FLGND
Flag Indicating Records Included in Both Numerator and Denominator Files

This variable is included in the denominator file only, and identifies a record which is also included in the numerator file. Please note that not all infant deaths in the numerator file are represented in the denominator file, because some of the infants who died in 2001 were born in 2000.

1	...	Record also included in numerator file
Blank	...	Record not included in numerator file

Here ends the Denominator file. Documentation for the Mortality Section of the Numerator (Linked) file begins on the next page.

2001
Mortality Section of Numerator (Linked) Record

Locations 211-535 contain data from the Death Certificate. Residence items in the Denominator Record and in the natality section of the Numerator (linked) Record refer to the usual place of residence of the <u>Mother</u>; whereas in the mortality section of the Numerator (linked) Record, these items refer to the place of residence of the <u>Decedent</u>.

AGED
Age at Death in Days

The generated age at death in days is calculated from the date of death   on the death certificate minus the date of birth on the birth certificate   unless the reported age of death is less than 2 days, then the reported   age is used. If the exact date of birth and/or death is unknown, the age   is imputed.

Beginning in 1995, a record weight was added to the linked file to adjust for the approximately 2-3% of records each year which cannot be linked to their corresponding birth certificates (see introduction to this tape documentation for further details). These weights are used to produce all NCHS linked file tables, including Documentation tables 1-5 included in this tape documentation. The general format for this record weight is the number one followed by a decimal point and six decimal places as follows:
