Snapshot Report

NCES 2006-458XB8r

The National Assessment of Educational Progress (NAEP) assesses mathematics on a 0-500 point scale. In 2005, Boston School District was one of ten urban districts that voluntarily participated in the NAEP mathematics assessment on a trial basis.

Overall Mathematics Results for Boston

- In 2005, the average scale score for eighth-grade students in Boston was 270. This was higher than their average score in 2003 (262).¹
- Boston's average score (270) in 2005 was higher than that of public schools in large central cities² (265).
- The percentage of students in Boston who performed at or above the NAEP *Proficient* level was 23 percent in 2005. This percentage was greater than that in 2003 (17 percent).
- The percentage of students in Boston who performed at or above the NAEP Basic level was 58 percent in 2005. This percentage was greater than that in 2003 (48 percent).

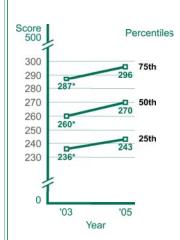

NOTE: The NAEP grade 8 mathematics achievement levels correspond to the following scale points: Below *Basic*, 261 or lower; *Basic*, 262–298; *Proficient*, 299–332; *Advanced*, 333 or above.

Performance of NAEP Reporting Groups in Boston: 2005						
	Percent	Average	Percent	Percent of students at or above		Percent
Reporting groups	of students ³	score	below Basic	Basic	Proficient	Advanced
Male	50	267↑	45↓	55↑	20	6
Female	50	272↑	39↓	61↑	25↑	7
White	16	299	17	83	54	19
Black	45	256	55↓	45↑	9	1
Hispanic	28	261↑	49↓	51↑	12	1
Asian/Pacific Islander	11	309	8	92	61	25
American Indian/Alaska Native	#	‡	‡	‡	‡	‡
Eligible for free/reduced-price school lunch	74	264↑	47↓	53↑	17↑	3
Not eligible for free/reduced-price school lunch	25↑	288	27	73	41	16

Average Score Gaps Between Selected Groups

- In 2005, male students in Boston had an average score that was not significantly different from that of female students. In 2003, there was no significant difference between the average score of male and female students.
- In 2005, Black students had an average score that was lower than that of White students by 43 points. In 2003, the average score for Black students was lower than that of White students by 39 points.
- In 2005, Hispanic students had an average score that was lower than that of White students by 38 points. In 2003, the average score for Hispanic students was lower than that of White students by 37 points.
- In 2005, students who were eligible for free/reduced-price school lunch, an indicator of poverty, had an average score that was lower than that of students who were not eligible for free/reduced-price school lunch by 24 points. In 2003, the average score for students who were eligible for free/reduced-price school lunch was lower than the score of those not eligible by 25 points.
- In 2005, the score gap between students at the 75th percentile and students at the 25th percentile was 53 points. In 2003, the score gap between students at the 75th percentile and students at the 25th percentile was 52 points.

Mathematics Scale Scores at Selected Percentiles

Scores at selected percentiles on the NAEP mathematics scale indicate how well students at lower, middle, and higher levels performed.

The estimate rounds to zero.

‡ Reporting standards not met.

* Significantly different from 2005.

- ↑ Significantly higher than 2003. ↓ Significantly lower than 2003.
- ¹ Comparisons (higher/lower/not different) are based on statistical tests. The .05 level was used for testing statistical significance. Comparisons across jurisdictions and comparisons with the nation or within a jurisdiction across years may be affected by differences in exclusion rates for students with disabilities (SD) and English language learners (ELL). The exclusion rates for SD and ELL in Boston were 7 percent and 4 percent in 2005, respectively. Statistical comparisons are calculated on the basis of unrounded scale scores or percentages.
- ² "Large central city" includes public schools located in large central cities (population 250,000 or more) within metropolitan statistical areas as defined by the federal Office of Management and Budget. It is not synonymous with "inner city."
- ³ For comparison, non-White students comprised 77 percent of students in large central city public schools and 40 percent in public schools nationally. Also, students eligible for free/reduced-price school lunch comprised 62 percent of students in large central city public schools and 39 percent in public schools nationally. NOTE: Detail may not sum to totals because of rounding and because the "Information not available" category for free/reduced-price school lunch and the "Unclassifed" category for race/ethnicity are not displayed.
