1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census. The 2000 per capita personal income estimates are based on the April 1, 2000 decennial census population counts as released by the Census Bureau on December 28, 2000. Per capita personal income estimates for 1991-99 are not shown because the Census Bureau has not yet published State population estimates for the intercensal years that are consistent with the decennial census counts.

2. Percent change was calculated from unrounded data.

NOTE.—The personal income level shown for the United States is derived as the sum of the

State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.

1. Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census. The 2000 per capita disposable personal income estimates are based on the April 1, 2000 decennial census population counts as released by the Census Bureau on December 28, 2000. Per capita disposable personal income estimates for 1991-99 are not shown because the Census Bureau has not yet published State population estimates for the intercensal years that are consistent with the decennial census counts.

2. Percent change was calculated from unrounded data.

NOTE.—The personal income level shown for the United States is derived as the sum of the

State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.

NOTE.—Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GSP is derived from gross domestic income, which differs from GDP by the statistical discrepancy. In addition, GSP excludes and GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and

for military equipment, except office equipment. Also, GSP and GDP have different revision schedules.

Source: This table has been updated to reflect the GSP estimates for 1999, which were released on June 4, 2001. Detailed estimates are available on BEA's Web site at <www.bea.doc.gov> under "State and local area data."
