

CHAPTER 6

International Comparisons of Education

This chapter offers a broad perspective on education across the nations of the world. It also provides an international context for examining the condition of education in the United States. Insights into the educational practices and outcomes of the United States are obtained by comparing them with those of other countries. The National Center for Education Statistics (NCES) carries out a variety of these activities to provide statistical data for international comparisons of education.

This chapter presents data drawn from materials prepared by the United Nations Educational, Scientific, and Cultural Organization (UNESCO), the Institute of International Education, the Organization for Economic Cooperation and Development (OECD), and the International Association for the Evaluation of Educational Achievement (IEA). The basic summary data on enrollments, teachers, enrollment ratios, and finances were synthesized from information appearing in *Education at a Glance* published by OECD. Even though OECD tabulations are very carefully prepared, international data users should be cautioned about the many problems of definition and reporting involved in the collection of data about the educational systems in the world (See OECD entry in Guide to Sources).

This chapter also presents data from the 1994–95 Trends in International Mathematics and Science Study (TIMSS) and 1999 Trends in International Mathematics and Science Study–Repeat (TIMSS–R), carried out under the aegis of the International Association for the Evaluation of Educational Achievement (IEA), and supported by NCES and the National Science Foundation. These surveys were formerly known as the Third International Mathematics and Science Study. Data in 1994–95 were collected for the two grades that contained the most 9-year-olds (Population 1) and the two grades that contained the most 13-year-olds (Population 2). The mathematics and science performance of 4th-grade students in 26 countries, and 8th-grade students in 41 countries, was studied through assessments administered during 1994–95. The mathematics and science performance of students at the end of secondary schooling (12th-grade in the United States) was also assessed at the same time in 21 countries. TIMSS–R is a successor to the 1994–95 TIMSS and focuses on the

mathematics and science achievement of 8th-grade students in participating nations. It provides a second data point in a regular cycle of international assessments of mathematics and science that are planned to chart trends in achievement over time.

This chapter includes additional information on performance scores of 15-year-olds in the areas of reading, mathematics, and science literacy from the Program for International Student Assessment (PISA). PISA also measures general or cross-curricular competencies such as learning strategies. While this study focuses on OECD countries, data from some non-OECD countries are also provided.

The role that the United States plays in the world of higher education is illuminated by data on foreign students enrolled in U.S. institutions of higher education. The Institute of International Education provides estimates of the number of foreign students and their countries of origin.

Further information on survey methodologies is in the Guide to Sources in the appendix and in the publications cited in the source notes.

Population

The percent of young people in a population can influence the proportion of national income spent per student (table 396). Among the OECD countries, Turkey had the largest percentage of young people ages 5 to 14 (21 percent in 1999). The closest followers were Iceland (16), Ireland (15), New Zealand (15), and the United States (15). Countries with relatively small numbers of persons in this age group included Italy, Japan, and Spain at 10 percent.

Enrollments

In 1997, about 1.2 billion students were enrolled in schools around the world (table 394). Of these students, 668 million were in elementary-level programs, 398 million were in secondary programs, and 88 million were in higher education programs. Between 1990 and 1997, enrollment changes varied from region to region. Changes in elementary enrollment ranged from increases of 24 percent in Africa, 17 percent in Oceania, 13 percent in Central and South America, 12 percent in Asia, and 8 percent in Northern America (defined in UNESCO tabulations as in-

cluding the United States, Canada, and Greenland) to a 5 percent decrease in Europe. Over the same period, enrollment increases at the secondary level outpaced increases at the primary (elementary) level, especially in Africa (38 percent), Oceania (68 percent), Asia (31 percent), and Central and South America (31 percent). Secondary-level enrollment increased in Europe by 10 percent. Enrollment in Northern America rose by 15 percent.

At the postsecondary level, developing areas of the world also had substantial increases in enrollment between 1990 and 1997 (tables 394 and figure 27). Postsecondary enrollment rose by 68 percent in Africa and by 49 percent in Asia. Postsecondary enrollment in Oceania increased by 99 percent, Central and South America increased by 30 percent, followed by Europe at 15 percent and Northern America at 3 percent. These increases are due to growth both in the proportion of the people attending postsecondary institutions and increases in the populations.

Postsecondary enrollment varied among countries partially due to differing definitions of postsecondary education and at what age it begins (table 397). In 1999, among the OECD countries, Greece reported the highest proportion of 18- to 21-year-olds enrolled in postsecondary education at 54 percent, followed by Korea (51 percent), Belgium (42 percent), the United States (36 percent), and France (35 percent). In the 22 to 25 year old age group, Finland's enrollment rate was highest at 35 percent, with Norway following at 28 percent, Denmark at 27 percent, Korea at 26 percent, and Sweden at 25 percent.

In 2001–02, there were about 583,000 foreign students studying at U.S. colleges and universities (table 417). Approximately 56 percent of these students were from Asian countries. Between 1990 and 2001, the proportion of students at U.S. colleges who were nonresident aliens rose from 2.8 to 3.5 percent (table 209).

Achievement

In 1999, U.S. 8th-graders exceeded the international average of 38 nations in mathematics and science (tables 403 and 409). In mathematics, U.S. 8th-grade students outperformed their peers in 17 nations (ranking not shown), performed no different than their peers in 6 nations, and performed lower than their peers in 14 nations in 1999 (table 403). In science, U.S. 8th-grade students outperformed their peers in 18 nations (ranking not shown), performed no different than their peers in 5 nations, and performed lower than their peers in 14 nations in 1999 (table 409).

On the combined reading literacy scale for PISA 2000, there was no difference detected in the average performance of U.S. 15-year-olds compared to

averages of 15-year-olds in 19 of the 27 participating OECD countries (table 400). The PISA mathematics and science literacy assessments also showed that the U.S. average does not differ from the OECD average. Eight countries outperformed the United States in mathematics literacy (ranking not shown), and seven had higher average scores for science literacy. The United States had higher average scores than seven countries for mathematics literacy and seven for science literacy.

Degrees

Ratios of bachelor's degrees conferred per hundred persons at the typical year of graduation in 2000 ranged from 9 in Denmark and 10 in Switzerland to 38 in the United Kingdom and 36 in Finland and Australia (table 412 and figure 29). The ratio for the United States was 33. In 1996, women had higher bachelor's degree ratios than men in 14 out of 19 countries reporting data.

The percentage of undergraduate degrees awarded in science fields (including natural sciences, mathematics and computer science, and engineering) reported by OECD countries ranged from 11 to 37 percent for 2000 (table 413). Korea, Finland, Germany and France were over 30 percent, while Denmark, Norway, Hungary, the Netherlands, Iceland, Poland, the United States, Portugal, New Zealand, Japan, and Canada were 20 percent or less. The proportion of graduate degrees awarded in science fields also ranged widely across countries in 2000 (table 414). Among the countries with the highest proportions were Japan (52 percent), Korea (48 percent), Switzerland (43 percent), and Sweden (41 percent). Among the countries with the lowest proportions were Poland (3 percent), Hungary (10 percent), Italy (12 percent), the United States (13 percent), and Australia (15 percent).

Finances

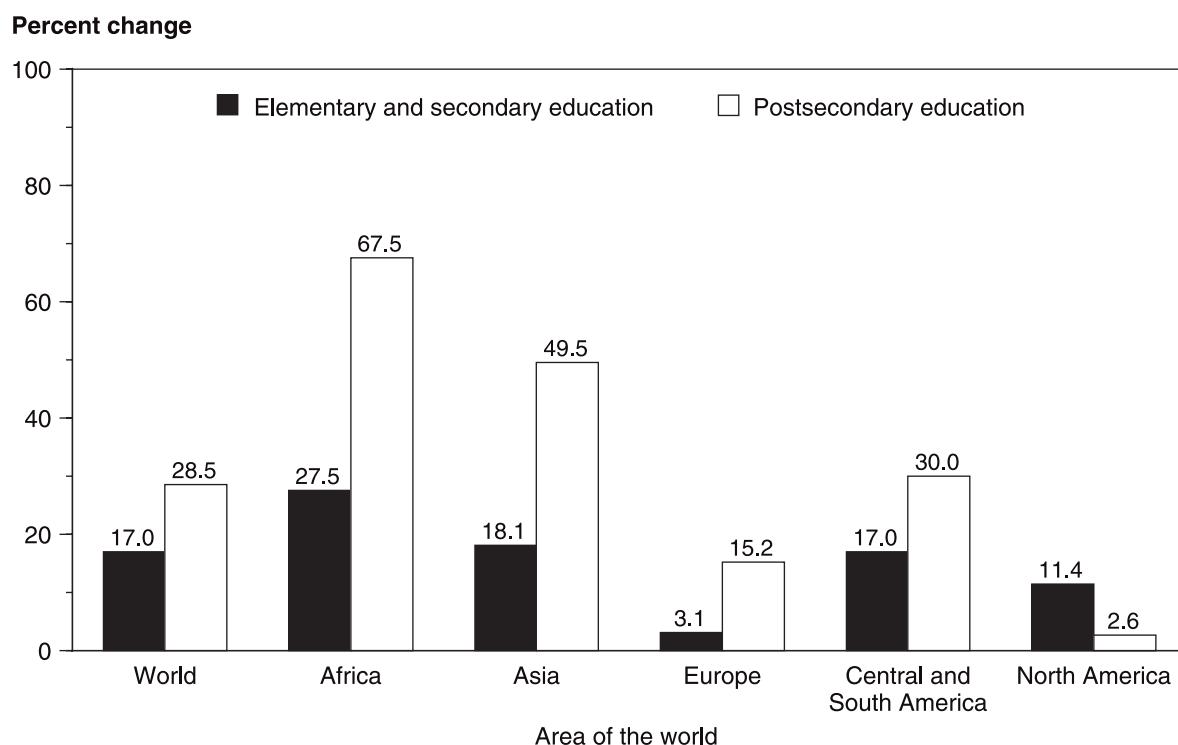

In general, higher income countries spend more public and private funds per student than lower income countries. At the primary level of education, Denmark, the United States, Switzerland, Austria, Norway, and Sweden ranked at the upper end of public per pupil expenditures in 2000 (table 415). For primary education per student, Denmark spent about \$7,074 per student, the United States spent \$6,995, Switzerland spent \$6,631, Austria spent \$6,560, Norway spent \$6,550, and Sweden was \$6,336. At the secondary level, Switzerland, the United States, Austria, and Norway had expenditures over \$8,000 per student. The United States, Switzerland, Canada, and Sweden spent relatively large amounts per student in higher education. The United States spent \$20,358, Switzerland spent \$18,450, Sweden spent

\$15,097, and Canada spent \$14,983. These expenditures were adjusted to U.S. dollars using the purchasing-power-parity (PPP) Index. This index is considered more stable and comparable than using currency exchange rates.

A comparison of public direct expenditures on education as a percent of gross domestic product (GDP) in OECD countries shows that national investment in education in 2000 ranged from 3.5 percent in Turkey,

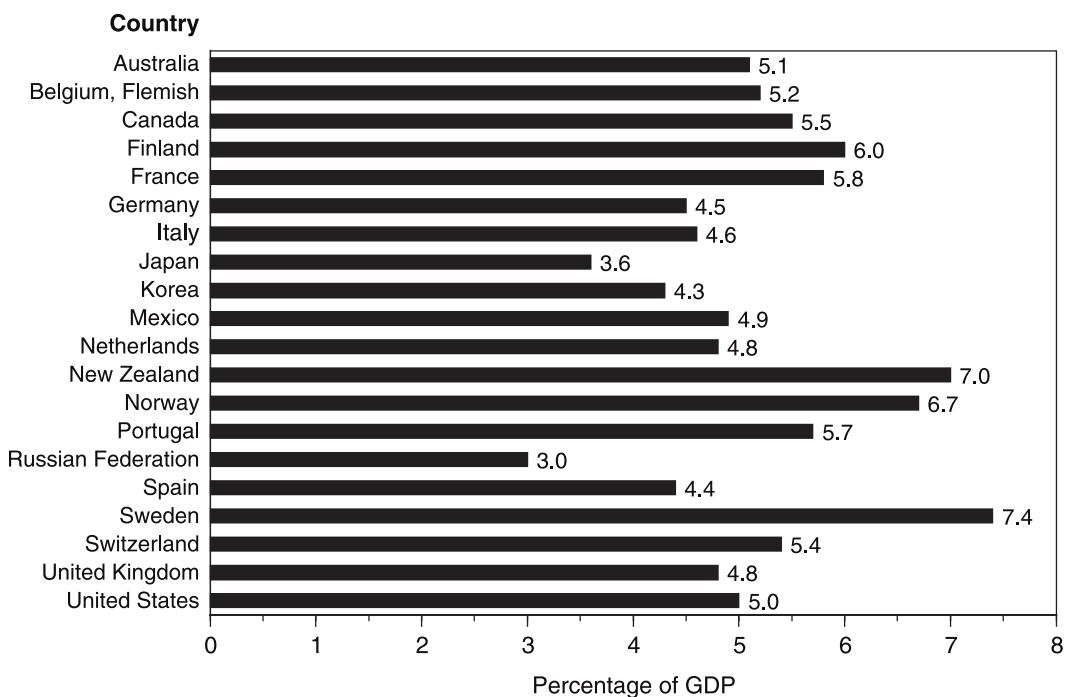

3.6 percent in Japan, and 3.8 percent in Greece to 8.4 percent in Denmark (table 416 and figure 28). Among reporting countries, the average public investment in education in 2000 was 5.2 percent of GDP. In the United States, public expenditures on education as a percent of GDP was 5.0 percent, and in the Russian Federation, a non-OECD country, it was 3.0 percent.

⁷Not available.⁸Enrollment and teacher data exclude the Democratic People's Republic of Korea.⁹Excludes Rodrigues and other small islands.³Includes 5 countries of the former U.S.S.R., the Democratic People's Republic of Korea, Arab states, and both the Asian and the European portions of Turkey.⁴Includes all countries of the former U.S.S.R. except Kazakhstan, Uzbekistan, Kyrgyzstan, Tajikistan, and Turkmenistan.⁵Northern America includes Bermuda, Canada, Greenland, St. Pierre and Miquelon, and the United States of America. Hawaii is included in Northern America rather than Oceania. Central and South America includes Latin America and the Caribbean.⁶Includes American Samoa, Australia, Cook Islands, Fiji, French Polynesia, Guam, Kiribati, Marshall Islands, Nauru, New Caledonia, New Zealand, Niue, Norfolk Island, Pacific Islands, Papua New Guinea, Samoa, Solomon Islands, Tokelau, Tonga, Tuvalu, and the Republic of Vanuatu.⁷Estimate of midyear population.⁸First level enrollment generally consists of elementary school, grades 1-6.⁹Second level enrollment includes general education, teacher training (at the second level), and technical and vocational education. This level generally corresponds to secondary education in the United States, grades 7-12.¹⁰Third level enrollment includes college and university enrollment, and technical and vocational education beyond the high school level. There is considerable variation in reporting from country to country.¹¹This figure is for Europe, not including the former U.S.S.R.

NOTE: Detail may not sum to totals due to rounding.

—Not available.

Rounds to zero.

¹ Selection based on total population for midyear 1997.² First level enrollment generally consists of elementary school, grades 1–6.³ Second level enrollment includes general education, teacher training (at the second level), and technical and vocational education. This level generally corresponds to secondary education in the United States, grades 7–12.⁴ Third level enrollment includes college and university enrollment, and technical and vocational education beyond the high school level. There is considerable variation in reporting from country to country.⁵ Data represent the total enrollment of all ages in the school level divided by the population of the specific age groups that correspond to the school level. Adjustments have been made for the varying lengths of first and second level programs. Ratios may exceed 100 because some countries have many students from outside the normal age range.⁶ Enrollment totals and ratios exclude Democratic People's Republic of Korea. Data do not include adult education or special education provided outside regular schools.⁷ Classification or data coverage of levels have been revised. Data by level may not be comparable over time.⁸ Data for 1996–97.⁹ Data for 1995–96.¹⁰ Data for 1994–95.¹¹ Data for 1991–92.¹² Excludes private institutions.¹³ Data refer to universities and exclude Al Azhar.¹⁴ Excludes non-university institutions (such as teacher training colleges and technical colleges) and excludes distance-learning universities.¹⁵ Estimated.

¹ Less than 335 score points. Although students at this level may have the technical capacity to read, they have serious difficulties in using reading literacy as an effective tool to advance knowledge.

² Between 335 and 407 score points. Indicates an ability to locate a single piece of information, identify the main theme of a text, or make a simple connection with everyday knowledge.

³ Between 408 and 480 score points. Indicates an ability to locate straightforward information, make low-level inferences, work out what a well-defined part of a text means, and use some outside knowledge to understand it.

⁴ Between 481 and 552 score points. Indicates an ability to locate multiple pieces of information, make links between different parts of a text, and relate it to familiar everyday knowledge.

⁵ Between 553 and 625 score points. Indicates an ability to locate embedded information, construe meaning from nuances of language, and critically evaluate a text.

⁶ Above 625 score points. Indicates an ability to manage information that is difficult to find in unfamiliar texts, show detailed understanding of such text, and evaluate critically and build hypotheses.

⁷ Refers to the mean of the data values for all OECD countries, to which each country contributes equally, regardless of the absolute size of the student population of each country.

⁸ Refers to the average for OECD countries as a single entity, to which each country contributes in proportion to the number of 15-year-olds enrolled in its schools.

NOTE: Mean score was designed to have an average of 500 points, and a standard deviation of 100. Standard errors appear in parentheses. Detail may not sum to totals due to rounding.

¹Not available.²Average hours based on: No time = 0; Less than 1 hour = .5; 1-2 hours = 1.5; 3-4 hours = 3.5; More than 4 hours = 5.³SAR=Special Administrative Region.⁴Indicates a 70 to 84 percent student response rate on question about time spent studying mathematics, with missing data having not been explicitly accounted for in the analysis.

NOTE: Possible scores range from 1 to 1,000. Data are for fourth-grade students or equivalent in most countries. Detail may not sum to totals due to rounding. Standard errors appear in parentheses.

¹Not available.²Rounds to zero.³Teacher response data on hours taught weekly available for 70 to 84 percent of students, with missing data having not been explicitly accounted for in the analysis.⁴Teacher response data on hours taught weekly available for 50 to 69 percent of students, with missing data having not been explicitly accounted for in the analysis.⁵Students were asked about "natural science;" data pertain to grade 8 physics/chemistry.

NOTE: Data are for 8th-grade or equivalent in most countries. Possible scores range from 1 to 1,000. Standard errors appear in parentheses. In the 23 countries shown, science is taught as a single subject. In other countries, separate sum to totals due to rounding.

¹Average hours based on: No time = 0; Less than 1 hour = .5; 1–2 hours = 1.5; 3–5 hours = 4; More than 5 hours = 7.²Countries not meeting all International Association for the Evaluation of Education Achievement's sampling specifications.

NOTE: End of secondary school is equivalent to 12th-grade in the U.S. and a few other countries, but ranges from 9th- to 14th-grade among the survey countries. Possible

scores range from 1 to 1,000. Detail may not sum to totals due to rounding. Standard errors appear in parentheses.

¹ Data for Flemish Belgium only.² Data for 1989 are for the former West Germany.

NOTE: The graduation rate relates the number of people with bachelor's degrees to the number of people in the population at the typical age of graduation. Data for 1999

and 2000 reflect a reclassification of degree levels and may not be comparable to figures for earlier years.

SOURCE: Organization for Economic Cooperation and Development, *Education at a Glance 2002*, and previously unpublished tabulations. (This table was prepared August 2003.)

¹Includes preprimary and other expenditures not classified by level.²Data are for Flemish Belgium only.³Data for 1985 are for the former West Germany.⁴Data are for 2000.

NOTE: Direct public expenditure on educational services includes both amounts spent directly by governments to hire educational personnel and to procure other resources,

and amounts provided by governments to public or private institutions, or households. Figures for 1985 also include transfers and payments to private entities, and thus are not strictly comparable with later figures. Some data revised from previously published figures.

—Not available.

Rounds to zero.

¹ Data for 1980–81 and 1985–86 are for West Germany (Federal Republic of Germany before unification).² Excludes Mexico and Central America, which are included with Latin America.³ Home country unknown or undeclared.

NOTE: Totals and subtotals include other countries not shown separately. Data are for "nonimmigrants," i.e., students who have not migrated to this country. Detail may not sum totals due to rounding.
