Lessons Learned from Disaster Recovery in Tsunami-Affected Countries

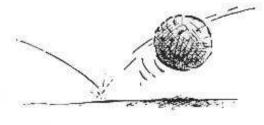

Resilience

the inverse of

Absorb shock

Bounce back

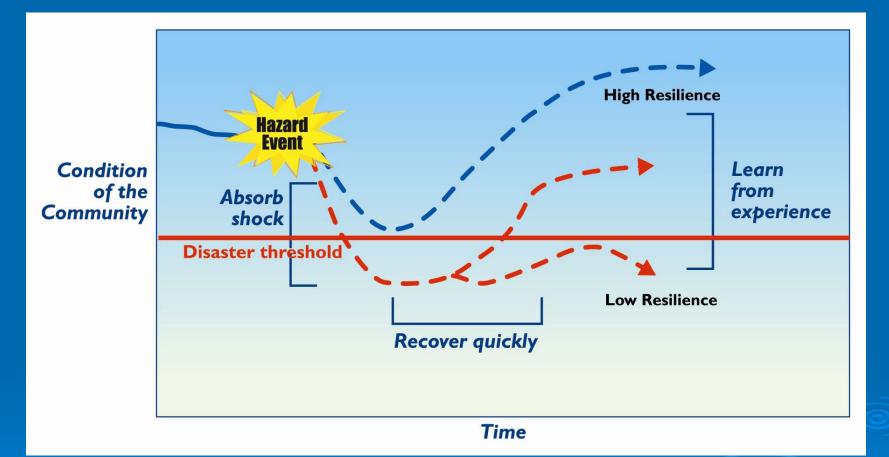

Vulnerability

Learning/adaptation

Goals of Resilient Coastal Communities

"If we focus on needs and vulnerabilities, we remain locked in the logic of repetitive responses that fail to nurture the car acities for resilience contained deep within every community." (IF RC 2004)

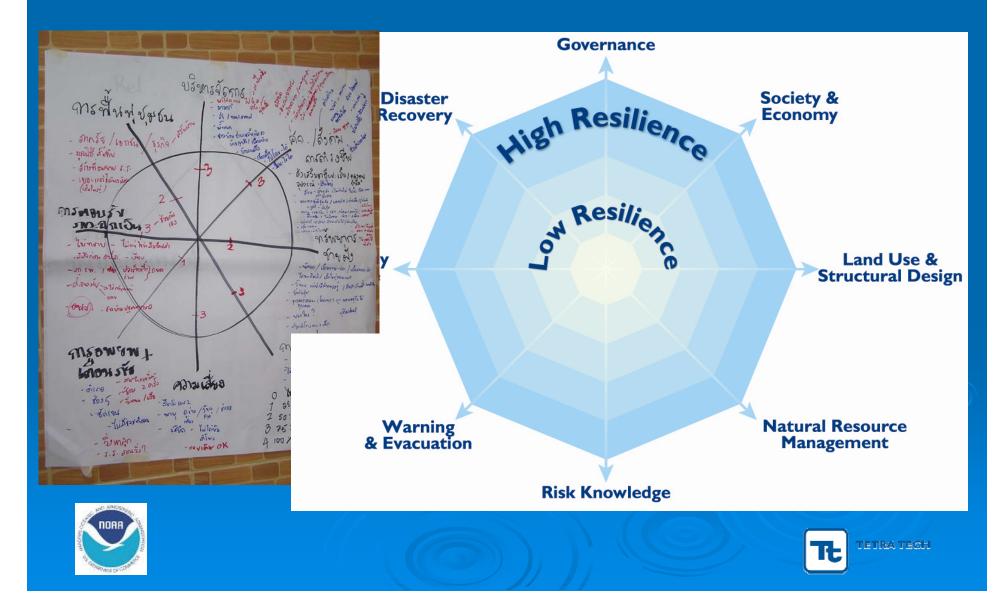

Domains in Practice

Resilience Elements

Monitoring and Evaluation

Plans and programs are adapted based on experience and lessons learned

Disaster

Recovery

Information Management

Information and data needed for plan development and adaption are available and shared and accessible to relevant stakeholders

Resilience Cycle

Implementation

Implementation activities are conducted and funded collaboratively to reflect priority chronic and episodic hazards

Emergency Response

Disaste

Warning and Evacuation

lazari

Even

Planning

Planning efforts are community-based, place-based, and culture-based and developed through multisectoral collaboration to address chronic and episodic hazards

ETRA TECH

Τŧ

Questions to Consider in Planning for Resilience

Do community development plans address chronic hazards as well as disaster events? Do community development plans incorporate measures to protect natural resources?

Do hazard mitigation plans provide placebased risk information useful for community planning? Community Development

Do natural resource management plans consider measures to sustain livelihoods?

Resilience

Disaster Management Coastal Management

Do hazard mitigation and disaster recovery plans protect sensitive habitats? Do natural resource management plans incorporate measures to preserve open space and restore habitats for hazard mitigation?
