

Figure 9.1. Percent of adults aged 18 years and over who had 5 or more drinks in 1 day at least once in the past year: United States, 1997-2003

NOTES: The analyses excluded adults with unknown alcohol consumption (about 2% of respondents each year). CI is confidence interval. Beginning with the 2003 data, the National Health Interview Survey transitioned to weights derived from the 2000 census. In this Early Release, estimates for 2000-02 were recalculated using weights derived from the 2000 census. See "About This Release" and appendix tables in this release for more details.

DATA SOURCE: Sample Adult Core component of the 1997-2003 National Health Interview Surveys.

- In 2003, the percent of adults who had five or more drinks in 1 day at least once in the past year was 19.1% (95% CI=18.5%-19.8%).
- From 1997 through 2003, there was no significant trend in the annual estimates of adults who had five or more drinks in 1 day at least once in the past year.

Figure 9.2. Percent of adults aged 18 years and over who had 5 or more drinks in 1 day at least once in the past year, by age group and sex: United States, 2003

NOTE: The analyses excluded 895 adults (2.9%) with unknown alcohol consumption.

DATA SOURCE: Sample Adult Core component of the 2003 National Health Interview Survey.

- For both men and women, younger adults were more likely than older adults to have had five or more drinks in 1 day at least once in the past year.
- In all four age groups, men were more likely than women to have had five or more drinks in 1 day at least once in the past year.

Figure 9.3. Age-sex-adjusted percent of adults aged 18 years and over who had 5 or more drinks in 1 day at least once in the past year, by race/ethnicity: United States, 2003

NOTES: The analyses excluded 895 adults (2.9%) with unknown alcohol consumption. Estimates are age-sex-adjusted to the 2000 projected U.S. standard population using four age groups: 18-24 years, 25-44 years, 45-64 years, and 65 years and over.

DATA SOURCE: Sample Adult Core component of the 2003 National Health Interview Survey.

- The age-sex-adjusted percent of adults who had five or more drinks in 1 day at least once in the past year was 15.4% for Hispanic adults, 22.2% for non-Hispanic white adults, and 11.3% for non-Hispanic black adults.
- Non-Hispanic white adults were most likely to have had five or more drinks in 1 day at least once in the past year, followed by Hispanic adults and non-Hispanic black adults.
