## SUPPLEMENTAL TABLES

Table 1.1.-Number of school-associated violent deaths ${ }^{1}$ occurring at school and away from school: 1992-93 to 1998-99

| Year | Homicides of youth ages 5 to 19 |  | Suicides of youth ages 5 to 19 |  | nonstudent, and staff school-associated violent deaths ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Homicides ${ }^{2}$ at school | Homicides $^{3}$ away from school | Suicides ${ }^{2}$ at school | Suicides $^{4}$ away from school |  |
| Total | 218 | 22,323 | 37 | 14,813 | 358 |
| 1992-93 | 34 | 3,595 | 6 | 2,199 | 57 |
| 1993-94 | 29 | 3,816 | 7 | 2,263 | 48 |
| 1994-95 | 28 | 3,563 | 7 | 2,220 | 48 |
| 1995-96 | 32 | 3,313 | 6 | 2,113 | 53 |
| 1996-97 | 28 | 2,953 | 1 | 2,108 | 48 |
| 1997-98 | 34 | 2,725 | 6 | 2,055 | 57 |
| 1998-99 | 33 | 2,358 | 4 | 1,855 | 47 |

${ }^{1}$ School-associated violent deaths include a homicide, suicide, legal intervention, or unintentional firearm-related death in which the fatal injury occurred on the campus of a functioning elementary or secondary school in the United States, while the victim was on the way to or from regular sessions at such a school, or while the victim was attending or traveling to or from an official schoolsponsored event. Victims included nonstudents as well as students and staff members. Total school-associated violent deaths include: in 1992-93, 47 homicides and 10 suicides; 1993-94, 38 homicides and 10 suicides; 1994-95, 39 homicides, 8 suicides, and 1 unintentional death; 1995-96, 46 homicides, 6 suicides, and 1 legal intervention; 1996-97, 45 homicides, 2 suicides, and 1 legal intervention; 1997-98, 47 homicides, 9 suicides, and 1 legal intervention; 1998-99, 38 homicides, 6 suicides, 2 legal intervention, and 1 unintentional death.
${ }^{2}$ Homicides and suicides of youth ages 5 to 19 at school, July 1,1992 to June 30, 1999.
${ }^{3}$ Homicides of youth ages 5 to 19 away from school, July 1, 1992 to June 30, 1999.
${ }^{4}$ Suicides of youth ages 5 to 19 away from school, 1993 to 1999 calendar years.
NOTE: "At school" includes on school property, on the way to or from school, and while attending or traveling to or from a school-sponsored event.
SOURCE: Homicides and suicides of youth ages 5 to 19 at school and total school-associated violent deaths compiled from a special tabulation using preliminary data from the School-Associated Violent Deaths Study, 1992-1999; Data on suicides of youth ages 5 to 19 away from school are from the National Center for Health Statistics, National Vital Statistics System for numbers of deaths, U.S. Bureau of Census for population estimates. Statistics compiled using WISQARSTM produced by the Office of Statistics and Programming, National Center for Injury Prevention and Control, Centers for Disease Control and Prevention, data downloaded May 2001; Homicides of youth ages 5 to 19 away from school are compiled from Fox, J.A. Uniform Crime Reports (U.S.): Supplementary Homicide Reports, 1976-1999 [Computer file]. Inter-university Consortium for Political and Social Research (ICPSR) version. Boston, MA: Northeastern University, College of Criminal Justice, 2001. Ann Arbor, MI: ICPSR, data downloaded May 2001.

$\dagger$ No cases are reported in this cell, although the event defined by this cell could have been reported by some students with these characteristics, had a different sample been drawn.
${ }^{1}$ Serious violent crimes are also included in violent crimes.
${ }^{2}$ Estimate based on fewer than 10 cases.
NOTE: Serious violent crimes include rape, sexual assault, robbery, and aggravated assault. Violent crimes include serious violent crimes and simple assault. Total crimes include violent crimes and theft. "At school" includes inside the school building, on school property, or on the way to or from school. Because of rounding or missing data, detail may not add to totals. Numbers are rounded to the nearest 100.

${ }^{1}$ Serious violent crimes are also included in violent crimes.
${ }^{2}$ Estimate based on fewer than 10 cases.
NOTE: Serious violent crimes include rape, sexual assault, robbery, and aggravated assault. Violent crimes include serious violent crimes and simple assault. Total crimes include violent crimes and theft. Because of rounding or missing data, detail may not add to totals. Numbers are rounded to the nearest 100.

${ }^{1}$ Serious violent crimes are also included in violent crimes.
${ }^{2}$ Estimate based on fewer than 10 cases.
NOTE: Serious violent crimes include rape, sexual assault, robbery, and aggravated assault. Violent crimes include serious violent crimes and simple assault. Total crimes include violent crimes and theft. Population sizes are $23,740,295$ students ages 12 through 18 in $1992 ; 24,557,779$ in 1993; $25,326,989$ in $1994 ; 25,715,220$ in $1995 ; 26,151,364$ in $1996 ; 26,548,142$ in $1997 ; 26,806,268$ in 1998; $27,012,660$ in 1999; and $27,169,238$ in 2000 . Because of rounding or missing data, detail may not add to totals.

NOTE: Serious violent crimes include murder, rape or other type of sexual battery, suicide, physical attack or fight with a weapon, or robbery. Less serious violent or nonviolent crimes include physical attack or fight without a weapon, theftlarceny, and vandalism. Any incidents refer to any of the crimes listed. Not included are any crimes not listed here and any crimes not reported to police. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is 78,000 public schools.

NOTE: Serious violent crimes include murder, rape or other type of sexual battery, suicide, physical attack or fight with a weapon, or robbery. Less serious violent or nonviolent crimes include physical attack or fight without a weapon, theft/larceny, and vandalism. Any incidents refer to any of the crimes listed. Not included are any crimes not listed here and any crimes not reported to police. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is $42,336,819$ public school students.

-Fewer than 30 sample cases.
$\dagger$ No cases are reported in this cell, although the event defined by this cell could have been reported by some schools with these characteristics, had a different sample been drawn.
NOTE: Examples of weapons are guns, knives, sharp-edged or pointed objects, baseball bats, frying pans, sticks, rocks, and bottles. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is 78,000 public schools. Because of rounding or missing data, detail may not add to totals.

$\dagger$ No cases were reported in this cell, although the crime defined by the cell could have happened to some teachers with these characteristics, had a different sample had been drawn.
${ }^{1}$ Serious violent crimes are also included in violent crimes.
${ }^{2}$ The estimate was based on fewer than 10 cases.
${ }^{3}$ Teachers teaching in more than one school in different locales are not included.
NOTE: Serious violent crimes include rape, sexual assault, robbery, and aggravated assault. Violent crimes include serious violent crimes and simple assault. Total crimes include violent crimes and theft. "At school" includes inside the school building, on school property, at work site, or while working. For thefts, "while working" was not considered since thefts of teachers' property kept at school can occur when teachers are not present. The data were aggregated from 1996 through 2000 due to the small number of teachers in each year's sample. On average, there were about 4.4 million teachers per year over the 5 -year period for a total population size of $21,802,946$ teachers. The population reported here includes part-time teachers as well as other instructional and support staff. Because of rounding or missing data, detail may not add to totals. Total crime numbers are rounded to the nearest 100 .

§The response categories for race/ethnicity changed in 1999 making comparisons of some categories with earlier years problematic.
${ }^{1}$ The response rate for this survey was less than 70 percent and a full nonresponse bias analysis has not been done to date.
${ }^{2}$ Hispanics and Latinos are not included in these race/ethnicity categories unless specified. While there appear to be large differences among racial/ethnic groups, these differences are associated with large standard errors and should be interpreted with caution.

NOTE: "On school property" was not defined for survey respondents. The term "anywhere" is not used in the YRBS questionnaire. Rather students are simply asked during the past 30 days, on how many days did they have at least one drink of alcohol.

$\dagger$ No cases are reported in this cell, although the event defined by this cell could have been reported by some students with these characteristics, had a different sample been drawn.
${ }^{1}$ Serious violent crimes are also included in violent crimes.
${ }^{2}$ Estimate based on fewer than 10 cases.
NOTE: Serious violent crimes include rape, sexual assault, robbery, and aggravated assault. Violent crimes include serious violent crimes and simple assault. Total crimes include violent crimes and theft. "At school" includes inside the school building, on school property, or on the way to or from school. Standard errors are rounded to the nearest 10 .

$\dagger$ No cases are reported in this cell, although the event defined by this cell could have been reported by some students with these characteristics, had a different sample been drawn.
${ }^{1}$ Serious violent crimes are also included in violent crimes.
${ }^{2}$ Estimate based on fewer than 10 cases.
NOTE: Serious violent crimes include rape, sexual assault, robbery, and aggravated assault. Violent crimes include serious violent crimes and simple assault. Total crimes include violent crimes and theft. "At school" includes inside the school building, on school property, or on the way to or from school. Population sizes are 23,740,295 students ages 12 through 18 in 1992; 24,557,779 in 1993; $25,326,989$ in 1994; $25,715,220$ in 1995; $26,151,364$ in 1996; $26,548,142$ in 1997; $26,806,268$ in 1998; $27,012,660$ in 1999 ; and $27,169,238$ in 2000.

NOTE: Serious violent crimes include murder, rape or other type of sexual battery, suicide, physical attack or fight with a weapon, or robbery. Less serious violent or nonviolent crimes include physical attack or fight without a weapon, theftlarceny, and vandalism. Any incidents refer to any of the crimes listed. Not included are any crimes not listed here and any crimes not reported to police. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is 78,000 public schools.

-Fewer than 30 sample cases.
NOTE: Examples of weapons are guns, knives, sharp-edged or pointed objects, baseball bats, fying pans, sticks, rocks, and botlles. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is 78,000 public schools.

[^5]$\dagger$ No cases are reported in this cell, although the event defined by this cell could have been reported by some schools with these characteristics, had a different sample been drawn. $\ddagger$ Values are less than 50 .

NOTE: Examples of weapons are guns, knives, sharp-edged or pointed objects, baseball bats, frying pans, sticks, rocks, and bottles. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Standard errors are rounded to the nearest 10.

-Fewer than 30 sample cases.
NOTE: Examples of weapons are guns, knives, sharp-edged or pointed objects, baseball bats, frying pans, sticks, rocks, and bottles. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is $42,336,819$ public school students.

§The response categories for race/ethnicity changed in 1999 making comparisons of some categories with earlier years problematic.
${ }^{1}$ The response rate for this survey was less than 70 percent and a full nonresponse bias analysis has not been done to date.
${ }^{2}$ Hispanics and Latinos are not included in these race/ethnicity categories unless specified.
NOTE: The term "anywhere" is not used in the YRBS questionnaire. Rather, students are simply asked during the past 30 days, on how many days they carried a weapon.

*In the SCS questionnaire, students are asked if they were the targets of hate-related words at school. If the students respond that they were called a hate-related word, they are asked to choose the specific characteristics that the hate-related word targeted. Students were allowed to choose more than one characteristic. If a student chose more than one characteristic, he or she is counted once under the "total" category. Therefore, the percent of students who reported being called a hate-related word is less than the sum of all the individual characteristics.

NOTE: "At school" means in the school building, on school property, on a school bus, or going to and from school. Population size is 24,315,190 students ages 12 through 18 in 2001.

## THIS PAGE INTENTIONALLY LEFT BLANK

## APPENDIX A. School Practices and Policies Related to Safety and Discipline

Concern over school crime and violence has prompted many public schools to take various measures to reduce and prevent violence and ensure safety in schools. Such measures include adopting zero tolerance policies; requiring students to wear uniforms; employing various security measures such as requiring visitor sign-in and using metal detectors; having police or other law enforcement representatives stationed at the school; and offering students various types of violence prevention programs. Presented in this appendix are data on the implementation of such safety measures in public schools. This report does not evaluate the effectiveness of any of these efforts or strategies, and the inclusion of a strategy does not suggest that it is endorsed by the National Center for Education Statistics (NCES) or the Bureau of Justice Statistics (BJS) as an effective means of reducing or preventing violence. Likewise, the omission of a possible strategy does not suggest it is rejected by NCES or BJS as a policy to reduce or prevent violence. This information was drawn from two sources. First, some information and tables were drawn from an NCES report titled Violence and Discipline Problems in U.S. Public Schools: 1996-97 (NCES 98-030). The report was based on data from the 1996-97 Fast Response Survey System (FRSS) Principal/School Disciplinarian Survey on School Violence. Readers should consult the FRSS report for more detailed findings on variation by school characteristics. Second, data from the 1999-2000 Schools and Staffing Survey were used to update existing information with timely data on practices and policies related to safety and discipline.

## Zero Tolerance Policies

- In 1996-97, most public schools reported having zero tolerance policies toward serious student offenses (table A1). A "zero tolerance policy" was defined as a school or district policy that mandates predetermined consequences or punishments for specific offenses. At least 9 out of 10 schools reported zero tolerance policies for firearms ( 94 percent) and weapons other than firearms ( 91 percent). Eighty-seven percent of schools had policies of zero tolerance for alcohol and 88 percent had zero tolerance policies for drugs. Most schools also had zero tolerance policies for violence and tobacco (79 percent each).

## School Uniforms

## Security Measures

Presence of Police or
Other Law
Enforcement
Representatives in
Schools

- Requiring students to wear school uniforms was not common. Three percent of all public schools required students to wear uniforms during the 1996-97 school year (table A2).
- Schools took a number of measures to secure their schools. For example, in 1999-2000, 97 percent of public schools reported that visitors were required to sign in before entering the school building (table A3); 90 percent of public schools reported having a closed campus policy that prohibited most students from leaving the campus for lunch; 23 percent of schools reported the daily presence of police or security personnel; and 15 percent reported using video surveillance to monitor students and their school. In addition, 21 percent of public schools reported conducting drug sweeps, with secondary schools and combined elementary/secondary schools being more likely to use drug sweeps than elementary schools (49 and 40 percent, respectively, vs. 10 percent). While 8 percent of public schools reported that they performed random metal detector checks on students, daily use of metal detectors as a security measure was not as common: only 2 percent of public schools reported taking this measure.
- In addition to the security measures described above, in 1996-97, 6 percent of public schools reported having police or other law enforcement representatives stationed 30 hours or more at the school in a typical week during the 1996-97 school year; 1 percent of schools had them stationed from 10 to 29 hours; and 3 percent had them stationed from 1 to 9 hours (table A4). Twelve percent of schools did not have police or other law enforcement representatives stationed during a typical week, but made them available as needed, and 78 percent of schools did not have any such persons stationed at their schools.
- A majority of public schools (59 percent) reported having a school violence prevention program in 1999-2000 (table A5). Of those schools with a program, 58 percent employed a formal procedure to assess the effectiveness of the violence prevention program.
- In the 1996-97 school year, there were over 5,000 student expulsions for possession or use of a firearm (table A6). An additional 3,300 students were transferred to alternative schools for possession or use of a firearm, while 8,144 were placed in out-of-school suspensions lasting 5 or more days. About 5 percent of all public schools (or 4,170 ) took one or more of these actions.

Disciplinarian Survey on School Violence," FRSS 63, 1997.

## Appendix B. Technical Notes

## General Information

The information presented in this report was obtained from many data sources, including databases from the National Center for Education Statistics (NCES), the Centers for Disease Control and Prevention (CDC), and the Bureau of Justice Statistics (BJS). While some of the data were collected from universe surveys, most were gathered by sample surveys. Some questions from different surveys may appear the same, but they were actually asked of different populations of students (e.g., high school seniors or students in grades 9 through 12); in different years; about experiences that occurred within different periods of time (e.g., in the past 4 weeks or during the past 12 months); and at different locations (e.g., in school or at home). Readers of this report should take particular care when comparing data from the different data sources. Because of the variation in collection procedures, timing, phrasing of questions, and so forth, the results from the different sources may not be strictly comparable. After introducing the data sources used for this report, the next section discusses the accuracy of estimates and describes the statistical procedures used.

Table B1 presents some key information for each of the data sets used in the report, including the survey year(s), target population, response rate, and sample size. The remainder of the section briefly describes each data set and provides directions for obtaining more information. The exact wording of the interview questions used to construct the indicators are presented in table B2.

Schools and Staffing Survey (SASS)

This report draws upon data on teacher victimization from the Schools and Staffing Survey (SASS), which provides national- and state-level data on public and national- and affiliation-level on private schools, principals, school districts, and teachers. The 1993-94 and 1999-2000 SASS consists of four sets of linked surveys, including surveys of schools, the principals of each selected school, a subsample of teachers within each school, and public school districts. Data were collected by multistage sampling. Stratified by state, control (public vs. private), type, association membership (for example, in private school associations), and grade level (for private schools), schools were sampled first. This report uses 1993-1994 and 1999-2000 SASS data. Approximately 9,900 public schools and 3,300 private schools were selected to participate in the 1993-1994 SASS and 9,900 public schools and 3,600 private schools were selected to participate in the 1999-2000 SASS. Within each school, teachers were further stratified into one of five teacher types in the following hierarchy: (1) Asian or Pacific Islander;
(2) American Indian, Aleut, or Eskimo; (3) bilingual/ESL; (4) new teachers (those with 1 to 3 years of experience); and (5) experienced teachers (those with more than 3 years of experience). Within each teacher stratum, teachers were selected systematically with equal probability. In 1993-1994, approximately 53,000 public school teachers and 10,400 private school teachers were sampled. In 1999-2000, 56,400 public school teachers and 10,800 private school teachers were sampled.

This report focuses on responses from both teachers and principals. The overall weighted response rates were between 83 and 88 percent for public school teachers and between 77 and 80 percent for private school teachers. For public school principals, the overall weighted response rates were between 90 and 97 percent. Values were imputed for questionnaire items that should have been answered but were not. For additional information about SASS contact:

Kerry Gruber<br>National Center for Education Statistics<br>1990 K Street NW<br>Washington, DC 20006<br>Telephone: (202) 502-7349<br>E-mail: Kerry.Gruber@ed.gov

National School-Based
Youth Risk Behavior Survey (YRBS)

The National School-Based Youth Risk Behavior Survey (YRBS) is one component of the Youth Risk Behavior Surveillance System (YRBSS), an epidemiological surveillance system developed by the Centers for Disease Control and Prevention (CDC) to monitor the prevalence of youth behaviors that most influence health. The YRBS focuses on priority health-risk behaviors established during youth that result in the most significant mortality, morbidity, disability, and social problems during both youth and adulthood. This report uses 1993, 1995, 1997, 1999, and 2001 YRBS data.

The YRBS used a three-stage cluster sampling design to produce a nationally representative sample of students in grades 9 through 12 in the United States. The target population consisted of all public and private school students in grades 9 through 12 in the 50 states and the District of Columbia. The first-stage sampling frame included selecting primary sampling units (PSUs) from strata formed on the basis of urbanization and the relative percentage of black and Hispanic students in the PSU. These PSUs are either large counties or groups of smaller, adjacent counties. At the second stage, schools were selected with probability proportional to school enrollment size. Schools with substantial numbers of black and Hispanic students were sampled at relatively higher rates than all other schools. The final stage of sampling consisted of randomly selecting
within each chosen school at each grade 9 through 12 one or two intact classes of a required subject, such as English or social studies. All students in selected classes were eligible to participate. Approximately 16,300, 10,900, 16,300, 15,300 , and 13,600 students were selected to participate in the 1993, 1995, 1997, 1999, and 2001 surveys, respectively.

The overall response rate was 70 percent for the 1993 survey, 60 percent for the 1995 survey, 69 percent for the 1997 survey, 66 percent for the 1999 survey, and 63 percent for the 2001 survey. NCES standards call for response rates of 70 percent or better and bias analyses are called for by NCES when that percentage is not achieved. For the YRBS data, a full nonresponse bias analysis has not been done to date. The weights were developed to adjust for nonresponse and the oversampling of black and Hispanic students in the sample. The final weights were normalized so that only weighted proportions of students (not weighted counts of students) in each grade matched national population projections.

In 1999, in accordance with changes to the Office of Management and Budget's standards for the classification of federal data on race and ethnicity, the YRBS item on race/ethnicity was modified. The version of the race and ethnicity question used in 1993, 1995, and 1997 was:

How do you describe yourself?

1. White - not Hispanic
2. Black - not Hispanic
3. Hispanic or Latino
4. Asian or Pacific Islander
5. American Indian or Alaskan Native
6. Other

The version used in 1999 and 2001 was:
How do you describe yourself? (Select one or more responses.)
A. American Indian or Alaska Native
B. Asian
C. Black or African American
D. Hispanic or Latino
E. Native Hawaiian or Other Pacific Islander
F. White

This new version of the question used in 1999 and 2001 results in the possibility of respondents marking more than one category. While more accurately reflect-
ing respondents' racial and ethnic identity, the new item cannot be directly compared to responses to the old item. Thus, comparisons of responses by race/ ethnicity of the 1999 and 2001 YRBS with prior years' YRBS are not advisable. For additional information about the YRBS contact:

Fast Response Survey System: Principal/School Disciplinarian Survey on School Violence

The Principal/School Disciplinarian Survey was conducted through the NCES Fast Response Survey System (FRSS) during the spring and summer of 1997. The FRSS is a survey system designed to collect small amounts of issueoriented data with minimal burden on respondents and within a relatively short time frame. The FRSS Principal/School Disciplinarian Survey focused on incidents of specific crimes/offenses and a variety of specific discipline issues in public schools. The survey was conducted with a nationally representative sample of regular public elementary, middle, and high schools in the 50 states and the District of Columbia. Special education, alternative and vocational schools, schools in the territories, and schools that taught only prekindergarten, kindergarten, or adult education were not included in the sample.

The sample of public schools was selected from the 1993-94 NCES Common Core of Data (CCD) Public School Universe File. The sample was stratified by instructional level, locale, and school size. Within the primary strata, schools were also sorted by geographic region and by percent minority enrollment. The sample sizes were then allocated to the primary strata in rough proportion to the aggregate square root of the size of enrollment of schools in the stratum. A total of 1,415 schools were selected. Among them, 11 schools were found no longer to be in existence, and 1,234 schools completed the survey. In April 1997, questionnaires were mailed to school principals, who were asked to complete the survey or to have it completed by the person most knowledgeable about discipline issues at the school. The raw response rate was 88 percent $(1,234$ schools divided by the 1,404 eligible schools in the sample). The weighted overall response rate was 89 percent, and item nonresponse rates ranged from 0 percent to 0.9 percent. The weights were developed to adjust for the variable probabilities of selection and differential nonresponse and can be used to produce national estimates for regular public schools in the 1996-97 school year. ## National Crime <br> Victimization Survey (NCVS)

The National Crime Victimization Survey (NCVS), administered for the U.S. Bureau of Justice Statistics by the Census Bureau, is the nation's primary source of information on crime victimization and the victims of crime. Initiated in 1972 and redesigned in 1992, the NCVS collects detailed information on the frequency and nature of the crimes of rape, sexual assault, robbery, aggravated and simple assault, theft, household burglary, and motor vehicle theft experienced by Americans and their households each year. The survey measures crimes reported as well as those not reported to police.

The NCVS sample consists of about 53,730 households selected using a stratified, multistage cluster design. In the first stage, the primary sampling units (PSUs), consisting of counties or groups of counties, were selected. In the second stage, smaller areas, called Enumeration Districts (EDs), were selected from each sampled PSU. Finally, from selected EDs, clusters of four households, called segments, were selected for interview. At each stage, the selection was done proportionate to population size in order to create a self-weighting sample. The final sample was augmented to account for housing units constructed after the decennial Census. Within each sampled household, Census Bureau personnel interviewed all household members ages 12 and older to determine whether they had been victimized by the measured crimes during the 6 months preceding the interview. About 79,360 persons ages 12 and older are interviewed each 6 months. Households remain in the sample for 3 years and are interviewed 7 times at 6 -month intervals. The initial interview at each sample unit is used only to bound future interviews to establish a time frame to avoid duplication of crimes uncovered in these subsequent interviews. After their seventh interview, households are replaced by new sample households. The NCVS has consistently obtained a response rate of about 93 percent at the household level. During the study period, the completion rates for persons within households were about 90 percent. Thus, final response rates were about 83 percent. Weights were developed to permit estimates for the total U.S. population 12 years and older. For more information about the NCVS, contact:

## School Crime <br> Supplement (SCS)

Created as a supplement to the NCVS and co-designed by the National Center for Education Statistics and Bureau of Justice Statistics, the School Crime Supplement (SCS) survey was conducted in 1989, 1995, 1999, and 2001 to collect additional information about school-related victimizations on a national level. This report includes data from the 1995, 1999, and 2001 collections. The 1989 data are not included in this report as a result of methodological changes to the NCVS and SCS. The survey was designed to assist policymakers as well as academic researchers and practitioners at the federal, state, and local levels so that they can make informed decisions concerning crime in schools. The SCS asks students a number of key questions about their experiences with and perceptions of crime and violence that occurred inside their school, on school grounds, on a school bus, or on the way to or from school. Additional questions not included in the NCVS were also added to the SCS, such as those concerning preventive measures used by the school, students' participation in afterschool activities, students' perceptions of school rules, the presence of weapons and street gangs in school, the presence of hate-related words and graffiti in school, student reports of bullying and reports of rejection at school, and the availability of drugs and alcohol in school, as well as attitudinal questions relating to fear of victimization and avoidance behavior at school.

In all SCS survey years, the SCS was conducted for a 6-month period from January through June in all households selected for the NCVS (see discussion above for information about the sampling design). It should be noted that the initial NCVS interview is included in the SCS data analysis. Within these households, the eligible respondents for the SCS were those household members who had attended school at any time during the 6 months preceding the interview, and were enrolled in grades 6 through 12 in a school that would help them advance toward eventually receiving a high school diploma. The age range of students covered in this report is 12 through 18 years of age. Eligible respondents were asked the supplemental questions in the SCS only after completing their entire NCVS interview.

In 2001, the SCS survey instrument was modified from previous collections in three ways. First, in 1995 and 1999, "at school" was defined for respondents as
in the school building, on the school grounds, or on a school bus. In 2001, the definition for "at school" was changed to mean in the school building, on school property, on a school bus, or going to and from school. This change was made to the 2001 questionnaire in order to be consistent with the definition of "at school" as it is constructed in the National Crime Victimization survey. Unlike prior Indicators reports, the prevalence of victimization for 1995, 1999, and 2001 was calculated by using NCVS incident variables appended to the 1995, 1999, and 2001 SCS data files. The NCVS type of crime variable was used to classify victimizations of students in the SCS as serious violent, violent, or theft. The NCVS variables asking where the incident happened and what the victim was doing when it happened were used to ascertain whether the incident happened at school. For prevalence of victimization, the NCVS definition of "at school" includes in the school building, on school property, or on the way to or from school.

Second, the SCS questions pertaining to fear and avoidance have changed between the 1995 and 1999 SCS and the 2001 SCS. In 1995 and 1999, students were asked if they avoided places or were fearful because they thought someone would "attack or harm" them. In 2001, students were asked if they avoided places or were fearful because they thought someone would "attack or threaten to attack them." These changes should be considered when making comparisons between the 1995 and 1999 data and the 2001 data. Readers should also note that separate estimates were provided in the Indicators of School Crime and Safety 2001 report for the prevalence of fear at school and on the way to and from school. This year's report provides one estimate that combines at school with on the way to and from school and compares it to those students who report fear away from school.

Third, the SCS question pertaining to gangs has changed in the 2001 SCS. The introduction and definition of gangs as well as the placement of the item in the questionnaire changed in the 2001 SCS. Because of these changes, the reader should be cautioned not to compare results presented in this report with those estimates of gangs presented in previous reports.

Total victimization is a combination of violent victimization and theft. If the student reported an incident of either violent or theft victimization or both, he or she is counted as having experienced "total" victimization. Serious violent crimes include rape, sexual assault, robbery, and aggravated assault. Violent crimes include serious violent crimes and simple assault.

A total of 9,728 students participated in the 1995 SCS, 8,398 in 1999, and 8,374 in 2001. In the 2001 SCS, the household completion rate was 93 percent. In the 1995 and 1999 SCS, the household completion rates were 95 percent and 94 percent, respectively; and the student completion rates were both 78 percent.

For the 2001 SCS, the student completion rate was 77 percent. Thus, the overall SCS response rate (calculated by multiplying the household completion rate by the student completion rate) was 74 percent in 1995, 73 percent in 1999 and 72 percent in 2001. Response rates for most survey items were high-typically over 95 percent of all eligible respondents. The weights were developed to compensate for differential probabilities of selection and nonresponse. The weighted data permit inferences about the eligible student population who were enrolled in schools in 1995, 1999, and 2001. For more information about SCS, contact:

Kathryn A. Chandler<br>National Center for Education Statistics<br>1990 K Street NW<br>Washington, DC 20006<br>Telephone: (202) 502-7326<br>E-mail: Kathryn.Chandler@ed.gov

School Associated Violent Death Study (SAVD)

The School Associated Violent Death Study (SAVD) is an epidemiological study developed by the Centers for Disease Control and Prevention in conjunction with the U.S. Department of Education and the U.S. Department of Justice. SAVD seeks to describe the epidemiology of school-associated violent deaths, identify common features of these deaths, estimate the rate of school-associated violent death in the United States, and identify potential risk factors for these deaths. The study includes descriptive data on all school-associated violent deaths in the United States, including all homicides, suicides, and unintentional firearmrelated deaths where the fatal injury occurred on the campus of a functioning elementary or secondary school, while the victim was on the way to or from regular sessions at such a school, or while attending or on the way to or from an official school-sponsored event. Victims of such events include nonstudents as well as students and staff members. SAVD includes descriptive information about the school, event, victim(s), and offender(s). The first SAVD study collected data for July 1, 1992-June 30, 1994 and the follow-up study includes July 1, 1994-June 30, 1999.

SAVD uses a four-step process to identify and collect data on school-associated violent deaths. Cases were initially identified through a search of the Lexis/Nexis and Dialog newspaper and media databases. Then police officials are contacted to confirm the details of the case to determine if the event meets the case definition. Once a case is confirmed, a police official and a school official are interviewed regarding details about the school, event, victim(s), and offender(s). If police officials are unwilling or unable to complete the interview, a copy of the full police report is obtained. The information obtained on schools includes school demographics, attendance/absentee rates, suspension/expulsions and mobility,
school history of weapon carrying, security measures, violence prevention activities, school response to the event, and school policies about weapon carrying. Event information includes the location of injury, the context of injury (while classes held, during break, etc.), motives for injury, method of injury, and school and community events happening around the time period. Information obtained on victim(s) and offender(s) includes demographics, circumstances of the event (date/time, alcohol or drug use, number of persons involved), types and origins of weapons, criminal history, psychological risk factors, school-related problems, extracurricular activities, and family history, including structure and stressors.

One hundred and five school-associated violent deaths were identified from July 1, 1992-June 30, 1994 (See Kachur et al. June 12, 1996. JAMA. 275:22: 17291733). The most recent study identified 253 school-associated violent deaths between July 1, 1994-June 30, 1999 (See Anderson et al. December 5, 2001. JAMA. 286:21: 2695-2702). The first study achieved a response rate of 85 percent for police officials and 81 percent for school officials. The current study has achieved a response rate of 97 percent for police officials and 78 percent for school officials. For additional information about SAVD, contact:

## Supplementary

Homicide Reports (SHR)

The Supplementary Homicide Reports (SHR), which is a part of the Uniform Crime Reporting (UCR) program, provide incident-level information on criminal homicides including location, circumstances, and method of offense, as well as demographic characteristics of victims and perpetrators and the relationship between the two. The data are provided monthly to the Federal Bureau of Investigation (FBI) by local law enforcement agencies participating in the FBI's UCR program. The data include murders and non-negligent manslaughters in the United States from January 1976 through December 1999. That is, negligent manslaughters and justifiable homicides have been eliminated from the data. For the years 1976 through 1999, contributing agencies provided homicide reports for 452,965 of the estimated 497,030 murder victims, and for 500,946 of the estimated 549,874 offenders.

Although national coverage is quite high (about $92 \%$ of homicides are included in the SHR), missing reports can be corrected using weights to match national
and state estimates prepared by the FBl's UCR. A weight on the SHR data file reconciles the counts of SHR homicide victims with those in the UCR. The weight is the same for all cases for a given year. The weight represents the ratio of the number of homicides reported in the UCR to the number reported in the SHR. For additional information about SHR, contact:

James Fox<br>Principal Investigator<br>Uniform Crime Reports: Supplementary Homicide Reports<br>Northeastern University<br>360 Huntington Avenue<br>Boston, MA 02115<br>Telephone: (617) 373-3296<br>E-mail: jfox@neu.edu

Web-based Injury Statistics Query and Reporting System Fatal (WISQARS ${ }^{\text {TM }}$ Fatal)

WISQARS Fatal provides mortality data related to injury. The mortality data reported in WISQARS Fatal come from death certificate data reported to the National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention. Data includes causes of death reported by attending physicians, medical examiners, and coroners. It also includes demographic information about decedents reported by funeral directors, who obtain that information from family members and other informants. NCHS collects, compiles, verifies and prepares these data for release to the public. The data provides information about what types of injuries are leading causes of deaths, how common they are, and who they affect. This data is intended for a broad audience-the public, the media, public health practitioners and researchers, and public health offi-cials-to increase their knowledge of injury.

WISQARS Fatal mortality reports provide tables of the total numbers of injuryrelated deaths and the death rates per 100,000 population. The reports list deaths according to cause (mechanism) and intent (manner) of injury by state, race, Hispanic origin, sex, and age groupings. For more information on WISQARS Fatal, contact:

National Center for Injury Prevention and Control
Mailstop K65
4770 Buford Highway NE

Telephone: (770) 488-1506
E-mail:OHCINFO@cdc.gov

Accuracy of Estimates

The accuracy of any statistic is determined by the joint effects of "nonsampling" and "sampling" errors. Both types of error affect the estimates presented in this report. Several sources can contribute to nonsampling errors. For example, members of the population of interest are inadvertently excluded from the sampling frame; sampled members refuse to answer some of the survey questions (item nonresponse) or all of the survey questions (questionnaire nonresponse); mistakes are made during data editing, coding, or entry; the responses that respondents provide differ from the "true" responses; or measurement instruments such as tests or questionnaires fail to measure the characteristics they are intended to measure. Although nonsampling errors due to questionnaire and item nonresponse can be reduced somewhat by the adjustment of sample weights and imputation procedures, correcting nonsampling errors or gauging the effects of these errors is usually difficult.

Sampling errors occur because observations are made on samples rather than on entire populations. Surveys of population universes are not subject to sampling errors. Estimates based on a sample will differ somewhat from those that would have been obtained by a complete census of the relevant population using the same survey instruments, instructions, and procedures. The standard error of a statistic is a measure of the variation due to sampling; it indicates the precision of the statistic obtained in a particular sample. In addition, the standard errors for two sample statistics can be used to estimate the precision of the difference between the two statistics and to help determine whether the difference based on the sample is large enough so that it represents the population difference.

Most of the data used in this report were obtained from complex sampling designs rather than a simple random design. These features of complex sampling require different techniques to calculate standard errors than are used for data collected with a simple random sample. Therefore, calculation of standard errors requires procedures that are markedly different from the ones used when the data are from a simple random sample. The Taylor series approximation technique or the balanced repeated replication (BRR) method was used to estimate most of the statistics and their standard errors in this report. Table B3 lists the various methods used to compute standard errors for different data sets.

Standard error calculation for data from the National Crime Victimization Survey and the School Crime Supplement were based on the Taylor series approximation method using PSU and strata variables available from the data set was employed. For statistics based on all years of NCVS data standard errors were derived from a formula developed by the Census Bureau, which consists of three generalized variance function (gvf) constant parameters that represent the curve fitted to the individual standard errors calculated using the Jackknife Repeated Replication technique. The formulas used to compute the adjusted stan-
dard errors associated with percentages or population counts can be found in table B3.

## Statistical Procedures

The comparisons in the text have been tested for statistical significance to ensure that the differences are larger than might be expected due to sampling variations. Unless otherwise noted, all statements cited in the report are statistically significant at the .05 level. Several test procedures were used, depending upon the type of data being analyzed and the nature of the statement being tested. The primary test procedure used in this report was the Student's $t$ statistic, which tests the difference between two sample estimates, for example, between males and females. The formula used to compute the $t$ statistic is as follows:

$$
\begin{equation*}
t=\frac{E_{1}-E_{2}}{\sqrt{s e_{1}^{2}+s e_{2}^{2}}} \tag{1}
\end{equation*}
$$

where $E_{1}$ and $E_{2}$ are the estimates to be compared and $s e_{1}$ and $s e_{2}$ are their corresponding standard errors. Note that this formula is valid only for independent estimates. When the estimates are not independent (for example, when comparing a total percentage with that for a subgroup included in the total), a covariance term (i.e., $2^{*} \mathrm{Se}_{1}{ }^{*} \mathrm{Se}_{2}$ ) must be added to the denominator of the formula:

$$
\begin{equation*}
t=\frac{E_{1}-E_{2}}{\sqrt{s e_{1}^{2}+s e_{2}^{2}+2 * s e_{1} * s e_{2}}} \tag{2}
\end{equation*}
$$

Once the $t$ value was computed, it was compared with the published tables of values at certain critical levels, called alpha levels. For this report, an alpha value of 0.05 was used, which has a $t$ value of 1.96 . If the $t$ value was larger than 1.96 , then the difference between the two estimates was statistically significant at the 95 percent level.

When multiple comparisons among more than two groups were made, for example, among racial/ethnic groups, a Bonferroni adjustment to the significance level was used to ensure that the significance level for the tests as a group was at the .05 level. Generally, when multiple statistical comparisons are made, it becomes increasingly likely that an indication of a population difference is erroneous. Even when there is no difference in the population, at an alpha of .05 , there is still a 5 percent chance of concluding that an observed $t$ value representing one comparison in the sample is large enough to be statistically significant. As the number of comparisons increase, the risk of making such an erroneous inference also increases. The Bonferroni procedure corrects the significance (or alpha) level for the total number of comparisons made within a
particular classification variable. For each classification variable, there are ( $\left.K^{*}(K-1) / 2\right)$ possible comparisons (or nonredundant pairwise combinations), where K is the number of categories. The Bonferroni procedure divides the alpha level for a single $t$ test by the number of possible pairwise comparisons in order to produce a new alpha level that is corrected for the fact that multiple contrasts are being made. As a result, the $t$ value for a certain alpha level (e.g., .05) increases, which makes it more difficult to claim that the difference observed is statistically significant.

Finally, a linear trend test was used when a statement describing a linear trend, rather than the differences between two discrete categories, was made. This test allows one to examine whether, for example, the percentage of students using drugs increased (or decreased) over time or whether the percentage of students who reported being physically attacked in school increased (or decreased) with their age. Based on a regression with, for example, student's age as the independent variable and whether a student was physically attacked as the dependent variable, the test involves computing the regression coefficient (b) and its corresponding standard error (se). The ratio of these two (b/se) is the test statistic t . If t is greater than 1.96 , the critical value for one comparison at the .05 al pha level, the hypothesis that there is a linear relationship between student's age and being physically attacked is not rejected.

While many descriptive comparisons in this report were tested using $t$ statistic or the F-statistic, some comparisons among categories of an ordered variable with three or more levels involved a test for a linear trend across all categories, rather than a series of tests between pairs of categories. In this report, when differences among percentages were examined relative to a variable with ordered categories, Analysis of Variance (ANOVA) was used to test for a linear relationship between the two variables. To do this, ANOVA models included orthogonal linear contrasts corresponding to successive levels of the independent variable. The squares of the Taylorized standard errors (that is, standard errors that were calculated by the Taylor series method), the variance between the means, and the unweighted sample sizes were used to partition total sum of squares into within- and between-group sums of squares. These were used to create mean squares for the within- and between-group variance components and their corresponding F statistics, which were then compared with published values of F for a significance level of .05 . Significant values of both the overall $F$ and the $F$ associated with the linear contrast term were required as evidence of a linear relationship between the two variables.

Table B1.-Descriptions of data sources and samples used in the report

| Data source | Target population | Year of survey | Response rate (\%) | Sample size |
| :---: | :---: | :---: | :---: | :---: |
| Schools and Staffing Survey (Teacher Survey) (NCES) | A nationally representative sample of public and private school teachers from grades K through 12. | $1993-1994$ $1999-2000$ | 88 (public) ${ }^{1}$ <br> 80 (private) ${ }^{1}$ <br> 83 (public) ${ }^{1}$ <br> 77 (private) ${ }^{1}$ | $\begin{aligned} & 53,000 \\ & 10,400 \\ & 56,400 \\ & 10,800 \end{aligned}$ |
| Schools and Staffing Survey (Principal Survey) (NCES) | A nationally representative sample of public school principals. | $\begin{aligned} & 1993-1994 \\ & 1999-2000 \end{aligned}$ | $\begin{aligned} & 97^{1} \\ & 90^{1} \end{aligned}$ | $\begin{aligned} & 9,400 \\ & 9,900 \end{aligned}$ |
| Youth Risk Behavior Survey (CDC) | A nationally representative sample of students enrolled in grades 9 through 12 in public and private schools at the time of the survey. | $\begin{aligned} & 1993 \\ & 1995 \\ & 1997 \\ & 1999 \\ & 2001 \end{aligned}$ | $\begin{aligned} & 70^{2} \\ & 60^{2,3} \\ & 69^{2,3} \\ & 66^{2,3} \\ & 63^{2,3} \end{aligned}$ | $\begin{aligned} & 16,300 \\ & 10,900 \\ & 16,300 \\ & 15,300 \\ & 13,600 \end{aligned}$ |
| FRSS Principal/School Disciplinarian Survey (NCES) | A nationally representative sample of regular public elementary, middle, and secondary schools. | 1996-1997 | $89^{1}$ | 1,200 |
| National Crime Victimization Survey (BJS) | A nationally representative sample of individuals 12 years of age and older living in households and group quarters. | $\begin{aligned} & \text { 1992-2000 } \\ & \text { (Annual) } \end{aligned}$ | About $83^{2}$ | $\begin{gathered} \text { About } \\ 79,360 \end{gathered}$ |
| School Crime Supplement (BJS/NCES) | A nationally representative sample of students ages 12 through 18 enrolled in public and private schools during the 6 months prior to the interview. | $\begin{aligned} & 1995 \\ & 1999 \\ & 2001 \end{aligned}$ | $\begin{aligned} & 74^{2} \\ & 73^{2} \\ & 72^{2} \end{aligned}$ | $\begin{aligned} & 9,700 \\ & 8,400 \\ & 8,400 \end{aligned}$ |
| School Associated Violent Death Study (SAVD) | Population of school-associated violent deaths in the United States between July 1, 1992 and June 30, 1999. Data collected from two sources: a school official and a police official. | 1992-1999 | 79 (schools) <br> 96 (police) | N/A |
| Supplementary Homicide Reports (FBI) | Population of criminal homicides in the United States from January 1976 through December 1999. | 1976-1999 | About 92 | N/A |
| Web-based Injury Statistics Query and Reporting System ${ }^{\text {TM }}$ Fatal (CDC) | Death certificate data reported to the National Center for Health Statistics | 1981-1999 | 99 | N/A |

${ }^{1}$ Weighted response rate.
${ }^{2}$ Unweighted response rate.
${ }^{3}$ The response rate for this survey was less than 70 percent and a full nonresponse bias analysis has not been done to date.

(Screen Questionnaire)

- l'm going to read some examples that will give you an idea of the kinds of crimes this study Yes/No; if yes, What hapcovers. As I go through them, tell me if any of these happened to you in the last 6 months. That is since $\qquad$ , 19_. Was something belonging to you stolen, such as pened? If yes, how many times?
Things that you carry, like luggage, a wallet, purse, briefcase, book
Clothing, jewelry, or calculator
Bicycle or sports equipment
Or did anyone attempt to steal anything belonging to you?
- (Other than any incidents already mentioned,) Since $\qquad$ , 19 _ were you attacked or threatened or did you have something stolen from you At work or school

Yes/No; if yes, what happened? If yes, how many times?
Or did anyone attempt to attack or attempt to steal anything belonging to you from any of these places?

- (Other than any incidents already mentioned,) has anyone attacked or threatened you in any of these ways (exclude telephone threats):
With any weapon, for instance, a gun or knife
With anything like a baseball bat, frying pan, scissors, or stick
By something thrown, such as a rock or bottle
Include any grabbing, punching, or choking
Any rape, attempted rape or other type of sexual attack
Any face to face threats
Or any attack or threat or use of force by anyone at all?
Please mention it even if you are not certain it was a crime.
- People often don't think of incidents committed by someone they know. (Other than any incidents already mentioned,) did you have something stolen from you or were you attacked or threatened by (exclude telephone threats):
Someone at work or school?
- Incidents involving forced or unwanted sexual acts are often difficult to talk about. (Other than any incidents already mentioned,) Have you been forced or coerced to engage in unwanted sexual activity by:
Someone you didn't know before
A casual acquaintance
Or someone you know well?

Yes/No; if yes, what happened? If yes, how many times?

Yes/No; if yes, what happened? If yes, how many times?

| Survey | Questions | Response categories |
| :--- | :--- | :--- |
| Schools and Staffing Survey | - To what extent is each of the following matters a problem in this school? | Serious/Moderate/Minor/Not |
|  | Student tardiness |  |
|  | Student absenteeism |  |
|  | Students cutting class |  |
|  | Physical conflicts among students |  |
|  | Robbery or theft |  |
|  | Vandalism of school property |  |
|  | Student use of alcohol |  |
|  | Student drug abuse |  |
|  | Student possession of weapons |  |
|  | Student disrespect for teachers |  |

${ }^{1}$ Readers should note that this table reflects the most recent version of the NCVS (1999) and SCS (2001) instruments. Survey items shown here may have changed from past NCVS and SCS collections.
${ }^{2}$ Estimates of teacher victimizations include crimes occurring to teachers at school (location), or at the worksite (location), or while working (activity). For thefts, activity was not considered, since thefts of teachers' property kept at school can occur when teachers are not present.

Table B3.-Methods used to calculate standard errors of statistics for different surveys

| Survey | Year | Method of calculation |
| :--- | :--- | :--- |
| National Crime Victimization Survey | 1992 to 2000 | Standard errors of crime level data and aggregated crime <br> rates per 1,000 persons were calculated using three gen- <br> eralized variance function (gvf) constant parameters (de- <br> noted as a, b, and c) and formulas published in the |
|  |  | Methodology Section of Criminal Victimization in the United |
|  |  | States—Statistical Tables (NCJ184938) on the Bureau of <br> Justice Statistics Web Site: <br> http://www.ojp.usdoj.gov/bjs/abstract/cvusst.htm. |
|  |  |  |

The formula used to calculate standard errors (q) of crime level data $(\mathrm{x})$ is:

$$
\sqrt{a x^{2}+b x+c x^{3 / 2}}
$$

where $x$ is the estimated number of crimes of interest, and $a, b$, and $c$ are gvf constant parameters.

The formula used to calculate standard errors of aggregated crime rates per 1,000 persons $(r)$ is:
$\sqrt{\operatorname{br}(1000-r) / y+\operatorname{cr}(\sqrt{1000 r}-r) / \sqrt{(y)}}$
where $r$ is the aggregate crime rate (i.e., $1000^{*}$ total crimes / total population), y is the aggregated base population, and $b$ and $c$ are gvf constant parameters. The three gvf constant parameters associated with the specific years are:

| Year | a | b | c |
| :--- | :--- | :--- | :--- |
| 1992 | -0.00013407 | 4,872 | 3.858 |
| 1993 | -0.00007899 | 2,870 | 2.273 |
| 1994 | -0.00006269 | 2,278 | 1.804 |
| 1995 | -0.00006269 | 2,278 | 1.804 |
| 1996 | -0.00006863 | 2,494 | 1.975 |
| 1997 | 0.00016972 | 2,945 | 2.010 |
| 1998 | 0.00001297 | 2,656 | 3.390 |
| 1999 | -0.00026646 | 2,579 | 2.826 |
| 2000 | -0.0001186 | 2,829 | 2.868 |
| Aggregated data |  |  |  |
| from 1996 to 2000 | -0.00001799 | 4,483 | 1.940 |

Readers should note that the annual parameters published in this year's report differ slightly from those provided in previous reports.

School Crime Supplement
1995, 1999, and 2001

Standard errors of percentage and population counts were calculated using the Taylor series approximation method using PSU and strata variables from the 1995 1999, and 2001 data sets. Another way in which the standard errors can be calculated for these years is by using the generalized variance function (gvf) constant parameters (denoted as $a, b$ and $c$.

Table B3.-Methods used to calculate standard errors of statistics for different surveys-Continued

| Survey | Year | Method of calculation |
| :--- | :--- | :--- |

## THIS PAGE INTENTIONALLY LEFT BLANK

## Appendix C. Glossary of Terms

## General Terms

Cluster sampling

Crime

Incident

Multi-stage sampling

## Prevalence

Cluster sampling is a technique in which the sampling of respondents or subjects occurs within clusters or groups. For example, selecting students by sampling schools and the students that attend that school.

Any violation of a statute or regulation or any act that the government has determined is injurious to the public, including felonies and misdemeanors. Such violation may or may not involve violence, and it may affect individuals or property.

A specific criminal act or offense involving one or more victims and one or more offenders.

A survey sampling technique in which there is more than one wave of sampling. That is, one sample of units is drawn, and then another sample is drawn within that sample. For example, at the first stage, a number of Census blocks may be sampled out of all the Census blocks in the United States. At the second stage, households are sampled within the previously sampled Census blocks.

The percentage of the population directly affected by crime in a given period. This rate is based upon specific information elicited directly from the respondent regarding crimes committed against his or her person, against his or her property, or against an individual bearing a unique relationship to him or her. It is not based upon perceptions and beliefs about, or reactions to, criminal acts.

School
An education institution consisting of one or more of grades K through 12.
School crime
Any criminal activity that is committed on school property.
School year

Stratification
The 12-month period of time denoting the beginning and ending dates for school accounting purposes, usually from July 1 through June 30.

Stratification is a survey sampling technique in which the target population is divided into mutually exclusive groups or strata based on some variable or variables (e.g., metropolitan area) and sampling of units occurs separately within each stratum.

A survey sampling technique in which sampled units do not have the same probability of selection into the sample. For example, the investigator may oversample minority students in order to increase the sample sizes of minority students. Minority students would then be more likely than other students to be sampled.

## Specific Terms Used in Various Surveys

National Crime Victimization Survey

At school (students) Inside the school building, on school property (school parking area, play area, school bus, etc.), or on the way to or from school.

At school (teachers)

Aggravated assault

Rape Forced sexual intercourse including both psychological coercion, as well as physical force. Forced sexual intercourse means vaginal, anal, or oral penetration by the offender(s). This category also includes incidents where the penetration is from a foreign object such as a bottle.

Robbery Completed or attempted theft, directly from a person, of property or cash by force or threat of force, with or without a weapon, and with or without injury.

Rural A place not located inside the Metropolitan Statistical Area (MSA). This category includes a variety of localities, ranging from sparsely populated rural areas to cities with populations of less than 50,000 .

## Serious violent crime

Sexual assault
Inside the school building, on school property (school parking area, play area, school bus, etc.), at worksite, or while working. For thefts, "while working" was not considered, since thefts of teachers' property kept at school can occur when teachers are not present.

Attack or attempted attack with a weapon, regardless of whether or not an injury occurs, and attack without a weapon when serious injury results.

Rape, sexual assault, robbery, or aggravated assault.
A wide range of victimizations, separate from rape or attempted rape. These crimes include attacks or attempted attacks generally involving unwanted sexual contact between the victim and offender. Sexual assault may or may not involve force and includes such things as grabbing or fondling. Sexual assault also includes verbal threats.

| Simple assault | Attack without a weapon resulting either in no injury, minor injury, or in undeter- <br> mined injury requiring less than 2 days of hospitalization. Also includes at- <br> tempted assault without a weapon. |
| :--- | :--- |
| Suburban | A county or counties containing a central city, plus any contiguous counties that <br> are linked socially and economically to the central city. On the data tables, sub- <br> urban areas are categorized as those portions of metropolitan areas situated <br> "outside central cities." |
| Theft | Completed or attempted theft of property or cash without personal contact. |
| Victimization crime as it affects one individual person or household. For personal crimes, |  |
| the number of victimizations is equal to the number of victims involved. The |  |
| number of victimizations may be greater than the number of incidents because |  |
| more than one person may be victimized during an incident. |  |

## School Crime Supplement

Any victimization

At school

Property victimization
Violent victimization

Combination of violent and property victimization. If a student reported an incident of either, he or she is counted as having experienced any victimization. If the student reported having experienced both, he or she is counted once under "any victimization."

In the school building, on school property, on a school bus, or going to or from school.

Theft of property from a student's desk, locker, or other locations at school.

Physical attacks or taking property from the student directly by force, weapons, or threats.

## Youth Risk Behavior Survey

On school property On school property is included in the question wording, but was not defined for respondents.
Weapon Examples of weapons appearing in the questionnaire include guns, knives, and
clubs.

Illegal drugs Examples of illegal drugs were marijuana, cocaine, inhalants, steroids, or prescription drugs without a doctor's permission, heroin, and methamphetamines.

## FRSS Principal/School Disciplinarian Survey

| At school | In school buildings, on school buses, on school grounds, or at places that hold school-sponsored events or activities, but are not officially on school grounds. |
| :---: | :---: |
| Central region | Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin. |
| City | A central city of a Metropolitan Statistical Area (MSA). |
| Elementary school | A school that has a low grade of 3 or less and a high grade of 1 through 8 . |
| Free/reduced-price lunch | The percent of students enrolled in the school who are eligible for the federally funded free or reduced-price lunch program. |
| High school/combined | A school that has a low grade of 9 through 12 and a high grade of 10 through 12. Schools that do not precisely meet these qualifications, and are not elementary and middle schools, are classified as "combined" and are included in the analyses with high schools. |
| Less serious or nonviolent crime | Physical attack or fight without a weapon, theft or larceny, or vandalism. |
| Minority enrollment | The percentage of students enrolled in the school whose race or ethnicity is classified as one of the following: American Indian or Alaskan Native, Asian or Pacific Islander, black, or Hispanic, based on data in the 1993-94 Common Core of Data (CCD) file. |
| Middle school | A school that has a low grade of 4 through 9 and a high grade of 4 through 9 . |
| Northeast region | Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont. |

| Robbery | The taking or attempting to take anything of value that is owned by another per- <br> son or organization, under confrontational circumstances by force or threat of <br> force or violence and/or by putting the victim in fear. |
| :--- | :--- |
| Physical attack or fight | An actual and intentional touching or striking of another person against his or her <br> will, or the intentional causing of bodily harm to an individual. This category <br> should be used only when the attack is serious enough to warrant calling the po- <br> lice or other law enforcement representative. |
| Rural | A place with a population less than 2,500 and defined as rural by the U.S. Bu- <br> reau of the Census. |
| School enrollment | Total number of students enrolled as defined by the 1993-94 CCD. |
| Serious violent crime | Murder, suicide, rape or sexual battery, physical attack or fight with a weapon, or <br> robbery. |
| Sexual battery | An incident that includes rape, fondling, indecent liberties, child molestation, or <br> sodomy. |
| Southeast region | Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North <br> Carolina, South Carolina, Tennessee, Virginia, and West Virginia. |
| Theft or larceny | The unlawful taking of another person's property without personal confrontation, <br> threat, violence, or bodily harm. |
| Arban fringe | A place not within an MSA, but with a population greater than or equal to 2,500 <br> and defined as urban by the U.S. Bureau of the Census. |
| A mexizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New within an MSA of a central city, but not primarily its central city. |  |

## Schools and Staffing Survey

Central city

A large central city (a central city of a Metropolitan Statistical Area [MSA] with population greater than or equal to 400,000, or a population density greater than or equal to 6,000 per square mile) or a mid-size central city (a central city of an MSA, but not designated as a large central city).

| Elementary school | An elementary school teacher is one who, when asked for the grades taught, <br> teachers <br> thecked: (1) only "ungraded" and was designated as an elementary teacher on <br> the list of teachers provided by the school; (2) 6th grade or lower, or "ungraded," <br> and no grade higher than 6th; (3) 6th grade or lower and 7th grade or higher, <br> and reported a primary assignment of prekindergarten, kindergarten, or general <br> elementary; (4) 7th and 8th grades only, and reported a primary assignment of <br> prekindergarten, kindergarten, or general elementary; (5) 6th grade or lower and <br> 7th grade or higher, and reported a primary assignment of special education and <br> was designated as an elementary teacher on the list of teachers provided by the <br> school; or (6) 7th and 8th grades only, and reported a primary assignment of <br> special education and was designated as an elementary teacher on the list of <br> teachers provided by the school. A teacher at school that has grade 6 or lower, |

## S. Patrick Kachur et al., "School-Associated Violent Deaths in the United States, 1992 to 1994"

| Homicide | An act involving a killing of one person by another resulting from interpersonal <br> violence. |
| :--- | :--- |
| School-associated <br> violent death | A homicide or suicide in which the fatal injury occurred on the campus of a <br> functioning elementary or secondary school in the United States, while the victim <br> was on the way to or from regular sessions at such a school, or while the victim <br> was attending or traveling to or from an official school-sponsored event. Victims <br> included nonstudents as well as students and staff members. |
| Suicide | An act of taking one's own life voluntarily and intentionally. |

[^0]:    NOTE: See footnotes at end of table.

[^1]:    $\dagger$ No cases are reported in this cell, although the event defined by this cell could have been reported by some students with these characteristics, had a different sample been drawn.
    ${ }^{1}$ Total victimization is a combination of violent victimization and theft. If the student reported an incident in either, he or she is counted as having experienced "total" victimization. If the student reported having experienced both, he or she is counted once under "total" victimization.
    ${ }^{2}$ Violent crimes include rape, sexual assault, robbery, aggravated assault, and simple assault.
    ${ }^{3}$ Serious violent crimes include rape, sexual assault, robbery, and aggravated assault. Serious violent crimes are also included in violent crimes.

[^2]:    1"At school" means in the school building, on the school grounds, or on a school bus.

[^3]:    *In the SCS questionnaire, students are asked if they were the targets of hate-related words at school. If the students respond that they were called a hate-related word, they are asked to choose the specific characteristics that the hate-related word targeted. Students were allowed to choose more than one characteristic. If a student chose more than one characteristic, he or she is counted once under the "total" category. Therefore, the percent of students who reported being called a hate-related word is less than the sum of all the individual characteristics.

    NOTE: "At school" means in the school building, on school property, on a school bus, or going to and from school. Population size is 24,315,190 students ages 12 through 18 in 2001.

[^4]:    $\dagger$ No cases are reported in this cell, although the event defined by this cell could have been reported by some students with these characteristics, had a different sample been drawn.
    ${ }^{1}$ Total victimization is a combination of violent victimization and theft. If the student reported an incident in either, he or she is counted as having experienced "total" victimization. If the student reported having experienced both, he or she is counted once under "total" victimization.
    ${ }^{2}$ Violent crimes include rape, sexual assault, robbery, aggravated assault, and simple assault.
    ${ }^{3}$ Serious violent crimes include rape, sexual assault, robbery, and aggravated assault. Serious violent crimes are also included in violent crimes.

[^5]:    -Fewer than 30 sample cases.

[^6]:    $\dagger$ No cases were reported in this cell, although the crime defined by the cell could have happened to some teachers with these characteristics, had a different sample had been drawn.
    ${ }^{1}$ Serious violent crimes are also included in violent crimes.
    ${ }^{2}$ The estimate was based on fewer than 10 cases.
    ${ }^{3}$ Teachers teaching in more than one school in different locales are not included.
    NOTE: Serious violent crimes include rape, sexual assault, robbery, and aggravated assault. Violent crimes include serious violent crimes and simple assault. Total crimes include violent crimes and theft. "At school" includes inside the school building, on school property, at work site, or while working. For thefts, "while working" was not considered since thefts of teachers' property kept at school can occur when teachers are not present. The data were aggregated from 1996 through 2000 due to the small number of teachers in each year's sample. On average, there were about 4.4 million teachers per year over the 5 -year period for a total population size of $21,802,946$ teachers. The population reported here includes part-time teachers as well as other instructional and support staff. Standard errors for total crime numbers are rounded to the nearest 10.

[^8]:    NOTE: In 1995 and 1999, students reported fear of "attack or harm" at school during the previous 6 months. In 2001, students reported fear of "attack or threat of attack" at school during the previous 6 months. Includes students who reported that they sometimes or most of the time feared being victimized in this way. See appendix B for details. Population sizes for students ages 12 through 18 are $23,601,000$ in 1995, $24,614,000$ in 1999, and 24,315,190 in 2001.
