

State Personal Income, Second Quarter 2000

By Duke Tran

The quarterly estimates of State personal income are prepared by the Regional Economic Measurement Division.

THIS article presents new estimates of State personal income for the second quarter of 2000 and revised estimates for the first quarter of 1997 through the first quarter of 2000 that incorporate the annual revision of State personal income that was released in September 2000.

In the second quarter of 2000, U.S. personal income increased \$136.2 billion, or 1.7 percent.¹

- All 50 States had growth rates that were equal to, or above, the 0.5-percent increase in prices for the Nation.
- Personal income grew the fastest in Nevada, Delaware, Iowa, Michigan, Wisconsin, and Utah.
- Personal income grew the slowest in Connecticut, Arizona, North Dakota, New Hampshire, Massachusetts, and Wyoming.

From the second quarter of 1999 to the second quarter of 2000, U.S. personal income grew 6.7 percent; U.S. earnings by place of work grew in all major nonfarm industries.

- California, Massachusetts, Washington, New Hampshire, and Colorado had the fastest growth in personal income; all these States have had above-average growth in both personal income and population in recent years.
- Alabama, Louisiana, Hawaii, Mississippi, and West Virginia had the slowest growth in personal income; all these States have had below-average growth in both personal income and population in recent years.

Table 1 at the end of this article presents the quarterly estimates of personal income for each State and region, beginning with the first quarter of 1997. **Table 2** presents detailed quarterly estimates of personal income by major source and of

earnings by industry, beginning with the fourth quarter of 1998.

Growth in the second quarter of 2000

In the second quarter of 2000, U.S. personal income grew 1.7 percent, the same rate as in the first quarter. By type of income, net earnings grew 1.7 percent after growing 1.6 percent in the first quarter; dividends, interest, and rent grew 1.3 percent after growing 1.9 percent; and transfer payments grew 1.8 percent after growing 1.9 percent.² The slowdown in dividends, interest, and rent partly reflected a decrease in interest income of persons.

U.S. earnings by place of work grew 1.7 percent in the second quarter. Earnings grew in all major industries, but the primary contributors to earnings growth were earnings in services, in transportation and public utilities, in government, and in manufacturing.

The 1.7-percent increase in U.S. personal income was substantially above the 0.5-percent increase in prices paid by U.S. consumers (as measured by the price index for personal consumption expenditures). All 50 States had growth rates in personal income that were equal to, or above, the 0.5-percent increase in prices; in the District of Columbia, personal income grew 0.3 percent.

2. Net earnings is calculated as earnings by place of work less personal contributions for social insurance plus an adjustment that converts these earnings to a place-of-residence basis. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income.

Net earnings is used to analyze changes in the composition of personal income; earnings by place of work is used to analyze changes in the industrial structure of earnings. Net earnings by industry is not available, because the source data used to adjust earnings to a place-of-residence basis are not available by industry and because personal contributions for social insurance are not estimated by industry. For the definitions of the components of earnings, see U.S. Department of Commerce, Bureau of Economic Analysis, *State Personal Income, 1929-97* (Washington, DC: U.S. Government Printing Office, 1999), or go to BEA's Web site at <www.bea.doc.gov/bea/mp.htm>, and look under "Regional programs" for "State Personal Income, 1929-97."

1. In this article, percent changes from the preceding quarter are expressed at quarterly rates.

The six States with the fastest growth in personal income were Nevada (2.5 percent), Delaware (2.4 percent), Iowa (2.4 percent), Michigan (2.3 percent), Wisconsin (2.2 percent), and Utah (2.2 percent) (table A). The rapid growth in Nevada, Michigan, and Utah was a continuation of recent strong growth. In contrast, the rapid growth in Delaware, Iowa, and Wisconsin was a rebound from declines or slow growth in the first quarter.

The six States with the slowest growth in personal income were Connecticut (0.5 percent), Arizona (0.7 percent), North Dakota (0.8 percent), New Hampshire (0.8 percent), Massachusetts (1.0 percent), and Wyoming (1.0 percent). In all these States except North Dakota, personal income growth slowed substantially from the first quarter and was well below recent trends.

Growth in the past four quarters

From the second quarter of 1999 to the second quarter of 2000, U.S. personal income increased

\$515 billion, or 6.7 percent (table B).³ By type of income, net earnings, which accounted for about 70 percent of personal income, grew 6.9 percent; dividends, interest, and rent, which accounted for about 20 percent, grew 6.9 percent; and transfer payments, which accounted for about 10 percent, grew 5.3 percent.

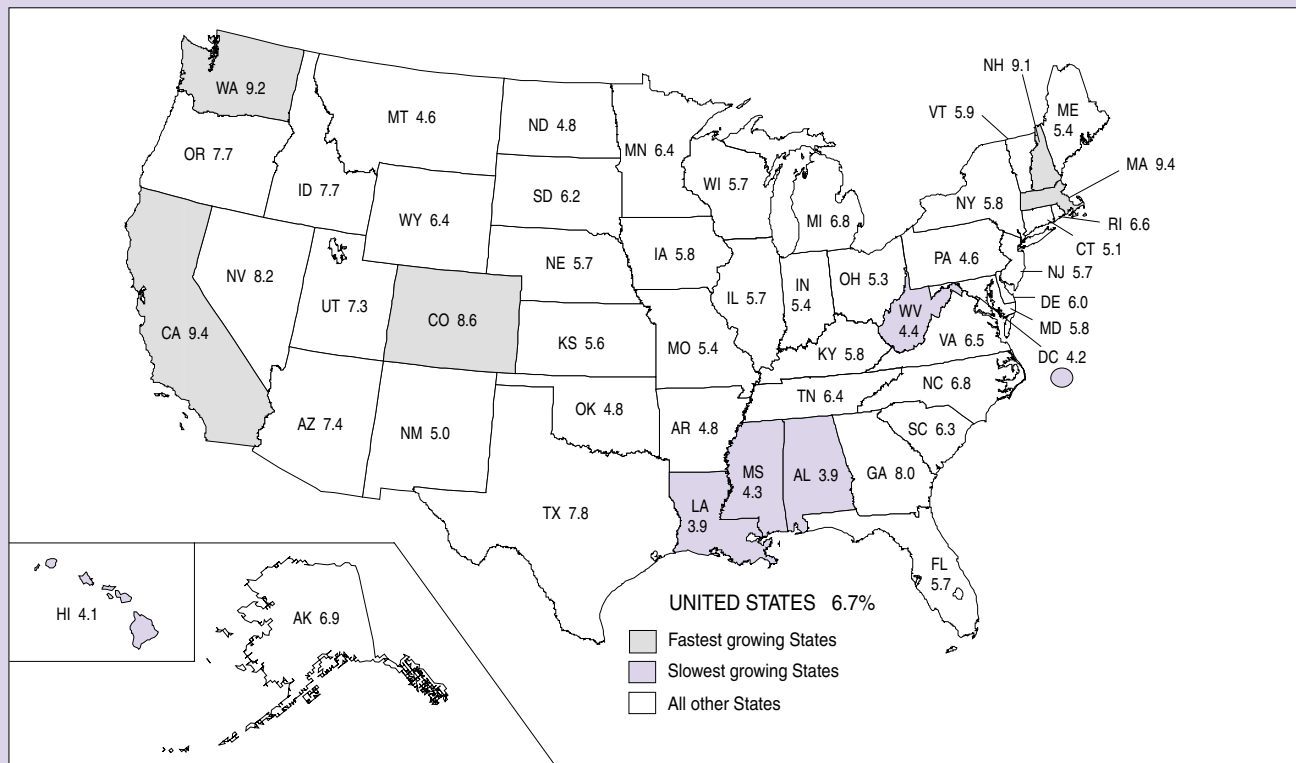

The increase in U.S. personal income considerably outpaced the 2.4-percent increase in prices paid by U.S. consumers. All 50 States and the District of Columbia had growth rates in personal income that were above the increase in prices. Personal income growth ranged from 9.4 percent in California and Massachusetts to 3.9 percent in Alabama and Louisiana.

By industry, U.S. earnings by place of work grew in all major industries except farms. Farm earnings declined 7.6 percent, partly reflecting reductions in Federal farm subsidy payments.

3. In this section, percent changes are expressed at annual rates.

CHART 1

Personal Income: Percent Change, 1999:II–2000:II

Fastest growing States.—The five States with the fastest growth in personal income were California (9.4 percent), Massachusetts (9.4 percent), Washington (9.2 percent), New Hampshire (9.1 percent), and Colorado (8.6 percent) ([chart 1](#)). The fast growth in these States mainly reflected strength in net earnings.

The strong growth in these States reflected a continuation of the rapid growth in personal income and population in recent years. In addition, all five States had per capita personal incomes that were above the national average.⁴

By industry, the fast growth in earnings in these States reflected strength in all major industries, but the major contributors to earnings growth were earnings in services and except in Washington, earnings in finance, insurance, and real estate ([tables C and D](#)).

In California, Massachusetts, and New Hampshire, earnings in manufacturing also contributed substantially to earnings growth, partly reflecting growth in high-tech manufacturing, such as industrial machinery and computer equipment (which includes computer and related hardware manufacturing).

Earnings in the following industries also contributed substantially to growth: Retail trade in California, Washington, and New Hampshire; gov-

ernment in California and New Hampshire; transportation and public utilities in Massachusetts and Washington; and construction in Colorado.

Slowest growing States.—The five States with the slowest growth in personal income were Hawaii (4.1 percent) and four States in the Southeast—Alabama (3.9 percent), Louisiana (3.9 percent), Mississippi (4.3 percent), and West Virginia (4.4 percent). In all five States, the slow growth reflected weakness in net earnings; in Hawaii, a decline in dividends, interest, and rent also contributed to the slow growth.

The slow growth in these States reflected continued weak growth or declines in personal income and population in recent years. In addition, all five States had per capita personal incomes that were below the national averages.

By industry, the slow growth in earnings in these States reflected weaknesses in most major industries; earnings either declined or grew at below-average rates in manufacturing, services, and trade. In addition, growth in high-tech manufacturing and business services was relatively less important. The slow growth also reflected declines in farm earnings in all the States except Hawaii and declines in mining earnings in all the States except Louisiana. In Alabama and Louisiana, weaknesses in earnings in government also contributed.

4. See the section "Personal Income and Per Capita Personal Income for 1999" in "Comprehensive Revision of State Personal Income: Revised Estimates for 1969–98 and Preliminary Estimates for 1999," SURVEY OF CURRENT BUSINESS 80 (June 2000): 65–67.

1. Percent changes are expressed at annual rates.

2. Net earnings is earnings by place of work—the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income—less personal contributions for social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

3. Dollar changes are expressed at annual rates.

NOTE.—Estimates may not add to totals because of rounding.
