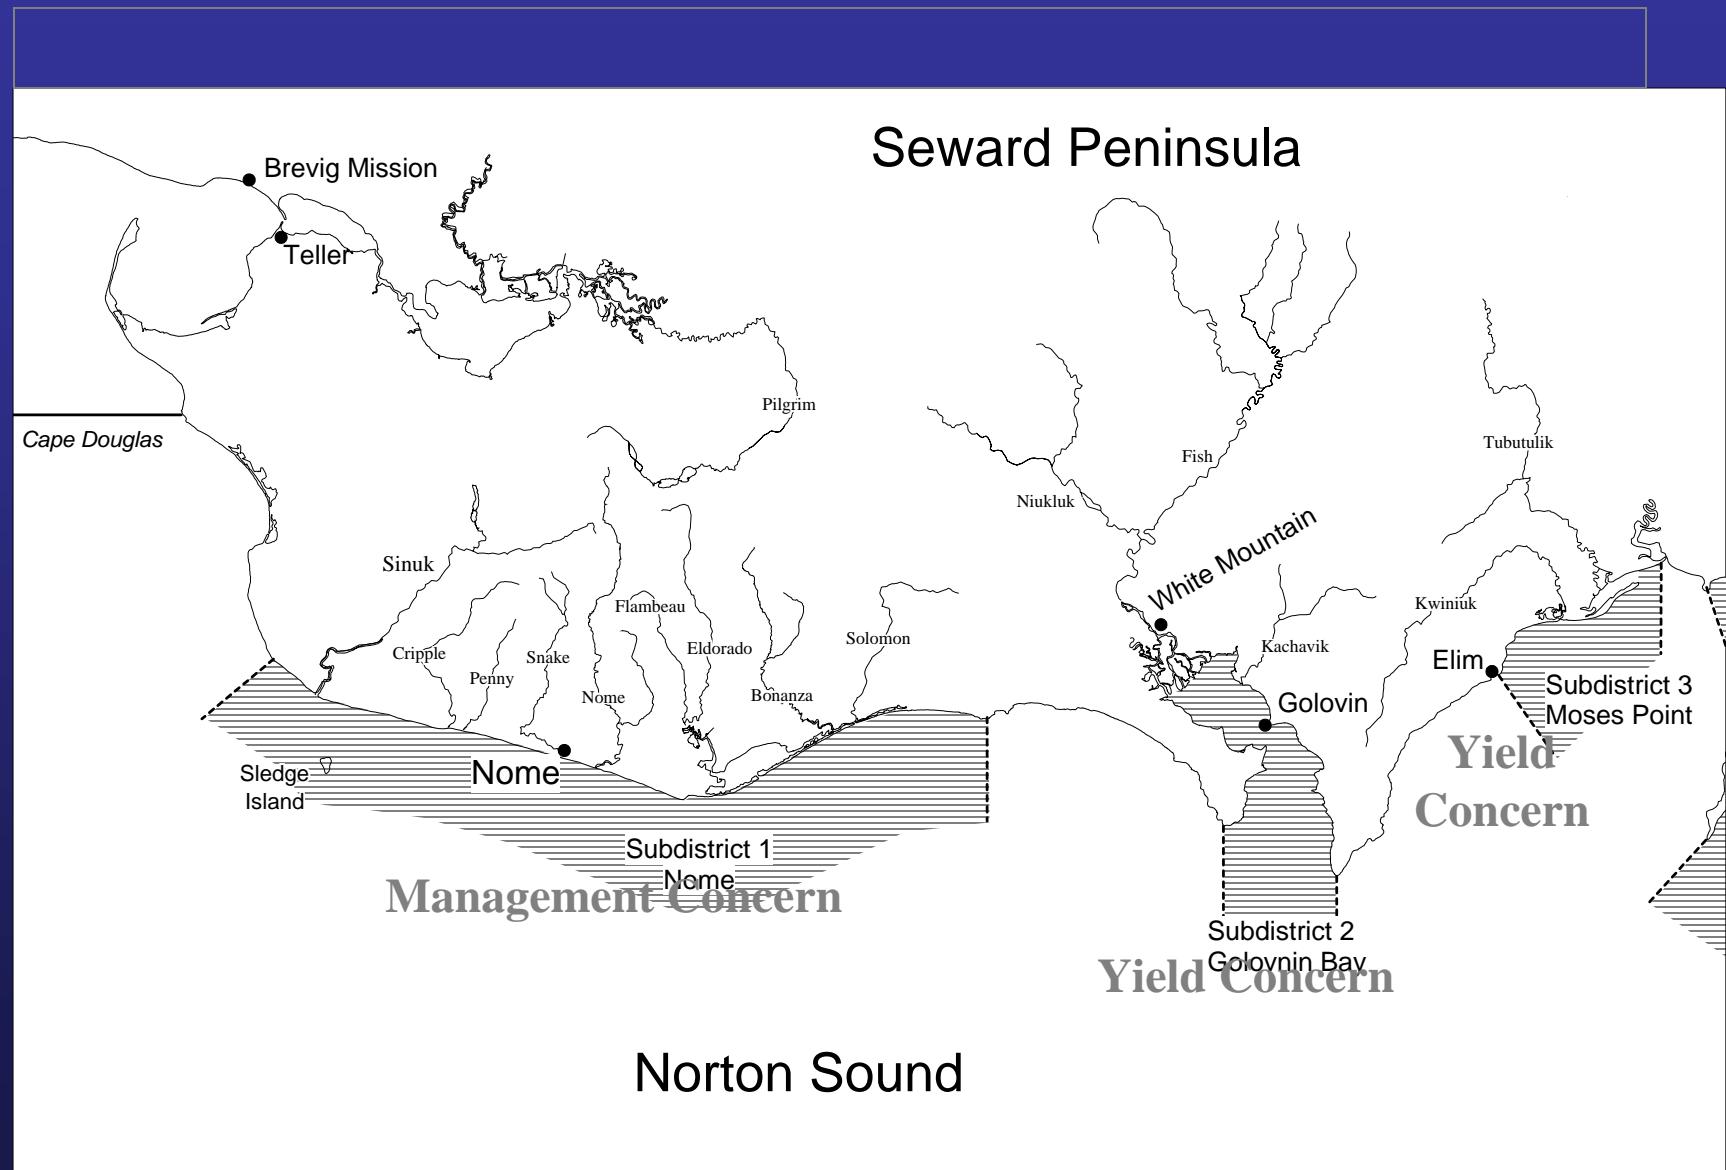

- **Yield concern** – Subdistricts 2 and 3 (Golovin and Moses Point)
- **Management concern** – Subdistrict 1 (Nome)

## Chinook Salmon Stocks of Concern

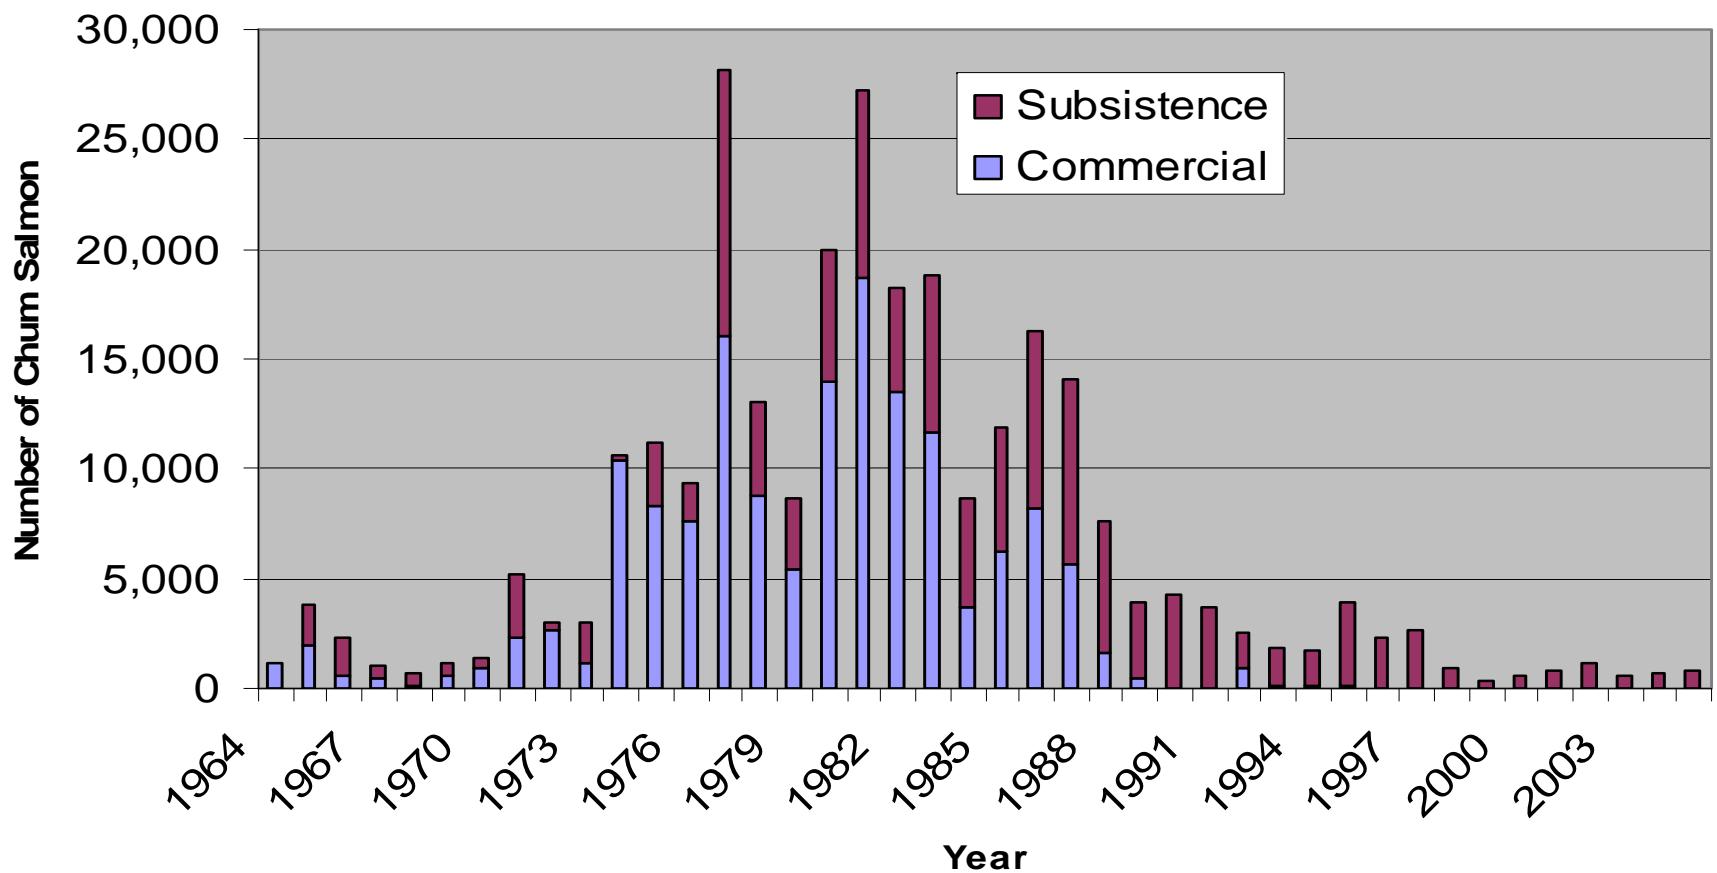

- **Yield Concern** – Subdistricts 5 and 6 (Unalakleet and Shaktoolik)

# Northern Norton Chum Salmon Stocks of Concern

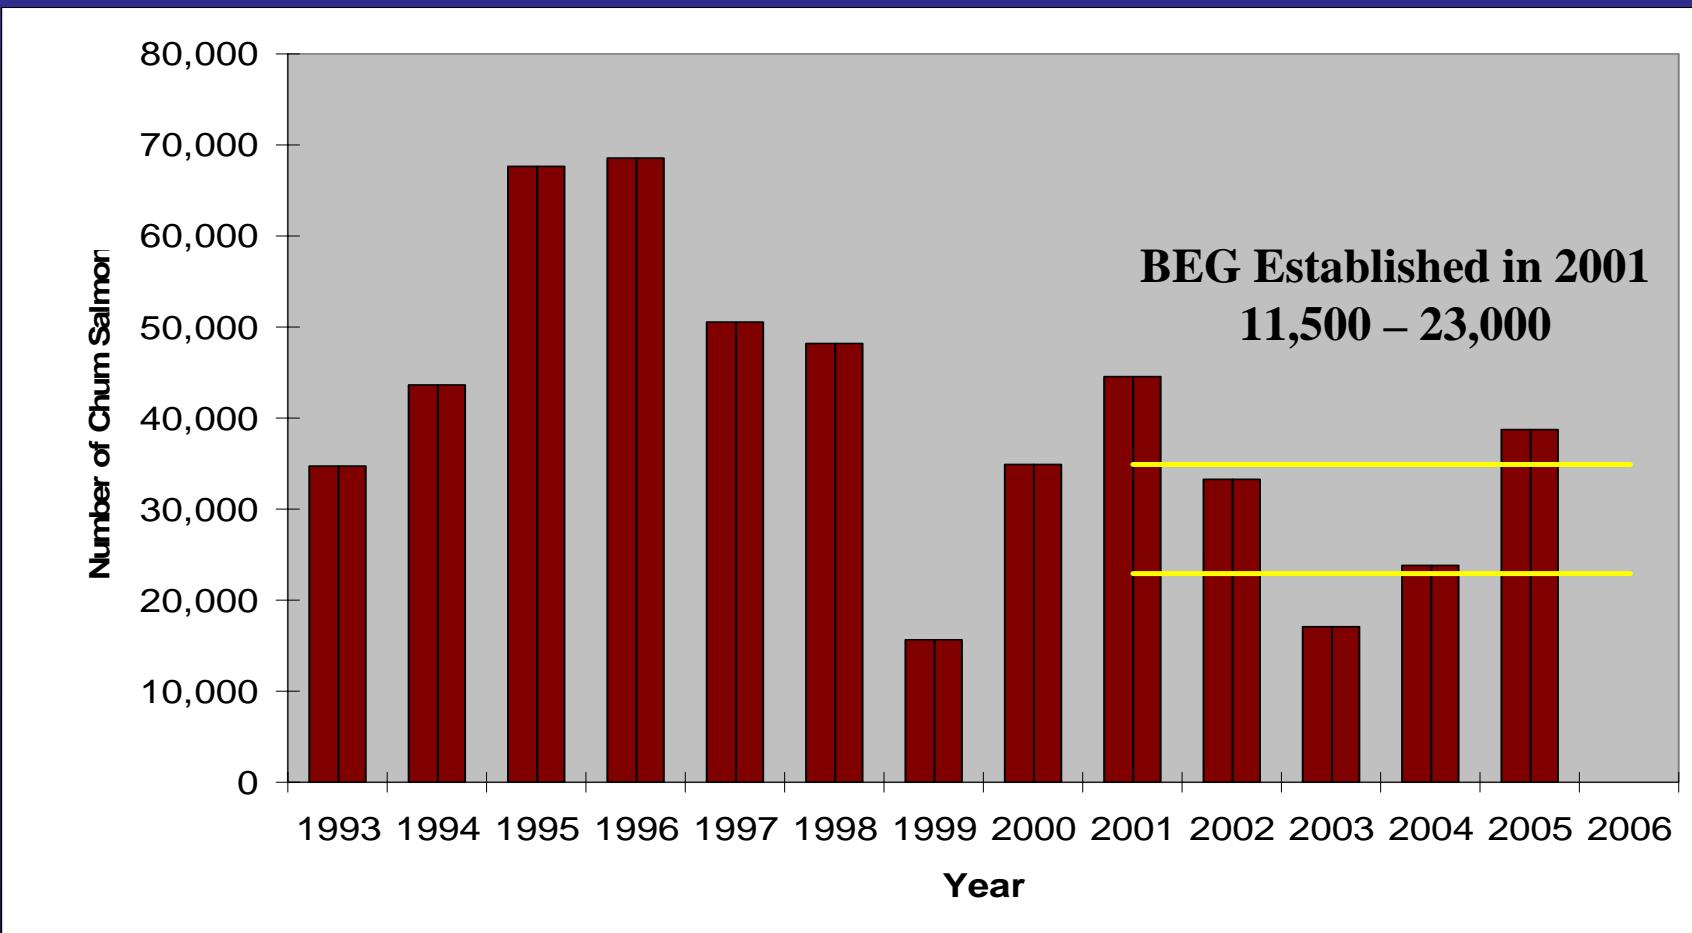

Slide 4

# Subdistrict 1 (Nome) Chum Salmon Commercial and Subsistence Harvest 1961-2005

# **Subdistrict 1 (Nome) Subdistrict Chum Salmon Escapement 1993-2005**

## **Subdistrict 1 (NOME) Chum Salmon Subsistence Fishery**

- Intensive management with frequent closures, permits required and bag limits
- Established as a Tier II fishery in 1999 by Alaska Board of Fisheries
- Amount needed for subsistence (ANS) is 3,430 – 5,716 chum
- Because of the failure to provide for ANS classified as Tier II
- A Tier II fishery limits the number of people who can fish - permit qualifications are based on applicant's number of years harvesting chum salmon in the Nome area

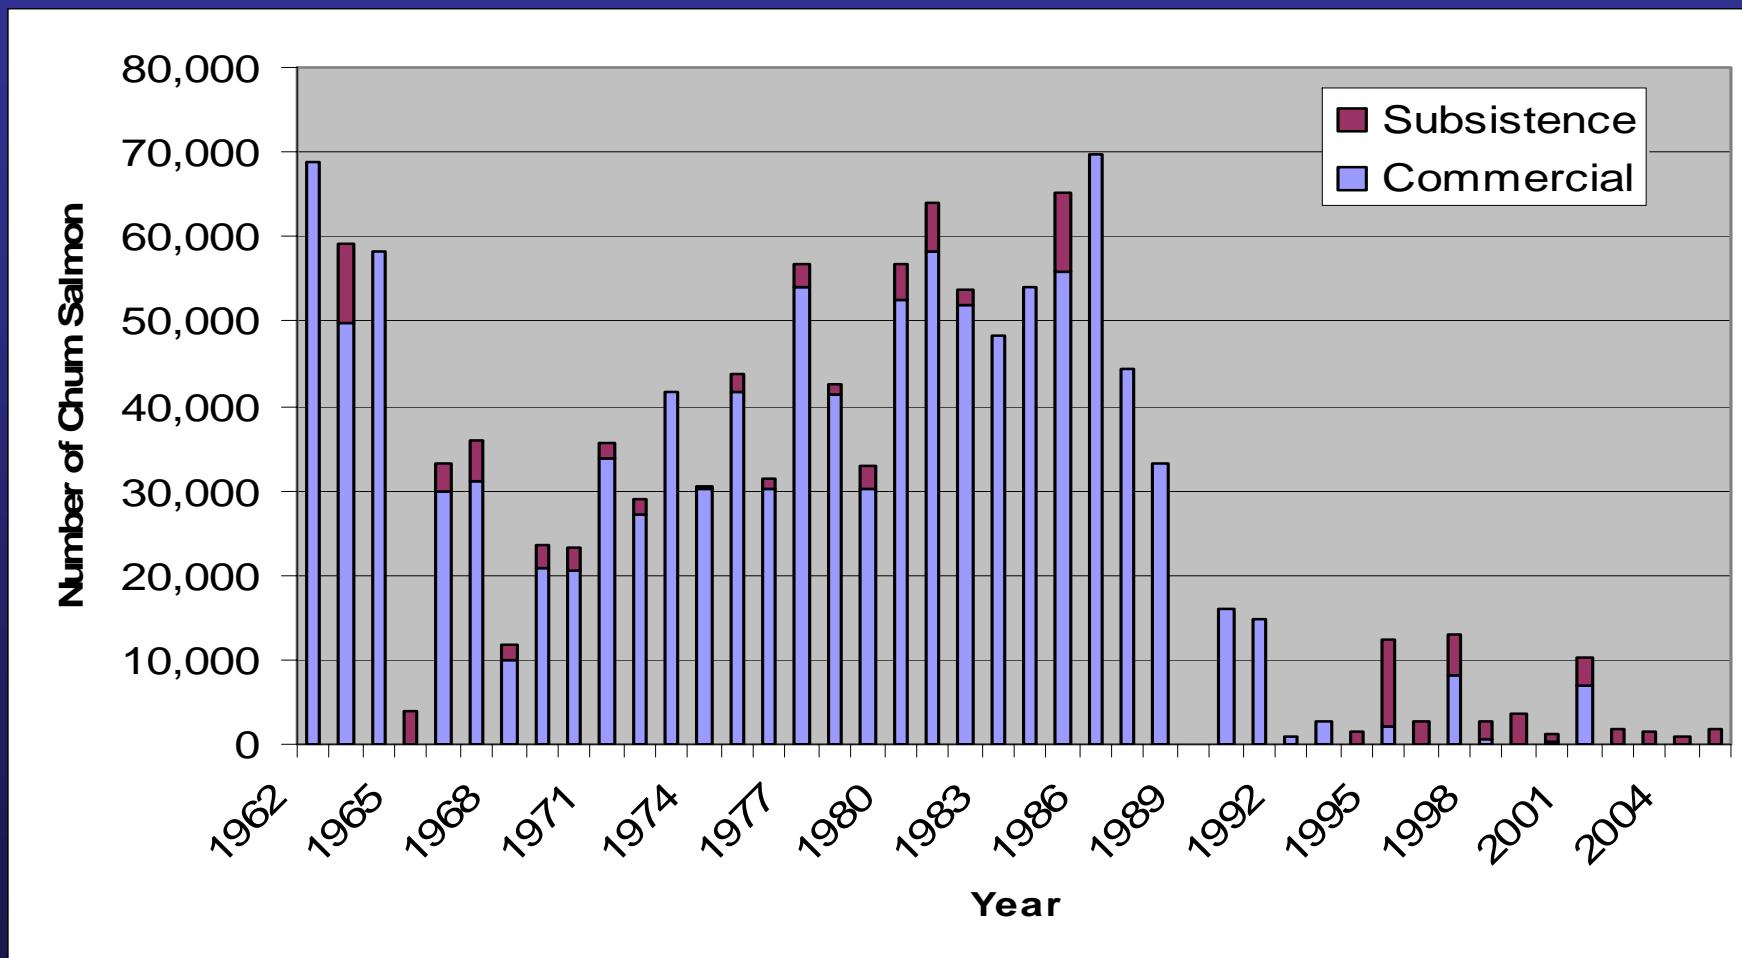

# Subdistricts 2 and 3 Chum Salmon

## Yield Concern

---

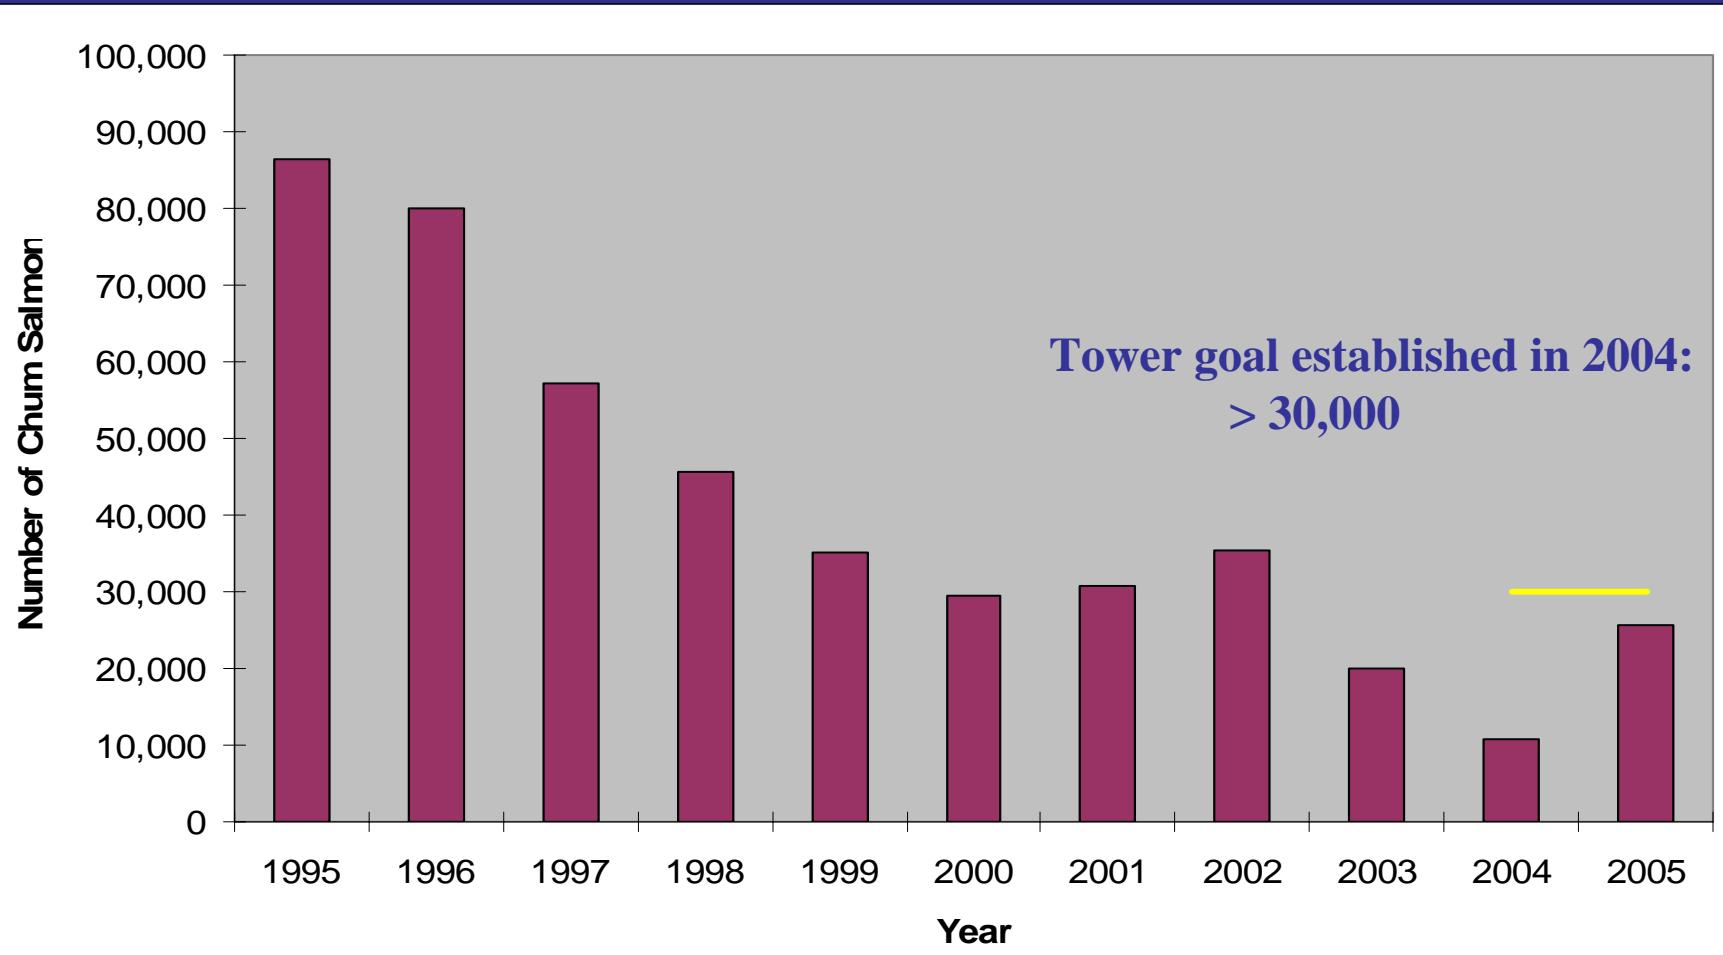

- Continued low and inconsistent yield
- Harvestable surplus well below historical levels

# Subdistrict 2 (Golovin) Commercial & Subsistence Chum Harvest 1961-2004

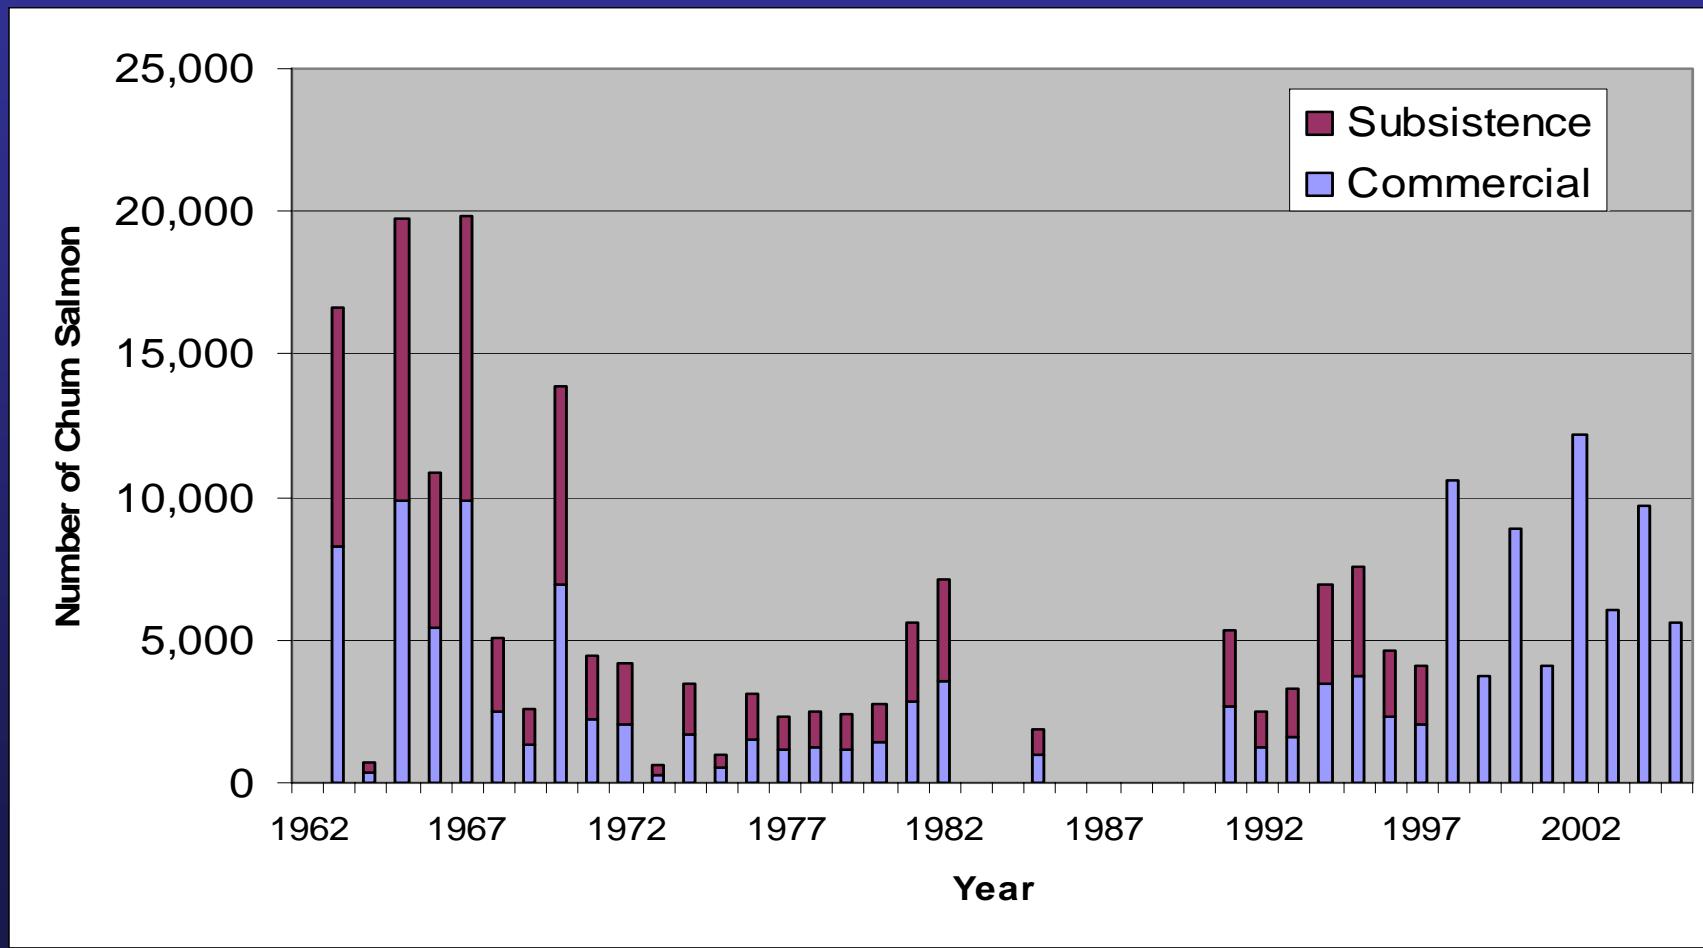

\* Subsistence data not available for all years. 1990s & 2000s subsistence data not comparable with other years.

# Niukluk River (Subdistrict 2) Chum Salmon Escapement 1995-2005

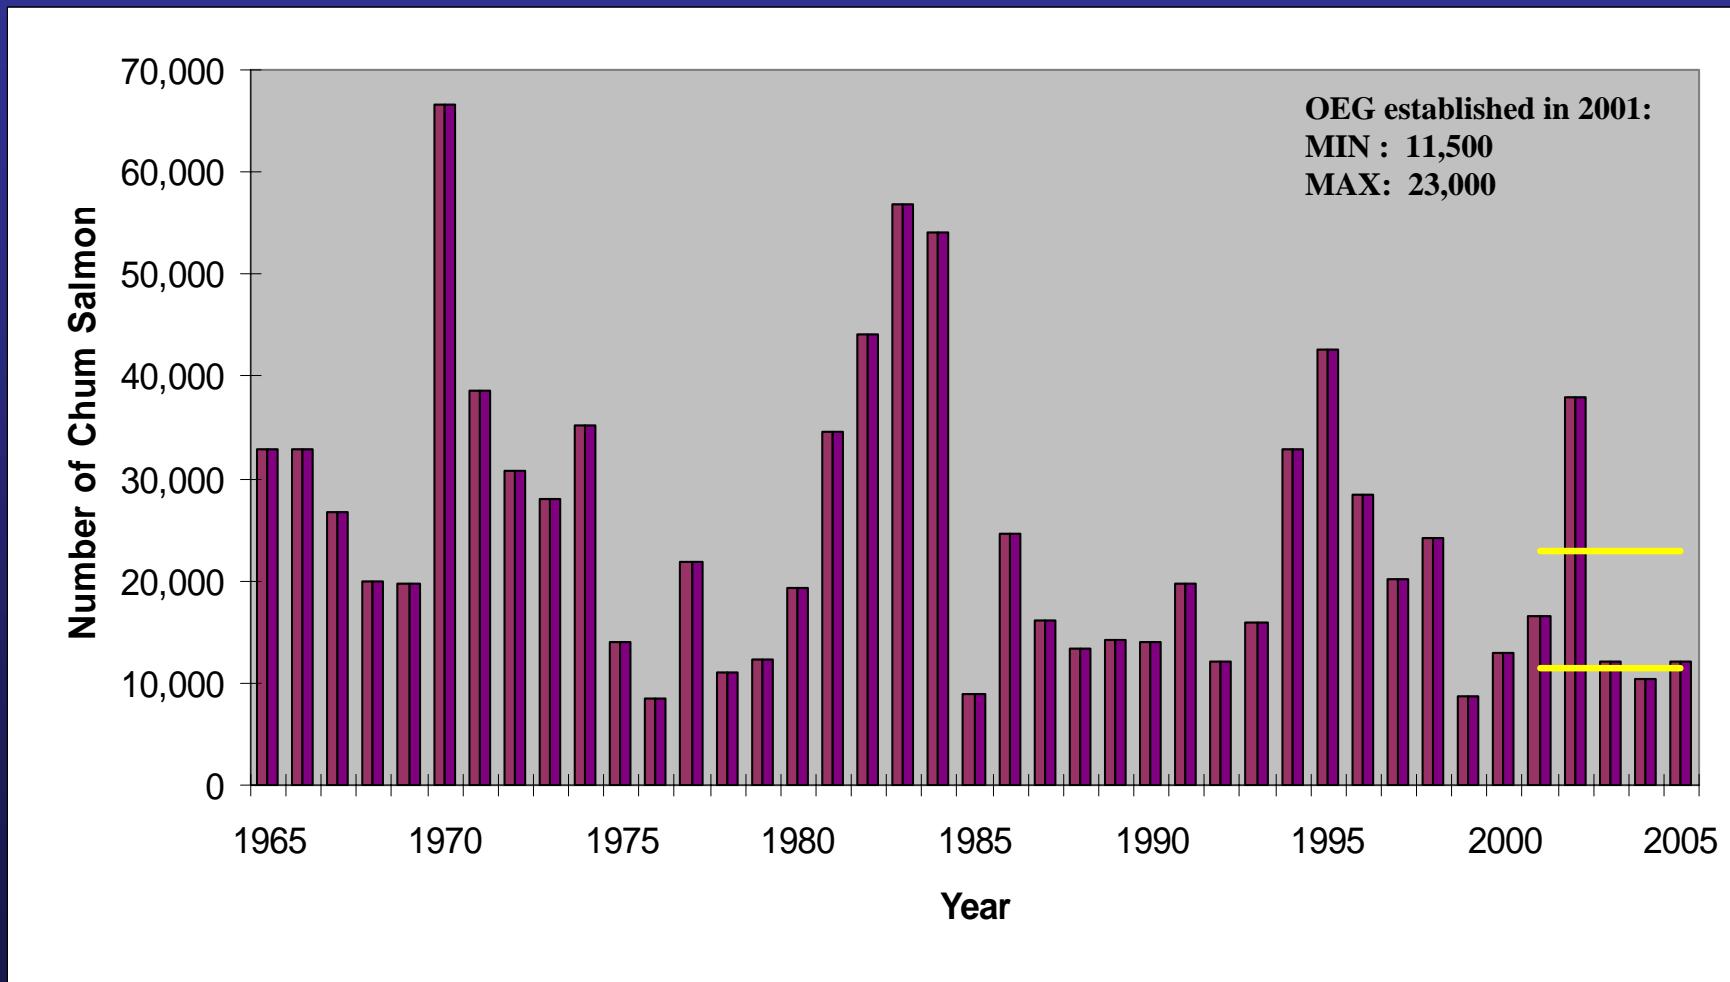

# Subdistrict 3 (Moses Pt.) Commercial & Subsistence Chum Salmon Harvest

\* Subsistence data not available for all years. 1990s and 2000s subsistence data not comparable with other years.

# Kwiniuk River (Subdistrict 3) Chum Salmon Escapement 1965-2005

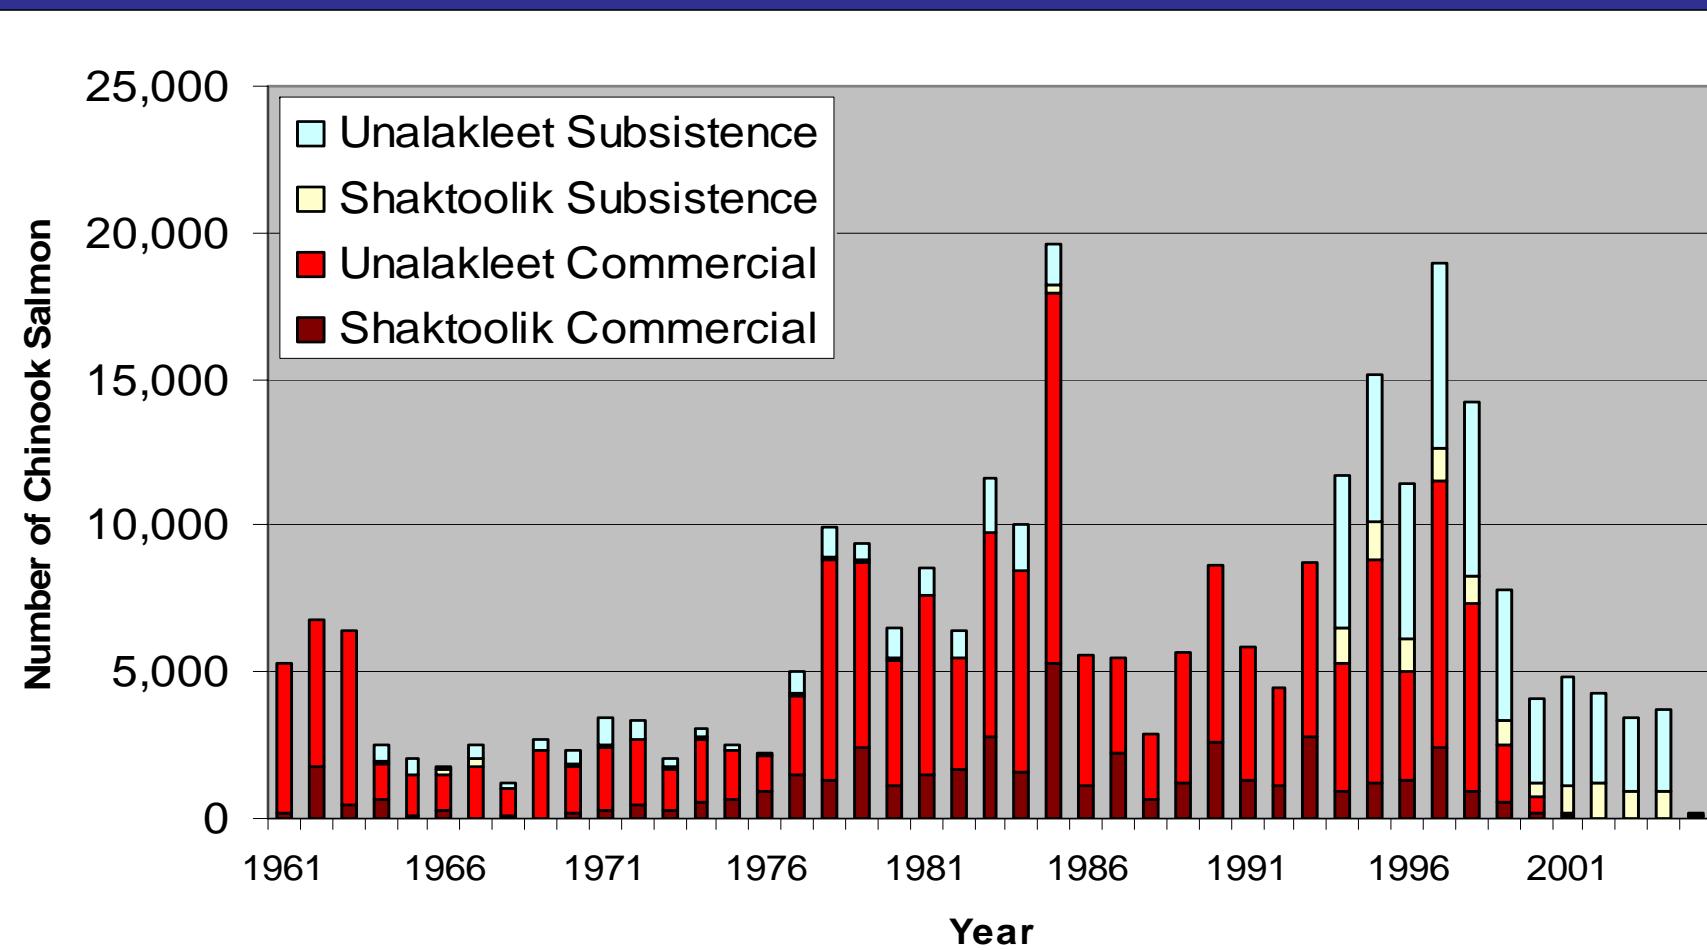

# **Subdistricts 5 and 6 Chinook Salmon**

## **Yield Concern**

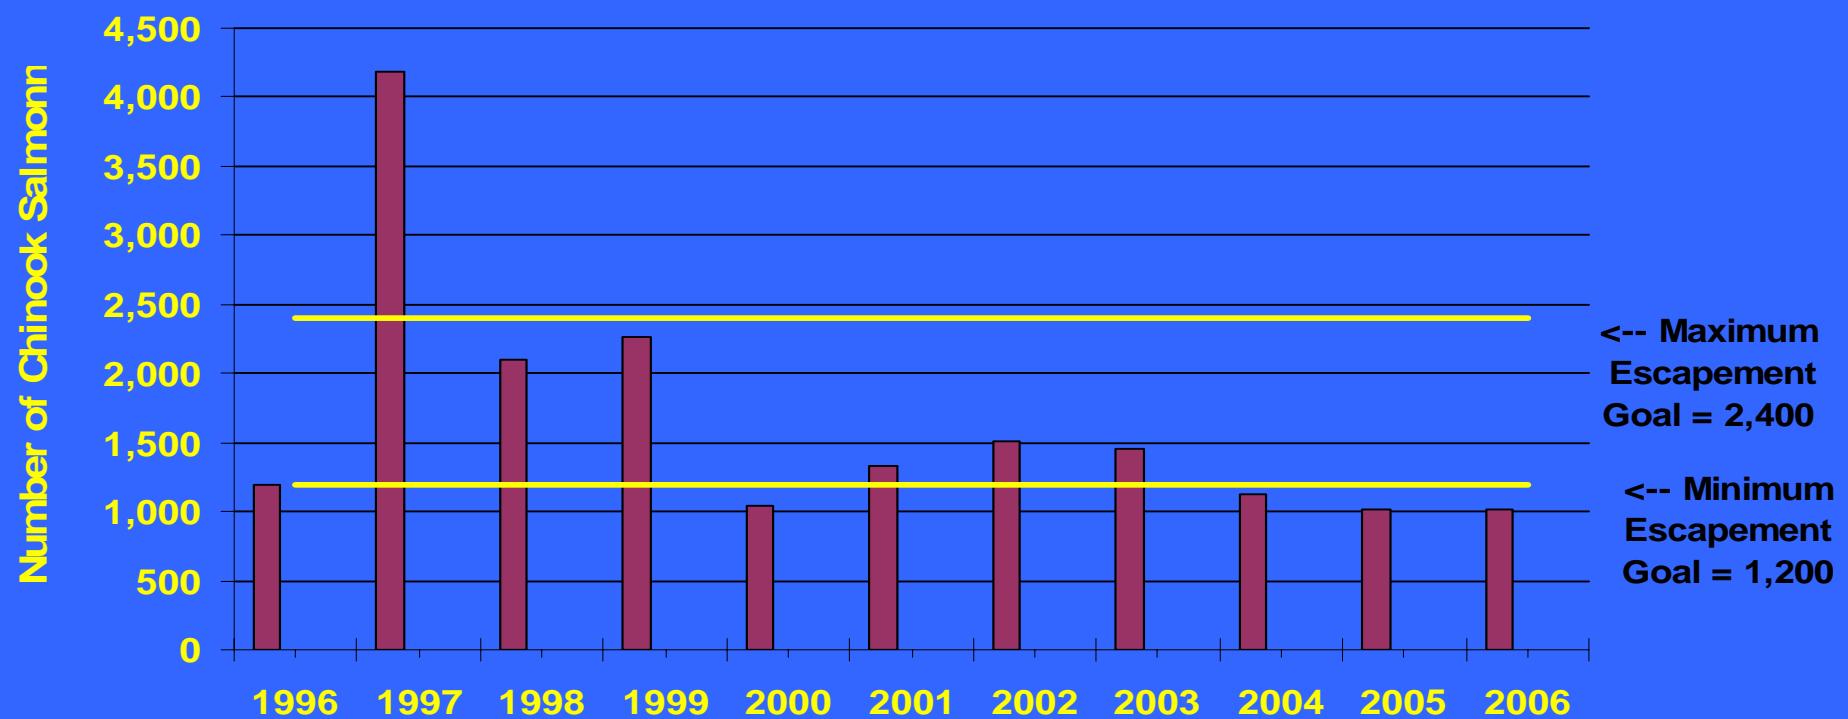

---

- North River tower meeting escapement goal in most years
- Average commercial harvest during last 5 years (193 fish)  
down 97% from previous 10-year average(6,422 fish)
- Average subsistence harvest during last 5 years (3,741 fish)  
down 34% from previous 6-year average (5,560 fish)

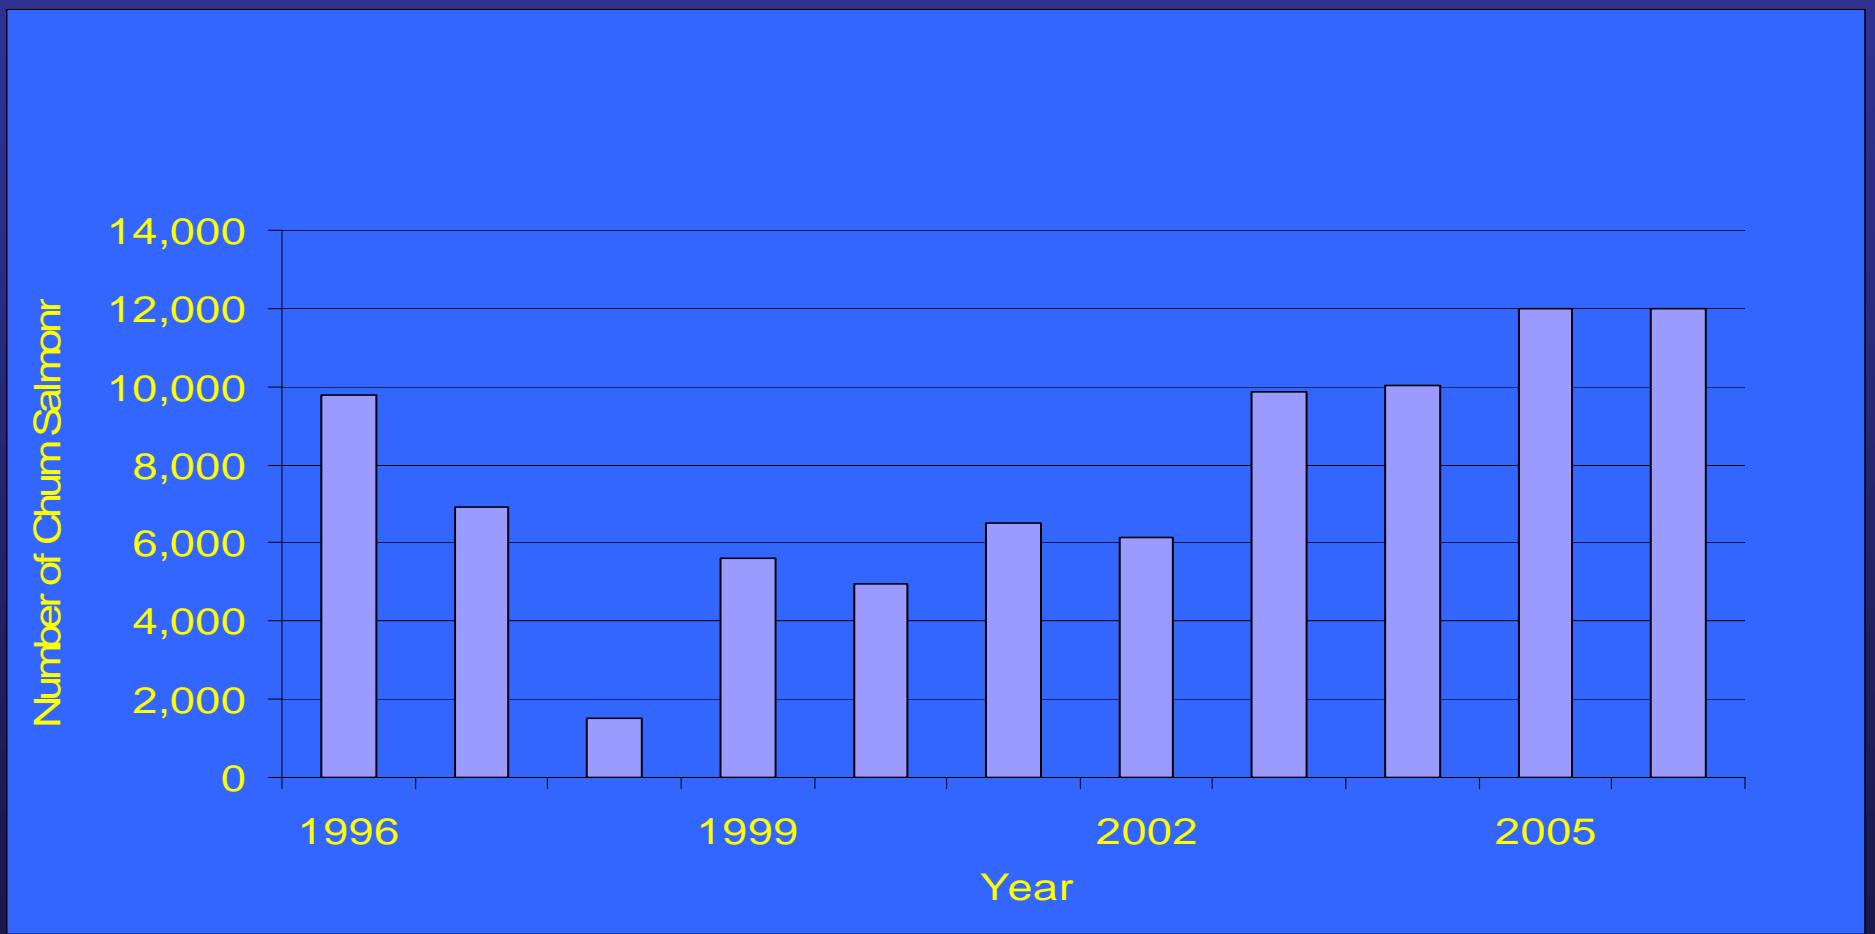

# Subdistricts 5 (Shaktoolik) & 6 (Unalakleet) Commercial & Subsistence Chinook Salmon Harvest 1961-2005

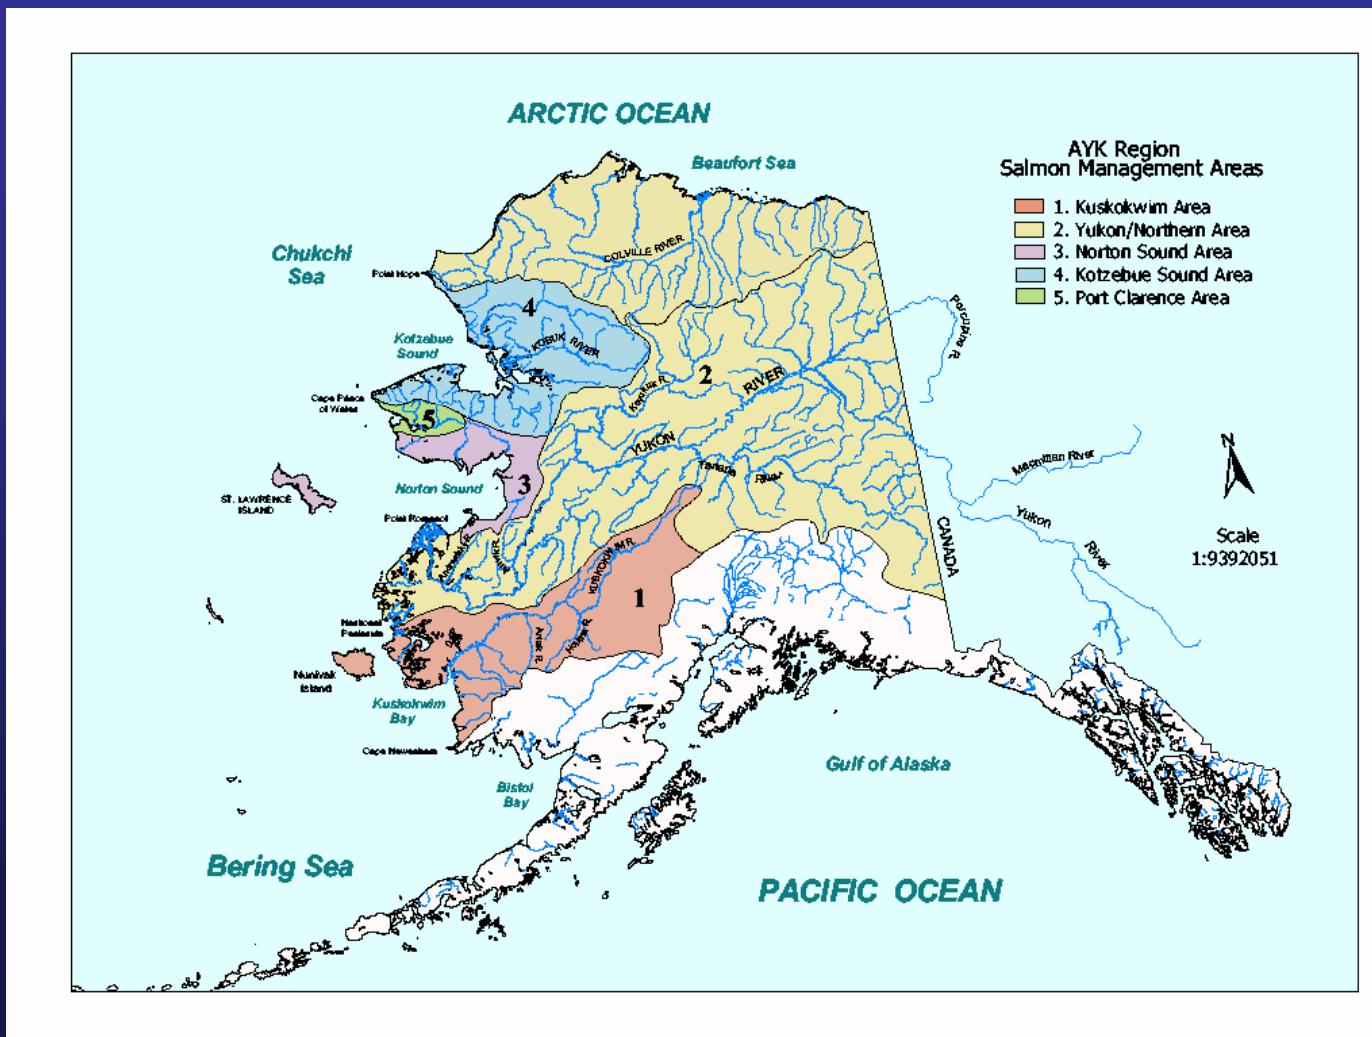

# North River Chinook Salmon Escapement Counts 1996-2005

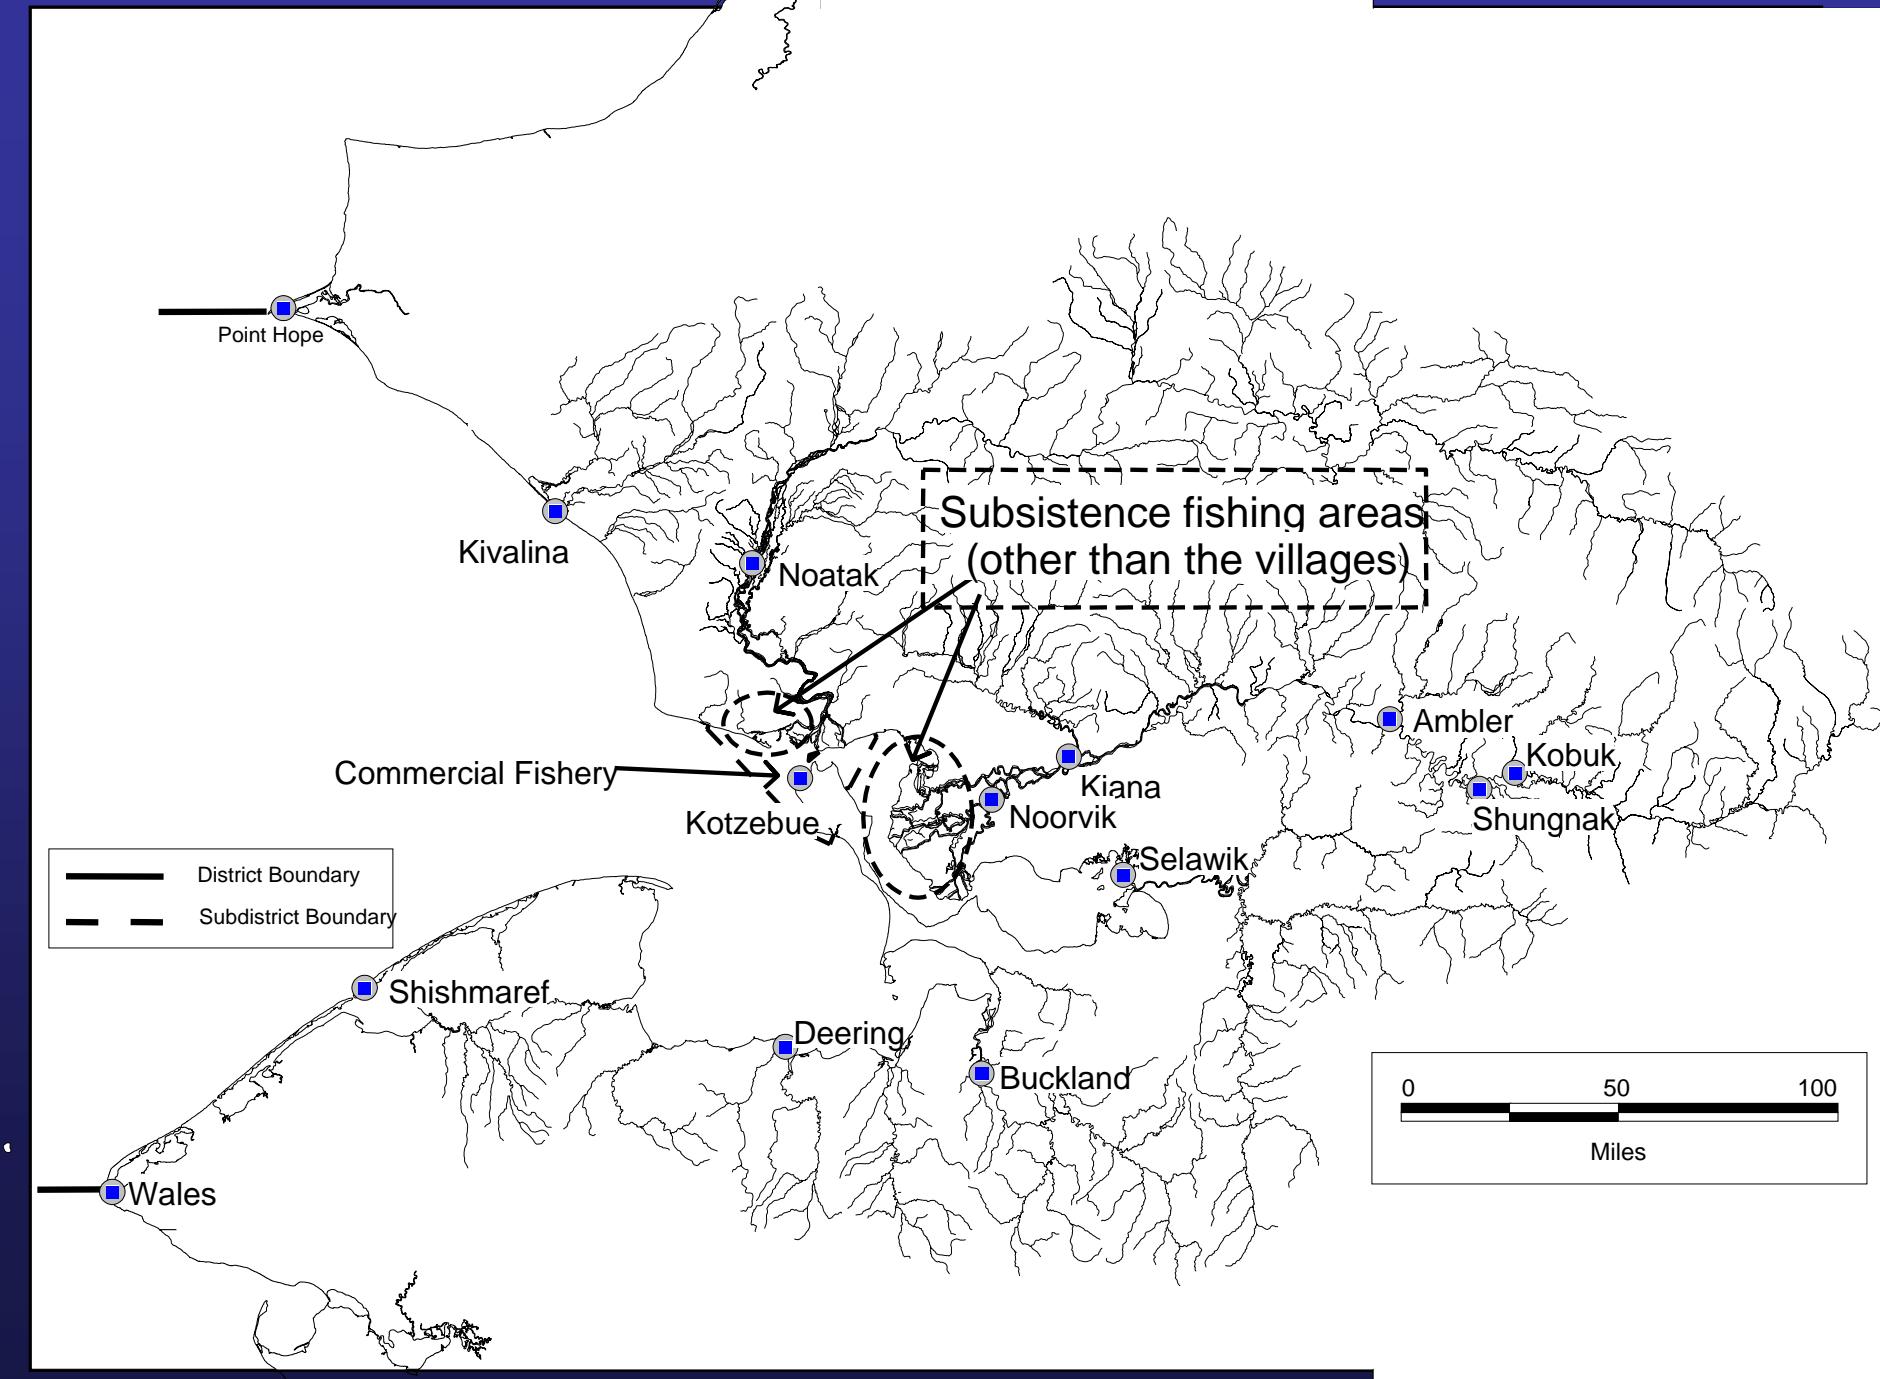

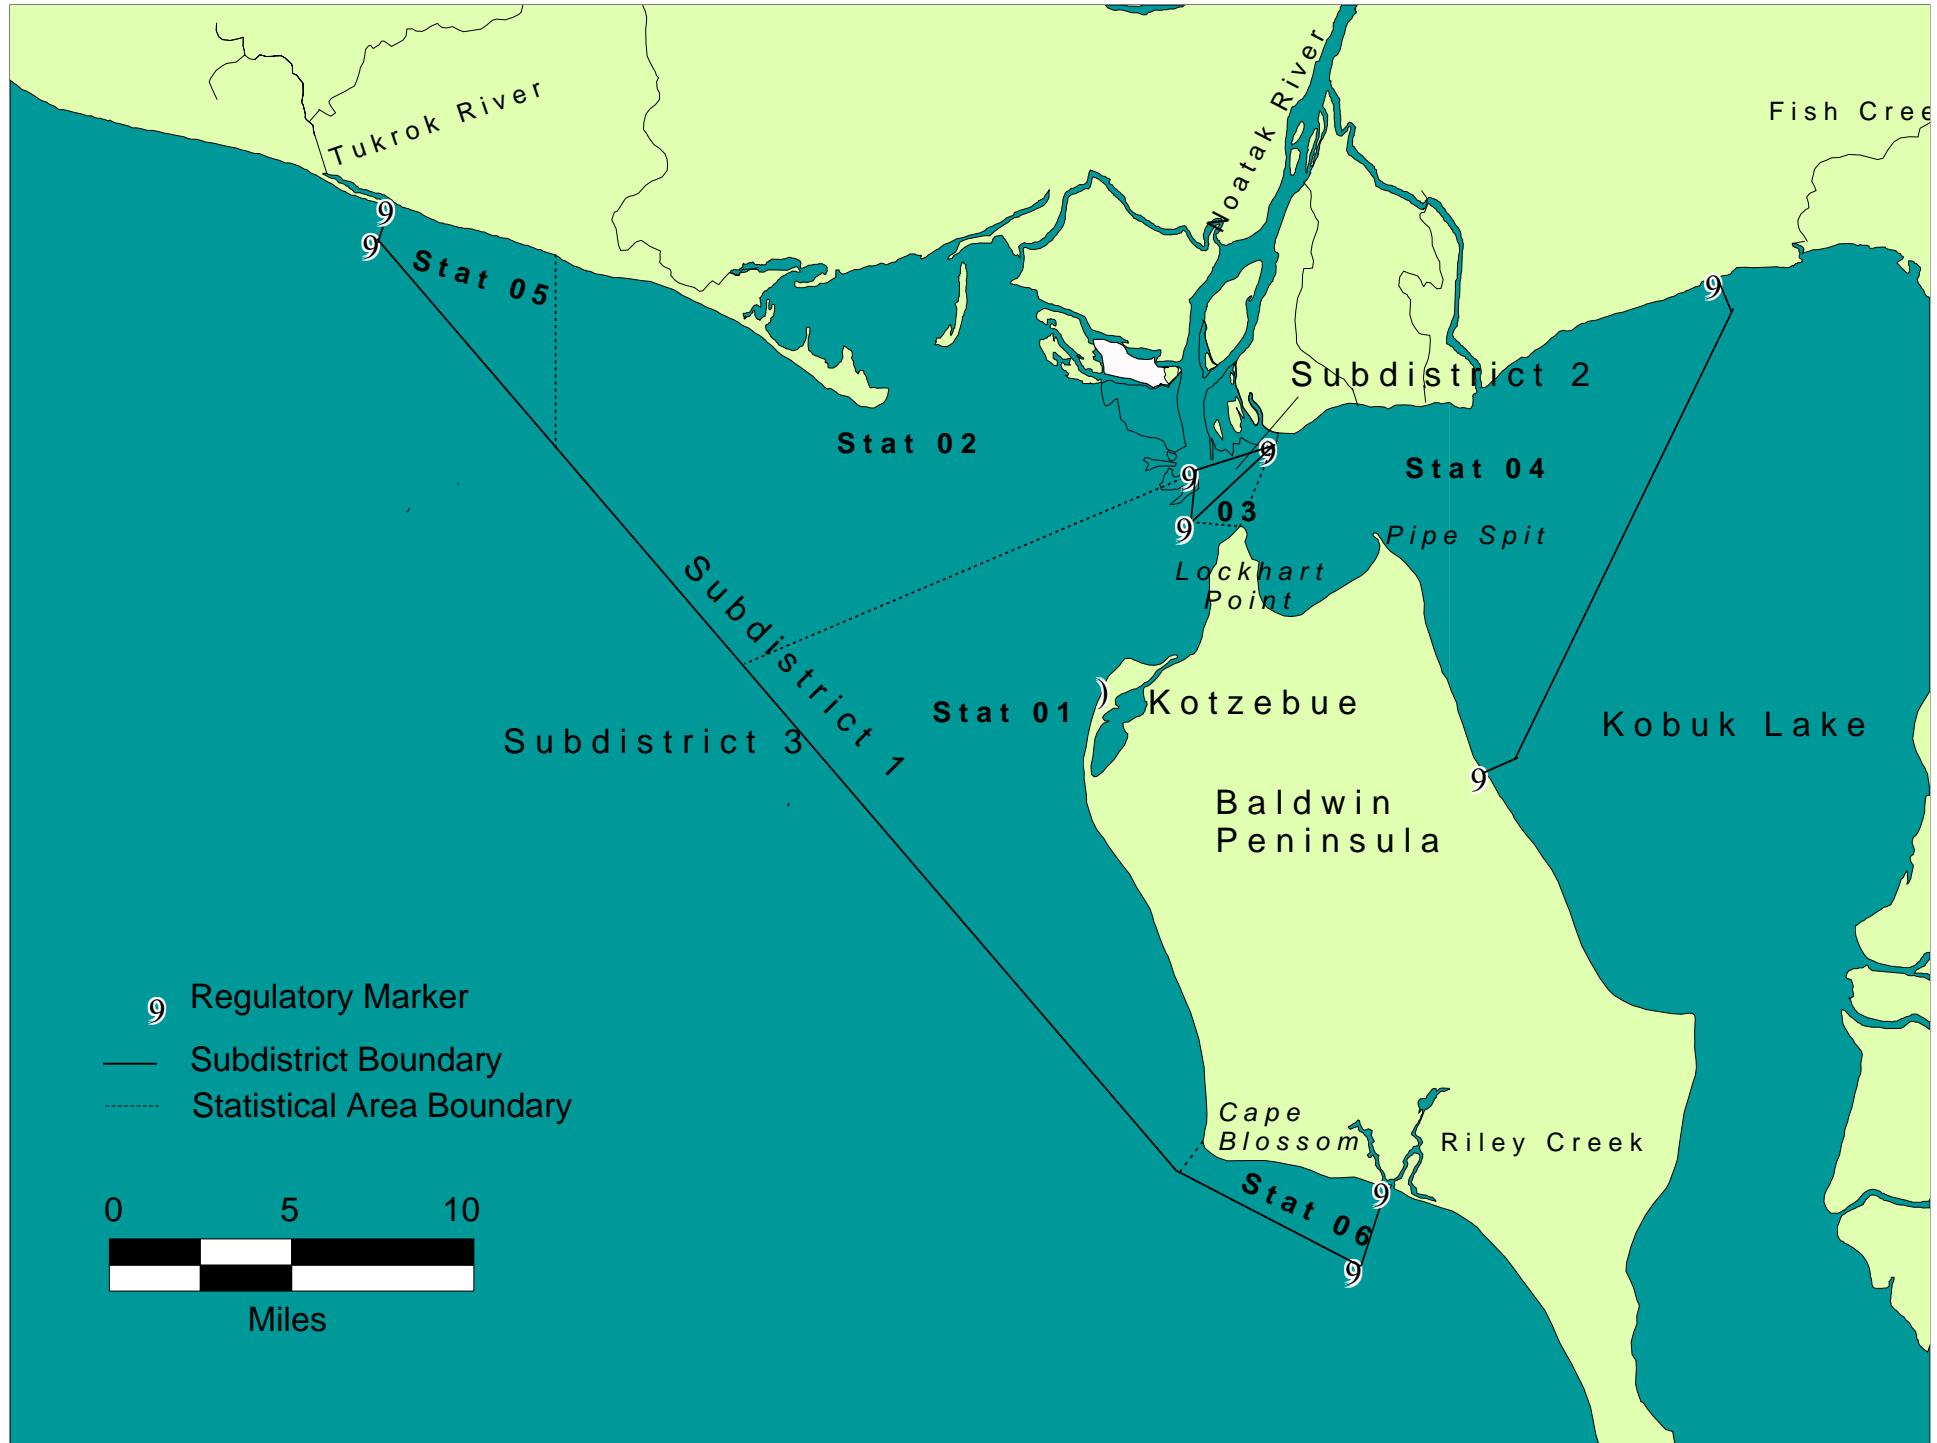

# North River Chum Salmon Escapement Counts 1996-2005

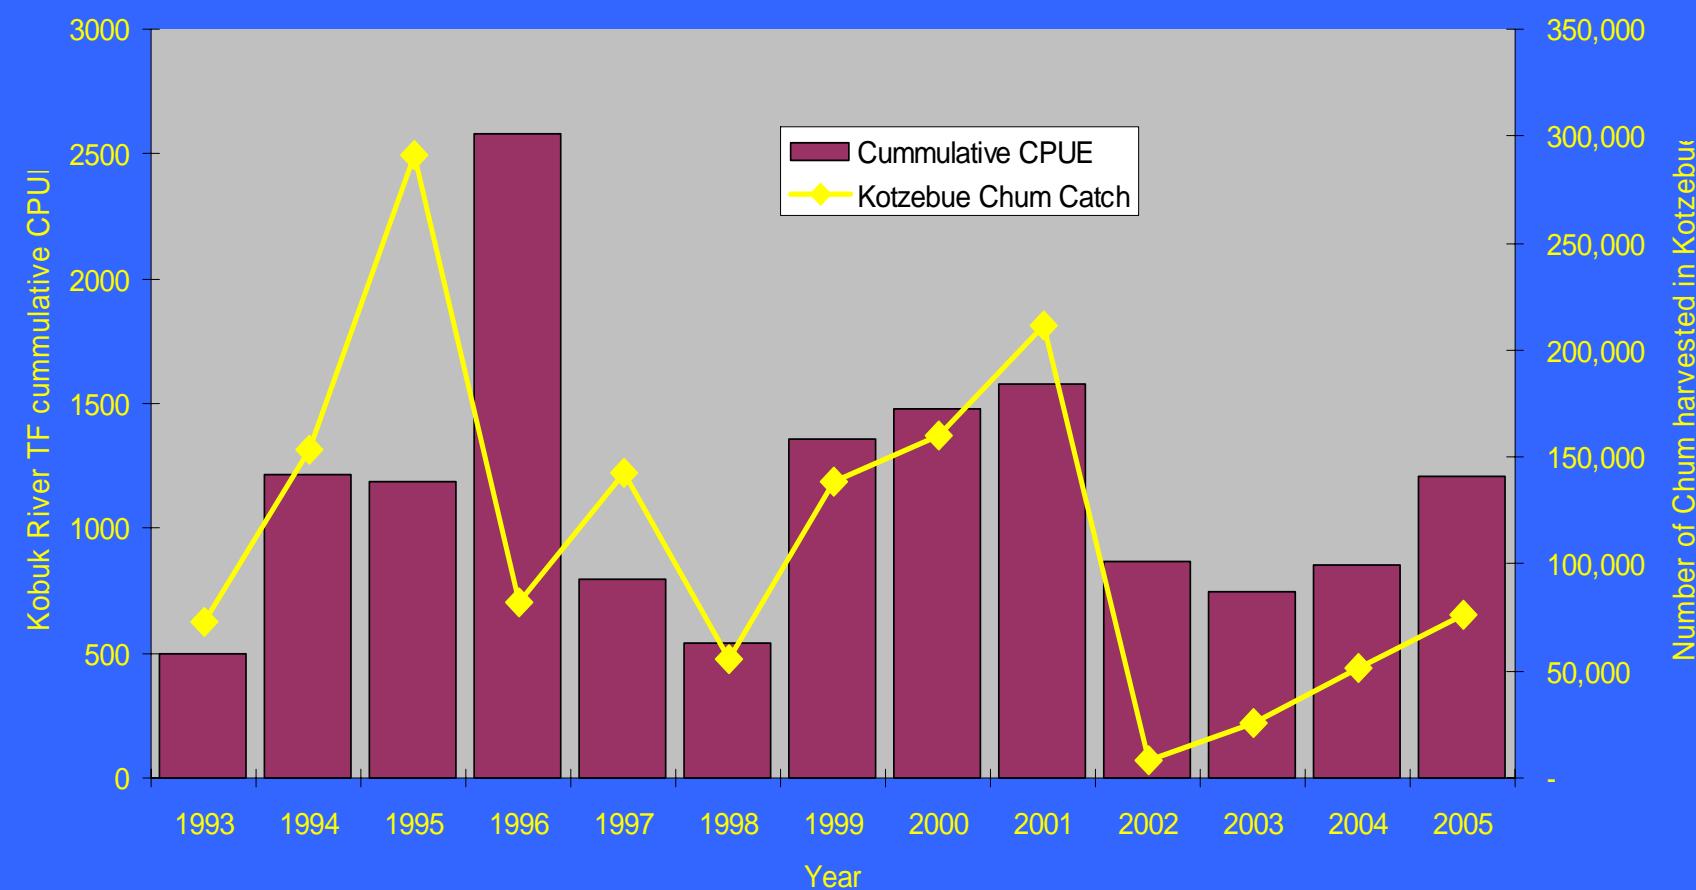

# AYK Region

Kobuk River Chum Test Fish cummulative CPUE and  
Kotzebue District commercial chum harvest, 1993 - 2004

# AYK Chum Salmon Stock Status

## Summary

- Northern Norton Sound chum stocks continue to be poor since 1989
- Yukon and Kuskokwim chum stocks had good runs/escapement in mid-1990s and poor runs of 1998-2001 from good escapements
- Yukon and Kuskokwim escapement goals met and runs generally improving starting in 2001-02 (summer chum) and 2003 (fall chum)
- Kuskokwim Area salmon stocks appear to be rebuilt
- Continued Yield Stock of Concern for Northern Norton Sound
- Lower Yukon summer chum stocks show lower productivity since 2000

# AYK Chinook Salmon Stock

## Status Summary

- Good runs/escapement in mid-1990s
- Poor runs of 1998-2001 from good escapements
- Escapement goals met and runs generally improving starting in 2001, except for Eastern Norton Sound
- Continued Yield Stock of Concerns for Yukon and Eastern Norton Sound
- Kuskokwim Area stocks appears to be rebuilt
