# Overview Dashboard

This displays key graphs and tables that provide an overview of the entire report. When viewing through the on-demand interface, you can click on the title of a graph or table to navigate to the corresponding page.

**Visits Trend**

**Hits Trend**

**Visitor Summary**

Visitors	2,932
Visitors Who Visited Once	2,521
Visitors Who Visited More Than Once	411
Average Visits per Visitor	2.29

**Page Views Trend**

**Visit Summary**

Visits	6,723
Average per Day	216
Average Visit Duration	00:15:48
Median Visit Duration	00:05:51
International Visits	20.41%
Visits of Unknown Origin	0.00%
Visits from Your Country: United States (US)	79.59%

**Hit Summary**

Successful Hits for Entire Site	18,569
Average Hits per Day	599
Home Page Hits	415

**Page View Summary**

Page Views	10,022
Average per Day	323
Average Page Views per Visit	1.49

# Marketing Dashboard

This dashboard summarizes important information related to online marketing activity.

## Visits by Referring Site

## Onsite Ad Impressions by Visits Trend

No data is available for this graph.

## Active Visits Trend

# Visitors Dashboard

This displays key graphs and tables that provide an overview of the Visitors chapter. When viewing through the on-demand interface, you can click on the title of a graph or table to navigate to the corresponding page.

# Activity Dashboard

This displays key graphs and tables that provide an overview of the Activity chapter. When viewing through the on-demand interface, you can click on the title of a graph or table to navigate to the corresponding page.

**Hits by Hour of the Day**

**Least Active Summary**

Least Active Date	3/28/09
Number of Hits on Least Active Date	360
Least Active Day of the Week	Saturday
Least Active Hour of the Day	06:00-06:59

**Activity on Weekdays Summary**

Total Hits Weekdays	14,040
Total Visits Weekdays	5,137
Average Number of <B>Visits</B> per day on Weekdays	233
Average Number of <B>Hits</B> per day on Weekdays	638

**Hits by Day of the Week**

**Activity on Weekends Summary**

Total Hits Weekend	4,529
Total Visits Weekend	1,586
Average Number of <B>Visits</B> per Weekend	317
Average Number of <B>Hits</B> per Weekend	905

**Most Active Summary**

Most Active Date	3/16/09
Number of Hits on Most Active Date	927
Most Active Day of the Week	Monday
Most Active Hour of the Day	14:00-14:59

## Pages - Help Card

### Column Definitions

#### Pages

Any displayed page. You can specify for each profile the types of files that qualify as a page. These settings can be changed by the WebTrends administrator.

#### Visits

Number of visits to this page. A visit is a series of actions that begins when a visitor views the first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

#### Views

Number of times this page was viewed by visitors.

#### Average Time Viewed

Average length of time the specified page was viewed. (The format is hh:mm:ss - hours:minutes:seconds.)

#### Average Time to Serve

Average amount of time (in milliseconds) it took to serve each document during the specified time interval. The time to serve spans from the time the server got a page request until it transmitted all the data.

**Note:** Zero values in this column probably indicates that your web server is not logging Time to Serve information.

---

### Report Descriptions

Pages with good content and design are more likely to attract visitors and be revisited. Less popular pages on a site can be made more appealing by improving the content or incorporating design elements similar to that on the more important pages. Always remember that people are far more interested in content than in design, and average view times can help determine which content is most important to your visitors.

# Content Groups

This report identifies the most popular groups of web site pages and how often they were visited.

## Content Groups by Visits Trend

No data is available for this graph.

## Content Groups by Visits

No data is available for this graph.

## Content Groups

No data is available for this table.

## Content Groups - Help Card

### Column Definitions

#### Content Group

A defined group of web pages with specific things in common, such as the same types of products, services, or information.

#### Visits

Number of visits where the visitor viewed at least one page in the specified content group. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

#### Hits

Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.

---

### **Report Descriptions**

The information on this page can show you which content groups were most popular. This will reveal the reasons people visit your web site, and what is most interesting and least interesting to them.

# Directories

This report lists the most commonly accessed directories on your web site. This information can help determine the types of data most often requested.

**Directories by Visits Trend**

### Directories - Help Card

#### Column Definitions

##### Path to Directory

The full URL path to the directory being analyzed.

##### Visits

Number of visits to pages within the specified directory. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

##### Hits

Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.

##### Kbytes Transferred

Number of kilobytes of data transferred by the server from the specified directory to your visitors.

#### Report Descriptions

This report indicates the content visitors are most interested in. Use this information to determine which content areas to develop further, which areas to focus on less, and how you can arrange your content most effectively. If the table is sorted by kilobytes of data transferred, this page reveals what kind of data the server spends the most time transferring, and may suggest different ways to organize your data, or different ways to distribute the server load if you have more than one server.

# Files Dashboard

This displays key graphs and tables that provide an overview of the Files chapter. When viewing through the on-demand interface, you can click on the title of a graph or table to navigate to the corresponding page.

## Downloaded Files - Help Card

### Column Definitions

#### Files

The path and filename of the file being analyzed.

#### Downloads

Number of times the specified file was downloaded by a visitor. If an error occurred during a transfer, the transfer is not counted. Note that downloaded PDF files may cause an inflated count. See KnowledgeBase article NETIQKB2494 for more information.

#### Visits

Number of visits that accessed the specified files. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

### Report Descriptions

This information shows you the most popular downloadable files on your web site. Files that don't appear on the list, or appear low on the list, may require maintenance such as decreasing the file size, improving link placement, or elimination to make room for more popular content.

# Accessed File Types

This report identifies the types of files accessed on your site and the total number of kilobytes of data transferred for each file type. Cached requests and erred hits are excluded from the totals.

**Accessed File Types by Files**

**Accessed File Types**

File Type	Files	% Files	Kbytes Transferred
1. pdf	7,654	46.25%	1,403,680
2. html	4,983	30.11%	122,378
3. htm	3,730	22.54%	58,096
4. doc	106	0.64%	9,077
5. ppt	77	0.47%	321,701
<b>Total</b>	<b>16,550</b>	<b>100.00%</b>	<b>1,914,930</b>

items 1-5 of 5

## Accessed File Types - Help Card

### Column Definitions

#### File Type

Identifies types of files by their file extension. For example, a file named graphic.gif is identified as type "gif."

#### Files

Number of files of the specified type accessed by visitors to your site.

#### Kbytes Transferred

Number of kilobytes of data transferred for all files of the specified type.

### Report Descriptions

This report provides general statistics for the type of data that visitors access on your site.

# Uploaded Files

This report identifies the most popular files uploaded from a client to your servers using FTP PUT, HTTP PUT, or HTTP POST.

## Uploaded Files

No data is available for this graph.

## Uploaded Files

No data is available for this table.

### Uploaded Files - Help Card

#### Column Definitions

##### Files

The path and filename of the uploaded file being analyzed.

##### Visits

Number of visits to your site where the specified file was uploaded to your servers. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

##### Uploads

Number of times the specified file was uploaded to your site. If an error occurred during a transfer, the transfer is not counted.

#### Report Descriptions

This report presents information on files that were uploaded to your servers during the period of the report. You may want to run virus scans on uploaded files.

# Navigation Dashboard

This dashboard summarizes important information related to online navigation.

## Entry Pages

Visits

## Single-Page Visits

Visits

## Exit Pages

Visits

# Entry Pages

This report shows the first or "entry" pages viewed in all visits. Every visit has one and only one Entry Page. A visit's entry page may or may not be the "home page." The Entry Page for a visit can depend on how a visitor arrived at your site: they may type an address into a browser, use a bookmark they made on a previous visit, click on a link on another site, click on a search engine results page, click on an on-line ad, or click on a link in an e-mail. Each of these links can point to your home page or any other page on your site

#### Entry Pages - Help Card

#### Column Definitions

##### Entry Page

The first page in a given visit. Every visit has one and only one entry page.

##### Visits

For each entry page, the total number of visits that began with that entry page, during this time period.

##### %

For each page (row), the percentage of all visits to the site that went to that particular page during the report time period.

## Report Descriptions

### Briefly:

A visit can begin on a given page if a visitor:

- types the URL of the page in their browser then clicks on "Go"
- clicks on a bookmark to the page (stored from a previous visit)
- clicks on a link on a different site that points to the file. The link can appear to be text or an image, such as a banner ad.
- clicks on a link to the page in an e-mail. Again, the link can appear to be text or an image.
- clicks on a link on a search engine results page that points to this page
- activates an applet on another site or in a program that transfers them to this page

Finally, a visit can seem to begin on a given page if a visitor was already on the site, but allowed more than 30 minutes to elapse between clicks. When such a pause occurs, WebTrends counts two visits, one before and one after the pause. In other words, WebTrends considers a timeout of more than 30 minutes to be a de facto end of a visit. Consequently, the first page visited after the long pause will appear as an Entry Page for a new visit. Likewise, the last Page Viewed before the long pause will appear in the Exit Pages report. (*Note: the timeout is configurable in WebTrends via Options*)

If your site has more than one URL for a certain page, for example, /home.html and /home.asp, consider combining their statistics to get an accurate picture of how frequently that page's content is seen.

### Uses and Interpretation:

Look at each page on the Entry Pages report and ask yourself whether it is suitable as the first page a visitor sees. For example, it can be argued that entry pages should:

- identify the site and/or brand
- have a clear link to the home page
- show the same navigation bars as the rest of the site

If a page that's frequently an entry page doesn't do all these things, consider modifying it to conform with best practices.

### Other relevant reports and analyses:

1. Referring URLs for these entry pages.
2. Relationship to Exit Pages and Single Page Visits.
3. Correcting for multiple URLs for the same Page View.

# Exit Pages

This report shows the last or "exit" page of all visits. The visits may have finished for a number of reasons: the visitor went to another site, clicked on one of your site's links that took them to another site, closed the browser, or was inactive long enough for WebTrends to have counted the visit as ended.

**Exit Pages - Help Card**

 **Column Definitions**

**Exit Page**  
The last page viewed in a given visit. Every visit has one and only one exit page.

**Visits**  
For each exit page, the total number of visits that ended with that page.

**%**  
For each page (row), the percentage of all visits to the site that went to that particular page during the report time period.

---

## Report Descriptions

### Briefly:

If a visitor leaves your site or is inactive for a long time, Webtrends counts the visit as "ended" after 30 minutes of inaction. Visitors may have:

- Browsed to a different site
- Closed their browser
- Remained inactive for more than 30 minutes but did not leave your site. Note that if a visitor resumes clicking on your site after 30 minutes of inactivity, WebTrends records two visits, one before and one after the pause. Consequently, the last page viewed before the long pause will appear as an Exit Page, the first page viewed after the long pause will appear in the Entry Pages report, and your own domain will be the referring domain.

It's usually not possible to know where a visitor went after your site. Log files only record those clicks that are requests for files housed on *your* servers. If your site has links to other sites, it is possible to find out if visitors left the site using those links if you modify those links so that, when clicked on, they request a redirect page from your server that in turn takes them to the destination site.

It's usually not possible to know how long a visitor stayed on the exit page before leaving. All that is known is that the visitor had no activity (clicks) for at least 30 minutes.

### Uses and Interpretation:

Examine each exit page in the report and ask yourself whether it can be considered a desirable or undesirable ending point for a visit. For example, a purchase thank-you page would be a desirable end of a visit, but a page in the middle of a registration process would be undesirable as a last page.

Undesirable exit pages may indicate a problem needing addressing, such as:

- a difficult multi-step process
- a page that takes too long to load
- content that does not hold the visitor's interest
- confusing navigation

### Other relevant reports and analyses:

Relationship to Entry Pages and Single-Page Visits.

# Single-Page Visits

This report lists pages that were the only page viewed during visits that were exactly one page long.

Single-Page Visits: Trend Over Time

Single-Page Visits

### Single-Page Visits - Help Card

#### Column Definitions

##### Pages

Any displayed page. You can specify for each profile the types of files that qualify as a page. These settings can be changed by the WebTrends administrator.

##### Visits

Number of visits where the specified page was the exit page. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

##### %

For each page (row), the percentage of all visits to the site that went to that particular page during the report time period.

## Report Descriptions

### Briefly:

The proportion of all visits that are single page visits can be surprisingly high, although this phenomenon is experienced on most public websites. But the Single Page Visit statistic is easily skewed by certain site structures. The most common is an arrival page that automatically redirects the visitor to the "real" home page. Single-Page Visits will be underestimated in these cases, because visitors have requested two pages by the time they reach the home page. Any visitor who leaves immediately will be counted as a two-page visit. Their single-page experience will not appear in the Single-Page Visits report.

The Single Page Visits report can be made more accurate by filtering out the arrival page (losing, unfortunately, important referrer information). A better solution is to change the URL of the redirect page into the URL of the target page, using the URL Search and Replace function or WebTrends Scripting Language. Parameters can be different in the two log lines as long as the stem is the same. In the logs, the session will appear to be two consecutive hits to the target page, which WebTrends perceives as a Single-Page Visit to the target page.

### Uses and Interpretation:

Before using Single Page Visits (SPVs) to evaluate a site's success, be clear about which Single-Page Visits are desirable or undesirable. For example, are some of your pages intended to be self-sufficient, such as a "What's New" page?

SPVs can be part of a set of overall site metrics called "Percent of all Visits that are Single-Page Visits." Ideally, undesirable SPVs should be low, and desirable SPVs should be high.

Pages in which undesirable SPVs more than expected should be evaluated for possible content or design flaws. Examples:

- There is no obvious way to go further into the site.
- The page doesn't convey what the site is about.
- The visitor is overwhelmed by complexity of the page.
- The page takes too long to load.

In a marketing context, high numbers of Single-Page Visits can indicate that visitors are coming to the site for the wrong reason. Do new visitors have accurate perceptions about what the site offers? Are your ads or search engine listings giving the correct impression?

### Other relevant reports and analyses:

Separate SPV Statistics for New and Returning Visitors

## Paths, Forward: All Entry Pages

This report shows the most common page-by-page sequence followed by visitors after the specified start page. The paths may or may not include a visit's Exit Page.

### Paths, Forward: All Entry Pages - Help Card

#### Column Definitions

#### Paths, Forward

This represents the specified start page with the various paths your visitors took from it. Pages listed are limited to the paths configured for analysis in this profile.

#### Visits

Number of visits where the specified path was followed.

#### % of All Visits

Percentage of times that the specified path through your site was taken compared to all other listed paths through your site.

## Report Descriptions

### Briefly:

This report displays the critical first few clicks on your site, during which your new visitors are getting their first impression and your returning visitors are probably heading to a destination.

The length of paths displayed in the path analysis is limited to a number of steps specified in the report setup. This means that paths in this table are likely to be longer in actuality than the number of steps displayed.

### Uses and Interpretation:

Use this report to look for weaknesses and to understand visitor content and navigation preferences:

- Compare the most common paths in this report to those you expected when planning your site. Are they the same? If not, perhaps visitors are confused by your navigation ... or perhaps you predicted their paths incorrectly.
- Ask if your visitors are leaving the site earlier than you would like. Pay special attention to the short paths. Are too many visitors leaving the site before they know what your site is about? Does knowing the exit pages help you understand why?
- Notice which content topics are being visited right away. Forward paths help you understand what content is most important to visitors in the sense of where they go first. If just a few of your content topics seem to be the first destination of most visitors, perhaps those topics should be made more prominent in the home page navigation.
- Notice whether visitors drill down deeply right away, or instead look at a number of same-level pages before going deeper. If they're drilling down several levels, perhaps you should reduce the number of clicks needed to get to the depth they seem to want. Should you bring some pages up higher in the navigation tree? If they're looking at a variety of top-level pages before going deeper, check whether they are using the home page as a hub - often returning to it between jumps to second-level pages. Is this "pogo-sticking" navigation being forced on them? If your second-level pages can't be reached directly from each other, consider reducing the number of clicks by adding "sideways" links.

## Single-Level Paths, Forward

This report shows, for individual pages, the page that was the viewed immediately after that page. This is similar to a path that is only one step in length. A given visit might be counted several times, once, or not at all in this report, depending on how many times that page was viewed during that visit. Only applicable for visitor sessions that are tracked by something other than IP address.

## Single-Level Paths, Forward - Help Card

### Column Definitions

#### Pages

Any displayed page. You can specify for each profile the types of files that qualify as a page. These settings can be changed by the WebTrends administrator.

#### Next Page

The next page requested. Values of "Other" represent the percentage of traffic for Next Pages that were not tracked because the table limit was reached.

#### IP-Tracked Transitions

Represents all visits where the IP address was the only means to identify the visitor (for example, visitors who do not accept cookies).

#### End Of Visit

A Next Page value of End Of Visit means that this was the last page of the visit.

#### Page Refresh

A Next Page of Page Refresh represents routes where the page and the next page were the same.

#### Other

Represents traffic from unfinished visits and routes not included due to report size limits.

#### Views

Number of times this page was viewed by visitors.

#### %

Percentage of views that transitioned from the page listed under "Pages" to the page listed under "Next Page."

---

## Report Descriptions

### Briefly:

This report is an easy way to see what page visitors go to next from each of the top pages of your site.

A line containing "End of Visit" means shows statistics for occurrences when the page was the last page of a visit.

A line containing "Other" sums the data for any Next Pages not shown in this table. A value of zero indicates that the table contains all the Next Pages that occurred.

The Next Pages report is available only when sessions are identified with a cookie. The IP/Agent method of session identification, while more accurate than a simple IP approach, is still too uncertain for statistical reliability. If you wish to still use IP/Agent sessionizing for this report, there is a workaround available in the Knowledge Base.

### Uses and Interpretation:

Overlay the percentages on a screen shot of a page to see whether visitors are using the links on the page as expected. Web designers often try to correlate link prominence and position with expected usage. An unusually large number of jumps using an obscure link suggests a possible increase in prominence for that link. An unusually small number of jumps from a prominent link may mean support for the idea of downsizing that link or moving it deeper in the site.

If a page in the list is not available as a link on the page, it's likely that there was an intermediate page view that did not appear in your data. When analyzing log files, this happens when a viewed page is a cached one, for example when a visitor hits their "back" button. Especially large percentages associated with these can indicate a need to adjust the navigation to allow the sequence to happen without an intermediate page.

### Other relevant reports and analyses:

This report is equivalent to a summary of the first steps for paths shown in the Paths Forward report.

## Single-Level Paths, Reverse

This report shows, for individual pages, the page that was viewed immediately before that page. This is similar to a reverse path that is only one step in length. A given visit might be counted several times, once, or not at all in this report, depending on how many times that page was viewed during that visit. Only applicable for visitor sessions that are tracked by something other than IP address.

## Single-Level Paths, Reverse - Help Card

### Column Definitions

#### Pages

Any displayed page. You can specify for each profile the types of files that qualify as a page. These settings can be changed by the WebTrends administrator.

#### Previous Page

Page immediately prior to the requested page. Values of "Other" represent the percentage of traffic for Previous Pages that were not tracked because the table limit was reached.

#### Start Of Visit

A Previous Page of Start Of Visit means that the page marked the beginning of the visit.

#### IP-Tracked Transitions

Represents all visits where the IP address was the only means to identify the visitor (for example, visitors who do not accept cookies).

#### Page Refresh

A Previous Page of Page Refresh represents routes where the requested page and the previous page were the same.

#### Other

Represents traffic from unfinished visits and routes not included due to report size limits.

#### Views

Number of times this page was viewed by visitors.

#### %

Percentage of views that transitioned from the page listed under "Pages" to the page listed under "Previous Page."

---

## **Report Descriptions**

### **Briefly:**

This report is an easy way to see from where visitors came for each of the top pages of your site.

A value of zero indicates that the table contains all the Previous Pages that occurred.

The Single Level Paths reports are available only when sessions are identified with a cookie. The IP/Agent method of session identification, while more accurate than a simple IP approach, is still too uncertain for statistical reliability. If you still want to use IP/Agent sessionizing for this report, there is a workaround available in the Knowledge Base.

### **Uses and Interpretation:**

Examine the list for unusual sources of visits to this page.

### **Other relevant reports and analyses:**

This report is equivalent to a summary of the first steps for paths shown in the Paths, Reverse report.

## Single-Level Paths, Forward and Reverse

This reports shows, for individual pages, the page that was viewed immediately before and after that page. This is similar to a path that is only one step in length, in this case examining two, one-step paths. A given visit might be counted several times, once, or not at all in this report, depending on how many times that page was viewed during that visit. Only applicable for visitor sessions that are tracked by something other than IP address.

### Single-Level Paths, Forward

## Single-Level Paths, Forward and Reverse - Help Card

### Column Definitions

#### Pages

Any displayed page. You can specify for each profile the types of files that qualify as a page. These settings can be changed by the WebTrends administrator.

#### Previous Page

Page immediately prior to the requested page. Values of "Other" represent the percentage of traffic for Previous Pages that were not tracked because the table limit was reached.

#### Next Page

The next page requested. Values of "Other" represent the percentage of traffic for Next Pages that were not tracked because the table limit was reached.

#### IP-Tracked Transitions

Represents all visits where the IP address was the only means to identify the visitor (for example, visitors who do not accept cookies).

#### End Of Visit

A Next Page value of End Of Visit means that this was the last page of the visit.

#### Page Refresh

A Next Page of Page Refresh represents routes where the page and the next page were the same.

#### Other

Represents traffic from unfinished visits and routes not included due to report size limits.

#### Views

Number of times this page was viewed by visitors.

#### %

Percentage of views that transitioned from the page listed under "Pages" to the page listed under "Next Page."

---

## Report Descriptions

### **Briefly:**

This report is an easy way to see what page visitors go to next from each of the top pages of your site or where visitors came from for each of the top pages of your site.

A line containing "Start of Visit" shows statistics for occurrences when the page was the first page of a visit.

A line containing "End of Visit" means shows statistics for occurrences when the page was the last page of a visit.

A line containing "Other" sums the data for any Previous or Next Pages not shown in this table. A value of zero indicates that the table contains all the Previous or Next Pages that occurred.

The Previous-Next Pages report is available only when sessions are identified with a cookie. The IP/Agent method of session identification, while more accurate than a simple IP approach, is still too uncertain for statistical reliability. If you wish to still use IP/Agent sessionizing for this report, there is a workaround available in the Knowledge Base.

### **Uses and Interpretation:**

Examine the list for unusual sources of visits to this page.

Overlay the percentages on a screen shot of a page to see whether visitors are using the links on the page as expected. Web designers often try to correlate link prominence and position with expected usage. An unusually large number of jumps using an obscure link suggests a possible increase in prominence for that link. An unusually small number of jumps from a prominent link may mean support for the idea of downsizing that link or moving it deeper in the site.

If a page in the list is not available as a link on the page, it's likely that there was an intermediate page view that did not appear in your data. When analyzing log files, this happens when a viewed page is a cached one, for example when a visitor hits their "back" button. Especially large percentages associated with these can indicate a need to adjust the navigation to allow the sequence to happen without an intermediate page.

### **Other relevant reports and analyses:**

This report is equivalent to a summary of the first steps for paths shown in the "Paths, Forward" or the "Paths, Reverse" report.

# Browsers and Platforms Dashboard

This displays key graphs and tables that provide an overview of the Browsers and Platforms chapter. When viewing through the on-demand interface, you can click on the title of a graph or table to navigate to the corresponding page.

**Browsers by Visits**

**Spiders by Visits**

**Browsers by Visits Trend**

**Platforms by Visits Trend**

# Browsers

This report identifies the most popular browsers used by visitors to your site. This information will only be displayed if your server is logging the browser/platform information.

### Browsers - Help Card

#### Column Definitions

##### Browser

A program used to locate and view web pages. These include Netscape, Microsoft Internet Explorer, Opera and others.

##### Hits

Number of hits from visitors using the specified browser. Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.

##### Visits

The total visits where there was sufficient information to identify the browser. This number may be less than the total visits overall. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

---

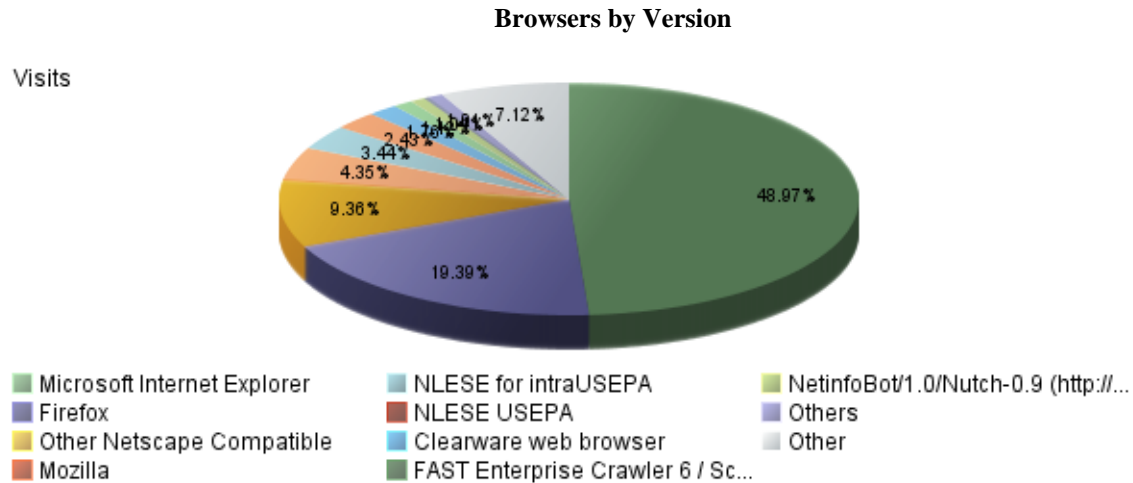

#### Report Descriptions

Browser data can help you determine how to configure your site for optimal viewing.

**Note:** Hits identified as originating from a spider (an automated program that searches the Internet) are not counted in this table. Also, if a browser does not identify itself in its request to the Web server, it will get counted on this page as an "Other."

# Browsers by Version

This report lists the browser versions most common among your visitors.

### Browsers by Version - Help Card

#### Column Definitions

##### Browser

A program used to locate and view web pages. These include Netscape, Microsoft Internet Explorer, Opera and others.

##### Version

The specific version of the browser.

##### Hits

Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.

##### Visits

Number of visits to this page. A visit is a series of actions that begins when a visitor views the first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

### **Report Descriptions**

This information can help you decide which technology to implement on your site. You can determine whether the majority of your visitors are ready to benefit from the latest technologies (DHTML, Flash, etc.) available with the most recent versions of the main browsers.

# Spiders

This report identifies robots, spiders, crawlers and search services visiting your site. If your site uses JavaScript tagging to monitor traffic (for example, WebTrends SmartSource Data Collector), only spiders that use JavaScript will appear in this report.

**Spiders by Visits Trend**

**Spiders by Visits**

**Spiders**

Spider	Hits	Visits	% Visits
1. Yahoo	2,710	1,438	48.35%
2. MSNBot	1,123	667	22.43%
3. Google	1,329	516	17.35%
4. Ask Jeeves	194	167	5.62%

	<b>Spider</b>	<b>Hits</b>	<b>Visits</b>	<b>% Visits</b>
5.	Voila.fr Robot	55	55	1.85%
6.	Checkbot	54	27	0.91%
7.	Converas RetrievalWare Internet Spider	147	20	0.67%
8.	Baidu	22	20	0.67%
9.	Picsearch	37	20	0.67%
10.	Speedy Spider	19	17	0.57%

items 1-20 of 20

### Spiders - Help Card

#### Column Definitions

##### Spider

An automated program which searches the Internet.

##### Hits

Number of times the specified spider hit your site. Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.

##### Visits

Number of times the specified spider visited your site. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

#### Report Descriptions

This information is important for a Webmaster trying to block spiders that tax the server. It also tells you what kind of automated attention you have attracted to your site.

# Platforms

This report identifies the operating systems most used by the visitors to the site. This information will only be displayed if your server is logging the browser/platform information.

**Platforms by Visits Trend**

**Platforms by Visits**

**Platforms**

	Platform	Hits	Visits	% Visits
1.	Windows XP	6,317	1,905	50.81%
2.	Others	4,454	1,059	28.25%
3.	Windows NT	785	319	8.51%
4.	Windows 2000	502	173	4.61%

	<b>Platform</b>	<b>Hits</b>	<b>Visits</b>	<b>% Visits</b>
5.	Macintosh	175	137	3.65%
6.	Linux	80	47	1.25%
7.	Macintosh PowerPC	57	46	1.23%
8.	Windows 3.x	266	18	0.48%
9.	Windows 98	71	15	0.40%
10.	Windows 2003	39	14	0.37%
11.	Windows Win32s	12	9	0.24%
12.	SunOS	6	5	0.13%
13.	Windows ME	6	2	0.05%
	<b>Total</b>	<b>12,770</b>	<b>3,749</b>	<b>100.00%</b>

items 1-13 of 13

### Platforms - Help Card

#### Column Definitions

##### Platform

The operating system used by the visitor to your site. This list excludes all spiders.

##### Hits

Number of hits by visitors using the specified platform. Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.

##### Visits

Number of visits by visitors using the specified platform. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

#### Report Descriptions

This information is useful when determining what content to include on your web site. This report excludes all hits and visits from spiders. The totals may therefore differ from the counts of hits and visits provided in the Overview.

# Wireless Dashboard

This dashboard summarizes important information related to wireless activity.
