Steps to estimate annual average number of employees for 2008:

Step 1:

previous page.

To calculate the annual average number of employees your establishment paid during 2008, you must calculate the total number of employees your establish employees your establish year 2008. Count all emp year and include full-time hourly workers. Note that weekly, etc.

Example:

Acme Construction paid its employees in 12 pay periods during 2008:

employees your establishment paid for all periods. Add the number of employees your establishment paid in every pay period during calendar year 2008. Count all employees that you paid at any time during the year and include full-time, part-time, temporary, seasonal, salaried, and hourly workers. Note that pay periods could be monthly, weekly, bi- weekly, etc.	-	
Step 2: Divide the total number of employees (from step 1) by the number of pay periods your establishment had in 2008. Be sure to count any pay periods when you had no (zero) employees.	<i>Example:</i> Acme Construction had 12 pay period 392 employees during these pay per 392 divided by 12 = 32.67	
Step 3: Round the answer you computed in step 2 to the next highest whole number. Write that number in the box for Section 1, question 2 on the	<i>Example:</i> Acme would round 32.67 to 33.	

Steps to estimate total hours worked by all employees for 2008:

Step 1: Determine the number of full-time employees at your establishment.	<i>Example:</i> Of Acme's 33 employees in 2008, 28 were full-time.
Step 2: Determine the number of hours generally worked by a full-time employee for a year. Multiply the number of full-time employees you calculated in step 1 by this number. This total number of full-time hours worked should exclude vacation, sick leave, holidays, and any other non-work time.	<i>Example:</i> Each of Acme's 28 full-time employees worked an average of 2,000 hours per year after excluding vacation, sick leave, holidays, and other non-work time. This works out to 40 hours per week for 50 weeks of the year.
	$\begin{array}{c} 28 \\ \underline{X \ 2,000} \\ 56,000 \\ \end{array} \text{ hours per year} \\ \hline 56,000 \\ \hline \end{array}$
Step 3: Determine the number of hours of overtime worked by your full-time employees.	<i>Example:</i> Acme's 28 full-time employees worked a total of 2,800 hours of overtime during 2008 and 56,000 regular hours. Acme's 5 part-time employees worked a total of 2,715
Determine the number of regular hours worked by your non-full-time employees. (Non-full-time employees include part-time, seasonal, and temporary employees.) Add these numbers to the number you calculated in step 2 above. This is the estimated number of hours worked by all of your employees – full-time and non-full-time – during 2008. Write this number in Section 1, question 3 on the previous page.	hours during 2008. 56,000 full-time hours from step 2 2,800 over time hours $\frac{+2,715}{61,515}$ part-time hours 61,515 total hours worked
