

National Patterns of R&D Resources: 2006 Data Update

Detailed Statistical Tables | NSF 07-331 | September 2007

Brandon Shackelford,
Project Officer
Research and Development Statistics Program
(703) 292-4685

Introduction

National Patterns of R&D Resources describes and analyzes current patterns of research and development (R&D) in the United States, in relation to the historical record and the reported R&D levels of other industrialized countries. In years when the full report is not published, the Division of Science Resources Statistics makes available "data update tables" (like those provided below) to provide public access to the most current data.

Please Note: For trend comparisons, use only the historical data reported here. These tables incorporate the latest revisions to prior-year data, including recently revised estimates of R&D performance by nonprofit organizations. Do not use data published earlier.

Tables 1-10 contain NSF's most current information to date regarding R&D expenditures in the United States. The expenditure levels reported are broken out by:

- **R&D performer:** Federal government, industry, academia, nonprofit institutions, and federally funded research and development centers
- **Source of funds:** Federal government, nonfederal government, industry, academia, and nonprofit institutions
- **Character of work:** Basic research, applied research, and development
- **Monetary unit:** Current dollars or constant 2000 dollars
- **Geographic location:** Each of the 50 states and the District of Columbia

Table 11 provides the research and development expenditures as well as administrative information for the 36 U.S. federally funded research and development centers (FFRDCs) in fiscal year 2004.

Table 12 shows trends in federal and nonfederal R&D expenditures as a percent of total R&D.

Table 13 gives the relationship between gross domestic product and R&D support.

Table 14 supplies international R&D data pertaining to the major industrialized "group of seven" countries (the United States, Japan, Germany, France, the United Kingdom, Italy, and Canada). These data include total R&D in constant 2000 dollars (by purchasing power parity) and as a percent of national gross domestic product.

Researchers may wish to examine the previous report, *National Patterns of R&D Resources: 2003*, and forthcoming *National Patterns* reports for more extensive and updated analyses of historical R&D trends and for more detailed breakdowns of R&D expenditure (such as by academic fields of study or sector of private industry).

Explanations of methodological and technical aspects of how the R&D statistics have been obtained and compiled can be found in *The Methodology Underlying the Measurement of R&D Expenditures: 2000* and the forthcoming methodology report for 2003. As explained in the technical notes of these reports, the data presented here on R&D expenditures derive from information obtained from four NSF/SRS surveys: Research and Development in Industry: 2004; Academic Research and Development Expenditures: Fiscal Year 2005; Federal Funds for Research and Development: Fiscal Years 2004-06; and Survey of R&D Funding & Performance by Nonprofit Organizations: Fiscal Years 1996 and 1997.

Note that R&D expenditure levels from federal sources, presented here based on performer-reported surveys, differ from the federal R&D funding totals reported by the federal agencies that provide those funds. The difference in the federal R&D totals appears to be concentrated in the funding of industry by the Department of Defense. See *National Patterns of R&D Resources: 2003* and forthcoming *National Patterns* reports for detailed discussion and documentation of these differences.

Updates to Methodology

Prior to fiscal year 2001, R&D data for all federally funded research and development centers (FFRDCs) were collected on three different surveys: the Survey of R&D Expenditures at Universities and Colleges (for university-administered FFRDCs), the Survey of Industrial R&D (for industry-administered FFRDCs), and the Survey of Federal Funds for R&D (for nonprofit-administered FFRDCs). Beginning in fiscal year 2001, data for all 36 FFRDCs were collected on the Survey of R&D Expenditures at Universities and Colleges.

Two adjustments have been made to the presentation of R&D performed at universities and colleges (not including FFRDCs). For 1998 and later years, adjustments have been made to university R&D figures to eliminate double counting of funds passed through from one academic institution to another. In fiscal year 1998, \$479 million in passthrough funds were reported. For FY 2006, \$1,657 million in passed-through funds are estimated. The character of work estimation procedure for university and college R&D also was revised for 1998 and later years. Respondent corrections and the revised estimation procedure resulted in an increase of approximately 5 percentage points in the share of academic R&D characterized as basic research. These changes make data for 1998 and later years not directly comparable with data for 1997 and earlier years. Character-of-work estimates for industry have also been revised for 1998 and later years; hence these data are not directly comparable with data for 1997 and earlier years. Revisions to industry data resulted in a net decrease in the proportion of industry R&D classified as basic research.

Notes on How to Read the Tables

Tables 1 through 8 are arranged to allow for direct comparisons of R&D data organized in two ways: (1) by performer first and then by source of funds, or (2) by source of funds first and then by performer. The first case addresses the question, what type of organization performs the R&D, and for each performer, from what kinds of organizations does it receive its funding? The second case addresses the

question, What type of organization provides funding for R&D, and to which kinds of performers does each provide those funds?

For example, the upper left-hand corners of table 1 and table 5 are displayed below, which represent cases 1 and 2, respectively. In table 1, the column for the federal government as a performer, as defined in the first row, is not subdivided because the federal government is the only source of funds for federal intramural research.

Industry performance, in contrast, is subdivided by the two main sources of industrial performance: the federal government and industry's own funds.

TABLE 1. U.S. research and development expenditures, by performing sector and source of funds: 1953–2006

Performing sector:	Total	Federal	Industry			FFRDCS ^a	Industry		
			Total	Federal ^a	Industry ^d		Total	Federal	
Year	Source of funds:	Total	Federal	Total	Federal ^a	Industry ^d	Total	Total	Federal
1953		5,160	1,015	3,630	1,430	2,200	NA	273	149
1954		5,617	963	4,070	1,750	2,320	NA	301	165

TABLE 5. U.S. research and development expenditures, by source of funds and performing sector: 1953–2006

Year	Performing sector:	Total	Federal						Nonprofit FFRDCS ^d
			Total	Total	Federal	Industry ^b	FFRDCS ^b	U&C ^c	
Current									
1953		5,160	2,783	1,015	1,430	NA	149	131	58
1954		5,617	3,098	963	1,750	NA	165	161	61
									NA

In table 5, on the other hand, the federal government as a source defines a column in the first row, which is subdivided into several columns in the second row for the performers that receive those funds, such as the federal government itself and industry.

Tables 1-4 are structured the same, and tables 5-8 are structured the same; but tables 2-4 and 6-8 present data on basic research, applied research, and development expenditures, rather than total R&D expenditures (the sum of those three components).

NA = not available; included in figures for federal support to industry and federal support to nonprofit institutions.

FFRDC = federally funded research and development center.

U&C = universities and colleges.

^a Federal support for industry in 1953–54 did not separate federal support for industry and for industry FFRDCs; thus, figures for federal support to industry includes support to FFRDCs for those years.

^b Adjustments have been made to U&C R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable with data for 1997 and earlier years. For FY 1998, \$479 million in total passed-through funds and \$421 million in federal passed-through funds were reported. For FY 2006, \$1,657 million in total passed-through funds and \$1,475 million in federal passed-through funds are estimated.

^c Federal support for nonprofit FFRDCs in 1953–54 did not separate federal support for other nonprofits and for nonprofit FFRDCs; thus, the figure for federal support to other nonprofit institutions includes support to FFRDCs for those years.

^d Industry sources of funding for industry R&D expenditures include all nonfederal sources of funding for industry R&D expenditures.

^e Because of limitations in survey information, data on other government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance, e.g., other government support to other nonprofits is included in other nonprofit support for their own R&D.

NOTES: Technical notes explaining methodological issues of measurement are available on request. Data are based on annual reports by performers except for nonprofit sector. For trend comparisons, use only historical data reported here. Do not use data published earlier. Expenditures for industry and prior to 2001 for industry-administered FFRDCs are collected by calendar year. Expenditures for other performers are calendar-year approximations based on fiscal year data. Approximation equals 75% of amount reported in same fiscal year plus 25% of amount reported in subsequent fiscal year with the following exceptions. The fiscal year for academic performers generally begins July 1, not October 1, and prior to 1977 the federal fiscal year began on July 1, not October 1; thus calendar-year approximations for academic performers and for federal performers prior to 1977 equals 50% of amount reported in same fiscal year plus 50% of amount reported in subsequent fiscal year. Detail may not add to total because of rounding. Constant dollar estimates derived from unrounded data.

NA = not available; included in figures for federal support to industry and federal support to nonprofit institutions.

FFRDC = federally funded research and development center.

U&C = universities and colleges.

^a Character-of-work estimates for industry have been revised for 1998 and later years; data are not directly comparable with data for 1997 and earlier years.

^b Character-of-work estimates for industry FFRDCs for 1953–63 were not separated from federal support for industry; thus, figure for federal support to industry includes support to FFRDCs for those years.

^c For 1998 and later years, character-of-work estimation procedure has been revised, and adjustments have been made to U&C R&D to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable with data for 1997 and earlier years.

^d Character-of-work estimates for nonprofit FFRDCs for 1953–80 were not separated from federal support for other nonprofits; thus, figure for federal support to other nonprofit institutions includes support to FFRDCs for those years.

^e Industry sources of funds for industry R&D expenditures include all nonfederal sources of industry funds for R&D expenditures.

^f Because of limitations in survey information, data on other government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance, e.g., other government support to other nonprofits is included in other nonprofit support for their own R&D.

NOTES: Technical notes explaining methodological issues of measurement are available on request. Data are based on annual reports by performers except for nonprofit sector. For trend comparisons, use only historical data reported here. Do not use data published earlier. Expenditures for industry and prior to 2001 for industry-administered FFRDCs are collected by calendar year. Expenditures for other performers are calendar-year approximations based on fiscal year data. Approximation equals 75% of amount reported in same fiscal year plus 25% of amount reported in subsequent fiscal year with the following exceptions. The fiscal year for academic performers generally begins July 1, not October 1, and prior to 1977 the federal fiscal year began on July 1, not October 1; thus calendar-year approximations for academic performers and for federal performers prior to 1977 equals 50% of amount reported in same fiscal year plus 50% of amount reported in subsequent fiscal year. Detail may not add to total because of rounding. Constant dollar estimates derived from unrounded data.

NA = not available; included in figures for federal support to industry and federal support to nonprofit institutions.

FFRDC = federally funded research and development center.

U&C = universities and colleges.

^a Character-of-work estimates for industry have been revised for 1998 and later years; data are not directly comparable with data for 1997 and earlier years.

^b Character-of-work estimates for industry FFRDCs for 1953–63 were not separated from federal support for industry; thus, figure for federal support to industry includes support to FFRDCs for those years.

^c For 1998 and later years, character-of-work estimation procedure has been revised, and adjustments have been made to U&C R&D to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable with data for 1997 and earlier years.

^d Character-of-work estimates for nonprofit FFRDCs for 1953–80 were not separated from federal support for other nonprofits; thus, figure for federal support to other nonprofit institutions includes support to FFRDCs for those years.

^e Industry sources of funds for industry R&D expenditures include all nonfederal sources of industry funds for R&D expenditures.

^f Because of limitations in survey information, data on other government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance, e.g., other government support to other nonprofits is included in other nonprofit support for their own R&D.

NOTES: Technical notes explaining methodological issues of measurement are available on request. Data are based on annual reports by performers except for nonprofit sector. For trend comparisons, use only historical data reported here. Do not use data published earlier. Expenditures for industry and prior to 2001 for industry-administered FFRDCs are collected by calendar year. Expenditures for other performers are calendar-year approximations based on fiscal year data. Approximation equals 75% of amount reported in same fiscal year plus 25% of amount reported in subsequent fiscal year with the following exceptions. The fiscal year for academic performers generally begins July 1, not October 1, and prior to 1977 the federal fiscal year began on July 1, not October 1; thus calendar-year approximations for academic performers and for federal performers prior to 1977 equals 50% of amount reported in same fiscal year plus 50% of amount reported in subsequent fiscal year. Detail may not add to total because of rounding. Constant dollar estimates derived from unrounded data.

TABLE 4. U.S. development expenditures, by performing sector and source of funds: 1953–2006

Performing sector:	Total	Federal	Industry			U&C ^c			U&C			Other nonprofit			Nonprofit			
			FFRDCs ^b			Other			FFRDCs			Other nonprofit			FFRDCs ^d			
Year	Source of funds:	Total	Federal	Total	Federal ^b	Industry ^e	Total	Federal	government ^f	Industry	U&C	nonprofit	Total	Total	Federal ^d	Industry	nonprofit	Total
2005 preliminary	167,906	10,667	150,108	13,963	136,145	802	1,579	746	148	114	415	156	1,863	1,782	410	214	1,158	1,106
2006 preliminary	174,275	10,215	156,898	13,963	142,935	711	1,636	773	153	116	431	164	1,890	1,825	344	225	1,256	1,100

NA = not available; included in figures for federal support to industry and federal support to nonprofit institutions.

FFRDC = federally funded research and development center.

U&C = universities and colleges.

^a Character-of-work estimates for industry have been revised for 1998 and later years; data are not directly comparable with data for 1997 and earlier years.

^b Character-of-work estimates for industry FFRDCs for 1953–63 were not separated from federal support for industry; thus, figure for federal support to industry includes support to FFRDCs for those years.

^c For 1998 and later years, character-of-work estimation procedure has been revised, and adjustments have been made to U&C R&D to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable with data for 1997 and earlier years.

^d Character-of-work estimates for nonprofit FFRDCs for 1953–80 were not separated from federal support for other nonprofits; thus, figure for federal support to other nonprofit institutions includes support to FFRDCs for those years.

^e Industry sources of funds for industry R&D expenditures include all nonfederal sources of industry funds for R&D expenditures.

^f Because of limitations in survey information, data on other government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance, e.g., other government support to other nonprofits is included in other nonprofit support for their own R&D.

NOTES: Technical notes explaining methodological issues of measurement are available on request. Data are based on annual reports by performers except for nonprofit sector. For trend comparisons, use only historical data reported here. Do not use data published earlier. Expenditures for industry and prior to 2001 for industry-administered FFRDCs are collected by calendar year. Expenditures for other performers are calendar-year approximations based on fiscal year data. Approximation equals 75% of amount reported in same fiscal year plus 25% of amount reported in subsequent fiscal year with the following exceptions. The fiscal year for academic performers generally begins July 1, not October 1, and prior to 1977 the federal fiscal year began on July 1, not October 1; thus calendar-year approximations for academic performers and for federal performers prior to 1977 equals 50% of amount reported in same fiscal year plus 50% of amount reported in subsequent fiscal year. Detail may not add to total because of rounding. Constant dollar estimates derived from unrounded data.

NA=not available.

FFRDC=federally funded research and development center.

U&C=universities and colleges.

^a Because of limitations in survey information, data on other government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance, e.g., other government support to other nonprofits is included in other nonprofit support for their own R&D.

^b Federal support for industry in 1953–54 did not separate federal support for industry and for industry FFRDCs; thus, figures for federal support to industry includes support to FFRDCs for those years.

^c Adjustments have been made to U&C R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable with data for 1997 and earlier years. For FY 1998, \$479 million in total passed-through funds and \$421 million in federal passed-through funds were reported. For FY 2006, \$1,657 million in total passed-through funds and \$1,475 million in federal passed-through funds are estimated.

^d Federal support for nonprofit FFRDCs in 1953–54 did not separate federal support for other nonprofits and for nonprofit FFRDCs; thus, the figure for federal support to other nonprofit institutions includes support to FFRDCs for those years.

^e Industry sources of funding for industry R&D expenditures include all nonfederal sources of funding for industry R&D expenditures.

NOTES: Technical notes explaining methodological issues of measurement are available on request. Data are based on annual reports by performers except for nonprofit sector. For trend comparisons, use only historical data reported here. Do not use data published earlier. Expenditures for industry and prior to 2001 for industry-administered FFRDCs are collected by calendar year. Expenditures for other performers are calendar-year approximations based on fiscal year data. Approximation equals 75% of amount reported in same fiscal year plus 25% of amount reported in subsequent fiscal year with the following exceptions. The fiscal year for academic performers generally begins July 1, not October 1, and prior to 1977 the federal fiscal year began on July 1, not October 1; thus calendar-year approximations for academic performers and for federal performers prior to 1977 equals 50% of amount reported in same fiscal year plus 50% of amount reported in subsequent fiscal year. Detail may not add to total because of rounding. Constant dollar estimates derived from unrounded data.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics (NSF/SRS), *Research and Development in Industry 2004* (Arlington, VA, forthcoming); NSF/SRS, *Academic Research and Development Expenditures: Fiscal Year 2005* (Arlington, VA, forthcoming); NSF/SRS, *Federal Funds for Research and Development: Fiscal Years 2004, 2005, and 2006* (Arlington, VA, forthcoming); and NSF/SRS, *Survey of Research and Development Funding and Performance by Nonprofit Organizations: FY 1996–97*.

NA=not available.

FFRDC=federally funded research and development center.

U&C=universities and colleges.

^aBecause of limitations in survey information, data on other government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance, e.g., other government support to other nonprofits is included in other nonprofit support for their own R&D.

^bCharacter-of-work estimates for industry have been revised for 1998 and later years; data are not directly comparable with data for 1997 and earlier years. Character-of-work estimates for industry FFRDCs for 1953–63 were not separated from federal support for industry; thus, figure for federal support to industry includes support to FFRDCs for those years.

^cCharacter-of-work estimates for industry FFRDCs for 1953–63 were not separated from federal support for industry; thus, figure for federal support to industry includes support to FFRDCs for those years.

^dFor 1998 and later years, character-of-work estimation procedure has been revised, and adjustments have been made to U&C R&D to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable with data for 1997 and earlier years.

^eCharacter-of-work estimates for nonprofit FFRDCs for 1953–80 were not separated from federal support for other nonprofits; thus, figure for federal support to other nonprofit institutions includes support to FFRDCs for those years.

^fIndustry sources of funds for industry R&D expenditures include all nonfederal sources of funds for industry R&D expenditures. Character-of-work estimates for industry have been revised for 1998 and later years; data are not directly comparable with data for 1997 and earlier years.

NOTES: Technical notes explaining methodological issues of measurement are available on request. Data are based on annual reports by performers except for nonprofit sector. For trend comparisons, use only historical data reported here. Do not use data published earlier. Expenditures for industry and prior to 2001 for industry-administered FFRDCs are collected by calendar year. Expenditures for other performers are calendar-year approximations based on fiscal year data. Approximation equals 75% of amount reported in same fiscal year plus 25% of amount reported in subsequent fiscal year with the following exceptions. The fiscal year for academic performers generally begins July 1, not October 1, and prior to 1977 the federal fiscal year began on July 1, not October 1; thus calendar-year approximations for academic performers and for federal performers prior to 1977 equals 50% of amount reported in same fiscal year plus 50% of amount reported in subsequent fiscal year. Detail may not add to total because of rounding. Constant dollar estimates derived from unrounded data.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics (NSF/SRS), *Research and Development in Industry 2004* (Arlington, VA, forthcoming); NSF/SRS, *Academic Research and Development Expenditures: Fiscal Year 2005* (Arlington, VA, forthcoming); NSF/SRS, *Federal Funds for Research and Development: Fiscal Years 2004, 2005, and 2006* (Arlington, VA, forthcoming); and NSF/SRS, *Survey of Research and Development Funding and Performance by Nonprofit Organizations: FY 1996–97*.

NA=not available.

FFRDC=federally funded research and development center.

U&C=universities and colleges.

^a Because of limitations in survey information, data on other government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance, e.g., other government support to other nonprofits is included in other nonprofit support for their own R&D.

^b Character-of-work estimates for industry have been revised for 1998 and later years; data are not directly comparable with data for 1997 and earlier years. Character-of-work estimates for industry FFRDCs for 1953–63 were not separated from federal support for industry; thus, figure for federal support to industry includes support to FFRDCs for those years.

^c Character-of-work estimates for industry FFRDCs for 1953–63 were not separated from federal support for industry; thus, figure for federal support to industry includes support to FFRDCs for those years.

^d For 1998 and later years, character-of-work estimation procedure has been revised, and adjustments have been made to U&C R&D to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable with data for 1997 and earlier years.

^e Character-of-work estimates for nonprofit FFRDCs for 1953–80 were not separated from federal support for other nonprofits; thus, figure for federal support to other nonprofit institutions includes support to FFRDCs for those years.

^f Industry sources of funds for industry R&D expenditures include all nonfederal sources of funds for industry R&D expenditures. Character-of-work estimates for industry have been revised for 1998 and later years; data are not directly comparable with data for 1997 and earlier years.

NOTES: Technical notes explaining methodological issues of measurement are available on request. Data are based on annual reports by performers except for nonprofit sector. For trend comparisons, use only historical data reported here. Do not use data published earlier. Expenditures for industry and prior to 2001 for industry-administered FFRDCs are collected by calendar year. Expenditures for other performers are calendar-year approximations based on fiscal year data. Approximation equals 75% of amount reported in same fiscal year plus 25% of amount reported in subsequent fiscal year with the following exceptions. The fiscal year for academic performers generally begins 1 July, not 1 October, and prior to 1977 the federal fiscal year began on 1 July, not 1 October; thus calendar-year approximations for academic performers and for federal performers prior to 1977 equals 50% of amount reported in same fiscal year plus 50% of amount reported in subsequent fiscal year.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics (NSF/SRS), *Research and Development in Industry 2004* (Arlington, VA, forthcoming); NSF/SRS, *Academic Research and Development Expenditures: Fiscal Year 2005* (Arlington, VA, forthcoming); NSF/SRS, *Federal Funds for Research and Development: Fiscal Years 2004, 2005, and 2006* (Arlington, VA, forthcoming); and NSF/SRS, *Survey of Research and Development Funding and Performance by Nonprofit Organizations: FY 1996–97*.

NA=not available.

FFRDC=federally funded research and development center

U&C=universities and colleges.

^a Because of limitations in survey information, data on other government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance, e.g., other government support to other nonprofits is included in other nonprofit support for their own R&D.

^b Character-of-work estimates for industry have been revised for 1998 and later years; data are not directly comparable with data for 1997 and earlier years. Character-of-work estimates for industry FFRDCs for 1953–63 were not separated from federal support for industry; thus, figure for federal support to industry includes support to FFRDCs for those years.

^c Character-of-work estimates for industry FFRDCs for 1953–63 were not separated from federal support for industry; thus, figure for federal support to industry includes support to FFRDCs for those years.

^d For 1998 and later years, character-of-work estimation procedure has been revised, and adjustments have been made to U&C R&D to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable with data for 1997 and earlier years.

^e Character-of-work estimates for nonprofit FFRDCs for 1953–80 were not separated from federal support for other nonprofits; thus, figure for federal support to other nonprofit institutions includes support to FFRDCs for those years.

^f Industry sources of funds for industry R&D expenditures include all nonfederal sources of funds for industry R&D expenditures. Character-of-work estimates for industry have been revised for 1998 and later years; data are not directly comparable with data for 1997 and earlier years.

NOTES: Technical notes explaining methodological issues of measurement are available on request. Data are based on annual reports by performers except for nonprofit sector. For trend comparisons, use only historical data reported here. Do not use data published earlier. Expenditures for industry and prior to 2001 for industry-administered FFRDCs are collected by calendar year. Expenditures for other performers are calendar-year approximations based on fiscal year data. Approximation equals 75% of amount reported in same fiscal year plus 25% of amount reported in subsequent fiscal year with the following exceptions. The fiscal year for academic performers generally begins July 1, not October 1, and prior to 1977 the federal fiscal year began on July 1, not October 1; thus calendar-year approximations for academic performers and for federal performers prior to 1977 equals 50% of amount reported in same fiscal year plus 50% of amount reported in subsequent fiscal year. Detail may not add to total because of rounding. Constant dollar estimates derived from unrounded data.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics (NSF/SRS), *Research and Development in Industry 2004* (Arlington, VA, forthcoming); NSF/SRS, *Academic Research and Development Expenditures: Fiscal Year 2005* (Arlington, VA, forthcoming); NSF/SRS, *Federal Funds for Research and Development: Fiscal Years 2004, 2005, and 2006* (Arlington, VA, forthcoming); and NSF/SRS, *Survey of Research and Development Funding and Performance by Nonprofit Organizations: FY 1996–97*.

na=not applicable; D=data withheld to avoid disclosing operations of individual companies; FFRDC=federally funded research and development center; GSP=gross state product;

R&D=research and development; U&C=universities and colleges.

^aState-level university R&D data have not been adjusted to eliminate double counting of funds passed through from one academic institution to another. At the national level, funds passed through to educational subrecipients account for 2.8% of total R&D expenditures reported by universities and colleges in FY2003.^bR&D intensity is ratio of total R&D performed in a state to GSP.^cNonfederal sources of funds for R&D expenditures reported by FFRDCs in FY2003 included state and local governments (\$31 million), industry (\$141 million), FFRDC institutional funds (\$140 million), and other sources (\$133 million).^dIndustry sources of funds for industry R&D expenditures include all nonfederal sources of funds of industry R&D expenditures.^eOther sources of funds for other nonprofit institutions were unavailable by state. For 2003, total other nonprofit performance is estimated at \$12.0 billion. Industry provided an estimated \$1.1 billion to other nonprofit sector, and other nonprofit institutions provided an estimated \$5.1 billion.^fState totals differ from U.S. totals reported elsewhere for four reasons: some R&D expenditures cannot be allocated to 1 of 50 states or District of Columbia; nonfederal sources of other nonprofit R&D expenditures could not be allocated by state; state-level U&C data have not been adjusted to eliminate double counting of funds passed through from one academic institution to another; and state-level R&D data are not converted from fiscal years to calendar years.

NOTES: Industry R&D data refer to calendar years; other R&D data refer to fiscal years but may serve as approximations to calendar-year data. "Other and unknown" category reflects reported data that could not be assigned to 1 of the 50 states or the District of Columbia. Detail may not add to total because of rounding.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics (NSF/SRS), Survey of Industrial Research and Development, 2003; NSF/SRS, Survey of Research and Development Expenditures at Universities and Colleges: FY 2003; and NSF/SRS, Survey of Federal Funds for Research and Development: FY 2003. GSP data are from the U.S. Bureau of Economic Analysis, <http://www.bea.gov/bea/regional/gsp.htm>.

Other and unknown	7,169	na	0	0	0	0	7,169	44	7,125	0	0	0	0	0	0	0	na	na	na	na	

na=not applicable; D=data withheld to avoid disclosing operations of individual companies; FFRDC=federally funded research and development center; GDP=gross domestic product;

R&D=research and development; U&C=universities and colleges.

^aState-level U&C R&D data have not been adjusted to eliminate double counting of funds passed through from one academic institution to another. At the national level, funds passed through to educational subrecipients account for 2.9% of total R&D expenditures reported by universities and colleges in FY2004.

^bR&D intensity is ratio of total R&D performed in a state to its GDP.

^cNonfederal sources of funds for R&D expenditures reported by FFRDCs in FY2004 included state and local governments (\$37 million), industry (\$134 million), FFRDC institutional funds (\$34 million), and other sources (\$149 million).

^dIndustry sources of funds for industry R&D expenditures include all nonfederal sources of funds for industry R&D expenditures.

^eOther sources of funds for other nonprofit institutions were unavailable by state. For 2004, total other nonprofit performance is estimated at \$12.8 billion. Industry provided an estimated \$1.2 billion to other nonprofit sector, and other nonprofit institutions provided an estimated \$6.0 billion.

^fState totals differ from U.S. totals reported elsewhere for four reasons: some R&D expenditures cannot be allocated to 1 of 50 states or District of Columbia; nonfederal sources of other nonprofit R&D expenditures could not be allocated by state; state-level U&C data have not been adjusted to eliminate double counting of funds passed through from one academic institution to another; and state-level R&D data are not converted from fiscal years to calendar years.

NOTES: Industry R&D data refer to calendar years; other R&D data refer to fiscal years but may serve as approximations to calendar-year data. "Other and unknown" category reflects reported data that could not be assigned to 1 of the 50 states or the District of Columbia. Detail may not add to total because of rounding.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics (NSF/SRS), Survey of Industrial Research and Development, 2004; NSF/SRS, Survey of Research and Development Expenditures at Universities and Colleges: FY 2004; and NSF/SRS, Survey of Federal Funds for Research and Development: FY 2004. GDP data are from the U.S. Bureau of Economic Analysis, <http://www.bea.gov/bea/regional/gsp.htm>.

NA=not available; GDP=gross domestic product; OECD=Organisation for Economic Co-operation and Development.

^a Data on Japanese research and development in 1996 and later years may not be consistent with data in earlier years because of changes in methodology.

^b Data for 1981–90 are for West Germany.

^c Conversions of foreign currencies to U.S. dollars are calculated with each country's GDP implicit price deflator and OECD purchasing power parity exchange rates.
