BEA 07-42

## State Personal Income: Second Quarter 2007

U.S. personal income grew at a 1.2 percent rate in the second quarter of 2007 after growing 2.5 percent in the first quarter, according to estimates released today by the U.S. Bureau of Economic Analysis. Personal income growth in all regions of the country slowed. First-quarter growth, the second strongest in the current economic expansion, reflected the receipt of bonuses for 2006. Personal income in the second quarter of 2007 was 6.4 percent higher than the second quarter of 2006.

NOTE.—Quarterly estimates are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter dollar changes are differences between published estimates. Quarter-to-quarter percent changes are calculated from unrounded data and are not annualized.

This news release is available on BEA's Web site at [www.bea.gov/rels.htm](http://www.bea.gov/rels.htm).

-- more --

Earnings and transfer receipts accounted for the entire fall in nominal personal income growth. Property income contributed 0.4 percentage points to growth in the second quarter, just as it did in the first.

Earnings decelerated in the second quarter in part because first quarter growth had been boosted by unusually large bonus payments in the finance industry. Transfers decelerated in the second quarter because first quarter growth had been boosted by annual cost of living adjustments and because of a slowdown in second quarter Medicaid and social security payments.

Professional services, health care, and state and local government contributed more than other industries to second quarter growth.

**States.** Most state personal income growth rates were very similar to the national average. Utah, however, had a notably higher growth rate in the second quarter and has grown substantially faster than all other states over the past year. The main contributors to its second quarter growth were professional services, construction and durable manufacturing.

New York, Connecticut, and North Dakota, on the other hand, had notably slower growth than the nation. The slow growth in New York and Connecticut in the second quarter reflects unusually large first quarter bonuses in the finance industry that is heavily concentrated in those states. North Dakota's slow growth was concentrated in farming which reduced personal income growth nearly 1 percentage point.

Inflation, as measured by the national price index for personal consumption expenditures, increased 1.0 percent in the second quarter after increasing 0.9 percent in the first quarter, leaving real U.S. personal income little changed. Two regions (New England and the Mideast) had income growth less than the national inflation rate.

**Revisions.** BEA also released today revised quarterly and annual estimates of state personal income beginning with the first quarter of 2004. Revisions are usually made each September to incorporate source data that are more complete, more detailed, and otherwise more consistent than previously available. The average revision to the 2006 personal incomes of the 50 states and the District of Columbia was 0.7 percentage point. A fuller presentation and discussion of the data and revisions will be provided in the October issue of the *Survey of Current Business*.

## **Definitions**

**Personal income** is the income received by all persons from all sources. Personal income is the sum of net earnings by place of residence, rental income of persons, personal dividend income, personal interest income, and personal current transfer receipts. **Net earnings** is earnings by place of work (the sum of wage and salary disbursements (payrolls), supplements to wages and salaries, and proprietors' income) less contributions for government social insurance, plus an adjustment to convert earnings by place of work to a place-of-residence basis. Personal income is measured before the deduction of personal income taxes and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

The estimate of personal income in the United States is derived as the sum of the state estimates; it differs from the estimate of personal income in the national income and product accounts (NIPAs) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

BEA groups all 50 states and the District of Columbia into eight distinct regions for purposes of data collecting and analyses: **New England** (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont); **Mideast** (Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania); **Great Lakes** (Illinois, Indiana, Michigan, Ohio, and Wisconsin); **Plains** (Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota); **Southeast** (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia); **Southwest** (Arizona, New Mexico, Oklahoma, and Texas); **Rocky Mountain** (Colorado, Idaho, Montana, Utah, and Wyoming); and **Far West** (Alaska, California, Hawaii, Nevada, Oregon, and Washington).

BEA's national, international, regional, and industry estimates; the *Survey of Current Business*; and BEA news releases are available without charge on BEA's Web site at [www.bea.gov](http://www.bea.gov). By visiting the site, you can also subscribe to receive free e-mail alerts of BEA releases and announcements.

1. An industry's contribution to percent change in personal income equals the dollar change in that industry's earnings divided by personal income in the previous quarter times 100.

2. Earnings by place of work is the sum of wage and salary disbursements (payrolls), supplements to wages and salaries, and proprietors' income.

3. "Other" consists of the wage and salary disbursements to U.S. residents employed by international organizations and foreign embassies and consulates in the U.S.

Source: U.S. Bureau of Economic Analysis
