Figure 9.1. Two conceptual models for describing different processes used by (a) the resource management community and (b) the climate community to support adaptation decision making. Colors are used to represent similar elements of the different processes.

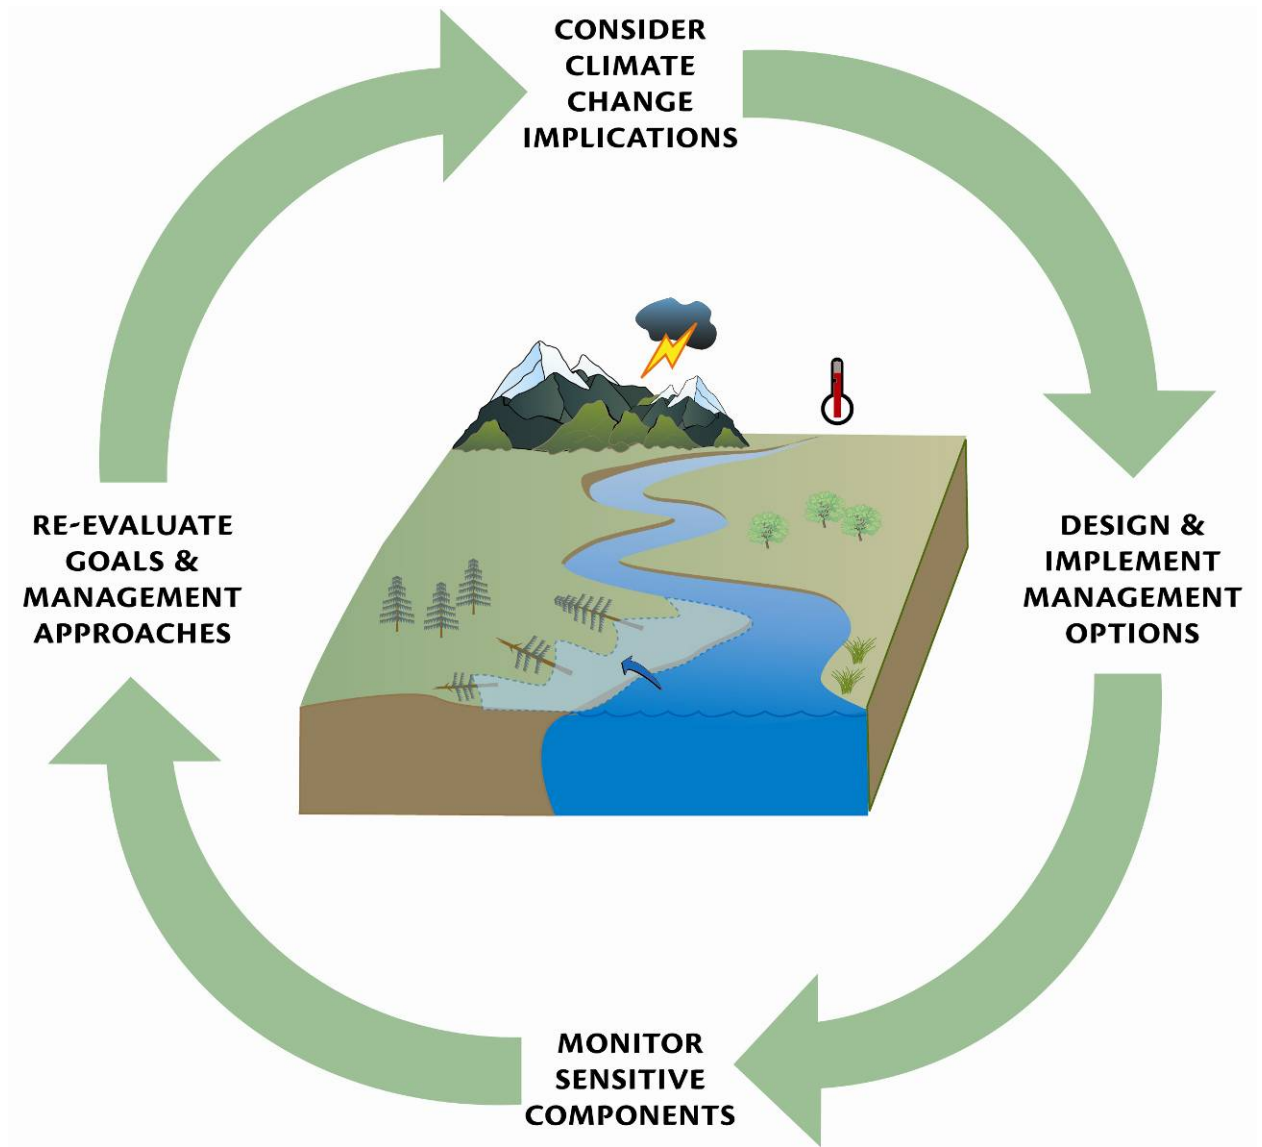

*Vulnerability is the sum of projected impacts and adaptive capacity; this step is done by managers when they evaluate the projected impacts and their capacity to respond during their planning process
 **Assessing the capacity to respond in the management community is equivalent to assessing adaptive capacity in the climate community
