Bravo

Whether you are building an environment from the ground up or incorporating new furniture into an existing layout, Bravo is the perfect choice. Worksurfaces in widths from 24" to 72" and two depths accommodate any size space. Likewise, leg glides with over 1" of adjustability guarantee a stable installation on every flooring surface.

Your office furniture has to do more than suit your space. It also has to suit your changing needs. Bravo responds with add-on worksurfaces and curvilinear peninsula shapes that transform a desk into a meeting space at the swivel of a chair.

DETAILS:

Full End Panel

Transition End Panel

Any free-standing office furniture can blend the accessibility of traditional desking with the efficiency of a panel-based system, but it takes Bravo to create your own workspace.

Bravo includes privacy features in multiple configurations. Desktop screens are available in both upholstered and translucent options.

Office Furniture Solutions

- Full steel end panels enhance privacy, reduce noise and provide complete enclosure for under desk storage
- Partial end panels can be used at desk intersections to improve accessibility and increase leg room
- Additional storage solutions are provided with tool rails and paper management options

Tool Rail

Bravo

Bravo not only exceeds ANSI/BIFMA standards, it couples convenience items to its safety features. A 10-wire electrical distribution system can be housed within the desk's horizontal structural beam to supply power at the worksurface without overtaxing building circuits or running dangerous extension cords.

Data cables can be routed through the leg supports, stanchions, grommets or modesty beams to provide access where you want it without loose cables.

DETAILS:

Full Modesty Panel

Workspace clutter isn't limited to cables and cords. Additional storage solutions can be made when pairing Opus Filing to Volition Desking. Similarly, stanchions put overheads within easy reach.

An ADA-compliant 72" Balance Overhead is mounted above the same sized worksurface via two reinforced steel stanchions. Upper doors of all overheads are available in standard paint or fabric finishes to coordinate with any décor.

Office Furniture Solutions

- Full modesty panels can be used to provide unbroken coverage for the front of an executive desk
- Grommets are standard in the corners of the desk to allow easy access to the wireways within
- Corner legs provide support and route power cables within the desk to the stanchion above.
- Flexible desk jumpers connect the power systems of adjoining desks, reducing the number of feeds required

Bravo

Form and function isn't the only union Bravo achieves. Opus storage units mesh with the system in two ways. Hanging, mobile, or free-standing pedestal files and 2-drawer lateral files fit perfectly beneath the worksurface.

Bravo is also compatible with the Crescendo and Classic XXI panel lines. It attaches to the framework of either system via specialized brackets, allowing you to retain the desking even if you remodel with fully powered panels. Bravo's overhead conversion kits allow you to integrate them into a new layout. When you are building an adaptable office environment, Bravo is the first step.

Power Pole

Screens are a combination tackboard, acoustic dampener, and divider, but they also create a finished look when bridging the gap between an overhead and desk.

Although stanchions primarily support overheads or countertops, as part of the Bravo line, they are also tailored frames for privacy screens.

Office Furniture Solutions

- A power pole enters the worksurface grommet to connect ceiling power feeds with the furniture's 10-wire electrical system
- Behind stanchion mounted screens provide privacy independent of stanchions and overheads
- Between stanchion mounted screens create a flush appearance from outside the space
- Screens can be ordered fully upholstered or with a durable, exposed metal frame painted the trim color
