This may get to you too late - but please accept my comment for consideration - we having problems with our phone lines here in Montana -with the storms -- I would like OMB to do some further research into the impacts of outsourcing on the local communities in rural america with the loss of Federal Jobs - due to the outsourcing of those positions - I would like you to consider whether the loss of stable income in a community is actually saving the taxpayer money - or is it just shifting the burden from one dept to another - will the loss of these jobs increase the amount of poverty in the local area. I do like outsourcing - but only when the regulations can be developed to keep the work locally -- out sourcing to a large company back east or overseas does not keep our federal tax dollars within the local community working for us the taxpayer....thank you for listening....Roylene Gaul
